FORWARD

The present volume is a collection of articles published by Professor James R. Russell of Harvard University, in various journals over the past decades. James Russell has been one of the pioneers in the field of Armenian and Iranian Studies, where he has demonstrated the importance of Iranian civilization for pre-Christian Armenia. The connection between the two civilizations has been part of the tireless work of Professor Russell, and I hope this publication shows the immense importance of his work for both Armenian and Iranian Studies. I would like to thank Professor Hourì Berberian, Director of the UC Irvine Armenian Studies Program, as well as Mr. Mamigonian and the National Association for Armenian Studies and Research (NAASR), for supporting the publication of this book.

TWO ROADS DIVERGED: ANCIENT CAPPADOCIA AND ANCIENT ARMENIA

James R. Russell

*Two roads diverged in a yellow wood,
And sorry I could not travel both
And be one traveler, long I stood
And looked down one as far as I could...*

*Two roads diverged in a yellow wood, and I
I took the one less travelled by,
And that has made all the difference.*

Robert Frost

Its Achaemenian Persian conquerors named the region Katpatuka in the sixth century B.C. In Middle Persian, it appears as the *shahr*, “realm,” of Kaputakya in lists of the lands reconquered by Shapur I and evangelized by the Zoroastrian high-priest Kartir. Greek usage follows: Cappadocia. But the Armenians use an older name, Gamirkæ, a relic of the Cimmerian invasions of the place in the seventh century B.C.; this is the Gomer of the Hebrew Bible. The river Halys separated it on the west from Phrygia; the great ramparts of the Taurus and Anti-Taurus ranges bound it on the south, and the Euphrates—western frontier of Armenia and of the various Iranian empires of antiquity—marked its eastern extremity. The native population was of Hittite stock, related to the Indo-Europeans whose empire dominated central Anatolia in the second millennium B.C. until the migrations of speakers of other Indo-European languages—the linguistic ancestors of the Phrygians and Armenians. The most

ancient Cappadocians worshipped a variety of gods, such as Perwa, a warlike divinity to whom the horse was sacred (Cappadocia always was famed for its horses, even as was Armenia); Shiwats, god of the day; Karmrushipash, goddess of healing and magic, who resides in the deeps of the Great Sea; and gods of the Sun and Moon, of storms, of gateways and pestilences, and of mountains and rivers. Their word for “master” was *ishkha*, a word some linguists have suggested is the ancestor of Armenian *ishkhan*. The word *shuppiya*, meaning “holy,” is likely to be etymologically related to Armenian *surb*.¹

Much of what is known of ancient Anatolian affairs comes from the annals of the Assyrians, who had long maintained communities of merchants in Cappadocia: a number of their inscribed tablets, dating back to the twentieth century B.C., have been found at Kültepe, near the site of the ancient town of Kanish. Assyrian records call the Thracian-Phrygian newcomers Mushki, and they left their mark in Cappadocia: the city renamed Caesarea by the reign of Archelaus in Roman imperial times (Armenian: Kesaria/Gesaria; Turkish: Kayseri) originally bore a form of their name, reproduced as Mazhak by Armenians, and Mazaca (Mazaka) by the Greeks. In the biblical book of Daniel, the three Hebrew children of the fiery furnace bear the Anatolian names Shadrach, Meshech (this is the Mushki-word!), and Abednego. Since the Acts of the Apostles (2.9) in the New Testament mention Cappadocian-speaking Jews at Jerusalem, it is likely that there were local Anatolian converts to the faith. Saint Basil of Caesarea heard people he calls “Mesopotamians” speaking their own language in Cappadocia in the fourth century A.D. This was probably a dialect of Aramaic; and among its speakers were followers of pagan Semitic cults, Jews, and, later, Christians.

Although parts of the plateau are arid, Cappadocia’s mines ensured its prosperity from earliest times. The country folk ate their cheese and yogurt with porridge or bread of rough grains, saving the finer crop for sale; city dwellers, as in ancient Armenia, ate a lot of pork. The porous limestone topography that cre-

¹ See Albrecht Goetze, “The Theophorous Elements of the Anatolian Proper Names from Cappadocia,” *Language* 29 (1953): 262-77, and “Some Groups of Ancient Anatolian Proper Names,” *Language* 30:3 (1954): 349-59. I am indebted to Professor John Huehnergard for these references.

ates the region's strange landscape of cones made it practical for the Cappadocians to carve out cave dwellings and whole subterranean cities, of obvious utility in the harsh Anatolian winters. One may compare to these the subterranean city at Armenian Ani, as well as the semi-dugout Armenian *glkhatun* houses. Cities were few: the Persian satraps ruled at Gazioura, whose name suggests that it was little more than a fortified treasury; and the Greek geographer Strabo mentions Mazaca and Tyana as the main urban concentrations. Mazaca is on the main east-west trading road across Anatolia, at the foot of Mount Argaeus (Armenian: Arkeos/Argeos; Turkish: Erciyes Dag) and surrounded by fertile farm land. But, unlike western Anatolia, Cappadocia did not undergo the heavy urbanization that went hand-in-hand with Hellenism, and had no network of cities: as in Armenia, most of the inhabitants lived in villages that were part of large estates held by local dynastic noble clans. Some of these holdings were temple estates, whose priests were hereditary and of noble rank: the priest of the goddess Men, a lunar divinity, at Comana (modern Shar, near Tufan-beyli), was second to the king and the temple possessed 6,000 slaves. After the destruction of the Persian Empire by Alexander, Cappadocia was ruled by the descendants of the Achaemenian satrap, Ariarathes.² Although the Ariarathids claimed Darius the Great as an ancestor, they nonetheless happily intermarried with the Macedonian Seleucids and Pergamene Attalids and gave their children Greek schooling. Ariobarzanes, also with an Iranian name, succeeded them but ended up at odds with the local nobility because his support for Rome indicated a trend towards strong, centralized monarchy that they opposed. All of this, again, is analogous to the situation in Armenia: local, semi-independent *nakharardoms* held together by a king who was *primus inter pares*—first among equals. And the kings of Armenia, too, all had Iranian names and blood lines.

In religious matters, ancient Cappadocia experienced strongly the influence of the Iranian religion, Zoroastrianism, just as Armenia did. At Farasha, in the southeast of the country, was

² On the political history of Cappadocia in ancient times see Richard D. Sullivan, *Near Eastern Royalty and Rome, 100-30 B.C.* (Toronto: Toronto University Press, 1990), and David Magie, *Roman Rule in Asia Minor* (Princeton: Princeton University Press, 1950).

found a bilingual inscription in Aramaic and Greek that reads: "Sa(n)garios, son of Magaphernes, *strategos*³ of Ariaramneia, sacrificed to Mithra." Sangarios is the native Anatolian name of a river in Phrygia; Magaphernes is Persian; and the verb translated as "sacrifice" derives from the Iranian word for a priest, *magu* (from which comes "magic," the Armenian *mog-pet*, "high-priest," and so on). From Tyana, there is a dedication, in Greek "to the just god, Mithra" (*the~i dikai~i Mithrai*): Mithra, known in Armenia as Mihr, and, later, as Mher, is called "the judge" in Iranian texts. As in Armenia, he was a very prominent divinity; and Franz Cumont suggested the cult of Saint George, a Cappadocian, derives many of its features from the pre-Christian devotion to Mithra. There is ample evidence of the worship of other Zoroastrian divinities. At Ortaköy (ancient Nitalis), in the northwest of the country, was found a dedication to the goddess Anaitis, that is, Anahita, Armenian Anahit, who is hailed by the Persian epithet *barzokhara*, "of high Hara," the latter being a legendary mountain in the Avesta. The Persians founded a sanctuary on a hill at Zela, where Anaitis, Omanos (perhaps Avestan Vohu Manah, "Good Mind"), and Anadatos were worshipped. In the fifteenth book of his *Geography*, Strabo speaks of the Persian *magoi*, "priests," and their rites in Cappadocia, calling them also by the Greek term *pyraithoi*, "kindlers of the [sacred] fire." A small, flat-topped altar was found at Bünyan, 21 miles/35 kilometers east of Mazaca: it shows a man in "Median" dress—a tiara, kandys, trousers, high boots—with the Zoroastrian ritual bundle of twigs, the *barsom* (Armenian: *bars-munkæ*), in his right hand.⁴

If the attire of the priests was purely Iranian, the coins of Cappadocia display temples containing cult images of the gods at Zela and Comana that are of typically Greek type, with a peristyle of columns surmounted by a triangular pediment.⁵ Such

³ The *strategos* was the military governor of a region—a Seleucid institution, but one which became hereditary within landed families in Cappadocia, as it did in Armenia.

⁴ On Iranian religion in Cappadocia, see Mary Boyce, *A History of Zoroastrianism*, vol. 3 (Leiden: Brill, 1991). On the analogous Armenian practices and beliefs, see James R. Russell, *Zoroastrianism in Armenia* (Cambridge, MA: Harvard Iranian Series, 1987).

⁵ See Martin Jessop Price and Bluma L. Trell, *Coins and Their Cities: Architecture on the ancient coins of Greece, Rome, and Palestine* (Detroit: Wayne State

architectural styles prove nothing in themselves about Hellenization or the lack of it, since they were common throughout the Hellenistic East: one recalls that the Second Temple on Judean coins looks much the same, though of course it contains no cult image. Armenians and Parthians of the pre-Christian period built temples of a similar kind, with statues of the gods within. The Armenian texts use the Parthian term *bagin* to designate these, as distinct from *atrushans*, “[temples of] kindled fire” (Greek: *pyraitheia*) may be a translation of this word or one like it. The statues themselves were often Greek: a bronze image of Herakles, for instance, has a Parthian re-dedication to the divinity Verethraghna incised upon its thigh. Armenians equated the same divinity, Vahagn, with the same Herakles; and Movses Khorenatsi mentions Greek statues that king Artaxias (Artashes) dedicated to his own, Iranian, gods. The Aramaic element in this blending of cultures is important, also. A bas-relief in “neo-Hittite style” was found at Arebsun (ancient Arabissos, near Nevsehir). It may depict a kind of creation scene, and the accompanying Aramaic inscription describes the marriage of the pagan Semitic god Bel to the goddess Daena Mazdayasnish, that is, “the Religion of Mazda-worship,” the personification of the Iranian faith. This is syncretism—the commingling of disparate religious traditions—in the most literal sense; and it gives some sense of the complexity of belief in the pre-Christian period in a region where so many different peoples and cultures lived together. Again, this parallels the situation in Armenia, where in a pre-Christian pantheon that is largely Zoroastrian one finds paired with Aramazd (that is, Ahura Mazda, the chief Iranian divinity) the Aramaean god Barshamin, that is Baael Shamin, Lord of Heaven, who was regarded as the equivalent of the Creator-divinity of the Iranians.

But perhaps the most important religious symbol of Cappadocia was its highest mountain, the snowcapped Argaeus, whose name is a survival of that of the ancient Hittite mountain-god Kharg(ai)a, “the shimmering white mountain.” It was one of the most frequently depicted mountains of antiquity: on the reliefs of the Villa Hadriana, it personifies Cappadocia. Maximus of Tyre (*Dissertationes* 8.8) does not exaggerate in writing that it

University Press, 1977), pp. 39, 98, 195.

was for the Cappadocians *theos kai horkos kai agalma*, “a god, an oath, and an emblem.” Strabo does: with pious hyperbole, he claims (*Geography* 12.2.7) that the Black Sea and the Mediterranean were both visible from its summit.⁶ The holy mountain appears on numerous coins and sometimes in bronze statuettes in the round, topped by a sacred symbol—an anthropomorphic god, a star, or an eagle. The latter could be a survival of Hittite iconography⁷; and it is noteworthy that in Armenia, too, were found statuettes of the Hellenistic period of a stylized mountain surmounted by an eagle. In the Armenian case, perhaps the mountain was meant to be Azat Masikæ, Greater Ararat; and the divine light above Argæus may be parallel, *mutatis mutandis*, to the Christianized Armenian legend of the Lamp of the Saint Gregory the Illuminator (immortalized in Hovhannes Tumanian’s poem, *Lusavorchi kantege*) that the faithful can see shining above Mount Aragats. Argæus is shown also above a fire altar between two armed guardians, the latter a motif common on the later coins of the Sasanians.⁸ Though the worship of Argæus went back to extreme antiquity, the Zoroastrians of Cappadocia probably offered it reverence as they did to the other great mountains of Iran proper (note the dedication to Anahit “of high Hara” mentioned above): Parsi manuscripts down to comparatively recent times contain a short prayer, called in Gujarati *namaskar*, addressed to mountains generally.⁹ In Christian art,

⁷ See Jutta Börger-Klahn, “Mons Argaius und Papana, ‘Die Berge’,” *Anatolia and the Ancient Near East, Studies in Honor of Tahsin Özgüç* (1989), pp. 237-55. At Yazilikaya, the Hittite king Tudhaliya IV depicts himself upon a mountain, to signify his divine status.

⁸ See the drawings of Ayça Güler accompanying the article “Kappadokia ulusları ve Erciyes kültü,” in Oghuz Güler, *Antik çağın ikonografisinde Erciyes* (Istanbul: Arkeoloji ve Sanat Yayınları, 1995).

⁹ See Dastur K.M. Jamasp-Asa and M. Nawabi, eds., *MS T3: Nirangs, Afrins, and Prayers, Pahlavi Codices and Iranian Researches*, vol. 28 (Shiraz: Asia Institute of Pahlavi University, 1976), pp. 67-68: *Azh hama gunah paitita pasha-hemanom vispao gairyo ashakhvathrao pourukhvathrao mazdadhata ashavano ashahe ratavo yaz(amaide). Ashem vohu (I), ahmai raescha*. “I repent and atone for all sins. We offer worship to all the mountains, who are abundant in the well-being of truth, created by Mazda, righteous and lords of righteousness.” This is followed by recitation of the mantric prayer “Truth is the best good” and the series of short prayer formulae beginning with “May I have abundance. . . .”

the Holy Cross is shown often on a stylized mountain: this could be, for Anatolians, both Golgotha and their own sacred mountain, whether Ararat or Argaeus. The transformation of such sacred images of the pagan past into icons of Christianity is illustrated clearly in the case of the Cappadocian figurines of the Roman period of the sacred eagle perched between the antlers of a stag: a fresco at a church in Cappadocian Mavruca, centuries later, shows Saint Eustathius on horseback, frozen, as a magnificent stag he has been hunting turns to face him, the Holy Cross between its antlers this time.¹⁰

The Urartians carved into rocky outcrops blind portals called “gates of the god:” the divinities were believed to dwell within the mountains. The gate at Tushpa, the center of the Urartian kingdom, with its encyclopedic inscription detailing the rites proper to the entire pantheon, was renamed by the Armenians *Mheri durn*, “the gate of Mithra,” and was enshrined in the national epic with the additional symbolic and narrative details that, taken together, show Armenia to have been the place of origination of the great Mithraic mystery-religion and fraternity of the Roman Imperial era. The Phrygians carved similar blind portals as well as tombs in their mountains, sometimes with the old Anatolian goddess Kybele as *potnia theron* with her two lions in relief on the “door;” and a Turkish scholar has proposed an Urartian origin for this practice.¹¹ It would have had to cross Cappadocia, where there are some rock-cut tombs but no Urartian-style “gates of the god.” Instead, the porous stone of the region allowed the Cappadocians to carve whole temples within the rock—the famous cave-churches of the country may perpetuate an Anatolian belief in the sacred space of a rock or mountain. Several Cappadocian coins, though, do depict Mount Argaeus with two grottoes: one at the base contains cult objects; the second, higher on the mountain face, sometimes contains a

¹⁰ For the fresco, see Luciano Giovannini, ed., *Arts of Cappadocia* (Geneva: Nagel, 1971), figs. 101, 103.

¹¹ See Fahri Isik, “Zur Entstehung der Phrygischen Felsdenkmäler,” *Anatolian Studies* 37 (1987):163-78. The old Anatolian myth of the birth of a god (Mithras!) or monster (Ullikummi) out of the rock seems to have traveled in the opposite direction, from west to east, through Armenia and specifically from there to the north Iranian epic of the Narts in the Caucasus. See Walter Burkert, “Von Ullikummi zum Kaukasus: Die Felsgeburt des Unholds,” *Würzburger Jahrbücher für die Altertumswissenschaft* 50 (1979): 253-61.

flame—suggesting perhaps a coalescing of Zoroastrian veneration for fire with the Anatolian belief in the mountain cave as the dwelling of the god. If Helios, often shown on coins standing on the summit of Argaeus with a globe in his right hand and a scepter in his left, represents Mithra, then one may see the reflection of a cult like that of the Armenian Mher in his cave.¹² As to the globe, this iconographic detail from the Greco-Roman tradition might indeed have been interpreted locally as the wheel of the Zodiac seen in Mithraic spelaea—the *charkh-e falak* “wheel of heavenly fate” Mher grasps, in his cave at Van.

Cappadocia weathered the short-lived Pontic Empire of Mithridates Eupator and the even briefer hegemony of Tigran II the Great of Armenia, who in 77 B.C. deported Mazacans to populate his new capital, Tigranakert/Tigranocerta. During the reign of Tiberius—when Jesus Christ was a teenager—Cappadocia was fully and permanently incorporated into the Roman Empire, in a way that Armenia, closer to Iran, never was. The indigenous languages of western and central Anatolia, several of which employed modified Greek alphabets, began to disappear after the second century A.D. Cappadocian still survived in the fourth: Saint Basil of Caesarea insists upon a doxology including at a certain point the conjunction “and,” which he has heard “Mesopotamians” use, apparently by grammatical necessity; and he adds, “Our Cappadocian dialect is similar; perhaps the Spirit foresaw how useful this word would be, when he gave the gift of tongues to the disciples!”¹³ In his *Letters*, from the 370’s, he de-

¹² See William E. Metcalf, *The Silver Coinage of Cappadocia, Vespasian-Commodus*, Numismatic Notes and Monographs no. 166 (New York: American Numismatic Society, 1996), pp. 9, 24, and plate 23.

¹³ Saint Basil the Great, *On the Holy Spirit* (Crestwood, NY: St. Vladimir’s Seminary Press, 1980), p. 112 (ch. 29.74). Karl Holl, “Das Fortleben der Volkssprachen in Kleinasien in Nachchristlicher Zeit,” *Hermes* 43 (1908): 240-54, connected the survival of local languages to the proliferation of heresies. But, as Speros Vryonis has pointed out, tomb inscriptions of known heretics were in Greek, and, if anything, Saint Basil’s mention of Cappadocian suggests equally that the undeveloped, unsophisticated character of the local languages might have guarded against the subtleties of some heretical doctrines for which Greek philosophical vocabulary could have served as a vector. It seems a great deal is known about heresy in Asia Minor, not because it did not exist elsewhere, but because there were so many pious pens there to record it, and so many ancient *agoras* and isolated valleys where it might be propagated or escape persecution and endure.

scribes the surviving Zoroastrian community of the Magousaioi and their beliefs and customs; he mentions also the Cappadocian name of a month, *Dathousa*—this is Avestan *Dathusho*, “of the Creator” (modern Persian *Dai*), and the names of the other months, preserved in other sources, are Zoroastrian, too.¹⁴ But there is no evidence of Cappadocian as a written language, nor did any of the Cappadocian Fathers perceive any need to read the Scriptures, preach the faith, or write theology in any language besides Greek.

Armenia, whose pre-Christian culture and institutions were so similar to Cappadocia’s, took a different road: on the other side of the Euphrates, the fractious *nakharars* and the hereditary high-priesthood of the Grigorians, a branch of the royal family (shades of Comana!), able better to balance the competing claims of the *duo imperia summa*, *Romanorum Parthorumque* (Pliny, *Natural History* 5.88), could control and limit to their advantage the Hellenization of their culture, as a counterweight to Iranian and Christian Syrian influences. But Armenia’s greater sense of isolation from the centers of Christendom also contributed to a nascent sense of unique, separate identity for which there is no evidence in Cappadocia or elsewhere in Anatolia. This nationalism expressed itself, not only in the Biblical paradigms of Daniel or the Maccabees, but also in the deliberate cultivation of such ethno-genetic myths as the tale of Hayk and Bel or the legends of the missions of the Apostles and the Illuminator, incrusting with the matter of heroic epic.

The Cappadocians, having succumbed once to Hellenization, were ripe, with the disintegration of Byzantine rule in Anatolia, for subsequent Turkification.¹⁵ Though Greek Christian communities survived in the region until 1923, they can scarcely be regarded as the bearers of an ancient Anatolian culture. The Armenians took another road, and it led to Mashtots. With the acquisition of a perfect alphabetic script, a sophisticated written language, and a critical mass of translated and original texts,

¹⁴ See Stephen Mitchell, *Anatolia: Land, Men, and Gods in Asia Minor*, vol. 1: *The Celts in Anatolia and the Impact of Roman Rule* (Oxford: Clarendon Press, 1993), pp. 170-76, on the indigenous languages.

¹⁵ On these processes, see Speros Vryonis, Jr., *The Decline of Medieval Hellenism in Asia Minor and the Process of Islamization from the Eleventh through the Fifteenth Century* (Berkeley and Los Angeles: University of California Press, 1971).

Armenia became, in the profoundest and most inviolable sense, independent and indestructible. It possessed an intellectual and spiritual identity sufficient unto itself yet subtle and flexible enough to experience infinite development without loss of self, no longer dependent on politics or place, impervious to co-optation by any imperial culture. The paths of Armenia and Cappadocia—both Anatolian, both rich in diverse cultures and beliefs, both of similar social structure, both converted to Christianity—diverged. Armenia took the road less traveled by, and that has made all the difference.

A Note on Armenian *hrmštk-el*

James R. Russell

Harvard University

Abstract

The hapax **framaštaq* in the Babylonian Talmud is a loan from a Middle Iranian slang word for the penis; from its base comes the common Armenian verb *hrmštkel*, “to shove in”, which is not attested in Classical texts and might have had an obscene connotation in ancient times that it no longer possesses.

Keywords

Slang, Babylonian Talmud, Sasanian dynasty, *Buzandaran*, *Köroghlu*, *framaštaq*, *marz-*, *mālīdan*, *hrmštkel*, *Alecander Romance*, *Bušāsf*, Paruyr Sevak

The Aramaic of the Babylonian Talmud is replete with Middle Iranian loan words, some of which reflect the same dialect variations as the Middle Iranian loans into Armenian of roughly the same period: *hraman* instead of *framān* for “command”, *navasard* instead of *nō sāl* for “new year”, and so on. The narratives in the text abound in Iranian themes, too; and in recent years a number of scholars, notably Daniel Sperber, Isaiah Gafni, Shaul Shaked, Yaakov Elman, and Geoffrey Herman have been exploring these. They are of interest to the study of ancient Armenia in both expected and unpredictable ways. For instance, we learn that in the fourth century the Sasanian monarch Šābuhr (Shapur II, r. AD 309-379) sat down to lunch with the Jewish Exilarch and the two august personages dined upon a single *ethrog*—a sort of citrus fruit used by Jews during the festival of Sukkot. This sounds rather silly on the face of it and it is probably an abbreviation: presumably they ate, and most definitely drank, a great deal more. The dessert of fruit is most likely to be understood as a kind of rhetorical shorthand for the comfortable intimacy of friendship and leisure the two men enjoyed. This was an enviable situation for the leader of a religious minority of course. In a world of swords and sabers one checked at the entrance to the

dining-tent or left with horse and groom, here they were concluding their meal, wielding a little fruit knife of peace.

Knowing that this shorthand was current and understandable to contemporary readers and listeners adds pathos to the already poignant scene of the death of the Armenian king Aršak II imprisoned by the same Šābuhr. One recalls that the epic narrative of P'awstos, the *Buzandaran*, leads one through a series of confrontations, each a set piece of oral *topoi*, at the climax of which the Armenian Arsacid was cast into the Fortress of Oblivion. There, thanks to the interventions of his faithful eunuch Drastamat, he was allowed to enjoy a last feast in the manner of kings: he reclined on pillows, watched dancing girls, and suddenly reached for a fruit knife and ended his life. Once we know the register of symbols, the little fruit knife as suicidal weapon becomes that much more tellingly poignant, that much sadder. And one might add that free men at feasts after they surrendered their heavier, longer blades were still allowed to retain in a scabbard strapped to the upper leg a sort of pocket dagger, in Armenian *nran*, which one explain from Iranian **ni-rāna*- literally "on the thigh". Aršak was lacking even this token weapon allowed any nobleman at any occasion. One mentioned pillows: in Parthian and Sasanian society, the more pillows one reclined upon at a feast, the more elevated one's rank was; and Armenian custom followed the practice, even using the standard Sasanian term for "pillow", *bališ*, to mean an honor bestowed. In the Middle Ages, the *khalat*, or robe, was to take place of the latter. So in the Talmud a Rabbi losing a disputation has one mat after another yanked away from underneath him till he dies—yet another example of how an image can be inverted to drive home a point in a standard tale.¹

Many are familiar with a cycle of epic tales about a Robin Hood-like figure called in Turkish *Köroğlu*, "Son of the Blind Man": multiple versions exist in Armenian, as well as the Turkic languages, Kurdish, and even Modern Greek.

¹ The *locus classicus* for the investigation of this technique is Professor Nina Garsoian's analysis of the transformation of Trdat the Great in the Agathangelos into a pig for his imprisonment of St. Gregory: here it is the royal *varaz*, the boar-totem of Verethraghna, that is inverted. I have proposed, in a study of the bas-reliefs on the drum of the Cathedral of the Holy Apostles, an inversion in the opposite direction in the same narrative cycle: the thirteenth "Apostle" is Gregory, beset by two serpents. These torture him as they do the imprisoned Zakhak; but the Christian saint will overcome them and emerge bringing salvation rather than apocalypse (see Russell 2004: 1165-1191).

The story begins with the father of the hero, who is master of the royal stables, being blinded. In ancient Iran, the *ākhwarrbed*, “stable master”, was part of the court hierarchy but also the lowliest courtier. Of Rabbi Yehuda I the Babylonian Talmud says, *Ahōrērē dā-Rabbī ‘atīr mi-Shābūr mālkā*, “The Rabbi’s stable-master [using a Persian loan word, the same as that found in Armenian] was richer than king Shapur”. So the office is a marked term whose meaning is best understood in its Parthian and early Sasanian context: it calls the attention of the listener to an epic or folk tale to what I would term a switching point in the narrative plot. That is, the son of the stable master can move either up or down in the social order. In this case the man is blinded for a supposed offense of *lèse majesté* and his son becomes a bandit-leader, an anti-king who dedicates his life to avenging his father’s unjust humiliation. The mention of the stable master is not so much Jewish hyperbole as Talmudic shorthand based upon the realia of Parthian and Sasanian society in Mesopotamia; and we can see how the topos, when understood in its Iranian context, serves as an anticipatory signal in the narrative from the Armenian highland from which the Kōroğlu cycle drew its core material.

Reuven Kipperwasser, a prominent Israeli Iranist and Talmudist, recently called my attention to a passage in tractate Mo’ed Qatan 18a of the Babylonian Talmud, in which Avitūl the Scribe (or maybe the Barber, there is some dispute about how to read his epithet) says in the name of Rav Papa that “the Pharaoh who lived in the time of Moses was one *amah* tall, his beard was one *amah* long, and his **framaštaq* was one *anah* and one *zereth* long”. This fulfills the prophet Daniel’s observation (Dan. 4.14) that God appoints the lowest of men over the kingdom of men, the text smugly observes. The average height of a man in the Talmud is four *amahs*; so the king of Egypt is a priapic dwarf. The text adds that he was a magus—a Zoroastrian. Prof. Martin Schwartz has proposed in correspondence for *framaštaq*, a hapax, a persuasive derivation from the base *marz-* “rub”, with preverb *fra-*. The base gives us both the Armenian loan *marzem* “exercise” and Persian *māl-īdan* “to rub” (so Persian-in-Turkish *peshtimal*, “back-rubber”, i.e., “towel”).² In the Armenian version of the Alexander Romance

² Jastrow explains Talmudic Aramaic *parmašt-aq* as *contractatus* or *extensus*, *membrum virile*, citing Pers. *parmāštak*. The latter New Persian form is not cited by Steingass, but one finds *parmās-īdan* “touch, extend” (Steingass). (The suggestion is cautiously advanced here that Turkish *parmak* “finger” may be the result of a loan from Iranian, digit and penis being typologically related.) This loan-word from Middle Iranian into the Aramaic of the Jews of Parthian or Sasanian Mesopotamia

the Egyptian Pharaoh Nectanebos is a rather pathetic figure: he dies by falling into a hole he has not noticed because he was too busy discoursing on the mysteries of the stars above, as the young Alexander observes with prim indifference. The hapless Egyptian is depicted as indecently lustful, too. When he meets the gullible Olympias, *i t'aguhiṇ macuceal karuc'aw aranc' t'ap'eloy, k'anzi ēr vawašamol i kanays* "at (the sight of) the queen he stiffened with an erection without ejaculating, for he was crazed by lust for women" (Simonyan 1989: 73).³

The Iranian term for the *membrum virile* found in the Talmud is not attested in modern Persian or Classical Armenian. But one recognized it at once as the source of the common modern Armenian denominative verb *hrmštk-el*, "to push or ram in hard". The word escaped the notice of both the great etymological lexicographers of the 20th century, Adjarian and Jahukyan; and it does not appear in the 19th century *Nor Baḡgirk'* since it is not attested in Classical Armenian texts. Yet it is self-evidently a loan into Armenian from northwestern Middle Iranian, probably in the Arsacid or early Sasanian period, a slangy term for penis that appears to have been fastidiously bypassed by Christian writers, even though its southwestern Middle Iranian form was judged suitable for the purposes of a scabrous, derogatory Talmudic yarn about the detestable, priapic

in the era of the compilation of the Babylonian Talmud may have been vocalized in fact as **framaštak*; and the Iran. form may be derived from OIr. **fra-mar-*, with a base H.W. Bailey suggested in his *Dictionary of Khotan Saka* could mean "mark, feel". Kohut proposes an etymology from the base *vaxš-* "grow, sprout" with preverb *fra-* "forth". Such a shift from *v* to *m* is normal, as is the reduction of the cluster *xš* to *š*; and the form is possible. Moreover, one notes that the base with prepositional *frā-* is indeed attested in Yašt 19.50, in a series of boastful physical threats against the man-dragon tyrant Dahāka after the latter has threatened the sacred fire: *frā θwqm zadangha uzuxšāne* "I'll mount both your buttocks!". Such a passage would have lent itself in popular tradition precisely to the kind of vulgar sexual jocularity one finds in the Talmudic passage. Prof. Martin Schwartz finds scant foundation for Bailey's understanding of the root as "feel" and argues that *mar-* cannot produce **maštak* in Parthian. (But one notes at least OIran. **fra-jar->* Arm., *via* Pth., *hra-žar-em*, "take one's leave of, reject" and *hražešt*, "farewell".) Schwartz instead proposes a derivation from the well-known base *marz-* "rub"—this is the root that produces New Persian *māl-īdan*. (One may recall the Arm. surname Peshtimaljian, from Pers.-in-Tk. "towel maker".) The latter is very well attested in Armenian of all periods, cf. *marz-em* "exercise", *marz-aran* "stadium", etc. In Pahlavi the base can have a sexual overtone, as in *kun-marz*, "anal intercourse", an activity of which the Zoroastrian books universally and sternly disapprove (unless, one supposes, one is Taxma Urupi or another Kayanian hero sticking it to Aži Dahāka).

³ Albert Wolohojian's English translation bowdlerizes the passage.

Egyptians. In this disregard for Egypt the Jews of Mesopotamia shared a sentiment with their Zoroastrian neighbors. The Pahlavi books call “Alexander the Accursed” (he is never “the Great”) *musrāyīg menišn*, “the Egypt-dweller”—clearly, the son of a fellow with endowments much like those of his ancestors. In Armenia, meanwhile, **hramaštak* would have endured down the ages in unrecorded vernacular usage, surfacing only when the latter began to be chronicled; and by then, only the derivative verb remained, its meaning having become innocuous. Such de-demonizations are fairly common, within the Iranian sphere: Asmussen long ago noted that the Avestan demoness of sloth, *Bušyqstā*, a personified optative “let it be (later)”, becomes a Judaeo-Persian common noun for sleep, *bušāsf*, which has no connotation of evil. And for the tendency to render innocuous sexually explicit expressions one might cite the Modern English example of “suck”. “This coffee sucks” means that the beverage tastes terrible, not that it has become mysteriously endowed with very unlikely erotic skills. (The lyric “where the bees suck” of the Bard in *The Tempest* has been ruined for this modern ear, which hears but a complaint about somehow inadequate insects.) Michael Adams, in his book *Slang: The People’s Poetry*, points out that the derogatory use of the verb actually had nothing to do with fellatio originally, though everybody polled wants, it seems, to think it does anyhow. *Fra-marz-*, *hrmštkel*, “shove it in”: *honi soit qui mal y pense*. We can recover something of the conversational language of ancient Armenia, and imagine some of the *topoi* of its storytelling, too, by looking at two kinds of sources: Irano-Talmudica and the modern Armenian lexicon; and by applying some of the methods of analysis of the folktale. The *hramaštak* signaled a lustful rascal of a king; an *axorāpet* minding the royal mounts was a low courtier about to get rich or rebel; one counted pillows and measured the tension of position and prestige; and a knife at table, depending on its size, was to be a symbol of amity or tragedy—Chekhov’s rifle on the wall that must be fired by the end of the play.

But the story does not end here for *hrmštk-el*. The study of Pahlavi and Talmudic Aramaic are enriched by a knowledge, not only of ancient Armenian, but of the modern language, as here. Those other tongues are dead, but Armenian is fertile and alive, and its literature evolves with old words and new imaginings; so we find forms of this verbal base, for instance, in the poem “Nightfall” (*Gišeramut*) of the great poet Paruyr Sevak (1924-1971), in his cycle *Etic’i hays*, (“Let there be light!”, (Sevak 1969: 32):

The automobiles
That seemed until now to be blind,
Blind as a cat's newborn brood
Now see one another and kindle their eyes.

And the silence already
Is thrusting all else aside
To clear itself its proper place
And from that long-drawn thrust
The mountains appear to have moved afar.

*'U lřut'yuna
Arden amen inč' hrmštorum ē,
Or iren hamar kargin teł bac'i,
Ev ayd tevakan hrmštoc'ic' ē,
Or heřac'ac en t'vum leřnera'.*

Loneliness, like Khayyam, is getting drunk,
Getting drunk and cursing God.
And now the good dogs' bark,
It seems, is not at all a barking but a prayer
Dispatched to blasphemed God
To ask Him that He pardon His abuser.

The dark becomes a wet sponge on the board
Erasing all the sky till heaven
Is slowly encrusted with hoar frost of stars.

And men begin to speak
Less, and more quietly,
Since the lights and the lamps
Tell more eloquent tales.
Every house sends forth
Its declaration to the sky
In the cry of a child,
A mother's call,
The animals',
The cars'
Telegraphic bleat and bark,
But above all else in these,
The lights that burn and blink, go out,
Unending, corresponding
To an alphabet, a new Morse code.

And then,
 When all these voices are already still—
 The lights, as well—
 It seems the time has come
 For the universe to respond:
 In sleep all men receive their answers
 In the shape of nightmares or good dreams.

 Good dreams alone to you, my darlings;
 Let your nightmares only come to me, your friend.

The verb becomes a part now of an introspective meditation on the way silence comes to a great city, Erevan, at dusk, the mountains in the darkness and the quiet seeming to recede. It is not merely de-demonized, but ennobled in its context. The poet, seemingly standing aside to perceive the esoteric language of the nightfall, emerges at the end beside us, a friend ready to shoulder even the weight of our nightmares. The scholarship of Professor Garnik Asatryan embraces all the provinces and ages touched upon in this philological note, and many more; but those who have rejoiced in his hospitality know a Parthian paradise on the plain of Ararat where good wine and conversation mingle with the magic night, and many are the burdens he has shouldered for us as a friend, like a titan on Masis or a hero of Sasun, for which our gratitude will have no end.

AN ARMENIAN SPIRIT OF TIME AND PLACE: THE ŠVOT

by

JAMES R. RUSSELL

Harvard University

To the memory of Dr. Nira Stone,
historian of Armenian art at the Hebrew University of Jerusalem, Israel;
beloved wife of the great Armenologist Prof. Michael Stone; and good friend.¹

Some outlaws live by the side of a lake
The minister's daughter's in love with the snake
Who lives in a well by the side of the road
Wake up, girl, we're almost home
We should see the gate by morning
We should be inside by evening

— Jim Morrison, “Not to touch the earth”.²

The *Švot*, or *švod* in Western Armenian, is a mythical creature of Armenian folk belief that lives during the colder months of the year in the walls of the house or the stable (*gom*). February is called “Švotsmoň”, *Švotamis*; and the rite of banishing the *Švot*, called “Švot-outing”, *Švotahan*, takes place the last night of February. *Švot (i) turs, Adar! Mart (i) ners!* “Out with the *Švot*; in with Adar (March)!” cries the lady of the house, banging on the wall of home or stable with a broom, her under-drawers (*vartik'*), or strips of leather. The *Švot* dislikes having to leave its cozy home for the warmer months of the year, and can be heard to complain. But it then dutifully, if perhaps grumpily, goes out into the family's fields to work. Presumably it returns the following winter to its comfortable lair in the wall.³ In Malatya (Gk. Melitēnē), Armenians

¹ This article was presented in abbreviated form as a paper at the Workshop on Armenian Folklore and Mythology (Cambridge, MA, August-September 2013) organized and hosted by the Mashtots Chair in Armenian Studies, Harvard University, and co-sponsored by the AIEA, SAS, NAASR, and ALMA. The workshop was dedicated to the memory of Dr. Nira Stone.

² Sugarman 1991, p. 89.

³ See Russell 1987, pp. 333-334. This paper expands considerably upon the data presented in that book; and my conclusions are now appreciably different in some respects.

believed the *Švot* was an invisible being that deceived people by leading them away to faraway places. This kind of *Švot* — if that were all it did — would then have to be a creature wholly of barren tracts or wastelands remote from human habitation, different from the house spirit described above. But this is probably not the case, and the report focuses on only one aspect of the spirit's activity. For according to beliefs recorded in various places, after being driven out of the house the *Švot* might try to sneak back in, in the form of a cat, or in the guise of a relative returning after a long absence. Then, in a mischievous or vindictive mood it might invite people out for a long walk, lead them astray, and abandon them.

As to its appearance, in Xarberd (Tk. Harput) the word *švot* was also used as a pejorative epithet for people with hideous (*aylandak*) faces; and in some places it was thought to be a demon or evil spirit as tall as a tree. As we shall see presently, the word might be applied to supernatural beings who were not house spirits at all and were very gruesome and terrifying indeed. Belief in the spirit was widespread over historical Armenia; and variants of the word in Armenian dialects include *šhod*, *šivod*, *šuvēd*, and *šuēt*. Armenians of Kesaria (Tk. Kayseri, i.e., Caesarea of Cappadocia where St. Basil lived) spoke of the *švot* as a spirit that appeared on the night of the Feast of the Presentation of Our Lord to the Temple (Arm. *Teaṛnəndaṛaṣ*).

The latter, celebrated on 13th February, is the Christian Armenian winter festival of fire equivalent to Western Candlemas, and comes in the month Ahekan of the ancient Armenian calendar, a name derived from from the Old Iranian **Āthrakāna*- "Fire festival". The late Professor Zaven Xaṛatyan of Erevan wrote an important essay on the *Švot* that I have offered in translation in full from the original Armenian as Appendix 1 of this study, providing additional data and important insights. He concluded that the *Švot* was a house spirit who lived indoors in the cold months, stimulated thoughts of love and procreation as springtime approached, and then went to the fields to help the family's crops grow. The great ethnographer Prof. Hranuš Xaṛatyan, kindly provided his publication to me and added one of her own on *Teaṛnəndaṛaṣ*, with data on the *Švot*. She reports: "The smoke and fire of *Teaṛnəndaṛaṣ* burned the spirits called *švot* and *xonjolo*z — demons that supposedly manifested themselves at the beginning of the new year and remained till this feast. After the evening meal the woman of the house would sprinkle a few drops of wax on her children's hats and other head-coverings from a candle kindled in church so that the spirit called *švot* might be unable to enter the house and take them away. In order to prevent the entry of the

švot the boards used to close the smoke-hole and window were smeared with ash from the bonfire. It was thought that a child born on the eve of *Teaṛnəndaraġ* would turn out very wicked and fiery since he had been ‘born with the fire’. Children born on that day or on Easter were called *lus-paron* (for a boy) [i.e., “Mister Light” — JRR] or *lus-tatun* (for a girl) [i.e., “Lady Light, with Tk. l-w *khatun* — JRR].”⁴ The custom seems to derive from the belief that in February the spirit acted lasciviously itself and put mischievous notions about love into the heads of the young; so the latter must be protected, though February’s child was evidently fated to be imbued with the proclivities of the house spirit in that transitional season. And as we shall see presently from the data from the village of Datem, the *Švot*, rather like Goethe’s Erbkönig, might entice or kidnap children. This would be of the same character as its propensity to lure people out of their houses, take long walks, and then abandon them.

The detail of the strips of leather used to drive the *Švot* outdoors in February is particularly telling, with respect to the association of the spirit with fertility. It ought to remind one of the *februa* and other rites of Lupercalia, when young, half-naked Roman youths ran through the streets flogging women with strips of the hide of a sacrificed goat to encourage procreation. Such riotous, lewd festivities involving flagellation have survived in various forms, notably in the Western Mardi Gras or Carnival; and there seem to be echoes also of these rites in its Armenian equivalent, *Bun Barekendan*, whose name might be translated as the Main (day) of Good Living, just before the Lenten fast.⁵ It is a feature that highlights the importance of the *Švot* to the physical wellbeing of the traditional agricultural household, with its livestock and its reliance on the fecundative renewal of nature at winter’s end. As one might expect with any seasonal observance, a coinciding date in the Christian calendar and a suitable etiology can be superimposed on a pre-existing feast; so accordingly some the Armenian rites are closest to those of their Zoroastrian substrates, and the fire festival of February bears an obvious affinity to the holiday that survives as the modern Iranian *jašn-e šadeh*, or “Feast of the hundred days” before the vernal New Year. Indeed, the Classical Armenian name of the holiday, *Teaṛnəndaraġ*, is shortened in some dialects to *Terəntez* and the like, perhaps partly under the influence of the

⁵ Cf. in particular the ritual cry, *Mort’ē zt’ot’ovn*, “*Flay the mumblor (goat)?”: on the rite in general and testimonia from the late medieval Armenian community of L’vov in Galicia (Poland/Ukraine), see Russell 2003.

unrelated but similar-sounding Iranian *Tirandāz*. People light a bonfire outdoors from tapers brought from within the church and leap over it, crying out *meṛelēd*, “from your dying”. (The name of the fire itself in various places has taken on various deformations of this word, such as *melemet*.) That is, the celebrants hope the fire will transfer its warmth and strength to them, even as by kindling it they warm the earth itself in mid-winter and look forward to spring. But the ritual word may also have had reference at one time to the spirits of the departed, Clas. Arm. *meṛeloc*’. This is significant if in fact the *Švot* was the spirit of a great, departed ancestor, as is the case with the similar Russian house spirit, the *domovoi*. And in pre-Christian Armenia spirits that received the honorific *šahapet*, “ruler of a realm”, had a particular chthonian connection — relevant to the otherworld and to the fertility of the earth.

But to return to the bonfire, as it begins to smolder, people take embers from the fire (or, as we have seen, candles kindled in church) and carry them home to their own hearths. Village Armenians believed that if they brought home the half-burned logs of the *Melemet* [fire], those would expel the *švot* from their homes — a process evidently completed with the *Švotahan*. In one Armenian village the night of the *Melemet* of *Tearnāndaraj* was itself called *Švot*’s night (*Švoti gišera*), and *švots* were believed then to enter the bellies of cats.⁶

One may add here to the dossier some interesting data on the *Švot* that have hitherto not been adequately considered by scholars: we travel first to a little Armenian hamlet. The Western Armenian village of Datem

⁶ *Hayoc’ lezvi barbaṭayin baṭaran* [“Dialect dictionary of the Armenian language”], Vol. 4, Erevan: Armenian Academy of Sciences, 2007, p. 283 et seq., s.v. *švod*, *švotahan*, *švotamis*. Nowadays no study of folkloric belief is complete without a foray into the dark forests of the Internet; so, my virtual horse snorting nervously, my knuckles white on my digital lance, I rode into Google and found this entry at Mythbeasts.com: “Shvod, Mythical Number: #2991, Culture: Eastern European, Attribute: Humanoid, Attribute: Domestic, Attribute: Rural, Behaviour: Friendly. A household creature from old Armenian beliefs. They choose a family and inhabit their house over the Winter period. They protect the home and its property. However their real work is outdoors where during the summer they help tend the animals and crops. The Shvod tend to get very used to the warmth of the house during Winter, and so on the last day of February it is customary to use sticks and other soft tools to beat the interior walls of the house to disturb the Shvod. The frustrated creature then leaves the house to start work on the farm.

(Shvod has been rated 0 stars) 5 Stars = I want Shvod as my pet! 4 Stars = Awesome. 3 Stars = Interesting. 2 Stars = Nothing special. 1 Star = Best left as a forgotten myth. [Poor Shvod! What is it with those other thirty viewers? — JRR]”

(pronounced /Tadem/ by its people, whose descendants still call themselves Tademts'is) belonged in antiquity to the Lesser Armenian principality of Sophene (Arm. Cop'k') and the region of Anzitēnē (Arm. Hanjit').⁷ Contiguous to Cappadocia, and, later, the Byzantine frontier regions, it was a place where Armenians rubbed shoulders with Greeks and with speakers of Aramaic, the Christian Assyrians. The genocidal murder of the Armenians in their ancient homeland by Ottoman Turkey in the First World War and the subsequent ethnic cleansing of Anatolia by the successor state, the Republic of Turkey, entirely obliterated Datem and the hundreds of other Armenian cities and towns of the region. Many of the Tademts'i refugees and survivors settled, like those of nearby Xarberd (Tk. Harput) and its environs, in the industrial centers of New England, particularly in and around Boston, Massachusetts. But in the early 20th century there had been over 1450 Armenian inhabitants of Datem; attached to the church of St. Astuacacin (i.e., Theotokos, the Holy Mother of God) was a school where about a hundred pupils were enrolled. Nearby stood the principal monastery, Datemavank' (Arm. *vank'*, "monastery"), which is reputed by local tradition to have been built by St. Thaddeus the Apostle (Thierry dates the present ruins to the 16th century); the church of St. Astuacacin has been dated to the seventh century or earlier.⁸

Though the still-flourishing village in the early years of the last century was fairly obscure, it had evidently been a place of greater importance in antiquity. The monastery was at one time the seat of a bishop; and the memorial volume (Arm. *yušamatean*) of the village asserts that Datemu [*vank'*] was one of the four great historical monasteries of Sophene, the other three being Zardarič'(), Sorsəray, and Xulay.⁹ George of Cyprus

⁷ *Hayastani ev harakic' šrjanneri telanunneri baġaran* ["Dictionary of the toponyms of Armenia and adjacent regions"], Erevan, 1988, vol. 2, p. 47 gives the variants Datem, Dadim, Dadima, Datemaberđ, Datim, Datma, T'adem, and T'atem.

⁸ Thierry 1993, p. 24 no. 116, Datemavank' (variant T'ikativank, Greek Dadima): there is a photograph in Parsegian, *Armenian Architecture* (photoarchive), vol. 6, no. 106.

⁹ Mxit'arean 1958, p. 24. Some two hundred *yušamateanner* ("memorial books") of the martyred provinces, cities, towns, and small villages of Western Armenia exist in print. Although the Armenian Genocide of 1895-1896 and 1915-1922 was unprecedented in the history of the ancient nation, indeed in human affairs, medieval Armenian literature, from long chronologies and histories to shorter colophons, is replete with narratives of loss and disaster. The genre of the *olb*, or historical lament, is very old; and in the nineteenth century ethnographers developed methods, and founded numerous journals and monograph series, to record the many facets of a way of life already disappearing. So, like the Jewish *yizkōr bikher* "memorial books" (Yiddish) compiled in the wake of the pogroms after the First World War and the wholesale slaughter of the Second, which draw upon the existing genres of lamentation, of ethnographic writing, and, not least, on *pinkasim* — community ledgers — the Armenian books such as Mxit'arean's are both old and new. At my suggestion

mentions, moreover, that Dadima, as the village was called in Greek, was the seat of a Metropolitan of the Greek church.¹⁰ Though the site has not been excavated, Byzantine pottery and coins have been found at the fortress, Datemaberd, which towered over the village. To the west of it flowed the spring of St. Yovhannēs; and Greek inscriptions cover the ruined church of the same name. The church was a place of local pilgrimage; and Armenians, Turks, and Kurds believed the spring to possess curative powers. A six-to-seven-hundred-meter-high hill crowned by the ruins of the aforementioned Datemaberd (Arm. *berd*, “fortress”) rose over the new town, which lay east of older ruins. The fortress itself was square in plan, with thirty-foot towers.¹¹

Datem is of particular interest to students of Armenian ethnography and religion because of its traditions concerning the *Švot*, which the Tademts’is themselves would pronounce as /shəvód/. South of the small, domed shrine of the Forty Martyrs near the village, writes G. Mxit’arean (Mkhitarian), the compiler of the memorial volume of Datem, “was the so-called *Švot* hillock (*blak*), about which innumerable tales are told. There is a small spring there, about which it is said that if little children wish to bathe in its waters, they are pulled into the spring and cannot return. To the west of the *Švot* stone (*k’ar*) is the little expanse called Haramik, which is ringed by mountains. There are two springs there, and hillside lands that belonged in our day to P’ehlivān [i.e., “brave or strong man”, from Persian *pahlavān*] Gōgo and to the priest, Fr. Gurgēn.”¹² Another spring near Datem was Šōš, whose bitter, salty waters were used in medicine. Haramik is remembered as the name of a *marzpan* [i.e., MPers. *marzbān*, a provincial governor of Armenia in the mid-Sasanian period].¹³ From the above references to bishops, metropolitans, and Sasanian satraps, as well as from the physical evidence of the fortress and the monastery and churches, it would seem Datem was a town of considerable importance in antiquity.

my doctoral pupil Christian Millian has begun work on a thesis on the *yušamatean* genre: this has not, to the best of my knowledge, been undertaken before, though at least one fully catalogued Massachusetts collection of the memorial books exists, and there is now a research website on Armenian memorial books as well.

¹⁰ Mxit’arean 1958, p. 25.

¹¹ Mxit’arean 1958, pp. 21–22.

¹² Mxit’arean 1958, p. 23. *Hayastani ev harakic’ šrjanneri telanunneri baġaran* [“Dictionary of toponyms of Armenia and contiguous regions”], *op. cit.*, Vol. 4, p. 154, describes as abundant the spring that flowed from *Švot*, a hill (*blur*) below Datem.

¹³ Mxit’arean 1958, p. 27. The name Haramik is not recorded in the dictionary of Armenian proper names of H. Ačaġean. It would seem to be the common Arabic term for a sacred or forbidden enclosure, with Arm. diminutive suffix *-ik*, perhaps referring to the feared and respected *Švot* whose hillock stood nearby.

As to the name of Datem, the native Armenian folk etymological tradition derives it from a law court, *datastan*, reputed to have been there in olden days. The latter word is an Iranian loan and the tradition may be not far off the mark, if one considers a possible derivation from the fairly important and widespread Old Persian personal name *Dātama. There was an Achaemenid satrap of Cappadocia, known in Greek as Datamēs, in the early fourth century BC, who rebelled against the king and captured cities in Pontus on the Black Sea coast.¹⁴ The pioneering scholar of Iranian onomastics Prof. Ferdinand Justi, writing in the late 19th century, mentioned another person with the same name (and a different Greek nominative ending), Datamas, who appears in the *Cyropaideia* of Xenophon (which also mentions an Armenian, Tigranes, as the bosom friend of Cyrus), and as an abbreviated attestation of the form cited the form DATAM in Greek on coins. He considered the name a possible abbreviation of *Dātamithra-, with OP. *dāta-*, “created, given” or “law, judgment” and Mithra. The much more frequently and widely attested compound with these two elements in reverse order is of course Mithradāta- “created by Mithra”, Gk. Mithridatēs, New Persian Mihrdād, Milād. Mithradates VI Eupator of Pontus, indisputably the most famous bearer of this very popular name, was the father-in-law of the Armenian Artaxiad king Tigran II the Great (95-56 BC). The name *Dātamithra- can be interpreted as “Mithra the Judge” or “Judged by Mithra”.¹⁵ Writing more recently, Prof. Manfred Mayrhofer, in agreement with Justi’s analysis, considers OP. *Dātama, attested as Elamite Daddama, a shortening of Dātamithra and one of a number of such “zweistämmige Kosenamen”.¹⁶ If the name of Datem is not Iranian in origin, but still comes from a human proper name, it might be derived in part from an old Anatolian form containing the element Dada-: Zgusta cites, for instance, the personal names Dadas, Daddos, Dadeas, Dadeis, Dadē, Dadēs, and Dadōn. He notes also a Greek inscription from Athens that mentions one Dadatēs *Kappadōx* (i.e., the Cappadocian), which “est plutôt un nom indigène de la Cappadoce, avec peut-être l’adaptation à la terminaison des composés iraniens”.¹⁷ This is possible; but the name Dadatēs might also be an Iranian theophoric form with the element *dāta-* with a hypocoristic or haplological abbreviated form of the divine name *Dathusa*. In his *Letters*, from the 370’s, St. Basil

of Caesarea of Cappadocia describes the surviving Zoroastrian community of the *Magousaioi* and their beliefs and customs in his native land; and he mentions also the Cappadocian name of a month, *Dathousa* — this is Avestan *Dāθušō* “of the Creator (Ahura Mazda)” (modern Persian *Dai*). The names of the other old Cappadocian months, preserved in other sources, including several Armenian lists, are Zoroastrian, too. An Iranian derivation for *Datem*, with its element *dat-*, is more likely than the Old Anatolian forms, all of which have *dad-*, unless the Armenian is itself a deformation of another form, such as the name of the place as attested in Greek, *Dadima*. Without a telltale suffix that clearly indicates the name of a city’s builder or ruler, such as the Middle Iranian *-kert* “built by” (the Parthians indeed had a *Mithradātkart*; and there was Armenian *Tigranakert*) or *-āpāt* “idem” (cf. Arm. *Vaṭaršapat*, “built by Vologases”) or *-šat* “joy of” (cf. Arm. *Artašat*, “Joy of Artaxias”), one’s proposed derivation of the name of the place from that of a man remains hypothetical. *Datem* was more than an obscure village in antiquity; so if it did bear a man’s name, then he might have been a person of some wealth and importance, belonging to the local Iranian or iranized nobility. If that man was one of the several Achaemenid individuals named *Dātama* — a name that, as I suggest, means something like “Mithra the Judge” — then the local legend about a court, *datastan* (again locally pronounced, of course, *tadastan*), might be more than a mixture of creative *Volksetymologie* and memory of *Datem*’s past greatness. It might preserve a grain of historical truth.

In *Datem*, reports *Mxit’arean*, “*Melemēt* caused people great concern. They believed that during the days of Lent, the Evil spirit harassed people. All waited impatiently for this day. On the day of *Melemēt*, every woman, young bride, and girl threw the *Švot*’s Hat (*švoti gtakə*) they had knitted into the fire to defeat (*xap’anelu*) evil. The women and brides, or girls who had attained adulthood, would stitch together multi-colored canvas bags they filled with a pinch of salt, a few grains of wheat, a little piece of garlic, and a pinch of mustard (*anux*, for standard Arm. *ananux*). They took this bag to the church and prayed there. The newly-wed couples, numbering ten or fifteen every year, also took to the church a bundle of kindling and piled it in a broad space. They all waited for the service to end. At its conclusion the priest came out in his robe (*šurjaṛ*) surrounded by deacons and unordained ministers (*tirac’u*) with candles. They assembled on the steps of the church and then descended, candles lit, approaching the pile of kindling. A young man (*eritasard*), candle in hand, approached the priest, kissed his hand, lit his candle from the one

the priest held, and waited near him. The priest recited a prayer of protection (*Pahpanič'*)¹⁸ over the youth, who, kissing the Cross, went over to the pile of kindling and set fire to it. The priest then circled the bonfire thrice with the clerks, other followers, and the people. After this rite came the turn of the newly-weds. Each couple in turn, hand in hand, would circle the bonfire thrice. Before the performance of the circuit our grandmas waited with the Švot's Hats in hand — and when the priest upon recitation of his prayer of protection ordered the newly-weds to begin their perambulation about the bonfire, they all cast the hats into it, crying out and praying, 'Lord God, take away the Evil and bring the Good!' (*Tēr Astuac, Č'arə tanes ew Barin beres*). After this ritual a fearless youth kicked out the fire, wading right into it and scattering the embers about with his feet to break its power. Then all present began to kick at and scatter the burning sticks from all four sides and to pile into each other. Everyone tried to secure an ember to take home, in order to kindle a fire under his own roof to protect his home from the Evil one and from scorpions, and so that his chickens would lay eggs — in a word, so that Evil might be conquered and good things rain down on the home."¹⁹

Children playing too close to the spring that issued from Švot Hill were in danger of being kidnapped by the spirit; and adult Tademts'is, too, feared to look behind them on processions to the sacred shrines and springs on the edge of town, lest the Švot take them: "On the afternoon of Easter Saturday, people came out of church bearing candles: many wanted to go to S. Ōhannēs. The older women, taking the brides and girls with them, walked in pairs. The young men, also two by two, walked fifteen to twenty paces ahead, on condition that they not turn around. If anyone happened to look back, everybody to a man would cry out 'I have sinned, I have sinned' (*Melay, melay*), since they thought that the Evil one, the Švot, had nested in the boy's heart (*švotə ayd tūn srtin mēj t'arac ēr*). They believed that the Švot was even worse than Lot's wife and the person who turned back would be transformed into stone, like

¹⁸ This prayer was most likely the fifteenth stanza of the *Hawatov xostovanim* "I confess in faith" of St. Nersēs Šnorhali (d. 1173), which was also employed in talismans: "Christ, protector of all, my your sheltering right hand be over me, by day and by night, when I sit at home, when I walk in the road, when I sleep and when I wake, that I may never be swayed. And have mercy upon your creatures and upon me, of multitudinous sins." See Russell 2005. For the prayers by St. Grigor Narekac'i employed to protect the home against nocturnal assault by natural and supernatural creatures, see Appendix 7.

¹⁹ Mxit'arean 1958, p. 34.

the mountain Mnkalenc'.²⁰ When they reached the church of S. Ōhannēs, the boys still remained twenty paces away. The women entered the church, prayed, and piously lit candles, taking flat stones in the meantime from the ground and securing the candles to them. If it happened that the flat stone adhered to another on which many candles had left drops of wax before, it was considered a sign that the pilgrimage had been acceptable and the desire of the candle's owner would be fulfilled. The mother of a girl would immediately take a kerchief out of her pocket, cover the girl's head with it, and all would proceed to the stream, saying 'St. John, let the hair of your horse's tail shake two drops of water into my ears and fill them' (*Surb Ōhannēs, jiud poč'in mazovə erku kat'il jur lec'ur akanjīs*). The lucky girl would then make the sign of the Cross over her face. Wetting the little finger (*čkoyt'*) of her right hand she would sprinkle water on all the women and girls, conferring thanks...²¹ So at Datem the *Švot* was not only a house spirit, addressed with rites similar to those described by Hranuš Xaratian, but the powerful, chthonic, tutelary spirit of a hillock with a spring disappearing deep within the earth. And there, at the onset of spring, it put the young in mind of love — a true nature spirit of fertility.

And one may add to the material from Datem similar and striking testimony from the province of Dersim (Tk. Tunceli). Near the Armenian village of Artaber²² was *Švoti k'ar*, "Švot's Rock", a great, isolated

²⁰ one recalls here the nymphs of Leto or daughters of Goethe's *Erlkönig*! — enticed little children to their doom. And youths passing by in procession dared not look back at girls, lest the Švot entice and possess them. One recalls the lines of *The Rime of the Ancient Mariner* by Samuel Taylor Coleridge: "Like one, that on a lonesome road/ Doth walk in fear and dread,/ And having once turned round walks on,/ And turns no more his head;/ Because he knows, a frightful fiend/ Doth close behind him tread." (On the exorcism of an Armenian-speaking spirit in Coleridge's poem see J.R. Russell (1998,1999 [2000])).

²¹ Mxit'arean 1958, p. 36. St. John the Forerunner (Arm. *Surb Yovhannēs Karapet*) is here envisioned as a mounted warrior saint, like Sts. George, Sergius, and Theodore. The popularity and tenacity of this image in Armenian popular Christianity cannot be over-emphasized. The three traditional mounted warrior saints appear together, each spearing with a lance a prostrate enemy underfoot, in bas relief on the royal Arcrunid church of the Holy Cross on Ałt'amar island in lake Van; and in June 2011, at a rare book shop in Erevan, Armenia, just below the Matenadaran on Maštoc' Avenue, this writer purchased holy images of the three mounted saints, with printed prayers on the back to two, Georg and Sargis, featured in a rack of postcards for tourists. On the Armenian talismanic scrolls employed to protect women in childbirth from the attacks of Lilith, called *Al* or *T'pła(y)*, three mounted saints are shown pursuing the demoness. As for *Surb Karapet*, he is an extremely popular figure in Armenian folk belief as the successor to the warlike champion of the pre-Christian pantheon, Vahagn (Avestan *Vərəθraγna-*, Persian *Bahrām*).

²² Clearly an ancient name, with the suffix *-berd*, "fortress", appended to the truncated form of what could once have been a noble proper name of the Arsacid era or earlier such as *Artašēs*, *Artawazd*, *Artawan*, etc. with *Olr. Arta-* "Truth, Righteousness".

boulder about 50 meters high. People believed the *Švot* would kidnap a child, hurl it from the top of its rock to die, descend to drink its blood, bury the body, let the flesh rot, and then dig it up again and eat it. In the village of Parti in the same region it was believed that the *p'ir* (lit. “elder”, Pers. *pīr*; here an honorific for a revered tutelary spirit) of a sacred forest nearby had chased the *alk*'s and *Švots* into a subterranean tunnel. The warm mineral waters gushing from thence were believed to have been warmed and flavored by the fires the confined spirits kindled for themselves.²³

The origin of the word *Švot* itself is beyond reasonable dispute. Mardiros Ananikian and subsequent scholars accepted a derivation from Classical Armenian *šahapet*, a *genius loci* — spirit of place — whose name is of obvious, standard Middle Iranian derivation from the Mlr. of the Arsacid era, **šahrpet*, i.e., “ruler of a realm”. In the *Agathangelos*, fifth century, Tiridates the Great when interrogating St. Gregory the Illuminator asks ironically whether this Christ he preaches is some *šahapet geretzmanac'*, a tutelary ruling spirit of tombs. Eznik Kołbac'i, *Ełc ałandoc'* (“Refutation of sects”, 5th cent.; recent Western students of the text prefer *De Deo* to this traditional title assigned to the work), para. 137, suggests that Satan makes the *šahapet*, among other phenomena, look very large in order that people may worship it: *Ew aynpēs janay satanay zi zame-nayn ok' i barwok' aknkalut'enē vripec'usc'ē, ew i snoti yoys kapič'ē. Mecac'uc'anē yač's mardkan zvišaps, zi yoržam ahagink' erewesc'in omanc', ařnuc'un znosa i paštawn. Karcec'uc'anē t'e ew nhangk' inč' ic'en getoc', ew šahapetk' vayrac'. Ew yet karcec'uc'aneloy ink'n kerparani kam i višapi kerparans kam i nhangi imm ew i šahapeti, zi aynu zmardn yiwmē t'iwresc'ē.* “And in this manner Satan strives to make every one stray from expectation that is of good, and to bind them to vain hopes. He magnifies dragons in the eyes of men, so that when they may appear awesomely huge to some, they will make them an object of worship. He makes people think there are some sort of crocodiles²⁴ of rivers, and *šahapets* of the fields. And after making them think this, he himself takes the shape of a dragon, crocodile, or *šahapet*, so that he may cause man to err after him.”

²³ See Halačyan 1973, pp. 43, 66.

²⁴ NP. *nahang* or *nihang*, “crocodile” (from OIr. **ni-θanj-* “pull down”), whose existence in Mlr. as an Arm. l-w the text of Eznik here proves. One Arm. MS has *nahangi*; so the word is a homonym of the well-known Mlr. and Arm. *nahang* “province”.

In the high medieval period are mentioned *šahapetk' vayrac'*, that is, *šahapets* of outdoor places — tilled field, vineyards, and the like. And Step'an Malxaseanc' lists the additional, more recent forms *šaharik*, *šaharuni*, *šaharac'i* as “forest dweller, a spirit of the forests, a *šahapet* *vayrac'*”, recognizing that the term is a synonym of *šahapet* though unmarked by the element *-pet*, “lord, ruler” and cites (from Ačārean's entry on the term in the *Armenian Etymological Dictionary*, it would seem) a late mythological usage, *Koč'ec'aw siluanos, or ē šaharac'i, vasn' zi i šahar ew i mayris snaw*, “He was called Silvanus, that is, *šaharac'i*, since he was nurtured in the field (*šahar*) and in the forests.” The various citations of Ačārean in his discussion of *šahapet* make it plain that the term meant “ruler of a place”, whether of the fields (*vayrac'*), orchards (*aygeac'*), or — in the earliest attestation, from Agathangelos — of tombs (*gerezmanac'*). He cites approvingly an Indic parallel adduced by Hübschmann, *kshetrapāla-*, “guardian of a field”. But a derivation from OIr. **xšaθrapati-* is secure. As for *šaharik*, it would appear to derive from Mlr. *šahrig*, with the basic meaning “belonging/appertaining to the realm”. T'ovma Arcruni, 10th century, in his *Patmut'iwn tann Arcruneac'* (“History of the house of Arcrunik'”), reports that he met travellers from Aḫastan (possibly Zābolestān in Eastern Iran/Afghanistan) called *šaxrik'* (nom. pl.) who were *hamakdēn*, that is, sages who knew “all the (Zoroastrian) religion”. It is clear theirs was a noble title; and Mas'ūdī defines *al-šahārija*, the Arabic broken plural of sg. *šaharij*, from Mlr. **šah(a)rīg*, as a class of Sasnian officials chosen from amongst the landowners (*dehqān*).²⁵ It is possible then that the term *šahapet* was replaced at some point in the medieval period by two terms: the etymologically related and equally honorific *šaharik*, used of the supernatural creature as a tutelary spirit of outdoor regions; and *švot*, used of the creature — perhaps the very same one — when it lived in the house and was chased outdoors from there in the month of February, whose serendipitously coincident Aramaic name sounded like a truncated version of the Iranian titles.

It might be noted that terms such as *šaharik* and *švot* are not confined to ethnographical works but find their way into Armenian literature of the early 20th century: Armenians of this period were not the passive subjects of anthropological research but creators of high literary culture who reflected actively and creatively on their folk traditions and antiquities, fully possessing and assimilating them. The Western Armenian Symbolist poet Misak' Mecarenc' (Medzarents) was born in 1886 in

²⁵ See Russell 1987(a), p. 6.

the remote village of Bingeon on the Euphrates near Akn, a place where Armenians lived a life steeped in ancient tradition, almost untouched by Islam or Ottoman rule; he died at Constantinople in 1908 of consumption. A connoisseur of his people's antiquities, he uses *šaharik* to striking effect in two poems, perhaps the last breath, then, of the Classical *šahapet* in texts. (See Appendix 7.) The *švot* has a kind of literary afterlife-after-the-afterlife, too: Hmayeak Arameanc', a leader of the Hnč'ak party and author of *Veracnundi erkunk'ə* ("The birth pangs of renaissance"), wrote under the *nom de plume* M.T. Šwōt, as in *Krderə Tačkak'-Hayastanum (Azgagrakan niwt'er)* ("The Kurds in Turkish Armenia, Ethnographical Materials"), St. Petersburg: *Puškinian tparan* (Pushkin Publishing House), 1905.

The earliest (and sole) attestation of the Iranian form from which Armenian *šahapet* was to derive comes from a trilingual inscription of the Achaemenian period from Xanthos in Asia Minor. In the Aramaic text Iranian-in-Aramaic *ḥštrpty*, that is, Iranian **xšathrapati-*, "ruler of a realm", is given as the equivalent of the divinity named Apollo in the Greek and Lycian parallel versions. The Greek inscription also mentions prominently Leto and her progeny. The latter has an association with graves and her children are nymphs who live in springs; so the Iranian word might have been employed to focus on the chthonic associations of Apollo.

In an article on the inscription Prof. Martin Schwartz of Berkeley cites the discussion in my *Zoroastrianism in Armenia* of Arm. *šahapet* and makes a case for the Iranian word as an identification of a Median Nergal.²⁶ Even if *ḥštrpty* is to be considered pure Median, rather than a loan into Old Persian, which latter possibility is far more likely — not least when one considers that no documentary attestation of Median, not one inscription, is known to exist — there is no particular reason to suppose that this "*gemeiniranisch*" form, adopted like some other terms of rank by the Achaemenian Persians, either reflected or was intended to convey a specifically Median religious belief. Nor, indeed, would one expect an identifiably distinct Median presence to be asserted by the middle Achaemenian era amongst the Iranian nobility of Xanthos or elsewhere in central and western Anatolia, who hailed from diverse satrapies but served a Persian king. There is almost as little evidence of the religious beliefs and practices of the Medes as there is of their language: it is impossible for the time being to reconstruct these in any but the most hypothetical way.

²⁶ Schwartz 2005.

Though the Medes dwelt in continuous proximity to the older, greater civilizations of Assyria and central Mesopotamia, the few sources we have are silent about any Mesopotamian presence in the Median pantheon, whatever other stars there might have been in that mysterious constellation.

All this is not to say there cannot have been a Median Nergal; and Prof. Schwartz's surmise, steeped in both deep learning and an ingenious, intuitive grasp of all matters relating to Iranian and Near Eastern religious traditions, may well be right. But in his otherwise meticulous survey of the data he neglects to mention that there is, however, a very prominent *Armenian* Nergal. This is Tork' Angel, i.e. Tarhundas-Nergal.²⁷ In the fourth century AD, Shapur II sacked Armenian Arsacid tombs in the region of Angel Tun (Gk. Ingilēnē), which bore the name of this being. He seems to have had chthonic associations, then, but Armenians did not identify him with Apollo. They saved that syncretistic association for Mithra, probably because of the common and prominent solar aspect of the Greek and Iranian divinities; and the Greek inscription identifying the cyclopean statue of Mithras on the great platform before the *hierothēsis* of Antiochus of Commagene on the heights of Nemrut Dagħ calls the god Mithras-Apollo-Helios-Hermes. The Armenian Nergal is not referred to anywhere as a *šahapet*. Tork' Angel is discussed by this writer at length in both *Zoroastrianism in Armenia* (which Schwartz cites in connection with the word *šahapet*, as noted above) and in a few subsequent articles, particularly "Polyphemos Armenios". But, like the *Švot*, he is imagined as a powerful giant with frightful features, hence Movsēs Xorenac'i's *Volksetymologie* from Arm. *an-geł*, "not beautiful" — and the Armenian *Patmahayr*, "Father of history", adds that Tork' was known to heave, Cyclops-like, huge boulders at the ships of invaders. So in a way he was, also like the *Švot*, a protector of the home writ large.²⁸

The prominent Iranist Prof. Garnik Asatrian of Erevan University, an authority also on Armenian and Kurdish folklore, rightly accepts the derivation of Arm. *švot* and Cappadocian Greek *sifōtēs*, which he defines as "a class of house spirits", as well as Pers. *šifūt*, "a human-like demon; desert demon; mad, insane, maniac", as loans from Syriac *šəbat*, the name of the month of February, "traditionally considered to be the

²⁷ See Russell 1996-97, pp. 25-38.

²⁸ Russell 1996-1997 (continuing arguments advanced in J.R. Russell, "Tork' and Tarhu," *Proceedings of the Third International Conference on Armenian Linguistics*, Erevan, 1987, published Erevan, 1993).

period of the highest activity of evil beings.” But Asatrian derives from **xšathrapati-*, with the semantic influence of the word for “night”, the second element of Kurdish *mêrê şavê*, literally “the man of the night”, a naked giant who wanders the fields inflicting cattle-plague, who must be placated with sacrifices. He regards the latter as a demonized emanation of Mithra.²⁹ Armenian contains forms such as /*shəhót*/, /*shəvét*/ and /*shwét*/, preserving both an unstressed form of /*shah*/ in the first half of the compound and the -e- of /*pet*/ in the second half: a direct derivation from /*shahapet*/ is admittedly difficult, but possible. Armenian compounds in -*pet* “ruler, master” are, as one might expect, a rather dignified assemblage in which the sacerdotal Grigori *k’ahanayapet*, “chief priest”, rubs shoulders with the aristocratic Mamikonean *sparapet* “commander in chief” under the benevolent gaze of St. John the Forerunner, Yovhannēs *Karapet* — who, as we have seen, is both a sacred and a martial figure in Armenian folk belief.

Radical abbreviation and deformation of divine names subjected in folk belief to demonization is a very common phenomenon generally. Arm. *sandaramet*, for instance, is one of two loaned forms of the name Spēntā Ārmaitī, “Holy Devotion”, the one of the heptad of Aməša Spēntas, “Holy Immortals”, who presides over Mother Earth: *sandarametk’*, used only as a plural, becomes “the subterranean regions”, then hell; and *sond-ark’*, a class of demons bearing the truncated name of the former goddess, swarm out of the demonic hollows of her realm. The Cappadocian month-name *sondara* echoes the Armenian abbreviation; while in modern Persian the same month is now *Esfand*, with poor Ārmaitī gone altogether. The imprisoned king Artawazd was likened to another Ašxadar, whose name sounded perhaps similar, then becoming *šidar*, a class of chthonian

²⁹ G. Asatrian, “Šifūt,” *Etymological Dictionary of Persian*, Leiden: Brill, forthcoming. In conversation at Erevan, Armenia, June 2011, Prof. Asatrian ventured an alternative derivation from *čufūt*, a word for Jew often used pejoratively in Persian and Turkish, on analogy with Modern Greek *armenida*, a kind of demonic nymph, literally, and Armenian woman or girl. On the latter, and on Greek attitudes to Armenians in the Byzantine period, see Russell (1998, 1999 [2000]). But the connection with Jews was considered and rejected long ago by Ačaṙean and is not original. The most recent writer on the linguistic aspect of the question is Martirosyan 2010, pp. 778–779, who cites H. Ačaṙean’s mention of the dialect of Hačən (Hajin) in which Candlemas is called *šved*, i.e., *švor*; and he accepts Ačaṙean’s derivation of the latter from “February, the month of freedom from devils, the demon of February”, while rejecting folk Terdzas as a corruption or reinterpretation of [the canonical name of Candlemas,] *Teainəndarəj* [i.e., “before the Lord”, i.e., the Presentation of Our Lord to the Temple—JRR], and accepting instead a connection to Iranian Tīrandāz. [The latter term means “Shooting an arrow” and would thus refer, in Martirosyan’s view, to the hunter Orion—JRR.]

demons — the process of the shortening of the form assisted by analogy to — and contamination by — a Syriac word meaning “insane”. As we shall see presently, both *šidar* and *sandaramet* appear together, indeed, in a passage from the *Letters* of Grigor Magistros Pahlawuni, an erudite and prolix writer with a taste for rare and antique words and names, with a word containing *šuyt*, which may it turn derive from *švot*.

It is likely that the month-name *šəbaṭ* among the Aramaic-speaking neighbors of northwestern Iranians and Armenians colored the transformation of *šahapet* to both the Armenian *švot* with its variant forms and northwestern Iranian *šifūt*. The word *švot*, by which the house spirit was renamed — after February, because of the rites associated with it in that month — might have seemed acceptable to the Armenian ear as an abbreviated form of the old and honorific term *šahapet*, irrespective of its etymological and semantic difference; and certainly it was a being that inspired both respect and, sometimes, fearful unease. And the name is associated with the titanic, dangerous tutelary demons of both desolate rocky heights and murky chthonic depths. It surely meant much more than a house spirit who became frisky with the onset of spring and had to be driven out to work off his energy on the farm. The name evidently embraced whatever numina the *šahapet* once had described, benevolent and demonic, disturbingly violent and erotically fecundative.

There is another lexical item in Armenian of relevance to this investigation, particularly since it highlights the association of the *švot* — or at least the most prominent type of spirit so designated — with the rites of spring and their passions, so prominent to its role and its very name. Zaven Xaṛatyan (see App. 1) suggested on ethnographic grounds a connection of *švot* to Arm. *švayt* (Clas. Arm. *šuyt*), “*lascivius*, rowdy, lewd” — a word that well describes the revels of *Barekendan* in Armenia, *šbāṭ al-labbāṭ* “February the kicker” in the Lebanon (an idiom for which I am indebted to Prof. K. el-Rouayheb of Harvard), the madness of England’s March hares a few weeks later and farther north, or, as we shall see presently, the misbehavior of Russian *domovye* on the feast of St. John Climacus in April, northwards still. The word *švayt*, with its various derivatives (an inchoative verb in *-anam* for gluttony, an adjective in *-akan*), is of medieval attestation, found earliest in the sermons attributed to Catholicos Yovhannēs Mandakuni (5th cent.) but more likely three centuries newer; and Yovhannēs Catholicos uses it of the notorious Semiramis, Arm. *Šamiram*, whose lust brought the death of the Armenian king Ara the Beautiful.³⁰ I would

³⁰ See Russell 1984.

propose a linguistic approach: the word could, given its relatively late appearance in the Clas. Arm. lexicon, conceivably be an Arabic loan, a diminutive of the month-name pronounced /šəwaf/, so *šuyaf, hence late Clas. Arm. *šuyaf*, Mod. Arm. *švayt*, though the Arabic dictionaries make no mention of such a word, which could have been wholly colloquial or localized to the Syro-Armenian regions.³¹ But the formation of such a diminutive form is universal in Arabic, cf. the common name Ḥusayn, lit. “little Ḥasan”, or *umaylah* “cutie” (from *malih*, “salty”, cf., Arm. *alēk* “nice, cute”, lit. “little salty”).³² Grigor Magistros Pahlawuni, in his *T’ut’k’* (*Letters*), No. 22, p. 67, uses the word in a passage brimming with darkly sonorous demonological and chthonian imagery: ... *Asem ziard krkin matneac’ Tēr ztuns Mamikonean i jeṛs nora? Ew aha karcis kaskacanac’ mez eleal yaštišatay dic’ diwc’aznakan diwakan yarjakman, guc’ē sandarametakanin xzeal kapanac’, kam et’ē ijk’ kiwsoy hmayic’ diwt’ut’ean: ibrew aṛ i šawlovn yaruc’anen zSamuēl, kam šuyatakan šidarac’n šars šamandateal šohanan i veray mer.* “... Shall I relate how once more the Lord handed over to him again this Mamikonean house? And here you might think us to have suspected a demonic assault of the hero gods of Aštišat, as though they had severed the bonds of the infernal one,³³ or perhaps the witchcraft of magic sorceries, as when in the days of Saul they raise up Samuel,³⁴ or shadowy ranks of lascivious imprisoned demons³⁵ imperiously advancing upon us.”

³¹ One recalls that users and speakers of Syriac lived in proximity to — and often shared households with — Armenians down to modern times at Xarberd, Diyarbekir (Tigranakert), and many other centers of Armenian population. See Russell 1994(a), p. 235 n. 1 on the WArm. name Xač’ig attested in medieval Syriac script; and Russell 2004. From the time of the conquests of the seventh century Armenians were in constant contact also with speakers of Arabic.

³² For the second Arabic example I am indebted to my colleague, Prof. Khaled el-Rouayheb (in conversation, June 2013; his own surname is a diminutive of the same form of a word for a Christian priest). For Arm. *alēay* “salty” in the sense of “cute” translated with corresponding Arabic *malih*, see Russell 2013(a), pp. 195, 197.

³³ Arm. *sandarametakan*, “belonging to *sandaramet*”, i.e., Hades. The term derives from a SWMlr. form of the name of the Zoroastrian *Amaša Spanta*, or Holy Immortal creative divinity of the earth, Avestan *Spəntā Ārmaitī*, “Holy Devotion”, MPers. Spandārmad, NPers. Esfand. When the army of Trdat, following St. Gregory, attacked the temple of Vahagn at Aštišat, the “demons” fought back to preserve their sanctuary. After the sacking of the place and the consecration of a church dedicated to St. John the Baptist, some demons were sealed up beneath a chapel called the *diwtun*, “house of the demons”; and the *kaṭ dew*, “lame demon”, was condemned, Sisyphus-like, to empty ash daily into the river Aracani till his efforts dam its flow.

³⁴ The episode in which the king of Israel consulted the witch of Endor: 1 Samuel 28.3–25.

³⁵ The class of demons called *šidar(k’)* is associated with the imprisoned king Artawazd, who is to burst his bonds at the end of days: see discussion *supra*. Grigor Magistros,

Let us descend into these infernal regions to visit a pair of demonized Iranian gods with rhyming names whose myth is related to that of another pair, also rhyming, this time of Egyptian magicians with another well — and Armenian Christian exegesis was to associate the Pharaonic pair with the *Švot*. Wells are a way into the subterranean realm of Hades/*Sandaramet* and the submarine lair of the dragon, the *višap* — they, deep, dark, and dangerous, with a tinge of the magical and the apocalyptic. For Zoroastrians, though, the well represents the power of the Waters (Pers. *Ābān*, Parsi Zoroastrian *Ava*), whose creator-guardian is the *Aməša Spənta* (“Holy Immortal”) *Haurvatāt* (“Wholeness, Health”). This being is paired with the related (and rhyming) *Aməša Spənta* of the plants, *Amərətāt* (“Immortality”); so Pers. *Xordād/Amurdād* and Arm. *xorot-morot*. In Arm. the latter is the name of a flower that is placed in a pot of water on the eve of the Christian festival of the Ascension and is used magically, for divination about love and marriage. In Mumbai (Bombay) many Parsis visit the sacred Bhikha Behram well and offer a net made of flowers to the waters. Each of the thirty days of the Zoroastrian month bears the name of a divinity, as do the twelve months — the Mazdean calendar has no division of the month into weeks — and the sea shore and well are favored sites of pilgrimage on the day whose name coincides with the name of the month of the waters (Parsi Guj. *Avanu parab*: i.e., *Ava mahino Ava roj*). It is customary there to recite either the long hymn to the goddess *Arədvī Sūrā Anāhitā* (“The Damp, Powerful, Unblemished one”, who is associated with the waters, childbirth, and fertility; in Armenian, *Anahit*), the *Ābān yašt*, or the *Ābān niyāyišn*, a litany to the same divinity (Parsi Guj. *Ava yasht*, *Ava niyayesh*).³⁶ According to Qazvīnī (*Athār al-bilād* 2.202), the Jews and Christians at Babil (Babylon, i.e., Seleucia-Ctesiphon) held festivals during the year at a well named after the prophet Daniel. (This was perhaps an association with his confinement in the lions’ den; cf. the association of the latter with the well-like pit at Artašat, Xor Virap, where the patron saint of the Armenians, Gregory the Illuminator, languished for fifteen years.) The Muslim historian adds that this was called also the well of *Hārūt* and *Mārūt*.³⁷

in addition to choosing just the right demons — the confined sort — also constructs a series of alliterations in *š-*, employing a conceit of ancient Armenian poetry and later folk poetry that was appropriated also by Christian hymnographers; see Appendix 7.

³⁶ See Kreyenbroek and Munshi 2001, pp. 23, 73, 296.

³⁷ Cited by Morony 1984, p. 432 n. 3. Frescoes depicting a pair of magi or magicians bearing staffs flank the central niche for the cult statue of the tauroctony in the third-century Mithraeum of Dura Europos. They are not named in inscriptions; and for no

The *Qur'ān* mentions the two as demons, imprisoned in a well in Babel. They are permitted to teach magic to interested visitors, but only after warning the latter that what they are about to hear is untrue. Zoroastrianism was associated in the minds of ancient Greeks and Muslims alike with magic; so perhaps the Koranic passages merely demonize a well that was sacred to the two divinities.³⁸ However there is also a Jewish tradition, older in its origin than the Islamic one but developed through the medieval period, that has two fallen angels, Šemhazai or 'Azza, and 'Azzael (note again their rhyming names), confined and chained in a (presumably dry) well in the Mountains of Darkness beyond the river Sambatyon, the latter so named because it rests from casting up stones only on the Sabbath (Heb. and Arm. *šab(b)at* ('), Aram. *šambar*). A traveler desirous of meeting the two fallen angels is to agitate the chain, at which point a cat-like monster, the *unimata*, comes to inquire as to the purpose of his visit. If he replies that he wishes to learn magic, he is admitted and instructed for fifty days.³⁹ Magicians, enchanted lairs, clanking chains: it is an entrancing *topos*, and we find an echo in the evocation by Edmund Spenser (1552-1599) of the British mage Merlin in *The Faerie Queene*.⁴⁰

particularly convincing reason previous scholars have identified them as Zoroaster and Ostanes. It is interesting and suggestive in the present context, at least, that they are an identical pair. Perhaps their names rhymed, like those of Cautes and Cautopates.

³⁸ In the spirit of oppositionalism that structures the Zoroastrian world view, *Haurvatāt* and *Amərətāt* already seem to have rhyming demonic opponents in the villains Teresh and Zeres (personifications, in Iranian, of *Tairičā* and *Zairičā*, Drought and Jaundice), who appear in the Biblical Book of Esther, a text steeped in Iranian lore and associated with the rowdy early spring feast of Purim (see Russell 1990).

³⁹ See Russell 2013.

⁴⁰ *The Faerie Queene*, Book 3, Canto 3.8-9: Merlin entered the Glass House of Bardsey with the Nine Bards and the thirteen treasures of Britain; or went to the edifice Esplumear he had built, and vanished. Or the water-fairy Nimiane or Viviane lured him to imprisonment for eternity in a tomb of rock, where he forces demons to build for him a brazen wall. "And if thou euer happen that same way/ to travell, goe to see that dreadfull place: it is an hideous hollow caue (they say)/ Vnder a rocke that lyes a little space/ From the swift Barry, tumbling downe apace,/ Emongst the woodie hilles of Dyneuowre:/ but dare thou not, I charge, in any case,/ to enter into that same balefull Bowre,/ for fear the cruell Feends should the vnawares deouwre./ But standing high aloft, low lay thine care,/ and there such ghastly noise of yron chaines,/ and brasen Cauldrons thou shalt rombling heare,/ which thousand Sprights with long enduring paines/ doe tosse, that it will stoune thy feeble braines,/ and oftentimes great groves, and grievous stounds,/ when too huge toile and labour them constraines:/ and oftentimes loud strokes, and ringing sounds/ from vnder that deepe Rocke most horribly rebounds." See also Butler 1948, pp. 107-109. This passage is certainly a foreshadowing of the poetic vision of *Kubla Khan* by Coleridge.

There is a second rhyming pair of magicians in Jewish and Christian tradition, Jannes and Jambres: Egyptian brothers, invented as a kind of double foil to Moses and Aaron (since Exodus does not name the rival magicians at court). It was they who instructed Moses himself in the black art at the behest of the princess who had adopted him, yet he defeated his tutors in a contest at the court of Pharaoh. The latter legend is known in Armenian tradition (see Appendix 2). The *Penitence* of Cyprian of Antioch mentions Jannes and Jambres as well. The third-century Antiochene wizard ruefully acknowledges that the two Egyptians respected at least the finger of God; but he, who has not acknowledged it, deserves a fate worse than theirs. This text is the core of a small book of prayers, the *Kiprianos*, employed talismanically by Armenians; in Western magic it was employed till recent times as a manual of the black art.⁴¹ The two magicians are extra-Biblical, but the story is old; for the Damascus Document reflects an early stratum of the tradition, and it is often suggested that Artapanus, a Jewish author of the Hellenistic period (and the bearer of an Iranian name prominent in the Arsacid house), is the ultimate source of it.

The story of Jannes and Jambres entered Christian lore: the fourth-century *Lausiac History* of Palladius and the *Life* of the Egyptian saint Macarius contain somewhat different versions of the Christian hermit's journey to the *kēpotaphion* "garden-tomb" or *paradeisos* "paradise, enclosed garden" constructed by the two. It is an antitype of Eden, watered by three springs, with huge fruit-bearing trees, its gates guarded not by an angel but by a throng of lewd demons. Eden was where Adam and Eve married; in their *herkos ponēron*, or "evil enclosure", Jannes and Jambres in suitable contrast pondered the benefits of adultery. But to return to Macarius, the monk after gaining admittance to the place finds the magicians are long dead. He sees there a wilted pomegranate, a well, and a rusted chain (see Appendix 3; for the Armenian version, which mentions neither well nor chain, see Appendix 4). Though the Egyptian sorcerers are not confined but dead, the latter two details still recall the developed myth of Hārūt and Mārūt, or of 'Azza and 'Azrael in their pit with their chain and feline familiar; and Albert Pietersma has suggested that the Koranic myth might have developed on the basis of the story of Jannes and Jambres. The pomegranate recalls a passage in a commentary on the Qur'ān where Hārūt and Mārūt give a magic kernel to a woman wishing to learn magic, and a plant sprouts swiftly when she casts it to

⁴¹ See Davies 2009, p. 114 f.

earth. This legend, or a variant of it, may be a source of the curious Armenian belief that Jannes and Jambres brought the evil tobacco plant to mankind.⁴²

Two variants of the *Universal History* of Vardan, 13th century (see Appendix 5), and the strongly derivative *History* of Mxit'ar of Ayrivank' expand upon the tradition, adding the significant local, Armenian, detail of interest to our study: Jannes and Jambres drove the children of Israel into the desert, where over fifteen years they built the *draxt* (*paradeisos*). The two then sacrificed hundreds of boys to the demons (*dewk'*), most of whom then became obedient to sorcerers (*kaxardk'*). More boys were sacrificed to propitiate the rest; and the demons were then appointed to guard the place. However, the text adds, the demons are still disobedient in the month whose name is variously rendered as *šuat*, *šabat'*, and *šwōt* (no equivalent Armenian or Latin month name is given). The first form is a faithful rendering of February as it was pronounced in Aramaic. The second, Mxit'ar's, seems a *lectio facilior*;⁴³ but the third reproduces the

⁴² Pietersma 1994, p. 35. See also Pietersma and Lutz 1985, pp. 427-442. The passage from the Persian-language Lahore *Tafsīr* reads: "Khwāja Imām, may God be pleased with him, said: We heard it said in some commentaries, There came to 'Ā'īša, may God be pleased with her, a certain woman and said, My husband took another woman to wife and I am tormented by jealousy. A woman told me, I'll take you to a place where they will teach you something. You pronounce it over your husband and he will not even touch that other woman. At night she arrived, leading two of what could have been either cats or dogs, God knows. She mounted one and seated me on the other and off we went. We traveled till we reached a place where we saw two people suspended upside-down. She led me to them and left me there. They said: Do not learn what we say, or else you will become an unbeliever. But I said, I must learn it. If you have to, they said, then go to that furnace. And I saw a place like a furnace. When I went there I was frightened, turned around, and said, I went to the furnace. They replied, What, then, did you see? I said, I didn't see anything. They retorted, That means you didn't go there. So, go back! Don't learn or you'll become an unbeliever. I did not obey. So they said, Go on then, go right up to the furnace, to see. I didn't go all the way that second time either. I went up to the furnace only the third time, looked, and saw something like a horseman clothed in white. White cloth covered his head. He rose out of the furnace and flew up to the sky. I returned and related what I had seen. They said, That was your faith, and it flew up and away. Now learn. And they pronounced those words. I committed them to memory and returned home. As they taught me, I cast a kernel into the earth and pronounced those words. In the same instant a stalk grew, became green, rose, and started to sprout leaves. As soon as that plant appeared, I immediately repented." See Abdullaeva 2001, p. 84 and discussion in Russell 2013, pp. 471-472.

⁴³ This author used Vardan Arewelc'i as the principal source here: see Harut'yunyan 1985, p. 9. His additions seem attempts to rationalize the text in front of him, so a reading of an obscure Aramaic month-name as a commoner word, though the name of a day of the week, seems the sober suggestion. Mxit'ar wrote a *Ganj būn barekendānin*, a hymn for the eve of the great Lenten fast, though (L. Ališan, *Ayrarat*, Venice, 1890, pp. 350-351) and so must have known of the folk rites of this Armenian Mardi Gras, including perhaps

name exactly as we find it as the modern name of the Armenian spirit. The remark concluding the pericope suggests Vardan was perhaps attempting on the basis of learned apocryphal tradition to explain why the spirit or demon of Armenian folk belief misbehaves during one month of the year but is obedient for the rest: maybe the demons required still more sacrifices but did not get them! The problem of theodicy, after all, is that evil exists; but for the wicked the parallel (and practical) problem of theology, one might suggest, is that the forces of evil are not wholly under their control.

Armenians retained a lively and creative interest in the two Egyptian magicians: a poem, the earliest known manuscript of which is dated to the beginning of the 18th century, makes the claim that they planted tobacco in the Garden — though it is not clear which one, Eden or their antitype of it (see Appendix 6). The deadly weed is American in origin, but that did not deter the bold latter-day mythographer. The reason for this identification may be rooted in a detail of the legend that is not, however, attested to my knowledge in a known Armenian source: Jannes summoned the wise men of Egypt to see the quick-growing and abundant foliage of his “paradise”.⁴⁴ One thinks of the huge leaves and rapid growth of the tobacco plant, as well as, of course, its addictive and other deleterious properties. Or Armenians perhaps imagined the anti-*draxt* rather as the garden of Attalus, a luxuriant place of poisonous weeds, that was in later centuries and an ocean away to inspire the tale about Rapaccini’s daughter. And one of the demons interrogated in the *Testament of Solomon* (25.2-4) boasts, “I, king Solomon, am called Abezethibou... I was present at the time when Moses appeared before Pharaoh, king of Egypt, hardening his heart. I am the one whom Jannes and Jambres, those who opposed Moses in Egypt, called to their aid. I am the adversary of Moses in [performing]

those involving the expulsion of the *Švor*. A possible known and intended connection to the river Sambatyon, in the myth of ‘Azza and ‘Azrael, is still, then, enticing; and one recalls that Armenians knew well the Aramaic form, *Šambat*, of the name they used for Saturday, *Šabat* (Sunday is *Kiraki*, from Gk. *Kyriakē* (*hēmera*), “the Lord’s (day)”). In the West, witches are said to celebrate a Sabbath or Esbat — but unless Crusaders passing through Cilicia mentioned the superstition, which developed as a demonization of Jewish observance, it is unlikely Armenians knew of it. One tradition cited by Pietersma, p. 18, makes Jannes and Jambres the sons of Balaam and the princes of Midian. It will be of interest to some readers that in Clive Barker’s novel *Cabal*, Midian is the name given to a subterranean realm of outcasts, witches, and monsters ruled by Baphomet, the idol of medieval legend. But this Midian is in the New World, just outside Calgary. And the perspective is correspondingly enlightened, too, for its denizens are the heroes and the police, clergymen, and psychiatrists of the upper world are the true monsters.

⁴⁴ See Pietersma 1994, p. 52.

wonders and signs.” This text, with its helpful list of all seventy demons, their purposes, and their conjurations, has served as the basis for illustrated Armenian magical books — another source, then, for continuing interest in the Egyptian sorcerers.⁴⁵ One should add that Paradise was of enduring interest to Armenians since it was somewhere in (or above) the country: we have seen how Macarius visited the anti-*draxt*, but Armenian monks saw Eden from a distance and described it to St. Nersēs Šnorhali (“the Graceful”, d. 1173). MS 285 of the Armenian Patriarchate of Jerusalem, 15th century, a richly illuminated Armenian text of the *Lives* of the desert fathers, includes a picture of the scene, as well as legends of St. Macarius.⁴⁶ Armenian MSS of the Baptism of Christ often depict the shattering tablet of the Cheirograph of Adam and a little demon in the Jordan beneath the feet of our Lord — perhaps the former is none other than the helper of Jannes and Jambres!⁴⁷ In an eleventh-century English miniature, Mambres (i.e., Jambres) is shown conjuring his brother up from Hell: Jannes appears covered with tufted, shaggy hair: this is the mark of the Wild Man (Arm., *vayri mard*), and signifies the demonic properties of that monster of the open country in medieval European myth, who, quite like Armenian Švots, also both wickedly kidnaps children and benevolently tills the soil.⁴⁸

The essay by Xaratyán cited and translated here provides very wide comparativist data, whereas much of my own research has been limited to the specific dossier of Armenia and the Iranian and Biblical material of relevance to Armenian Christian origins. But since all happy families are happy in the same way, as a certain writer observed in another context, I would offer finally a few points of reflection on the Russian *domovoi* or

house spirit. It has some strikingly particular similarities to the Armenian *švot*. There is an association with the otherworld of the dead, since it is considered to be the ghost of a respected or primordial ancestor; cf. Christ called by Trdat a *šahapet* of tombs (with St. Gregory's clever assent) in Agathangelos, and the divine being designated as *xšāthrapati* and linked to the underworld, of ancient Iran. Indeed one of the Russian spirit's principal designations is *navnoi*, from *nav'*, a term for the after-life. And because the dead ancestor was a prominent man, the spirit is also given honorific titles: *khozyayin*, "chief"; *bol'shak*, "big one"; *gosudar'*, "sovereign", etc.; cf. the title *šahapet*, the title in ancient Iranian usage of a divinity. The *domovoi* can appear in various forms: as a man covered with shaggy fur, as a member of the family, even as a pig riding a horse in circles. But he is not titanic in stature.⁴⁹ There is a vast corpus of stories and beliefs about him.⁵⁰ He dwells in the *pech'*, the hearth, at the very center of the home. The *domovoi* is in general a benevolent spirit, though, its principal concern the wealth and well being of the household, especially the livestock; and here one perceives a similarity to the agricultural concerns of the Armenian *švot*. Its name day is the feast of St. Ephrem the Syrian (Rus. *Efrem Sirin*), 7 Feb. O.S. — that is, roughly the time of Lupercalia, Candlemas, and Arm. *Teaṛnəndaṛaġ*; and "it is precisely in February that unclean spirits who have forced their way out of the lower world carouse freely" (*imenno v fevrale svobodno razgulyvayut vyrvavshiesya iz nizhnego mira nechistye dukhi*). So the name day fixed period when the disruptive, procreative energy of nature is associated with the spirit, though its own misbehavior comes later, with the later spring-time of the Russian land. On 5 April O.S., the feast of St. John Climacus (Rus. *Ioann Lestvichnik*), *domovye* do not recognize their own, act up, and annoy the animals: people speculate that the spirit feels the sap of the northern spring and wants to bed a witch (*ved'ma*).⁵¹

The comparison of the Armenian and Russian phenomena does not suggest (and is not intended to imply) a genetic connection, even though the two peoples practice an eastern type of Christianity, both belong to old and fairly close branches of the Indo-European tree, and for many

⁴⁹ This might suggest that there was no substrate in which the *domovoi* was divinized. From the Irano-Greek gods on their throne at Nemrut Dagħ in Commagene to the monolithic *moai* of the royal ancestors on the *ahus* of Rapa Nui (Easter Island), the gods are always *big*.

⁵⁰ Novichkova 1993, p. 130 f.

⁵¹ See Nikitina 2006, pp. 13, 14 n. 3, 15, 25-26, 34.

centuries they have been culturally and politically close. Their similarity seems, rather, to be functional; and these functions afford a point at which to conclude, since they are likewise diverse, likewise determined by intricate links to both space and time. The Armenian spirit likewise has a connection to the otherworld, is greatly respected, and dwells in the house but also has an important role to play outside its walls. This function has to do with procreation — hence the association with the mischief of February — and with agricultural fertility — hence the ritualized transition of the *Švot* to the outdoors in the same month. The spirit has, thus, multiple functions as a *genius loci* and a *Zeitgeist*, a spirit of place and a spirit of time. The adoption by Armenians of the name *Švot*, with its fortuitous resemblance to the term *šahapet*, an epithet used, it would seem, of a variety of tutelary nature spirits, chthonian deities, and divinized ancestors of titanic stature inspiring both pious affection and noumenous dread, might have begun to gain a footing as early as the eighth century, if the explanation of *šuyt* proposed here prove to be correct. But the texts of Vardan Arewelc'i and Mxit'ar Ayrivanec'i from the thirteenth century, examined here for the first time I believe with regard to this problem, push back the first *testimonia* for the *Švot* six centuries before the ethnographical data compiled in pre-Genocide Armenia. The *Švot* of recent times is usually a house spirit with its February frolics, but, as we have seen, could be also a dangerous supernatural being inhabiting a rock or stream — the word still covering the range, then, of the *šahapet* of old.

This documentation would suggest that one reason for the eclipse or diminution (literally and figuratively, with the truncation of the word) of the term *šahapet* and the rise to general usage of *Švot* might have been the association of the spirit overwhelmingly with the folk rites sanctioned by the Christian church in connection with the feasts of the Presentation of Our Lord to the Temple (*Teaṛnədaṛaṣ*) and Shrove Tuesday (*Bun Barekendan*). And this would have happened at a time when the rich mythology of the Christian faith had finally and fully taken root in Armenia and captured the popular imagination: Jannes and Jambres, their busy demons, and eventually, even their enjoyable smoke weed. But for all that, behind the *Švot* and its vernal revels looms the earlier *šahapet*, master of the realm, the family hearth, the warm stables, the fields and pastures, outward and into the past, of the formative Achaemenian and Arsacid epochs and the immemorial ages of an Armenian antiquity that, like its powerful and unquiet spirits, endures in its folk lore and folk life.

APPENDICES

1. An ethnographical study of the *švot*. Zaven V. Xařatyan 1989, p. 44 f.:

“... The idea of a house spirit was embodied in all the objects and members of the family that to a greater or lesser extent were connected with the family’s wellbeing; but for all that did not have a defined, strictly fixed personification. We may add also that the Armenians had the custom of selecting for the role of protector of the family, aside from the house spirits mentioned, one or another Christian saint. This attests to the rootedness in tradition of the idea of a patron or protector of the house and the family.

According to the conceptions of the Armenians, there existed also a certain demon who was capable of bringing harm to the family’s affairs. According to the report of G. Bunatov, this spirit ‘... is active only at the beginning of March and is called *švod*. He, like all spirits, can take any sort of appearance. The *švod*, in order to sneak into dwellings, takes the form of a cat, enters the house without any obstacle, and brings in frost with it. The day particularly favored by the *švod* is the first of March: for this reason, peasants open the doors wide on that day and beat all the corners and walls of the house with sheepskins and switches, repeating *Švod durs, mard ners* (“*Švod* go away; man, come in” [i.e., understood as Arm. mard “man”, not mart “March” — JRR]). After this, they draw lines around the corners and around the pillars, and put a plate of iron at the doors, so that the *švod* may not enter the room. In this way the *švod*, denied admission to the dwelling, wanders through the fields. Usually it is known to the *švod* who is absent and from the house of what family, so at night he assumes the form of the absent relative and asks in that one’s voice that they open the doors. Through deceit he then compels the one who opened the doors to him to wander together with him through the fields till dawn. For this reason on the first of March all members of the family must be gathered at home so the *švod* is unable to trick anybody. The Armenians also call frost and the month of February *švod*.” [N. 59: G. Bunatov, *Iz poverii, predrassudkov, i narodnykh primet armyan Echmiadzinskogo uezda* (“Some of the beliefs, prejudices, and folk superstitions of the Armenians of the Echmiadzin district”), *Sbornik materialov dlya opisaniya mestnostei i plemën Kavkaza* (“Collection of materials for a description of the localities and tribes of the Caucasus”), Vol. 17, Tiflis, 1893, p. 117.]

The people of Nor Bayazet called this spirit *švot*. Here they described it as ‘... a spirit thin and tall, clothed in a white shirt. Unlike Satan, he is not immortal, but he is born and does multiply. He is not an opponent of God, but, rather, prays to Him. In the winter he dwells in houses; and in the summer, he goes to the tilled plots and fields. In February his blood warms, and he bewitches people with erotic dream-visions. In [p. 45] February cats start to meow, because they can see the *švot*, who comes in and out of the house. The inhabitants chase out the *švot* with calfskins, saying *Švod durs, mart ners* (“*Švod* out; March, come in!”) [N. 60: E. Lalayean, *Nor Bayazet, Azgagrakan Handēs* (“Ethnographic Journal”), No. 17, p. 107.]

In Muš it was believed that ‘*švots* live in groups and appear in the month of *švat* (Arabic *šubat*, ‘February’); on the evening of the last day of this month people draw a line around the *erdik*’s [i.e., the smoke-hole in the squinch-formed

dome supported by four pillars, above the hearth at the center of a traditional Armenian house or *glxatun* — JRR] and thresholds of all dwellings, and when it gets dark they take a apron, striking the pillars of the room and all the walls with it, to chase out the *švots*, while repeating at the same time *Švotn i durs, Martēn i ners* (“*Švot* out; March, come in!”). Then they place the iron cross from the *t’onir* [the earth-oven at the hearth — JRR] at the threshold of the entrance-doors; while the lines drawn around the *erdik* prevents their return through that entry.’

In Vaspurakan this spirit was known by the name *p’uṛdik* or *pupušik*. Here the man of the house, winding a goatskin around his head, would take a sheepskin in one hand and a sickle in the other, and, striking all the walls with the skin, would say, ‘*P’uṛdik*’, out! *P’uṛdik*’, out!’ Coming up to the front door, he would say, ‘*P’uṛdik*’, go to the pastures, to the cool springs, to the green fields...’ after which he would shut the door at once. In order to prevent the *p’uṛdik* from climbing back into the house through the smoke-hole, they would cover the latter in advance with two sticks in the form of a Cross.

According to these beliefs, *švots* living in stables are particularly tenacious: in order to drive them out, people would strike the animals and the walls of the stable with a wineskin full of little stones to make a noise, repeating ‘*Švot* out; March, come in!’

In some places people did not believe in February dreams, considering them false and unreliable, since they could have been dictated by a *švot*.

In the popular conceptions about the *švot/d* presented here the following basic motifs stand out:

1. The *švot* was considered an evil spirit and was associated with cold, and therefore people drove him out of dwellings at the end of February or the beginning of March.
2. The *švot* caused people to have erotic dreams.
3. The image of the *švot* was closely associated with the Cat.

In analyzing the connection of the *švot* to cold, one notes the characteristic mythological images of old women personifying cold among the mountain Tajiks and the Uzbeks of Khwarazm: these were associated with a short period of frost that preceded the arrival of spring. It is true that the image of an old woman bearing cold was known to Armenians as well; but according to their conceptions this figure appeared at the beginning of April, not at the beginning of March. The Central Asian image of the old woman is interesting precisely because, according to the information provided by al-Biruni, the cold ‘days of the old woman’ came precisely during the winter month of Šubat. In Assyrian texts⁵² this name is attested in the form *šebet*. It appears possible to associate with these names the form *švot* itself, which enables us to explain the genesis of Armenian folk conceptions about the *švot* spirit.

⁵² In Armenian this term generally refers, not to ancient Assyria, but to the Syrian Christians, *aysor* or *asori*, who employ Syriac in their rituals and some of whom still speak neo-Aramaic. Armenians and *asoris* have always lived in close proximity to each other and many of their folk beliefs and practices are nearly identical.

H. Ačarean explains this term in the following way: 'The month of February; considered the month of the devil; a particular evil spirit active in February' (*Armenian Etymological Dictionary*, Vol. 3, pp. 537-538). A. Ōdabašyan, comparing the data of Armenian and Assyrian written sources, determined that Švot, the fifth month of the Assyrian calendar, would have corresponded to February, the second month of the Roman calendar (*Amanora hay žolovrdakan tonac' uyc' um* ["The New Year in the Armenian folk calendar"], p. 34), and, citing ethnographic materials, affirmed that this term, as the designation of a month, was used in the late 19th and early 20th centuries in Moks, where it was equivalent to the Roman February. (N. 46: In these materials, collected by A. Darbinyan, a native of Moks, the people of the region called the month of February *subat'* or *subəat'*: his papers are in the archive of the Institute of Armenian Ethnography of the Academy of Sciences of the Armenian SSR.) All this served as a basis for Ōdabašyan to suggest that the words accompanying the banishing of the *švot* mean, 'Švot-February, go away; March, come in.' She considers that 'the purpose of this ritual custom was not only to protect stores conserved from the previous year from the malign activity of evil spirits, but also properly to welcome the new agricultural year, which begins with the month of March and the arrival of spring.' A. Łanalanyan regards the ritual in much the same way (A.T. Łanalanyan, *Ařacani* ["Compendium of proverbs"], Erevan, 1960, pp. xi-xii).

It seems to us that the explanation of such an intricate complex of folk conceptions as that of the *švot* spirit by the single sacral phrase 'Švot, out; March, come in' does not provide an exhaustive characterization of this figure. And the interpretation of this phrase as 'February, out; March, come in' creates more problems than it solves. In this connection, the explanation of the interrelationship of the names of the months in various calendars employed in Armenian folk life (ancient Armenian, Assyrian, Roman) assumes great significance. This problem has not been substantially explored in specialized literature, and that naturally complicates the examination of the questions and aspects of interest to us. The understanding of the phrase 'Švot, out; March, come in' serves as a striking example of this. For if the words *švot* and March are simply month names, then one naturally poses the question why one is named according to the Assyrian calendar; and the other, by the Roman. This would scarcely make sense. But if this is a matter of more and other than the mere names of months, then we deal with a phenomenon of purely ritual content.

In ethnographical and folklore materials relating to the Armenians of Moks, who employed the term *švot* (in the form *subat*) as the designation of the month of February, there are unfortunately no data attested about a corresponding name of a figure, ritual, or other expression of the *švot*. But it is very indicative that in the historical and ethnographical region of Vaspurakan, contiguous to Moks, the figure was known by the name *P'urđik'*, or, more affectionately, as *Pupušik* (E. Lalayean, *Vaspurakan, Azgagrakan Handēs*, No. 25, p. 58). Thus we deal with multiple designations of one and the same being: *švod*, *P'urđik'*, *Pupušik*, *švot*. What is this? Local differences of designations, or differences of a diachronic character, or the result of the confusion of various conceptions, figures, and names? One thinks a solution of the puzzle and an understanding of the concepts and acts associated with it can be arrived at on the basis of a consideration of all three parameters.

First of all, one notes the following aspect: in the description cited above by G. Bunatov, after the expulsion of the *švod* people invited into the home not the new month of March but a man (*mard*); while in the Vaspurakan variant after the expulsion of the *P'urdik'* they did not invite in anybody at all. These facts indicate to a limited extent that the understanding of the terms *švot* and *mart* as the names of months is not always supported by the ethnographic data. To the contrary, these data provide a foundation for the discovery and exploration of a defined demonological image and of the concepts and actions associated with it among the Armenians, for whom, in the majority of regions, it is known as a *švot*.

Let us now consider the role assigned to the *švot* in the economic life of the people: was it negative or positive? An answer to this question allows one to determine the character and basic functions of this specific demonological figure.

It strikes one forcefully at the very first glance that the *švot*, classified as an evil demon, still dwelt in warm houses and stables together with humans and animals all winter long and was patiently tolerated by them. And only at the end of February, or at the beginning of March, they chased it out, considering it an evil spirit. In one story about the *švot* it is related that the spirit expresses its displeasure at being ejected at just this time of year. 'Listen here, dearie,' the women say to each other, 'I went out tonight and what do I see but a bunch of *švots* at the gates of Yekho's house. How they were cursing, cursing that house of Yekho's! For chasing them outside into this snow and ice. Would it have been so hard, said the *švots*, to let us stay in the warm upper corner of the barn?' (Bense, *Bulanəx kam Hark'* ["Bulanəx or Hark' (district)"], *Azğagrakan Handēs*, No. 6, p. 10).

In Vaspurakan the expelled *švot* went out to the green fields, to the cool springs; and according to materials from Nor Bayazet the *švots* generally spent all summer in the fields and farmlands. But, as is well known from the ritual practices of many [p. 47] peoples, no evil spirit, upon its expulsion, is ever dispatched to such useful and functionally important places of humans. How did the *švot* earn, then, such regard? And here another aspect of the *švot* commands attention: its instilling erotic dreams in people. Apparently with this feature it was somehow associated and connected at one time with this idea of fertility and conception — an idea so characteristic of the onset of spring. Not for nothing was the *švot* in most instances represented in the guise of a cat or else was associated with cats: after all, the end of February and the beginning of March is the start of the 'love period' of cats, which even in the present day in several regions is called *švat* or *švayt*. (N. 83: Of no small significance is the fact that the Armenian word *švayt* means "lewdly rowdy" — one cannot exclude here a connection to the *švot*.)

It is noteworthy that in a number of places a girl who wanted to get married would secretly clamber onto the flat clay rooftop of the home of her chosen young man, and, stealthily creeping up to the smoke-hole, would meow through the opening like a cat. It is interesting also that folks sometimes said of girls entering adulthood, 'She's meowing like a cat: it means she wants to get married.'

Commenting on the connection of the *švot* to cats, A. Ōdabašyan notes that the cat was a totemic symbol of pregnancy in the beliefs of many peoples of the ancient world. One might add that the same idea was familiar to peoples of South

and Southeast Asia. In one Khmer myth, for instance, it is related that a hermit created a cat out of the first menses of a girl entering adolescence (*Kkhmerskie mify i legendy* ["Khmer myths and legends"], Moscow, 1980, pp. 26-28). In the same myth the cat created by the hermit is closely connected to customs of weddings and marriage, and to the happiness and well being of the bride in her new home — the house of her husband.

The Italian 'mimicry of the rite of courtship' is very important in this regard: it is performed in early March, the time when people fall in love (N.A. Krasnovskaya, *Ital'yantsy* ["The Italians"], in the vol. *Kalendarnye obychai i obryady v stranakh zarubezhnoi Evropy: vesennie prazdniki* ["Calendrical customs and rites in the countries of Europe beyond the (Soviet) border: vernal holidays"], p. 15). The holiday of *Šabuot* of the Georgian Jews, considered a festival of green plants, is interesting: 'In Jewish villages they try on this holiday to decorate dwellings with green plants and to spread green grass on the floor' (*Religioznye verovaniya narodov SSSR* ["Religious beliefs of the peoples of the USSR"], part II, p. 316). Most weddings also took place on the days of the *Šabuot* festival.⁵³

Thus by comparative analysis of the materials connected with the complex of concepts and customs a particular link is found between the cat and the idea of conception, on the one hand, and that of this idea and the *švot* (in both name and content), on the other. This circumstance suggests the further thought that the *švot*, being located in the fields in the spring and summer, could by means of its 'fertilizing' capacity exert an influence upon agricultural labor as well, making the fields more fertile. The custom of the Armenians of Akhalkalaki serves as testimony to this (B. Karapetyan described this custom to us on the basis of stories told to him by his mother, a native of Akhalkalaki): on the night before the expulsion of the *švot* the women of the house would draw in flour on the walls and pillars of the house and barn depictions of either oxen in harness or domestic animals leaving the stable to graze. The meaning of those drawings was to make the *švot* go out to the tilled fields and pastures along with the animals and the plow. It is no coincidence that in Vaspurakan they would chase out the spirit while brandishing a sickle. No less important is the ubiquitous use in the ritual of expulsion of the *švot* of a sheepskin, which was understood among many peoples as a means of fertility. (N. 91: See for example N.P. Lobacheva, *Razlichnye obryadovye komplekсы* ["Various ritual complexes"], p. 307.)

The analysis and juxtaposition of all the motifs cited above, together with the characteristics and functions of the *švot*, seemingly elusive at first glance, provide a basis for associating its image with that of the *polevik* [the Russian spirit of the fields — JRR]. In this connection it is appropriate to mention the spirit called *xlvlik* (the word in Armenian means "playful"; it is noteworthy that Georgians call a lizard *xlvivi* or *xvliki*), which, according to the conceptions of the people of Vaspurakan, lived in the fields and was a producer and protector of crops (Lalayan, *Vaspurakan, Azgagrakan Handēs*, No. 26, p. 205).

⁵³ There seems to have been some confusion here. The holiday is actually that of "Weeks", Heb. *Šavu'ot*; but the 15th day of the month of *Švat*, corresponding to *Švot* and February, is celebrated as the "New Year of Trees" (JRR).

It is interesting that the image of this spirit did not enjoy wide distribution among Armenians: perhaps only the spirit noted by Bense among the Armenians of the Muš region, the *xipilik*, can be regarded as a spirit-protector [p. 48] of the harvest. However in a number of regions of Armenia there existed a holiday of the *Xlvlik* celebrated in the autumn (N. 95: See, for instance, M. Salmastec'i, "*Xlvlik*," *Arjagank'* ["The Echo"], 1893, no. 1). One cannot exclude the possibility that with the *xlvlik* we deal with a surviving attestation of the figure of some sort of divinity of vegetation, a preserver and protector of crops and fields: the fact of the existence of similar spirits and divinities amongst various peoples of the Caucasus would argue in favor of this hypothesis (N. 97: See G.F. Chursin, *Očerki po etnologii Kavkaza* ["Sketches on the ethnology of the Caucasus"], pp. 50, 53, 55; and V.F. Miller, *Osetinskie etyudy* ["Ossetic studies"], part II, pp. 282, 297). It is also quite likely that the *švot* was once a divinity who returned home with the harvest in autumn. Later on this motif was consigned to oblivion; and all that was retained in folk memory was the rite of the expulsion of the god at the beginning in spring of the new farming year.

For the determination of the character of the extremely complex type of spirit called *švot* it is important to note that in Vaspurakan he was called *p'ur'dik'* — a name also given to bread that fell into the oven while baking, as well as to a kind of ceremonial bread. Ōdabašyan writes of the coincidence of names: 'Through the expulsion of the *p'ur'dik'*-*švot* and the baking of sacrificial bread called by the same name, people strove to frustrate the possible negative influence of this spirit on the stores of grain depleted towards the beginning of spring' (Ōdabašyan, "New Year..." *op. cit.*, p. 36). One should note that the custom of naming ceremonial breads after those divinities or Christian saints to whom the loaves were dedicated is attested in the cultic and ritual customs of numerous peoples, particularly among various Georgian ethnographical groups. It is quite possible that the *p'ur'dik'* as well was a theophoric designation of a ceremonial loaf that had at one time been consecrated to a god or spirit of the same name. At least, for Vaspurakan and contiguous regions this seems an entirely plausible suggestion.

The exposition of the functions and precise identification of the character of the *švot* as that of a demonic personage is further complicated by the fact that it does not have analogues in the demonological representations and ritual practice of other peoples. Of undoubted interest is the Georgian custom of expulsion of mice from the home, which is analogous to the expulsion of the *švot* among Armenians. The Georgians would address the mice with these words: 'Little mouse, little mouse, go out into the yard; angel, come into the home.' They would tempt the mouse at this point with a branch of *shipovnik* (Rus., sweetbriar or eglantine) on which were placed pieces of cheese, lard, and other kinds of food. It is also worthy of note that the Georgians regarded with reverence a household rat with a bright patch on its breast: during festivals, special sacrificial wafers called *lemzyr* were left on the floor for it. As we can see, Georgian images of the rat and the mouse were connected with the idea and image of a household spirit whom the Armenians also sometimes imagined in the form of a mouse (E. Lalayan, *Nor Bayazet, Azgagrakan Handēs*, no. 17, p. 97).

Turning now to the *švot*, it is essential to mention another circumstance: in several regions of Armenia the bread that fell into the furnace upon breaking, the

p'uridik', was considered the portion of an angel (S. Amatuni, *Hayoc' bat u ban* ["Armenian Wörter und Sachen"], Vataršapat, 1912, p. 660). The question arises: Which angel? Could it not be that of the good being of the same name, the *p'uridik'-švot*? In any case, one thing is clear: people would have been unlikely to call the angel's portion by the name of an evil spirit. If one adds to this the fact that in Sasun, bordering on Vaspurakan, the *p'uridik'*-bread was considered the *barakat* and *dovlat* of the home,⁵⁴ then there is no doubt that the *švot-p'uridik'* was actually considered a household spirit; and the rite of a sacrificial offering of bread to it is seen to be common among a wide range of peoples (N. 106: S.A. Tokarev, *Religioznye verovaniya vostochnoslavjanskikh narodov...* ["Religious beliefs of the East Slavic peoples..."], p. 95).

As is apparent from the foregoing material, one finds concentrated in the image of the *švot*-spirit various strata of folk religious world views; and in the complex of beliefs about it that has come down to us, one already finds diverse qualities ascribed to it. This circumstance makes it particularly difficult to specify the genealogical roots of this most particularly specific demonological type. But the fact that the *švot* was associated with cold and even to some degree embodied it [p. 49], indicates a genetic connection of the primordial archetype of the *švot* with the spirits of nature.

A comparative analysis of the complex of representations and rites connected with the *švot*-spirit allows us to distinguish one main idea: that of pregnancy, growth, rebirth, and, finally, fertility. In this aspect the syncretic type of the *švot-p'uridik'* can be interpreted as that of the good spirit regarded as the protector of the welfare and wealth of the family. From this point of view the *švot* is linked intimately to the *polevik* and to household spirits. The study of this material demonstrates also that the most archaic features attributed to this spirit were preserved in the folk conceptions of that part of the Armenian population inhabiting the Lake Van basin and neighboring parts of historical Armenia."

2. Jannes and Jambres in the Armenian apocrypha. From *Patmut'iwn Movsēsi* ("The History of Moses"), in S. Yovsēp'eanc 1886, p. 202.

"... and then Moses and Aaron went before Pharaoh and performed great signs. For Moses cast his staff before Pharaoh and it became a serpent (*višap*).⁵⁵ Then the magicians (*diwt'k'n*) of Pharaoh, Jannes and Jambres, stood forward. They had contempt for Moses, and said to Pharaoh, 'This one is our pupil and by our teaching does [add.: whatever he does].' And the two of them cast their staffs to the earth, and they became snakes (*ōjk'*), to the eyes but not in truth. For the snake of Moses swallowed the two staffs of the sorcerers (*zkaxardac'n*) and after a while they melted and it digested them."

⁵⁴ These two Arabic words, borrowed *via* Persian into Ottoman Turkish and from there into Armenian dialects, are left untranslated by the author. *Baraka* means "blessing"; *dawla*, "power" or "dominion" (JRR).

⁵⁵ There may be an implied contrast between Moses' *višap*, which in Armenian tradition has the heraldic overtones of the noble *sēnmurw* of ancient Iran as well as the power of a dragon, and the generic *awj*, "snake", of the two magicians — even though Moses' creature is called one at the end of the pericope.

3. The anti-paradise of Jannes and Jambres. From the *Life* of Macarius of Alexandria. Robert T. Meyer 1964, pp. 58-61.

(Palladius was born in Galatia (northwestern central Anatolia) in 363/364 and was a pupil of Evagrius of Pontus. He became a monk, traveling to Israel and Egypt; and then served in Bithynia as a bishop. He composed his *History* in Greek in 419/420 for Lausias, a chamberlain of the Byzantine emperor Theodosius II. There are translations in numerous East Christian languages, including Armenian, in long and short recensions.)

"He once wished, so he told us, to enter the garden-tomb of Jannes and Jambres. Now this garden-tomb had belonged to the magicians who had power along with Pharaoh back in the old days. Since they held power for a long time they built the work with stones four feet square. They erected their monument there and put away much gold. They even planted trees there, for the spot was damp, and they dug a well, too.

Since the holy man did not know the road, he followed the stars, traversing the desert as though it were the sea.⁵⁶ Taking a bunch of reeds, he placed one at every mile, leaving a mark so that he might find the way back on his return. After traveling for nine days, he reached the place. Then the demon who ever acts in opposition to the athletes of Christ collected all the reeds and put them by his head as he slept near the garden tomb.

He found the reeds upon arising. God had permitted this for his own further training, so that he might not place trust in reeds, but rather in the pillar of cloud that led Israel for forty years in the desert. He used to say, 'Seventy demons rushed from the garden tomb to meet me, shouting: "What do you wish, Macarius? What do you want, monk? Why did you come to our place? You cannot stay here." I told them,' he said, 'Let me but go in and look about, then leave.'

He continued, 'Upon entering, I found a hanging brass jar and an iron chain near the well, already consumed by time; the pomegranates had nothing inside, so dried out were they by the sun.'

Then he started back, and was twenty days traveling. When the water which he was carrying gave out, and also the bread, he was in a very precarious situation. And just when he was on the verge of collapse, he caught sight of a maiden dressed in a pure white linen robe and holding a jug dripping water.

He said that she was far off, about a stade or two, and he was on the journey three days seeing her with the jug, standing there as it were, but he was unable to attain it, as in a dream. He survived only in hopes of drinking it. Next there appeared a herd of antelope. One of them had a calf, and he saw that her udder was dripping milk. Crawling under her, he sucked and was refreshed. The antelope accompanied him to his cell and nursed him, but would not take her own calf."

⁵⁶ When I was a graduate student at Oxford in 1974-1976 Fr. Goriun Khojababian (later appointed Archbishop of Isfahan) told me that when he had served the Armenian faithful of Qamishli in northern Syria he was driven through the desert to remote parishes in a limousine whose driver used an astrolabe to navigate.

4. The Armenian version of Macarius' journey. From *Patmut'iwn surb hōrn Makaray egiptac'woy* ("The history of the holy father Macarius the Egyptian"), *Vark' srboc'* 1855, vol. 1, pp. 90-92 (tr. by JRR):

"And it was when he had been three days in his cell, he said, 'I wish to go into the paradise (*draxt*) of of Jannes and Jambres. And he sought grace of God, that he might enter the paradise of the sorcerers (*kaxardac'n*), and said, 'I have heard that in every hour the demons (*dewk'n*) are armed by themselves, for Jannes and Jambres planted plants and so fortified it that there is nothing anywhere like it. And they did this because their hope was in the earth.' The blessed one, the elder and servant of Christ Macarius, had a desire for this paradise that he might be tried by the demons. And the blessed elder set out to go, making Venus (*zAruseakn*) his guide as helmsmen of ships do on the depths; and he departed, going into the desert. 'And I took,' he said, 'a bundle of reeds and made a mark of the places where I passed and said, 'When I return to my hut, I shall come without difficulty. When I was close to the paradise, about a mile, and night had fallen, sleep took me. And the wild and evil demons went off and gathered the reeds, made a bundle of them, and put it under my head. And I say, 'They did this great grace for me, and this was the will of the Lord and not from the demons, so that I might not rely upon the guidance of a reed, but upon the grace of our Lord as by a cloud He guided the children of Israel in the awful desert for forty years.

'When I approached the paradise, the demons came out before me. Some danced lewdly,⁵⁷ some made noise, some ground their teeth over me, and some like ravens flapped their wings in my face and said, "Why have you come, Macarius the hermit, to test us? Are we some sort of hermitage for you hermits? Is it not already enough for you that you drove our companions out of the desert? We are not the equal of you all, so why did you come to our place? Many are you hermits to whom we have left the desert. This place was erected in our name and there is no way for you to be here. Why do you seek to enter the work of others, for since its builders died no son of man has entered herein.'" After these demons and those demons had expressed their stubbornness, the elder then addressed them: 'I will enter one time and look around, then I will exit and depart from this place.' And the demons said to him: 'Swear to us by Christ, who is God, that you will go away.' And Macarius said, 'I will do so.' And the demons vanished before him.

'So I entered,' said he, 'and saw everything and remained there for three days and departed from thence without disturbance. And after twenty days I returned from there to my cell, and for those days I tasted neither bread nor water till I had accomplished the matter. And when I had been three days in my cell, a demon appeared to me in the form of a girl, and in her hand she carried a pitcher, and her raiment was white, and for three days she walked about, and on the third day she made bold to say to me, "Take and drink this water, for here you are, dying of thirst." And I made no reply to her. After a short time the girl went away and milked a buffalo, brought the milk, and said, "Drink this, so that you do not die of thirst." And in this, too, the grace of God consoled me.' For God prospered Macarius in deeds, in grace, and in healing..."

⁵⁷ Arm. *kak'awēin*, lit. "did the partridge dance".

5. Jannes, Jambres, and (the) *šwōt* in Medieval Armenian Historiography.

(Vardan traveled to Cilicia and to the court of the Mongol khan Hulagu in northern Iran. In his *History* he relies heavily on the *Chronicle* of Michael the Syrian, which he translated from the Syriac. The latter, 12.1, mentions that the Byzantine emperor Leo IV (776-781) sent the caliph al-Mahdī (775-785) the book Jannes and Jambres, which “contained all the magic of the Egyptians and everything they did in opposition to Moses.”⁵⁸ Vardan died in 1271 and was buried at Xor Virap. He evinces an interest in etymology, offering an explanation, for example, of *mesrop*, the epithet of Maštoc’, inventor of the Armenian alphabet, as “verdant”, which, Thomson suggests, may be based on Arabic *masrur*, “fertile”. The form *šuat* in the MSS seems closest to the actual pronunciation of the name of the month /Šavāt/, whilst *šabat*’ may be a *lectio faciliior* rendering the familiar Sabbath, Arm. Saturday; and *šwōt* could be our Armenian folk spirit itself.)

1. *Hawak’umn patmut’ean Vardanay vardapeti* (“The Compilation of History of Vardan vardapet”), Venice, 1862, p. 19, para. 9 (tr. by JRR; the text has also been tr. and ed. by Robert W. Thomson 1989, pp. 125-226):

... ew Yanēsñ ew Yamrēsñ arin zordisñ Israyēli ew taran znosa hngetasan awur čanaparh and anapatn, ew šinec’in zdraxt iwreanc’, zhngetasan tari: ew i katarman šinuacin, yordwoc’n Israyēli arin tlay innhariwr ew ut’sun, ew zohec’in diwac’, ew hawak’ec’an ar nosa, ew edin pahapans draxtin, ew yaynmhetē arawel hnazandec’an dewk’ kaxardac’, ew č’orek’hariwr dewk’, asen, oč’ hnazandec’an, minč’ew krkin zohec’in yanun noc’a, ew apa ekeal arin hawanut’iwn, bayc’ šwōt amisñ anhnazandec’ gorcen zkams iwreanc’ tanelov omans i mardkanē.

“... and Jannes and Jambres took the children of Israel and conveyed them fifteen days on the road into the desert, and they built their paradise (*zdraxt*), for fifteen years. And at the completion of the building, they took from amongst the children of Israel nine hundred and eighty boys, and sacrificed them to the demons (*diwac*’), and they were gathered to them, and they placed them as guards of the paradise. And thereafter demons were more obedient to sorcerers (*kaxardac*’), and four hundred demons, they say, did not submit till they again sacrificed in their name, and then they came and undertook agreement, but not submitting in the month of *šwōt* they work their will, taking away some of mankind.”

2. Mkrtič’ Ēmin 1861, pp. 28-29:

Ew yanēsñ ew yamrēsñ arin zordisñ Israyēli ew taran znosa hngetasan awur čanaparh and anapatn, ew šinec’in zdraxtn iwreanc’ zhngetasan tari. ⁵⁸ See Pietersma 1994, *op. cit.*, p. 44.

“And Jannes and Jambres took the children of Israel and conveyed them fifteen days down the road into the desert, and they built their paradise (*zdraxtn*) over fifteen years. And at the completion of the building they took from amongst the children of Israel nine hundred eighty boys and sacrificed them to the demons (*diwac*’). And they were gathered to them, and they placed them as guards of the paradise and thereafter demons were more obedient to sorcerers (*kaxardac*’). And four hundred demons, they say, were not obedient, till again they made sacrifice in their name, and then they came and undertook agreement; but disobedient in the month of *šuat*, they work their will, taking away some of mankind.”

3. K. Patkanov 1869, p. 272:

Yanēs ew Yamrēs, ork’ arin zordisn Israyēli ew taran hngetasan ōreay čanaparh and anapatn: ew šinec’in draxt ink’eanc’ hngetasan am ew ylsrayēlē 980 tlays zohec’in diwac’ ew hnazandec znosa edin pahapans draxtin: ew ut’sun dewk’ [var.: 400] oč’ hnazandec’an, minč’ew krkin 980 tlays ayl zohec’in, ew apa hnazandec’an, bac’ i šabat’ amsoy.

“Jannes and Jambres [are the ones] who took the children of Israel and conveyed them on a road of fifteen days into the desert: and in fifteen years they built a paradise (*draxt*) for themselves and out of Israel they sacrificed 980 boys to demons (*diwac*’), and having made them obedient placed them as guards of the paradise: and 80 demons [var.: 400] did not submit till they again sacrificed another 980 boys, and then they submitted, except in the month of *šabat*’.”

6. The plant of Jannes and Jambres. *Patmut’iwn pilc t’ut’unin* (“The History of Foul Tobacco”): the earliest MS is dated 1701; see for a full discussion and annotation of the poem Russell 2009.

O Christians, give ear!
See how foul a thing tobacco is:
They pay money- throw it in the fire-
And do their souls harm besides.

- (5) The *qalyun*-pipe is richly adorned:
Putting their mouths to it, they lap it up like dogs,
Drink, and expel the smoke from their mouths,
Their noses, eyes, and ears.

They expel the smoke in billowing clouds:

- (10) The angels flee the stench,
Soar up, and rise to Heaven
And make complaint to the Son of God.

There is a man hungry for tobacco
Who smokes fifty waterpipes in a day

- (15) And swallows the smoke, which reaches his gut
And — worse than a dog — turns and comes out.

- He's withdrawn his hands from any work,
 Fallen to the demons' lot.
 What wretched children all they are!
- (20) And not a scrap of bread's left in his house.
 At night his thoughts dwell on it.
 He turns and tosses, cannot sleep,
 Gets up, sits down, and strikes the flint —
 And imbibes filthy tobacco greedily.
- (25) This world has phony priests
 Who drink to excess foul tobacco —
 They are like the evil Pharisees
 And partners to the Hebrews' company.
 They sit and drink in public
- (30) With hacking coughs like junkyard dogs.
 Their waterpipe is marble black;
 Of finely-worked ebony, its handle.
 The laity see all this
 And are emboldened to imitate it.
- (35) The pastor knows how to read — they say —
 And must know best, for ignorant are we.
 He's the shepherd, we're the sheep,
 We'll follow him home, wherever he goes.
 If he doesn't say that it's a sin,
- (40) Then what do we care about such things?
 Tobacco is a weed that grows:
 Scripture does not refer to it.
 But now it's found a cozy home,
 A dwelling for the demons' throng.
- (45) The sermon's plain when you get up close:
 Worms and blood fall off the tongue.
 The serpent deceived Adam and Eve.
 The evil Tempter was the cause.
 They didn't keep the Lord's command:
- (50) Deceived, they ate of Eden's fruit.
 As soon as they had, they felt regret,
 And were stripped of the ineffable light they wore.
 They saw that they were naked
 And wrapped themselves in fig leaves.
- (55) Where are you, Adam?— cried the Lord.
 For shame he fled and hid.
 He says: You did not keep the commandment!
 Come on, get out! This is not your house.
 They say: The serpent tricked us —
- (60) And point at the tree with the fruit.

Our Lord cursed the serpent.
 Off fell its limbs — it had to slither.
 The demons collected them
 And took them to the bold devil.

- (65) We found the potion of perdition —
 They said — Destroyer of men's souls.
 Jannes and Jambres, they say, in the Garden
 Planted them, and tobacco grew.

First they called it *k'ark'i*.⁵⁹

- (70) This is tobacco — the devil said.
 They sowed its evil seed in the world,
 A trap, a moth to eat men's souls.

Thus have they hunted down mankind,
 Made a place for themselves, a home.

- (75) Men have forgotten church and prayer:
 Night and day they drink foul tobacco.

They do not want the aroma of incense.
 They are blinded by this ugly smoke.

- (80) Signed on with the wicked foe.

They impoverish their widowed souls,
 Consigning them to hell's undying flames.
 They collect somewhere and drink that scum
 And, like hounds barking, belch coarse coughs.

- (85) With smoke you have blackened your soul.
 You never come to church to pray.
 Wretch! Go and see for yourself
 What the interpreter of Scripture has to tell.

- (90) They fasten on the water pipe and pass it round,
 And, taking it, raise their hands above their brows
 And declare: Let its dust and flame
 Pile up and on our heads crash down!

They take it from the Muslims' mouths,
 Drink, suck the poison up.

- (95) The body enjoys a little pleasure,
 But the soul becomes black within.

They have become the demons' habitation,
 Spending the whole day in that company,
 For all the writings testify:

- (100) Repulsive is foul tobacco.

⁵⁹ Unless saffron is meant, this is an unknown word.

The soul clamors from within,
 To the angels makes complaint
 And says: Take me out of this place,
 Out of this repulsive and foul body!

- (105) Better far the reek of hell
 Than this foul tobacco that they smoke:
 They smoke it, spill the smoke on me,
 And murder me right now.
- My place is hard and ugly, foul
 (110) And dark and muddy, gloom:
 Satan's fattened us all up
 To make of us the fiend's food.
- Brethren, I counsel you,
 Think well on what I've said.
 (115) Do not perform Satan's will,
 For hard and bitter is the day of death.
- You despatch yourselves to hell for nought —
 You do harm to your own soul.
 When that evil *k'ark'i* grows green,
 (120) They say it is shunned by the bee.

7. *Šahariks on the Euphrates*. Misak' Mecarenc', *Irikuan ilj* ("Evening's desire") and *Irikuns* ("This evening"), from the volume *Nor tater* ("New Lyrics"), Constantinople, 1907, nos. 30 and 31; A.S. Šaruryan 1981, pp. 126 and 127. In the transcription I have restored the original, Classical orthography employed in Western Armenian, from the modified system adopted in Soviet Armenia and retained by the present Republic of Armenia that Šaruryan employs in his critical edition.

IRIKUAN ILJ

Öriord Nardikin

- (1) *Irikuan mēj anhetelu yoysn unenal,*
Ew yanjnəwil nurb kacani mə k'əmayk'in:

EVENING'S DESIRE

To Miss Nardik

- (1) In the evening to hope to vanish without trace
 And give oneself to fancy's narrow trail;
 Like snakeskin to slough off both boredom and ecstasy!
 To vest one's sick soul in untroubled calm.
- (5) And to swath the sick soul in lights all round,
 To have a sister in the water's burble and blue mist,
 Intent to heed the whisper of the roadside breeze—
 To mingle with a mighty sweetness and abide alone!
 To be comrade to the wheat field and the fruitland,
- (10) To open wide the door, familiar as a child,
 And let in the *šahariks* to bear you off,
 Arms wrapped around, mute into the broad silence.
 There to be brother to the trees spreading round!
 Lover to the flowers spreading wide as the sea!
- (15) In the evening to hope to vanish without trace!...

Both this and the following poem belong to the series *Əllayi, əllayi* ("If I were, if I were"), in which the poet expresses his longing to be one with Nature, remembered as the world of his rural childhood. The poem is dense with sublimated erotic longing (cf. *yanjnui*, "submit"; *xairnui*, "commingle"), none of which ever became the lineament of gratified desire for the poor young poet.⁶⁰ But he would have nature in the form of the sylvan tutelary spirits enter his house (the Arm. verb in the reader's mind would be *matnel*), to which he would admit them in intimacy (*matermōrēn*). The kidnapping *šahariks* (cf. the *Švot*!) are thus welcome ravishers. This is a reversal of the usual attitude towards the child-stealing spirit, as though Goethe had let the child in his anxious father's arms give voice to a yearning for the more intimate embrace of the love-smitten Erlkönig. Schubert would have been shocked. So one looks for other reversals of the conventional; and in line 3 the poet wishes he could slough off both tedium and intoxication like the skin of a snake. One thinks, inevitably and rightly, of the serpent in the Garden of Eden, and of an oceanic delight in nature transcending not only the contrasting moods of quotidian existence, but perhaps good and evil themselves. The use of the marked verb *patmučanel*, derived from a Mlr. loan used only for the vestment of a priest, alerts the reader to the use by Mecarenc' of the sacral, or of the inversion of it by a kind of pantheism.

In keeping with his evocation of the supernatural *šahariks*, Mecarenc' encodes the name of a magic *flower* into his poem. For as the reader nears the broad fields of flowers, the poet deploys the parallel adverbs *hamrōrēn* "mutely" and

⁶⁰ According to the historian of late Ottoman Armenian Constantinople, Y. Č. Siruni, Miss Nardik "was a young lady who loved books, with whom [Mecarenc'] had exchanged barely a few words or a smile" (writing in *Hayrenik* ["Fatherland"], 1923.10, p. 65, cited by Šaruryan 1981, p. 381).

termōrēn “intimately”, neither of which is a particularly conversational usage and both of which therefore invite attention as marked lexical items. The latter has given up its code, which is desire for penetration; but the former appears in the phrase *hamrōrēn hon šrjasp’iwr*, where one searches for a deeper structure, a hypogram. The repetition of initial *h*- whets the reader’s expectation of alliteration in *h*- in the third word; and the opening and closing syllables of the phrase in fact form an acrophonic *hamasp’iwr*, lit. “all-spreading”. This is the magic flower of Armenian folklore and mythology *par excellence*;⁶¹ and we know the poet knew it and knew how to play with it besides. For in the poem *Mitk’ ew bnut’iwn* (“Mind and nature”) Mecarenc’ uses the word adjectivally, as an epithet of his own mind, which yearns for oneness with the infinity of nature, of course. The word concealing, as it were, the magic *hamasp’iwr* — *šrjasp’iwr*, lit. “round-spreading” — is not all that different in meaning or in construction. And it is to foreground, as a synonymous construction, the densely alliterative epithet the poet will then apply to the flowers, *catikner covacawal*, lit. “flowers sea-dilating” (pronounced /dzaghignér dzovadzavál/). The epithet harkens back to the famous Song of the Church of St. Grigor Narekac’i, with whose writings Mecarenc’ was very familiar (cf. the following poem), where the eyes of the Theotokos *covn i cov cicataxit cawalanayr* “dilated sea into sea dense-laughing” (K’yoškeryan 1981, p. 120; the saint uses *cov* and *cawal* together very often in his hymns).

THIS EVENING

To the poet Vahram T'at'ul

- This evening is good, fragrance-laden, its hands full:
 Bridge betwixt the day and night, a path of gold,
 I yearn for the moon, beneath the trees so shaggy to behold,
 For the solar, splendid, saffron-daubed lunar glow
- (5) Amidst the fragrant trees' lip-swelling blossoms⁶²
 Whose ambrosia, from cups offered to the gods, the insatiable bee drains.
 The golden sun is the trees' final flare-embroidered tapestry
 Whose weave, fine raiment, slips down the flower-bearing stems;
 And the zephyr yet, a boldly stolen kiss, is youth restored.
- (10) And the plashing fountain is the fond murmur of a friend,
 A girlish shade slipping from the north to gently cover me;
 And the fountain's splash is the narcissus' blushing veil
 Or the tears in the eyes of myriad corollas wide-flung:
 With sweetness it anoints that place of silence of the flowers lone.
- (15) And the petals, the *šaharik's* graces, tumble into my palms,
 Palms open, stretching towards the light's sheaves' moving coruscations.
 Lo! She passes, a vision like a wave, of misty blue and gauze,
 Woman of marvel, lovely in her tresses, all of milk and roses! Miracle...
 A nymph made of milk, of roses, flower, sunburst, water, zephyr...
 Such fullness, O Lord, for my soul, this superabundance spreading its
 bounty everywhere...

Mecarenc' was influenced strongly by Symbolism; and its spirit is evident in these verses. But he sought also to evoke his idyllic rural childhood, which he describes, not only with the allusive images of the Symbolists, but with the bold strokes of a portrait from nature. Armenian nationalism of the late 19th century, like similar movements elsewhere, had a large antiquarian and mythological aspect, and the short life of Mecarenc' coincides with the period when most of the great ethnographical monographs and studies were published. His contemporary Daniël Varužan (1884-1915) was the poet most explicitly associated with aesthetic neo-paganism, with his *Het'anos erger* ("Heathen songs", Constantino-ple, 1912). In the work of Mecarenc' one finds only a few lines imbued with any sort of nationalistic fervor; but the fairies (*payik-k'*), nymphs (*yaweržaharsunk'*), and sylvan spirits (*šaharik-k'*) of the pre-Christian Armenian pantheon and the folklore of the Christian nation abound in his poems.

Western Armenian poetry of the pre-Genocide era reflects also the high literacy of author and reader, the firm grounding in Classical texts that the community's excellent educational system provided to its best and brightest, and the continuity of the literary tradition from the earliest period to the present. It is not surprising, then, that two texts of the tenth-century mystical poet St. Gregory of Narek, Arm. Grigor Narekac'i (951-1003), also bring to bear their vivid lexical

⁶² The desired effect is an alliterative pattern in /dz/; the *cayri* is identified by Šaruryan as a kind of tree but I find no record of it in any source.

imagery and thematics in the poem. The first is the liturgical *Taḥ yawrhnel jroc'n*, "Song for the blessing of the waters" (K'yoškeryan 1981, pp. 66-71): one stanza (lines 13-20) contains Narekac'i's neologism *p'otp'olenēj* (used by Mecarenc' in line 16 of his poem); but two others, l. 29-36 and 41-49, are also relevant with their imagery. Armenian poets have loved and read especially the shorter hymns (*taḥ*) of the saint because of their use of alliterative sound patterns, richly obscure vocabulary, elements of the contemporary vernacular, and luxuriant, naturalistic imagery. Mecarenc' in 1908, the year of his early death from consumption, published an article, *Narekac'iin het* ("With Narekac'i"), on his engagement with the saint's writings (Loys, Constantinople, 19 Jan. 1908; repr. by Šaruryan, pp. 265-270).

TAL YAWRHNEL JROC'N: SONG FOR THE BLESSING OF THE WATERS.

Lines 13-20:

*Awetis k'ez, Tiramayr,/ Srovbēanman, k'rovbēat'oṛ,/ Hup erraki loys ger-
azanc'./ Lusoyñ arp'i vehinačem./ Seṛic'n ant'ac' biwruc' ijeal./ Šotšoteni,
p'otp'olenēj./ Manraheṭet, gaṭtni šawit/ Ancanawt'i čanaparhin.*

"Good tidings to you, Mother of the Lord,/ Like a seraph, enthroned as a cherub,/ Connected to the supernal, trinitarian light,/ Sunlight of radiance walking on high,/ Descending flow of the myriad races,/ Glitter and glow, shining in its rise and fall,/ Little flood and secret path/ On the road of the unknown."

Lines 29-36:

Awetis caṛoc' caṭkanc'./ Boḅbojoxit, xitasataṛt'./ Goyn geṭec'ik, pṭinawēt,/ Aknaḥačoy, ham k'alc'runak,/ hot burazuart', p'unj xuṛneram,/ Cayric' vardic' p't't'inaṣard/ T'ert' taraceal oskečačanč'./ Terewaxit kanač'ac'eal.

"Good tidings to the flowering trees/ Dense in bulbs, thick in green,/ Lovely of hue, abundant in fruit,/ Pleasing to the eye, sweet to the taste,/ Gay aroma to the smell, multifarious bouquet,/ The roses' corollas with petals adorned,/ Leaves spread out like a sunburst of gold,/ Dense leaves glowing green."

Lines 41-49:

Awetis tayr Yovhannēs/ Yord alberac', hoyl vtakac'./ Jur manuacoy cicat cawal,/ karkač'ahos, utxinahos,/ Cayt'inasēr, manuacawal,/ Šrjanaptoyt manr awazin./ Holov xoroc' mēt mēt zugin,/ Vayr ver anēj! ver vayr i ver!! P'ut'an i jursn Yordananu.

"John gave good tidings/ To the brimming springs, myriad streams,/ Laughing, spreading, winding water,/ burbling in flow, rushing rill,/ caressing shores,⁶³ in little streams,/ Swirling about the shallow sands,/ Flowing to meet and join the many depths,/ Plunging upwards, swirling up and down,/ As they hasten to the waters of the Jordan."

⁶³ Arm. *cayt'inasēr* is a hapax one tentatively emends to **cayrinasēr* with *cayr*, "river-bank"; the suffix *-sēr* "loving" would then fit with the next strophe mentioning sand. St. Grigor was accused of being a *cayr*, "heretic", but the possibility seems faint indeed that the calumny occasioned a copyist's *lapsus calami*.

The second text is the *Matean otbergut'ean* ("Book of lamentation"), a cycle of 95 meditative, penitential prayers, with the medieval poet's neologism *l'aran* ("place of silence") in Ch. 91.2 (p. 228 of the Buenos Aires ed. used for the Erevan *Concordance* of the *Matean*), which Mecarenc' uses in line 14 (the *shva* indicates in printed Armenian poetry and hymnology a *sut vank*, i.e., the pronunciation of a consonant cluster as a full syllable). Jacques Sayapalean, a particularly obtuse critic who wrote under the *nom de plume* P'aylak, took Mecarenc' to task for his recondite lexicon in a review of *Nor tater* with the title *Kanxahas zatik* ("Premature Easter", in the journal *Masis*, Constantinople, 1908.20): "The Evening' [*Irikuns*], p. 56, is the chef d'oeuvre of words monstrous, tasteless, and vile to the ear [*ančōrni, ančāšak, xžalur*]." The poet replied in a vigorous polemic, *Hetamnac' barekendan* ("Retarded Carnival", *Biwzandion*, No. 3488, Constantinople, 13/26 March 1908, repr. by Šaruryan, pp. 271-277), pointing out that many of these words, including *p'otp'olenēj* and *l'aran*, are actually Narekac'i's, adding, "*L'aran*, my boy, means 'a place in which to be quiet', and how much profit might there be for P'aylak, if only he knew and respected the meaning of *l'aran* — the place to keep silent!..."

Mecarenc' poem is about evening; and Chapter 91 of the Narek is one of four listed in the Jerusalem, St. James' edition of 1964 as *Ałōr'k' gišeraynoy* ("Prayers for the night"), along with 12, 41, and 94. Ch. 12 is the most well-known, incorporated into the evening liturgy, and Mecarenc' cites it in his article on Narekac'i. It implores the protection of the Holy Cross as a barrier against demonic invasion upon the smoke-hole, the doors and windows — all the places where the expelled *Švot* tries to re-enter the home!⁶⁴

Ch. 91.2: "Now I stretch forth my hands to inscribe with my fingers your lordly sign, in this hour of night — you who are never darkened by tenebrous ignorance, but perceive all in your sight, even as you rest in your dwelling of unapproachable light. Receive me, imploring and in danger, speaking words of thanks, under your mighty arms' protection. Save me from the foul intruding phantasms, cleanse the mirror of my heart, my sense of sight, and strengthen me against sorrowful dreams by your tree of life. Besprinkle with your blood the bounds of my station; circumscribe my steps of departure and entry with the life-giving flow that sprang from your side; may the shape of your four-fold form be the protector of my perambulations; and when I lift up my eyes, may the mystery of your salvific passion meet them. May the deed of your suffering strengthen the lintel of my door; and my hope in faith depend upon your tree of blessing. Confine, O Lord, hereby that ruiner of souls: may the defender of the light enter in unopposed. Lighten my debts' burden, in place of the severe weight of my pain, which I confess to you, knower of all: the innumerable particulars of my wicked and iniquitous deeds, here in the place of quiet of my thoughts, gathered in the bedclothes of my couch, recalling the bitter fruits of my despair."⁶⁵

⁶⁴ On the prayer, see Russell 1994.

⁶⁵ Text in P.M. Xaç'atryan and A.A. Łazinyan 1985, p. 609.

The Epic of Sasun: Armenian Apocalypse

James R. Russell

Violent, irrational, intolerant, allied to racism and tribalism and bigotry, invested in ignorance and hostile to free inquiry, contemptuous of women and coercive toward children: organized religion ought to have a great deal on its conscience. There is one more charge to be added to the bill of indictment. With a necessary part of its collective mind, religion looks forward to the destruction of the world.

In *The Future of an Illusion*, Freud made the obvious point that religion suffered from one incurable deficiency: it was too clearly derived from our own desire to escape from or survive death.

CHRISTOPHER HITCHENS, *God Is Not Great: How Religion Poisons Everything*, NEW YORK AND BOSTON: TWELVE, 2007, PP. 56, 103.

1 General Considerations

There seems to be a perversity in religion: on the one hand, believers desire to escape from or to survive death; on the other, they look forward to the destruction of the world. Apocalyptic encompasses both, seemingly contradictory, desires; and the illogic of the situation requires awkward repetitions and convolutions in the theoretical outcome of the future achieved by theologians and prophets. Men are to be judged, once at death and again at resurrection; so the wicked will suffer twice in hell, first till the end of time and then forever after that, while the souls of the righteous will go to heaven till Judgment Day and then be reborn in resurrected bodies for bliss on earth. At the end of time, the Second Coming, Judgment Day, the world will be destroyed. But then it will be restored—how, as what, nobody knows. A thinking person cannot help but agree with Christopher Hitchens that the cosmological dogmas of religions are primitive and demeaning systems of wish fulfillment. Life is inevitably tragic: we experience loneliness and loss, pain, sickness, and age, and we die. The world around us, for all its beauty, is also a place of fear and violence, thanks in no small measure to the incurable vices of our own species. We want to live, but not the way we do; we want a world to live in, but one better than this.

With Christianity, the Armenians inherited a developing apocalyptic scheme that was similar in some respects to that of the Zoroastrian religion whose beliefs and practices had exerted such a profound influence on the

culture of the country previously. This was not entirely fortuitous; for although unconnected cultures often achieve analogous visions of apocalypse, in the ancient Near East apocalyptic ideas have a chronological priority, density of articulation, and ideological centrality in the teachings of Zarathuštra. Prof. Jon Levenson has argued brilliantly and convincingly that ancient Israel developed a belief in a collective, one might even say national resurrection that stands apart from the patterns of belief that emphasize the spiritual immortality of an individual.¹ This system was not the result of Iranian influence; but other beliefs accreted in the Second Temple period—the time critical to Christian origins—definitely were. And the Armenian Christians, uniquely among the *chrétientés*—national Christian cultures—had in any case a Zoroastrian religious substratum from which they drew abundantly in their symbolism—especially of light in opposition to darkness, as one might expect—and in religious terminology. The Avestan word for apocalypse, the renovation of the world at the end of time, *frašō.kərəti-*, lit. “making wonderful,” Pahlavi *frašegird*, for instance, is found as Armenian *hrašakert*, the “masterpiece” of God’s Creation; and the word for the dread crisis of end-time, *awrhas*, must be from OIr. **avi-frasa-* “intensive questioning”!²

However the Armenians did not entirely abandon their older faith. It endured for nearly two millennia through the medium of orally recited heroic epic, a kind of secular scripture that existed alongside the teachings of Christianity. Though Christian clerics railed bitterly against the vices ostensibly preached by the *gusank’* “minstrels” and the reciters of epic songs in turn poked fun at the hypocrisies and foibles of the clergy, more often one observes a coexistence, even a symbiosis, of Armenian epic and Armenian Christianity. A small but telling example of this is the episode in the epic of Sasun, *Sasna c’ier* (*c’er* means, literally, “bent,” and describes here a hero of wild, imprudent valor) where Sanasar, one of the twins who found Sasun, dives to the shrine of the Holy Mother of God beneath the waters of Lake Van to receive his magic weapons. He also, predictably, fights a dragon. Now a legend about the tenth-century mystic St. Grigor Narekac’i, who lived on the south shore of the lake, where the epic begins, was shaped on the model of the episode or its older mythological underpinnings; but then, later variants of the epic episode in turn were colored by the legend about Narekac’i.³ This cross-fertilization can be observed in many aspects of Armenian spiritual and material culture.

¹ See Levenson 2006.

² See Russell 1998a.

³ See Russell 2007.

I was able to discover and establish the hitherto unnoticed interrelation of the epic passage and the Christian legend noted above by employing a method that, strangely, has not been utilized in the study of the Sasun epic before. The latter exists only in individual recitations in various Armenian dialects, principally of the regions around Van, especially to its west and south. It is accepted that there are four main chapters, or branches (Arm. *čiwł*), of the narrative, and the reciters know them as such. They reflect a basic narrative unity. But there was never a written *Quelle*; so the elegant harmonizing text published in Soviet Armenia by Joseph Orbeli from which Artin Shalian accomplished his wonderfully lively English translation, and the much longer, composite *Sassounacan* text Tigran Č'it'uni printed in wartime Paris, were achieved at the expense of many of the fascinating details that cause the variant recitations to diverge and make them in fact irreconcilable at important points. Important as they are for an overview, the composites cannot serve as a sort of reliable critical edition. So I have translated for this study from the transcribed texts in Armenian dialects 24 versions of the famous final episode of the Sasun epic, with its vision of apocalypse, collected in the three principal volumes published at Erevan in the Stalinist years by Manuk Abelyan and Karapet Melik'-Öhanjanyan (sc 1, 2, 2.1). This section, which may be summarized in general terms, concerns the fourth and last of the great heroes of the line of Sasun, "Little" (Arm. *P'ok'r*) Mher (Mithra), son of the slain David (Arm. *Davit'*). Mher avenges the latter by destroying the city of (A)Xlat' on the northwestern shore of Lake Van. He then finds that the ground is too soft and weak (or "old") to support the hooves of his steed, K'uřkik Jelali. He goes to the graves of his parents and learns his father has cursed him (or, he learns all this in a dream): he is to be imprisoned alive till the end of time in a cave at Raven's Rock at Van. When the earth is hard enough again for his horse not to sink in, and grains of corn are as big as rosehips, Mher can come out. Then he will either rule or destroy the world. In the meantime, the rock opens on one or two holidays every year (though one variant has five): Ascension (*Hambardzum*) and Transfiguration (*Vardavar*). People see Mher and his horse as giants; if they enter the cave, time does not seem to pass for them. The water that trickles down the rock face is believed to be the urine of Mher's steed. This place, also called the Gate of Mher (Arm. *Mheri duřn*, Tk. *Meher kapısı*), in most variants can be identified as an Urartean blind portal at Van carved as a gateway for the gods.

The "branch" of Little Mithra is the shortest of the four in the epic, but it is structurally and thematically the densest, with numerous and intricate foreshadowings and recapitulations that both give it a tight and symmetrical internal unity, and link it to the three previous sections. When it begins, Mher does not know David has been murdered; and his relatives, afraid of the chaos his

vengeance will bring on, attempt to hide him. David, too, was hidden away and had to discover the particulars of his identity. Mher breaks loose, learns the truth, and laments his father, wishing in each refrain that he had gone blind. This is an ironic and prophetic foreshadowing of the curse he is to hear from his father's grave: that he will go into the earth and his eyes will not see. That is a direct paraphrase of the curse of king Artasēs, that Artawazd be kept in Ararat and not see the light. And the latter draws upon the Iranian myth of Yima, Persian Jamšid, who is to be confined in his hypogean *var* and not behold the light of the sun. So the Armenian oral epic not only echoes the tradition with precision here, but positively reverberates with it. Mher fights a girl, Gohar, armored like a youth, and then marries her, much as his father David married Xandut'; and, like the latter, Gohar is to die by her own hand. Xandut' killed herself for grief over David's murder, but the motive for Gohar's self-destruction is more mysterious. Twice before his father's ghost curses him, Mher will intone that he has no heir and no death: perhaps Gohar understands his eerie premonition of a lonely immortality and understands she is not to share it. In a foreshadowing, again, of his visit to his parents' graves, Mher goes on a pilgrimage to Baghdad to visit the grave of Sanasar's brother, Baldasar, thereby tying a loose end from the beginning of the epic. Though Mher in the course of the narrative recovers his weapons, mounts the magic steed, avenges his father, defeats seven kings who are assisted by a treacherous abbot, marries, and travels, all these events are telescoped into a very short time so as to impress upon the reader Mher's youth, which will congeal into an arrested and eternal adolescence—a manner of presentation of what I will call the neotenic theme in the discussion below. In this he is in vivid contrast to his grandfather *Mec* Mher, "Great" Mithra, whose story is all about the *longue durée*, maturation, fallibility, and death. One is tragedy and sudden death, like the *ēbgad* (incursion of the evil one); the other, the gazing forward into deathlessness of *frašegird*. Together, they compass both the human condition and its contrasts, and the dual and paradoxical themes of apocalyptic itself.

The timing of the ending of the episode of *P'ok'r* Mher is itself of great interest in resolving the issue of the integrity of the epic as a single work. The action of the epic opens on Ascension Day, when the maiden Covinar goes out for a last walk on the shores of lake Van before being sent away to Baghdad in marriage to the Arab caliph. She is thirsty, and drinks one-and-a-half handfuls of a milky liquid that gushes from a phallic rock. Nine months later the unequal twins, Sanasar and Baldasar, are born: the former founds the fortress of Sasun. At the end, Mher is immured in his cave, which opens on the eve of the Ascension (and, sometimes, on the feast of the Transfiguration as well). The action of the epic can thus be seen as taking place within the cycle of an archaic ring com-

position; and this is a strong argument for its narrative integrity as something much more intricate than a collection of different legends like the *Kalevala* or *Ossian*. The Mithraic mysteries seem to reflect a similar historical cycle: the primordial bull was slain at the incursion of Ahreman into the universe on the day Ohrmazd of the month Fravardin⁴—the vernal equinox, modern Iranian Nō Rūz—in the 6000th year of Creation; and the final sacrifice of another bull will usher in the unending bliss of immortality on the same day in the 12000th year. Easter, despite its Iranian name in Armenian (*Zatik*, i.e., “Birth”), was perhaps too strongly Christian a festival to stand in for the Zoroastrian spring New Year; but Ascension day, with its pre-Christian rites, seems to have been a suitable substitute. The summer holiday of Transfiguration, too, with its overtones in Armenian folk ritual of pan-Indo-European flower festivals like the Roman Rosalia or Greek Anthesterion, and of the specifically Iranian summer holiday *Ābrīzegān*, “Water-splashing,” was also suitable for Mithra.

The themes the epic deploys in this narrative are common folklore types. Among the more prominent ones are: information received in a dream (D 1810.8.2), a mountain or rock that opens or closes (D 1552), the magic door (D 1146), the extraordinary cave (F 757), and giants in the otherworld (F 167.3). We find them elsewhere, also with apocalyptic overtones: there is a cave in the Carmel range believed to be that of the immortal, apocalyptic prophet Elijah, for instance; and, according to an Aramaic fragment found in the Cairo Geniza, yet another immortal, apocalyptic figure by the name of Jesus hid in it and it closed up on Him. But Rabbi Judah the Gardener came and ordered it to open, and Jesus fled.⁵ The presence of these types in such narratives does not prove very much beyond the obvious observation that people tell symbolically meaningful stories about important religious figures and ideas in similar ways. Since such types can be encountered in normative scripture as well as in oral literature, they do not even make the tale being told more or less authorial and intentional, avowedly confessional or consciously artificial. They are elements, even as language itself is a necessary element, of narrative art. We have not found a way to do without them and probably do not need to. But the details subsumed by these types are local, traditional, and significant: it is Mithra, not Christ or Elijah, in this particular, Armenian cave. So the narrative enlarges one's sense of Mithra as an apocalyptic figure enduring in Armenian tradition. And the context—of heroic epic here—is of distinguishing significance, too;

4 That is, “of the *fravašis*,” or protective spirits of the righteous dead, Av. *Fravašayō*: the Zoroastrian designation persists in the old Arm. month name Hrotic', gen. pl. of **hro(r)t* < **fravart(i)*, i.e., Median or OIr. for *fravaši*.

5 See Ben-Amos 2006, 135, citing Ginzberg 1928, 332–5.

for that circumstance does elevate the episode in cultural importance for its hearers from a magic tale without necessary normative value to a document freighted with the high seriousness of the collective, social narrative of a people conscious of a tradition—of a secular scripture.

Mithra, then, merits particular attention in the discussion of apocalyptic in Armenia. For of the four principal heroes of the Epic of Sasun, two bear the name of the ancient Zoroastrian divinity Mithra (Mir. Mihr, Arm. Mihr, Mher): *ariwcadzew* (“leontomorphous” or “lion-slaying”) Mher, and his grandson at the end of the epic. Why is it that this particular *yazata* of the many worshipped in the older religion has remained so prominently?

2 The Humanity of Mithra

One reason that may be adduced for the marked importance of Mithra/Mher in the Armenian epic’s apocalyptic section is his anthropomorphism, a feature that would not have gone unnoticed by adherents of a newer religion whose transcendent God exists as a salvific, incarnate man, Jesus Christ.⁶ It is noteworthy that Mithra, alone amongst the thirty-three lesser *Yazatas* (“[Spiritual beings] to be worshipped”) and seven *Amaša Spəntas* (“Bounteous Immortals”) of the Zoroastrian pantheon, possesses a stable and relatively consistent iconographical profile that is faithfully reproduced in every region, however remote from the Iranian lands, where the divinity was an object of cult.⁷ Everywhere—on Graeco-Bactrian coins from the second century BCE on (the god is labeled ΜΙΠΟ, i.e., *Mihir), the bas-reliefs of Commagenian Arsameia on the Nymphaios and Nimrud Dagħ in the first century BCE, the reliefs, sculptures in the round, and frescoes of the Mithraic religion from the northern littoral of the Black Sea, down to Cilicia on the Mediterranean coast, northwest to Hadrian’s Wall on the Caledonian frontier and northeast to the Danubian and Rhenish outposts of the empire in Pannonia and Germania—the god is

6 The early Christian polemicists did not fail to notice the affinities between Christ and Mithra and their respective cults; but of course they regarded those of Mithraism as a demonic parody of the true mysteries of their own faith. The iconographic convergences are numerous as well: see, for instance, Mathews 1993, 153–155 with figs. 121 and 125, on the similarities of the gods and the processions of their faithful on frescoes at the Aventine Mithraeum and Domitilla (Christian) Catacomb.

7 The literature on Mithra and Mithraism is vast. See Russell 1987, chapter 8; and the following articles: Russell 1989, Russell 1994, Russell 1995, Russell 1999, Russell 2002–3, and the “Introduction” to Russell 2000, with references.

portrayed as a strong and beautiful youth in “Persian” *anaxyrides*-trousers and the “Phrygian” cap (the felt *başlık* of the Anatolian shepherd). Often the radiate nimbus of the Sun god—Iranian *Xvarə xšaēta*, Greek *Helios*—surrounds his head. There are some features less widely attested: a fresco in the Mithraeum at Dura Europos and numerous terracotta statuettes in the round from Arsacid Armenian Artaxat and Parthian Iran proper show the god on horseback; and the icon of tauroctonous Mithras, though adumbrated in Zoroastrian references to Mithra’s activity as a sacrificer (he receives animal sacrifice on the festival of Miθrakāna-/Mehregān, cf. the Armenian month Mehekan), is attested sparsely in the north Black Sea region and Anatolia, ubiquitously in Roman Mithraism, but not in Iran and farther East. But the Mithra-image with radiate nimbus is largely stable; and one can witness its influence on sculptures of the third and final Buddha of the future, Maitreya (whose name is a derivative from Mitra, the Iranian Mithra’s Vedic cognate), as far East as Japan.

The third-century Sasanian state inscriptions refer to the replacement of shrines derisively called *nišēmag ī dēwān*, “dwelling(s) of the demons” by sacred fires. One should specify with respect to this oft-mentioned Sasanian iconoclasm, that the destruction of the image-shrines (called **bagina-*, Armenian *bagin*, by their own devotees), where likenesses of the gods, presumably in diverse media, were recipients of cult, and the installation of consecrated fires (Armenian *atrušan*, etc.) there, did not affect the depiction of the gods in other contexts. The supreme Creator God Ohrmazd (Avestan Ahura Mazdā, the “Lord Wisdom,” Arm. Aramazd) Himself is shown in relief in the investiture scene of the first Sasanian monarch, Ardašir I, at Naqš-e Rostam near Persepolis (still venerated in its ruin by the Persians of the period as *Sad stūn*, “[the place of the] Hundred Columns”): he is a man on horseback, extending the ring of *xvarənah-*, the Glory of the primordial dynasty of the Kavis, to Ardašir, who is also mounted, facing Him. The front hoof of the steed of God crushes the serpent-wreathed head of the prostrate arch-demon Ahreman; and the king’s horse likewise tramples underfoot the fallen Arsacid king, Ardavan. The Armenian ekphrastic compound *smbakakox*, “hoof-downtrodden,” seems to have been coined on the basis of just such a scene; and on the walls of the tenth-century Church of the Holy Cross on Alt’amar built by king Gagik Arcruni of Vaspurakan in 920 (it is this Gagik who is remembered as Covinar’s royal father; and it was on the south shore of the lake, facing the island, that she drank) the mounts of the three warrior saints Sergius, George, and Theodore trample dragons and Satan. The image, with its Christian afterlife and Armenian rhetorical voice, indicates that there was no Zoroastrian iconoclasm of a radical type comparable to the sort one encounters in Byzantium in the early Islamic period, or, in latter days, amongst

Protestants. (The Puritans of the Massachusetts Bay Colony prohibited the Holy Cross itself). The Sasanian corpus abounds in portrayals of female divinities: many of these must be Anāhīd (Avestan *Arədvī Sūrā Anāhitā*, the “Watery Mighty Undeified [Goddess],” Armenian *Anahit*, New Persian *Nāhīd* “Venus”), given her prominence in invocations and the designation of the Sasanian regnal fire at the temple of Ādur Anāhīd at Staxr. But it is unlikely that all these are the same goddess: Ārd (Avestan *Āši*, “Wealth,” the Zoroastrian equivalent of Indian *Lakṣmī*), Spandārmad (Avestan *Spəntā Armaiti*, “Bountiful Devotion,” the goddess Mother Earth), and the Dēn (Avestan *Daēnā*, “Vision,” the personification of the individual soul and of the Zoroastrian Faith itself) were also all important, all candidates for iconic depiction. The well-known portrayals of Zoroastrian, Buddhist, Hindu, and Hellenic divinities on the coinage of Bactria indicates that whatever iconoclasm existed in the western reaches of the Iranian world was a relatively local phenomenon; and the discovery of a much richer iconographic program of the Zoroastrian gods on the ossuaries, frescoes, and funerary bas reliefs of the Sogdians, in their Central Asian homeland and in their settlements in China at the termini of the Silk Road, enables scholars to undertake a nuanced re-evaluation of the Sasanian evidence. Yet the careful and unmistakable portrayal of Mithra (Middle Iranian Mihr) at Tāq-e Bostān in Iran is impressive withal, coming as it does from a later stage of the dynasty when depictions of the gods were less frequent than they had been in the third century. In the relief, Mithra stands on a flat, open lotus and holds the priestly bundle of *barsom*-twigs in his hand (I have alluded above to his participation in liturgy; the place where Zoroastrian sacerdotal rituals are solemnized is called a *dar-e Mihr*, or “Court/Gate of Mithra”). His radiate nimbus glows behind his noble head.

After Tāq-e Bostān, though, the trail begins to grow cold: with the Arab subjugation of Iran in the seventh century and the consequent eclipse of Zoroastrianism as a major religious and cultural influence, the old Iranian culture recedes gradually from the Buddhist world. Though the Maitreya cult grows, the image of that Buddha changes. Odd, isolated images recur: on a medallion, believed by Prof. David Bivar to be datable to the period of the Būyid dynasty, there seems to appear the leontocephalous figure associated with Mithraism, of which more is to be said presently. The tauroctony resurfaces on the adorned capitals of monastery pillars in mediaeval Europe; but there is no reason to think it was anything more to the sculptor than a barbarous curiosity, seen on some ruin and added to the eclectic dossier of the bestiary, which swept up pagan and exotic imagery, sacred and profane, as indiscriminately as the callow young shepherd David of Sasun, who drove into town at dusk not only the cows and sheep, but the wolves and martens and bears of the hills and

dales. The temporally and geographically remotest echo of the iconic Mithras-Apollōn-Hēlios-Hermēs, though, is beyond question the most magnificent and monumental object of the corpus since the conception of the image itself. It is the great nimbus-crowned Statue of Liberty by Bartholdi in New York harbor, with Emma Lazarus' stirring ode to the New Colossus, the Mother of Exiles, at its base. With the statue, the symbolism of Mithra's Phrygian cap as the sign of manumission, then of Revolution, attains for the West its zenith and the history of the icon there most likely has reached its end, except perhaps on the strange new continent of the Internet, where neo-Mithraists have resurrected the ancient image.

I wish to propose the idea that the reason for the unique stability, ubiquity, and anthropomorphism of the image of Mithra in particular in the Zoroastrian pantheon is precisely his humanity, that is, the pre-eminently and particularly human concerns that his functions embrace, by comparison to the other *yazatas*. Mithra is the witness (*gugāy*, cf. Arm. *l-w vkay*), guardian, mediator, and arbitrator of all relationships between human beings that exist by an act of rational will, from legal agreements (including, in fact, a rather important super-human one: the accord of Ahura Mazdā and the evil spirit Angra Mainyu at Creation to fight for dominion over the world only for a specified time) and judgments (including the measure of tortures in hell: Mithra sweeps his mace over the funnel of the Inferno thrice daily to remind the imps not to afflict the damned beyond their specified sentence), to the ties of love and friendship. His name was formed from the Indo-European base **mei-*, "exchange." The Sun, whose light illuminates all, also sees all; so Mithra and the Sun are invoked thrice daily together. The importance of Mithra in Iranian religion cannot be overstated. The 16th day of every month bears his name; so he presides over the second half of the month even as Ahura Mazdā, after whom the first day is named, rules the first half. The late Achaemenids invoke the triad of Ahuramazdā, Mithra, and Anāhitā in their inscriptions; and the corpus of theophoric names is huge and prominent, from Mithradates of Pontus in the *Lives* of Plutarch to Mithrobarzanes in the *Menippus* of Lucian. Lucian, though he wrote in Greek, was a Syrian of Commagenian Samosata, within the Armenian and Parthian world. The name of his magus is that of the venerable sacred fire Ādur Burzēn Mihr of the Parthian homeland.

In modern Persian, Mehr is a name of the Sun, particularly in the poetic pairing *Mehr ō Māh*, "Sun and Moon." But the word also means "love"; and the peach fuzz on the cheek of a boy—the archetypal object of love in the secular and religious poetry of Muslim Iran—is called *mehre gīyāh*, literally "Mithra's grass." Now, it may be objected that Zoroastrianism, a human invention like all other religions, is anthropocentric and its gods embody phenomena that

involve us: Vərəθraϥna (Middle Persian Bahrām, Armenian Vahagn), “he who smites his opponent,” personifies just force. Anāhitā assists child birth; Sraoša’s job is to listen (as Soruš, an alternate name of the angel and psychopomp Gabriel, he is the only Zoroastrian divine being absorbed into Iranian Islam).⁸ We need health and hope for prolongation of life: the Amēša Spēntas of the plants and the waters, Haurvatāt “Wholeness” and Amərətāt “Immortality” (demonized into the Harūt and Marūt of the *Qur’ān*; in Christian Armenia, petals of a flower named after the pair, *hōrot-mōrot*, are scattered upon water in a vernal rite of divination), fulfill these functions.⁹

All the above qualities are to some degree those of animals, too; yet the creation and maintenance of relationships through artificial structures—viable and changeable institutions—is an activity unique to a creature whose management of life and transit through it are not assured and compassed entirely by instinct. As the American anthropologist of the Southwest, Prof. Weston La Barre, observed, human beings are perennial learners and experimenters, caught in a sort of perpetual adolescence of discovery, invention, and uncertainty: he termed this state *neoteny*—a condition, not of perpetual physical youth, but of a kind of continuing intellectual and emotional adolescence (the sort of state *P’ok’r Mher* is literally trapped in) in which one remains naïve, testing, learning, questing. Animal relationships and societies may be more diverse and complex than we yet know; but they do not seem to be susceptible to self-conscious reflection, written comment, or considered alteration. Elephants have emotions, rituals, commitments, and consciousness. They deserve more respect that we accord them. But to the best of our knowledge one generation of these noble creatures will not, say, debate gay marriage, polygamy, pre-nuptial agreements or other changes to the pattern of society materially different from the practices of pachyderms of an earlier time, in full awareness that there is a quality of arbitrariness and contingency to any social relationship. The creation of institutions may be an adaptive response to human frailties, and thus possess an element of determinism; but it is still neotenic *kat’ exokhēn*. Since Mithra’s chief function is precisely to oversee voluntary associations and covenants, rather than the relations determined wholly by nature, he is the *deus neotenicus*, the peculiarly human *yazata*, the one best suited to portrayal as a man. There is nothing necessarily anthropomorphic about a god who represents dawn, or the Sun, or Sirius, or Vega, the haoma

8 His bird is the rooster, who heralds the sunrise; and it is likely that the white cock of cosmic proportions of the *Mīrāj-nāme* is the bird of the *yazata*.

9 See Russell 2013.

plant, fire, or force (the Armenians and Parthians were quite content to represent Vahagn/Bahrām as a wild boar, *varāz*). But a human image of Mithra *cannot* be misrepresentation.

“What if God were one of us?” wonders Joan Osborne in a poignant song probably familiar to most young Christian believers in the United States. Their early forebears in the Roman Empire were perhaps unduly disturbed by the similarity of the Iranian answer to that question to their own, to the Nazarene. For the small, secretive Mithraic conventicles never posed a threat to the vast, evangelistic organization of the Church, whose salient feature was the transformation of an intimate mystery rite into an overtly public ritual—a mystery without secrets. The Mithraic *agapē* stayed intimate: few Mithraic “cave”-temples, the *spelaea*, could accommodate comfortably more than thirty communicants. The cult never sought, nor gained, the numbers that make for tectonic shifts in the politics of religious faith. But it stayed an *agapē*, till its final dissolution at the hands of a vengeful, victorious *Ecclesia*. Roman churches stand, literally, upon vanquished mithraea. The primary object of Christian hostility, usurpation, and worry—the various psychological expressions of the anxiety of influence, an algorithm of criticism Harold Bloom has applied as convincingly to Christian co-optation of Scripture as he has to the development of secular literature—was of course *Synagoga*, shown in mediaeval art as a grieving woman, downcast and hoodwinked by her willful ignorance. The Jews survived this. But what of the smaller number of surviving Mithraists whose faith the Church suppressed?

Mithraists were noted for their exclusivity among the Oriental mystery cults; the others let their adherents join other groups: a devotee of Isis might also enjoy the rites of the Moon-god Men, for example—but the Mithraists did not. Yet in the fourth century some banded together with other philosophically minded pagans in the hope, perhaps, of strength in unity: the last Eleusinian hierophant, in the mid-fourth century, was a Mithraist. Later still, Mithraists might have endured within the relatively free zone of quasi-religious confraternities of artisans that changed and coalesced over the mediaeval period. The necessary obscurity that protected such movements forces one to speculation in the absence of documentation; so their study is regrettably susceptible to the vagaries of conspiracy theory and other popular amusements. But it is at least beyond dispute that one of these groups emerged into the light of day in the safety of the Age of Enlightenment in Europe as the brotherhood of Freemasons. The English writer and Freemason Rudyard Kipling, with his wide knowledge of the military, of Eastern and Western religions, of Masonic lore, and of Roman history, took for granted the Mithraic origins of the noble Craft;

and modern American Masonic historians also welcome such research.¹⁰ But where Masonry is under attack by the Christian Church or the popular press, official publications are more circumspect: the research lodge of the Quatuor Coronati in England does not welcome discussions of Mithraism.

In Eastern Anatolia, the very region where the Romans had first encountered the devotions they were to adopt and partly reshape into Mithraism, the Kurdish sectarians of the Yāresān and Ahl-e Ḥaqq continue to preserve the form and many of the particulars of Mithraic ritual in their own fraternal associations. Within the wider urban society of medieval Anatolia and Iran, and to a lesser extent elsewhere in the Muslim world, conventicles similar to those of the Kurds developed. They performed civic and quasi-military functions, while the religious aspect of their activity was more or less successfully co-opted by canonical religions: among Muslims, they were grafted onto the Sufis; while an Armenian priest who composed a constitution for a fraternity drew upon the Neoplatonic treatises of the Muslim Ikhwān al-Ṣafā. They were called, generically, *javān mardān* or *futuwwa*—"young men"—in Persian and Arabic. Another designation sometimes applied to them in Persian, *ʿayyār*, from a Middle Iranian word meaning "helper," undergoes curious semantic development: retaining the initial *ʿayn* acquired in Arabic transliteration, it comes to mean something like a crazy ruffian; as *yār*, it means "friend, lover" and is a Sufi name of God. Some of the Armenian confraternities are similarly designated *ktrič*, "intrepid, daring." The heroes of the Armenian epic of Sasun are called *cuṛ*, literally "crooked, bent" and understood as crazily daring and intrepid: the four generations of *Sasna cʿrer*, the daredevils of Sasun, serve the Armenian community and defend it against its Muslim enemies (who are called Egyptian idolaters—*kṛapašt* of Məsər, i.e., Mišr).¹¹

The central figure of the Iranian national epic, the *Šāh-nāme*, is the Scythian hero Rostam, with his trusty steed Raxš, who was well known to the Armenians of the time of Movsēs Xorenac'i (ca. 5th c. CE). There are Armenian oral epic recitations about him down to the modern period. Though Ferdōsi's masterpiece bears the title *The Book of Kings*, many of the latter are base, weak men; and Rostam is maneuvered by one of them, Kāvūs, into killing his own son, Sohrāb

10 See Russell 1989.

11 One of the latter, the devious woman Ismil Xat'un of Xlat'—a center of Arab rule—is the lover of Davit' and their daughter treacherously murders him in the bath. And his father Mec Mher's dalliance with another woman of Msr had led to his estrangement from his lawful wife, Armaḷan, and to the death of them both immediately after the birth of Davit'. (Mec Mher's lion-slaying exploit reminds one of Samson of Dan; and the alien is his Delilah.)

(Armenian preserves the Kurdish form of the name, Zohrab) for fear that if both champions are left alive, Rostam will take the throne. Indeed, Rostam is not only *pil tan*, “elephant-bodied,” but, notably, *tāj baxš*, “bestower of the crown.” The only king of Armenia in the Epic of Sasun, Gagik, makes a cameo appearance and then disappears right after the beginning. He is no more than a tributary of the Arabs. The heroes of Sasun hold center stage: they quarrel, they fight alien invaders, but they do not rule Armenia as *kings*, though: there is none of the tension that animates the relationship between the crowned Agamemnon and the fighter Achilles, or between Rostam and the shahs he serves. The braves of Sasun are *aznanc’ordik’*, “sons of the nobly born,” many times taller and stronger than other men, and are seen as a race apart. Their youthful exuberance and rebellious, even anarchic and blasphemous behavior arouse alarm at times, so much so that in the third of the four divisions, or “branches” (Armenian *ēwt*) of the epic the uncles of the child David try to prevent him from discovering his heroic strength, martial mission, and magic steed and weapons. They are *‘ayyārān*, in short; and if one recalls that to this day Iranian muscle-men train in the gymnasias called *zōr-xāne* to the accompaniment of the chanting of *Šāh-nāme*, then it is plain that epic was a sort of secular scripture, not just for the laity, but for the martial and civic fraternities in particular, expressing the beliefs and behavior they were to inculcate and emulate in their own activity. The Armenian medieval lyric poet Kostandin of Erzinka (modern Turkish Erzincan, in Eastern Anatolia) even composed at the request of the “brothers” a Christian cosmological poem in the “voice” (Armenian *džayn*) of the *Šāh-nāme*.¹² If there are literary relics of Mithraism, then, it is in epic, with its special social function amongst the Irano-Anatolian fraternities, that we may reasonably expect to discover them; and *Sasna crēr* proves to be no less than an eloquent *tableau vivant* of the symbols and scenes familiar from the lovely, mute stone bas-reliefs of Roman Mithraism.

This Armenian dossier is indispensable to a serious discussion of the phenomenon of Mithra, not only because the country itself was the enduring Western outpost of Zoroastrian civilization—a conduit of Iranian thought and faith to the Classical civilizations of the Mediterranean basin—but because, of the four male protagonists of the four branches of the Epic of Sasun, as was noted above two bear Mithra’s name. The first generation of the heroes are born of the lady Covinar after she has drunk milk of a rock in the sea: the Roman Mithras is *saxigenus/petrogenes*; the Mithras of Ps.-Plutarch, *De Fluviiis*, ejaculates on a rock on the banks of the Araxes—the river that defined Armenia in the Roman imagination—to engender the monster Diorphos; and in the

12 For the text and translation of the poem, with discussion, see Russell 2001–2, esp. 83–9.

Armenian Christian hymnal, the *Šarakan*, the Blessed Virgin Mary, called *Astuaca-cin*, "*Theo-tokos*," is also called *vima-cin*, "generator of the Rock." The Armenized Christ has co-opted Mithras Saxigenus; though the Hebrew designation of God, *Šûr*, "the Rock," also provides ample biblical justification for the epithet as well. *Mec* ("great") or *ariwcazew* Mher, hero of the second branch, breaks a vow and dies young, reflecting as a negative image, as it were, the principal concerns of the *yazata*: truth and fidelity to a covenant. *Mec* Mher's sudden death and leonine association, if related, may echo an ancient symbolism: in the Mithraic rites of initiation, which recapitulate the human process of coming of age and of learning, among other things, of the facts of mortality, the candidate to the fourth degree underwent a symbolic death and rebirth and received the Mithraic *syndexios*, or hand-clasp. (There are specific similarities to the analogous third degree of Masonry here, too.) The ritual death happened as he was conducted past a fearsome, fire-breathing leontocephalous figure called the *deus areimanius* (i.e., "the Ahrimanic god"). Such a leontocephalous man is employed as a symbolic figure on some medieval and later Armenian sarcophagi—perhaps as a symbol of leonine courage, an emblem of death and of the hope of resurrection.

The second Mithra of the epic is of course the hero of the fourth and final branch. *P'ok'ṛ* ("little," probably "youthful" is meant) Mher, son of the greatest hero of the line of Sasun, David (Arm. Davit') of the third branch, is in conflict with his father, though not in open rebellion as was the son of David's biblical namesake. As mentioned above, *P'ok'ṛ* Mher finds himself in a changing world no longer hospitable to the heroic code, a place where the very earth will not support the hooves of his magic talking steed, K'urikik Jelali. Speaking from the grave, the ghost of David commands Mher to go to a cave where he is to remain immured till the end of time. The *topos* will be familiar to any English speaker who has heard an indecisive prince ponder the instructions of another specter at Elsinore. In the context of Armenian oral heroic literature the episode has a precise antecedent, though, in the pre-Christian epic cycle of the Artaxiad dynasty of the second century BCE, alluded to above, where the ghost of the dead king Artasēs (Artaxias) I dooms his rebellious son Artawazd to millennial confinement in a cave in Mt. Ararat (Armenian *Azat Masik'*). So Young Mithra follows a talking raven (cf. the Mithraic *corax*, "idem," itself derivative from the Avestan *karšiptar*-, lit. "black-winged [bird]," in aspect and function) to a cave (cf. again the Mithraic *spelaeum*-temple), to the blind portal at Van behind which he is to remain. The Armenians call this Urartean carved gate *Mheri duṛn*, "Mithra's gate," from which is derived the modern Turkish name, *Meher kapısı*; the Zoroastrians call a place of rites *dar-e Mehr*, "idem."

At the end of time, Artawazd and Little Mithra are to emerge and destroy, save, or possess the world: Armenian Christianity makes Antichrists of both, understandably; and just as predictably Armenian Communist poets hailed the Great October Socialist Revolution of 1917 as the liberation of Mithra from his chains, bearing the blood-red banner, crushing the temples of the mighty, ravening for joy. Anti-Soviet writers have seen themselves as immured future avengers of David, too.¹³ Both the Roman Mithras and the Avestan Mithra have prominent eschatological roles also: the tauroctony scene of Mithraic altars probably telescopes the murder of the Primordial Bull that set earthly time in motion with the final sacrifice that will end time and bring immortality. The zodiac arches over the scene, with the vernal sign Aries at the center: both events, cosmogonical and eschatological, take place on 21 March/ 1 Fravardīn. Mithra in the scene is sometimes portrayed with an expression of ecstatic or agonized emotion: far from standing in impassive tranquility above the world, he is all pathos and passion, fully involved, suffering with the creatures of the earth whom he is helping to rescue.

It is noteworthy that the Epic of Sasun, keyed to heroes instead of kings, is so emphatically Mithraic. It contrasts in this respect with the epics of Armenia's pre-Christian dynasties with which other points are shared, whose official cult replaced Mithra with *Vərəθraγna* in the triad Aramazd-Anahit-Vahagn. The boar-totem (Armenian *varaz*, from Avestan *varāza-*, Persian *gurāz*) of Vahagn is so emblematic of Arsacid mythology and ideology that in a polemical Christian inversion of the latter, when king Trdat (Tiridates) persecutes St. Grigor he is transformed into a boar. Why did the Armenian kings seemingly demote Mihr and elevate Vahagn? Had the former become too closely associated for comfort with the class of hero-warriors whose social descendants were to be the *cīer* of folk epic and the *ktrčworac' elbayrut'iwuk'*, the "brotherhoods of the braves" of medieval Christian society? The tension between the roles of king and hero-warrior is as old as the rivalry of the two "best of the Achaeans," Agamemnon and Achilles, or of the uneasy equilibrium in Ferdōsi of the Iranian kings and the elephant-bodied Rostam the Saka.

The Armenian epic, by making of Mithra a multi-faceted literary character, accomplishes the fullest humanization of the god, a character adumbrated in his every classical feature. He is human frailty and bravery, fidelity and rebelliousness, a complete mirror image of our neotenic predicament. No other *yazata*, surely, could ever have become a character in a drama demanding the coincidence of contraries that is the essence of the human state. In

13 See Russell 1998b, a translation and discussion of a poem by Gevorg Emin.

the Armenian narratives, a shepherd or girl beholds the imprisoned youth Mher when the rock-portal at Van yawns spectrally open on Ascension Eve, when Heaven and Earth embrace. In one variant, Mher is covered in shaggy hair head to toe. This detail invites comparison of the Mithra-figure to the Armenian *vayri mard*, “wild man,” and Caucasian *garmakoči*, “idem,” who are of identical appearance: hairy humanoids. And the latter in particular is related to the prototype of Prometheus—the suffering god who is friend and helper to men, yet still a god, and therefore doomed to be in between or apart, something unnatural, a monster even if loved. Such deep association with the human predicament must of necessity alienate a god from the company of the immortals; and to the extent he advances the interests of mortals, he attracts the antagonism of his fellow divinities and invites punishment. Mithras in his *spelaeum*, and Mher in his cave, are not simply actors in a *topos* of apocalypse; they also are sharers, in a way, of the imprisonment of mortals in the Platonic metaphorical myth of this world as a cave where we see shadows cast before a fire and erroneously think them to be true objects lit by the real sun.

Such reflections on the humanity of a particular Iranian god and its implications for his image raise larger questions, as noted, about his evolution outside and beyond graphic art, as a literary character. The force of the humanity of Christ, a figure known first from a text, overturned the Second Commandment and brought to the fore, for all historical time to come, the Promethean tensions inherent in the concept of an immortal who shares the lot of mortals—a God who really does care. It is a conflict that is not susceptible to resolution, and maybe for that very reason it fertilizes the extremes of religious expression: mysticism, and literature—with a man at the center. The Iranian case of Mithra is somewhat the reverse: the preponderance of the evidence, with the large exception of the Hymn to Mithra in Avestan, the *Mīhr Yašt*, is iconographic; and the subsequent development is literary.

3 The Variants of the Text

The individual recitations of variant narratives enable one to discover details that the artificial, composite texts obscure.

In some mithraea, notably the fresco from Dura-Europus, the god is shown hunting on horseback; and numerous terracotta figurines from Arsacid Iran and Armenia show him thus. So it is noteworthy that Mher goes hunting in (8), and in (5) is led to his cave by a deer he is hunting. He shoots at the talking raven of (14): this conflates the image of the Avestan black bird *karšiptar* together with the theme of the hunt. In most texts he either enters the cave,

after which the stone flanks of the rock come together like closing doors, or he falls in, suggesting that the cave (Arm. *ayr*, Arabo-Tk. *mağara*, Heb. *me'ara*, see below) is also a hypogeum (Tk. *mağaza*). The cave can have various numbers of dwellers. In (2), both Mher and his wife are imprisoned. This would seem to be a variant upon the theme in (9) of the married woman who chances upon him when his rock opens and is stuck inside forever: the narrator insists the woman's husband was impotent, leaving some question as to why she stayed with Mher. Most likely the latter narrative conflates two themes: Mher and his consort, and the hapless traveler who is in the cave when it closes (14) or who visits and explains to the guileless hero how humans live by their wits (7, 13). But in (6) the three surviving heroes of Sasun, Great-voiced Ovan, Uncle T'oros, and Ovanes son of Davit', are all immured: this reminds one more of *Kang dez*, the fortress of refuge in Iranian epic where the heroes live immortally, than a place of imprisonment. Ovanes, i.e. standard Arm. Yovhannēs, "John," is sometimes mentioned as Mher's son, whom he kills; so Ovanes here seems to be a stand-in for Mher. Though the texts stress in unison that Mher is to be without issue—or that the noble progeny he sired have all died off—there is, again, some variance of opinion. After a lecture on the epic in Watertown, MA, during which I mentioned that Mher has no descendants, a member of the audience averred that his family trace their descent to the hero.¹⁴

Though most variants specify that Mher is immured in Raven's Rock at Van, in (12) the cave is at Xlat': this is perhaps because that is where he took revenge for the murder of Davit' and the two episodes are conflated, or else because of the proximity of the great, snow-crowned Mt. Sip'an (Tk. Subhan dağı, Arm. Nex Masik') so similar in its majestic appearance to Ararat in the northeast, where Artawazd is imprisoned. Sip'an is at least mentioned in Mher's itinerary in (24). In (13) the rock is located in the district of the city of Van called Shah-baghi, where an important tradition of Mher concerning the fate of his magic Lightning Saber (Arm. *t'ur kecaki*) endured (see note to the translated text), probably to distinguish the Urartean portal near there from another on the high rock of Van fortress. This suggests competing local traditions even within Van itself. In (10), the rock is called Xəzəš, a word meaning excitation or anger—perhaps because Mher will emerge from there to wreak destruction (or, cf. perhaps Mlr. *ristāxēz*, "resurrection"). In the same variant he is called Davit'

14 Dr. Kegham Chobanian, a physician living in Belmont, MA, told me his maternal grandmother, from the Aygestan district of Van city, was named Arsenian and was a descendant of the Arcrunis. His paternal grandfather, Mher Mherian, whose family came from Šatax, was born in Hayoc' Jor. According to family legend, the name went back many generations and the line descended from the Mher of the epic.

son of Davit' (and, in (16), Davit'-Mher), either because of conflation with the Davidic, messianic line or because the much longer episode on Davit' simply co-opted the material on Mher. But it should still be stressed that in the same period the Epic of Sasun was taking final shape, the Armenian Bagratids put about an anachronistic claim to Davidic descent. Since Armenian Christian writers are aware of a Jewish messianic belief that David will return, the apocalyptic overtone is still present. The only outward symbol of the cave to distinguish it from a Christian shrine is a walnut tree that grows nearby (14). The latter may have had meaning once for the reciters and hearers, since it is a tree of importance in Iranian tradition: the archer Ǝrəxša (Pers. Āraš) defined the boundaries of the Iranian clime by shooting an arrow that came to rest in the trunk of a distant walnut.

In (1) is mentioned that in the cave where Mher is immured, "To either side a candle burns by night and day (*erku kuštā mek mem mom vaṛuk a gišer c'erek*)."

It has long been recognized that this is perhaps a memory of the beings who become the Mithraic *dadophori*, "torchbearers." (It is in (1) that Mher is also described as covered with hair, like the Caucasian bigfoot.) But in (14), light is associated also with the annual opening of the cave: "Once a year the door of the cave (*herā* ') opens. / Then light streams forth like Jerusalem (*inč' Erusalem lūs kə kat'ə* ')." The explicit equation of this light with the radiance of the city holy to Christians seems more than a vivid figure of speech. The Zoroastrian Mithra is, after all, a Sun god; and Mher's brilliance here is both a memory and a challenge to the newer dispensation, reflecting the ambivalence of folk tradition. In the same text, both Mher and a girl who goes to the cave, thinking it a church (*žam*, "chapel"), and is immured for a year that passes imperceptibly, are sustained by manna from heaven. She calls this a "round thing," indicating confusion with a communion wafer (*nšxar*): in the legend of Narekac'i noted above, a child he protects in an underwater dwelling is fed the holy bread and doesn't notice the year pass.

In several texts it is specified that Mher is to remain confined till Christ's second Coming (Arm. *galust*) or Judgment (Arm. *datastan*). But in (16) the formula is employed, "till the unborn is born and the immortal dies." This riddle belongs to an ancient *topos* in folklore that in Armenian and other Christian myth is incorporated into the tale of the cheirograph, or written contract, of Adam. When Adam was expelled from Eden, night, which he had never seen before, began to descend. Satan came and assured Adam that the Sun would return if only our forefather would pledge the servitude of his progeny till—yes—the unborn is born and the immortal dies. Christ erased Adam's signa-

ture.¹⁵ The exploitation of the formula is awkward, since it implies that Mher will be released, not at the Second Coming, but at the Nativity, and is thus not only a non-Christian figure, but a pre-Christian one as well. At the end of the same text the reciter declares that the race of Davit' is of the aggregate of the demons: the *hapax* used, *devəstan* (<**diwastan*), is a collective form, rather like "pandemonium."¹⁶ Since in (11) the progeny of the secondary heroes Great-voiced Ohan and Xor Manuk ("Deep Child")¹⁷ of Sasun are considered the ancestors of the young braves (*ktrič*), and the line of Mher, now ended, was that of the *aznanc'ordik*, "sons of the nobles,"¹⁸ this explicit association of Davit' and his son with the demons is striking and has very ancient roots. The genetic kinship of the story in general and in verbal detail (especially the curse formula) to the epic of Artašēs and Artawazd has been noted; and in the latter it is also said that "the progeny of the dragon [i.e., the Medes] kidnapped the child Artawazd and put a demon (*dew*) in his place" (*višapazunk' gołac'an zmanukn Artawazd ew dew p'oxanak edin*). So the statement that the Sasun heroes were demons may be quite specific, not merely a general, affrighted reflection on their otherness.

For the curse of Mher by Davit' derives from that of Artašēs against Artawazd in the *History* of Movsēs Xorenac'i. In the same chapter one learns various other details identical to those in the myth of Mher: that Artawazd is imprisoned in a cave (*ayr*), that he "strives to emerge and bring an end to the world"

15 See Stone 2002; and review, Russell 2003.

16 It should be compared to Phl. *mowastān*, "(the aggregate of) the Magi" Cf. Arm. *krawnstan*: Grigor Narekac'i, *Matean otbergut'ean*, ch. 72.1, *Ayl aha jez asem, ov eketec'ik' mianjanc' ew ašakertut'iwkn' krawnstanac'*; "But now I say to ye, O churches of hermits and discipleships of the religious." The ending *-stan* is a collective plural as well as the more commonly encountered toponymical suffix.

17 This character is probably related to another figure in Armenian mythology: see Russell 1998c. I think these various "kids" are the unruly members of the Sasun *Männerbund*, bit characters from subsidiary episodes attached locally to the epic by diverse reciters and now lost.

18 As noted above, this is the term used, as recently as the sixteenth century and as far from Armenia as Poland and Ukraine, to describe the associations of young men in Armenian communities who engaged in mystical initiation and study, athletic and military training, and social service. Their activities are analogous to those of the *futuwwa*, *axī*, and *javān mardān* of Arabic, Turkish, and Persian-speaking Muslims. Just as the heroic exploits of Rostam in the *Šāh-nāme* of Ferdōsī are still chanted in the Iranian gymnasium, or *zōr xāne*, one surmises that in addition to the Armenian songs "in the voice" (i.e., meter) of the Persian bard that Kostandin of Erzuka was asked to compose for the "brethren" (presumably, of a conventicle of the *ktrič* youth), tales of Sasun would have been recited as well.

(*janay elanel ew arnel vaxčan ašxarhi*), and, as we noted, that it was believed that Artawazd was not a human but a demonic changeling.¹⁹ With all these correspondences, it is perhaps predictable that Davit' and his line also should belong to the *dewastan*. Armenian Christians would have seen in an apocalyptic figure seeking to destroy the world a satanic being, an Antichrist. So the association of Mher with Satan through the legend of the cheirograph of Adam makes thematic sense. Yet when one recalls that the heroes of Sasun are worshippers of the Holy Cross (*xač'apašt*) fighting the idolatrous (*krapašt*) Arabs with magic weapons bestowed by the Holy Mother of God of Marut'a (the latter is the Syrian saint who interred holy relics at Maypherqath/Martyropolis), the demonic associations are startling. They are a reflection of the unease and ambivalence with which the Armenians regarded the apocalyptic conclusion of a heroic cycle that was theirs but came from before Christianity and remained in some ways outside it.

As to the curse itself, in (17) the dead Davit' curses his son from the grave: "Woe, Mher!/ I ask of God that you be immortal (*anmax*)./ Let no heir come from you./ Your place, too, will be in a rock./ You will not see the world with your eyes (*Dü k'ü ač'k'öv axšar č'tisnas*)./ When you see the world, the world shall you destroy (*t'avris*)."²⁰ This echoes the account by Movsēs Xorenac'i (2.61) of the curse that the apparently already deceased king Artasēs pronounces on his son Artawazd: "If you ride to the hunt up on Azat Masik' [i.e., Greater Ararat], the *k'aj's* will take you, carry you off up on Masik', you will stay there, and you will not see the light."²¹ (In several texts, Mher indeed goes hunting; and in one it is the hunted (and wounded) raven that leads him to its rock). And as I have suggested above, a likely remoter source of both epic episodes is the scriptural and epic myth in the Avesta of Yima, the primordial king who sins and is condemned to an undying existence in the underworld. The *Gāthās* of Zarathuštra refer to the legend of Yima in *Yasna* 32; the tenth verse condemns the one who ruins our reputation or fame (*sravah*) by professing the worst (*ač'išta*) for the sake of the sight (*vaēnah*) of the Cow and the Sun (*hvar*) with his eyes (*aši*—the word used here is "daēvic," i.e., used only of demons and evil creatures). This passage in turn may derive from a curse in the Avestan hymn to the sacred plant *haoma* (*Hōm Yašt*, *Yasna* 9.28–29) against the violent and wicked man that he see neither Cow nor Earth (the rhyming pair *qam/ zqm*) with his two eyes (*ašibya*).²¹

19 On the Artaxiad cycle and these fragments, see Russell 2006–7.

20 *Et'ē du yors hecc'in yazat i ver i Masis, z'k'ez kalc'in k'ajk', tarc'in yazat i ver i Masis, and kayc'es, ew zloys mi tesc'es*. For discussion see Russell 1987, 399–435.

21 I am indebted for the suggestion of a derivation of the line in Y. 32 from the hymn to Haoma to Prof. Martin Schwartz of the University of California, Berkeley.

Though in a number of versions Mher rides to Raven's Rock once the curse has been explained to him, in (24) he first must fight the angels of God: this ancient and widespread epic theme is found in the Armenian heroic ballad of the naïve Aslan *aġa* (lit. "Lord Lion," cf. *Ariwc* "Lion" Mher!), who does not understand what death is and cannot find anyone willing to die in his place.²² This contest fits in well with Mher's image, both as an ingenuous Promethean rebel and as a member of an older dispensation whom the new Christian faith literally conquers.

Mher will emerge when grains of wheat are as large as rosehips and the ground is firm enough to support his horse: according to (22), when the world is destroyed and rebuilt anew, it will be his. But according to (8) he will cause a massacre and then be "martyred"; in (5) and (10) all that is said is that he will lay waste the world. So there is some ambiguity about whether his second coming will be for good or bad and whether he himself will survive thereafter. In (3) the element of apocalypse is entirely absent: Mher will stay in the cave till the day of his death (*mahvan ōrə*). But that dénouement is entirely uncharacteristic of the overall message of the variants I have read: Mher is coming back, and his return will be bad news.

The urine of Mher's horse is either always to be seen on the rock face behind which the hero and his steed are immured; or else it trickles down on one of the Christian holy days when the cave is said to yawn open. This rather anti-climactic-sounding detail is always given prominence, even in the most laconic versions of the episode. So it may be of greater than incidental significance. One is tempted to offer an explanation with reference to the *xar ī se pāy*, "three-legged ass," of Zoroastrian cosmological myth. This mythical equid being's urine, expelled into the world-ocean, kills the demonic beings that would otherwise destroy the tree of life. The horn of the unicorn was in mediaeval Europe believed likewise to purify the water: perhaps that is why the creature is shown on one of the tapestries of the Unicorn series at the Cloisters museum, New York, to plunge its horn into a stream.²³ And that, if it isn't an explanation, is at least a good guess.

²² See Russell 2002.

²³ See Cavallo 1998, 57 and fig. 35. But one is reminded also of the story of the fellow who during the years of Prohibition in America took a bottle of hooch to a doctor, wondering what exactly he'd been drinking. "Sorry, sir," said the physician after analyzing the sample. "Your horse has diabetes."

4 From Van to Jerusalem

In the Spring of 1967 the Arab states massed their Soviet-supplied armies for the stated purpose of destroying the State of Israel and driving the Jews into the sea. In the midst of this crisis, Naomi Shemer was asked to write a song for the festival to be held in Jerusalem on 15 May, the anniversary in the Western calendar of the founding of the State nineteen years earlier. Previous songs about the Holy City did not mention its division: at that time the Old City was occupied by Jordan, the Jewish Quarter lay in ruins, and Jews were denied access to the city in general and the Western Wall in particular. Shemer composed a song, *Yerushalayim shel zahav*, "Jerusalem of Gold," a love song to Jerusalem and a lament over its division. Shuli Natan performed it at the festival, to immense acclaim. Egypt had blockaded the Straits of Tiran that day, and Yitzhak Rabin had to leave the concert early to deal with the developing situation. War began on 5 June; and on 7 June the Israel Defense Forces liberated the city, returning sovereignty of David's capital to his own people for the first time since the Second Temple Period. Shemer, who was in El Arish that day, composed a final stanza for the song, which was made the official song of the Israel Jubilee in 1998 and has the status of an unofficial second national anthem.

Several stanzas of that apocalyptic song of an apocalyptic moment in the life of a nation that has too often stood on the brink of apocalypse, or mused about it, rehearse perhaps not so strangely the durable, suggestive images and *topoi* of which the episode of Mher is replete. *U-va-me'arot asher ba-sela' / Meyalelot rukhot*, "And in the caves that are in the rock/ Spirits [or 'winds'] moan," in the desolate city that languishes in captivity. *Ki shemekh tsorev et ha-sfatayim / Ke-neshikat saraf*, "For your name burns the lips/ Like a seraph's kiss," makes one think of Jacob— or Mher— wrestling the angel. The strophe *Eikha yavshu borot ha-mayim*, "Woe! The very wells of water are dry," stands in contrast to the staling of Mher's horse, perhaps. But then, *Khazarnu el borot ha-mayim, / La-shuk ve-la-kikar / Shofar kore be-Har ha-Bayit / Ba-Tr ha-Atika / U-va-me'arot asher ba-sela' alfe shemashot zorekhot, / Ve-shuv nered el Yam ha-Melakh / Ba-Derekh Yerikho*. "We have returned to the wells of water, / To marketplace and square. / The ram's horn trumpet calls upon the Temple Mount / Within the Old City. / And in the caves that are in the rock / Shines the light of thousands of suns / And to the Dead Sea we shall descend again / On the Jericho Road." Water springs, and from the open cave shines the light of redemption. Or as Hovan of Moks put it, as he chanted the Epic of Sasun to Garegin Hovsep'yan, "Then light streams forth like Jerusalem (*inč' Erusalem liis ka kat'a*')." And both the songs of the Six Day War and the Epic of Sasun have become political phenomena, irruptions of mythology into the cultural arsenal of irredentist sentiment, the modern apocalyptic of two minority nations.

5 Conclusion: The Sense of No Ending

Apocalypse predicates upon the destruction of the world the instauration of eternal life. The variant recitations of the Armenian Epic of Sasun mention both, but never do so in a conclusive way. Whatever is to happen, the epic ends with Mher in his cave, visited now and then by the chance traveler, K'urkik Jelali making his presence known. Naomi Shemer, in her song, looks forward to dazzling lights bursting forth from Jerusalem's limestone caverns, the *shofar* blasting triumph, and water purling from dry wells—but after all that, what happens? People go to the seashore. What will we say to God? muses Vahan Tekeyan. He decides to tell Him, “Send us to hell. Send us *back* to hell. You made us know it so very well. And give Your precious Eden to the Turks.” For two cultures with such abundant apocalyptic traditions, Jews and Armenians seem remarkably resistant to apocalypse. Perhaps that is because the hope of living as free people in our own country—indeed, the hope that the world will leave us alone to live at all—has been so distant an ideal. So the restored cosmos is simply being at home again in Jerusalem, or Van; and immortality is seeing our children grow.

Appendix: Texts²⁴

- I. A list of translated texts in foreign languages of passages concerning Mher's occultation:
 1. Collins 1901, 78–9. This is a tr. of II.7 (pub. in 1873), as is scs (cf. 148–50).

²⁴ The following abbreviations have been used:

S= Tigran Č'it'uni/Dikran Tchitouny, *Uwunūwlywū* (French title: *Sassounacan: Épopée Populaire Arménienne*). Paris: Arak's/T'öp'alean, 1942.

sc 1= Manuk Abelyan and Karapet Melik' Ohanjanyan, eds. *Uwūw dntēr* (Daredevils of Sasun), v.1. Erevan: Petakan hratarakč'ut'yun, 1936.

sc 2= Manuk Abelyan and Karapet Melik' Ohanjanyan, eds. *Uwūw dntēr* (Daredevils of Sasun), v.2. Erevan: Petakan hratarakč'ut'yun, 1951.

sc 2.1= Manuk Abelyan and Karapet Melik' Ohanjanyan, eds. *Uwūw dntēr* (Daredevils of Sasun), v. 2, pt. 1. Erevan: Petakan hratarakč'ut'yun, 1944.

scs= Karapet Sital, *Uwūw dntēr* (Daredevils of Sasun). Philadelphia, PA: Amerikahay Yafa'dimakan Miut'iwn ["American-Armenian Progressive Union"], 1946.

sd= H. Örbeli, ed. *Uwunūgh Ĵawh̄r: hawlyawlyan dthghrdhawlyan tcyu* (Sasunc'i Davit': An Armenian popular epic). Erevan: Haypethrat, 1961.

2. Shalian 1964, 367–71; Feydit 1964, 393–5; Surmelian 1964, 274–9; Mkrtčyan 1982, 338–41. These are translations of the “composite” text, SD.
3. Tolegian 1961. This is a translation of the rendering of the epic into modern Eastern Armenian verse by the poet Hovhannes T’umanyan (d. 1912).
4. Boyle 1976. This is a translation of the “composite” text, S, pp. 1083–97.

II. Translations of texts in Armenian dialect.

1. *Sasma crer*, recited by Aṙak’el Šakoyan of Nor Bayazet, recorded in 1905 by Ervand Lalayan (SC 2, p. 172).

“The ground then gave way under his horse’s hooves;/ It gave way (*dayanmiš*) up to its knees./ He looked, saw: above Xlat’ there was a mountain:/ He turned thither, rode to the mountain’s summit,/ Asked: ‘What mountain is this?’/ They answered, ‘This is the Carven Rock (*Kerpac k’ar*).’/ He said, ‘I’ll ride my horse slowly over those rocks./ The ground will be calm lest I go and break them.’/ By God’s command the Carven Rock came over him,/ Made an arch (*tap*) and stood./ It stands there still till now./ The hair of his body has grown and covers him,/ And his breast is seven ells wide./ On Holy Ascension day/ He comes out of the cave with the good light,/ prays, and walks seven great strides from his place./ He rides his horse outside:/ Beneath the horse’s hooves the ground still gives way./ As soon as three hours have passed/ He goes inside: he does not have permission to remain longer./ Then the door of the cave closes./ His daily food is three communion wafers (*nšxark’*)./ To either side a candle burns by night and day (*erku kušta mek mem mom varuk a gišer c’erek*)./ His horse stales: the urine comes out of the cave./ The horse’s alfalfa (*yonjen*) is in front of it/ And is green in summer and winter.”

2. *Davit’ ev Mher kam Sasna crer*, recited by Sargis Hakobyan of K’avañ, recorded in 1903 (SC 2, pp. 229–30).

“Mher mounted his horse and rode to the palaces of Aleppo: he called Gohar from there. Gohar recognized her husband’s voice and came out to him. When she saw Hohanes was not there, she asked, ‘But where is Hohanes?’ Mher deceived his wife and said, ‘He’s gone bird hunting (*av u huš*); he’ll return in the evening. But I’ve come to take you to go hunting with me: we’ll come home by evening.’ After those words, Gohar mounted behind her husband and Mher spurred his horse towards Van. Near there, there is a great boulder-rock. Mher stopped in front of the boulder-rock and said, ‘O Lord God, after my son’s death

I am unworthy to live. For that reason, let this cliff split and give me and my wife a place in itself. Upon these words, the boulder-rock divided in two. Mher rode his horse inside. The boulder-rock closed overhead from either side and was made one again. It took within itself Mher, his wife, and his horse. Till today every traveler passing by that boulder-rock on Fridays hears the wailing and crying of the luckless parents and the neighing of Mher's K'uřik Jallad."

3. *Sasna c'rer*, recited by Murat Hovsep'yan of Ayrarat, recorded by Sargis Haykuni (SC 2, p. 316).

"Great-voiced Hovan saw that no matter how he begged,/ he did not stay./ He said,/ 'Son, I ask of God/ That your place be the Rock of Van (*Vana k'arn*)./ Mher mounted his horse and rode towards Van./ When he had ridden his steed from Sasun to the fortress of Van,/ He saw that his horse's legs were sinking up to the knees in the earth./ He said, 'Now I know the world and the earth are grown old (*axšark'xot'xalivorc'e*).'/ There was a cave: he went inside./ The doors of the cave came together and it took him to itself./ He stayed in that rock till the day of his death (*č'ur ira mahvan orə*)./ From one Ascension to the next, the door of the cave opens./ He comes out and observes (*t'amaša k'ani*) the world./ He heaves a sigh and rides back in, remains inside./ The doors come together and it takes him to itself once more."

4. *Sasna tun*, reciter and recorder unknown (SC 2, p. 480).

"Thereafter Davit' died and they buried him in Axlat'. After forty days were past, *Mher's mother also died [the authors emend from "David's"]. It was Little (*Pstik*) Mher's time to strike, play with, and oppress his people in every way. When evil befell that Little Mher, he got up and went to his mother's grave, cried long, and said, 'Mother, what am I to do? The earth will not support my horse anymore.' From his mother's grave a voice arose, and said, 'Go, it is not I who have cursed you. It is your father who gave you the curse: go and cry over his grave.' Little Mher got up from there and went to cry over his father's grave. And from that grave a voice arose and said, 'Go, mount your horse, ride to Van. There stands Raven's Rock (*Ağravu k'är*). Go there. In that Raven's Rock will you sit.

Little Mher arose and mounted his horse./ He rode to Van, to Raven's Rock./ There he went up on a high rock,/ Entered an opening in it,/ And by God's command that rock closed up,/ And he remained there till now./ Whosoever wishes, let him believe./ Three apples came down from heaven:/ One for the teller, one for the hearer,/ And one for the one who gives an attentive ear."

5. *Sasna crer*, recited by Barseł Sahakyan of Aparan, recorded by Ervand Lalayan in 1912 (SC 2, p. 531).

"He mounted his horse and came to Aleppo,/ Drew his saber, and put it in between him and them (*drec' ort'alaf*)./ He rose in the morning, thanked his father in law,/ Took his wife, and was to go to Sasun./ He mounted his horse, seated his wife behind him, and rode on./ Uncle T'oros, Vegev the Shitter,/ Little Sparrow, Great-voiced Hovan/ Arose and went before,/ Came, reached Mher./ They took Mher and turned from the road./ As they came, a deer appeared right in front of them./ Mher lowered his wife from his mount/ And plunged after the deer./ They took his wife and went on to Sasun./ Mher spurred his horse after the deer./ He went, and a great rock opened,/ The deer went in,/ Mher rode after it, and it hid them./ Till now he, the deer, and his horse/ Are standing, in the rock./ When Mher comes out of the rock/ He will lay waste to the world (*ašxark' piti avera*)."

6. *Sasuna crer*, recited by Mkrtič' Petrosyan, recorded in 1946 by Vard Bdoyan (SC 2, p. 703).

"Some time passed./ Uncle T'oros went on pilgrimage:/ He took the son of Davit', Ovanes, with him and Great-voiced Ovan./ They went and made their pilgrimage: they were inside a cave./ The two mountains came together,/ And they remained within the cave./ Since that time still, they say,/ They are alive (*sał*) within the cave."

7. *Sasunc'i Davit' kam Mheri duř*, recited by Krpo of Taron, recorded by Garegin Srvanjtyanc' in 1873 (SC 2.1, pp. 41–4).

"The brothers of Davit' set off/ And came to the Lady Xandud./ They touched the lady's breasts with their hands/ And saw there was milk, since there was a babe./ They went out, gathered, and said:/ 'Maybe what has happened, is there./' When they went and arrived at Kagizvan,/ They said to the ones seated there,/ 'Our brother's wife has given birth to a child. Where is he?'/ They said, 'Nothing of the kind./' Those men replied,/ 'We have a sign of it./ Our sister in law's bosom has milk./' Some others said to this,/ 'A girl was in these parts, but she has died./' They said to them,/ 'We have a sign of death:/ At one year, it's one giant step;/ At two, it's two,/ And now...'/ They went to have a look at the graves,/ But there was nobody's grave long enough to be one of their own./ Great-voiced Ovan said,/ 'Bring the skins and wrap them round me, for me to cry./ Mher: they've made an underground storeroom (*malaza*),/ Placed a guard over it,/ And put him there./' They wrapped Great-voiced Ovan in the skin and he wailed./ Mher recognized his voice./ Mher said he was going out, and his grandmother said,/ 'That is not the voice of your kin./ There are boys

and tambourines: that's what you hear./ When Mher recognized the voice a third time,/ He struck out, broke the door down, came outside./ He broke one door down after the other,/ Kicked in the next,/ One after the other,/ Smashed seven in all and came out./ He saw his uncles were there but his father was not./ He asked his uncles,/ Whether the men of Xlat' had killed him./ He cried, sank to his knees, nose and mouth bowed./ When he fell to the ground/ His uncles fell upon him,/ Tried but could not straighten him up./ Mher's tears wore a hole (*handak*) in the ground and disappeared.// When three days had passed, Mher straightened up again./ He mounted his father's colt/ And went to Xlat', reduced it to rubble,/ Destroyed it utterly./ Then he went to the summit of Nemrut,/ Looked, and saw smoke rising. He turned then/ And saw an old woman was passing./ He took her, tied one foot to one tree, one foot to another,/ And let the trees apart. Thus he killed them./ He ended the life of Xlat'./ He sent a message releasing (*izin*) his uncles from there/ And they went home./ He himself went to the hill of Tosp (*Tospan blur*)./ They say there's a cave there: that's where he is./ And everyone (*omya*) sees his horse there:/ And his horse's urine always comes out of the rock.// On the night of Ascension the door of Mher's cave (*Mheri eri dur*) opens,/ And there is no command that he may go out./ The ground will not sustain him./ His legs bend in the earth./ On one Ascension night a hunter/ Sees Mher's door open:/ The hunter goes inside./ Mher asks him:/ 'How do you live?' (lit. 'How do you eat the world?' *imal duk' zašxar k'utek'*) He responds, 'By intelligence.' (*xelk'ov*)./ Mher sits up and says, 'How is it, your intelligence?' Well, take the horse's bag, put it on its head./ However hard the hunter tried, he couldn't lift it./ He brought the horse to the bag,/ Opened it and lowered the horse's head to it./ Then he bound the cord round the horse's neck/ And the horse raised its head./ The hunter led it back to its place and hitched it there./ He said, 'Our intelligence is like this./ We live this way./ And the hunter asked,/ 'Mher, when will you come out of this place?'/ He said,/ 'When a grain of wheat is bigger than a quince (*aluč*),/ and a hop is bigger than a rosehip./ Then the command will come allowing us to leave this place./// Three apples came down from heaven:/ One for the teller, one for the hearer,/ And one for the whole wide world (*alam ašxarin*)."

8. *Sasma c'ier*, recited by Murad of Aparan, recorded by Garegin Hovsep'yan (sc 2.1, pp. 101–2).

"Some time passed,/ And Mher mounted his horse/ To go hunting (*avətuš*)./ The ground did not sustain his horse:/ It sank to its knees in the earth./ Mher said, 'What will I do?' The ground does not hold up my horse./ He spurred his horse and came/ To the side of a giant rock (*joj k'ari*), and said:/ 'O God, what will I do, what can I do?'/ When he spoke thus, made a plea,/ God heard his

voice./ The rock opened and took Mher in./ A voice came: 'Mher,/ You will stay in the rock/ Till a grain of wheat is the size of a rosehip./ Then you will come out of the rock again.'// Now Mher is in the rock till that hour,/ And they say that when his horse stales, the urine comes out of the rock."

[Variant ending: "Now Mher and his horse/ Are alive in the rock./ On the five great dedicatory festivals of the year (*hing avak' katik*, i.e., Arm. *nawakatik*),/ Mher comes out of that rock,/ Looks at the world, enters that rock./ There is no command allowing him to walk the world./ When a grain of wheat is become a rosehip,/ The ground will become firm (*xayimna*)./ Mher and his horse will come to the world./ Again Mher will wreak massacre (*Nor Mher kuturum k'eni*);/ At the end he will be martyred (*Verj ka martirosi*)."]

9. *Sasna tun*, recited by T'amo Davt'yan of Sasun, recorded by Karapet Melik' Ohanjanyan in 1932 (SC 2.1, pp. 195–6).

"Mher mounted his horse and rode./ The horse could not resist (*däyaxa*), and sank (*gə lorxer*) in the earth./ Davit' had cursed it, the horse could not stand./ He sent Mher to the city of Aleppo—/ Davit' had built the city of Aleppo—/ So Mher got up and went there./ There his horse could not stand, it could not stop./ Mher burnt the townspeople./ One day he mounted his horse and departed./ He got up and fell into a cave (*zutrín*),/ The rocks came together, the door closed./ Mher stayed in the cave. / [Variant: No matter how Mher turned, the earth would not sustain him./ He went to the mountains of Axlat', to its valleys, went up on the rocks./ He went up on one rock and was stricken:/ The rock came together and he himself entered within.] Till a kernel of corn becomes the size of a rosehip,/ Till a grain of wheat becomes the size of a walnut,/ Mher will not come out of the cave.// Till now men have seen him./ A bride of seven years was taking bread to the plowmen (*ladzvurnun*)./ The door of the cave (*k'afu*) opened./ That bride was married seven years,/ Her fiancé was bound from her (*gabug ə əti*),²⁵ / Lest people talk./ The cave door yawned open,/ Mher appeared (*gə hazərvi*), came out,/ And the door of the cave closed up again./ There is a command he not emerge till Judgment Day (*tadasdan*),/ Till a kernel of corn be like a rosehip,/ Till a hop be like a plum."

10. *Sasuna Davit'*, in the dialect of Xlat', reciter and recorder unknown (SC 2.1, p. 246).

"The lady Xandud remained with two souls. In nine months, nine hours, and nine minutes she was stricken, and bore Davit', the son of Davit'. When Davit' came out of his mother, he fell on the ground. His hand was closed. The world

25 The man has been rendered impotent by demons, cf. Arm. *kap* "binding (spell)."

tried but could not get it open. His mother gave him her hand, and by God's command his hand opened. They saw that the man was taken and delivered after his mother's heart. He reached his twelfth year and laid waste to Xlat'. As many hard stones as there were, he split every one in two. He turned the world upside down, destroyed it and went entered Xəzəş²⁶ rock. He is there till now, till a grain of wheat becomes bigger than a rosehip: when he emerges, he will destroy the entire world (*elman ašxark' avira*)."

11. *Sasuna c'ier*, recited by Manuk T'oroyan of Alaškert, recorded in 1932 by Karapet Melik' Ohanĵanyan (sc 2.1, pp. 351–3).
 "Mher fell into thought./ He thought, 'I have become a sinner./ How can a man kill his own son/ And not be a sinner himself?'/ So Mher went along, thinking./ He came to a spot below a mountain,/ A black rock (*sev k'ar*) right in front of him./ He said, 'Wait, I'll let fly at this rock with my mace (*gürz*)./ If it breaks, I'm not a sinner./ If it doesn't break, then I am a sinner./ When the mace hit the rock,/ The rock split on either side:/ He and his horse went into the rock./ The rock came back together./ Mher escaped, was freed (*pərdəzav, azadav*)./ Mher's line (*j'ins*) came to an end./ Uncle T'oros died of grief/ When he heard of Mher's death./ The line of all the rest who remained continues still./ Now when there are brave men (*ktrič*) amongst the people of Sasun,/ They say those are from the line of Great-voiced Ohan, of Deep Child (*Xor Manuk*)./ The sons of the nobles (*aznanc'ordik'*) are from the race of Mher./ They went, ended."

12. *Davit' ev Mher*, recited by Uncle Naxo of Moks, recorded in 1886 by Manuk Abelyan (sc 1, pp. 50–1).
 "Mher got up and wanted to go;/ When he put down his feet, they sank into the earth./ The earth had weakened before him./ There was no place on earth for Mher to rest./ He went and entered beneath the cave of Xlat'.// Some days passed, and a man on horseback came./ Mher went and took his horse away./ He got up, mounted the horse,/ Intended to perform more heroic feats (*p'ehlvanut'ün*)./ He mounted and rode the horse to the plain./ The earth before him was weak/ And the horse sank into the soil./ There was no place on earth for Mher to rest./ Mher for twenty years/ Prayed beneath the cave of Xlat', saying:/ 'O Lord God,/ My father's curse has reached me,/ It has pulled the vein of my insides,/ From my side no heir has fallen into the world./ Nor is there death for me/ Till Christ comes for the Judgment (*č'ur K'ristos kă datastan*)./ O Lord God,/ I call to you,/ Whatever you do/ Do not leave (*dzges*) me in the Rock of Van/ Till Christ comes for the Judgment,/ Makes provision for my soul (*Im*

26 Cf. Tk. *qiziš*, "hot, angry, excited."

xogu čarə eni).'/ God issued a command/ That he be left corporeally (*marmnavor*) in the Rock of Van/ Till Christ comes for the Judgment.// They say that on the night of Ascension/ The door of Mher's rock opens./ A man does not see; there is no command a man see./ A bride of one year saw him./ That bride was taking her cow to pasture./ The calf fled, she followed it, they fell into the rock./ The door of the rock opened and Mher came out from inside the rock./ The bride came home and reported the news./ Before they could come back there, the rock had closed.// There is no command a man see/ Till Christ comes for the Judgment."

13. *Sasma p'ahlivanner kam T'alor Davit' ev Mher*, recited by Zatik Xapoyenc' of Moks, recorded in 1898 by Bagrat Xalat'yanec' (sc 1, pp. 117–18).

"The earth grew old (*axt'iarac'av*)./ Mher mounted his horse, departed, rode around./ The horse sank into the ground as though into a hole./ Mher said,// 'Merciful, beneficent God,/ You commanded/ And the angel Gabriel came down but gave not death/ Till Christ comes for the Judgment./ Angel Gabriel,/ Cast me into the Rock of Van/ Until Christ comes for the Judgment.'// The angel Gabriel cast Mher into the Rock of Van/ Till Christ comes for the Judgment./ There was a girl./ They filled a kerchief full of eggs,/ Put it in the girl's hands and said to her,/ 'Take it to your godfather's house.'/ The girl departs, takes the kerchief, goes to the Rock of Šabał.²⁷/ She sees the door is open./ The girl goes there./ Mher brings her in, questions (*kə jrbə*') her, saying,/ 'Girl, give some grass to my horse. Let him eat.'/ The girl says,/ 'Let me have your lance (*əram*)./ I'll spear the grass with your lance/ And put it in front of the horse, so he can eat./ My hand can't reach that far: he's tall.'/ Mher says,/ 'He doesn't want it. My horse won't eat the grass.'/ Mher says, 'The world is still evil./ I cannot live in the world.'"

14. *Davit' ev Mher*, recited by Hovan of Moks, recorded by Garegin Hovsep'yan (sc 1, pp. 243–5).

"He arose, mounted up, and reached the plain of Van./ He looked over the plain of Van and saw/ There was a raven, it spoke (*Mek aḡrav kær, kə xuser*)./ He took out his bow and arrow, shot and struck the raven./ The raven was injured (*birindar*)./ The raven fled, he spurred his horse, went after it./ He reached a

27 This is the district of Van known as Šāh-bāyi: in 1995 Krikor Boghosian, whose mother was from there, told me she used to say that the waters of Lake Van were vexed on Fridays because Mher's sword was falling then into the water. See Russell 2001, 211 n. 58 (=Russell 2004, 1159).

rock and saw it was open, it was a storage-cave (*malaza*)./ He saw: the raven had entered the cave./ He turned himself and his horse away on the ground,/ But as he turned, the horse's hoof found no resting place on the ground and was buried./ It was high noon. The more he spurred/ The horse, the deeper it was buried, till evening./ He took the horse, rode into the cave, said,/ 'I'll wait till dawn, leave here, and go.'/ When he went in there,/ He dismounted and hitched his horse,/ The door came together and he remained inside./ He didn't come out again, God did not command (*amr*) that he come outside./ He remain there till at the end of the world the earth become firm (*kə kək'və*) and/ Hold up (*dayamiš*) beneath the horse's hooves.// Once a year the door of the cave (*herə*) opens./ Then light streams forth like Jerusalem (*inč' Erusatem lüs kə kat'ə*)./ The door of that cave opens./ And why does it open?/ For the sake of God's grace (*xat'və*)./ Manna from heaven falls there:/ Both he and his horse eat./ They eat once a year and are not hungry thereafter./ They call the name of that place Raven's Rock (*Agravu k'är*)./ Since the raven entered it,/ Because of that they call it Raven's Rock./ Once a year, in the month of Roses (*Gilan*)./ The urine of his horse comes out.// On the evening of Red Sunday (*Karmir kiraki*) when the Divine Liturgy is done,/ That evening a man says to his daughter,/ Get up and go to church (*žam*), light a candle, bless the fire (*oxnuk krak ar*). Go./ The girl goes outside, looks, and sees/ The light of a lamp is coming out of that rock./ The girl got up and went there hoping that was the church./ She went in, lit a lamp./ She turned and was about to go, the door came together./ The girl remained there./ She saw manna was coming from heaven./ Mher took it and ate, so did his horse, the girl too./ They were not hungry again till a year had elapsed./ On that day when one year had passed,/ The girl lit a lamp./ When the door opened, she came outside, took the lamp and went home./ Her father said, 'Girl,/ A whole year has passed, where have you been?'/ The girl said, 'Dad, didn't I go out just now,/ Light a lamp, and return?/ I didn't even sit down there.'/ He said, 'That house where you were, who was there?'/ She said, 'A man and his horse.'/ He said, 'What was there on the door?'/ She said, 'There was a walnut tree (*kök'və'car*) there; there was nothing else there.'/ She related some more, and said,/ 'A round thing came from heaven and I ate it./ I was hungry; he was hungry.'/ The girl was hungry for a year./ As soon as she ate it, she was full./ They realized it had been Mher and his horse."

15. *T'vat Davit' ev Mher*, recited by Łazar Hovakimenc' of Moks, recorded in 1899 by Artašes Abelyan (sc 1, p. 300).

"Mher left, went to his father's grave./ He sat down and cried./ He cried so hard, and called on God./ Davit' spoke, and said to Mher,/ 'What are you crying for?'/ He said, 'I have lost the lordship of Sasun.'/ He said:/ 'Son, let the hair down

over my head/ And flee from my face in shame./ There is no permission (*izin*) for me to come out./ God gives no command./ Go to the grove (*razir*) of Van, there is Raven's Rock (*Agrap'u k'är*)./ Enter within that rock./ Your bread is baked./ Your food is cooked, too./ Till Christ's coming (*Č'ür K'ristusä kälstyan*)./ When Christ comes,/ Sits upon a throne of light/ And separates the righteous and the wicked, one from the other./ That day you will come out.// He went and entered Raven's Rock./ Once a year his horse's urine comes out of the rock."

16. *Davit' ev Mher*, recited by Vardan of Moks, recorded by Sargis Haykuni (SC 1, pp. 377–8).

"Mher went. What did he do?/ He went and fell upon the deep grave./ There he cried much, and sang:/ 'My father, they have made me exiled of the house of Sasun./ My father, they have made me disinherited of the house of Sasun./ My father, they have made me bereft of the house of Sasun./ A voice comes from the grave of Davit':/ 'Mher, your horse cannot stand on the earth./ Mount your horse and go to Raven's Rock of Van (*Vana Atk'rp'u k'är*)./ Your place is there/ Till the unborn is born and the immortal dies (*č'ür ancin cnani, anmax merani*).// Mher arose, mounted up, went./ The rock opened and drew him in./ The rock came together, and he remained inside.// Twice a year the door opens/ And he takes a look (*t'amaša*) at the world./ One time it opens on Vardavař./ Mher child of Davit' comes out on the night of Ascension/ And goes a journey of forty days in one hour./ On the day the rock opens, he travels forty days over rocks:/ Wherever he happens on earth, his horse sinks in./ He cannot walk, and turns back./ On Ascension night Mher has two hours of time:/ For one he travels out, in the next he turns back.// The horse's shoe is the size of a big tray./ When it stamps on the earth, it will destroy the world.// They call Mher, child of Davit', Davit'-Mher.// An angel shod the horse of Davit'./ Davit' said, 'Shoe it well!'/ He replied, 'I'll shoe it so well/ That your horse's and your life (*ümr*) will be one.// The race of Davit' that of the demons (*Davt'i azg devästanniruc'i*)."

17. *Jořanc' tun*, recited by T'umas Petrosyan of Moks, recorded by Sargis Haykuni (SC 1, pp. 469–70).

"Davit' curses him: 'Woe, Mher!/ I ask of God that you be immortal (*anmax*)./ Let no heir come from you./ Your place, too, will be in a rock./ You will not see the world with your eyes (*Dü k'ü ač'k'öv axšar č'tisnas*)./ When you see the world, the world shall you destroy (*t'avris*).// Xandüt' saw Davit' had dried up./ She stretched forth her hand to bring Davit' out./ She saw his side and all his ones were shattered./ Xandüt' leaves Davit',/ Looks around for Mher, and Mher is gone, too./ Mher is clean lost./ She gets up, removes Davit',/ Goes and brings his brothers one by one;/ She brings priests, princes./ She gives them a place

to make a pit, has them all dig./ She pays out (*kə xarʃi*) the gold of Davit'/ Has a fine prayer and Divine Liturgy offered./ She herself eats no bread, says,/ 'May God destroy (*k'äki*) Sasun.'/ She is angry (*k'əṛəki*), mounts her horse,/ Hey, ho, wherever you are, I'm coming for you.// Sasun is the ruin that was destroyed."

18. *Sasna p'ahlevanner*, recited by Vardan Muxsi-Bazikyan of Moks, recorded in 1911 by Harut'yun Gilanyan of Moks (SC 1, p. 524).

"By God's command there is a voice: it says,/ 'My son (*mortun*), what can I do, what can I do?/ It is your father who has cursed you./ Go to Raven's Rock (*Agravu k'är*)./ God give you rest (*tävānum*);/ Tarry (*tävānis*) till the time of His coming./ Mher departs, goes to Raven's Rock./ By God's command the rock opens,/ Mher goes in (*k'ya hinə*) with his horse,/ The rock comes together, and it is finished (*kə ləməna*)."

19. *Sasna crer*, recited by Vardan Muxsi-Bazikyan, recorded in 1915 by Senek'erim Ter-Hakobyan (SC 1, p. 600).

"His mother said, // 'Your father has cursed you./ There is no entry for you into the earth./ Go into Raven's Rock (*Äkravu k'är*),/ Your rest (*dävānum*) will be there.// Mher went to Raven's Rock, the rock opened./ Mher went in, his horse went in, the rock came together.// And the sign (*nšanakn*) of it also/ Is that on Ascension his horse stales/ And it comes down the rock."

20. *Sasna crer*, recited by Manuk Harut'yunyan of Moks, recorded in 1933 by Karapet Melik'-Ohanjanyan (SC 1, pp. 647–8).

"The reply came to Sasun to Mher./ Mher goes forth to avenge (*t'ol*) his father./ He slaughters enemies (*zdüşmank'tir*), lays waste to the world (*axšar k'avirə*)./ Mher returns to Sasun, remains./ However long he lives, he doesn't die.// Mher sees a dream (*eraz*)./ In the dream they say to Mher,/ 'Mher, your father has cursed you:/ You will not see death, you will not see an heir./ Go within Raven's Rock (*Agravu k'är*)./ Remain there till Christ comes for the Judgment (*datas-tan*)./ Mher goes, remains in that rock,/ He is kept (*kə pähxkvə*) there, the rock comes together./ To this day, they say, he is there.// Now water comes out of that rock./ They say it is the water of Mher's horse.// This much we have heard."

21. *Davit' ev Mher*, recited by Mkrtič' Harut'yunyan of Šatax, recorded by Sargis Haykuni (SC 1, p. 700).

"He leaves, mounts K'ürkik Jalali, goes (*kə ha*)./ The grounds beneath the hooves of K'ürkik Jalali thunders (*kə t'nda*)./ Mher says, 'Hi ho, it's nothing (*boš*)./ The ground, too, has become old (*xalivorc'er i*)./ It cannot stand firm beneath the hooves of my horse./ By God's command, Mher goes,/ Reaches Raven's Rock

(*Akrp'u k'är*)./ The rock opens, Mher goes into the rock with his horse./ The rock comes together.// They say that when they reap rock and sift sand,/ At that time Mher will come out./ They say Crazy (*Del*)²⁸ Mher and his horse are both still alive./ Today, they say, that place has been made into a monastery (*vank'*)./ Every year on Ascension Day they go there on pilgrimage./ We've heard from many/ That from Friday to Friday his horse passes water (*jr'vack'*)./ The front of the rock gets wet./ Every man has seen it.// Forty times let us pray Lord have mercy for the mighty house of Sasun./ May it stand prosperous and glorious./ The High Mother of God of Marut'a over its foundations."

22. *T'lor Davit' ev Mher*, recited by Margarit Sargsyan of Gavaš, recorded in 1916 by Senek'erim Ter-Hakobyan (SC 1, pp. 932–3).

"He leaves, come close to the grave, says,/ 'Mother, arise. Mother, arise./ Of the house of Sasun they have deprived me./ His mother says,/ 'The times (*dävrana*) have fled my hands,/ The jewel has fallen from my face./ Ask your father./ He goes to his father's grave,/ Thrice he says in a song (*xat*),/ 'Father, arise. Father, arise./ Of the house of Sasun they have deprived me./ Father, arise. Father, arise./ Of the house of Sasun they have deprived me./ Father, arise. Father, arise./ Of the house of Sasun they have deprived me./ His father says,/ 'The times (*dävrana*) have fled my hands,/ The hair has fallen from my beard./ Your writing is written in Aleppo,/ Your place is Raven's Rock (*Akrp'u k'är*)./ You are an immortal son./ The world will be destroyed and rebuilt anew;/ When the earth can endure before your horse/ The world is yours (*Diynen k'ün*)./ He goes, cries before the cave of Raven's Rock./ The rock opens, he goes inside.// It is said,/ Now every year on Ascension there is a sign of him:/ His horse urinates, it appears on the rock./ When the world is destroyed once and rebuilt,/ He will emerge into view (*herevan*)."

23. *Sasna çrêr*, recited by Hambardzum-Xapo Grigoryan of Gavaš, recorded in 1916 by Senek'erim Ter-Hakobyan (SC 1, p. 1022).

"His mother says,/ 'No, son, do not kill [the men of Sasun]./ Mount your horse, go, ride around in the world./ As long as your horse's hooves don't sink, ride around freely./ When it sinks, you will stay in your place.// Mher travels around./ He goes to the realm of Van (*Vana axšar*), sinks in Raven's Rock (*Agrbu k'ärin meĵka xrvî*)./ And he remains until now."

28 According to the Glossary in SC 2, 727, *del* means "bitch" (*k'ac*); but I think it more likely that one should explain the word as Tk. *delli*, "crazy," cf. Delli Dumrul, the Polyphemos-like monster of the *Dede Korkut* epic.

24. *Jořanc' tun kam Sasma c'ier*, recited by T'aio Kazaryan of Hayoc' Dzor, recorder unknown (SC 1, pp. 1085–6).

"He went in the morning to Sasun,/ Where he took his father's horse and weapons,/ Mounted up and went to the city of Aleppo./ He did not know the road where he was going./ He travelled till he came to mount Sip'an./ He passed by there and reached the plain of Van./ He was famished with hunger/ And asked God that He either fight him (*křiv m' ta*)/ Or take back what He had given (*amanat'*).// God sent seven angels on horseback/ To fight Mher./ They fought from midday until evening./ Mher lowered the Lightning Sword (*T'urn Kecakin*),/ Could not catch the angels,/ But the angels sore tormented Mher./ Mher raised his eyes to heaven and asked God/ That He open to Mher His compassion's gate./ He turned his eyes up to heaven/ And saw he had arrived beneath Raven's Rock (*Akřp'u k'är*)./ There the rock opened like a door:/ Mher entered, the door shut, he remained there./ He is there still./ His horse's urine from that rock/ Comes forth till now./ Three apples fell from heaven:/ One for the tellers, one for the hearers,/ One for those who give ear, Amen."

LANGUAGE OF DEMONS, LANGUAGE OF MEN.

James R. Russell,
Harvard University,
Cambridge, Massachusetts.

"It was Merlin... calling loud and intolerably glad above the riot of nonsense, *Qui Verbum Dei contempserunt, eis auferetur etiam verbum hominis*."

C.S. Lewis, *That Hideous Strength*, New York: Scribner, 1996, p. 348.

The voices in this paper, from the discordant clamor of infernal tongues to angelic choirs singing the strains of *onomastica sacra*, to the prescriptions of Armenian magical manuscripts and the verses of the poets of England, acclaim Michael Stone in unison.¹

In his study "Language of gods and language of men: remarks on some Indo-European metalinguistic traditions,"² Calvert Watkins approaches a long-recognized problem in Homer and texts in Old Indic, Old Irish, and Old Norse: the poets cite the names men and gods give to different things. What men call the bird *kymindis*, the river Skamandros, and the giant Aigaiōn, for instance, the gods call *khalkis*, Xanthos, and Briareōs. In the *Śatapatha-Brāhmaṇa* (10.4.6.1), what men call *aśva-*, "horse"—the regular cognate of *equus*, *hippos*, etc., meaning "fast"—the *devas* call *hāya-*, meaning "impelled, driven". In Armenian the only word for a horse is *jī*, a cognate of the latter; while the reflex of **ekwos-* is *ēš*, "donkey". In this case the hierarchy has simply moved down one step: in the Avestan *Vīdēvdāt* (7.42), the donkey (*kara-*) is considered the least worthy *staora-*, "beast of burden", ranking below the horse.³ The "gods'" word is generally descriptive, charged, semantically marked, and belongs to an established lexicon of poets different from everyday speech though identifiably part of *known* speech. Thus, the Old Irish *Auraicept na n-Éces* ("Handbook of the Learned") distinguishes the various registers of poetic language from *berla Fene*, the "language of the Irish"; and in India *saṃskṛta-*, "perfected" speech, stands apart from *prakṛta-*, "la matière brute du langage".⁴

Specialists in the craft of oral poetry were taught these marked words, which set apart their compositions from everyday speech. They had to be recognized as such by an audience, and they had to produce an intended effect, for there to be any point in using them. The context of performance would thus be important: it could be sacral, in which case the marked terms, the "language of the gods", possess the power of *mantra*. Or the composition could be of solemnly social and historical importance: a heroic epic, for instance. The language of gods is a human invention, or at least is known only through the intermediary of consciously-spoken human language. But it is socially and psychologically elevated above everyday discourse and is intended to convey the audible sound of another world than this. This is a world temporally located in the past to which great deeds and events of collective importance to a community of listeners belong, a world in which supernatural beings were not only audible, but visible and tangible, the sounds of their voices alone enduring thereafter in poetry, but alive, a point of connection for mortals with them, with

¹ This paper was delivered as a lecture to the University of Manchester in November 2009. I thank my host, Dr. Alan Williams, and other colleagues there, for their extraordinary hospitality. I am grateful also to my home institution, Harvard University, for the generous terms of a semester's medical leave following a road accident that enabled me to recuperate, work, and travel to Britain.

⁴ Watkins, pp. 461, 467.

their immortality. Some of the ancients understood this as artifice: something sacred (*semnon*) is present in Homer's lies (*pseudes*) and winged machination in the tale of Odysseus, says Pindar (*Nem.* 7.22-23). "Ephemeral! What is anyone? What is he not? The dream of a shadow is man. But when the god-given radiance comes upon them, a shining light rests on men and their lifetime is sweet." (*Pyth.* 8.95-97) It is not just victory in the games that Pindar praises here; it is the creation and perception of the works of the poetic imagination. So even when it is recognized that the reproduction of divine speech is artifice, that art of it provokes a transcendent mental experience recognized as important and valuable to man's social and personal existence.

The language of the gods is in poetry semantic, linguistic; but many Indian *mantras*, and *nomina sacra* in the magical texts of other traditions, are only partially so, or not at all. These are sounds to which a meaning may secondarily and arbitrarily be attached; but they are not natural words. By contrast with Indian usage the Zoroastrian sacred scripture, the *Avesta*, which is linguistic and intelligible in its entirety, is called *maθra-spənta*-, "sacred *mantra*". Martin Schwartz, in a series of pioneering studies, has demonstrated that the text at the core of the *Avesta*, the *Gāthas* ("Hymns") of the Prophet Zarathustra himself, consists of an intricate array of deliberate plays on the sounds comprising words, distributed into symmetric patterns in such a way that whole passages generate others, with phrases flowering from phrases and whole hymns emerging as mirror-images, or perhaps the closed wings of a butterfly opening, the text becoming an inner- and outer-faceted jewel.⁵ But the Zoroastrian mantras are semantic and the Indian ones are not: the term has evidently evolved in the two closely kindred language groups in different ways, as much else in their vocabularies has done.⁶

When we consider the divine language in most Gnostic texts in the Mediterranean world, it is much as in India— often entirely vocalic. Sometimes symbolic meanings are assigned to vowels: in the *Pistis Sophia* Christ pronounces the mystic word IAŌ— a rendering of the Hebrew pronunciation of the Tetragrammaton— and goes on to explain that the All came forth in *iota* and will come again in *alpha*; completion will arrive in the last letter of the syllable and alphabet, *omega*.⁷ There is something of Christ's assertion that He is A and Ω here; and one suspects it was as much the sound of IAO as its meaning in Hebrew or its symbolism in the New Testament that made it popular. But more often the mystical sounds in these texts are unintelligible strings, of the kind Paul warns religious ecstatic practitioners to avoid (1 Cor. 14.7,9).⁸ If these sounds are not semantic, then they must produce some other effect.

⁵ See, most recently, M. Schwartz, "How Zarathushtra Generated the Gathic Corpus: Inner-textual and Intertextual Composition," *Bulletin of the Asia Institute* 16, pp. 53-64. I have benefited from the insights of Prof. Schwartz, and from the pioneering work of Saussure on the logogram and *locus princeps*, in an analysis of such features in Armenian poetics and epic: the song of the birth of Vahagn, other passages of the Tigranid cycle in Xorenac'i, and later texts including magical ones— in "Magic Mountains, Milky Seas, Dragon Slayers, and Other Zoroastrian Archetypes," delivered as one of the Ratanbai Katrak Lectures at the University of Oxford, 3 November 2009 (in publication in the volume of the lectures, ed. by Elizabeth Tucker and Theo Van Lint).

⁶ The Sogdian word for a magician, derived from **manthra-kāra*-, a maker of mantras, can imply spells that employ nonsense words. The parallel Arm. l-w, *margarē*, has come in Christian usage to mean a "prophet"— one whose words are powerful, not because of their sound but because of the importance and authoritativeness of the esoteric information— from God, about the future— that they convey. Zoroastrianism and Christianity are similarly ethical and monotheistic faiths; so the semantic development in Armenian might be seen as analogous to the process that produced the Zoroastrian usage.

⁷ The significance of sounds as beginnings and endings according to their position in the alphabet, with alpha first and omega last, confers upon them a spatial power: Davies, p. 13, notes that the demon of envy, Autothith, in *Test. Sol.*, can be banished by writing alpha, then omega. That is, the start and finish either confine and bind him, or else surround the worshipper and exclude him. So the word of a spell acquires, as it were, the characteristics of a living being: its sound is heat, breath, motion; its placement, a dimensional location. In *Test. Sol.* 4.81, it is possible the author adumbrates this idea when he explains that a certain female demon is generated from "a voice of the echo of a black heaven, emitted in matter" (Duling, p. 953).

⁸ Patricia Cox Miller, "In Praise of Nonsense," *Classical Mediterranean Spirituality: Egyptian, Greek, Roman*, ed. A.H. Armstrong, New York: Crossroad, 1986, pp. 481-505, esp. p. 485.

Roman Jakobson once observed, “The proverb is the largest coded unit occurring in our speech and at the same time the shortest poetic composition.” It thus possesses both marked words and significant sound patterns allied to these. He then looked at the related phenomenon of children’s cryptic words and expressions, and found these to imbue both signifier and signified with a quasi-supernatural character, “a certain kind of shamanism.” These observations on relatively simple phenomena serve as a jumping off point for the consideration of very strange and surprising examples of cryptic speech. He cites a spell for protection against *rusalki*, mermaids, published in 1908 by the poet Alexander Blok: *Ау, ау, шихарда кавда! Шивда, вноза, митта, миногом./ Каланди, инди, акуташма биташ./ Окитоми ми нуффан, зидима.* The Flagellant (*Khlysty*, Хлысты) sectarians of pre-Revolutionary Russia used to say while worshipping, *Киндра фендра киравеца*; the first two words of one of their invocations, *рентре фентре*, had been recorded in 1747; and in 1914 Jakobson’s sister, seeing a sectarian stroking a cat, asked him what he was doing and he said, “I am stroking the *kyndra* on the *fendra*” (Кындру по фендре глажу). He refused to be drawn when asked whether he knew what a *kiravetsa* was, averring only that it was an old, wise word.

“If nonsense is an art, it must have its own laws of construction,” wrote Elizabeth Sewell; and from the Russian examples it is evident that the importance accorded to what are apparently nonsense words was sufficient for them carefully to be handed down over centuries. That is, even as nonsense words, as *nomina barbara*, they were marked and remembered. Jakobson finds typical of the dossier phonemes unusual to Russian, like *f*, and clusters like *n*, plus *t* or *d*, followed by *r*.⁹ I would see in terms like *akutashma* an imitation of Turkic noun-formation; with pseudo-Turkic verbal forms in the past tense in *kalandi*, *indi*, and *bitash*. Russians have lived for at least a millennium in close proximity to speakers of Uralo-Altaic and Finno-Ugric— the “nearest Others”, whose speech, subliminally registered, will play a role in the case of the language of a demon, to be considered presently. One would also suggest that words ending in *-andra*, *-indra*, and *-endra*, as well as, perhaps, those in the spell in *-arda* and *-avda*, might sound Greek, and carry overtones of Orthodox sanctity, to a Russian hearer. They are phonetically pleasant, not harsh; and this, too, seems a marker of non-semantic words associated with divinity. The *Khlysty* invented their language of the gods from what they heard. It had to sound pleasant, to establish meter and rhyme, and to have associations with languages thought to be good, or cryptically powerful, or both.

Jakobson drew from the known and relatively easy environment of Russian riddles and rhymes in approaching the more arcane territories of *nomina sacra*. In England, the free inventions of Oxonian philologists in the playing fields of fantasy and science fiction can be similarly illustrative, a way into more serious realms. The divine language C.S. Lewis invented for his science fiction trilogy is strikingly similar to Jakobson’s *-V-ndra*’s: the names of the holy planets Mars and Venus are *Malacandra* and *Perelandra*; while the evil being holding Earth in sway, though his name ends the same way, contains the Greek name of Ouroboros, the satanic worm that grips its tail in its jaws: *Ouroborindra*. In Lewis’ Narnia books, the villains pay for their goods in Crescents and worship an idol, Tash, whose name just happens to mean “rock” in Turkish; he is protected by the Tashbān— the suffix for “protector” is Persian. Such a mixture of Turkish and Persian, with representations of Islam, that faith symbolized by the crescent moon, as idolatrous, provides a concise picture of the Ottomans. J.R.R. Tolkien, who admitted in an essay that making up languages was a sort of private vice, has his nice elves speak a sort of Finnish, full of vowels and soft, rolling consonantal clusters; while the rest of the good creatures of Middle Earth are decidedly Old English, Germanic types. Finnish is a positively marked “near Other” to Norsemen. But the nasty orcs and their ilk jabber in a harsh, agglutinative pseudo-Turkish that is used also for the sinister spell of the Ring. And Tolkien, like his friend and fellow don, resorts to a known, marked word in Greek for the name of the arch-villain: not Ouroboros the worm this time, but its close relative Sauron, the serpent. Both Oxford dons thus mark the dangerous Other as Muslim— the powerful Ottoman Turk at the gates of Vienna!— using strongly marked terms from a canonical, sacred language for him as well; and their good or divine fantasy languages are soft, and sonorous. When the *Lord of the Rings* cycle was filmed, the

⁹ Roman Jakobson, “Retrospect,” *Selected Writings*, IV, The Hague: Mouton, 1966, pp. 637-641.

director presumably realized Finnish would mean nothing to most viewers, so the elves speak in lilting Irish accents.¹⁰

C.S. Lewis and Tolkien used various living languages as sources for the invented languages in their works of fiction; and Jakobson studied the cult language of Russian sectarians. Both the English writers and the Slavic Flagellants seem to have liked the ending *V-ndra*; and this very pattern occurs within or at the end of nearly every word of a long glossolalic passage recited in isolation by a Presbyterian minister in America in the second half of the 20th century and transcribed by the sociolinguist William J. Samarin.¹¹ He analyzes a number of written glossolalic terms used by the Russian sectarian Molokans, and suggests that “some of these look more like borrowings from a non-Slavic language than glossolalia.” That is, the speech of alien neighbors influenced, subliminally or otherwise, the *voces mysticae* of the Molokan texts. And these words are no more random nonsense than the terms used by the Flagellants: a Molokan wishing to address the congregation in a state of inspiration must apply first to the presiding pastor with the rhyming, glossolalic phrase *Parginal assurginal (yuzgoris)*. Many Molokans lived in Russian Armenia in the Tsarist period; so when one encounters glossolalic phrases such as *Tarifta rafti khental*, cited by Samarin, one is tempted to see in them the ghosts of Turkish *tarifta* “on the side” and Persian *rafti*, “you went”.

A late Byzantine text, *De daemonibus*, falsely attributed to the great Michael Psellus, describes a possessed woman “babbling” (*alalazousa*) “in some barbaric tongue” (*barbaron tina glössan*). It is found to be Armenian; so an Armenian exorcist, sword in hand, expels the spirit molesting her with invocations in his own language. The woman remembers later a shadowy female creature with disheveled hair (*enemomenas... komas*)— the typical coiffure of a demon. Who is she? One of the demons interrogated in the *Testament of Solomon*, 13.1, Obyzouth, has disheveled hair. But she is unlikely to have been Armenian. When in an Armenian prayer three saints confront the child-stealing witch, called Lilith by Jews but Al, literally “the scarlet one”, by Armenians, Iranians, and Central Asian Turks, *maz nora ibrew zōji jar jioy*, “her hair (was) like a serpent, a horse’s mane.” Since the hair of the mane of a saint’s mount is elsewhere invoked as a good and protective thing in Armenian prayers, it is possible the copyist, in altering his text, was enjoying the buzzing, alliterative properties of /maz... zodzi dzār dziól/. And later on her hair is additionally described: *maz nora orpēs varazi xozī*, “her hair (was) like a boar pig’s” — stiff and bristly.¹² This phrase, too, has an alliterative pattern in the sound “z”; and sibilants and buzzing noises tend to be used in demonic speech. Milton has his fallen angels hiss, like the snake in Eden; the *Qur’an* has the jinn “whisper” (Arabic *waswasa*); and in the manuscripts from Qumrān the Hebrew term for “incantation” is *divrei lahaš*, “words of whispering.” The Armenian text reaches for a familiar effect, perhaps.

But taken together, the descriptions leave little doubt that this widely known and very dangerous female spirit, the spurned first wife of Adam, had disheveled hair. She is also, invariably, pitch black in Armenian manuscripts and printed books. And the saints command and abjure her in good *grabar*, the Classical Armenian of the Divine Liturgy and Scripture. This is a Lilith-like demoness, then, and she is one who was well known to Byzantine Greeks. As for her tongue, the situation facing the relatives of the

¹⁰ For a discussion of the two writers and the larger implications of their fictional inventions, see J.R. Russell, “News from Zembla,” a review article on John Garth, *Tolkien and the Great War*; Elena Obatnina, *Tsar’ Asyka i ego poddannye*; etc., *The New Leader*, New York, Summer 2004.

¹¹ William J. Samarin, *Tongues of Men and Angels*, New York: Macmillan, 1972, pp. 77, 184-185. On pp. 83-84, Samarin argues that his Presbyterian informant is reducing to glossolalia the sound patterns that come most naturally to him. But this surely cannot be the case for the Russians who produced *indra*-patterns. Rather, I think both groups echo sounds from what they believe to be “ancient” or “sacred” speech. Samarin is closer to the mark, then, when he declares that “glossolalia is a linguistic symbol of the sacred” (p. 231).

¹² Sargis Harut’yunyan, ed., *Hay hmayakan ev žotovrdakan atot’k’ner* (English title: *Armenian Incantations and Folk Prayers*), Erevan: Erevan State University Press, 2006, pp. 130-131. This indispensable and meticulous compilation is marred, as is so often the case with recent scholarship from Armenia, by the failure to credit most Western scholarship in the field under study, the apparent presumption being that savants abroad adhere to a malign agenda.

possessed woman in Constantinople, probably some time early in the fifteenth century, cannot have been unprecedented: Clement of Alexandria in his *Stromateis*, 1.21.142, sensibly observes that people possessed by demons do not speak their own language, but that of the demons who have possessed them. So it was to be expected that a Byzantine possessor-spirit might be babbling in something other than medieval Greek. Still the Armenophone demon so impressed Samuel Taylor Coleridge that he noted it in a gloss to *The Rime of the Ancient Mariner*, 1816: it inspired the *genius loci* that pursues the unlucky slayer of the albatross.¹³ The only other malign supernatural being who made the transition from Armenia to English literature, to my knowledge, is the Zoroastrian archdemon Ahreman: Lord Byron translated the section on him in the *Ét c'atandoc* ("Refutation of Sects") of the fifth-century heresiologist Eznik of Kolb.¹⁴

Why is it that the demon inhabiting the Greek woman spoke Armenian? The Armenians, after the Greeks, were the largest ethnic group in Constantinople before the Ottoman conquest; and the second largest and sometimes largest Christian minority thereafter. They were neither remotely foreign — was not John Tzimisces himself an Armenian? — nor native; neither Orthodox — the Armenian Church has not since early mediaeval times been in communion with the Greeks and Russians — nor mere unbelievers. They were to Byzantine Greeks the *nearest aliens*, the closest Other, inhabiting that dangerous liminal space where the foreign language heard was common enough for it to penetrate the unconscious of a Greek. But it was not a language one liked, or was likely to learn, so it could be the speech of one's demons — as the Turkish saying has it, *Rum ve Ermeni dost olmaz*, "Greeks and Armenians can never be friends." And although the good islanders of Naxos call some demons after Jews and Arabs, the Nereid called *Arménis*, "the Armenian woman", or *Armenída* in modern Greek, is perhaps most popularly known to this day. Demons often speak — or in spells, are spoken to — either in one's own sacred tongue, as in exorcistic rites, or, as in the case above, in the tongue of the near other, a language marked by perceptions of fear, power, and negativity. Yet it is apparent from the story in *De daemonibus* that an Armenian exorcist was sought and found by the woman's family and he agreed to help them: the borders between people of different groups tend to be much more porous in magic than in other religious situations, even where hostility between those groups is common.

There is no hard and fast rule in this, and it is hard to see how there could be, since we deal after all, not with phonological or morphological aspects of language susceptible to the application of scientific law, but highly subjective and emotional responses to the cultural aspects of language instead. Idris Shah, who comments upon Obizuth, she of the disheveled hair mentioned above (he describes her merely as a dark woman with green eyes), notes in connection with the *nomina sacra* and *barbara*, take your pick, in *Test. Sol.*, about which we will have more to say presently: "It is common, however, for 'Words of Power' to be apparently meaningless, and few occultists interest themselves in matters of research."¹⁵ He does say "apparently". Even if one cannot produce an infallible law, there must be a discoverable logic in any speech

¹³ See J.R. Russell, "A Scholium on Coleridge and an Armenian Demon," *Journal of the Society for Armenian Studies* 10, 1998-99, 2000, pp. 63-71, repr in J.R. Russell, *Armenian and Iranian Studies* (=AIS), Harvard Armenian Texts and Studies 9, Cambridge, MA, 2004, pp. 989-997.

¹⁴ Byron did something that would have horrified the pious Archbishop and confirmed the poet's Mekhitarist tutors in *grabar* at San Lazzaro, Venice, in their suspicions he was mad: he presented Eznik's Arhmn/Haramani, the Frightful Spirit and enemy of our Creator Ahura Mazda as a romantic hero! This sort of backfiring was typical of its time — the Romantics made of the Satan of *Paradise Lost* more of a positive figure than Milton meant him to be; and Russian Satanists canonized a translation from the English as their own anti-Scripture (see Neil Forsyth, *The Satanic Epic*, Princeton: Princeton University Press, 2003; and Valentin Boss, *Milton and the Rise of Russian Satanism*, Toronto: University of Toronto Press, 1991, which Forsyth seems to have missed). In our own day, H.P. Lovecraft's fictional *Nekronomicon*, with its invocations in a guttural demonic speech to the dangerous extraterrestrial monsters Yog Sothoth, Cthulhu, and so on, is believed by hopeful or credulous readers of his fantasies to be authentic: I was once asked by the Harvard Library to field a query about the book from England, since Lovecraft mentions a copy in Widener. Others have invented and published "fake" *Nekronomika* (but what is a fake of a fiction?) meant to be used in satanic rites.

¹⁵ Sayed Idries Shah, *The Secret Lore of Magic: Books of the Sorcerers*, New York: Citadel, 1958, pp. 215, 221.

act, including glossolalia and written nonsense, and a poetics to texts of the same. (And, not being an occultist, I interest myself in matters of research!)

So, if one looks, for instance, at Arabic Muslim magic, there are plenty of meaningful words as well as phonetically interesting nonsense. Of the meaningful variety, the *Basmalah* formula, “In the name of God, the merciful, the compassionate,” is the *incipit* of the canonical text in the sacred language, and plays a significant role in invocations. Mystic words, such as the names assigned to the seven sleepers of Ephesus, the *ahl al-kahf*, are often corruptions of Greek or pseudo-Greek: Doqīānōs, Kafšatīthios, Sūs, and their dog, Qiṭmīr. I find that others so identified are quite obviously Middle Persian, though: Marnōš and Šādnōš are men whose immortality (*-anōš*) belongs to Mithra (Mihr) and joy (*šadr*). Such Iranisms crop up in the Aramaic magical texts produced by Jews, Christians, and others in Sasanian Mesopotamia; so their presence in Arabic may be the persistence of the pre-Islamic pattern, allowing a sense of the sheer geographical and temporal range of the encounters of Muslim magicians.

Jews were to Muslims both a feared reminder that the religion of the latter in some sense was secondary, derivative of another; and, not infrequently, a degraded community of despised *dhimmis*. And of course Jews retained their old reputation around the Mediterranean as magicians. So Hebrew figures strongly in Arab magic: *Meṭaṭrōn* — a name assigned in Kabbala to Enoch — is hailed as the chief of the angels; and the unvowelled formula AHYA ŠRAHYA ADWNAY AŠBAWT AL ŠDAY is easily read as *Ehyeh Ašer Ehyeh, Adonai Šavā’ōt, El Šaddai*, “I am that I am, Lord of hosts, Almighty God.”¹⁶ Hebrew, and pseudo-Hebrew, is a common language of spells and *nomina sacra* from Late Antiquity on: one encounters often in Greek magical texts ΠΙΠΙΙ, a rough copy of the appearance in the square Hebrew characters of the Second Temple period of the Tetragrammaton; and the mystic syllable IAO is an approximation of the pronunciation of the same. Again there is a continuation of older patterns: as in other contexts, so in magic antiquity, or the semblance thereof, confers prestige and, what is more important since magic is supposed to work, credibility.

But another, perhaps more important reason for the particular popularity of Hebrew amongst magicians, must have been the cycle of legends about king Solomon, in which his magical seal and knowledge of and power over demons are the pre-eminent themes. The figure of Sulaymān ibn Dāwūd — Solomon — in the *Qur’ān*, for instance, derives from Rabbinic sources in which his magical exploits were fully formed: he compels the *jinn* to build shrines, he lapses into idolatry and is punished by having his throne occupied till his repentance by another being in his likeness, and so on (34.12, 13; 38.34, 35, 40). Later tradition fleshes out this lore: there are 72 demons, and it is a *jinn* named Šaxr who both usurps the throne and finds the pebble called Samur, that is the Hebrew Šamīr-worm to cut the stones of the Temple. For his magical prowess, his magnificence, and the hubristic behavior that leads to his fall, Solomon is compared, extra-canonically, to the ancient Iranian epic king Jamšīd, a figure who derives proximally from the Zoroastrian scripture, the Avesta.¹⁷ This is an important parallel; and we shall return to it presently.

One of the most important and widespread texts of demonology in general, and concerning Solomon’s intercourse with the demons in particular, is *Test. Sol.*, mentioned earlier.¹⁸ Since it will be seen

¹⁶ See Tewfik Canaan, “The Decipherment of Arabic Talismans,” in Emilie Savage-Smith, ed., *Magic and Divination in Early Islam*, Aldershot: Ashgate, 2004, pp. 125-177, pp. 129, 139, 145.

¹⁸ On the text in the general context of magical literature, see most recently Owen Davies, *Grimoires: A History of Magical Books*, New York: Oxford University Press, 2009; on the enduring popularity of the text in the West, see Sarah Iles Johnston, “The Testament of Solomon from Late Antiquity to the Renaissance,” in J. Bremmer and Veenstra, eds., *The Metamorphosis of Magic from Late Antiquity to the Early Modern Period*, Leuven, 2002. For a complete translation and commentary, see D.C. Duling, *Testament of Solomon*, in James H. Charlesworth, ed., *The Old Testament Pseudepigrapha*, Vol. 1, Garden City, NY: Doubleday, 1983, pp. 935-987. On the development in literature of the image of Solomon, see Pablo A. Torijano, *Solomon the Esoteric King: From King to Magus, Development of a Tradition*, Leiden: Brill, 2007 (I am indebted for this very useful reference to the friend and colleague whom this volume felicitates: Professor Michael Stone of the Hebrew University of Jerusalem, Israel.)

to be of some importance in Armenian tradition, too, it merits detailed description here. The text is in Greek, composed probably around the third century AD, and the first papyrus fragment dates to the sixth century;¹⁹ but the roots are very much older and there was probably a Hebrew prototype. Hellenistic Judaism elaborated Solomon's status as an epic king, if not a holy man, and a thaumaturge; and he comes to be regarded as an exorcist by about the first century BC, perhaps because of his father David's ability by his music to expel evil spirits (1 Samuel 16.14-23). The formulaic question *Mt ata?* ("Who are you?") that introduces each colloquy with a demon in *Test. Sol.* goes back to apocryphal Psalms found in Qumran Cave 11. The text has been plausibly dated as far back as the third century AD, but Torijano prefers a fourth-century date.²⁰

It seems to consist of two original parts: a "complex and comprehensive demonology is inserted within the haggadic framework of the labors of the demons on the Temple."²¹ The framing narrative "in exorcisms and magical praxis usually furnishes an 'historical' context for the technique to be explained." Structurally it conforms, with some differences, to the narratives preceding incantations that state the mythical basis of the magical operation, its legitimizing and ennobling history, the testimony of its efficacy. These combinations of story and spell were called *Legendenzauber* by Grimm and later writers have retained this useful term of categorization. The story in *Test. Sol.* would seem, therefore, to have been added somewhat apologetically to a work whose primary purpose was practical magic; so "the wisdom tradition has been changed into a power tradition."²² And from the simple query "Who are you?" evolves the questionnaire: 1. Who are you?/ What is your calling? 2. Tell me in what sign of the Zodiac you reside. 3. What are your deeds?/ What is your business? 5. Which angel counteracts you?²³ The demon is then duly sealed and employed on the construction crew of the *Bet ha-Miqdāš*.

The *Test. Sol.* Begins, then, with a demon named Orniās sapping of energy an unnamed boy who somehow inspires the builders of the Temple. The archangel Michael gives Solomon a ring with which to summon and interrogate the demons and to force them to work on the Temple. Among these is Asmodeus, Heb. Ašmedai—the only Iranian demon named in Scripture, of Wrath: *Aēšma daēva*, Mr. *Xešm dēw*. The potent remedy against him, the burning liver and gall of a fish, is known from *Tobit*, an apocryphal book steeped in Iranian themes and related to *Jonah*.²⁴ And in *Test. Sol.* the demon avers that his principal function is to harm women's marriage and child-bearing, which is what he does in *Tobit*. Solomon then falls in love with a foreign woman, practices idolatry for her sake, loses his kingdom, and writes his testament thereafter, in a repentant mood. The details of the story are richly elaborated in Rabbinic lore. Asmodeus, for instance, is known to divide his time between visits to the academy on high (the *Yešiva šel Ma'ala*) and earthly Jewish houses of study. Upon arrival on this planet, he drinks from a mountain spring which he then caps with a big stone. Solomon sends Benaia ben Yehoiada to empty the well and refill it with wine. The demon comes, sniffs the spring suspiciously, but gives in to thirst and falls asleep drunk: he is chained with a magic seal and brought to the king, for whom he finds the tiny worm *Šamīr* to cut the stones for the Temple. When Solomon credulously lends the demon his ring, the latter promptly casts him hundreds of parasangs into the desert and sits on the throne of Israel till the king's Ammonite lover Na'ama (by the way, the Na'ama of Gen. 6.1-2, according to the *Zohar*, is Asmodeus' mother!) finds the ring in the belly of a fish: here is a Jonah-like detail, perhaps with the *topos* of the ring of Polycrates thrown in for good measure. She returns her Israelite paramour, who has been wandering as a beggar and praying for mercy in the interim, to power.

Asmodeus also comments upon human vanities with weary disgust: he sees, for instance, a man who he knows will die in a week's time asking a cobbler to make him shoes to last seven years; he overhears the prattling of a fortune-teller and clairvoyant who is unaware that he is sitting above buried

treasure.²⁵ The demon comes across as an intelligent, grumpy but rather endearing supernatural being; and in Jewish tradition he is transformed into an entirely positive figure. A chronicler of the massacre of the Jews of Mainz by the Crusaders in 1095 mentions that according to an ancient book (*sefer yašān*) he read, Abraham, Isaac, and Jacob in the guise of three old men walked the streets before the Christian murderers came, reciting *Kaddish*, the prayer for the dead. Ašmedai and some other demons decided to fight on the side of the innocent people of Israel, and in the ensuing pogrom the king of the demons was killed: *qibla 'aleihem dtn shomayim ū-fa'alā bā-sōd še-Ašmedai, mālka dā-šēdei, bā bā-ḥel gadōl liqrāt ha-sōn'im ū-lā-hilāhēm bā 'ad ha-Yehūdīm, vā-nātan lā-Yehūdīm sīman: im yihyeh ha-dam adom yihyeh tōv, ve-im yihyeh yārōq, mā še-hāyāh, hāyāh. Vā-xēn mās' ū lā-Ašmedai neherag 'imāhēm.* "They received upon themselves the judgment of Heaven and acted upon the secret that Ašmedai, king of the demons, comes with a great host against the enemy, to fight on the Jews' behalf; and he gave the Jews a sign: If the blood will be red then that is good; but if it is green, then what is done is done, and so they found Ašmedai slain with them [the Jews]."²⁶ *Adom*, "red", may be a pun on Edom, the code word for Rome: that is, if the Catholic Crusaders are defeated and cut down, it will be good; but if green blood, i.e., demonic ichor, is shed, then let God's will be done. Unfortunately, the host of Asmodeus was no match for the Crusaders. But in Jewish folklore he had children and grandchildren, who survived in the community of Israel.

The unusually sympathetic portrayals of Asmodeus in Jewish tradition, where the arch-demon can fairly be said to have been de-demonized—so fully was he assimilated into the cosmology of an omnipotent God and made a servant of the latter—may help us to understand a strange detail of Zoroastrian polemic. In the ninth-century religious compendium in Pahlavi known as the *Dēnkard*, or "Acts of the Faith", we are informed that the Zoroastrian dragon-man and exemplar of misrule, Aži Dahāka, Middle Persian Dahāg, Persian Zahhāk, who overthrew the great but hubristic king of the Iranians Yima Xšaeta, Persian Jamšīd, expressed ten bad desires—presumably, the Decalogue—in opposition to Yima's ten good counsels, and *ōraytā ī jahūdīh bun nibēg kardan, ud őrūšlem dēšīdan padeš dāštan, dahāg frādōm ō awrahām ī jahūdān dastwar, ud az awrahām ō mōše ī narm paywand*, "made the Torah, the fundamental Scripture of Judaism, and built Jerusalem to keep it in. Dahāg [gave it] to Abraham, the Jews' first chief; and from Abraham [it went] to Moses of the soft tradition."²⁷ The "soft tradition", Prof. Shaul Shaked suggests, is scornfully contrasted to the strong one of the Mazdeans; and we may extend this strategy of derisive oppositionalism also, one thinks, to the strange choice of a demonic being as the negative counterpart of Yima. If Solomon was in Muslim tradition to be likened to Jamšīd, and indeed had built the Temple at Jerusalem with the assistance of an arch-demon, then Jamšīd's adversary Dahāg would be the likely candidate for chief contractor, a stand-in for Asmodeus, Demon of Wrath. Wrath itself, *xēšm*, though personified, even in the *Gathās* of Zarathustra seems to be an abstract power that infects all the demons rather than a being around whom a mythological character can be constructed. In Georgian, the Iranian loan-word *hešmak-i* becomes the term for a demon in general; and demonolaters are called by Eznik (the Classical Armenian writer mentioned above, whom Byron translated) **hešmaka-pašt*. The Mazdean polemicist will perhaps have wanted someone more concrete; and Dahāg, regarded in any case as a *tāz*, an Arab, will have fit the bill well—for even though throughout the Sasanian period the Jews were the exemplars of the monism that the dualist Iranians disliked, an attack on them composed after the fall of the dynasty could also be read by the Zoroastrians of the ninth century as an oblique criticism of the Arab Muslim conquerors of their country.

One might perhaps propose yet another reason for the association of Dahāg with Jerusalem. After defeating the dragon-tyrant, Farēdūn imprisons him in mount Damāvand. In MS Ouseley Add. 176, the Bodleian Library, Oxford, fol. 30r, Dahāg, Pers. Zohhak, is shown, not being chained or tied up, but being

²⁷ See Shaul Shaked, "Zoroastrian Polemics against Jews in the Sasanian and Early Islamic Period," in S. Shaked and A. Netzer, eds., *Irano-Judaica II*, Jerusalem: Ben-Zvi Institute, 1990, pp. 85-104, esp. pp. 88-89, 93, cit. Dk. 3.227.15, 3.288.1.

crucified— with nails through each outstretched arm and in each hanging foot. This scene is not unique in Persian art.²⁸ Could not such a detail have been associated with the Crucifixion? Pagans regarded the divinization of Our Lord, Whom Jewish sources scornfully deride as “the Hanged One”, as worthy of scornful ridicule, not because of His Incarnation but because of the intensely humiliating manner of His execution. Crucifixion was a punishment for slaves and bandits— and did not Christ, crucified between two bandits, ask at Gethsemane why He was being arrested with swords and staves as though He were a bandit? Pre-Islamic Persians shared the same view as the pagans; and Muslim doctrine, borrowing from Docetist heresy, simply denies that Christ perished on the Cross at all. Another reason, too, for the association of Dahāg with Jerusalem, may be proposed. Although there are Iranisms in the Talmud, and anecdotes about affable relations between Sasanian kings and Jewish rabbis, the two forms of Gnosticism most strongly Iranian in their culture and historical setting, Manichaeism and Mandaeanism, are both intensely anti-Jewish, excluding Israel entirely from the tradition of wisdom and the process of human salvation. Judaism is to both religions unrelievedly demonic; so perhaps the legend of Dahāg and the Temple is an indication of an anti-Semitism rooted in the culture of late Zoroastrian Iran itself. One recognizes also that the Mandaeans, at least, seem to have been specifically rebelling against Second Temple Judaism, from whose ranks they parted; so their animus may betray the special bitterness of rejection of (and from) one to whom one was intimately close.

It should come as no surprise that Solomon figures prominently in Armenian magical spells, which invoke Solomon’s seal (*knik’*), ring (*matani*), throne (*at’or*), and temple (*tačar*). Some charms invoke the hair of the mane and the shoe of the hoof (*jioy jar, nal*) of his mount, as though he were a mounted warrior saint like George, Sergius, and Theodore, who ride down and lance dragons and demons.²⁹ The Classical Armenian pseudepigrapha include several short texts that belong to the Solomon cycle.³⁰ These include “From the commentary of the Paralipomena concerning the penitence of Solomon” (*I meknut’ enē mnac’ ordac’ vasn Sołomoni apašxarut’ ean*), “Concerning king Solomon” (*Vasn Sołomoni ark’ ayi*), “The questions of the queen and the replies of Solomon son of David” (*Harc’ munk’ dšxoyin ew patasxanik’ Sołomoni ordwoy Dawt’ i*), “Concerning Solomon’s books” (*Vasn greanc’ n Sołomoni*), and “About Solomon’s Books” (*Yačags greanc’ n Sołomoni*). These excerpts show that the tradition of Solomon’s truck with demons, his sinning, and all the rest, was well known to Armenians at an early date: “But he took other women, to the great outrage of the Children of Israel: not just to fornicate with them, but to take part also in their scandalous worship. For he was led astray by reason of his wisdom, and allowed his thoughts to wander down the paths of the women who collectively plotted the undoing of his soul, to the point that he erected idols on the mountaintops and fornicated in the open before the holy Temple and in plain view of his enemies...”³¹ “When the help of God was denied him, he ordered his chamberlain to burn his books.” Though fortunately the man hid the few that have come down to us, including the Song of Songs, there were so many others that the flames of the bonfire reached heaven. Solomon wept and God accounted it repentance (*apašxarut’ iwn*) to him.³² When his servants burnt his books, they reported back to Solomon that they had smelled a sweet aroma and seen a dove rising up to heaven and vanishing: the

²⁸ See Firuza Abdullaeva and Charles Melville, *The Persian Book of Kings: Ibrahim Sultan’s Shahnama*, Oxford: Bodleian Library, 2008, pp. 66–67, fig. 37. The first known portrayal of Zohhak as crucified seems to be MS. Per. 104.3, Chester Beatty Library, Dublin, illus. in Abdullaeva and Melville, p. 35, fig. 17. The Bodleian miniature also adorns the dust-jacket of the volume; and Dr. Abdullaeva, to whom I am indebted for the gift of a copy, told me that at first the press objected to the illustration, fearing precisely that this scene of a crucifixion might horrify potential buyers. Zohhak’s name in Persian is enough like the Arabic of Isaac that conflation of the scene of the ‘*Aqedah*, the Binding of Isaac, with the Crucifixion might have played a role in the evolution of the scene at Damavand. And the Muslims, after all, were to claim descent from Abraham’s other son, Ishmael.

penitent king flooded his chamber with tears.³³ *Test. Sol.* **itself** is missing from its expected place in the narrative cycle and corpus of known Clas. Arm. pseudepigrapha. But we should be in error, were we to infer from its absence in that corpus that it was never translated into Armenian at all, or known in Armenia— for we should be looking in the wrong place.

Some texts that belonged initially to sacred literature, but were so strongly magical in associations and content that they came to be used solely for magical purposes, resisted inclusion in the sacred canon and found a place instead in the texts of magic and of folk religion. Such is the case with the “Repentance of Cyprian”, used throughout Christendom as a magical manual even though it deals with the conversion of a magician, Cyprian of Antioch, ca. AD 300, to Christianity. There is indeed a long version in Clas. Arm., *Apašxarut’iwn Kiprianosi*;³⁴ but the text has become, overwhelmingly, a work of folk religion and thaumaturgy. It is often inscribed talismanically on the illuminated scrolls called in Armenian *hmayil*, from Arabic *ḥamāyil*, the broken pl. of *ḥamīlah*. These are kept near the bed to protect women from the Lilith or Al. Or the texts are printed in small booklets containing other prayers similarly believed to have power against the forces of darkness. The writer of the *hmayil* is often a *tirac’u*, a practitioner without priestly ordination with the Armenian Church; and in Christian Ethiopia the *debertera*, a similarly marginal figure, produces similar scrolls of licit magical content. Scholarly attention has been focused hitherto on the texts of these objects; but one has attempted to study their illustrations within the recently articulated category of “outsider art”.³⁵ If one looks, then, for *Test. Sol.* in Armenian, all one has to do is adjust one’s sight, seeking magical rather than canonical texts, and then, like the purloined letter, it is in plain view: the first complete Armenian magical MS ever published in facsimile, and translated. It is a typical 17th-century magical miscellany, Venice, Biblioteca Marciana no. 210, and includes a work in Armeno-Turkish— also common in Armenian magical collections.³⁶

The text, fol. 43-111, begins with a *historiola*: Solomon, wishing to cure his 24-year-old daughter of infertility, questions 74 demons (in most Armenian sources, he has dealings with the standard number, 72). Typically the *recto* page contains the text; the facing *verso*, a crude, inky-black depiction of the demon being interrogated. The perfunctory *Zauberlegende* omits boy, Orniās, Asmodeus, Shamir, and Temple, and occupies only a few lines. Armenian literature is not allergic to such details; but, if one may venture gingerly into an *argumentum ex silentio*, two possible reasons may be suggested for the change in plot. First, Solomon’s daughter’s complaint is exactly about what Asmodeus *does*, as we have seen earlier with reference to the apocryphal Book of Tobit, from which *Test. Sol.* draws also the remedy against Asmodeus. The second reason, though, seems to me the more compelling: Solomon, the archetypal good magician, is invoked very often in Armenian spells of various kinds, and, prominently, conjuring against an unnamed arch-demon, in compilations of spells whose main purpose is protection against the child-stealing witch Al/Lilith.³⁷ Helping women against barrenness, childbed fever, and similar problems, was an immediate

³⁷ An example, from a printed *hmayil* scroll, from a (MS?) version dated 1 November 1717: cat. no. 95-77, collection of the Armenian Library and Museum of America, Watertown, MA: “Prayer for the binding of

concern of pre-modern people, against which the curious details of pretty youths inspiring the builders of a long-vanished Temple whose construction required also the assistance of an odd worm and some three score and ten grumpy demons led by a wrathful and tipsy scholar-demon, will have seemed rather less practical. The text of Cyprian experiences an analogous abbreviation: details of the erstwhile sorcerer's initiation into various pagan cults, including Mithraism, which occupy page after page in the *Clas. Arm.*, disappear from the version that survives in magical scrolls and booklets. So our laconic preface on the matter of the king's efficacy against the demon *Al/Lilith* might have replaced the tale of Temple and boy, at the time when the text made its decisive transition from extra-canonical pseudepigraphon to magical grimoire. There are other significant changes. The Greek *Test. Sol.* speaks of seven vices, Deception, Strife, Fate, Distress, Error, Power, and "The Worst" as the rulers of "this world of darkness". Presumably these are the planets. Armenian magical texts, deriving proximally from Muslim works such as the *Ghayatu 'l-Hakim* and ultimately from Greek and Indian sources, use freely the decans and lunar mansions in demonology; but the *Test. Sol.* reflects a more radically negative view of the cosmos, of the sort associated generally with Gnostics—in the Gnostic *Testimony of Truth*, for instance, Solomon imprisons demons in seven water pots at Jerusalem—³⁸ and specifically with Manichaeans. No Christian Armenian, even a practitioner of magic, could subscribe to a Gnostic or Manichaean view of the world, one thinks; and the seven planetary prison wardens embodying their depressing vices are absent from the *Arm. list*.

There are numerous variants of this much-changed *Test. Sol.* in *Arm.* with diverse names, the theme of child birth and the number of demons interrogated seeming to be the most stable features of the text: *Harc'munk' Sotomoni t'agaworin eot'anasunerku dewerac'* "The questions of Solomon the king to the seventy-two demons", *Eot'anasun ew erku harc'munk' Sotomoni* "The seventy-two questions of Solomon", and *Harc'munk' Sotomoni i p'erinerun vasn amul kananc' cnaneloy, zawakn me'aneloy ew kam apreloy* "The questions of Solomon to the *peris* concerning a barren woman giving birth, and the child perishing or surviving".³⁹ Let us examine an example of the *Arm.* text taken at random from *Venice Bibl. Marc. 210*:⁴⁰ "The fifth demon. Fifth the demon came [*arek*, for Middle *Arm.* *erek*, *Clas. Arm.* *ekn*, "came"?] whose name was *afretun*, seated on a *black [*eavi*, for *seaw-i*?] horse, with the head of a sheep and the feet of a bird [*tuš*, l-w from *Tk. kuš*], a snake in his hand [*jerum*, loc. sg. in *Mod. E. Arm.*]. Solomon saith: What is your operation [*hasiat'n*, *Arm* l-w *via Pers.*]. Saith the demon: I ramble [*man ku gam*, a mixed E/W *Arm.* vernacular expression] that I see who remembers the name of God. I bring sorrow [*mazarab*] upon him that he fall ill [*nač'atay*] throughout [*t'amam*] his body and pain come all over [*paham*, i.e., *Pers. lba ham*] him. Solomon said: what is the remedy of this? Saith the demon: They mix the bile of a hare with the bile of a black chicken and drip it into one's nose, and write these names and bind them to one's back: *ofleum leum leum uray marar buam ta't'ia yut' bray fualhay heum*. This is the name."

demons and *als.*/ Solomon the wise saw the prince of the demons of darkness, who roared like a cloud and screeched like a dragon. Solomon says: O foul and accursed one, what are you? The demon says: I am the prince of the demons and mother of all evils and sins. I am the one who kindles enmity between brothers, contention and quarrel and disturbance and fornication. I enter into the hearts of men, bringing and sowing the seed of wicked desire. Solomon says: Arise, that I may see you. And he arose, greater than a mountain, and wished to fall upon him. Solomon says: Become small! And he became smaller than a mustard seed. And Solomon trapped him, and put him in a ring on his right hand, and put a piece of the tablets of Sinai on top, with a piece also of Noah's Ark, and of Jacob's Ladder, and of Aaron's staff: and by the prayers of Kononos may all evil demons and wicked satanic contrivances be banished and frustrated, may they be released and cast out afar for this servant of God (N.N.)/ Lord, show me your ways, and teach me your paths./ Prayer of the *t'pgha* and *al.*/ Holy Siovn holy Sisi and holy Sisianē and holy Noviēl and holy Tañēl, angels are they, by Christ's command. They went out hunting and heard a child's cry. They went and saw the *Al* in her wickedness, and seized and held fast and bound the *Al* on the rock of *Al*. The mother of the *Al* came, and says: What might this be? They say: What is this, that you go in, to a mother's womb, and eat her child's flesh, drink the blood, and darken the light of its eyes? The mother of the *Al* says: spare my son, and we will not go near to that house where they recall your names, to the servant of God (N.N.): in the name of the Father and Son and Holy Spirit, now and forever, and unto ages of ages, Amen."

³⁹ Harut'yunyan, p. 215, citing Erevan Matenadaran MSS 8423, 6677, 6678, and 8428.

⁴⁰ Macler, fig. 314.

The drawing on the facing page depicts a bird-footed, animal-headed figure on horseback, using a snake as a quirt.

The language is late vernacular Middle Armenian, suffused with Turkish and Arabo-Persian loan words, with a few formulaic pretensions to Classicism. The demon bears the name Afretun, apparently a combination of the Pers. l-w in Arm. *afret*, “demon”, lit. “creation”, with the name of Farīdūn, the Iranian epic hero. The *voces magicae* form a sonorous rhyme with several possibly pseudo-Arabic words marked by the distinctly non-Armenian, exotic sound *f*.⁴¹ In subsequent sections Arabic words and formulae are common: *rahim* (Ar. *rahīm* “merciful”), *ismhu* (Ar. *ismu-hu*, “His Name”), *filarzi* (Ar. *fr* ’l-ardi “in the Earth”, as pronounced by Persians), *inay humn stmnin* (perhaps Ar. *innahum al-muslimīn*, “For they, the Muslims...” with the intrusive name of Solomon), *hu pislayərahman* (perhaps Ar. *Hu! Bi-šalahi* ’r-*Rahman*, “He! In prayer to the Compassionate”), *mismillahi fir bismilay* and *mismillahi rahman rahim* (rhymes upon the Bismalah), *vlay hovl vlay tuat’ ilay bilay* (Ar. *Wa-lā hawla wa-lā quwwata ilā bi-’llāh*, “Nought availeth without God!”), and, finally *axrat’* (Ar.-Pers. *āxtrah*, This is The End...). These terms and phrases appear in long, sonorous, sing-song, rhyming formulas, most of whose words are strongly vocalic, non-Armenian-sounding nonsense— an Armenian listener’s impression of what Muslim conjurors chant. Though we find a lion here, a dog there, as in the Greek, the demons of the Arm. text are also local, later, and fanciful, with names such as Maṭnay, Maros, Katur, Malul, and Zvi. Recognizable names are few. One demon is said to appear like an *aṭjū baṭjū*, i.e., Ar. Yajūj Majūj, “Gog and Magog”!⁴² But what this doubtless alarming and unpleasant phenomenon looks like is not explained.

Medieval Christians viewed the prophet Mohammed as an arch-heretic: his name was deformed into either Baphomet, the name of a satanic demon, or *mawmet*, the generic term for a little golden statue of Mercury that Muslims supposedly worshipped. In the *Inferno* of Dante, the city of Dis in the pit is dotted with mosques, the Prophet himself rends his own body for having divided the Church, and the damned jabber in a kind of pseudo-Arabic. Armenian polemics against Islam are extremely harsh, and there are even spells against it:⁴³ but one finds also at times, as for instance in the introduction to the 12th-century *credo* of St. Nersēs Šnorhali, a grudging admiration of the Muslims’ courage and steadfast devotion to their faith.⁴⁴ In the case of the Arm. *Test. Sol.* we seem to deal with Arabic not so much as a language demons use— their spoken Armenian is irreproachable— as one that, as the sacred tongue of the near Other, is ambiguous in its value, and thus marked with both power and danger.

We have noted the importance in Armenian magic of the child-stealing witch Al. She is called also the “mother of Al” in both Armenian and Persian (*mādar-e Āl*), and several Arm. spells contain lists of the names of her twelve offspring. These are fairly consistent:⁴⁵

1. *Cneloc* “of those born”/ *Cnaneloy* “of giving birth”/ *Cnaneloc’n* “of those to give birth”/ *Cnaneloy*
2. *Atlazol’ Azlazol’ Batlatul’ Azlazoy*: “of *Azazel”(?)
3. *Mayroyēl’ Maroc’/ ---/ Maroy*: possibly related to *mar-em* “extinguish”?
4. *Aṭk’atē* “poor” + fem. suffix *-ē* of Gk. names in Arm./ *Datak’ōtēl’ Gezagastēl’ Daygātay gōtē*
5. *Aysmē* “from this”/ *Aslumēl’ Aslasumēl’ Aslumē*
6. *Ayszin* “of this kind(?)”/ *Ayilinēl’ Ayilin’ Ayiline*

⁴¹ Though Arm. dialects have the phoneme, and modern native speakers of Arm. employ, universally and without difficulty, the Turco-Pers. exclamation *Āfertn!* (“Bravo!” lit. “Blessing!”), the letter was added to the alphabet only in the 12th century; and foreign words containing *f* are still often “standardized” by the alteration to *p*.

⁴² Macler, fig. 318, fol. 51v.

⁴³ Harut’yunyan, p. 211: *Histos K’ristos/ K’o’rna Mart’iros/ Pzri haxen/ Ktri karen/ Xap’ani čluli Połos/ He’rana mer erkren/ Hām šeyx, hām mollen:/ El k’[ak’, om. by ed.] k’rdu dřen* “Jesus Christ/ ? Martyr/ ? ?/ The strength be cut off(?) / ? be defeated... Paul/ From our land be driven far away/ Both Sheikh and Mollah/ And shit at the Kurd’s gate!”

⁴⁴ See J.R. Russell, “The Credal Poem *Hawatov xostovanim* (“I confess in faith”) of St. Nerses the Graceful,” in J.J. van Ginkel et al., eds., *Redefining Christian Identity: Cultural Interaction in the Middle East since the Rise of Islam*, Orientalia Lovanensia Analecta 134, Leuven, 2005, pp. 185-236.

⁴⁵ Harut’yunyan, pp. 131, 137, 139.

7. *Marmaroyel/ Mairmarayl/ Mairmaroyel/ Marmaroy*: possible from Gk. toponym Marmara, with base *mar-* again understood as reduplicated?
 8. *Ayroy* “of a widow (*ayri*)?”/ *Ašioyl/ Ayēuel/ Ašioy*
 9. *Kališt* “of a wolf (*gayl*) and ass (*ēš*)?” or perhaps based on *kal-* aor. stem of *un-im*, “have, seize”/ *Kalelil/ Kalalil/ Kalile*
 10. *Yulic’al/ Homizanl/ Hovizanl/ Homizan*
 11. *Ekitun* “I came home”/ *Eki tunl/ Ekisanl/ Homitun*
 12. *Ankanes* “Thou fallest down”/ *Ankeanisl/ Ankenesl/ Ankanis*

Although some of the names in the list above are strange, most are not very mysterious constructions with the familiar feminine Greek ending *-ē* that was long ago fully assimilated into Arm. onomastics; and others, “Of birth”, “Of this”, “I came home”, and, at the end, “You fall down!” are as homely as a child’s rhyme, the rhyming pairs just on the edge of sense, like Lewis Carroll’s *Jabberwocky*.⁴⁶ When I sang “Ring around the rosy, a pocket full of posies, ashes, ashes, we all fall down!” I did not know anything about primitive beliefs that flowers protected one from a consuming plague. As we have seen, Jakobson connected the patterns of children’s magic rhymes to the deeper structures of the language of folk religion and of spells, as part of a single process in poetry.

The language of the demons, then, is like that of the gods in that it is often intelligible but variously marked. It is rarely meant to sound pleasant to the ear; and when it is a foreign language, that tongue often belongs to an alien neighbor, a near other whose faith is experienced at once as potent and dangerous. “I speak three languages, English, Yiddish, and Rubbish!” declared a music hall comedian cited by the late Prof. Neil Mackenzie as he delightedly demolished a forgery.⁴⁷ Demons speak nonsense, too, as we might expect of the mendacious enemies of Adam, he who gave their true names to all the beings in Creation. This distinguishes them from the gods, except perhaps those of Jorge Luis Borges, whose works constantly return to the problem that infinity of anything makes a nonsense of it: immortality reduces divinities to idiocy. I do not believe this. There is nothing good about nonsense; and I would conclude with another idea about language that is different from the phenomena described by Prof. Watkins altogether.

One of my teachers, now a dear friend of many years as well, is Prof. Nina Georgievna Garsoian, the great Armenologist; and one of her ancestors through the Armenian, Russophone Saparov family of the north Caucasus was the great Russian Orthodox mystic Father Pavel Florensky. He was a spiritual leader of the mystical school known as *imiaslavie*, “name-glorification”, whose essential proposition is: The name of God is God. God in *any* language, that is: Russian, Avestan, Armenian, or Hebrew. That is, God by His prevenient grace endows any prayerful locution of human language with the transcendent power of the Divine *logos* of truth, much in the way that He by *kenosis*, the act of love and self-abnegation, enclosed the unencompassable within the Incarnation. Magic, and magical language, are an entangling and sterile web; but when we part company also with the self-indulgent rhetoric of *mantra*, we find a refreshingly different experience of thought and being. To name something, as Loren Graham explains the assertions of the **imiaslavists*, the “glorifiers of the name”, is to individuate it: the Moscow mathematicians, associated with Fr. Florensky and his teachings, can thus assert reasonably a “set of all sets” since they can *name* it. That set is our Lord.⁴⁸ When human knowledge and thought touch the face of Heaven, Al and her children, Asmodeus and the 72 demons, the seven dolorous planets, tear like a thin sheet of paper covered with vain scribbles. “They who have had contempt for the Word of God, from them the word of man, too, shall be taken away!” thunders Merlin. But for those who love the Word of God, then the humblest word of man is filled with truth and light. And then there is neither the language of gods nor the language of demons, but

⁴⁶ On the lexicon of the poem of “Through the Looking-Glass” (1872), which is a fully-formed *Drachenkampf* with perfect ring composition, see Eric Partridge, “The Nonsense Words of Edward Lear and Lewis Carroll,” *Here, There and Everywhere*, London: Hamish Hamilton, 1950, pp. 162-188. There may be more than a hint of the demonological in Carroll’s inventions: Partridge thinks the “*ipwergis-pudding*” of “A Tangled Tale” (1885) may combine Walpurgis and haggis.

simply language itself, the language of man and of the man Christ, meaningful and sonorous and full of strength and truth, the *Logos*.

APPENDIX

As a contribution to the corpus of material on king Solomon's books, questions, and career, I append this study of a manuscript recently acquired by the National Association for Armenian Studies and Research in Belmont, MA, USA.

"Un document est un témoin; comme la plupart des témoins, il ne parle guère que lorsqu'on l'interroge."
("A document is a witness; like most witnesses it barely says a word until it is questioned.")

— Marc Bloch, "Pour un histoire comparée des sociétés européennes," *Mélanges historiques* I, Paris, 1969, 16-40, 20.

II.

In the summer of 2009, Dr. Levon Boyajian of New Jersey, born in Washington Heights, a neighborhood in upper Manhattan, New York City, in 1929, donated several old and rare Armenian books, including a manuscript, to the National Association for Armenian Studies and Research (NAASR), in Belmont, MA.⁴⁹ They were brought to the USA shortly after his birth by his maternal grandfather, Levon Nazarian, the youngest of three brothers, and a native of Chemishgezek. The family had moved in Nazarian's childhood from western Armenia to Aleppo, Syria, where he grew up; he emigrated to New York in 1930, worked as a confectioner to help support the family during the hard times of the Great Depression, and died three years later. The books were part of a larger collection, most of which Mr. Nazarian donated to libraries in the new republic of Soviet Armenia when he left Syria. He had run an inn— described as a *khan* or *caravansarai*— where he sheltered relatives left destitute in the wake of the Armenian Genocide. His best friend had been a rebel fighter from Zeitun, where Armenians had defended themselves against the depredations and extortions of the Ottoman rulers and their Kurdish enforcers; and he always maintained an interest in progressive politics.

Grandfather Nazarian's wide-ranging interests embraced also the occult. This is not surprising, considering that esotericism challenges the bounds of conventional belief about the order of the universe much as political radicalism questions the smug assumptions of the prevailing social order. And Dr. Boyajian said he had compiled a notebook containing esoteric symbols. Dr. Boyajian when we last corresponded was unaware of its whereabouts, even whether it was still extant. He passed away in 2010; and the notebook has turned up in a collection of the family's Armenian books donated to the library of NAASR by his son. Mr. Nazarian was a well educated and civilized man: he raised his daughter Verkin, the woman who was to be Dr. Boyajian's mother, in an environment of comfort, enlightenment, and respect. She came to America in 1923. Dr. Boyajian's father Apkar was born in Chemishgezek in 1890 and came to the US before the outbreak of World War I. His was the itinerary of many Armenians: he worked in a New England textile mill, then as a photoengraver in New York City.

The ancient town of Chemishgezek (Armenian *Č'mškacag*), home of the Byzantine emperor John Tzimiskes, is NNE of Malatya, SE of Akn, and NNW of Kharpert; Aleppo is SSW, twice the distance of Malatya. The city is in the Dersim (now called by the Turkish occupation state Tunceli) region of Western Armenia, a stronghold of the Zaza people, who are speakers of the dialect of Dailam in northern Iran and call their speech *dilmi*; but they are identified culturally and politically with the Kurds. Legend has it that Dersim got its name from Der Simon, an Armenian priest who accepted the Alevi Shi'a sect of Islam to save his flock, during the Jalali uprisings of the 17th century that convulsed all of Anatolia. There were close ties between the Armenians and Zazas of the region, which is still in sporadic rebellion against

⁴⁹ A version of the first part of this study was published as "Collection of Books Donated to NAASR by Dr. Levon Boyajian" in the NAASR *Newsletter*, Belmont, MA, Fall-Winter 2009-2010, pp. 1-3.

Turkish control. The history of the town⁵⁰ mentions both the Boyajian and Nazarian families, whose children united in wedlock. Others there were bibliophiles: Harut' iun Ajemian, a priest from the nearby village of Sisna, "died a very old man and left many manuscripts".⁵¹

Dr. Boyajian's family memoir, *Hayots Badeevuh* [i.e., *Hayoc' patiwa*, "Armenian honor"]: *Reminiscences of Armenian Life in New York City*, Reading, UK: Taderon, 2004, provides a vivid picture of Armenian life in uptown Manhattan in the years of the Great Depression. Times were hard, but the photoengravers' union to which his father belonged helped struggling members of its brotherhood and gave workers a sense of dignity. In their spare time, men sat around debating politics on the sidewalk of Wadsworth Ave., or at coffee houses and clubs, and played *tavlu* (backgammon). Friends visited each other's homes back and forth, and there was always a *jezve* — a pot of Turkish coffee — on the stove. Toasts were offered in homemade *oghi* (the anisette liqueur also called *arak* or *raki*). The center of social life was, thus, the family; the center of communal life was the Armenian Apostolic Church. The Holy Cross Church of Armenia on West 187th St. east of St. Nicholas Ave. sponsored an annual picnic in June and a bazaar in November; so church events and family life, shared meals, picnics, and the cultural-social-national luncheon-dinner-reception called the *hantes* (Arm. *handēs*, "gathering, occasion, encounter") held the community together and determined the rhythm and pattern of life outside the workplace. Other outings might include breakfast at the Horn & Hardart automat on 181st St. on Saturday after the cashing of Dad's paycheck. The neighborhood had a half dozen Armenian groceries;⁵² and "Doc" Cohen, the local pharmacist, had the young Levon write out for him in English transliteration the Armenian of the six hundred words that, according to the *New York Times*, were basic to any language. There were many single men in the community who had either never married, or who had lost their families in the Genocide; and their fellow Armenians took care of them.

The life that Levon Boyajian recalled is not very different from that of other ethnic enclaves in New York then. My mother grew up in Bensonhurst, an Italian and Jewish neighborhood of Brooklyn. Times were hard, and a nickel or dime was a treat went a long way on a weekend trip to the automat, or the movies, or even Manhattan. Home and family were the anchor of existence: my grandmother Marguerite cooked the Moroccan Sabbath stew called *adafina*, baked *kadayif*, and served guests little cups of Turkish coffee with homemade candied orange peel. By shopping for groceries wholesale and finding chicken wings and necks cheap, and God knows what other strategies, Grandma managed to put food on the table every night for parents, grandparents, and four daughters, several sisters and their families, and friends. The hard *rosocas* and *fijuelas* I remember from my childhood were made with recipes brought to Salonica from the Spain of Ferdinand, Isabella, and the Inquisition five centuries earlier. During Prohibition my grandfather made wine and *raki* at home; and our edification and entertainment was tales of Djuha, the crafty dervish Hoca Nasrettin. And though I was too young to have heard him, Uncle Jack played the *oud*. As for the occult, my great grandmother Rachel, whose nickname was Manachi, used to offer the blood of a black cock to the dead at midnight when somebody was ill. I don't know the other aspects of her witchcraft; but she was an austere and bony woman of immense power who got around on a great staff till she passed at ninety six, having foretold her own death to the day. She loved me and used to say to me when I was little *Camina, pasha!* "Walk, O king!" in Ladino. I inherited her ring of twined snakes with diamond and ruby eyes. The family had escaped from the famine and great fire of 1917 in Greece, and from the filth and ignorance of Morocco: America despite the Depression, still meant freedom, goodness, and opportunity in those days; and President Franklin Delano Roosevelt and New York Mayor Fiorello La Guardia enjoyed the status of living saints.

I first met Dr. Boyajian when we worked together on the organizing committee of a two-day conference on the *sequelae* of trauma — the experiences of children of Genocide survivors — that was held at the Armenian Diocese on Second Ave. and 34th St. in New York in April 1980. He was then a vigorous man of middle years, a respected physician and psychiatrist, a pillar of the Church, and very friendly and

⁵¹ *Ibid.*, p. 502.

⁵² In my teenage years, around 1970-71, only one was left, the *Hay Nparavačar*, on St. Nicholas Ave. The neighborhood is just as lively and cheerful as ever, but now the crowds are largely Dominican.

forthright. I was twenty-six, and coordinating cultural affairs for the Diocese was my first job; but His Eminence Archbishop Torkom Manoogian and our Director, Syraun Palvetzian, treated me with kindness and courtesy, and the Diocesan staff was a supportive, hard-working, fun family. The conference, which touched upon the Holocaust and Cambodia as well as the Armenian Genocide, was attended by hundreds; and the proceedings, with Levon's study of the sequelae of genocidal trauma, was prepared for publication. It remains still in manuscript, though, and is now in the NAASR archives. Levon and I had a lot in common, for I grew up in Washington Heights, too; and when I interviewed him a few months before his passing we discovered that there were more than a few memories of the old neighborhood we shared and treasured: listening to the Texaco broadcast of the Metropolitan Opera on Saturday afternoons on WQXR through every radio in every window uninterruptedly as we walked down the street, not missing a note. I remember the wonderful *hantes* in the hall below Holy Cross, where my Armenian teacher, Vart Tarpinian, taught Sunday school. There was a feast of salad, pilaf and roast beef, ice cream and coffee, then impressively intoned prayers and flowery speeches and songs with a lady of a certain age on the piano playing awfully well and dances by kids in lovely costumes and poems, and a lot of loud socializing and good cheer. In mid-afternoon you would stagger out of Haik Kavukjian hall with the strong conviction, Armenia lives! When I was young, Archbishop Tiran Nersoyan, a great scholar, lived in the parish house attached to the church; and Levon remembers Fr. Yeghishe Simonian, who served from 1935 to 1965: he was a survivor of the burning and massacre of Smyrna, as was Abp. Leon Tourian, whose murder in the church by leaders of the New York chapter of the Armenian Revolutionary Federation (the Tashnag or Dašnak party) in December 1933 created a rift in the community that lasted for generations and whose echo is still felt.⁵³ Indeed the echoes of the grisly crime reached far beyond the confines of the Armenian community: in his first novel *And The Hippos Boiled In Their Tanks*, a *roman à clef* about a murder within the social circle of the nascent Beat movement in the mid-1940's, William S. Burroughs named one of his fictionalized characters Tourian.

Washington Heights was not just a big Armenian neighborhood— my teacher, Fr. Krikor Maksoudian, remembered the pun Washington *Hayoc*, “of the Armenians”— but a center of arts and learning. The scholar and translator of Persian poetry, Mihrdat Tiryakian, whose translation of *dāstāns* from the *Šah-nāme* of Ferdōsī was published in 1951, lived in the neighborhood: he followed in the path of his father Harut'iun, whose Armenian translation of sections of the same epic was printed in New York in 1909. The graphic designer Minas Minasian, who died in 1981, born in the village of Chengiler near Nicomedia, lived on Pinehurst Avenue. His Armenian typefaces and designs defined the poster, periodical, and book arts of the American Armenian community for decades. Harut'iun Hazarian, who lived on Ft. Washington Avenue and 170th Street, died at the same time. He had devoted his considerable wealth to buying Armenian manuscripts and donating them to the Matenadaran in Erevan, and to leading the Gesaria (Caesarea of Cappadocia, Kayseri) Compatriotic Union. The neighborhood became dangerous, the children went to college, and most moved away to the suburbs— Fort Lee in New Jersey, Westchester in New York.⁵⁴

The 1930's saw not only the great schism in the Armenian community, which began at the little parish church in Washington Heights, but also the rise of fascism overseas and the eclipse of the Soviet Union by Stalinist tyranny. The convulsions beyond the sea affected Armenian-Americans. Levon averred that widespread anti-Semitism in the Armenian community sometimes precluded sympathy for the Jews in

⁵³ Marjorie Housepian Dobkin, author of the groundbreaking historical masterpiece *Smyrna 1922*, about the Turkish massacre and destruction of a great and ancient city, published a memoir of her own Armenian-American childhood in New York, *A Houseful of Love*, that became a bestseller and was serialized in *Reader's Digest*. Although overly sentimental and sanitized, in my view, the book presents a faithful picture similar to Boyajian's. Marge is the mother of my old friend and Columbia classmate Stephen Andrew Johnson of New York, who told me she answered the phone the day of Abp. Tourian's murder: her family lived a few minutes away from Holy Cross, and her father, a physician who had served as a medical relief volunteer in Armenia in World War I, attended the Primate, who died in the parish house of his wounds shortly after the attack.

⁵⁴ See James Russell, “The Calligrapher of Washington Hayotz,” *Ararat Quarterly*, New York, Autumn 1981, pp. 24-26.

Nazi Germany, but this was by no means a majority sentiment and one member of the community reacted quite differently indeed. Avedis Derounian, a Genocide survivor growing up in Washington Heights, witnessed Abp. Tourian's horrible murder in the church and perceived a connection between the Armenian Genocide, that crime, and the fascist movements gaining strength in Europe and here. Using the *nom de plume* John Roy Carlson, he wrote a bestseller, *Under Cover*, about fascist organizations in America. His articles in *Fortune* on the subject spurred Congress to form the House Un-American Activities Committee. After the war, Derounian traveled to the Middle East to cover the Israel War of Independence and published with Knopf in New York a few years later *From Cairo to Damascus*, in which he detailed the transplantation of Nazism into the Islamic world and presciently argued that Islamic political fanaticism would prove to be a far deadlier and longer-lasting threat to freedom than Communism. And meanwhile, as the world surged and darkened and ignorant armies clashed by night and the Armenians of New York worked and ate and prayed and cooked and raised their children, the books waited...

Mr. Nazarian's books were kept with respect in a cabinet, and the family had a Bible and a *Narek* (that is, the *Book of Lamentations* of the tenth-century St. Grigor Narekats'i, a cycle of 95 mystical prayers), as most Christian Armenian homes did. It would appear from the notations that Mr. Nazarian read his books carefully. The seven vowels of Armenian were the subject of a magical text, the *Eōt'nagreank'*, or "(Book of) the seven letters"; and perhaps Mr. Nazarian's interests in esoterica led him to the only manuscript in the initial collection donated by Dr. Boyajian, a seventeenth-century miscellany that contains two grammatical treatises. One notes that the probable origin of the term "grimoire", the standard word for a manual of magic, is French *grammaire*, "grammar"! The manuscript contains also Aristotle's letter to Alexander; and this, too, has magical overtones; for their fictional correspondence, which includes advice on the preparation of talismans, is the matter of the magical book known in the West as *Secretum secretorum*, "The Secret of Secrets". The occult notebook of Mr. Nazarian was donated posthumously to NAASR, as noted above, by his son. But the principal books donated by Dr. Boyajian shortly before his death are these:

1. A manuscript on paper of roughly octavo size, containing texts in several hands. The first, with title in purple and red and text in black, is, "Definition of Grammar: Grammar is an art comprised of speech and writing and its parts are four: letter, syllable, word, saying..." in an attenuated notary, Arm. *notrgir*, of the early 17th century, concluding with an undated colophon, "Remember this sinner in Christ." The next text is in a considerably cruder semi-cursive *šetagir* hand of the 17th century: "Grammar is a skill, those matters of the poets and of oft repeated utterances, and its parts are six: first, writing..." There follows in a neater, mixed *notrgir* and *šetagir* of the same period, "The letter of Aristotle the Philosopher to king Alexander. History concerning the world [*ašxari* for *ašxarhi*]. Alexander often seemed to me to be something truly divine..."

The book is completed in this same hand but with less space between the words, and concludes with a colophon: "And now God, as the saying of the ancients goes, is the beginning and the end. And, having within Him all beings, He completes their paths in a straight way, causing them to follow the various kinds of their natures. Falling short of justice they are punished by God; and likewise whoever is favored will be blessed with His grace. Eternal glory, Amen. This was written in the Armenian year 1096 in the month of May, at a time when one Sultan Epram [Ibrahim] reigned, who fought a war against the Cretans and all the land of the Ottomans endured great suffering. And all the more so this city of Halap [Aleppo], for the Pasha was particularly lawless. They called him by the name Tali Huseyn [i.e., *dali*, Mod. Tk. *delli*, Huseyn, "Crazy Hussein", a typical Jalali sobriquet]. If only God might free all faithful Christians from the hands of these people by the intercession of the Holy Mother of God, Amen." There follows in Arabic language and script: *Al-faqr qasīs [kešrš?] Markar*. "The poor man, the *priest Markar."

The surface leaves of the cartonnage from which the hard cover was made were manufactured using an older MS in very fine *bolorgir* script of a type found in Cilician MSS of the early 14th century; but as the thin, polished paper feels to me more recent, I am inclined to date it to the 17th century or not much earlier. The text has a superscription in modern cursive Armenian, perhaps belonging to Mr. Nazarian: "Menologium, martyrology of our holy father Gregory the Armenian of the family of the Illuminator and a most select martyr. History." The book bears two stamp seals, one of which seems to have the Armenian name Kirakos; and on the flyleaf in purple ink is this note in the same flowery hand as the superscription on

the cartonnage: "I took (this) from Brutean (the potter?) Kir[a]kos in the monastery of St. Sargis, abbot of the Armenians, 1882 February 20 *yitisia* [in Edessa?] *Arewin* [?]." The text of the *Menologium*, which is evidently the martyrdom of the Apostle Bartholomew, is as follows: "... who went after him. Take those deceivers there outside. And the executioners went... apostles... took Philip and Bartholomew, and Mary, and dragged them outside. And when the tyrant beheld them he began to gnash his teeth, and said, Pull away those witches, who are leading astray many women and virgins. And they said, We are worshippers of God. And he commanded.../ ... your deeds. And let go your life full of pain. And abandon your fleeting joys. For it passes like a shadow. See that which endures, and forget these transient things. And give up your savage ways, that is, the deeds of foulness, that..." And at the other end, "She went outside and saw them. She made bold [*hamarjec'aw* for *hamarjakec'aw*] before them all and said, I am a Hebrew and the daughter of a Hebrew [*ebraec'o* for *ebayec'woy*]. Speak to me in the speech of my fathers. For I have listened before to your preaching and was healed of my disease. And now I glorify and bow down to the beneficence of your God even in this distant land, for the precious stone of one's own that the great dragon swallowed. But Lord, make alive the true stone..." Next page, "... they led astray the multitudes. For after that they went in to him. This city was full of useless people. The slew also the serpents, the sons of the viper, who were our gods [i.e., false gods, Arm. *ack'* with a *patiw* below the abbreviation, as is done with the name of Satan]. They destroyed our temple and our worship perished. Our table, too, was ruined, and no longer do we find wine to place before us. For having drunk of the..."

2. A printed *Šaraknoc*, "Hymnal" illustrated with woodcuts, as of Adam and Eve deceived by the serpent (p. 130). Following the table of contents on p. 240, the endpaper contains a fragmentary inscription, "May there arrive.../ Xumxabu [Kum kapu in Constantinople, site of the Armenian Patriarchate]/ Khan and/ Lord Grigor/ *T(i)r(a)c'(o)w* [a cleric without ordination]..." Following p. 716, *Es em č'imiš/ kezakc'i/ terac'ul arut'iw?/n/ girec'i/ t'win* "I, the *tirac'u* Harut'iun of Chimishkezek wrote this in the year..." In pencil there follow the numbers, in Arabic:

1928
1096
832

1096 is the Armenian date of the MS described above, to which one adds 551 to obtain the date *Anno Domini*; but it would seem Mr. Nazarian subtracted it from AD 1928— two years before his departure for the US from Aleppo— in what appears to have been a misguided attempt to ascertain when the colophon was written.

3. *P'elik's ew Pawlinē kam Žuray leṛan taki gerezmanē*, "Felix and Pauline, or, the tomb below Mt. Jura," translated from Italian (into Western Armenian) by Grigor T'orosean, Paris, 1859. It is inscribed, *Aṛ nazeli ṛ. Zmruxt Nazarean, i nšan buṛn zgac'manc' nuiṛē sirakarōt khōsec'ealn iwr V. M. K'iwrk'čean*, "V.M. Kurkjian, her intended, pining for love, offers this in token of his ardent feelings to the charming Miss Zmruxt Nazarian" with the date 1887 March 2, Constantinople. Dr. Boyajian does not know who the swain and his lady were; though perhaps Ms. Nazarian was a relative. The novel was written by Pierre Blanchard (1772-1856). Ms. Shushan Teager of Belmont, MA, a native of Beirut whose family were from Aintab, has identified the ardent swain as none other than Vahan M. Kurkjian, the author of *A History of Armenia*, *Aspet Liparit*, and other books. The young lady, whose family settled on the form Nazaretian of their surname, was first cousin to Ms. Teager's grandmother, Zarman Nazaretian. The Nazaretians settled in New York City.

4. A collection of miscellaneous political tracts bound together:

1. *Sots'ializmā ew soc'ialakan šaržumā 19-rd darum*, "Socialism and the socialist movement in the 19th century", translated from (Werner Sombart's study in) German and published by the Armenian students of Geneva, press of the Armenian Revolutionary Federation, 1898, with the epigraph *Oč'inč' č'em araġarkum, Oč'inč' č'em ent'adrum, patmum em* "I propose nothing, and I suppose nothing: I merely relate."

2. John Stuart Mill, *Azatur'ean masin (On Liberty)*, translated from the Russian translation, with a brief account of Mill's life, Moscow: Herbek press, 1898.

3. S.S. Zak, *Hoġ ew kapitalizm (Land and capitalism)*, translated from Russian, Tiflis, 1907.

4. Yovhannēs X. Nazarean, *Krt'akan veracnut'iwn (The renaissance in education)*, Constantinople, 1909.

5. H. T'. Bokl (Buckle), *Angliayi k'atak'akrt'ut'ean patmut'iwnā (The history of the civilization of England)*, Tiflis, 1909.

The latter miscellany suggests that Mr. Nazarian was interested in economic history and in progressive politics in particular. This was not at all uncommon: Karl Marx, in a preface to a late edition of his *Communist Manifesto*, mentioned two Armenian translations of his work. Both Western and Eastern Armenian printed versions of the Manifesto are known; and Armenian socialist and revolutionary activity is coextensive with that of the Russians themselves. In the US, especially during the 1930's when so many people were out of work, the *Hnč'ak* party ("Bell", named after Alexander Herzen's *Kolokol*) and the Communist *Yarajdimakan* ("Progressive") league were active in calling for reform or even overthrow of the capitalist system. There were even Armenian translations of Trotsky's tracts of the Fourth International published in New York. And when the American Lincoln Battalion fought with the International Brigades against fascism in the Spanish Civil War, one of several Armenian Americans who died in battle was Ashod Antreassian on New York. His brother named the Ashod Press, which served the Armenian Diocese for decades, after the fallen hero.

So as the fledgling Armenian-American community weathered the storms of political assassination and economic depression while building its thriving, vital culture in New York City, a cabinet in an apartment held a manuscript whose scribe evokes the cataclysmic events of the Jalali uprisings of the 1600's, decades before New York received its present name. A printed hymnal records its acquisition by a man of Chimishkezek from a lay priest. A romantic novel gives a brief insight into a romantic engagement in late 19th-century Constantinople. The latest text in a collection of political studies and tracts is bound in 1909—the terminus date for the miscellany, i.e., in the turbulent period of revolution in Russia, Iran, and Ottoman Turkey and the portentous year of the Adana massacres, scarcely half a decade away from the holocaust that was to destroy the millennial life of the Armenians in most of their homeland and scatter the survivors across the globe, as far as upper Manhattan and New England.

For decades, the books brought to the shores of the New World from Aleppo were kept carefully as life roiled around them. Men worked, women cooked and brewed coffee, there was laughter and conversation, and sorrow and longing. Children played, grew up, studied and became professionals, Americans. The neighborhood changed and most of the Armenians moved away from St. Nicholas Ave., from Audubon Ave., from 187th St., to the wealthier suburbs around Manhattan: north to Westchester, west to Fort Lee and Englewood, NJ. Holy Cross Church of Armenia still stands, and most of its parishioners come to Sunday services by car from suburban homes. And the grocery stores, the large Sunday crowds, the inviting smells, all belong now to the past. Though the bloodstained vestments of Abp. Tourian are still stored near his tomb in the church, and the dark tale of his grisly murder still can shock one, it is swiftly fading away to ancient history now, and as the Soviet era itself recedes into memory and an independent Armenia confronts new challenges, the wounds of old political feuds are healing. But the old Armenian books, like folded flowers waiting through the night for dawn, waited patiently on their shelves. And now the books open, and speak to us again.

2.

One of these is Dr. Nazarian's newly discovered notebook containing those esoteric symbols that his grandson thought was lost. Its title-page calls it *bžškarān*, a book of medicine or healing; but it is perhaps better described as a magico-medical miscellany. The manuscript is inscribed in a small, sturdy hardbound brown notebook, probably of late 19th or early 20th-century manufacture. The pages, about 100, of which 89 are inscribed, are ruled in squares like graph paper and measure 3.8 inches (19 cm) by 4.8 inches (24 cm). There are four sections: a collection of remedies (pp. 1-49), a series of spells (pp. 50-64), a list of Psalms to be recited as magical texts for various purposes (pp. 66-73 and 81-88), a long disquisition

on the medicinal and magical uses of parts of the stork (*aragil*) (pp. 74-78), and two loose inserts. The latter section, following instructions on using the liver mixed with oil to cure the possessed and keeping the wing to chase depression from one's heart, concludes with the laconic instruction to keep the "inner beak" (*znergin ktuc'n*) with one: *bavē imastnoc*: "to the wise it is sufficient." *Verbum sapienti* indeed.

The phrase reminds one at once of the title *Angitac' anpēt*, "Useless to the ignorant", that the great fifteenth-century Armenian physician Amirdovlat' of Amasia assigned to one of his tracts. Medicine requires skill and knowledge, many of its methods and ingredients are not indeed to be disclosed to those who might foolishly or maliciously misuse them, and some of its operations seem magical still. But Amirdovlat' did not intend his craft to be esoteric; as other compositions, *Usumn bžškut'ean*, "The study of healing" and *Ogut bžškut'ean* "The usefulness of healing", demonstrate. He believed the physician's art was useful to the body as prayer was, to the soul; and closed a tract with a brief poem: *Yoržam šaržmunk' lini c'awoc' / Ew astacem ast pitoyic' / Ew Astuac tay zarořjut' iwn ast hačoyic*: "When the symptoms of pains appear/ Then I provide the needed care;/ And God bestows health, if it pleases Him." In his manuals for treatment, Amirdovlat' lists each disease, then its cause, its signs, its treatment (*statsum*), and the opinions of various previous Greek, Arab, Persian, and Armenian experts. The famous Mkhitar' Herats'i figures among the latter. The title *bžškan* or an Arabic equivalent in Armenian, *Akhrapatin*, is fairly common in Armenian medical books, such as that of Grigoris, late fifteenth century, each chapter of whose book is called a "door" (*duřn*), suggesting a Muslim source: Arabic *bab* or Persian *dar*. Armenian doctors were prominent in the Ottoman Empire and elsewhere, and the tradition is long: in the late 18th century, for instance, Petros K'alant'arean, born at New Julfa in Isfahan, traveled to Moscow to study medicine. His "concise" (*hamarōt*) *bžškan* contains sections on emetics and laxatives, fever, stomach ache, liver ailments, problems of urination and ejaculation (*sermnakat'ut' iwn*), headache, cuts and wounds, skin diseases, and problems of the eyes, ears, teeth, and musculature. He frequently transcribes Latin terminology in Armenian script, and uses some Russian, too (*petrushka*, *romashka*) for herbal matters.⁵⁵ It is easy to imagine him taking a walk in the forests outside Moscow with a Russian friend on a beautiful bygone day, learning about plants and probably picking berries and mushrooms.

So Armenian medicine and medical books as such have a long pedigree; and it is likely that the copyist of our text worked from one or more of these, adding French words where a modern source indicated them or as he himself knew them. But the manuscript has two other sections, on spells and the magical employment of Psalms. These suggest still deeper, more ancient, springs. And such a mixture of relatively modern medicine, medieval magic, and magical use of Biblical texts is actually not at all strange or surprising, any more than was the interest of the compiler of our *bžškan* in these subjects. For in fact little in human culture is older than the association of magic and medicine. One of the spells in our manuscript invokes Solomon, the ancient king of Israel whom Jews, Christians, and Muslims alike regard as the greatest magician in history. Jewish tradition attributes to Solomon's authorship a book (*sefer*) or table (*tabla*) of remedies (*refu'ot*) for every disease. Towards the end of his life Solomon is said to have repented of his errant ways and consigned many of his writings to a great bonfire; but Hezekiah is supposed to have "concealed" the *Sefer Refu'ot*: the verb used is *ganaz*, an Iranian loan meaning "treasure" (Pers. *ganj*, Arm. *ganj*, etc.); and one recalls the derivative *geniza*, a storeroom for worn-out sacred texts. The Church Father Hippolytus cites an old tradition, repeated later and independently by Maimonides, to the effect that Hezekiah consigned the book to occultation because people had come to rely on it, rather than on God, for healing.⁵⁶ Just as for centuries magicians have produced magical books purporting to be the Seal of Solomon, which probably never existed; so the original of the book with which we deal now might have purported to be a revealed text of the *Sefer refu'ot*, whose actuality is likewise doubtful. Myths are inherently impossible, though meaningful; but legends can have a plausible basis in reality. It is at least possible that the sick sought the aid of king Solomon; for since time immemorial in diverse countries people have believed that the touch of a monarch can cure such tellingly-named ailments as the skin disease

⁵⁵ See Arak'el G. Arak'elyan, *Hay žořovrdi mtavor mšakuyt'i zargac'man patmut'yun*, Vol. 2, Erevan: Haypethrat, 1964, p. 374 ff.

⁵⁶ See David J. Halperin, "The Book of Remedies, the canonization of the Solomonic writings, and the riddle of Ps.-Eusebius," *Jewish Quarterly Review* 76.4 (Apr. 1982), pp. 269-292.

called in English “the king’s evil”. From there, the claim to be able to cure all diseases is but a hubristic expansion, to which would then be attached Solomon’s reputation as the author of thousands of books.

Solomon is often identified in Iranian and Islamic lore with the primordial king Jamshid (Avestan Yima *khshaeta* “the shining”, the equivalent of the Vedic lord of the dead, Yama), to whose hubris and fall from grace Zarathustra referred enigmatically in his hymns, the *Gathas*, probably in the late second millennium B.C. In later tradition, though, it is made quite clear that Jamshid demanded men worship him as God since he could cure every disease. Though one may dispute who inspired whom in the development of the legend, the Hebrew God is often death-dealing while the Persian Ahura Mazda, an entirely benevolent being, never is. So although both divinities are healers, the source of this particular detail of the Solomonic cycle may just be Iranian. Solomon’s legendary medicine had a magical aspect, too— yet another reason for remedies and spells to rub shoulders in the Armenian *Bžškaran*. Josephus reports that in the presence of the Roman emperor Vespasian a Jew named Eleazar employed an incantation (Gk. *epōdē*), Solomon’s name, and a root (probably the famous *baaras*) prescribed by the latter, to draw demons out of possessed men. And as for the third portion of our manuscript, the list of Psalms and their magical uses, one need only recall Josephus again: David was able to heal and exorcize Saul because he could charm away (Gk. *psallein*, cf. the word Psalm) spirits with his harp (*Ant.* 6.166-169).⁵⁷ One can scarcely criticize a pious Armenian for employing the Psalms to magical ends when their proto-Orphic author did the same himself.

The title page, with the single word *Bžškaran*, “Compendium of remedies”, is followed by 46 pages listing diseases, their symptoms, and treatment, written in purple ink with a *šetagir* cursive hand. Three additional pages of the same in pencil and black ink by the same hand follow. The language is Modern Western Armenian; and the names of diseases and medications are given also in French in parentheses. This would suggest that the manuscript was compiled at Aleppo: Syria after the first World War was French mandate territory according to the terms of the wartime Sykes-Picot agreement that divided the Arab spoils of the Ottoman Empire between Britain and France. Since Dr. Boyajian claimed the notebook was compiled by his grandfather, one can assert beyond reasonable doubt that the hand Mr. Nazarian’s own; and he wrote the notebook most likely in the 1920’s, in Aleppo.

The remedies in the first section are generally of the sort available at home (strong coffee and the like) or easily obtained at an apothecary shop in the days before sulfa drugs and antibiotics were discovered; and one supposes that the laboriously copied text was put to practical use. The first sickness addressed is migraine (*gluxin kēs c’aw*), for which sitting in the dark is recommended as the cure (*darman*), with a cachet of antipyrine or quinine sulfate. Treatments follow for various complaints including hemorrhoids (with the Turkish *mayasil* helpfully appended), constipation (*pndut’iwn*), drowsiness, drug-overdose (cocaine, morphine, belladonna, and laudanum), arsenic-poisoning, fish-poisoning, mushroom-poisoning, tuberculosis (with progressive symptoms carefully listed), epilepsy, colic, seasickness, cholera, hair loss, skin disease, rheumatism, shortness of breath, brain fever, brain hemorrhage, abscesses, neuralgia, stomach ailments, bronchitis, chills, cystitis, angina pectoris, athlete’s foot, and a fever called “snake disease” (*ojakht*, Tk. *ilanjik*) whose symptoms include trembling, vomiting, and redness of the nose. For the latter ailment *bžškin c’oyc’ tal*— a visit to the doctor— is recommended. The added pages in pencil and black ink address eye problems, toothache, and cuts: An example from p. 4: *Belladone* [French, i.e., Belladonna]: *nšan— beranē č’or ew ač’k’in biberē mecc’ac k’alan, ew hiwandā kə zāranc’ē. Darman— p’sxotakan, ařanc’ šak’ari zorawor surč talā ew hiwandā tak’c’nel.* “Belladonna: symptom— mouth dry and pupils of the eye dilated. The patient is raving. Treatment— emetic, keep the patient warm and give him strong coffee without sugar.” On p. 9, one is advised to administer “Bromhydrate de quinine, antipyrine” to treat a fever; and if the patient is spitting up blood, *sařoyc’i pok’ri(k) ktorner kllel tal* “have him swallow little bits of ice”. As a cynical Scottish convert to Orthodoxy swinging a censer in a Moscow church was once heard to mutter in between verses of the Old Slavonic liturgy, “If it does ye nie goud, it’ll do ye nie harm!”

⁵⁷ See Dennis Duling, “The Eleazar Miracle and Solomon’s Magical Wisdom in Flavius Josephus’ *Antiquitates Judaicae* 8.42-49,” *Harvard Theological Review* 78.1/2, 1985, pp. 1-25, esp. pp. 2, 4, 22.

Pages 50-64, in pencil and black ink, contain a series of magical spells in semi-Classical and Modern Armenian interspersed with lines of magical symbols or grids of the same that resemble magic squares but have only a few actual numbers (in Arabo-Muslim numerals, with occasional Western ones) in each example. These numbers don't add up; so the magical squares were either copied wrong or were gibberish from the start. The medical portion of the book is written in somewhat smaller letters, but the hand seems to be the same.

“(50) By the command of God Elijah the prophet lived in heaven 7 years and 6 months.⁵⁸ Solomon the wise bound the (fiery red?) giant⁵⁹ and all the (legions?)⁶⁰ of the demons he submerged and bound in the depths of the sea. Joshua bound the feet of the (son's king?) the sun;⁶¹ Daniel the prophet bound the mouths of the lions; (51) and as Moses the prophet parted the Red Sea and bound the same with fetters, I bind you, evil *t'pghas*,⁶² with the three nails and the milk of Mary the virgin, and as (52) the Lord Jesus Christ bound the evil Satan, so bound with the same fetters stand you before the keeper of this holy writing, NN,⁶³ in immovable fetters, in seven chains, and by the name of the holy tree of life of the Cross of Christ and of the Father and of the Holy Spirit, Amen. The holy Mother of God came and brought 300 (legions?) of iron. (53) Keep this writing with you: your fortune will open and you will be beloved before every man. The name of the Father and the Son and the Holy Spirit, Amen. God the Father, creation of Adam. The beauty of Joseph was sweetened before Pharaoh. The Sole-Begotten Son was sweetened, salvation of the world was sweetened as at the love of Solomon for wisdom the bee was sweetened at its labor. So sweet before all men be (this person's name). God had mercy on us and blessed us as his heaven in us, and have mercy on us. (54) End. [Magical symbols] (55) For stomach ache write, God, strengthen a pure heart within me and renew the soul in my breast straightly. Write it all, then this [magic square]. Save me from sickness, God, God of my salvation and so on. (56) This writing is for a journey and a robber and the sea and harm done by witches. [Magical symbols] (57) [Blank] (58) [Blank] (59) Write for falling in love: Take red copper, write this talisman on it and write the name of the person desired, then cast it into fire, and say, May the heart of N of N burn for my love like this talisman. It will burn. By God⁶⁴ he will get up and come. [Magical symbols] Write this on a stone also and cast it into fire. [Magical symbols] And say, May the heart of N of N burn for my love. By God he will get up and come. (60) Write this and put it on your forehead. [Magical symbols] In order to kill your enemy, write these 6 letters on an egg and bury them in a field. The hour of your ill-wisher's death will be the hour he looks upon it. [Six magical symbols] And with (?)⁶⁵ incense burn for its *star⁶⁶. (61) If they want somebody's daughter and they do not give her away,

⁵⁸ I have not found another version of this spell; but in general it resembles other binding spells that list Biblical precedents; cf. Frédéric Feydit, *Amulettes de l'Arménie Chrétienne*, Venice: St. Lazarus, 1986, no. XCI (p. 256 f.).

⁵⁹ The text is unclear but seems to read **hrašēk k'ajñ*. There are Armenian spells against the *šēk mard* “red (haired) man” or *šēk ač'k'awor* “red-eyed man”: see Sargis Harut'yunyan, *Hay hmayakan ev žotovrdakan ašot'k'ner*, cited above, p. 84. According to the superstitions of many peoples red-haired people are dangerous or unlucky; and mediaeval Germans believed that demonic *rote Juden*, “red Jews” living outside the wall Alexander built to confine Gog and Magog were to burst forth as the army of the invading Antichrist.

⁶⁰ Arm. **gunds*, indistinct and crossed out before gen. pl. *divac*.

⁶¹ This refers to the miracle at Gibeon, *Joshua* 10.12-13.

⁶² The *t'pta* and *al* are mythical beings, the “child stealing witches” of Armenian and general Ancient Near Eastern mythology who make women sick in childbirth.

⁶³ Arm. *filan*, i.e., the Turkish form of a loan from Arabic, *fulān* “somebody, so-and-so”.

⁶⁴ Arm. inst. sg. *A(stuvc)*, that is, “with God's help”. This abbreviated, pious formula is repeated throughout.

⁶⁵ Arm. *u cac*.

⁶⁶ A symbol meaning “star”— an X with a dot in each angle (see Ašot Abrahamyan, *Hay gri ev grč'ut'yan patmut'yun*, Erevan: Haypethrat, 1959, table on p. 169)— is the only one used in the body of the text, as opposed to the separate talismans that follow each spell (one of which, on p. 54, includes it); and this is the only instruction to burn incense, presumably at a time indicated by an astrological calculation.

write this talisman, write the names of the people in that house along with it in a green bowl.⁶⁷ Then pour water over it till it is full. Let the boy who wants the girl wash in it, then take the water he has washed with, and pour it at the girl's door. By God, the desired girl [magical symbols]. (62) [Crossed out: If you want somebody to...] Releasing the binding of a bridegroom...⁶⁸ Clap your hands: Heavenly God, the 'Render power' and write the name next to it on two pieces of paper. Let the groom and his bride wash with the first piece. Let the groom bind the second to his right arm and by God he will be released. Here they are: *Hasaviṭ, mat'um, marum, mat'eumn, mariun, mahk'on, avasi, azavmi, marut*.⁶⁹ By God he is released. (63) [Magical symbol] Write this on your beloved's [crossed out: she will come] threshold on the first Wednesday of the moon [=month?] and bury it there. By God, she will come. Keep it on you and you will be beloved of all men. [Magical symbols] (64) [Magical symbols] End."

Page 65 is blank and the text resumes with the third section on p. 66, a list of Psalms and their uses written hastily in large letters in pencil: "(Vol.?) 1 ch.⁷⁰ For going to court; Vol. (?) 6 ch. For not being harmed. (67) Psalm 58, 3, 8, to be rescued from an enemy. 'The heavens relate...' To cross the sea or a river ch. 68, read on the sea." The main text begins with a heading on p. 68 and is in clear black ink, with dividing lines between each Psalm, which I identify according to the numeration of the Armenian Bible in curved brackets {}. The verses cited are sometimes corrupt, sometimes different from the Classical text, so the translations are direct and my own, rather than from the KJV or other standard translation:

"Chapter of the Psalm(s) of David. 'Blessed is the man who did not go' {1}. It is for planting trees and plants that they are not harmed, by God. 'Why are the heathens disturbed.' {2} For when you go into court your cause will succeed. 'Lord, for many are they who have oppressed me.' {3} For counteracting ill will: read it and by God you will be free of all evil. 'When I called you heard me, God.' {4} When you fall into straitened circumstances, read it and by God you will be freed. (69) 'Give ear to my words, O Lord.' {4} For pain in the eyes. Read it over hot water and wash your face. You will be freed by God. 'Lord, do not oppose me with your anger.' {6} Concerning a witch. Read it 5 times over water for 3 days. Then wash yourself, and you will be freed by God. 'Lord my God, I have hoped in you, save.' For being afraid of a man. You will be freed by God. 'Lord, our Lord, for wondrous is the name.' {8} For evil will against a man. You will be saved from him and he will not bother you anymore, by God. 'I will thank⁷¹ you Lord in all.' {9} For other evil read this and you will be freed by God. (70) 'I hoped in you as you will say to my soul.' {10} For an insane person. Read it over him or write it on a piece of raw canvas and keep it on his head: he will be freed by God. 'Save my life O Lord for I grow faint.' {11} For a man deprived. When they deprive you, read it over rose oil and anoint your face and hands and you will be freed by God.

⁶⁷ Arm. *č'anaxi*; variant *č'ank'i* partially erased. The first form is a Central or Eastern Anatolian pronunciation of standard Turkish *çanak*, "bowl". The second form might have been erased as it could be confused with Tk. *çünkü*, "because". Aside from a particular color, the type of bowl is never specified in these spells; nor am I aware of the existence of Armenian inscribed magic bowls of the sort found in ancient and late antique Mesopotamia and, for instance, in modern Iran.

⁶⁸ Followed by unclear words: *zay erig tun ev abmun* (?)

⁶⁹ This rhyming concatenation of vaguely Arabic magical words is mostly nonsense save perhaps for the final one, which may be the name Marut. Harut and Marut are the Armenian (or Sogdian, though distance makes this less likely) forms of the Middle Iranian names of the Zoroastrian Amesha Spentas ("Holy Immortal" archangels) that preside over the plants and waters, Haurvatāt and Amərətāt. They replace in the *Qur'an* the twin angels Shemhazai and Azazel of Jewish demonology, who dwell in a cave and teach magic to all comers. What is interesting is the appropriateness of the name to the magical rite, for on Ascension Eve, Armenian girls take petals of the flower *horot-morot* and place them, with various personal possessions, in a bowl of water that is then guarded beneath the stars. Heaven opens that night, it is believed; and on the morn a girl takes each possession and reads out to its owner a quatrain predicting her fortunes in love and wedlock. This *vičakaxat*, or "game of lots", is here distilled into a magical rite. (See J.R. Russell, "Hārūt and Mārūt: The Armenian Zoroastrian Demonic Twins in the *Qur'an* Who Invented Fiction," Irano-Judaica conference, Hebrew Univ., Jerusalem, Oct. 2010, forthcoming in *Proceedings*.)

⁷⁰ Arm *h.* may abbreviate *hator*, "volume"; *gl.* abbreviates *glux*, "chapter".

⁷¹ *Gohac'uc'* for Clas. Arm. *gohac'ayc'*, would be a Modern Arm. 3rd pers. sg. factitive "he satisfied" in place of a forgotten Clas. Arm. "I will thank"!

'Till when, O Lord, do you forget me?' {12} For robbers; and read it aloud that you be freed by God. 'The insensate one has said in his heart' {13} is for matters of witchcraft of a man. Read it over water and give it to him to drink; he will be freed by God.⁷² {71} 'Lord, who will stand in your canopy?' {14} This is for a crazed demon-possessed person.⁷³ Set down a vessel of water, read this over it, warm it and wash that man: he will be freed by God. 'Listen, Lord of righteousness, and look' {16} is for all snares and evil mischances. Read it and you will be freed by God. 'I will love you my Lord of power' {17} is for all snares and harm. Read it and you will be freed by God. 'The Lord will hear you on the day of sorrow.' {19} For success by God's command. 'Lord may he be glad in your power.' {20} For enemies, that you may be freed by God. Renew.⁷⁴ {72} 'God, my God, look upon me.' {21} Against weapon and poisonous snake. Read it every morning that your affairs may prosper by God. 'God the earth with its fullness.' {23}⁷⁵ For snakes and scorpions, that they do not go and harm any man, by God. 'I called to you, Lord God' {27} is for success and the day of evils. Read it 4 times: you will be freed by God from every evil. 'Judge for me, Lord, for I am accursed.' {25}⁷⁶ For a court case. It will succeed. Lord God. {73} 'The Lord is my light and my life.' {26} For a thief. Read it five times a day to turn the thief away, by God's will. 'I called to you, Lord God.' {27} For evil-wishers: write it on a goatskin. Hang it over the house and the evil-wisher will flee or go crazy by God. 'Approach the Lord God' {28} is for wasting disease. Recite it over olive oil and smear it: he will be healed by God.⁷⁷ 'I exalt you Lord for receive.' {29} For the sea: read it 3 times every day and travel fearlessly, by God."

The list resumes on p. 81 in scrawled pencil:

"Ch. 137, 'I will confess.' For trade and profit, read 7 times a day for 7 days. (82) Ch. 122, 'To you, Lord, I raised,' 2 times till 'Have mercy on us, O Lord, and have mercy' is for headaches that happen on one side.⁷⁸ And write the talisman and keep it on your head. [Magical symbols] (83) Ch. 41, 'As he longs for the bride' till 'I said to God, I am acceptable.' Read 50 times and keep the talisman. [Magical symbols] (84) Ch. 59, 'God, you have rejected.' Recite till 'By your right hand and hear us.' Write the talisman. [Magical symbols] (85) Ch. 19, 'May God hear you.' Read 3 times and count your demands. They will be fulfilled immediately; and for headache read till 'We will greatly...' and keep this talis(man) on you. [Magical symbols] (86) Ch. 39, 'Rejoice.' [Magical symbols] Amen, amen. (87) Ch. 22, 'The Lord is my shepherd.' Read 7 times: sadness will turn to gladness and if you have business with a great man⁷⁹ read it 7 times and go and ask and immediately he will fulfill or give. (88) Ch. 24, 'To you, Lord.' Read 3 times for a prisoner. He will be freed of all oppression. Take soil from beneath your foot and read over it 40 times, drop and scatter it. He will be freed."

Two loose, small pieces of paper were found inserted into the notebook. One, evidently in Mr. Nazarian's hand, is a slightly ungrammatical Classical Armenian Biblical imprecation, perhaps employed for magical purposes to ward off an enemy: *Xawaresc'ē ač'k' noc'ay zi mi tesanic'en* "He will darken their eyes that they not see." This is in black pencil; on the reverse, in the purple ink of the section on remedies,

⁷² Arm. *vasn kaxardut'ean irac' mardoy* "for matters of witchcraft of a man" is an awkward construction, perhaps meaning that the Psalm has power over any manner of things caused by devilry. The full verse of the Psalm protests that the fool in his heart says there is no God; so perhaps Armenians associated the black arts with atheist disbelief or belief only in powers other than the Almighty.

⁷³ Arm. *vasn xewi ew diwahari*: *xew* is an epithet employed sometimes by *ashughs*, minstrels, with the specific sense of love-crazed (see J.R. Russell, *Yovhannes T'lkuranc'i and the Mediaeval Armenian Lyric Tradition*, Armenian Texts & Studies Series, Univ. of Pennsylvania, Scholars Press, Atlanta, GA, 1987).

⁷⁴ Arm. *Norogo* stands alone on the last line of the page. My instinct was that the copyist had begun to write the hymn *Norogot tiezerac'*, "Renewer of the universe." But one cannot know.

⁷⁵ Arm. *Tērn*, nom., instead of the gen. *Teārn*, "The earth is the Lord's and the fullness thereof..."

⁷⁶ Arm. *yanēcs*, "in curses", is a startling misreading of *yanbcut'ean* "in unblemishedness!"

⁷⁷ The citation of the verse omits *ordik'* "sons (of God)", whose literal meaning outside its idiomatic Hebrew context would surely have scandalized a believer in the *Miacin*, Sole-Begotten, Christ. *Barak c'aw* is literally "thin pain"; and I read *zeyt' eal(in)* as Tk. *zeytinyaḡi*, "olive oil".

⁷⁸ That is, hemispheric: migraine.

⁷⁹ The Arm. here mixes the pseudo-Classical with the thoroughly idiomatic: *Ew mec mardoy het xndirk' ma unisnē*. The last word would be in "standard" Modern Western, *et'ē unenas*, "if you have".

is a more mundane text: a cure for hemorrhoids, with the ingredients of the medicine to be compounded listed in grams.

On another scrap of paper, in a careful but crude hand, is a short love poem that reminds one strongly of the *hayrens* attributed to the late mediaeval bard Nahapet K'uč'ak. It was probably originally a quatrain of ancient Armenian octosyllabic lines with a caesura at each hemistich; but the text is corrupt and full of misspellings: *Du vard unis/ yawēt garun/ k'u kieank'n i tel mənayun/ es i ayrunim im hok'ul mēj var mənau* "You have a rose that is/ Eternal spring; your life/ Forever in your heart./ But I have fire in my soul/ That can never be put out." On the reverse of the slip is a recipe for a popular dessert called *hat hat p'al luzayz* ("piece by piece" followed by unfamiliar words) calling for two cups each of cornstarch (*nišē*) and sugar, and three of water. This mixture is stirred in such a way that the resulting sweet, which is still popular in the Armenian community, crumbles like grains of rice.

To conclude, we may observe that the medical portion of the manuscript deals mostly with everyday complaints: constipation and hemorrhoids, migraine and stomach ache, and different kinds of poisoning; and the remedies prescribed are of the sort that would have been easily and inexpensively available. Consultation of a physician is recommended only once; and every cure can be done at home. There is no reference to surgery, no recourse to specialized medical instruments. So this part of the manuscript probably was used. The two magical sections of spells and Psalms focus on love and marriage, court cases and one's reputation and image, counteracting the ill will and machinations of enemies, head and chest pain again, and the thieves and perilous conditions at sea or on the road that beset the traveler. From the urbane, sophisticated image of Mr. Nazarian that we have, it is most unlikely that having copied the talismans, he employed them to concoct potions, mutter dire spells to destroy foes, or perform lecanomantic rites to woo women. Use of a magic bowl for such a purpose, one imagines, might have earned him a smart bat on the head from an irate wife wielding a wholly unmagical frying pan. His curiosity about the occult is of a diffident sort many of an intellectual bent share— I am writing this study, am I not— so it was sufficient to engage his writing hand; but one thinks he kept the darker forces of the supernatural at arm's length.

Recitation of the Psalms was probably another matter. It is common for printed editions of the *Narek*, the *Book of Lamentations* of St. Grigor Narekac'i, the tenth-century mystical poet-theologian, to contain a list of chapters to be prayed for this or that purpose; and owners of these books frequently added lists of their own. I have several such, large and small, from the 18th to the 20th century, in my own collection. Christian and Jewish believers resort to the help of the Psalms for comfort in grief, help in healing, relief from fear, and reassurance in the face of enmity. I have done so myself, in sickness and in health. So Mr. Nazarian might have used this list, too. Again, one would imagine that he did not employ everything he copied; and he mentions only a quarter or so of the hundred-and-fifty Psalms; so perhaps he had only a partial manuscript, or his notebook was coming to an end, or he was just tired.

It is not clear what the magical symbols he copied, sometimes assiduously, sometimes it would seem a bit more playfully or carelessly, meant to him. He uses only one symbol or abbreviation, an X with four dots, one in each angle, in the text itself. He surely understood the Arabic numbers and individual letters of the Arabic alphabet that appear; but the rest of the symbols, whether rising from a base line or inscribed freely in space, do not seem to have any translatable meaning and never did, although many of them have been systematically employed in Armenian cryptograms. The bulk of them, with the obvious exception of permuted letters of the Armenian alphabet, seem to derive from Muslim magical texts, where they have no linguist sense either.

None of the spells touch upon any achievement of technology of the last two centuries; though the medical portion does mention cocaine, a recent import to the Near East. Although recent editions of the Armenian *Erazahan*, or book of interpretation of dreams, incorporate the images of recent inventions: telephones, trains, air travel, electric lights, and so on— we do not find them here. Travel is only by sea. The setting seems to be that of a rural village: one buries magic bowls in fields, not on the crossroads of

187th Street and St. Nicholas Avenue.⁸⁰ Still, not much has changed in the human condition, perhaps. Travel is more common, and faster; but it still has its dangers. A number of Psalms are addressed to the insane, the lovesick, the possessed, the depressed. Sigmund Freud died in 1939, less than a decade after our manuscript made its sea journey to the New World; but most people beset by the sorrows of life still confided their troubles, not to a psychiatrist, but to God or loving friends and family. Society was kinder, and more respectful, to the elderly; but the young still clamored for excitement and passion. I close the book, return to these latter days, and wonder whether we have really come so far. Genocide did not end with the Armenians and the Jews, but became an increasingly common instrument of state policy; and people were as indifferent to the Rwandan slaughter as it was happening as they were to Auschwitz. Have texting, Prozac, and Ritalin really ameliorated human loneliness and sorrow? The warm kitchen, the cup of coffee, the actual and not virtual face of a trusted friend or loved relative, seem to me more authentic and less alienating.

To read a manuscript, to read this manuscript, in the intricate blending of Classical and Modern language and the delicate script of an ancient and noble literary tradition, is to read both the long and complex civilization of the Armenian people— from Solomonic legend to Amirdovlat' and beyond— the epochs and peregrinations of its history, and the particular, recent past of my Manhattan neighborhood, and to hear loved voices. A manuscript has a pedigree but it is a unique object, a primary source. It has the complete integrity of a physical object. It has being; it is a witness. A witness, when questioned, speaks; and a manuscript is an enduring witness. So I have asked questions of this manuscript that must first of all establish its time and origin and content, the translated facts of the text. These require the tools of language, of Armenian philology. But one also asks about its ancestry, what a book of both healing and magic was historically intended to represent, how its parts were seen to come together, in Solomonic legend and in healing practice. And other questions address its context: its copyist and owner, his motives, his times, his peregrinations, the uses to which he and perhaps others might have put the manuscript. I wonder at its durability in its long journey across lands and seas of time and space, of the way the world around it has changed. These questions require a background in the humanities, an awareness of the depth and breadth of the sea of our civilization. And since the world and our perception, changes so much, sometimes we think we read an ancient witness right and cannot know we are in fact mistaken. It is no minor pitfall in scholarship, that; and I am reminded, in this last regard, of the English poet Philip Larkin's "An Arundel Tomb", which explains how the nearly unintended symbolism of a monument over the ages may become the main thing that later generations think they have understood about it. It enjoins humility, and poignancy of feeling, and wonder, and reminds us that we are connected, a part of that we study in the common enterprise of life, of which one result is human culture. *Verba volant, scripta manent*: spoken words fly away, writings endure. The living voices that sounded round the book in its journey through the 20th century are faint, and most are gone. Those voices seem sometimes gentler than the stridor of these times. They blend together: the Sephardic sounds of Brooklyn, my grandmother and her kitchen and her stories, my Armenian teachers Vart Tarpinian and Mary Tsaggos, Levon Boyajian, the enchanting sounds of Washington *Hayots*, the place where I grew up, the Armenia on the Hudson River, that is gone forever and where I am now a stranger who can never go home again, wandering in an unfamiliar age, speaking of an old book of magic that has survived and will outlive me. If the book is a witness, it sees us too: Nietzsche reminded one that when you stare long enough into the abyss, the abyss stares back. So if the book, fragile and enduring witness, that I cradle in my hands spoke back to me, in this onrushing flood of time that carries its maker and its keepers all away, what might it say? Perhaps an echo of the meditation upon Tithonus of another British poet, Alfred, Lord Tennyson:

The woods decay, the woods decay and fall,
The vapors weep their burthen to the ground,
Man comes and tills the field and lies beneath,
And after many a summer dies the swan.
Me only cruel immortality

⁸⁰ Ironically, perhaps, a different kind of witchcraft, as a part of the Afro-Caribbean Santería religion, does thrive in the neighborhood; and implements of the craft can be purchased at numerous shops called *botanicas*.

The Cross and the Lotus:

The Armenian Miscellany *Patmut' iwn plnjē k'alak'i* ("History of the City of Brass") on the Periphery of the Iranian *Oikoumene*

James R. Russell
(Harvard University, Cambridge MA)

Persian, literature as a didactic tool, a source of common reference in discourse, an embellishment of the art of living speech, is as central to the idea of Iran as Chaucer, Shakespeare, Austen, and Dickens are to the idea of England. Every morning, in September of 2000, a niece or nephew of my friend Professor Azhideh Moqaddam would stop on the way to school at my hotel in Tehran with a scrap of paper: an illuminated calligraphic verse of Sa'di or Hāfez they had memorized. I collected these; and they bind together the album (NP *muraqqa'*) of my cherished memories, of what I learned of Iranian life. They are — and we shall pursue this metaphor presently — part of the patched cloak of one's journey through life. Surely the glory of classical Persian literature had a native ancestor, but who is it? For most of the texts extant in Zoroastrian Book Pahlavi — the indigenous literature of the Sasanian era — are theological in content, with little pretense to aesthetic effect. They achieved the form in which they have come down to us only in the ninth century CE, three centuries after the end of the dynasty and at a point when it was obvious that, barring supernatural intervention, Iran was to turn decisively to Islam. The major works of this Middle Persian corpus deal directly with the *Avesta* and its *Zand*, elucidate points of Mazdean dogma and ritual, or engage in theological polemic — the Pahlavi *zand* of the Avestan *Yasna*, *Vispered* and *Videvdad*, the *Bundahišn* ["Creation", with an account of the confrontation of the primordial spirits of good and evil, followed by lists of the various creations], *Dēnkard* ["Acts of the Faith", sometimes described as a kind of *summa theologica*], *Dādestān ī dēnīg* ["Religious Judgment"], *Herbedestān* and *Nirangestān* [treatises of sacerdotal training and practice, in a concise shorthand style], *Šāyest ne šāyest* ["Do and Don't"], *Mēnōg ī Xrad* ["The Spirit of Wisdom"], *Škand-gumānīg wizār* ["Doubt-dispelling Exposition", a polemic against other faiths]. The same priestly collection preserves various compositions attributed to the revered fourth-century high priest Ādurbād ī

Amahraspandān: *Čīdag andarz ī pōryōtkēšān* ["Select Counsels of the Ancient Sages", a catechism composed perhaps in response to such Christian texts as the Nicene Creed], prayers in the *Khordeh Avesta* such as the credal *Nām stāyišn* ["Praise by name is meet to Ohrmazd"], etc. A very few are episodes from the epic past of Zoroastrian Iran (*Ayādgār ī Zarērān* ["The Memorial of Zarer"], *Kārnāmag ī Ardešīr ī Pābagān* ["Acts of Ardešir son of Papak"]) or wisdom tales (*Draxt ī Asūrīg* ["The Assyrian Tree", a wisdom text in which the benefits to man of the date-palm and the goat are compared], *Jōišť ī Friyān* ["Youngest of the Friya Clan", in which a Mazdean youth defeats the sorcerer Akht, "Vice" in a riddle contest]); and some deal with apocalyptic hopes (*Madan ī Varahrān ī Varzāvand* ["The Coming of Verethraghna the Thaumaturge", with vengeful predictions of the doom of Islam], *Zand ī Wahman Yasn*, *Ayādgār ī Jāmāspīg* ["The Memorial of Jamaspa", used by Parsis for divination], and probably in this category too the *Ardā Wirāz Nāmag* ["The Book of Wiraz the Righteous", the account of an out-of-body visit to the infernal and heavenly realms, and thus a remote precursor of Dante]). The writings dealing with such secular topics as epistolary style (*Nāmag nibēsišn*), postprandial speeches (*Sūr saxwan*), chess (*Wizārišn ī čatrang*), and the pleasures of life at court (*Khusrō ud rēdag*), are few and concise. Even where they deal with eloquence, their style is cramped. Sasanian epigraphy is generally limited to political matters — as was the case with the Achaemenians, the Prophet Zarathustra himself is not mentioned once in the corpus, though Ohrmazd, the *yazatas*, and the sacred fire are. The several inscriptions of the third-century CE high priest Kirdēr, who checked the growth of Manichaeism in the empire, are an exception, and describe a visionary journey of the soul probably patterned on that of *Ardā Wiraz*. And although the discovery a century ago of the Manichaean Middle Persian and Parthian corpus has enlarged our understanding of language and belief, the contribution of these texts to our knowledge of secular, artistic culture is, again, fairly meagre.¹

Yet we know, notably from the catalogue (*Fihrist*) of the books in his father's shop composed by Ibn an-Nadīm — thank God for men of leisure — that there was a rich Sasanian secular literature alongside the writings of divines, and what we now possess seems to be, *grosso modo*, material that was deemed worthy of rescue and swiftly compiled for the purposes of survival of the Mazdean community in reduced circumstances. In rare cases, outside testimonia can be corroborated with surviving texts: Athenaeus in his *Deipnosophists* asserts that Persians paint scenes from the romance of Zariadris and Odatis in their temples — and the *Memorial of Zarēr*, mentioned above, exists in Pahlavi though its content is more religious than romantic. Other epic narratives in the lost Sasanian *Khwadāy nāmag* were the source from which Daqīqī drew material that Firdausi/ was in turn to incorporate into the *Šāhnāme*. But it is mainly to the translation activity of Ibn al-Muqaffa' and the *shu'ubīya* — the newly-converted Persian Muslims who committed themselves to preserving their old cultural treasures in a new tongue — that we owe the counsels attributed to king Khusrau Anushirvan and his vizier Wuzurgmihr,

the animal fables of the Indian *Panchatantra* that became, via Pahlavi transmission, the *Kalila wa Dimna*, the strands of tales threaded together in the story of the maiden Shahrizād that were to be assembled into the Arabic *One Thousand Nights and a Night*, and references to the lyrics of Barbad and other *gōsāns*. The mention of Indian storytelling reminds one that pre-Islamic Iranian literature was also a conduit for Buddhist texts: through Manichaean and Persian translations the teaching of the life of the Buddha and the *bodhisattva* doctrine outlined in the *Lalitavistara* became Christianized in the Georgian *Balavariani* and then through the Greek *Barlaam and Ioasaph* (falsely attributed to John Damascenus) was diffused through the European literatures.² The subsequent history of this text alone demonstrates the importance of this Silk Road of the intellect, as it were, to the fortunes of mankind: Leo Tolstoy in his *Ispoved'* ("Confession") avows that a parable in the book inspired him to turn away from wealth and worldly vanity and to craft the theory of non-violence; and Mahatma Gandhi and, following him, the Rev. Dr. Martin Luther King put the theory into practice.

Though the Persian-speaking centre was nearly always the core of power, one must look also to the regions upon which political history imposes the somewhat misleading but still useful designation "peripheral Iran"—one might call it also, and more equitably, the Iranian *oikoumene* — to acquire a fuller picture of the literary heritage that was carried over into the Islamic period and to appreciate the rich, cosmopolitan diversity that informed it. Though my teacher Professor Nicholas Sims-Williams once opined that a word is worth a thousand pictures, I would like to approach my task beginning, at least, with pictures—the frescoes found in homes of Sogdian Panjikant, most of which date from the mid-eighth century CE, that is, shortly after the Arab conquest of the region.

Panjikant frescoes, Sogd, ca. 8th cent.; Muraqqa', Iran and Central Asia, ca. late 14th cent.; Church of the Holy Cross, south elevation, Alt'amar, Vaspurakan, Armenia, A.D. 920.

These are well known from the studies of the late Boris Marshak and others; so a brief survey of significant points should suffice. They were done by painters who executed also performance scrolls; and from written captions it would seem reciters of epics, fables, and romances entertained the master of the house and his guests much as the *Šāh-nāme-khān* (a reader of the “Book of Kings”) does in a Tehran *qahveh-khāne* (lit. “coffee-house”, actually a restaurant serving tea) to this day, gesturing to the pictures and adding interactive commentary to his text to involve the audience. The frescoes are in vertical registers; and when there are three, the order of subjects from the top down is divine, heroic, and human. The subjects are drawn from the same array of texts we have seen that are sparsely attested in Pahlavi but abundantly, in Arabic and New Persian: the exploits of Rostam the Saka, the *Panchatantra* and the fables of Aesop, and other sources such as local tales: indeed, in Marshak’s words, “we find illustrations to a whole library of the secular books so poorly represented among Sogdian and other Middle Iranian literary texts which have come down to us.”³ The frescoes, while expensive, did not belong to royalty; rather, they suggest upward mobility and imitation by a mercantile class. Accordingly, a setting of travel thematically unifies many pictures of didactic character.⁴ Presumably allegories about the acquisition of wisdom couched in the narrative framework of travel existed in other media used for social entertainment, such as painted scrolls and books: one argued long ago for the authenticity of a Sogdian bas-relief with a Zoroastrian funerary scene of the Northern Qi period in China that probably also tells the life story of a traveling merchant; since then, several other such narrative bas-reliefs have come to light.⁵

Another important feature of the Panjikant frescoes is their eclecticism: Rostam rubs shoulders, almost literally, with fictional characters from perhaps as far away as Rome — if indeed the scene of a child suckled by a wolf is not of more locally Turkic or Hyrcanian provenance. Translated into literary terms, what we deal with is a miscellany; so, while negotiating the way back from pictures to text, we may consider briefly the genre of the *muraqqa’*. This Arabic term, which referred originally to the heavily-patched cloak worn by Sufis, came to be applied to the Persian albums in which choice samples of calligraphy, drawings, and paintings were compiled for

Panjikant frescoes, Sogd, ca. 8th cent.; Muraqqa’, Iran and Central Asia, ca. late 14th cent.; Church of the Holy Cross, south elevation, Alt’amar,

noblemen. The purpose of these “gatherings of like material” both the systematization of knowledge and the provision of edification: they came out of what David Roxburgh has characterized as “a long and venerated tradition of making compilations for the purpose of giving advice.”⁶ The pre-Islamic Iranian component is strong: the calligraphy album of Baysonghur, for instance, contains aphorisms attributed to the Sasanian kings Ardešīr and Khusrau and the latter’s vizier Wuzurgmihr, with the latter repeatedly quoted as saying “*adab* is the best legacy.”⁷ This maxim, which one might easily pass over as a commonplace remark, deserves some attention, as it points to one of the main reasons why miscellanies of *moralia* were compiled and frescoes with manifold parallel scenes painted. *Paideia*, *farhang*, *adab*: the concept of civility of values and manners rooted in a general education in the humane classics, as Peter Brown demonstrated in his taut, brilliant work *Power and Persuasion in Late Antiquity*, was the invisible binding force of society, the unwritten law, the tacit constitution that enfranchised the holy man, the wise counsellor, the learned orator to speak fearlessly to the powerful and that ideally prevented the arbitrary abuse of power by the latter. The social and semantic distance, then, from the patched *khirqā* of the dervish to the sumptuous royal album of precious works of art, is not that great; for what better lesson could civility impress upon king and commoner than the human common denominator of the evanescence of wealth, the transience of condition, the inevitability of mortality? That lesson might be clearest in fables and tales of itinerant Sufis and merchants, but it resounds through epic as well: *Et in Arcadia ego*.

And now to Armenia. Imagining the rim of the shield of Aeneas, Virgil did not think of Homer’s Ocean stream but of “the Araxes that suffers no bridges”, a stock phrase — Tacitus knows it, too — for in Roman eyes the riparian frontier of Armenia was that of Iran as well: more than the watery wastes beyond the Pillars of Hercules, the Araxes was the impassable *eschaton* of the Empire. From the East it is less clear whether Armenia was considered *Ērān* or *Anērān*; yet Armenian culture, with its Zoroastrian substratum and huge linguistic fund of Iranian loans, can be fruitfully be viewed as the Iranian *chrétienté* — the particular expression of an Iranized Christianity that might have arisen in the metropolis itself, had the gravitational pull of the temperate Mediterranean — of the Biblical, Greco-Roman, and Orthodox cultures — exceeded the fierce, hot winds of the Arabian desert. Armenia is on the western periphery of the *oikoumene*; Sogdia, on the eastern — and the two display some structural affinities. Power in Artaxiad and Arsacid Armenia was largely decentralized in the hands of the hereditary dynastic clans of the different mountainous cantons, designated by the Parthian loan *naxarar*; while the country’s cities were points of international commerce. Yuri Slezkine in a recent monograph⁸ introduced the categories of Mercurians and Apollonians to distinguish cosmopolitan peoples whose strength derives from the movement of goods and services and the exploitation and development of information technology from nations that maintain themselves on defined territories, are ruled by landed hierarchies rooted in an agricultural economy, and rely upon

military might. The Sogdians developed a far-flung commercial diaspora that reached its apogee in the post-Sasanian era; in the Armenian case, the diasporan pattern does not reach its fullness until the Ottoman centuries. But in literature and the graphic arts we can observe parallel developments, *mutatis mutandis* for the Christianized Armenian forms, that speak for a cultural kinship across the *oikoumene*.

Canonical scenes of the Gospels dominate pictorial narrative, with the important exception of portrayals in bas relief on memorial *xač'k'ars* "cross-stones" of the typically Iranian royal hunt, the triumph during which the mounted nobleman bears aloft the ring of *khwarānah* (Arm. *p'ark'*), and of course fighting and feasting (*razm* yields Arm. *razm-ik*, "warlike", and *pate-razm* "war"; *bazm* is loaned into Arm. *bazmem* "sit [for a feast]").⁹

Panjikant frescoes, Sogd, ca. 8th cent.; Muraqqa', Iran and Central Asia, ca. late 14th cent.; Church of the Holy Cross, south elevation, Alt'amar, Vaspurakan, Armenia, A.D. 920.

The outer walls of the tenth-century church of the Holy Cross on Alt'amar island are decorated with bands of narrative scenes in successive registers of bas relief; and at times the animals gambolling in the vine scroll may mock the serious deeds of kings and prophets below. (Such satire is common in book illumination elsewhere in Christendom, as Michel Camille showed in his *Image on the Edge* and other studies; and it is known on churches as well.) We may have here a parallel to the stacked, linear narratives of Panjikant; and since perambulations of churches were done in consecration and ritual in Armenia, the bas reliefs might not have been merely mute tales, but visual support to a verbal narrative, in a sacralized variant of the entertainments enjoyed by the rich Sogdian merchant and his guests at a wine party. In any event the Armenians called their minstrels by the loaned Iranian term *gusan* (it has been largely superseded by Arabic *ashugh* now); and one of them, Kostandin of

Erznka (Tk. Erzincan), was asked by his “brethren” (apparently members of a *fuṭuwwa*-like order) to compose and sing an Armenian poem in the meter of the *Šāhnāme*, suggesting they had some knowledge of the epic in the Persian original. He obliged them, and the result is a fair emulation.¹⁰

The first Biblical verse St. Mesrop Maštoc’ rendered into Armenian in the fifth century CE, employing the new alphabet he had devised, was *Čanač’el zimastut’iwnn ew zxrāt, imanal zbans hančaroy*, “To know wisdom and instruction; to perceive the words of understanding” (Prov. 1.1, KJV), with at least one Iranian loan, from *khrađ* “wisdom”— and the practice of compilation of miscellanies of *moralia* seems to go back very far. Although MSS. containing a fair proportion of the contents of the miscellany that became popular under the designation of its title story, *Patmut’iwn plnjē k’alak’i* (PPK), go back to the sixteenth century, the separate texts comprising the collection are known directly and from references centuries earlier.¹¹ Many of these have been individually edited, and have been studied with reference to other secular works of the Classical and Middle Armenian corpus, particularly the *Alexander Romance*.¹² The stable PPK text was printed first at Constantinople the 18th cent.; and after subsequent editions there and at Tiflis, with some subtractions and editions, the last publication seems to have been a translation into Western Modern Armenian printed at Constantinople after World War I. The contents of the Tiflis edition of 1857 are: 1. “The History of the City of Brass, which is an example of this world” (*Patmut’iwn plnjē k’alak’i or ē ōrinak ašxarhis*), 2. “History concerning P’ahlul the king” (*Patmut’iwn yalags P’ahlul t’agaworin*), 3. “Helpful counsels made by the poet king whose name is Nušrēvan” (*Xratk’ ōgtakark’ arareal banastelc’ t’agaworin oroy anunn ē Nušrēvan*), 4. “Useful and helpful counsels that Xikar the Wise made” (*Xratk’ pitanik’ ew ōgtakark’ zor arareal ē Xikaray imastnoy*), 5. “History of the girl and the boy and their questions to each other” (*Patmut’iwn aljkan ew mankan ew harc’ munk’ noc’a and mimeans*), 6. “Life and history of Alexianos the ascetic” (*Vark’ ew patmut’iwn Alēk’sianosi čgnaworin*), 7. “History of lord Yusik and his son Step’annos” (*Patmut’iwn tēr Yuskan ew ordwoy norin Step’annosin*), 8. “Children’s amusements” (*Zbōsank’ tlayoc’*). Peter Schäfer suggested that one study the contents of variant MSS. by identifying macroforms, that is, large, shifting, but relatively stable units of text, composed of microforms, smaller blocks of tradition that appear in different places in different MSS. or in other works entirely as well.¹³ That is a good general method for studying the PPK: all editions have the title story, but most do not have the *Life* St. Stephen of Artamet; many versions of the famous pan-Christian story of St. Alexis the voluntary pauper exist in Armenian prose and verse; the counsels of Anushirvan are found in translation elsewhere, as is the tale of king Bahlōl, who abandoned his throne to become a dervish; and the Armenian translation of *Aḫiqar*, which must date back to the fifth century, is an apocryphal text of the Bible. The chapter called “Children’s amusements” is in Tiflis and Constantinople editions of the 19th century and consists of two tables, the 36 letters of the Classical Armenian alphabet and the twelve signs of the

Zodiac, each letter or sign accompanied by a sententious moral admonition.

The title story, of the City of Brass, is well known from the corpus of the *One Thousand Nights and a Night*; and of several extant Armenian versions the earliest translation, from Arabic, was made for David the Curopalate c. A.D. 1000.¹⁴ Though the contents of individual collections of the *PPK* shift, the City of Brass carries the message of the macroform, and the other texts echo it: life is a road with many illusory temptations and reversals of fortune, earthly rank is meaningless, the quest for glory is vain, and true wisdom is to be found in prayerful submission to God, penitence, and renunciation.

Patmut'iwn plnjē k'alak'i, *Constantinople*, 1803, *frontispiece showing the travelers entering the City of Brass*.

In the story, the caliph dispatches a party to find the jars in which Solomon had imprisoned the *jinn*. They travel past ruined cities, as well as domes or pavilions (*kubba*), where they read inscriptions about the vanity of life or are swallowed up by lethal mirages. At the end of their quest, on the shore of the ocean, they receive the jars and return; but when casks are uncorked in the throne room and the *jinn* are released from their millennial captivity, all they have to say is "Repentance, O Prophet of God." The chastened ruler renounces his throne and assumes the patched cloak of the dervish. The story belongs in general to the type of speculation about the ends of the earth, the confinement by Alexander of the barbarous nations Gog and Magog, and maybe also to the Iranian cycle about the mythical fortress of Kang. In its prosimetric style, with brief stanzas of verse recapitulating the action of the prose narrative, it reminds one of the Armenian version of the *Alexander Romance*; but, more importantly, the printed text indicates different spoken parts. That is, we deal with a

performance, and are reminded of the uses to which the frescoes of Panjikant were put.

The theme of life's transient and evanescent qualities, together with this form of narrative interrupted by verse, places the City of Brass in the specific genre of the Buddhist stories studied by Victor Mair of T'ang China called "transformation texts".¹⁵ One may perhaps mention more specifically as a source, maybe the ultimate one, the parable of the Phantom City in the most important cluster of transformation texts of Mahayana Buddhism in East Asia, the Lotus Sutra of the Good Law (*Saddharmapundarikasutra*): here, the Buddha creates an illusory town to provide rest for his traveling band, then erases it when it is time for them to move on.

Patmut'iwn plnjē k'atak'i, Constantinople, 1803; Parable of the Phantom City. Mogaoku. Dunhuang.

The story was understood specifically as a reference to the "voice-hearers" who "conceive an idea of extinction and enter into what they believe to be nirvana," though it is in fact only a station on the way.¹⁶ It is possible this text was composed in Central Asia, that is, in the milieu of travelling merchants who spoke Iranian languages — and the appeal of its selection of metaphors should be obvious. In only altered form, it was to prove equally popular to Armenians of a similar social and economic position, thousands of miles away and for over a millennium into the future. The 1803 edition of *PPK*, Constantinople, has a woodcut frontispiece displaying the scene of the travelers approaching the City of Brass; and there is a rather similar narrative fresco depicting the same climactic moment, but from the parable of the Phantom City at Mogaoku, Dunhuang, at the Chinese end of the Silk Road.¹⁷ In the Chinese painting the Phantom City contains a *stupa*, or domed reliquary monument; and perhaps rendering of ruins in the desert as *kubba*, "domes", of the Arabic and Armenian is a remote attempt to understand this.

What we have, then, in Christian Armenia, is a miscellany that endured for perhaps a millennium in popular culture, a *muraqqa'* of *moralia* in which a Buddhist transformation tale that probably took shape in Iranian Central Asia rubs shoulders with the counsels of a Sasanian king, the tale of another monarch who became a Sufi, and the hagiographies of hermits from as close as Van and as far away as Rome. If my suggestion that the Lotus Sutra is the source of the main story is right, then we find similar illustrations of the narrative at both ends of the Silk Road, with ample evidence from Sogd in between and in the Armenian text itself that the story was enacted as interactive performance. And now vignettes of the cultural life of the vast Iranian *oikoumene* assume shape, sound, color: a festive gathering, the *gusan* with his lute, bright pictures on the wall, narrations of wisdom and epic, lyric and romance interspersed with improvisatory verses, interpolations of wit. From there, forward across dark abysms of time, emerge the *muraqqa'* album, the lively frescoes of a Tehrani *qahveh-khāne*, and Professor Moqaddam's nephew with a verse from a classical *Dīvān*.

The multiple programs of Sogdian narrative frescoes, the vertical registers of the bas reliefs at Alt'amar, the Persian scrapbooks of *moralia* and art, and the miscellany of Armenian tales with its unifying thematic structure, all create a dense pattern of contacts between diverse people and concerns, in which *adab/farhang/paideia* discerns common features and forges fellow feeling. But these stacked and parallel narratives by virtue of their very structure create something else, too: a polyphony in the presentation of literary characters, one that is neither linear nor hieratic, with a din of different social, ethnic, and religious voices acting upon each other. The result, even in a book of didactic intent, remains negotiation and dialogue between characters, rather than unified and normative statement. And in this aspect of the storytelling of the larger Iranian world that made its way westwards, and combined with the narrative devices of the cultures it encountered, one may perhaps discern the beginnings of a literary technique in which different kinds of voices meet, subjecting cliché subjects to satirical regard and probing new psychological insights — the first stirrings of those literary strategies that Mikhail Bakhtin, in his investigations of the phenomenon of literary *heteroglossia*, was to plot from Rabelais' deployment of the carnivalesque to the poetics of Dostoyevsky — the embryo of that primary vehicle of modernity itself, the novel.

Still at risk of putting one too many patches on the cloak of the dervish, one offers in conclusion a smaller observation, on the term *muraqqa'* itself, that word for album which originally meant scraps sewn together. At the Sasanian and Armenian Arsacid courts the royal counselor was called (*dar*) *andarzbed*, Arm., *handerjapet*. Arm. *han-derj* "clothing", cf. Arm. *derjak*, NP *darzī*, "tailor", derived from OIr. **ham-darz-* "bind or load together",¹⁸ is clearly the same as. MP and NP *andarz*, "precept, advice": clothes and counsel both indicate the proper form in which to be seen and in which to act; and it is wisdom that binds people together. Should this extension of the metaphor of clothing to the imperial counsel seem farfetched, one need but recall the

observation by the Indo-Europeanist Joshua Katz that the words *vespers*, Rus. *večer* ("evening"), Arm. *gišer* ("night"), etc. all derive from the same base as *vestment*: dusk is when the Sun and sky don evening dress. So the books of instruction for nobles and merchants proceed from the *andarz* of proper court attire to what may be then a linguistic calque on the Persian term or a parallel semantic result: the *muraqqa'*, the patched cloak of the itinerant holy man entertaining, advising, guiding the enchanted reader past *stupas* and ancient ruins, past the City of Brass to the sea.

Notes:

1. The best descriptive essay on the subject remains Boyce 1968: 31-66; see also the chapters on the various literatures of the Middle Iranian languages in Yarshater 1983: 1151-1258. Since then numerous Bactrian documents have been discovered and published by Nicholas Sims-Williams. Iranists have not devoted sufficient attention to the Armenian literature of the Sasanian era and later, where the Iranian content is important, particularly in the epic genre; but see the studies of this writer and of Nina Garsoïan (*infra*). This writer has discussed the literary and philosophical connections and influences of a number of Pahlavi works in articles: "The Platonic Myth of Er, Armenian Ara, and Iranian Arda Viraz", "The Sage in Ancient Iranian Literature", "Kartir and Mani: a Shamanistic Model of their Conflict", "The *Do 'a-ye Nam Stayishn*", "On Mysticism and Esotericism among the Zoroastrians", "A Parthian *Bhagavad Gita* and its Echoes", and other studies reprinted in Russell, 2004.
2. See Abuladze 1962 and Lang, 1966.
3. Marshak 2002: 105.
4. In one of these, according to Marshak's interpretation, a merchant encounters the spirit of the sea. This is an Indian oikotype of the theme encountered as the Biblical story of Jephthah, and is attested in Manichaean literature. Marshak elsewhere refers to the kinship of these tales to the rich heritage of Russian folklore; and one is reminded in this instance of the numerous variants of the famous ballad (Rus. *bylina*) of the seafaring merchant Sadko, and his encounters with the spirit of the deep. The source of the story is a place strikingly different from other Russian towns but structurally very similar to Sogd: the socially fluid, politically independent trading city of Novgorod. As is well known, early medieval Russia had strong commercial and cultural connections to Iran; so it may be that the ballad of Sadko itself is of Indian origin and came to Russia *via* a Central Asian or Iranian intermediary version, as I have argued was the case for the *bylina* of Il'ya Muromets and the Nightingale-Robber (*solovei razboinik*) in (Russell 2005: 77-139 also published in Russian in *Rossiia XXI* 4, 2006: 156-197. On Sadko, Novgorodian democracy, and the transmission to Rus' of material from the *Bundahišn* and "Zurvanite" cosmogonic myth, see Russell, *forthcoming*.
5. See Russell, "Zoroastrianism and the Northern Qi Panels," lectures at Harvard, March 1994 and University of California (Berkeley), April 1994, and published in Russell 1997 and reprinted in Russell 2004: 1445-1450.

¹ The best descriptive essay on the subject remains Boyce 1968: 31-66; see also the chapters on the various literatures of the Middle Iranian languages in Yarshater 1983: 1151-1258. Since then numerous Bactrian documents have been discovered and published by Nicholas Sims-Williams. Iranists have not devoted sufficient attention to the Armenian literature of the Sasanian era and later, where the Iranian content is important, particularly in the epic genre; but see the studies of this writer and of Nina Garsoïan (*infra*). This writer has discussed the literary and philosophical connections and influences of a number of Pahlavi works in articles: "The Platonic Myth of Er, Armenian Ara, and Iranian Arda Viraz", "The Sage in Ancient Iranian Literature", "Kartir and Mani: a Shamanistic Model of their Conflict", "The *Do 'a-ye Nam Stayishn*", "On Mysticism and Esotericism among the Zoroastrians", "A Parthian *Bhagavad Gita* and its Echoes", and other studies reprinted in Russell, 2004.

² See Abuladze 1962 and Lang, 1966.

³ Marshak 2002: 105.

⁴ In one of these, according to Marshak's interpretation, a merchant encounters the spirit of the sea. This is an Indian oikotype of the theme encountered as the Biblical story of Jephthah, and is attested in Manichaean literature. Marshak elsewhere refers to the kinship of these tales to the rich heritage of Russian folklore; and one is reminded in this instance of the numerous variants of the famous ballad (Rus. *bylina*) of the seafaring merchant Sadko, and his encounters with the spirit of the deep. The source of the story is a place strikingly different from other Russian towns but structurally very similar to Sogd: the socially fluid, politically independent trading city of Novgorod. As is well known, early medieval Russia had strong commercial and cultural connections to Iran; so it may be that the ballad of Sadko itself is of Indian origin and came to Russia *via* a Central Asian or Iranian intermediary version, as I have argued was the case for the *bylina* of Il'ya Muromets and the Nightingale-Robber (*solovei razboinik*) in (Russell 2005: 77-139 also published in Russian in *Rossiia XXI* 4, 2006: 156-197. On Sadko, Novgorodian democracy, and the transmission to Rus' of material from the *Bundahišn* and "Zurvanite" cosmogonic myth, see Russell, *forthcoming*.

On an Armenian Word List from the Cairo Geniza*

James R. Russell
Harvard University

Abstract

This study deals with a short text on a small piece of paper, a conversational glossary, found in the Cairo Geniza. It is likely to be nearly a millennium old, and consists of a list of twenty Judaeo-Arabic words and phrases with their equivalents in Armenian written in Hebrew script. It suggests that members of the two communities met in a convivial setting, possibly a Barekandan (Mardi Gras) party where an official was parodied as a goat in effigy—a custom encountered in other Armenian celebrations of the holiday at Lvov in the 16th century; and Tiflis, in the 19th. The other words in the list reflect economic and cultural realia of the 11th–13th centuries.

Keywords

Geniza, Judeo-Arabic, Cilician Armenian, Mardi Gras, Medieval Cairo, Goat-man

“... No one in the world except Armenians.
No European can ever really understand or speak your language.”
(Gabriel Bagratian’s French wife Juliette, Werfel 1934: 178)

*T’eguz əlim, t’eguz č’əlim, meflisnerun saz č’i paksi,
T’e ku paksim, k’iz ku paksim, ašxaris me maz č’i paksi,
Sayat’ Novu gerezmanən Hind, Habaš, Arab mi ani.*

“To be or not to be, no party will lack for a lute because of me;
This world lacks not for a hair; if I lack, I lack for thee—
Let not a Hindu, Ethiop, or Arab Sayat’ Nova’s gravedigger be.”
(Hasrat’yan 1963: 20, no. 10: final stanza of *Dun ən glxen*, AD 1753)

This study deals with a short text on a small piece of paper found in the Cairo Geniza. It is likely to be nearly a millennium old, and consists of a list of twenty Judaeo-Arabic words and phrases with their equivalents in

* This paper was presented at the international conference organized on the occasion of the 15th anniversary of *Iran and the Caucasus*, Yerevan, Armenia, July 2011.

Armenian written in Hebrew script. Very few such documents are known and there are good reasons that they are highly unusual. For although small numbers of Jews have lived in Armenia over the centuries, the country has no indigenous Jewish community in the sense that all the nations surrounding it do.¹ There are Judaeo-Georgian, Judaeo-Persian, Judaeo-Kurdish, Mountain Jewish Turkic, and other ethnolects, but there is no dialect that can properly be called Judaeo-Armenian. Tigran II ("the Great") brought Jewish settlers to Armenian towns in the first century B.C., and P'awstos Buzand records the presence of large numbers of Jews in Armenia in Sasanian times. Iranian invading armies, notably in the reign of Shapur II in the fourth century A.D., drove most of these communities, it seems, into exile. In Diaspora settings, such as Constantinople, where the two communities have lived in close proximity to each other, Armeno-Jewish relations have been sometimes cordial, but at other times those of minorities in tense competition. Traditional Christian anti-Semitism sometimes mars Armenian attitudes towards Jews and is evident in

¹ In the Soviet period, between one and two thousand Russian-speaking Jews settled in Armenia—the most ethnically homogeneous of all the Soviet Republics—mostly in Yerevan. Dimitri Slivnyak became an Armenologist and worked in the Matenadaran, where I first met him; later he migrated to Israel and Hebraized his name to Mordechai Even-Vered. Some local Armenians married Jews: my friend Ruben Malayan, who has lived in both Armenia and Israel, is the offspring of such a union. In Israel itself there are Arabic-speaking Armenian communities in Galilee; Hebrew-speaking Armenians in Haifa; Russian- and Armenian-speaking Soviet immigrants from Armenia in the Tel Aviv area; and in the Armenian Quarter of the Old City of Jerusalem and environs, both the centuries-old *k'talak'ac'i* "city" people with their dialect and the descendants of Genocide-era refugees speaking Western Armenian dialects. The State of Israel, like the United States, has for the sake of relations with Turkey refused officially to recognize the Armenian Genocide, though the Hebrew University of Jerusalem holds an official commemoration of 24 April every year (this writer was its keynote speaker in 2009). Armenia in turn, also for justifiable, even vital political and economic reasons, maintains good relations with the Islamic Republic of Iran, whose present *régime* officially denies the Holocaust, advocates the destruction of Israel, is implicated in acts of terrorism against Israeli and Diaspora Jews, and disseminates at state expense such anti-Semitic propaganda as the notorious forgery, *Protocols of the Elders of Zion*. Many Armenians in the Near East are politically anti-Israel and pro-Arab. Social contacts and even marriages between Armenians and Jews are frequent and happy, but communal and official relations are often not very close. However, there are no natural reasons for enmity between the national entities of the Jews, Armenians, and Iranians. One hopes for a much brighter future.

such works as Eremia Çelebi Kömurciyan's *The Jewish Wife*. The contempt seems to have been mutual: one popular Jewish belief has branded Armenians, astonishingly, as the descendants of the Amalekites of the Bible, the very embodiment of human evil whom God Himself cursed. In Yiddish, for instance, the Hebrew word *timkhe*, half of the emphatically repetitive phrase *yemakh timkhe*—God's command that the Amalekites be utterly blotted out—was a code name for Armenians. So a list of Armenian words and phrases in Hebrew script is of great intrinsic linguistic interest; but it richly deserves to be mined also for its social and cultural content and context, and its rarity warrants even imaginative speculation about its purpose. The rarity of documents may suggest that Armeno-Jewish interaction was correspondingly sparse, but these two dynamic, versatile peoples of the Near and Middle East often paralleled and overlapped each other in location and social station, in craft and profession, in travel and trade; so the written evidence may hint, in fact, of a much richer reality.

With the important exception of "Assyrian" Christians, some of whom are still bilingual in Neo-Aramaic and Armenian, Armenian Gypsies, and to a lesser extent, some Kurds, Yazidis, and Greeks living in the Armenian highlands, few foreigners except for scholars and a poet or two, and it would seem, still fewer Jews of the Near East, have needed, wanted, or troubled in most recent times to learn Armenian.² But that was not always the case; and one indication is another manuscript whose data will be cited presently to corroborate the Geniza fragment. This is a dictionary in Arabic script of six different languages—a hexaglot—compiled in the fourteenth century for a king at Aden, in southern Yemen. The languages are Arabic, Persian, Turkish, Greek, Armenian, and Mongol; and it is reasonably inferred that these six were considered particularly important and useful in the 1300's, the zenith of the Mongol Empire. At that time the political center of Armenia was the Cilician kingdom, on the northeastern

² Lord Byron famously learnt Armenian at the Mekhitarist monastery of S. Lazzaro in Venice and opined that it was a difficult language, but one that repaid the effort of learning it. Some of the Russian poets who collaborated with Valery Bryusov on the 1916 Anthology took a superficial interest in the language; and it intrigued Osip Mandelstam, who tried to learn a bit more, and as the Acmeist author of the cycle *Kamen'*, "Stone", liked the phonetic collocation, evocative of the hardness and inner air of the skull, of Armenian *glux*, "head", and Russian *gluxoj*, "hollow".

coast of the Mediterranean, whose form of the spoken Armenian language is, indeed, the closest to both the Geniza fragment and the hexaglot. One recalls that a Cilician prince, Het'um, had completed in 1307 his narrative, in Old French, of a trip some decades earlier to the Mongol capital, Karakorum—the Middle English translation, *A Lytell Chronicle*, with its author's name quaintly rendered as Haithon, was rather a bestseller in the British Isles. The Armenians of the centuries embraced by these two glossaries were a nation of political and economic importance who inhabited a homeland that encompassed large parts of modern Georgia, Shirvan and Arran, and Iran on the north and east, parts of northern Iraq and Syria on the south, and much of the Anatolian peninsula. Armenians were a major presence in Constantinople, from the imperial court on down, in Jerusalem and most other cities, holy places, and monastic centers of the land of Israel, and, as we shall see presently, in Egypt. The only surviving remnant of that homeland is the Transcaucasian survivor state in the northeast; and the Armenian people are scattered to remote diasporas, playing a modest role in world affairs. But in the period under discussion, Armenia was neither small nor peripheral to the Near and Middle East but central to it in demography, politics, and economy; its language, of corresponding importance. To see Armenia as small is to peer through the wrong end of the telescope; but historical myopia can warp one's perceptions, and such distortions can affect more than scholarship.

For instance, it is known from the *Vita* of Maštoc' by Koriwn that the Armenian saint created first the Armenian alphabet, then at the invitation of Georgians and Albanians and in collaboration with them invented also the alphabets of the two other Christian peoples. But lately the invention of the scripts is attributed to a "pan-Caucasian effort", a term as vague as it is imprecise—ancient Armenia was very much more and other than a "Caucasian" land. Most of the loan-words in Georgian from Middle Iranian—terms that are of considerable religious, administrative, military, and culture significance—were not borrowed directly from the Parthians or Persians, but through the intermediary of Armenian. Yet Georgian scholars who certainly ought to know better tend to cite the Armenian forms as parallels, rather than sources. If a British scholar were to insist that the numerous Romance vocabulary in English derived, not from Old French, but directly from Roman Imperial Latin we should view the dis-

tortion as an extension of the old animus against that pleasant land across the Channel of snails, garlic, red wine, and, well the conquering Normans, into scholarship. The absurdity is less amusing when one considers that the Georgian diminution of Armenia proceeds together with the de-Armenization of Tiflis, cultural and physical ethnic cleansing rubbing each other's hands, as it were. There are further overtones: at the conference of the *Association Internationale des Etudes Arméniennes*, the great Georgian scholar Zaza Aleksidze devoted his plenary lecture to a call to Armenians for pan-Caucasian unity. Though the lecture had an eirenic purpose and stressed the many things the two peoples have in common, its designation of Armenia as Caucasian distorts and diminishes the country, while the political result of such a summons would be to set Armenia alongside Georgia in the latter's dispute with the Russian Federation—to Georgia's benefit, perhaps, but to Armenia's peril. It is not one's purpose here to inaugurate a polemic or to advance a counter-agenda, only to insist firmly upon the integrity and accuracy of scholarly method in the basic premises of historical geography and linguistics. So, I invite the readers a thousand years into the past, to listen to a kind of Armenian very like the standard Western Armenian today, but in a Middle East where Armenia was a major presence, a world that was in many other ways, too, radically different from our own.

But first, what is the Cairo Geniza? Jewish law prohibits the disposal of any writing with the Hebrew name of God, such as a Torah scroll or prayer book too worn or damaged for licit liturgical use. It must be ceremonially buried or confined to a receptacle for storage; and tradition gradually extended the prohibition to any document in the Hebrew script, which was sacred because it was employed to write the Bible. Depositing papers in a storeroom at the back of a synagogue was cheaper than carting them off to the graveyard, though burial was done sometimes, too. Such a place of storage is called a *geniza*, from the Hebrew root *g-n-z*, "to conceal", itself a loan from the Iranian word for a treasure (cf. Persian *ganj*, the Armenian loan-word *ganj*, the toponym *Ganjak* or *Ganja*, Hebrew *gizbar* from **ganzabara*, "treasurer", etc.). The most famous *geniza* is that of the Ibn Ezra synagogue of Fustat, old Cairo, which was discovered by scholars in the late nineteenth century. Its many thousands of fragments, most of which belong to the Fatimid and early Ayyubid peri-

ods—roughly the first quarter of the second Christian millennium, though there are also documents of much later date—deal with every aspect of the economic, legal, religious, cultural, and material life of Jewish communities in Egypt, North Africa, the Land of Israel, and Spain in particular, but with many other regions and peoples as well. It is thus a treasure house, indeed, and Geniza studies have transformed our understanding of Jewish life and letters in the Middle Ages. The principal languages of these documents are Hebrew and Aramaic and the Judaeo-Arabic ethnolect, with much material also in other languages including Judaeo-Persian, Judaeo-Spanish (Ladino), Judaeo-Greek, and even Judaeo-German (Yiddish). Most of the Geniza documents were removed to Cambridge University, though smaller collections exist in many other places, not all of them edited; and Solomon Schechter, S.D. Goitein, Shaul Shaked, and other titans of scholarship have pored over and published them for over a century. Very many still remain to be studied; and the fragment to be discussed here, which was read and published only recently, affords an idea of the treasures the Geniza has yielded and of the new discoveries its riches may yet make possible.³

In 2005, the Geniza scholar and eminent professor of Arabic, Dr. Avihai Shvitiel, in collaboration with Prof. James Clackson of Cambridge University, a Classicist and Armenologist perhaps best known for his lucid work on the important but vexed question of the kinship of early Armenian to Greek, published a brief article on the fragment T-S NS 38.79.⁴ This is a

³ For a good survey of the history of the discovery of the collection and its contents and researchers, see Hoffman/Cole 2011. The Cairo Geniza has inspired also Amitav Ghosh (1992). Perhaps this paper is in its way cultural history in the guise of a study of language.

⁴ Shvitiel 2005, and see also Clackson 2008. I am indebted for this reference to my dear friend and valued colleague Prof. Firuza Abdullaeva and to Prof. Geoffrey Khan, both of Cambridge University; and for his provision of references on Armenians in Egypt, to Marc Mamigonian, director of the National Association for Armenian Studies and Research, Belmont, MA. I have the pleasure also to acknowledge a most friendly and informative reply to my query by Dr. Ben Outhwaite of the Taylor-Schechter Geniza Research Unit of the Cambridge University Library; and I thank the Syndics of the Library for kind permission to publish the fragment, whose classification number is T-S NS 176.2. The existence of the Geniza fragment was helpfully brought to my attention, though in general terms and without specific reference or description, by a most learned anonymous reader of my article (Russell 2011): I record here my thanks for his valuable observation. The JTS manuscript, which can be dated to ca. A.D. 1892, has annotations in Hebrew and Judaeo-Spanish

document from the Geniza of twenty words and phrases in Judaeo-Arabic with their equivalents in Armenian transliterated into the same semi-cursive, square-character Hebrew letters employed for the Arabic. The fragment, which measures 17 x 6.5 cm, is dated on the basis of the type of paper and the palaeography to the tenth-twelfth centuries A.D. The language is not identified in the text itself as Armenian; and Shvitiel speculates that the fragment may have been part of a larger phrase book. The latter would, I think, have been polyglottic, rather than a continuation of the Armenian list; for the range and arrangement of the latter suggests it is self-contained and is not likely to have been a part of a longer glossary with more and other Armenian words on diverse topics. The list of the Judaeo-Arabic words and phrases to be translated is as follows: "bread" (*al-khubz*), "meat" (*al-laḥm*), "water" (*al-mā*), "wine" (*al-nabid*), "rose" (*al-ward*), "apple" (*al-tuffāḥ*), "pear" (*al-kummathrā*), "woman" (*al-mar'ah*), "virgin" (*al-bint al-bikr*), "your mother" (*ummak*), "your father" (*abūk*), "beautiful [lit., "salty"] face" (*al-wajḥ al-maliḥ*), "female singer" (*al-mughanniyah*), "white" (*al-abyaḍ*), "black" (*al-aswad*), "tax collector" (*jilwa'az*), "come!" (*ta'āl*), "go!" (*imḍi*), "sit!" (*ijlis*), and "how are you" (*kīfant*). The corresponding Armenian forms are: *hads* (for *hac*'),

(Ladino), as well as a list of the Armenian names of the signs of the Zodiac transliterated in Western Armenian pronunciation into square-character Hebrew. Both the Geniza and JTS MSS are examples of transliteration of a foreign language. As we have seen, there is no evidence, however, of a particular form of Armenian spoken by Jews analogous to such hyphenatable ethnolects as Yiddish, Ladino, Judaeo-Persian, etc. Some Jewish graves have been found in Armenia from roughly the same period as the Geniza text, and Prof. Michael Stone has studied and published them. But these are inscribed in Hebrew/Aramaic only, and there is no context for the community to which they belonged. On the existing meager evidence one is inclined to think they were relatively transient Iranian Jews who employed Armenian stonemasons. There is no historical evidence of a long-term, indigenous Jewish community in Armenia after the Sasanian period; and there is no Jewish literature in Armenian, which is exclusively and entirely Christian. From what we can glean from studies by Avraham Galante and others, Jews who lived in Armenian areas of Ottoman Anatolia spoke Arabic, Neo-Aramaic, Kurdish, and Turkish, but never Armenian. The designation "Judaeo-Armenian" is at best imprecise and at worst misleading, and should, consequently, be set aside. This is not meant in any way to detract from the immense value of Shvitiel's contribution or of Clackson's remarks, which are all the more remarkable and praiseworthy for the remoteness of this material from the latter's branch of Armenology.

The Cairo Geniza Judaeo-Arabic and Armenian word list, T-S NS 38.79 (T-S NS 176.2).

mis, shur (for either *jur* or “Western Armenian” /čʷr/), *kini* (for *gini*), *vart* (for *vard* or /vart/), *khnzor* (for *xnjor*), *danz* (for *danj*), *khugnigh* (probably

k'u "thy", with diminutive *knik* or */gnig/* "wife, little woman"), *kays* (for *koy*s), *mayr* (without possessive suffix), *dad* (instead of *hayr*, and without possessive suffix), *aghya akhshkin* (*ateay*, "salty", with gen. of *afjik*, "girl"), *kusan* (for *gusan* or */kusan/*, "minstrel, bard" without gender suffix), *aspidag* (for *spitak* or */spidag/*, with on-glide: */əspidag/*), *siyav* (Classical Armenian *seaw*), **atstpan mart* (a difficult word to decipher, perhaps Middle Armenian *acpan mard*, "goat-herd man", cf. Arm. *aycapan* "goat-herd"), *ariyag* (cf. Middle Armenian *arek*), *aknah* (*gnay* or */knay/*, either prefaced by an exclamatory *Ah!* or else with on-glide: */əkná/*), *nist* (Classical Armenian *nist*), and *in shkurnas* (thus, as two words with Hebrew final *nun* delineating the first, perhaps to indicate stress on the first syllable; so possibly from a form *inč' ku ařnes*, "What are you doing?", like modern American "How ya doin'?).

A number of these forms are paralleled by the Rasūlid hexaglot, the 14th century dictionary in Arabic from Yemen, to which one referred above. We find there *h's* */hats/* for "bread", *mys* */mīs/* for "meat", *ṭ'nz* */tandz/* for "pear", *v'rt* */vārt/* for "rose", *khnzwr* */khndzōr/* for "apple", *'ghyk* */aghēk/* for "good", and *syw* */sēv/* for "black". "Sit!" is *nyst* */nīst/* as in the Geniza fragment, but "Go!" is simply *kn'* */knā/* without prothetic *a*. "Come!" is *'ryk* */arēk/* rather than *ariyag*, a development to be expected after two centuries. The word for woman in the hexaglot, *knyk* */knīk/*, has the same diminutive ending as in the Geniza, rather than *kin*. (For *al-ṭāhir*, "pure", the Armenian of the hexaglot again employs a diminutive, *srbkyk* */sərbkūk/*.) The hexaglot has an exhaustive hippological section, so it distinguishes finely between Armenian *jrm'k* */jermak/* "white" in the sense of a white horse, the kind that horse people nowadays call a "gray" (Arabic *al-ašhab*), and the generic word for "white" (Arabic *al-abyaḍ*), *sbyd'k* */əsbīdāk/*. Among the deficiencies of the Arabic script are the use of *k* for both *k* and *g* and the use of *matres lectionis*—place-holding vowel-letters like *alif* and *ya*—to represent either a long *a* or *i* or simply a place where another language has that vowel, either short or long (and in the case of *ya*, *i* or *e*, too). Arabic has no *ts* or *dz*, so we can only suppose *h's* is */hats'/*. It has no *p*, so it is only on the strength of the *d* in place of *t* in the word for white, *'sbydk*, that we can infer the scribe meant to render *əsbidak* (or, indeed, *əsbidag*?)—Classical and Modern Eastern Armenian *spitak*. The late great Hungarian Armenologist, Prof. Edmund Schütz,

opted rightly, I think, to render Cilician forms where the Arabic posed such ambiguities. The Geniza fragment with its more precise Hebrew, published several years after the hexaglot, vindicates his judgment.⁵

I have transliterated or explained a number of the Armenian words differently at points from Clackson, who in his notes also distinguishes this or that form, on the basis of the voicing or lack thereof of the unvoiced stops of Classical Armenian, as “Western” or “Eastern”. These voiced forms are, indeed, important and worthy of attention, since they attest vividly to dialect variation in Armenian, a feature of the language that undoubtedly existed from very early times. The political division of Persian and Roman spheres of influence in Armenia could have set in motion the processes that resulted in the sharper, later distinctions between the dialects of the Ottoman-ruled and Russo-Persian parts of the country. It is by now generally accepted that the division of a preponderance of the dialects of the language into reasonably delineable Western and Eastern categories as we now know them can be dated to about the 17th century. Rather we deal, as the imperative for “Come!” suggests, with an early attestation of Middle Armenian, the language typified by the documentation of the Cilician kingdom, displaying the characteristically fluid phonology of that stage of the language. Moreover, the Hebrew transliteration of the form as *ariyag* suggests a transitional stage between an original *ari ek* and the later *arek* attested in Armenian manuscripts (Łazaryan/Avetisyan 1987: 89). Similarly transitional is the use of *ateay*, “made of salt” (ibid.: 27), for “pretty”, before or alongside the addition of the diminutive that produced Middle and Modern Armenian *atek*. There are distinctly “Classical” forms, such as *sīyav* (rather than modern *sev*) for “black” and *nist* (instead of *nstē* or *nstir*) for “Sit!” The word for “white”, */əspidag/*, voices the unvoiced stops as the later Western dialects do; but the Middle Iranian loan-word *spitak* itself would now be characteristic of Eastern Armenian, the common term in Western being instead */jermag/*. The latter is a specialized and, therefore, secondary form, a particular shade of white, that has become general. It displays the demotion to common usage of a previously noble, hippological term, cf. Persian *čarmeh*, “a gray”

⁵ See Golden 2000. I am most grateful to Prof. Sebouh Aslanian of the University of California, Los Angeles, who called my attention to this valuable resource.

(i.e., a white horse), as we have seen in the Rasūlid hexaglot, above. (For another example of the process, compare the change in Persian of the word *dehqān* from “landed nobleman” to “peasant”. The wear and tear of usage tends to drag words down.) So an “Eastern” word, *spitak*, for white with “Western” pronunciation *spidag* is neither “Eastern” nor “Western” but truly *Middle* Armenian in every way. The possessive second person singular *k’u* is typical of Western dialects today, cf. Classical and Eastern *k’o*. The pronunciation of *koy*s, “virgin”, as *kays* (the diphthong rendered by a Hebrew double *yod*) reflects a dialect variation, unless the double *yy* is a *lapsus calami* for the slightly rarer (in Hebrew) *waw-yod*, the downstroke of the *waw* in the Hebrew script of this period being only slightly longer than that of the *yod* (whose downstroke then was longer than it is now). But in support of dialect variation one may cite the name, Nairuz (for an original Nowrūz, lit. “New Light”), of an Armenian convert to Islam who fought to reconquer Antioch from the Crusaders in 1098, squarely in the middle, that is, of the period to which the word list is dated (Dadoyan 1997: 133).⁶ The ancient Zoroastrian new year feast of Nowrūz, as we will see presently, was extremely popular in medieval Cairo and its observances may be of relevance to an understanding of the Armenian word list under discussion as well. Another possible dialect form is *hads* for *hac’*, “bread”, suggesting the anomalous voicing of the aspirate *ts’*—unless the Hebrew writer meant simply for the sake of clarity to avoid use of the letter *tsaddi*, which was often used in the Judaeo-Arabic of the time not only to represent the sound *ts*, which exists in Hebrew and Aramaic but not Arabic proper, but also for the Arabic sounds *ṣad* or *ḍad* (Daniels/Bright 1996: 729).

Writing Armenian in foreign alphabets is not unprecedented. According to the hagiography of Koriwn, St. Mesrop Maštoc’ himself, when inventing the Armenian script early in the fifth century, experimented with the enigmatic “Danielian” letters—perhaps a variant of Syriac adapted to Armenian, or the remnants of the old Aramaic heterographic system that was to endure in Zoroastrian Book Pahlavi. There are short transliterations of names and phrases into Greek, in both manuscripts and epigraphy (as well as a papyrus in Greek, written in Armenian letters): an un-

⁶ The Arabic term for “virgin” in the hexaglot lacks an Armenian equivalent.

dated bas-relief on the outer wall of Echmiadzin cathedral begs God's mercy on Daniël, Tirēr (i.e., Tirayr), and Garikinos (i.e., Garegin). All these forms correspond to the phonology of Classical Armenian. In the eleventh century, a bronze caster left his name in Greek and Estrangela Syriac letters on the doors he had made, which now greet the visitor to the church of San Paolo fuori le Mura, at Rome: Staurakios, lit. "little Cross", and *k-t-š-g*, i.e., Armenian Xaç'ik, which means the same thing. The final unvoiced stop in the diminutive suffix, *-ik*, is voiced as a *g*, just as in later Western dialects and just as in several cases on our list from the Geniza! (Russell 1994: 235 n. 1 with refs).⁷

Who spoke the Armenian of the word list? Armenians had traveled to Egypt for many centuries, though from the evidence they were royal captives or tourists. Poor king Artawazd II was captured by Marc Antony in 34 B.C., paraded in a triumph through Alexandria, and murdered three years later (Russell 1987: 94). Around A.D. 202, the Armenian king Xosrov I accompanied the emperor Septimius Severus (r. 193–211) to Egypt, and left a Greek inscription at Thebes: *Khosroēs armenios idōn ethaumasa*, "Xosrov the Armenian, seeing (this), I was amazed" (ibid.: 119). Prof. Clackson has studied the Greek-in-Armenian papyrus mentioned above: found in the 19th century and probably in the Fayyūm, it now reposes in the Bibliothèque nationale de France. Clackson places it in the context of Greek educational papyri found in Egypt: it contains some seventeen lines of short conversational phrases, conjugations of verbs, word-lists by subject, and some short stories and maxims. Scholarly speculation about the author is divided: he could have been a merchant, maybe a soldier.⁸ But it seems that Armenians in Egypt before the Muslim conquest in A.D. 640, such as the man who wrote the papyrus, were numerous enough, and resident long enough, to take a serious interest in the Greek culture of the Byzantine rulers.

⁷ On texts in other languages written in Armenian letters, see P'ap'azyan 1964. In recent centuries, it has been very common for Armenians in Georgia to write their own language in Georgian script: the 18th century polyglot minstrel of Tiflis, Sayat' Nova, wrote Armenian in Georgian *mkhedruli* letters while using Armenian script to write Tatar (Azeri Turkic).

⁸ Kouymjian 2002: 59–63, especially p. 60, n. 226 with references to Clackson's several articles on the papyrus; and p. 63, illustration 16, the papyrus.

In the first centuries of the second millennium there were Armenians in Egypt from the heartland of the country around Van, many others still would have come from Syria, and Armenian converts to Islam were prominent in the Fatimid hierarchy, though the latter were by reason of their station less likely to mix socially with middle-class Jews, nor, indeed, to need words of greeting and the like translated from Arabic for them. The Armenian written by the eleventh-century bronze caster Khach'ig is phonetically like the kind we encounter in the word list; and since he used Estrangela Syriac script it is reasonable to suppose he was born and learnt his craft in a city with a substantial Armenian population where Syriac was dominant at the time. The obvious candidate is of course Edessa, modern Urfa, whose fall to the Muslims about a century later St. Nersēs Šnorhali (d. 1173) was to chronicle in the long poetic lament, *Otb Edesioy*: St. Nersēs, who lived not very far away at Hromkla near Aintab (modern Turkish Gaziantep), relied on eyewitness accounts. He is known to have written in the *ašxarhakan*, “secular” Armenian speech—that is, the Middle Armenian equivalent of the vernacular we now call, with reference to Modern Armenian, *ašxarhabar*, “vernacular”—in distinction to *grabar* “book language”, i.e., the Classical Armenian that was then still very much alive as a literary medium. This would have been the language Khach'ig spoke; and if the Catholicos wrote it, then it was the common speech of the noble and the wealthy as well. One might hazard the guess, therefore, that the Armenian informant whose pronunciation of his native tongue our writer of Judaeo-Arabic transliterated on an *ad hoc* basis, had arrived at Cairo from Syria: from Edessa, or perhaps Antioch. Whatever his own origin, the number of his compatriots in the Fatimid metropolis was, as we have seen, heterogeneous. It had recently become much larger, though it was already of long standing. Two Armenian Cross-stones (*xač'k'ar*) found in Cairo are dated to the tenth century; and the huge fresco at Deir al-Abyad, the “White Monastery” near Sohag, dated 1124–1125, has Armenian inscriptions and was the work of an Armenian artist. By the late eleventh century, a number of Armenian converts to Islam were prominent in the Fatimid state. In the period of mass migration and chaos following the battle of Manazkert (Manzikert, to Byzantinists) in 1071, some thirty thousand Armenians fled the Byzantines and Seljuks to settle in Egypt. Armenian architects and builders constructed

the walls and gates of the capital under the supervision of Badr al-Jamālī (1075-1094), an Armenian who served as vizier of the Caliph al-Mustansir (1036-1094). In the late 1070's the Armenian Catholicos Gregory II Martirophilus (*Vkayasēr*), son of the scholar and Armeno-Byzantine administrator Grigor Magistros Pahlawuni (d. 1058), made his famous journey to Egypt and, with the approval of the Muslim authorities, appointed his nephew Grigoris primate of the newly established diocese of the country.⁹ By the twelfth century, when a Muslim Armenian named Bahrām served as vizier, some thirty Armenian churches and monasteries are known to have existed at Cairo and in other major cities of Egypt (Dadoyan 1997: 9, 82, 87, 94, 105). Thus there were both prominent Muslim converts and numerous Christian Armenians in Egypt at the time the word list was compiled.

What did Armenians of the period in Egypt do? The Geniza documents themselves mention Armenian craftsmen and merchants in Cairo who traded in carpets, curtains, silk, and mother of pearl; one Nahray b. Nissīm mentions "half an Arjishī robe", i.e., from Arčēš, an Armenian city on the north shore of lake Van.¹⁰ A letter requests various carpets including a "red Armenian rug (*bisāt*)" (Goitein 1983: 119, 123, 126, 197) Close attention to the many shades of color is a salient feature of Geniza texts dealing with *realia*, and of all hues it is the distinctive Armenian red that others have noted and prized through history. In the United States and other modern Western countries, the Armenian or Persian rug merchant is something of a stereotype; and the Oriental carpet is a superfluous, luxury item. One must resist such myopia in attempting to understand Fatimid Egypt: there, as S.D. Goitein demonstrated, such items of furniture as tables, chairs, and beds, so common in Greco-Roman antiquity and in the West today, were few. Domestic arrangements bore the mark of an Arab

⁹ Kapoian-Kouymjian 1988: 2-15, plates 1-IVa for the fresco. The visit of the Catholicos was important enough to merit mention by the major Armenian chroniclers over the next two centuries, including Matthew of Edessa, St. Nersēs Šnorhali, Kirakos of Ganjak, and Smbat.

¹⁰ Arčēš, an ancient Urartean foundation, was partly submerged in the Middle Ages and acquired the same sort of legends that accreted around other sunken cities, such as Atlantis, Russian Kitezh, and East Anglian Dunwich (see Russell 2007: 136-156; on the robe, see Goitein 1983: 182).

desert culture, not an ancient urban one. Rugs, mats, curtains, and hangings of all kinds played a correspondingly greater role in household furnishings than they do now. And the Muslim and Jewish faiths, while enjoining abstemiousness at table, urged their adherents to be lavish in their clothing, which was as rich in color and material as its wearer could afford: the tailor's profession was not a lowly one. Shelomo Goitein, after an exhaustive study of fabrics, colors, and garments mentioned in the Geniza documents, exclaimed that "medieval males... must have looked like tropical singing birds"! The role of the Armenians in the rug and textile trade was vital and central to the economy. It is to be imagined that the Armenian whom the Jewish owner of the word list was seeking to impress with a few words of the former's own tongue was a fellow tradesman, possibly a merchant of means and importance whose friendship was worth the effort, one whom he might encounter at a social gathering.

It is apparent from the contents of the word list that it was intended for social purposes, rather than, say, a legal case, a purely business transaction, or a religious disputation. What would such a social event involve? Let us attempt a sort of rough deduction. While working on this paper I wrote to a wide range of friends and colleagues, without telling them the contents of the word list from the Cairo Geniza but explaining my work on it, and asked that they compile for me a list of the twenty most important words and phrases they would want to know in a foreign language for a social encounter. Only a few were so courteous as to respond; but they and their replies are sufficiently diverse for the data they provide to be of some interest. Michele Moramarco, in his fifties, a friend in Reggio Emilia, Italy, writes: 1. Who are you? 2. Where do you come from? 3. I am... 4. I come from... 5. Do you like? 6. I like... 7. Health, 8. Food, 9. Water, 10. Music, 11. Family, 12. Friendship, 13. Love, 14. Goal, 15. Time, 16. God, 17. Ideas, 18. Job, 19. Hobby, 20. Future. Dr. Sergio La Porta, forty, a native of New York City and Professor of Armenian Studies at Fresno State University, California, offered the following list, with a witty 21st item: 1. Hello, 2. Goodbye, 3. How are you? 4. How much does it cost? 5. Nice to meet you, 6. My name is... 7. Bread, 8. Water, 9. Market, 10. Where is, 11. River, 12. Center, 13. Gate, 14. Church, 15. Street, 16. Sun, 17. Moon, 18. Up, 19. Down, 20. Excuse me, 21. Toilet. Dr. Peter Manuelian, also in his forties, a native of Boston and Professor of Egyptology at Harvard, suggests: 1. Greetings, 2.

How are you? 3. Yes/no, 4. Where is...? 5. Do you have...? 6. I want... 7. Water, 8. Food, 9. Please give me... 10. My name is... 11. Your name is... 12. He, 13. She, 14. We, 15. They, 16. Sleep, 17. House, 18. Mother/father, 19. Sister/brother, 20. Son/daughter. Kristina Arakilyan, a native of Uzbekistan now resident in Brooklyn, New York, and an undergraduate at Harvard, has this list: 1. Hello, 2. My name is X, 3. I am from X, 4. It is nice to meet you, 5. Yes, 6. No, 7. Morning, 8. Afternoon, 9. Evening, 10. Night, 11. Please help me, 12. Thank you, 13. Where is X? 14. Inn, 15. Transportation, 16. Water, 17. I don't understand, 18. How much is it? 19. I'm sorry, 20. Goodbye.

Where is it? How much does it cost? Help! Excuse me, I'm sorry, goodbye! The younger the source, the more the list seems to be influenced by phrase books for travelers: more Kafka looking anxiously for the railway station early in the morning in an unfamiliar city than a traveler breaking bread with a stranger. All include some form of introductory greeting; two mention food in general, one specifies bread, and all the lists have water. One mentions family; another, more specific family relationships. None mentions any colors, fruits, or flowers. And only one of my four interlocutors, perhaps not surprisingly the eldest (remembering better days than this unarmorial age) and the one living closest to the Mediterranean, includes the items "love" and "music" on his list: we recall the little woman, pretty face, and (female) singer of the Geniza manuscript. Khach'ig and Avraham meet, and the latter trots out the basic pleasantries: *Ariyag, nist, inšurnas*? Would you care for *hads, mis*, a cup of *šur*? What are the names of your *dad* and *māyṛ*? How is *k'u knig*? That's a nice *əspidag* coat and *siyav* hat.¹¹

But the occasion and the vocabulary appropriate to it are not so perfunctory, for nine more items in the Geniza list stand out: wine, rose, apple, pear, virgin, woman, pretty face, musician, and the equivalent of *jilwa'az*, "tax collector". We shall leave this enigmatic item for last, after painting a picture around it, as it were, with the first eight. *Kini*. "What is life to a man without wine?" wonders Ben Sira, the literary sophisticate whose work in its Hebrew original the pioneer of Geniza studies, Solomon

¹¹ Goitein 1983: 174, 176 notes that white is the color most frequently mentioned in trousseaus (83 times); black (16 times). But the latter did not have the funereal associations of the West of the present day, and was considered "festive and dressy".

Schechter, was so elated to discover in the Cairene treasure trove (Hoffman/Cole 2011: 59).¹² Readers of the Fatimid period would have appreciated the sentiment: “it is known”, writes Paul Fenton, a modern researcher, “that drinking parties were a common feature of social life, and the Genizah has even preserved some ancient drinking songs”. People of different faiths mingled at drinking parties in the period, and there was music: a Muslim musician of thirteenth-century Aden reported his three noble Jewish employers to the local *qāḍī* after an Eid al-Fitr celebration they hosted. The Israeli poet Dan Pagis published a number of the songs found in the Geniza (Fenton 2002: 155; Pagis 1977: 245-255). A wealthy Cairene Jewish home had a large central room, the *maǰlis*, which could accommodate as many as four hundred guests: one entered through a hall called in Arabic by the Persian loan-word *dahlīz* (cf. Armenian *dahlīč*). It might have marble walls, water flowing down a slab into a marble basin (called in Arabic, as in Armenian, by another Persian loan-word *šādir-wān*), and a wind-tower for cooling like the Iranian *bādgīr*. The *maǰlis* of the wealthy was illuminated at night hundreds of large and small candles, chandeliers, and oil lamps. *Vart*. A rose is a rose. We offer them as gifts, maybe grow them in gardens, and that’s all: soap, after shave, and spray cans do the rest. But Cairenes used rose water in vast quantities—to rinse, freshen up, and cleanse a place of odors. The ubiquitous long-necked *golābdān*, rose-water dispenser, of repoussé silver one finds in modern India and Iran is a remote echo of those times. Geniza texts also mention such vessels as part of the basic furnishings of a good home. Our word list dutifully mentions bread and water: Cairenes had their drinking water from the Nile delivered by porters; and though homes had large storage jars and measuring cups for wheat, flour was ground at mills and the local baker’s hot ovens were often employed for bread. Meat was a luxury item: fruits and vegetables were eaten in large quantities. Khach’ig has had a bite to eat, and they have begun drinking; Avraham offers him a sprinkle of rose water and some fruit. *Danz*, *khnzor*. Pears and apples are fruits of the north—locally, specialties of the Armenian plateau. The Armenian

¹² Schechter saw the discovery of the original Hebrew Ben Sira as vindication of his view that Second Temple Judaism was vital, lively, cultured, and human—not the legalistic, ritualistic monstrosity that biased Gentile Biblical scholars, such as Wellhausen, made it out to be.

word for apple is an old one, Urartean, and the finest apples, proverbially, were those of Artamet near Van. Perhaps the Jewish owner of the word list wished to praise these in pleasant conversation. *Aghya akhshkin, kays, kusan*. Ben Sira praises wine and warns that old men ought not to interrupt the music at a party with too much talk; and since slave girls and dancers figure as valuable property in Geniza lists, they perhaps formed part of the much-appreciated entertainment. The Jew and Armenian perhaps meet, then, in a well-appointed *majlis* at a drinking party where there are beautiful girls: *Aghchign agheg e, kuys e?* the two men wonder, perhaps wistfully. There are musicians, and singers. At this point, the party gets interesting—at least we have the word of the worried religious authorities. I have already mentioned consternation of the *qadi* in Aden—and the Muslim clergy of Egypt were regularly incensed by bibulous practices, which, one is pleased to report, they were quite unable to stop. As for the Jews, in the tractate *'Avoda zara* ("Alien worship") of the Babylonian Talmud, 31b, the Rabbis warn that drinking parties lead to intermarriage. (And why do the ultra-Orthodox disapprove of sex? goes the modern joke. Answer: It leads to dancing!) Armenian divines through the ages have been no less severe in their condemnation of such entertainments. A sermon attributed to the fifth-century Catholicos Yovhannēs Mandakuni (more likely to be the work of another Catholicos John, Mayragomec'i, who lived three centuries later), "Concerning the lawless behavior of drunkards", warns sourly, "Bread (*hac'*), water (*jur*), and raiment requite the necessities of life; all the rest are a matter of desire, not of importance". Another sermon of the same author that has become the *locus classicus* for discussion of Armenian *gusans*, "Concerning the lawless theaters of the demonic", declares weak-willed women particularly susceptible to the lewd suggestions of drama: "For the custom itself is evil and so are those who encourage it: wine (*gini*), the minstrel (*gusan*), and Satan", where "women are cast into the role of prostitutes; and men, as rutting stallions mounting mares (*jioc' matakaxazac'*)", There are also clowns or jesters at these performances: "For where jesters (*katakk'*) and minstrels and lewd play (*xat*) and satire (*catr*) be; there the demons, too, join in the dance". These occasions involve wine, as one might expect: "For the theaters of the play are the encampments of the demons, as are all the immoral, minstrel-mad (*gusanamol*) wine-imbibers (*ginarbuk'n*), too". It is

not just wine the demons give the performers: “And they pour more into the mouths of the lewd minstrels—many clownish jests and moronic speeches”. Yovhannēs did not miss anything: he even has a reference to the pleasant fragrances employed at social gatherings, like the rose water of Cairo: “Woe to them who drink wine in order to become intoxicated, and who anoint themselves with sweet oils (*anoyš iwteawk*)!” (Mandakuni 1860: 130, 132, 134, 135, 136). The kings of Armenia were fortunate in not having to take any account of such sermons: P’awstos Buzand reports that when Aršak II was imprisoned in the Sasanian Fortress of Oblivion, his faithful eunuch Drastamat *urax aṛnēr zna gusanawk* “cheered him with minstrels”; and Pap died while *nayēr and pēs pēs ambox gusanac’n* “he was gazing at a motley throng of minstrels”. At least eight centuries later and hundreds of miles to the southwest, the poet Yovhannēs of T’lkuran still called himself a *gusan* (Russell 1986: 2-3). And the 12th century law code *Datastanagirk* of Mxit’ar Goš—closely contemporary to our fragment—is scandalized by such entertainments, which seem to be typical of the way of life of the privileged classes. “Some freemen and horsemen, when they arrive at villages, which are situated in the region of a monastery, do not dismount at the village, but some with women (*kanambk*) and female servants (*nažštawk*) lodge at the monastery, and in this way trample on the canon of the fathers. With minstrels (*gusanawk*) and singing girls (*varjakawk*) they dine in the house of holiness and worship, which is horrible for Christians to hear, let alone see” (Thomson 2000: 254-255).¹³

The invective against wine drinkers and minstrels refers also to satirical speech and to actors playing lewd roles as animals. The satire would have been both political and anti-clerical; and the actors would have required costumes and masks. One recalls that the English “satire” itself goes back to the lusty, ithyphallic *Mischwesen*, the half-men, half-beasts who pursue youths and maidens across the surfaces of ancient Greek *kratērs*—wine-mixing bowls—and drinking cups. Might they provide a hint as to the meaning of the ninth and enigmatic term of our list, *štṗ’n mrt*, i.e., some kind of man (*mard*, pronounced here */mart/*)? Clackson reads the first word as *estefan*, and suggests, on the basis of the word it translates, Judaeo-Arabic *jilwa’az*, that it is a deformation of *ostikan*, a

¹³ I have changed his translation slightly. For the text, see T’orosyan 1975: 121.

high official (nowadays, just a cop). Let us return to the term Nowrūz, encountered above in the form Nairuz as the name of a Muslim Armenian who fought in Syria. The term is the familiar name of the Iranian New Year, a vernal festival commemorating Ahura Mazda's creation of fire, which coursed through the other six sacred creations, animated them, and brought the new world into motion. The holiday became immensely popular in Egypt, with wine and beer consumed in public. Too much alcohol was as dangerous then as it is now: in Aleppo in the spring of 1022, 'Azīz al-Daula fell into a drunken slumber after a party and was assassinated by his two favorite *ghulāms*, one of whom happened to be an Armenian convert to Islam named Abū'l Naǧm Badr (Dadoyan 1997: 110). A description of Nowrūz in Cairo in A.D. 975 mentions public performances of a carnivalesque character in which actors satirized, mocked, and punished officials, in an apparent overlay of customs associated with the Greco-Roman and succeeding Christian cultures of the Mediterranean. A twelfth-century source testifies that whores and transvestites carried musical instruments; and descriptions of Nowrūz in nineteenth-century Egypt note that celebrants still wore costumes blasphemously parodying such otherwise dreaded officials as the tax man, the hangman, the flogger, and so on (Shoshan 1993: 42, 43, 50, 59).¹⁴ Armenian Carnival or Mardi Gras—the feast of *Barekendan*—was also associated with such blasphemous and lewd plays of role-reversal. A chronicler of the era gives us a glimpse into contemporary celebrations of the holiday by Armenian traders, probably from the region of Lake Van, who seem to have been organized in a guild-brotherhood for, among other things, defensive purposes. "On the day of *barekendan* of the same year [i.e., in the 1120's], a caravan carrying salted fish [Arm., *tarex*] came to the city of Antioch from the East. The people belonging to this caravan had set themselves up in the marketplace and were drinking and making merry. When the townspeople heard the sounds of their dancing and singing, all the men of the city pounced upon them and beat them to a pulp, after which they began to throw them out of the city. Now the men of this caravan were eighty in

¹⁴ For the non-Muslims of Fatimid Cairo (and, indeed, of many other Muslim climes at many other times, too), who were required as *dhimmis* to pay the additional, punitive *jizya* tax, the internal revenue service of the day inspired even greater dread than it does among Americans in mid-April nowadays.

number and they had truncheons and were resolute in purpose. So when their guild-leader [*manktawagn noc'a*] cried out to them, in their drunken condition they fell upon the townspeople, pursuing them from the Gate of *Sewodn* [Arm., "Blackfoot"] to the Church of Saint Peter, they put all the townspeople to flight and broke the skulls and bones of many. Finally, the Antiochenes swore by the cross and the Gospels that they would never bother them again. So, after peace was reestablished, the caravan returned to its place of origin" (Dosturian 1993: 148-149).¹⁵

Minas of Tokat, an Armenian clergyman of L'vov (Austro-Hungarian Lemberg, Ukrainian L'viv, Polish Lwów, home to all those peoples, Jews, Kipchaks, and a great many Armenians at one time) in the Eastern European region of Galicia, wrote on Friday, 5 February 1563, a semi-satirical ode, *Govut'wn i veray herisayi*, in praise of the rich festival porridge called *herisa* or *keshkek* by Armenians. It includes this quatrain: "Shrovetide is near,/ The hour of joy has come,/ The *Abelat'ot* rite is near,/ And *Mort'ët'ot'ovn!* is said" (lines 37-40). *Abelat'ot*, which means "leaving the monastic rule", is a Shrovetide parade, a blasphemous parody of the monastic perambulation of a church. The Shrovetide shout *Mort'ët'ot'ovn!* which I understand as "Skin the stammerer!" has most likely to do with the mock-flaying of the *aycemard*, or "goat-man"—a man or boy dressed in a goat costume. The custom, which still existed among Armenians of 19th century Tiflis, was described by observers, and there is even a drawing of the *aycemard*, a man with a staff in a goat mask—both goat and goat-herd—that is, a "goat-herd man".¹⁶ This creature, part man and part animal, is a remote echo of the satyr; and as for the act of flaying, one recalls that young men of the Equestrian order killed and flayed an actual goat on Roman Lupercalia. They then ran through the streets, smeared with blood, striking women with strips of goat hide to make them fertile. The *februa*, or switches, used in Lupercalian rites have, indeed, given the month of February, when all this went on, its very name.

¹⁵ Armenian text: Uṯhayec'Ī 1898: 226. I am indebted for this reference to my former student and present colleague Dr. Rachel Goshgarian, from her excellent work on the Armenian fraternal orders of the Erzinka/Erzincan area.

¹⁶ Russell 2003: 137-179: the *aycemard*, "goat-man" of the *Barekendan* revels, is illustrated in pl. 1, p. 171/1259, from Bdoyan 1963: 147 pl. 11.

Now let us return to the drinking party and the young girls and minstrels in the Cairo *majlis*. Might it be the carnivalesque Nowrūz, with a *gusan* in lupercalian costume representing some mutually feared and despised official to be harmlessly mocked? If so, might then our enigmatic phrase be read as **atstpan mart*, that is, *acpan mard*, “goat-herd man”, with the mysterious first word a rendering of the attested form in Middle Armenian, and the phrase entire a medieval equivalent of the *aycamard*, “goat-man”, of the Shrovetide revels of Tiflis in more recent times? (Łazaryan/Avetisyan 1987: 21, s.v. *acpan*). The obvious problem and objection to this suggestion is that this term does not directly translate “tax collector”, and my suggestion is that the latter was being satirized; so the word list here employs a very particular paraphrase. Another possible reading, closer to a direct translation of *ĵitwa’az*, might be advanced: **atat’pan*, “keeper of order”, as a compound with the common Arabic loan variously spelled *adat’*, *adēt’* in Middle Armenian. One’s reconstruction of the social scene might have to part with its satyr; but I mean to revive him one last time.

Wine is poured, fruit is eaten, a minstrel sings. Then one realizes that one has only been gazing at a sheet of paper. Our revels now are ended, Prospero declared as the cloud-capped towers melted away. Federico Fellini once made a film based upon the *Satyricon* of Petronius, a book brimming with *realia* (and satyrs!) that takes us through the feasts, drinking parties, music, entertainments, and debauchery of Imperial Rome, about as long before the celebration in medieval Cairo I have attempted to reconstruct as we now stand after it. At the end of the film the speech of one of the two proto-picaresque young heroes stops in mid-sentence, and his face becomes a fragment of a ruined ancient fresco in the sun; beyond it, the indifferent and eternal blue of the Mediterranean. From this literal fragment of an Egyptian Jew’s book I have sought, with some imaginative audacity for which I crave your indulgence, to shore up my ruins, and your own.

The Fatimid Cairenes, as I have said, were at an equal temporal remove from both Rome and ourselves. But this equivalence of chronology is deceptive. Much of their world endured, little changed; and we have only recently been severed from it, root and branch. The drinkers of Tiflis in the mid-18th century could still hear the living voice of a great Arme-

nian *gusan*, the polyglot bard Sayat' Nova, who wrote Tatar in the Armenian script of Maštoc'; and Armenian, in the intricately curvilinear Georgian *mkhedruli*. His world, with its cosmopolitan conviviality, its wine and wit, its roses and delicate maidens, its absorption in music and love, its gatherings in the *majlis*, is not too far from that of eleventh-century Cairo. But the master minstrel, cited in the second epigraph to this paper, was wrong when he sang that without him wine parties would not lack for the sound of stringed instruments. The culture that Indian and Ethiopian, Arab, Armenian, and Jew had shared soon followed his departure from the earth. In the 11th century, Christian and Muslim Armenians wrote mystical songs, fought, traded, wove rugs, cut stone, and cast bronze in Syria, where the easternmost waves of the Mediterranean end their long journey from the Pillars of Hercules and break below the forested spurs and foggy chasms of Musa Dagħ. That life ended, in 1915, when the embattled Armenian villagers of the mountain withstood the onslaught of the world's first genocidal state. Though many of them survived, still by the end of the Great War, most of Armenia was gone. In the first epigraph, the French wife of the leader of the *fedayis*, the Armenian fighters on the mountain of Moses, exclaims, *No European can learn your language!* The isolation of Armenian the language has become the metaphor of Armenia, the nation itself, an island of civilization nearly alone in a darkening and raging ocean. There were no more phrase books through which a Jew and a Christian in a Muslim capital might enjoy together a Persian new year's drinking party spiced by the theatrical relics of Roman debauchery. For *The Forty Days of Musa Dagħ* are the work of Franz Werfel, a Jew from Austria. He imagined in the fateful year 1933 the plaintive words of Juliette Bagratian; the Nazis burned his book, and within a decade most of the Jews of Europe, too, had been murdered. There are fewer than a hundred Jews alive in Egypt today: the Ibn Ezra synagogue has become itself a *geniza*, a storehouse inhabited by ghosts.

Ašxarə me pañfara ē, sang Sayat' Nova. "The world is but a window", into the beyond. *Talerumēn bezaril im*, "And I am tired of its panes". (The pun, pane/pain, on window frame and hurt works here as well in English as in Armenian.) *Erekə lav ēr vunc' vor aysōr;/ Valerumēn pezaril im*: "Yesterday was better than today;/ And I am tired of the morrow". The *majlis* of the western world I inhabit seems too often a study in loneliness to-

gether: isolated faces around cheerless tables, each face fixed upon the balefully glowing screen of a laptop. Conversation itself is fragmented into the one-sided stridor of voices on cell phones. The salt, as Christ warned us, has lost its savor. But there are still places on the ruined and dying planet a delicate instrument is tuned, there is free and articulate conversation, a beautiful face may still be seen, a song is sung, and somebody pours a friend a glass of wine. Where I live, in Cambridge, Massachusetts, a singer named Peter from southern Russia plays his guitar on warm nights in front of the Au Bon Pain café on Harvard Square. During the winter he plays at an Armenian restaurant. When I told him I had written a paper to read in Yerevan, he said, "Don't forget to mention Okudzhava!". This was something of a joke, since whenever he sees me sitting at the café or walking past on Massachusetts Avenue, Petya plays my favorite, Okudzhava's song *Ваше благородие, госпожа удача* ("Your ladyship, Madame Fortune") from the good old Soviet movie *Белое солнце пустыни*, "The White Sun of the Desert". But in fact I already had done so, in the draft, and here it will stay. If the old bards are gone, there are others, still, to make our celebrations human amidst the hideous inversion of life of a nightmare age: Bob Dylan, Vladimir Vysotsky. And Bulat Okudzhava. His poetic voice emerged from the Russian, Armenian, Georgian, and Jewish cultures of Moscow and Tiflis, of a vast and undivided country we once knew, a sorrowful and joyful country, but one we loved. In his song he pleads with his own hero in art to carry on: *Моцарт на старенькой скрипке играет,/ Моцарт играет и скрипка поет./ Моцарт отечества не выбирает,/ Только играет всю жизнь напролет./ Ах, ничего, что всегда, как известно,/ Наша судьба то гульба, то пальба—/ Не обращайтесь вниманья, maestro,/ Не убирайте ладони со лба.*—"Mozart plays an antique violin:/ Mozart plays, and the violin sings./ Mozart chooses no fatherland for himself,/ Just plays his whole life away./ Oh, it doesn't matter that, as we know,/ Our fate is ever thunder and a howl./ Pay them no attention, master!/ Don't take your palm from your brow".

THE VISION OF THE PAINTING: ALEXANDER KONDRATIEV'S NOVELLA «DREAMS»

Dreams have more than today's stuff, the snippets of impressions of the moment that were not narrated to the end or fully thought out. In dreams are also the things of yesterday: the events in life that are indelibly imprinted, and what is crucial — the blood, whose flow runs back to the time before one's own birth. But in dreams there is also the shape of tomorrow — that which in the stream of life, ceaseless and without beginning, we regard as the future — that is open to beasts through their instinct; and to men, by premonition. Dreams afford recognition, consciousness, and foresight. Life as depicted through dreams unfolds into the ages that are to come and to which came before them.

*Remizov A. The Fire of Things: Dreams and Drownings*¹

Di gantse velt iz a kholem - nar beser a guter kholem eyder a shlekhter (The whole world is a dream, so better a good dream than a bad one)

Yiddish proverb

«We are the blown leaves of the tree of life;
We are but the shadows of what once was;
We are but an unfulfilled dream
of the homeland bright,
Pale after dusk, the last reflected light.
We, troubled ghosts in the land of dream visions
Meet you, brothers, enwrapped in mourning;
We wander, silent, in the field amidst strange plants
And slip with light tread through mute precincts.
Soft is the film of their silvery dust at our step;
Something like moonlight on dark flagstones fell;

In the mortuary glare of an alien moon bathed,
Statues of grim beasts have frozen at their posts...
Time rolls on, we grow pale, we grow wan,
O forgotten brothers! We, the dreams you forgot.
We fly from you into a darkness unknown,
Shedding earthly visage like garments outworn...
So whispered the shadows beside me, leaning close.
My heart was wracked by savage pain
And soundless plaints overwhelmed my soul
Of those whose soul is captive to the vale
beyond the grave.

*Kondratiev A. Autumn 1911*²

¹ *Ремизов А. Огонь вещей: сны и предсказания*. М., 1989. С. 144: «В снах не только сегодняшнее — обрывки дневных впечатлений, недосказанное и недодуманное; в снах и вчерашнее — заснеженные нежданно события жизни и самое важное: кровь, уводящее в прошлое; но в снах и завтрашнее — что в непрерывном беснующемся потоке жизни отблескивает как будущее и что открыто через чужие зверя, а человеку предчувствием; в снах дается и познание, и сознание, и провидение; жизнь, изображаемая со снами, развертывается в века и до века».

² *Кондратьев А. Закат: Посмертный сборник стихотворений* / Под ред. В. Крейза. Orange, 1990. С. 11. № 4:

«Мы облетание листья с дерева жизни;
Мы только тени того, что было когда-то;
Мы лишь несбытанный сон о светлой отчизне,

Отблеск зари, поблескивая после заката.
Призраки смутные, мы в стране сновидений
С вами встречаемся, братья, скорбью обитые;

1. THE WRITER

Alexander Alexeyevich Kondratiev (Александр Алексеевич Кондратьев) (Pl. 1) was born 11 May 1876 (o. s.) in St. Petersburg. His father was director of the State printing house. In 1897 he was graduated from the Petersburg Gymnasium and was enrolled at the law school of St. Petersburg University, where in the following year he became acquainted with the poet Alexander Blok, a fellow student. His first published work of prose was the short story «Домовой» («The house spirits»), which appeared in 1901 in the newspaper «Россия» («Russia»). He began his first full time job the following year, in the legal department of the Imperial Ministry of Transportation. The year after that saw the first publication of his verses, in a student anthology; and he met the Symbolist poet-couple Zinaida Gippius and Dmitri Merezhkovsky. His first volume of verse, «Стихи А. К.» («Verses of A. K.»), was printed by his father's company in 1905; his translation from French, published in 1907, of the «Songs of Bilitis» was condemned by the critics as pornography. In the same year he published at Moscow his novel «Сатирикса» («The Satyress»). In 1908 he was hired by the legal department of the State Duma (housed in the Tauride Palace, described in «Dreams») and published his first collection of stories, «Белый козел» («The White Goats»). His second book of poems, «Черная Венера» («Black Venus»), was printed in 1909 at Petersburg. In 1911 he published at Petersburg a second collection of stories, «Улыбка Ашера» («The Smile of Asherah»). The following year he published at Petersburg a scholarly monograph, «Граф А. К. Толстой: материалы для истории жизни и творчества» («Count A. K. Tolstoy: materials for a history of his life and works»); the verses and notebook of the poet figure significantly in «Dreams».

Except perhaps for the post in the bureaucracy of the Duma — the parliament granted by Tsar Nicholas II in the wake of the first Russian Revolution, of 1905 — there is little sense that much of Kondratiev's creative work, populated by fallen angels, pagan goddesses, Russian sprites, and *femmes fatales* playing out occult and demonic themes, had to do with either his dull, everyday life as a state functionary or with the larger historical events convulsing Russia. Passionate social, political, and economic debates gripped nearly all strata of society: the disastrous war with Japan, the bloody pogroms engineered by the reactionary regime, the growing revolutionary sentiment against the established order. He used his art to avoid all this. The languid, decadent creatures and exotic landscapes that adorn the covers of his publications recall Aubrey Beardsley and the rest of the *fin de siècle*. It is perhaps fair that in the standard guides to Russian literature, that bastion of unrelenting moral engagement and agonized soul searching, he rarely merits so much as a footnote. When war broke out in 1914, Kondratiev worked for an organization providing aid to the wounded. But the experience seems to have left little imprint on his consciousness as an artist, for the last book he published in Russia, in the apocalyptic year 1917 (at Petrograd, this time), was yet another work of decadence mired in an imagined antiquity: «Елена: Драматический эпизод из эпохи Троянской войны» («Helen: A dramatic episode from the epoch of the Trojan War»). An unadmirable critic observed, perhaps too unjustly, that Kondratiev wrote as though Leo Tolstoy's Ivan Ilyich had never lived or died.

Politics and suffering were to flood into Kondratiev's life; they tinted, but did not deeply color, his art. In January 1918 he left the Cradle of the Revolution for the White-held Crimea, as did so many people of the old order never to return: when the Reds were victorious there, too, he moved to a family estate,

Бродим мы вместе в полях среди странных растений,
Поступью легкой скользим в немые палаты;
Нежен при входе в них слой серебряной пыли;
Свет вроде лунного пал на темные плиты;
Мертвенным блеском луны нездешней облиты
Статуи строгих зерей на страже застыли...
Катится время, и мы блуждаем в тьме,

Вам забытые сны, забытые бреды.
Мы в неизвестную тьму от нас улетим,
Облик покинув земной, как старые платья...»
Так мне цитаты, склоняясь, близкие тени.
Сердце сжималось во мне мучительной болью.
Душу наполняли мне беззвучные песни
Тех, чья душа пленена захребной колодой.

Dorogobuzh, near Rovno (now in the Ukraine, then eastern Poland). Though Kondratiev never embraced contemporary themes and his interest in the supernatural did not wane, he does seem to have turned in nostalgia from Greco-Roman and ancient Near Eastern settings and motifs to his native Slavic world and its own rich mythology, and to set his occult tales in prewar Petersburg as well as ancient Greece or Phoenicia. In 1930 he published at Berlin his great «demonological» novel «На берегах Ярына» («On the Banks of the Yaryn», available in a competent English translation by Valentina G. Brougher). The name of the fictional river is a combination of those of two others near the estate; and the book is a virtual encyclopaedia of Slavic folk lore and belief, its submarine landscape peopled by mermaids (русалки), the wraiths of drowned men (утраченные души), and the water spirit (водяной) who rules them. Above the surface we encounter a dryad (русалка), the pagan god Perun, witches, the devil, and various other beings moving through the feasts and rites, both sacred and blasphemous, of the changing seasons. It is perhaps significant to the argument I will make presently for the importance of water in an actual painting that parallels a fictional one described in the novella «Dreams», that much of the action of the novel «On the Banks of the Yaryn» takes place underwater, in the river Yaryn itself. In 1936 Kondratiev printed privately at Rovno a collection of verses, «Славянские боги» («The Slavonic Gods») — again an evocation of the local, native pagan past. To perceive the utter obsolescence of this in the context of 20th-century art one need but recall that not very far away, in Drohobycz, Poland (now western Ukraine), the writer Bruno Schulz was reaching the apogee of his fame with innovative, magical realist tales that transform, satirize, and enchant the actual social and economic life of the Jews, Poles, and Ukrainians of Galicia. And considering the racist uses to which the Germans on the western side of the Polish border were putting their own neo-paganism, Kondratiev's preoccupations can perhaps to some seem disturbing in retrospect. But the prism of historical retrospective can distort; and I would argue that Kondratiev was untainted by fascist notions of any sort. Perhaps the *entartete Kunst* of the languid Decadents and dreamy Symbolists was something of a protection against the lure of fascism, with its puritanical rigidity.

After the outbreak of war in September 1939 with Hitler's savage *Blitzkrieg* against Poland, Soviet forces moved into the eastern part of the country, including the district of Rovno, in fulfillment of a secret protocol of the Molotov-Ribbentrop pact. For most Jews in what had been the old Pale of Settlement of the Tsars, the arrival of the Red Army was a reprieve, whether they knew it or not at the time. But Communist occupation placed White Russian emigres and very many others (Polish officers, Ukrainian and Baltic nationalists, etc.) perceived as enemies of the USSR in immediate and dire peril of arrest, deportation to the Gulag, and worse. So in December Kondratiev fled westward yet again, this time across the lines to German-occupied Warsaw, then south to Krakow, where in 1941 his wife died of cancer. April 1945 found him in besieged Berlin. We do not know what he did, or knew, during the war and the Holocaust, at whose epicenter he was living. Though many Russian emigres fortunate enough to be without a traceable past in liberal politics reasonably preferred a rather precarious existence under the Nazis to certain death in the Stalinist USSR, there were some who had brought in their hurriedly-packed bags

Pl. 1. Alexander Alexeyevich Kondratiev

the anti-Semitism cultivated by the *ancien régime* and who regarded fascist policies with a depraved indifference or even with active approval. The two monarchists who had inadvertently murdered Vladimir Nabokov's father in 1922, for instance, found positions as SS informers during the war; and the newspaper «Новое Слово» («New Words») in Berlin called for Nabokov to be melted down in the same pot as the Jews, so that a new and untainted Russian literature might be cooked. There is no indication, at least in his work, that Kondratiev shared such pro-Nazi attitudes, or, indeed, that he ever hated or hurt another soul. In the stories set in the Rovno district the Jews of the *shetlach* (little villages, *мечетки*) are an unremarked, natural part of everyday life, never parodied or demeaned. As an occultist, Kondratiev was fascinated by the Hebrew language and by Kabbalah, which he admired. Kondratiev's apolitical aestheticism — escapism, really, with its tell-tale erotic fantasizing — may have helped him as a shield against the increasingly hideous world he had to inhabit as his life trailed into an enfeebled and impotent old age, as much as it distanced him from fascist ideas.

With the fall of Berlin to the Red Army in May 1945 Kondratiev fled south, to Belgrade, which had been another Russian emigre center, and lived there with his daughter and her children — one imagines, in circumstances of dependence and penury. But this haven too proved temporary, as Yugoslavia became a Communist state; and in 1950 its dictator Tito deported the Russian exiles to a camp near Trieste. The writer, driven by the winds of exile and stripped of individual dignity and resources, was reduced to resorting to a spiritualist séance to try to find out the circumstances of the death of his own son. Two years later the Tolstoy Fund assisted Kondratiev's daughter and grandchildren to move to the USA; he was settled in a pension for the elderly in Switzerland but rejoined his relatives in 1957, when he was admitted to the nursing home of the Tolstoy Farm in upstate New York. In May 1967 he passed away and was buried at the Russian cemetery of Novo-Dievo in New York State³.

The novella (новелла) «Сны» («Dreams»), translated here, was written after the author's emigration to Volhynia and contains the first real elements of autobiography in Kondratiev's work — and they are numerous. I have not been able to ascertain the date of its completion; but it is possible the author worked on it through the 1920s and finished it around the time of the outbreak of the Second World War. Most of it is set in the Petersburg of the Silver Age, before the First World War and the October Revolution: the narrator mentions as background the 1905 Revolution, and one character has a prophetic dream of street fighting, machine gun fire, and a friend's death on the embankment of the Fontanka — to take place, presumably, in the October Revolution of 1917. The supernatural events of the novella transpire, not in the ancient Slavonic mythological clime of water sprites and forest spirits, but in dreams about a landscape painting that depicts the country estate, a world more authentically (and nostalgically) Russian, and closer to the hearts of author and narrator, than in the submarine and supernatural Otherworld. And although the imagined estate turns out to be real, and near the narrator's home-in-exile near Rovno, he beholds it only after it has been destroyed; and its inhabitants, slaughtered⁴. Although the story is semi-autobiographical, the poem by Kondratiev translated as an epigraph to this study and translation, adumbrates many of its themes in an almost prophetic way and was written seven years before the Revolution (though published,

³ O. Sedov provides the chronology of the writer's life in: *Kondratiev A. Сны*, СПб., 1993 (с предисловием О. Седова); there are some more details in V. Key'd's introduction to *Kondratiev A. Завет*. Here I express my gratitude to my old friend, the acclaimed present-day Petersburg poet Elena Danayevskaya, for her gift of Sedov's lovely volume. May this small study and translation be a modest offering of thanks for the wonderful hospitality of her home and the pleasure of her extraordinary company (and that of her regal cat, Ricky) at Nepssa Pesna (Black Small River) in November 2012.

⁴ The device of coming upon an actual place now dead and in ruins that had first appeared in a dream as living and whole is encountered in the work of a contemporary writer whom Kondratiev could not have known. The American writer of horror and fantasy, H. P. Lovecraft (1890–1937), constructs the fabulous prehistoric city in the Antipodes of his story «The Shadow Out of Time», which was published just a year before his death, in a sequence of dreams; and the narrator at the end comes upon the actual ruins and an ancient book written in his own hand in them. Lovecraft did not believe in the supernatural; so in his tale the narrator's mind is taken in time travel by an alien intelligence that swaps its body for his for a period of time in order to study the human culture of the early 20th century.

as irony would have it, posthumously). In it one meets the souls of the dead wandering through sere parks and long-deserted halls in moonlit dream visions. And they declare themselves «the dream that did not come true about a bright fatherland», even though Kondratiev was yet to know the sorrows of exile.

The work is structured as a narrative set down in old age, consisting entirely of conversations recalled by the narrator; and even the latter refer mostly to memories of dreams told by others. The locus of these dreams is at first an imaginary landscape whose only reflection in the «real» world of the narrative foreground is a painting — and the artist who made it is deceased. Then it is a satanist temple seen by an artist in successive dreams; but the description provided turns out in fact to have been recast into a coherent narrative by an intermediary interlocutor, placing the scene at a tertiary remove from reality. The artist who saw the temple appears towards the end of the novella, and is invited to imagine the scene of the ruins of a stately home in the Crimea, this time not on the basis of a painting but of a poem describing such a spectacle in reality in the cycle «Крымские эскизы» («Crimean Sketches») by the 19th-century Russian poet Alexei Konstantinovich Tolstoy (whose initials with patronymic but without family name, AK, correspond to Alexander Kondratiev's initials without patronymic — and he used AK as an abbreviation or *nom de plume*, perhaps in homage to the admired poet). And this scene may have affinities to an actual painting — Apollinarily Vasnetsov's «Элегия» («Elegy») — which is typologically the precursor of his late-life canvas «Sound of an old park». And that picture, in turn, resembles the fictional one with which the novella begins. The lines that divide dream from waking, painted landscapes from real ones, and even poetic evocation from prose description, are all blurred or forced into recursive or synchronous patterns, in such a way that there is no longer only art for art's sake, but reality for art's sake — reality made subservient to art. And, in a way, that is exactly what a dream does, insofar as it is an experience that is also a composition. Kondratiev has thus, it would seem, placed his tale at so many removes from the representation of reality that is supposed to be the ground of a conventional, classical, narrative that perhaps a disgusted Socialist Realist Plato would have to invent a new metaphor of the cave in «The Republic» to account for all the layers of illusion!

Though the novella is peppered with references to *fin de siècle* Decadents, Symbolists, occultists, and satanists, the actual magic of the novella inheres, not in references to rituals and arcana, but in the artful construction of the text itself. Kondratiev, like Nabokov, is the *vol'shebnik*, the sorcerer and enchanter. He has taken reality and charged it with additional, subjective meaning through use of, or reference to, multiple forms of artifice. The philosopher Hans Jonas in his essay «Image-Making and the Freedom of Man» suggested one can conclude a creature is a man from seeing that it can make a picture, because «in the pictorial representation the object is appropriated in a new, non-practical way, and the very fact that the interest in it can shift to its *ekdos* signifies a new object relation»⁵. He goes on to specify that this likeness is not and must not be complete. Dreams remembered and recast as stories upon waking, paintings, and poems are thus all mental acts that force perception into a subjective relationship with the phenomena of space and time. And the act of recollecting a dream is an artistic ordering, a narration that is also never entirely complete. For some features of the dream are, inevitably, forgotten or omitted — or, if they are irreconcilable with the sense of the retelling, altered. This makes man, and not the thing, the focus: it is humane rather than utilitarian, an effort to assert meanings, even invented meanings, in the face of nihilism.

⁵ Jonas H. *The Phenomenon of Life: Toward a Philosophical Biology*. New York, 1966. P. 159. This formulation by H. Jonas, who saw the great turning point in human thought in the invention of a god who exercises concern, makes art a similar action of concern rather than a soullessly materialistic process of blind imitation. Sight then becomes a moral quality, saved from the worship of surface appearance that is idolatry. So Philo Judaeus believed Israel saw the voice of God (which Ishmael, as his name indicates, could but hear); see: *The Ten Commandments in History and Tradition* / Ed. by Ben-Zion Segal. Jerusalem, 1990. P. 116–117. H. Jonas, who is perhaps best known for his lucid survey «The Gnostic Religions», was a pupil of Heidegger; and Richard Wolin has argued convincingly that much of the thought of the German Jewish refugee scholar about ecology and the importance of caring evolved in reaction against the background of his teacher's hideous emergence from the chrysalis of German academe as a Nazi.

When Kondratiev's narrator finally sees the real and ruined manor house, he searches for a figure traced in a dream, and finds it.

Everything in «Dreams» is in the past, every important character except the narrator is dead and gone, nothing is verifiably real, and — except for the drama of the dreams recollected by the characters in recitations — nothing happens. Much the same might be said of course of Vladimir Nabokov's «Lolita», where the only «living» character is the fictional psychiatrist of the preface: all the others are dead and the entire novel is a narrative recited by one of them. And the title character, that cunning, lubricious, lethal nymphet-hybrid of the ancient Semitic demoness Lilith and the pagan Slavonic goddess Леля (Lel'), could have stepped out of a salacious Kondratievian reverie of Asherahs and pycанки. Yet Nabokov's novel is perhaps the greatest artistic exploration of personal cruelty, mutual incomprehension, indifference, and crushing loneliness ever attempted, using a modicum of mythological material to create a moral narrative deeply engaged with the new surroundings of America that the Russian writer embraced with such passion and perception. Kondratiev's work, by contrast, might seem as brittle in its nostalgia and stale artifice, as chillingly (or innocently) free of moral affect, as the blank eyes of the white marble idol of a pagan demon. But one can also see his tenacious pursuit of the dream, his careful hoarding of memory, and his aesthetic manipulation of consciousness, as an exaltation of the sovereign demiurgic power of the individual, of the intimacy of creativity. It is an attempt to transcend the horror and misery of an age of war, revolution, destruction, and exile — the working of a defiant personal magic against a dark and demonic social reality.

The use of dreams in literature is as ancient as writing, and seems to come together with a taste for exotic settings and extravagant effects: in a Persian romance summarized in the «Deipnosophistai» of Athenaeus, for instance, the lovers Zariadris and Odatis meet through shared dreams — a type that Kondratiev explores in his novella⁶. Russian literature abounds in dreams: in «Eugene Onegin» Pushkin devotes much attention to ethnographic details on dream interpretation and the like in the sequence on Tatiana's dream. In «Boris Godunov» the priest Pimen dreams of the feasts and battles of his youth, and counsels a younger cleric to fast and pray in order to forestall such visions. (Kondratiev's characters, occultists and satanists, seek out such dream-adventures rather than avoiding them.) The *locus classicus* for the dream about a painting that exists in the waking life of the narrative and acts upon the dreamer-protagonist is N. V. Gogol's «Портрет» («The Portrait», 1835, revised in 1842), in which the hero Chertkov lives in a state of *полупробужденности* («semiconsciousness») and *полусновидения* («semi-dream-vision»)⁷. Alexei Remizov, a contemporary of Kondratiev, could as easily have been describing the latter's *oeuvre* when he wrote of Gogol, in his «Ороч. сны» — from which the epigraph to this essay is drawn — «All of Gogol's works... can be conceived of as a series of dream visions with awakenings while still in that dream»⁸. Kondratiev's contemporary, the Symbolist poet Valeriy Bryusov, has the hero of his «В башне» («In the Tower», 1902–1907) wonder which is real, the writing-desk at which he is recording his narrative, or the story itself — a dream of imprisonment in the straw-strewn dungeon of a castle (cf.: the

⁶ See, with references: Russell J. R. *An Epic for the Borderlands: Zariadris of Sophene, Aslan the Rebel, Digenes Akrites, and the Mythologem of Alcestis in Armenia* // *Armenian Tsopik/Kharper* / Ed. by R. Hovannissian. Costa Mesa, 2002 (UCLA Armenian History and Culture Series, Historic Armenian Cities and Provinces. 3.). P. 147–183. It is worth noting that the central vision of the *Gdāls*, or «Songs» of the Prophet Zarathustra — the earliest known poetic cycle in world literature whose human author names and describes himself — takes place *svdno* «in a dream».

⁷ As though the satanic element were not obvious enough, the name of the corrupted hero contains Russian *sepr* (devil). This is common enough in Gogol that it is unlikely to have been a coincidental choice. In «Илиссес» («The Overcoats») poor Akakiy Akakievich (whose Christian name, Acacius, seems to contain childish *kaku* «shit») is nearly named Mokkii, Sossii, or Khondazad (Mocius, Socius, the Sasanian martyr Xwadodad) — saints' names that in Russian evoke *соеппа*, coars, and *защипа* — wetness, sticking, and a pair of buttocks.

⁸ Cited by M. R. Katz (Katz M. R. *Dreams and the Unconscious in Nineteenth-Century Russian Fiction*. Hanover, 1984. P. 66) whose translation of *сновидения* I have changed from «dreams» to «dream visions» (Russian *сон* is cognate to other Indo-European words meaning «sleep», including the English; but *вид-* means quite specifically «see».) And Gogol's hallucinogenic Russian landscape is dotted with wonderful, corrupt little hamlets like *Бухарь* Cнег and *Кухня* Чрезмерна — «Lousy Prides» and «Hotcakes All Gones».

castle-like building in «Dreams»). The Symbolists, heirs of Gogol, bequeath to the subsequent literature of the absurd the theme of the captivating dream that is more powerful or even more solid than the waking state. In his «Сон» («A dream», 1926) Daniil Kharmas has a character dream the same thing over and over in ever more bizarrely illogical iterations till he is no longer capable of waking life and is discarded with the trash⁹. These dreams are all grim. Pushkin had tried to cheer the imprisoned Decembrists:

Believe me, comrade, it will rise,
That star of captivating joy:
Russia will spring up from her sleep...¹⁰

But a century later K. D. Bal'mont (1867–1942) could write in exile the poem «Длнный сон» («A Bad Dream»):

It seems as though I never left Russia
And that no change could ever happen there,
And that she had both doves and serpents wise,
And a host of wolves, and long, long prison walls...¹¹

V. V. Nabokov, who considered himself as much a poet as a prose writer, chose to engrave in the glass of the window in the guest room of his friend Edmund Wilson the poem «Расстрел» («Execution by firing squad») that begins so wistfully, like a child's dream of an enchanted kingdom, a Narnia in the wardrobe:

There are nights when as soon as I lie down
The bed sails off to Russia¹².

But it continues: they are leading him to a ravine to shoot him, and «bed» (кровать) rhymes with «kill» (убивать). He wakes in terror, but part of him still wants to be home, with the racemosa (черемуха) in bloom in the ravine on the night of his death. «Приснилось как лучше, а проснулся как всегда», one might say, «We dreamed of better but awoke as usual» — paraphrasing Chernomyrdin's quip on the Russian reality that always seems to tag along as the dismal shadow of the bright Russian Idea.

The interaction of writing and painting is ancient: cf. the Greek literary convention of *ekphrasis*, which Old Russian literature inherited by way of Byzantium. And in pre-Revolutionary Russia paintings with a message of doom find their verbal echo. In Kondratiev's own day and circle, the poet and philosopher Vyacheslav Ivanov based an essay on the painting «Terror Antiquus» (Pl. 2) by Leon Bakst, a member of the World of Art movement (on which see *bywa*). Bakst began the painting in the revolutionary year 1905 and completed and exhibited it three years later: the canvas depicts the destruction of Atlantis in flood and lightning, seen from far above: in the foreground, facing the viewer is the immobile statue of a Greek *korē* or goddess with the enigmatic «archaic smile» on her lips. With her back to the tragedy unfolding far below, she would be coldly indifferent even if shown as a woman, not an idol. Ivanov interpreted the scene — or took it as the starting point for an idea of his own — as the condign doom of a society that had embraced

evanescent portrait that the mirror paints, changes one's state and one's place. Kondratiev seems to suggest that the work of art plays an active, even fatal, role in the life of its viewer, and that reflection (another way of creating a two-dimensional image, which is by its nature incomplete and therefore in a sense arbitrary and creative) has a formative impact on the three-dimensional world from which it is distilled. And here too one recalls Gogol: a young priest forced to read the Psalter for three nights over the corpse of a young witch survives terrifying visions of demons who cannot see him till the monster who gives his name to the story, «Буѣ» («Вѣ»), is brought in. The creature is a monstrous lidded eye. It beholds the youth, and the spirits rush in and kill him. Sight itself becomes the actor — the killer.

Could Kondratiev's «Dreams» have been inspired by works of art he had actually seen? As I began to read «Dreams» I realized I had seen, long ago and in real life a Russian oil painting uncannily like the fictional Russian watercolor that occupies the first half and conclusion of the narrative. Even the sense of everything being a reverie of the past is conveyed by the oil painting's details, and by a version of its title. The painting is «Звук старого парка» («Sound of an old park») by Apollinary Vasnetsov, Moscow, 1926 (Pl. 3). It is most unlikely that Kondratiev, already in Rovno, ever saw the canvas or heard about it, though he most likely knew the artist's other work, because of their shared interest in Russian antiquity; and a much earlier work, «Elegy», that prefigures the 1926 painting, can perhaps be seen through the citation of a poem in the novella that describes a Crimean scene. It would seem that both men, the writer and the artist, fairly conservative practitioners of their crafts, reverted in old age to the common vision of a world and way of life they had known, one that was now lost forever because of the Revolutions of 1917; and found premonitions or

the patriarchal and the abstract and forsaken the earthly and maternal values Christianity had ostensibly contributed to Scriptural religion¹³. One can take issue with this idiosyncratic «reading» of the painting; but the main thing is the engagement of a contemporary Russian writer with a rather decadent painting that focuses, as Kondratiev always did, on the supernatural feminine power.

One has dwelt on the static aspects of Kondratiev's work, the passivity of the narrator and the other characters. But that is perhaps not the most useful perspective from which to discuss the novella. For the painting itself is the dynamic actor, and becomes the occasion for more dreams and further descriptions of their scenes. It grows, literally, out of its limits and dimensions, as the dreamer sees some details of the landscape that are beyond the frame or on the other side of — behind — the images visible on the flat canvas. The landscape of the painting expands and engulfs the dreamers. Kondratiev elaborates this theme with his use of mirrors: the narrator of a dream explains that he is transformed into a stag as he looks into a mirror; when as the metamorphosed animal he is cornered by a huntress, he is returned to the waking world by looking into the polished metal surface of the shield she carries. The picture forms a world for its viewer; and within that world the more

Pl. 3, Apollinary Mikhailovich Vasnetsov, «Sound of an old park», 1926

refractions of loss and elegiac emotional response to it in scenes from earlier in the 19th century. This confluence of visions and themes is logical, and not unique. The likelihood that affinity rather than causation links the fictional painting in the story written in eastern Poland to the real one in an artist's studio in Soviet Moscow (Pl. 4) makes the coincidence more, rather than less, interesting. But if there really were synchronicity, the acausal connecting principle Jung was pondering at the same time. Yes, and what then?

Pl. 4, A. Vasnetsov's studio, Moscow

Coleridge merely poses the question coyly, in his musings upon the dreamer waking with the flower of Paradise of his sleeping vision in his fleshy, waking hand. But Russians venture more boldly. Fr. Pavel Florensky introduces the reader to the icon, in which the true Otherworld finds its window into this insubstantial and evanescent one, at the beginning of his study «Иконоста́с» («The Iconostasis»), not with a consideration of painting but with an intricate and empirical meditation upon dreaming, as another window of that world beyond the linear sequentiality of time-space. He notes that when an external stimulus intrudes upon a dream, the dreamer has prepared for it in advance, thematically and typologically. I am sleeping, for instance, and a bell outside rings. But in my dream a bell tower about to chime has *already* — and therefore achronically — been worked harmoniously into the plot. Kondratiev is to visit in the foreground, the «real life» of the novella, the imagined estate of painting and dream. And there he is to find the monogram scratched there by a dreamer long dead, with a reply by a dead girl: Coleridge's flower, but a bloom wilted by mortality.

2. THE ARTIST

Apollinariy Mikhailovich Vasnetsov (Аполлина́рий Михаи́лович Васнецов), a younger brother of the far more famous academic painter Viktor Vasnetsov (best known for his iconic carves of three Old Russian knights), was born 6 August 1856 in the large and happy family (possibly of ancient Novgorodian stock) of a Russian Orthodox parish priest in the village of Ryabovo, in the *guberniya* of Viatka. His youth was unremarkable and quietly successful: he went to St. Petersburg and studied art under the tutelage of his brother Viktor in the 1870s; and in 1900 was elected an academician of the Imperial Academy of Arts in the capital. He joined the Union of Russian Artists (Союз русских художников) in 1903. Vasnetsov was an accomplished graphic illustrator, and in 1897 had done the sets for Musorgsky's opera «Хованщина» («Khovanshchina»), but is best known for his paintings of historical scenes of old Muscovy and of estates outside the ancient capital, as well as landscapes — from the Crimea to the Siberian taiga and Kama river. Vasnetsov associated with the circle of the benefactor of the arts, Savva Mamontov, at the latter's estate outside Moscow at Abramtsevo. Though an academic painter of the old school, he refused to condemn as decadent the World of Art (Мир искусства) movement with its connections to the Symbolists, *art nouveau*, and the occult, and unlike some other academic painters agreed to participate in their exhibition, writing «I am an enemy of decadence but have not become so senile as not to tell the shell from the kernel, that is, to be unable to distinguish between decadence and progress in art...»¹⁴. But he later broke decisively with World of Art. Vasnetsov spent most of his working life in Moscow, and seems to have come to terms with the Revolution, serving on the Moscow historical commission through the 1920s. But the hostility of the atheistic new order to Russian tradition was still intolerable to him; and he is reputed to have been the only artist publicly to protest the demolition by the Stalinist regime of the giant Cathedral church of Christ the Savior (Храм Христа Спасителя) in Moscow. He died peacefully after a long illness in 1933.

In 1926 Vasnetsov executed an oil painting on canvas, «Ильм crapopo napka» (Pl. 3), 106 x 176.5 cm, now displayed on an easel in the studio of the apartment-museum of the artist at Furmannyi pereulok 6, Moscow. The Russian word *urym* in the name, basically a loud sound, a noise, is hard adequately to render into English in this context. It is not necessarily discordant and has not the animal association of a feral roar. Pushkin in the novel in verse «Евгений Онегин» («Eugene Onegin») describes the Russian countryside in late October:

The secretive canopy of the forests
With a sad *urym*/sound was denuded¹⁵

¹⁴ Беспалов А. Аполлинарий Михайлович Васнецов, 1856–1933. М., 1956. С. 58.

¹⁵ Лесов таинственная сеть
С печальным шумом обнажилась

Pl. 5. A. Vasnetsov. «Elegy», 1893

In the poem «Медный всадник» («The Bronze Horseman») he evokes the «блеск, и шум, и говор башен» («glitter and шум/sound and talk of bashes»). So the «Шум (Sound) of an old park» (henceforth to be abbreviated as «SP») conveys the loud rustling of leaves, the soft and mighty roar of a forest vexed by wind, and although the foliage is green in the painting, the proof text from Pushkin in a Russian reader's mind conveys the possible added overtone of an approaching autumnal senescence. This would be relevant to the subject: one Soviet reproduction of the painting I remember from the Barnard Slavic Department common room in my own distant youth — the early 70s of the last century — had this title, «Шум старого парка (все в прошлом)» («The Sound of an old park (all in the past)»). I have not found since then this form of the title, with the reflective parenthesis. But that explanation seems to force itself upon every interpreter of the canvas as surely as a written text. This is how the author of a monograph on the artist describes the painting, for instance: «Late dusk. By a pond, on a stone bench, his back to the viewer, sits a grey-haired old man in a posture of thoughtfulness. In the house surrounded by a park, the lights burn. There, life goes on, perhaps a youthful revel: for them, all is ahead, but here... only the hollow roar of the trees and the implacable, cold wind blowing off the vexed steely-blue waters of the ponds». She considers the painting qualitatively to stand apart (особняк) from other works of the artist in the period, despite its somewhat garish colors, and considers it the elegiac work of an aging artist feeling his powers waning with disease. But in its general composition and important details it is clearly a development, she notes, from the much earlier canvas «Элегия» («Elegy», 1893) (Pl. 5)¹⁶. This painting depicts a man resting on a stone bench, back to the viewer, sunken in thought, as in «SP», though here his black hair has not yet turned white. He gazes out at the Black Sea, not the pond of a cold northern estate, and a rosy dusk

¹⁶ Басистова А. Александр Михайлович Васнецов. С. 57 + рисунок.

touches the mountain ridges of the Crimea. But there is still a tinge of loss, for the setting is a cemetery dotted with squarish tombs and a funerary chapel crowned by the Cross, with the white statue of a winged angel at its door. A single votive lamp (свечница) gleams there. Stately, dark cypresses rise from the gentle sloping lawn. These are southern trees, but also funerary ones: one is reminded of Böcklin's romantic «Toteninsel» («Isle of the Dead»). «Elegy» is imbued, then, with a kind of necromantic *Weltschmerz* very much at variance with the boisterous spirit of his paintings of life in Muscovy; but it is the kind of painting Kondratiev and his circle could well have known. Kondratiev probably never saw «SP», but it is quite possible he knew «Elegy» and even associated it with the elegies of the poetic cycle «Crimean Sketches», which he quotes at length in «Dreams», even citing material from the notebooks of the author, A. K. Tolstoy, about whom he published, as we have seen, a scholarly study.

«SP» continues to be «read» by recent viewers as it was two or three generations ago. A recent writer on the artist has interpreted «SP» this way: «In 1927 a one-man show was held to mark the fiftieth anniversary of Apollinariy Vasnetsov's artistic life, as it were summarizing his work of many years. The artist being celebrated prepared several new landscapes for the exhibition, perfect in execution and intensely lyrical. But the most striking of the canvases displayed was «SP», which, by the painter's own admission was an epilogue of sorts reflecting the whole of his creative journey. «SP» is a painting that is a reminiscence of the lovely Muscovite estates where Vasnetsov had lived and worked, of his unrecoverable youth. Evening is coming on. A ray of the setting sun, as if in a gesture of parting, has gilded the treetops, but a sudden gust of wind heralds nightfall. A grey-haired old man is seated on a stone bench in an attitude of profound thought: gazing at the ripples vexing the surface of the pond, he thinks of many things. The images of years gone by pass before his eyes: the cozy home in Ryabovo, the corner of the attic where little Apollinasha took his first steps in art; Vyatka, the handsome, black-eyed Andriolli [Vasnetsov's first tutor] and the ABC's of drawing; the glitter and throngs of Petersburg; and much else... It would seem all is past, yet light streams out of the windows of the house upon the hill as ever, and the strains of music are wafted to him. There, a fresh, young generation laughs and rejoices in life. Apollinariy Mikhailovich Vasnetsov died on 23 January 1933 in the seventy-seventh year of his life. He was buried in the Vvedenskoye cemetery alongside the grave of his brother, friend, and teacher Viktor Vasnetsov»¹⁷.

«Elegy» is a fairly straightforward painting that would fit easily into a World of Art exhibition or album, with its exotic setting and morbid overtones. But «SP» is compositionally and thematically more complex and subtler. Five objects of human artifice are connected in a semicircle broken at the left edge by forking paths: clockwise, the first is the square balustrade at the top of (invisible) stairs leading down to the pond, at about five o'clock. An ornamental urn (one notes the funereal association) stands at the edge closer to the viewer's position. On the other edge is a stump where its partner has broken and vanished (death and loss again). At six o'clock is the old man. He sits on a stone bench formed of a circle and square and rests his weary right elbow on a broken fragment of sculptural bas-relief. Behind him on a circular base is a tall pale statue, cousin of the angel in «Elegy». The path linking all these leaves the painting to fork and re-emerges above, fringed by a dark straight line of trees. (The edge of the pond is straight, too, underscoring the theme of nature shaped by human artifice.) On a rise at about ten, reached by the path, is the big square mansion, lights blazing, curtains billowing. Beyond it the path forks again, leading on the left to a round, open colonnaded pavilion or gazebo (беседка). The latter explains, in case you still have not understood, «I am a typical Russian country estate». These pavilions are as ubiquitous in the art as in the reality of the pre-revolutionary nobleman's country spread. One may cite for instance G. V. Soroka's painting of Spasskoye: in the foreground is a pond with the straight line of a dam. The house and trees are behind, and the round, domed, open-sided, colonnaded little gazebo, the беседка, is to the right. Or there is the identical type of pavilion, rather grandly designated the Temple of Venus (one can

¹⁷ Вольф Л. Аполлинарий Васнецов. М., 6. с. С. 47.

but hope the dalliances that transpired there lived up to the name), of the early 19th century above the lake (of course) at Sukhanovo¹⁸. In 1880–1886 Vasnetsov himself painted «Вид усадьбы, Ахтырка» («View of an estate, Akhtyrka»): in the foreground is a pond; trees to the left partly conceal a terrace with steps; and above and center is a colonnaded white building half-hidden by trees. It is practically the same landscape as «SP», except in sunnier, summery weather, and without the old man seated pensively on his bench¹⁹.

So the setting of «SP» is not in the romantic Crimea, in the Muscovite past, or in distant Siberia: the landscape is that of Vasnetsov's own life, at its heart. The objects along the road are the loci of events in that life, remembered counterclockwise: love, sociability, art, thought, and at the end of the path (at which the old man may be gazing pensively, unless he is peering wistfully at the distance ball in the manse), the *descensus ad inferos* down those steps capped by the bereaved urn, into the Otherworld of the lake²⁰. The forking paths will remind the reader (and American readers, of Robert Frost's sententious verses, pounded into our poor heads in childhood, about the road not taken) of the hackneyed metaphor of choices taken in life. The aged artist walked his path: perhaps a romantic dalliance in the temple of Venus, *soirée*, then the dark of the woods and all that followed, all in the unrecoverable past (signified perhaps by the break in the road at the left edge of the canvas). But, like the tamed

Americans would probably regard these little structures as quaint, Victorian, and even silly; the illustrator Edward Gorey's dapper young decadents, after dismal walks through menacing parks, repair to a «skens» to find the tea cakes iced a sinister shade of green.

¹⁹ Борис Г. Антонович Басинин. С. 4.

²⁰ But what if one goes down the steps into the lake of a painting? Perhaps the wonders of Atlantis, or of H. P. Lovecraft's submarine cities Y'ha-nthlei and R'lyeh, await one below the waves. (I shall return to H. P. Lovecraft in commenting on the device of the monogram found at the end of «Dreams».) Here I recall a very different painting indeed, yet one that has strong compositional and thematic affinities to both Vasnetsov's landscape and Kondratiev's fantasies of submarine *oceanus* and *pycnos*. In the spring of 1971 the American psychedelic artist B. Johansen made a poster for the New York rock and roll radio station WPLJ (95.5 FM) (PL 6). It depicts a vast man in starry cape and hood rending the veil of the sky, an vague expression of delight or wonder on his face. Below him is an overgrown landscape with cypresses and mansions. A winding stone staircase with a pinkish carpet winds down between two liana-wreathed columns to a milky-blue, roiling pond. On the column in the foreground is the statue of a winged humanoid figure facing away; on top of the other column is the image of a curving fish with open maw. Two gorgeous sea serpents with human heads and torsos are playing in the water; and a girl's smiling face peeks through the gigantic, fabulous flowers that grow out of the lake. Generally the archetype of the steps is of ascent to supernal realms, cf. the ladder of St. John Climacus. But the reversal of the motif relocates the Otherworld, it would seem, downwards and into the waters beneath at the foot of the stair.

landscape, the milestones shaped by architect or sculptor, so the very painting itself is the artist's own creation, the representation of reality shaped by his imagination — as a dream is.

But the title of the painting says none of this, and refers to one the thing the medium of a picture can allude to in various symbolic ways but cannot really convey: sound. Thus the written words of the painting's title are meant to perform a kind of magic akin to that of the writing *about* a painting in Kondratiev's novella. They enchant the perceptive powers of the viewer, enabling his consciousness to imbue the colors and forms canvas with the quality of living sound, of the sentient roar of an enchanted forest rising round the vexed waters of a lake where an old man waits dreaming. Словни, саово, снаса: the ekphrastic novella becomes the *nightingale* of bygone ages, giving voice to the painting and imperishable *renown* to its mortal maker and seer and dreamer.

3. ALEXANDER KONDRATIEV «Dreams»

When I was young and worked for one of those institutions of the pre-revolutionary Russian establishment, a place that had little in common with my poetic inclinations, I happened once to be visiting a colleague from work, Fyodor Nikolayevich Gosh, a man with whom I shared many of the same interests. True, he did not write verses, but with his command of several languages he followed with great interest all the new works of European literature that were appearing then. Gosh never missed an exhibition, subscribed to two or three art magazines, composed a handful of pieces for piano, and, to top it off, took an interest in the occult sciences. At that time the latter were in fashion and every self-respecting «decadent» prominently displayed the requisite volume of Eliphas Levi or Stanislas de Guaita²¹.

I enjoyed visiting Fyodor Nikolayevich. It was pleasant and interesting to listen to his quiet but animated discourses on the latest in art. I was interested also in the rare books he sometimes borrowed: volumes bound in red calf with a crowned monogram stamped on their covers. My co-worker used to obtain these to read for a short time through some secret channel, from what, it seemed, might have been the Imperial library itself.

I was obliged to Gosh also for my acquaintance with the work of French writers not yet well known then such as Barbe d'Oreille²² and Villiers de l'Isle-Adam²³. I remember as though it were now the Elsevier editions he supplied to me from his bookshelves.

Fyodor Nikolayevich was married but I never saw his wife, as she lived permanently abroad somewhere. But the absence of a housewifely hand did not tell on the order that reigned in the apartment: not a speck of dust was to be seen on the red wooden bookshelves or the cabinets with their Japanese and Italian vases. The books on the shelves were ranged in strict order, there were no stray cigarette stubs anywhere, and the writing desk always looked as though it had just been tidied. This last particular, though, might have been because of Gosh's sociable habits, which left him little time to write. An elderly lady of stern countenance who had assumed the role of lady of the household of my co-worker managed all matters of order and cleanliness.

Everything in Gosh's apartment occupied a place that, once determined, was eternal: new books and journals lay on a round table covered by some sort of antique cloth; albums stood on the lower and middle shelves of the cabinets; and a small collection of Italian engravings hung on the walls.

For this reason I was very surprised to see a certain rearrangement of the etchings to make room for a watercolor landscape in a reddish-brown frame.

²¹ Eliphas Levi (Alphonse Louis Constant) (1810–1875) and Stanislas de Guaita (1861–1897), were French writers and practitioners of magic and the occult.

²² Jules Amédée Barbey d'Aurevilly (1808–1889) was a French writer of late Romantic and Decadent tendencies.

²³ Jean-Marie-Mathias-Philippe-Auguste, comte de Villiers de l'Isle-Adam (1838–1889), was a French Symbolist writer.

I was unable to find a better place to display the fruits of my musical profits: Davingof recently paid me for four pieces at once, so I gave in and forked out for it... But come to that, had the picture cost five times as much, I would still have contrived to obtain it somehow,» said Fyodor Nikolayevich with a tone of uncharacteristic agitation, having noticed the surprise on my face.

I approached the landscape on the wall and commenced to scrutinize it more closely. It depicted a stone terrace whose white steps descended in the direction of the viewer, to water. Greenish bronze censers stood on either side of the marble balustrade. Two owls of the same color gazed from niches on the walls flanking the stairs. Farther on was an old, overgrown park (срапый паросущийся парк). Behind its trees were visible the upper part of a façade and the jagged towers of a palace or fortress.

The landscape seemed familiar to me. I recalled that I had seen it some weeks before at an exhibition, in a room dedicated to the work of an artist who had died recently. But there had been nothing that particularly stood out in the watercolor, neither in conception nor in execution, by comparison with the scores of similar pieces that were being offered posthumously for sale in order to provide a sum of money for the family of the deceased to tide them over in the period immediately following their misfortune.

«Fyodor Nikolayevich, you most likely knew this Stepanov, poor fellow,» I said, naming the artist whose signature I had discerned in the right-hand corner of the painting, «though I have never heard you say anything about him»

«I heard his name for the first time only when I became interested in this picture. At the thought Stepanov had already died I was beside myself with annoyance. I recently hastened to find out whether he had had a family and learned only that the deceased was a bachelor, and that the sum realized from the sale of his canvases and studies are to go to his young sister, who lives somewhere in the provinces. And nobody could tell me a word about where and when this study was done!»

«Why were you so taken with it?»

«O Lord, why — why, because I swam up to these steps with horns on my head, galloped up them onto the terrace, and still had time to cast a glance to either side. And everything was exactly as it is painted here!»

I gazed intently at him as he spoke. Fyodor Nikolayevich, noticing my stare, continued in quieter tones, though agitation still visibly seized his slender frame.

«Of course it was just a dream, but it was not an entirely usual sort of dream; considering its consequences, it was even a tragic one. Do you recall Arbuzov? You met him more than once at my place»

«That very plump, jolly blond fellow? The music lover and composer? Who seems to have been notable for the reprehensible style of life he led? Who died about a year ago?» I tried to recall.

«Everything you say is true. Arbuzov passed away the same night I saw him in a dream, in the park depicted in this very painting».

Fyodor Nikolayevich was unrecognizable. He stood, rising to his full height. The stooped posture he had acquired by always sitting hunched over engravings and books, had vanished somewhere. The black eyes in the face with its rosy blush glittered through the glare of his pince-nez. At that moment, Gosh was even handsome. He continued.

«I've known you for a long time and hope you will not start constructing tempting analogies between the dream, with its absurd metamorphoses, and my family life²⁴. Therefore I consider that I may be entirely candid with you. Not long before the dream I want to tell you about, I had received an important and rather unpleasant letter from abroad. Wanting to banish my gloomy thoughts, I fell in with the company of that likable but dissolute Arbuzov. The dear departed used to regard himself as a Nietzschean, then a satanist; and in all matters strove to be an eccentric. But he succeeded poorly at this. The company of his in which I found myself one evening did not correspond entirely to my tastes and habits, on account of which I had only a little to drink and then, pleading a headache, went home earlier than is generally

²⁴ Presumably a reference to «The Interpretation of Dreams» by Freud.

the rule for such occasions. But when I arrived home I felt for real a kind of heaviness in my head and feet — because, as I now suspect, Arbuzov had most likely slipped a few treacherous drops of something into the wine or the coffee. I remember the disappointed expression of my acquaintance when, despite all his pleading and persuading, I had resolved to leave. At home I went to bed, quickly fell asleep, and in my dream beheld Arbuzov himself. He and I were walking along the side of a very wide road overgrown with grass in places and edged to either side by a forest of tall old trees [высоким старым лесом]. I remember one particular as though it were today: to the left of us, in a broad cutting there lay, smoking, a few felled trunks, stripped of their branches and smoldering in places. At the same moment we noticed lone wolves loping now and then across the road, sometimes behind us, sometimes ahead.

«Hoping perhaps to be rid of the animals we turned off the broad, main road onto a narrower one cut into a sandy, wooded slope. Here, too, tall and sturdy trees stood to either side, somewhat recalling an old park gone to seed [старый запущенный парк]. On the ridge of the hill by the edge of the path one could see the tops of stone arches choked with earth and sand almost to their keystones. The wolves we had encountered on the road skulked in these arches as though in lairs; some of them crept back out and stared after us.

«I do not remember how we already found ourselves in what was definitely a park, with avenues, ponds, and beautifully distributed stands of rare trees. The servants we met, whose faces I do not recall — as is often the case in dreams — surrounded us, divided us from each other, and led us off in the direction of a nearby castle, the very same one depicted in the painting.

«At this point some invisible person said to me that the owner of the castle was a wizard and an enchanter. They conducted Arbuzov to him before me, leading him away through different doors, since I did not see him there again and heard only later on that the wizard had transformed him into a boar: he was stuck, roasted, and given to somebody to be devoured. Sometimes it even seems to me that from far off I heard his despairing shriek, like the squealing of a pig being slaughtered.

«Then my turn came. They led me into a smallish room on the second floor, where an elderly man sat. He was grey-haired, of medium height, dressed in an elegant gray robe and a colorful skullcap or yarmulke. He had a passing resemblance, I recall, to the poet Sologub. But I was not to examine him for long. They brought into the room a mirror with an intricate silver frame, and the old man suggested I look into it.

«Though a hidden inner voice cautioned me against peering into that mirror, for some reason I was unable to restrain myself, and looked. At exactly that instant somebody alongside me said 'Be a deer!' and the horned head and muzzle of a stag stared back at me from the bright, polished surface of the mirror. Thereupon they drove me out and conducted me into the park, where I began contentedly to graze on the bright green grass of the lawn.

«I do not remember how long I wandered through the park. It seemed to me that I had been there a very long time, and had acquired a thorough knowledge of the disposition of all its nooks and groves, its hills and paths — when all of a sudden I heard the barking of dogs and the bellow of a horn. And once more the secret voice within me explained that this was the daughter of the sorcerer — the owner of the castle painted by Stepanov — riding to the hunt. The sound of the baying of the curs was louder and closer. I realized the dogs had picked up my scent. Rearing my head, I galloped away from them. Meadows and clumps of trees flashed past me as I ran with giant leaps, trying to outdistance my pursuers. But the barking of the dogs and the trumpeting of the horn drew ever closer.

«When the dogs were already very close and began to jump in from both sides, trying to surround me, I flung myself into the lake depicted in the picture, and swam past an islet with a gazebo [беседка] outside the frame of the painting, towards the white terrace. I remember how the owls in the niches loomed larger and larger. Beneath these niches were iron rings for mooring boats. See: he has painted them, too. I remember how my hooves clattered on the marble steps to the white terrace as I leapt from the water and bounded upwards. Shaking myself off, I saw the stone bench on the other side of the parapet. Right there, in that

corner, it is a little broken and covered with velvety green moss. You cannot see it from this side. On that side of the terrace and around it grew strange roses of some kind with darkish bands on their petals.

«But I did not have time to study all this in detail, since the dogs, swimming after me, were already near. I took flight again, galloping down this avenue, then veering right from it, where the landscape became hilly. The dogs caught up with me again and tried to trap me. I remember how I kicked at one of them with my rear hoof: it flew into the air and fell somewhere behind with barely a yelp. But then I heard the call of the horn again, and the wizard's daughter rode towards me at a gallop, having come around the lake. As far as I can recall, she was a beautiful brunette in a dark dress with a tightly buttoned velvet jacket. A small, glittering metal shield was strapped to her left side, and she gripped a lance in her right hand. The huntress rode at me, just about to cast her spear, but at that very moment some mysterious power compelled me to look at her shield, which shone like a mirror.

«I had barely glanced at it, when the green hills, the sky, and the forest all whirled around in my head. I felt something akin to an electric shock and collapsed unconscious. My last thought was that the lovely daughter of the wizard had not wished to kill me and had set me free.

«I came to at home, in bed, with a headache and heaviness in all my limbs.

«The illness, which I myself, and the doctors, too, attributed to a chill, kept me in bed four or five days. I was still housebound when I learned that on that very night, after we had supped together, Arbuzov died at home of a paralysis of the heart. Perhaps the abuse of narcotics had precipitated his death.

«The sudden end of Arbuzov, who had been a fairly intimate friend in our younger days, had a powerful effect on me, and for a long time I was unable to divert my thoughts from it. At that time you», Gosh added, «had just gone abroad on holiday. I tried to take my mind off it, forcing myself to work intensively on my music. I left to stay with my family for a fortnight. I even attempted to learn Hebrew, and became acquainted with the Kabbalah. But all this helped little. Then came the autumn season of art exhibitions, and I forced myself to go to them. Imagine my astonishment when in the room dedicated to a posthumous exhibition of Stepanov's works I saw, alongside other landscapes, this very terrace with its ovals in their niches and the avenue leading to the castle with its jagged little towers. I remember how I then desired to look again into the face of the sorceress, which had not been etched in my memory exactly it should have been. I know only that she was very beautiful,» concluded Gosh with a sigh.

«Perhaps looking into her shield was your salvation,» I said. «Otherwise you would probably have suffered the fate that befell Arbuzov»

«I don't think so,» replied Fyodor Nikolayevich with a serious voice. «I remember very well how she took pity on me. What do you think? What ought I to do in order to get back to that park and behold its mistress?»

«You doubtless know as well as I do what one does most of the time in such cases. You have a painting that depicts one corner of the park. That makes the matter easier. All you now need to do is to choose the opportune time, put yourself in the appropriate cast of mind and convey yourself mentally to the terrace. The rest will be the result of your preparation and the powers of your own abilities. You surely know yourself the risk to which you are exposing yourself in this. I am quite unable to imagine who the master of the castle, whom you saw in your dream, may have been; but I do not advise you to let yourself be seen by him a second time. Arbuzov's fate ought to serve as fair warning to you. It is very easy indeed not to return from this kind of excursion, at least without grave injury to your mental faculties.»

«I know all that, but the desire to see the magical huntress is more than tempting. Once one finds a suitable talisman the danger is not all that great. But we'll discuss that in more detail later. Meanwhile, do listen to this fantasia I've composed.»

And Gosh played a short piece on the piano in which one might, if one wished, sense the terror of the chase, the barking of the dogs, and the triumphant wail of the horn.

«It is hard to render on the piano the sound of a hunter's horn,» said Fyodor Nikolayevich, «but the motif still sticks in my mind».

When we parted I begged Gosh not to undertake the experiment we had discussed without telling me first. He consented.

Several days later my friend brought up again his desire to go back into the enchanted park, but I advised him first to try to find out something about the artist, and to question the latter's acquaintances about where the picture had been painted. If it was done from nature, then, I thought, one ought to locate the castle and park and make inquiry as to who lived there. But I considered it a dangerous procedure to rush into experiments with dual personality, particularly as these demand of the novice a huge expenditure of energy; and Gosh was not of the most robust health and was prone to consumption.

The political events of 1905²⁵ kept me from seeing Gosh often. But from time to time we managed to meet in the library of the ministry where we worked: he was a member of the committee there that supervised the acquisition of books in foreign languages. During one of these brief encounters Gosh informed me that although he had not yet been able to discover where Stepanov had painted the picture, the deceased artist — according to his friends — had been abroad two or three years before, in a northern coastal locale as a matter of fact, and had brought back a few paintings from there which by now had all been sold. The painter had spent the last two summers of his life, though, in either Volhynia or the Podolsk district²⁶.

On one of my visits to Gosh I noticed that Stepanov's picture had disappeared from the wall of the parlor. I thought Fyodor Nikolayevich had lost interest in it, and was, I must admit, very pleased, since his health had somewhat deteriorated towards springtime. Despite a cough he persisted in smoking cigarettes whose thick, whitish-gray smoke led one to suppose that tobacco was not their sole ingredient.

«I'm thinking of traveling abroad this summer», he said, «but I still don't know where. I'd like to go to Italy, but in all likelihood I'll have to spend some time in France as well».

I knew Fyodor Nikolayevich's wife lived in France and thought he wanted to visit her, but the subsequent words of my interlocutor shattered that assumption.

«Now I keep hoping», he continued in somewhat disturbed tones, «to see the artist Stepanov in a dream and get the location of that castle he painted out of him».

«Have you managed to obtain a photograph of him, or some object from his personal effects?» I asked, knowing how having such things present facilitates communication with the dead.

Gosh nodded wordlessly and added after a short silence, «Would you like to take a look? Then let's go into my bedroom.» However there was no bed in the room we entered — a wide, leather-upholstered couch stood in its place. By the doors, near the landscape, so familiar by now to me, that he had moved in here from the parlor, hung an enlarged photographic portrait of the artist Stepanov. The face of the latter betrayed no quality out of the ordinary. The visage of the blond man of about thirty who gazed at us out of the *daguerre* frame had a bristling crew cut, curling moustache, and a very tall collar knotted with a smallish cravat. He could just as easily have been the sales manager of a fashionable shop, or a bank teller, as an artist and painter.

«I took it from a group portrait and enlarged it», said Gosh, nodding at the photographic portrait.

«Well, so, have your experiments been successful?» I asked.

«So far, no. I needed to find some article of the deceased's undergarments or outer clothing, but up till now all I've managed to obtain is a pair of his gloves. I got them from the laundry where they had been left. I'm afraid that now they are clean, these gloves aren't worth as much as they would have been, had he just taken them off».

²⁵ That is, the first Russian Revolution, which was sparked by shortages, a general social unrest that manifested itself in terrible pogroms, and the country's ignominious defeat in the war with Japan. In his memoir «Speak, Memory» Nabokov recalls soldiers chasing and shooting down fleeing children outside the window of his family's home in Bel'shaya Monikaya street, not far from Palace Square — the epicenter of the demonstrations. Compare the street battles described by Kondratiev later in the novella.

²⁶ In 1919, after his flight from Soviet Russia, Kondratiev settled on his mother-in-law's estate near Rovno in Volhynia (Volyn' province, northwestern Ukraine, then a territory of Poland).

«That is exactly right, I'm afraid,» I replied.

«Instead of Stepanov, I had a dream about Arbuzov,» Gosh continued.

«Did he tell you anything?»

«How can I put it? Yes and no. In the dream he came to visit me, just as plump and cheery as he was when you met him here one time: he went up to the piano and began to play a one-handed version of 'Grandma had a little gray goat once upon a time' and then smiled, shook his finger at me, and left»²⁷.

«In my opinion he told you even more than necessary,» I said. «You ought not to go into a forest where all that will be left of you, like the kid in the song, is little horns and little hooves. Moreover, I recall you said something or other about wolves at the beginning of your fateful dream, didn't you?»

«Quite right. Now I recall it. I had nearly neglected that detail... But so what? 'If you're afraid of wolves, don't go into the woods,' as the proverb says.»

«Considering that you've transferred this landscape to your bedroom, I guess you're not afraid of them. But admit it, haven't you already made a couple of attempts to return to that park?»

«Of course I have. But cautiously, making sure that at any given moment I'd be able to halt the experiment.»

«With these dilettantish methods you're probably employing you can easily be tricked by your own fantasy and not achieve the results you might, were you to adhere to all the rules recommended by the science of occultism.»

«You and your rules and methods! That's all lengthy and dull. I've worked out my own rules through trial and error. For instance, when you wish to be transported into one or another picture and you're having a hard time making it happen right away, then what you do is select a point in it that is the most familiar and accessible to you. Let's say you can't get right into the room you desire: mentally make yourself stand at the outer doors of the house and try to go inside. If that, too, is difficult, then while you're standing at the doors try to imagine yourself before them, but this time from inside them; and then it will be easier to penetrate deeper into the recesses of the house. Everywhere you are unable to proceed, look from the point where you stopped, back at the path you've already come down, and then keep on walking, but facing backward, and it will be easier for you to visualize yourself in the place where you want to be. This succeeds best in places you are already familiar with.»

«Precisely: familiar places. But in unfamiliar ones Fyodor Nikolayevich, our fantasy can play tricks on us,» I remarked.

«What am I to do if my imagination, perhaps against my will, conveys me to that enchanted park? All I have to do is shut my eyes to swim in my mind across the pond and, shivering with cold, mount the marble steps to the great terrace. I tread slowly on the gravel, first along the shrubby verge of the path, then down the wide avenue to the park itself. Before it there is another plaza or field that I edge around, then at last the façade of the building. Fearing for some reason to enter by the main gate, I stop by the yellow corner door and waver — should I go in here or use the other door that lets into the little passage opposite the white stone wall of the neighboring wing? Passing through the front door by the method I confided to you, I try to reach the second floor but cannot get beyond the first landing on the stairs, to the place where in the left-hand corner there is a fireplace near the door that opens into the room. Some force thrusts me back. And again I wander around the house, trying not to be noticed by anyone at the windows. I wander, possessed by the desire to behold the woman mounted on the black steed, who with spear in hand was hunting me.»

²⁷ This is a popular Russian children's song: «Жыл-был у бабушки серенький козлик, (2x) / Вот как, вот как, серенький козлик. (2x) // Бабушка козлика очень любила, (2x) / Вот как, вот как, очень любила. (2x) // Выдумалось козлику в лес погуляти, (2x) / Вот как, вот как, в лес погуляти. (2x) // Напал на козлика серый волчок, (2x) / Вот как, вот, как серый волчок. (2x) // Осталась от козлика рожица да ножки, (2x) / Вот как, вот как, рожица да ножки. (2x)» («Grandma had a little gray kid one upon a time, sure she did. Grandma really loved the little kid, sure she did. The kid got the idea to take a walk in the forest, he sure did. Gray wolves fell upon the kid, sure they did. Sure'n all that was left then were the little horns and hooves of that little kids.»)

«I think,» Gosh added, «that Arbuzov's death constitutes mere chance, or, perhaps, coincidence. This enchantress had no need to slay me. Besides which, a person in a dream vision, no matter who it is, as far as I know, is unable to kill. I saw a man who happened in analogous circumstances to suffer a blow delivered in a dream by a fallen archangel, and that man still survived, escaping with no more than a jolt to the nerves».

«That is most curious. Tell me the story, unless it's a secret».

«The incident occurred with an artist acquaintance of mine. He now lives in Sicily, where he supposedly studies the juxtaposition of colors in the stained glass windows of local churches and takes his time about writing. He seems not to have received my last two letters. Otherwise he would have instructed me as to how to proceed».

«I think I once met this friend of yours who now resides in Sicily. We were both in the editorial office of *The Maiden*.» Suddenly, without knowing why, I cut Gosh short. «Isn't his name Ostroumov?»

«Let us suppose it's Ostroumov. Well, anyhow this artist acquaintance of mine read up on descriptions of the flight to the witches' sabbat, the service of the devil. He became so absorbed in his reading that he began to dream that he was flying himself, but not just to the Brocken or Bald Mountain, but to another place of communion with the unholy powers, to some sort of temple with columns of black stone whose capitals disappeared in the twilight murk of the arches above. As he described it, pale-greenish ornaments formed of strange hieroglyphs and arabesques glowed on the cornices. Since the dream was repeated several times, this artist had the opportunity to become acquainted in detail with the layout of this mysterious temple, about which he related interesting details to me later on. So, for instance, over a hole worked in red stone and gold something resembling an open pavilion rose on seven small pillars in the form of entwined snakes, some of which were a ruddy bronze; others, dark and silvery in hue. The master of ceremonies first manifested in the guise of a pungent and rather repulsive greenish or grayish-white smoke that was rising from the hole I mentioned. But this has nothing to do with the matter at hand... So, at this rather reprehensible celebration, where there was a great throng of uninteresting people, my artist friend kept meeting a very sweet young lady. It happened all by itself somehow, that the two of them started withdrawing into secluded corners where they were undisturbed by the propositions and stealthy stares of various repulsive old men and hags, the latter shamelessly revealingly-attired or even completely nude. The young woman informed my friend that she, too, flew here regularly in her sleep, without resorting to any sort of ointments or other preparations. She gave my interlocutor to understand that she found him attractive; but she stubbornly refused to tell him where she came from or where she lived. Perhaps the lady would have imparted something about herself eventually; but here the event intervened, on account of which I am telling you this story.

«It seems to have been on the fourth oneiric visit of my friend to the black temple. 'I observed carefully,' the artist related, 'the still-empty throne, on which the *Hircus Nocturnus* customarily took his seat; and tried to commit to memory the very interesting sculptures in high relief that adorned it. I studied also the officiating figure in golden sandals and a mask — like his — of bronze, in the shape of a tiger's head. This hierodule made as though not to notice me and to be wholly absorbed in the task of decanting something into the Corinthian bronze lamps, which flared with a pale, colorless radiance. In that coruscating light the obscene figures in high relief on the throne seemed to come to life. Some of the new arrivals among the throng of guests considered it their duty to press themselves against these.

«But I keep straying from my topic. My friend felt suddenly that the young girl he had taken a liking to, was somewhere not far away. Looking around, he quickly located her. The girl was in her night dress, and, according to the artist's tale, was slightly embarrassed by this situation even though it would seem that most of those present did not notice each other; and if they did, then only by mutual consent. Nonetheless, my artist friend's unknown acquaintance wanted to retire with him apart from the crowd, on the pretext that she was for some reason afraid. They walked down an uneven floor that was rubbed down in places, to a fairly distant nook of the temple where little green wandering flames flared now and then.

When they ignited close to the ceiling one could discern the motionless, stony smiles of half-bestial, half-angelic faces on the capitals of the columns. A company of old men seated nearby paid no attention at all to the pair who had gone off to be alone. These old men were, it seems, wholly engrossed in sniffing something in a box they were passing from hand to hand: having taken a whiff, each would freeze, motionless as a statue, for a while. The artist began, as was his wont, to persuade his friend to permit him the honor of her acquaintance in waking life, but she just resolutely shook her head and insisted, 'Just not today, not today. Today is not the right occasion. I'm waiting for something, and I'm afraid'.

«I must add that this woman, as the artist told me, behaved with perfect modesty and nothing particularly improper transpired between them. My friend's interlocutor was able to tell him that she was eighteen and had begun to frequent this place in dreams only recently. Sinking her chin between her knees and gripping both legs with her hands, the girl gazed from far off at what was happening around the throne and shivered now and then. She was particularly frightened of the luminous apparitions when they flared nearby. To the girl's enormous relief, my friend drove off a very large and inquisitive snake that had slithered too close to her. Glowing with a faint bluish-green fire, the snake withdrew with an offended hiss.

«But a fiery red pentagram with some sort of hieroglyphs in the middle appeared out of a pylon in the Egyptian style worked into the wall not far away. Rising up at first, the pentagram paused briefly at a height of about three fathoms and commenced to descend. Then its outlines started wavering and it appeared to flow down to the ground, changing shape into an angel attired in crimson flame. The angel was astonishingly beautiful; what was especially striking, the artist said, was the proud, even insolently arrogant expression on his face. A diadem studded with sparkling stones of various hues rested on his black locks, and a shining, lilac-colored steam played at his lips. With slow, languid steps the fiery-purple newcomer advanced towards the seated couple.

«'It's him!' the girl suddenly exclaimed, pressing herself against the artist. The latter, though aware his powers could not match those of his opponent, still did what, as he put it, any decent man in his position must: he arose and interposed himself to defend his friend. With a simple gesture of utmost contempt the angel gave my acquaintance to understand that he must step aside. But the artist, who only shortly before this had been awarded the gold medal of the Academy and whose head was full of laudatory reviews of his painting, felt no less inflated with pride and self-confidence than his opponent was. For this reason, he not only did not retreat to the side, but even advanced a step or two towards his challenger. At that point, the angel raised his hand and moved his lips, as if pronouncing something. A sort of small sphere of lilac color detached itself from his fiery lips and in the same instant the artist felt a blow to his nerves that shot through his entire body — probably just what I had felt in my own experience. But the blow was so severe that the poor fellow's head spun and consciousness deserted him. All went dark.

«After coming to in his own bed, my friend never again beheld in dream the black temple or the girl whom the fallen angel had taken away from him. He never even attempted to discover her whereabouts.

«I do not know whether fear of his rival or some other factor was the cause, but whenever I asked the artist why he did not want to find out about the fate of the unknown girl, he constantly averred that women seen in a dream are always much more interesting than they are in waking life; and he did not want to ruin the beautiful image that remained in his memory. In a word, he was behaving somehow strangely. He would show me sketches from memory of the architectural and artistic details of the black temple he had seen in his dream. Several of these were very interesting, and my friend was putting them together to use sometime in his work. During his sojourn in England he was invited to decorate in the *style moderne* the interior of a church. I fear my artist friend put into the stained glass windows not just his handsome angel but something else rather more fanciful as well, which he'll have to answer for yet».

«And do you think,» I asked Gosh, «that the girl your acquaintance saw in his sleep, if indeed the whole dream was not itself a mere invention, existed in reality?»

«And why not? Have you never had occasion to experience a collective dream, that is, the kind seen simultaneously by somebody else as well?»

«It's happened,» I replied. «It's happened twice, as a matter of fact. It was during my first term at the university, in 1898. They had not prepared us in high school for independent study and I had a rather hard time at first. The printed notes for the course on Roman law were prepared less than two weeks before the final examination in the subject. I was already overtired from the previous exams — not having gotten used yet to the procedure — and had developed a case of neuralgia. The whole right side of my head and body hurt. When I tried to study the pain intensified so greatly that I had to collapse onto my bed and lie motionless, burying my head in the pillow and trying to clear my mind of all thoughts. The pain would then slowly abate. But there was little time left before the exam, and I had to apply myself to the lectures. In order not to overtax my thinking, and particularly to avoid having to recall this or that concept that seemed abstruse to me at the time, I decided to resort to the age-old high school practice of cheating by writing invisibly in pencil in the examination program the answer to each question listed there. At first everything seemed to be going fine, but soon I began to feel a pounding in my temples and had to lie down in bed again. I gradually fell asleep. In my dream I saw auditorium number ten of St. Petersburg University, the examination table, and Professor Grimm, and felt myself walking up to him. Peering fixedly at me, the examiner turned directly to me with the words 'Well, hand over your program.' And when I surrendered the sheets I had scribbled all over, David Davidovich began scolding me, admonishing me that I was no longer a high school student, and wasn't it high time to learn to regard my responsibilities more honorably — and all the other things one says on such occasions. After this the professor in the dream began to question me about the course. I offered some lengthy answer but then fell silent, tongue-tied. 'No, you do not know this question,' Grimm said. 'Answer this one here.' And he handed his own program over to me, pointing at the number of the question.

«Just at that moment I woke up. It was one of those bright, clear May Petersburg mornings. Dashing over to my desk I leafed through the program lying there and found on one page the spot indicated by the dream. I ticked it off then and there with a blue pencil. Afterwards I let myself rest for a whole day; and for the remainder of the days left before the examination I managed to go over the course material twice, rereading numerous times the part I had seen in my dream...

«Right after the dream vision I stopped copying down the program, and did not take it with me to the exam. Nonetheless, when I entered auditorium ten and was summoned, the first question of the professor, who had looked intently at me as I entered, was, 'And where is your program? Show it to me.' 'I forgot it at home, professor,' I replied. 'Perhaps you could give me yours? There are several on your desk.' Peering at me with a searching expression that, as it seemed to me at the time, expressed some disappointment, David Davidovich pronounced, 'Very well. Select a page.' I don't recall exactly what number it was. I remember only that it was more or less familiar to me, as the others were, by the way — for I tried never to miss lectures. I began to prepare my answer according to the program Grimm had given me. In the middle of the page, to my surprise and displeasure, was a question that I had completely forgotten: it was as though somebody had erased with a wet sponge from the blackboard of my memory the very answer I had to give.

«Since I had gone over that page at least twice, I started to answer, going into the most minor details retained in my memory, figuring thereby to exhaust my examiner and convince him I knew the material. But the professor fixed his eyes, which resembled those of a sleepy fish, on me, and listened in patient silence, as though waiting expectantly for me to reach the point I did not know. I came to the fatal question and... fell silent. 'Well? Answer!' urged the examiner. I tried to improvise, but without success. 'No, you don't know this question,' said Grimm, exactly as he had in the dream. 'Answer this one instead.'

«And with the same gesture I had seen him make in my dream, he indicated the place on the program that I had awaited so. God, how I trotted it out, citing not only everything in the printed notes, but even the details that had been omitted from them. The examiner stopped me and dismissed me with a grade of Four»²⁸.

²⁸ The Russian system of grading employs the numbers 1 to 5: Five (*piaterka*) is the highest, equivalent to the American grade of A.

«Why do you consider your dream a collective one?» Gosh asked me. «By desiring intensely to answer a question on a particular page and thinking about it, you could have convinced the professor to choose it».

«And in that case, why did he insist I show him my program? He didn't ask anybody else for theirs that day, and I did not impress the idea upon him in any way».

«That's very simple. You came up to him without a program and the professor was curious about where it was».

«I wasn't the only one without a program — which is why he had no fewer than half a dozen lying on his desk,» I retorted. «And besides, instead of letting me go after hearing a solid answer, Grimm persisted till I got to the question in the second half of the page in the program».

«I agree your dream belongs to the so-called mantic category, but I'm not prepared to recognize it as a collective one,» Fyodor Nikolayevich insisted.

«In that case, I'll tell you my other dream, which is already beyond any doubt of the collective type. When I was still in that first year at the university, in the autumn of 1897, I dreamed once a whole series of scenes of war in Petersburg, in which I was in various buildings or on the street. The interiors of those buildings were unfamiliar to me at the time, but in the last few years I've had occasion often to be in one of them. I'm sure I'll be in the others, when the time comes. In one of the buildings I had yet to see from within, I was impressed by the spectacle of a very lofty, circular hall with windows beneath its dome — like a church, although it had never been one. I recall empty plaster (or maybe marble) brackets on pale-brown painted walls and some sort of high plinths with nothing on top of them but with adornments in high relief on the sides. Not far from the entrance were what looked like four corpses lying on the floor.

«Adjoining this circular hall was another, gigantic in proportions, with a long row of white pillars. In one of the buildings I've mentioned, I was standing at a window that let onto the Fontanka river and was looking at people running past, some of them falling to the ground. I hear gunfire and the rattle of machine guns — the latter did not exist yet, I think, in the arsenal of the Russian army. I remember how one bullet shattered the windowpane and struck the sill where I was standing. I didn't like that, and crossed the vestibule to the staircase leading to the next floor. Under it was a door, which I went through and into a round courtyard the bullets could not reach. Tender shoots of green grass sprouted between the bricks with which the yard was paved. The sky was a clear blue. Swallows flitted, chirping, through the air: it was, obviously, springtime. I went out of this building — one that you and I frequent since our department is situated there — and made my way to Zabalkansky prospect, where I saw from far off a few soldiers in grayish summer uniforms and forage-caps. They were headed towards the Fontanka embankment from the direction of the Baltic and Warsaw Stations.

«Then the dream transported me to yet another building. The room in which I found myself was full of people rushing here and there in desperation and fright. Papers were scattered all over the floor. I went up to one rather short, elderly man, placed my right hand on his shoulder, and said, 'Enough! Don't try to flee. You cannot be saved.' Right after that I woke up.

«When I came to study at the university and was about to tell my high school classmate Lopatkin about the dream I'd had, he pre-empted me with the words, 'Listen, the strangest thing happened to me! I never have dreams, it seems; but last night I had one about a revolution, and was even as it were in the middle of a war.' And he began to describe the scenes he had witnessed in his dream. Some of them didn't coincide with mine, since they took place at other locations; but others corresponded with astonishing precision to the smallest detail. At the end of the last of the scenes he had beheld, he clapped me on the shoulder and said, 'Enough! Don't try to flee. You cannot be saved.' I remember that when Lopatkin and I were discussing our dreams, we arrived at the mutual conclusion that he was probably to see my ghost just before his own death».

«And might that dream not have served as a continuation and result of conversations you had, perhaps, with your friend about the revolution?» asked Gosh.

«Not in the least. We didn't discuss the revolution at that time and had not read anything about it immediately beforehand, either....»

Then I related to Gosh the rest of the events and scenes of the dream that had endured in my memory.

Fyodor Nikolayevich pretended to listen attentively to me, but I had the feeling he accorded little credence to my story, most likely attributing the greater part of it to my literary imagination.

I glanced at my watch. It was already late, and we said our farewells.

When we met afterwards at the Ministry, Gosh let slip that he had not abandoned his efforts to penetrate the enchanted fortress of the country of dreams, and had now equipped himself with a talisman and was taking all the necessary precautionary measures dictated by the science of the occult. Fyodor Nikolayevich added that he was following the advice of «an experienced mage», but for some reason did not want to divulge the name of the latter. As a matter of fact he had been somewhat secretive earlier, too, with respect to his diverse acquaintances.

«With the assistance of this mage», Gosh continued, «I even managed one time to get to the terrace with the steps down to the pond. My tutor advised me to go no farther at that initial stage. What makes it even more interesting is that I was not entirely in a dream state when I was there. In a dream our ego does not control its actions: it is as though they were dependent upon the will of another person. In a dream you do not know in advance where you are going to go, or what you will do. But I knew.

«With a long, sharp dagger whose hilt bore two half moons, I traced a circle on the marble paving stones of the terrace. I stood within it and for a long time summoned the huntress, the horsewoman. In vain, unfortunately I must confess. Perhaps I did not know the incantations well enough, or maybe they were just not sufficiently powerful. More likely it was because I did not know the name of the woman I was summoning. But she did not come. There was a deathly nocturnal stillness in the park: not so much as a leaf stirred.

«The moon bathed the empty terrace and the bushes with their white roses in its glow. Taking advantage of the moonlight, just before I was to return to my everyday life I scratched a circle on the right-hand parapet of the terrace as one ascends, near the uppermost step of the stone stair, inscribing within my monogram with the letters F and G. I know this monogram will remain there, in reality and for a long time,» said Gosh, concluding his story.

Soon after that we lost touch with each other forever. I married, changed jobs, and when I first entered the Tauride Palace, in whose chancellery I was employed, I was struck by the resemblance of its circular hall to the one I had seen in my dream: the same brownish paint on the upper part of the wall, the same empty white brackets there as in the dream, the same light streaming down from above that one sees in churches, the same great white columns in the neighboring Catherine hall, where political events were later to transpire²⁹. Beholding in a waking state these halls and the other apartments of the palace that once I had traversed in sleep, I felt that in all likelihood the particulars of my long, piecemeal dream vision were to become reality, right down to the appearance on the streets of the doomed city of soldiers clad in what was then still an unfamiliar uniform to me, with those forage-caps on their heads.

But I never got to share my impressions and conjectures with Gosh. That very spring when I found new employment he fell ill and went south on leave. There he died, leaving me in the dark as to whether he had ever succeeded or not in beholding his Amazonian enchantress.

Time passed in its way, and the war came. The coup d'état took place, with all its consequences. Remembering from my experience of the cribbed program from the exam on Roman law that dreams are not always in every detail what is fated to occur, but are sometimes, rather, a warning, I avoided visiting those

²⁹ The Tauride palace (*Tavricheskii dvorets*) on Shpalernaya str., St. Petersburg, was built in 1783–1789; in 1906–1910 it became the seat of the Russian Duma, or Parliament, and was used by the Constituent Assembly and the Soviets following the October Revolution. It is famed for the imposing domed hall (*kupol'nyy zal*) and colonnaded great gallery (*bol'shaya galeriya*) Kondratiev describes (Pl. 7 and 8).

corners of Petrograd³⁰ in which, according to one of my dream visions, danger threatened me. The surroundings of the Peter and Paul Fortress, for instance, belonged to that list of places. In a dream I'd had long before the revolution I was walking there, boots crunching the frozen mud and the icy crust of puddles. Isolated shots rang out in the park. I was walking there at a time of day when it was dark, but for some reason the gaslights that were common then were not lit. I was completely alone in the dream and was suddenly assaulted by armed men in gray Russian army coats. I remember I woke up, interrupting the part of the dream where I was clambering over some high fence to save myself from my pursuers, who threatened me with their bayonets from below. Recalling the dream, which at the time had seemed absurd and strange to me, I took care during the revolution to give the environs of the Peter and Paul Fortress a wide berth.

Much of what I beheld in dreams in 1897, for instance: the corpses of the slain in the circular hall of the Tauride Palace or the troops in foreign uniform on Zabalkansky prospect — did not come to pass. But it does not follow from this that those events will never happen.

I escaped successfully to the Crimea in January 1918, where my family had relocated during the war, and remained there till autumn. Then by the will of fate I found myself in Volhynia not far from the Austrian frontier, during the German occupation, on the modest estate of my mother-in-law. In the neighboring Jewish *shetl*, where the railway junction was, I happened to meet — it must have been in 1920 — Ostroumov, a friend of the late Gosh. The former was walking at the measured pace of a man out for a stroll, a bedroll over his shoulder. The artist who had once favored dandified jackets and cutaways now wore a ragged army uniform, but without epaulets.

«Georgii Sergeyevich!» I called out to him by name and patronymic.

Ostroumov did not recognize me at first, but after I had identified myself and mentioned the editorial office of the journal where we used to meet in bygone years, he brightened and became talkative. We reminisced about the past, sharing our impressions of the recent years we had lived through. During the conversation, I mentioned *inter alia* the death of Gosh.

«And did you know him?» asked Ostroumov.

«Yes. And he told me a great deal about you».

«What kind of things?» asked the artist, not without some unease.

«Well, about your serial dreams of flights to the black temple, at least. Tell me, Georgii Sergeyevich, after that confrontation with your angelic rival did you ever again meet the girl who had been the apple of contention between you?»

«Look here», replied Ostroumov. «Of the two of us it was my friend Gosh, and not I, who should have been the artist. I really did try once upon a time, to purchase some opium, to study in preparation the graphics of Felicien Rops³¹, Ferdinand Knopf³², Goya, and other artists with an inclination towards the demonic. After that I experienced several nightmarish, though disconnected, dream visions. The interior of the black temple, the angel in fiery red garments, and the girl with the beautiful face really did reappear from time to time, but all this was fairly chaotic; and only after I related my impressions to Gosh and he expounded them anew to me in conversation, did my dreams, through his retelling and recasting, acquire a certain coherence with respect to the sequence of events and the details of the setting. He would describe the black temple as though he had frequented it more often than I. For my part, after the clash with the red angel I put a stop to my flights altogether».

«And you never met the girl after that?» I repeated my question.

³⁰ As the capital was patriotically renamed at the outbreak of the First World War and till after Lenin's death, even though St. Petersburg is Dutch, not German.

³¹ Felicien Rops (1833–1898) was a Belgian graphic artist famed for his illustrations of Baudelaire's «Les Fleurs du Mal». He also did a series «Les Sataniques»; and was admired by other Decadents, including Jules Barbey d'Aurevilly, mentioned above.

³² Fernand Edmond Jean Marie Knopff (1858–1921) was a Belgian Symbolist painter.

«No, I did not. She had a very interesting and attractive face, about which I dreamed a few more times, in fact. Later I attempted to draw it from memory, together with some other images from my dream visions; but, as it happens, without the least success».

«Perhaps you will yet see her again, somewhere, and have the opportunity to sketch her face from nature. Sometimes in dreams we see faces, situations, and places where we are yet fated to be. Have you ever read the verses of Alexei Konstantinovich Tolstoy?»³³

«I have. Some of them, I must confess, I am very fond of».

«He wrote the *Crimean Sketches*. There is an entire cycle in it of poems composed in the immediate aftermath of the War of 1854–1855 when the poet, who had just recovered from typhus, went on several excursions along the southern coast of the Crimea with the woman he loved. Writing never again came to him with such ease, it seems, as it did then».

«How could one fail to remember?» Ostroumov interrupted me, and even intoned in a low voice, 'Do you remember how the sea thundered that evening, / How in the briar the nightingale sang, / And dense springs of white acacia / In your riding cap were nodding?' »³⁴

«It is, of course, a charming poem», I said, «But it was not the one I had in mind when I wanted to tell you, Georgii Sergeyevich, something about the kind of dream where we see a locale, a setting, where we are yet to be».

I began to tell Ostroumov about how the poet and his lady arrived at Melas, which is located not far from the Baydar Gates — the estate of Perovsky, Tolstoy's uncle. The ancient trees rising from the seaward-descending flanks of the Yayla had been cut down by the French occupiers of the district; and Perovsky's home had been ransacked by the enemy soldiers quartered there. On the walls were the 'crude drawings and vulgar jokes' mentioned in Tolstoy's poem; and sabers had cut gashes in the statues that adorned the room. Shattered mirrors, broken windows, smashed furniture, owls nesting in the rooms, and other signs of destruction and desolation filled the poet's heart with sorrow and inspired him to compose the poem 'I greet you, desolated home, / Oaks wilted, fallen round, / The blue sea, and you, steep cliffs, / And garden once luxuriant — now abandoned and alone' »³⁵.

«As an artist, you must recall the wonderful image of the climbing roses clinging to the marble cornice of the window. But that is not the point. I happened somehow to read the poet's notebook, which he kept with him throughout his trip. The little volume, even though many of its pages had been torn out, still offered interesting authorial notes, for instance, and the preliminary drafts of *Crimean Sketches*. And right opposite the draft of the poem I mentioned was a scribbled remark added in the poet's hand: 'And this is what a persistent dream displayed to me so many times!' I suppose Tolstoy saw in his dream the scene of the desolate house where he was fated in future to find himself»³⁶.

«That is quite possible,» replied Ostroumov. «And you suppose I am fated to meet in real life that lovely young lady with whom I spent such a pleasant time in the midst of that ravaging, demonic company that surrounded us. I recall that she was rather terrified. She pressed her shoulder against me and trembled slightly... No, I doubt it! In the place where I am bound and from which I shall probably never return, there are, it would seem, no young ladies».

«I do not insist that you will definitely see this person, but a meeting is still possible. One person has likened so-called mantic dreams to reflections in one's brain of impending events. It is equivalent to sitting at the window and looking into a mirror affixed to the frame outside, in which people and objects moving in the street are reflected in proportion to their proximity. In the mirror you see a man who is walking in your direction, earlier than his actual arrival alongside your house wall. In all likelihood he will keep

³³ Alexei Konstantinovich Tolstoy (Алексей Константинович Толстой) (1817–1875) was a Russian poet, prose writer, playwright, and satirist, about whom Kondratiev published a scholarly study.

³⁴ See Appendix 1.

³⁵ Here is the poem (see Appendix 2).

³⁶ Kondratiev's narrator here must be identical to the author, whose scholarly monograph on the poet is cited above.

on going past it, so that you will be able to view him directly through the window as well; yet he, before striding directly up to that point, is still able to duck into the nearest gateway and then you will not see him directly in the window, in unmediated physical reality».

«Well, I do not want to meet in unmediated waking life the woman whom I found so attractive in my dream, anyhow,» replied Ostroumov. «Oh, how much more beautiful than real life are reveries! By way of thanks for your commentary on Alexei Konstantinovich Tolstoy, I will explicate for you in turn, to clarify my point, a writer to whom you are not, I think, altogether indifferent. You have surely read Pierre Louÿs' *Aphrodite*?»³⁷

«Not without pleasures», said I.

«Well then, this same Louÿs in his novel elaborated a theme found in a poem in an anthology belonging most likely to the Alexandrian period. I do not remember it, of course, in the Greek, but perhaps if I survive I'll yet read your own poetic rendering of it into Russian. The meaning of the verse is approximately as follows: 'Svenelans, for the sake of whose charms capital cities are aflame, she who sells herself for fabulous sums, she who amasses the treasures of her lovers — she, thanks to a dream vision, whiled the night away by my side, all night till the morn, naked, demanding no recompense for her caresses. I will no longer implore the wicked girl on bended knee for her love and will no more bewail my fate after that dream, which vouchsafed me, holding nothing back, pure ecstasy' ».

«Developing the theme further,» Ostroumov continued, «Louÿs forces his hero, the artist Demetrius, who has had a similar dream, to refuse the caresses offered him by a beautiful woman whose love he had earlier sought. And he acted rightly. Otherwise he would have had to repent later on as Apelles did. Alexander the Great bestowed upon the latter his favorite concubine, with the remark that the artist who had painted her portrait might like to enjoy its original. The grandiloquent gesture of the mighty ruler cost the painter much trouble and discomfort later on... And, echoing the hero of Pierre Louÿs, I declare that the maiden I saw in my dream is unlikely to be any sweeter or more captivating, should I become acquainted with her in real life. I recall she came over to me in one of the dream visions and touched my leg. I rose and, embracing, we took flight through the air. She was wearing a black cape with the hood thrown back. She rested her head on my shoulder and still I remember the caress of her soft tresses brushing against me... No! Reality can only spoil the wonderful dream. Who could my lovely intimate stranger be, twenty years since we parted? And aging emigré, her nerves ravaged, prone to hysterics; an opportunist; a spy; the kept woman of some nouveau riche speculator; a Bolshevik nurse; a prostitute offering herself to foreign troops for a crust of bread? No, I don't want reality! My dream of bliss is sufficient for me!»

The conversation turned imperceptibly to political events. We chatted for another hour or so and then parted, most likely forever.

Two years after the encounter with Ostroumov I had to leave the estate where I was living on some business — a journey of over seventy *vershs*. I had to travel by carriage, railway, and even on foot. I was diverted from the most direct route, partly by an errand for a friend and partly by happenstance, to the address of a village priest. The good father, who had not seen anybody in a long while save his parishioners, an occasional local Jew, and various authorities arriving for the purpose of requisitioning property, received me very pleasantly, and was delighted to receive the letter I had brought. He asked me to stay over, at least, till the following morning. It was such a warmly offered invitation that I could scarcely decline; the more so as I wanted to see the steep river banks of the locality so famous for their beauty, and the remnants of a great aristocratic estate that had been destroyed [остатки большой разрушенной помещичьей усадьбы].

³⁷ Pierre Louÿs (1870–1925) was a French decadent and Symbolist poet and prose writer. He is most famous for his cycle of Lesbian verses, «*Les Chansons de Bilitis*»; his erotic novel about the life of an Alexandrian courtesan, «*Aphrodite: moeurs antiques*» (1896), was a bestseller in its day.

«There were nearly thirty rooms in the main palace, not counting the wings of the house. The paintings were Italian and the walls and ceilings were frescoed. And the fittings, the silver, the linens, the clothes! Our village women now come to church in laces and silks one doesn't like to look at. They just cut away the upholstery from the furniture, the satin and velvet, and made themselves jackets and frocks. How many mirrors alone were broken! You couldn't maneuver a whole one through the door of the peasant huts. One man set up a pier-glass near his threshing floor. In comes the ox, sees his reflection, and grapples it with his horns. Well, no matter, they picked up the pieces. All of them were put to use. Of course they carried off all the furniture. They sold some of it to the Jews in the neighboring *shetl* and burnt the rest. A year before the war the Count had installed new zinc drain pipes for the main house. One way or another all of that's been cut up and used for stills to make vodka. And how many books there were! Two huge rooms were stocked with shelves to the very ceiling. Later on I saw ragged, charred scraps of them drifting all over the park. They were in either Italian or English; it was hard to tell. I have to confess that what with living here I've gone and forgotten all the book learning I acquired in the seminary at Kremenets. So when the peasants plundered the big house after the soldiers' pogrom, they set fire to these books instead of torches and walked around lighting their way with them».

«And did the landowner himself manage to escape?»

«*Pan* Count, you mean?»¹⁸ You really haven't heard? No, soldiers returning from the front killed both him and his stepdaughter. The front was right nearby. As long as the command post was here it was possible to live; but when our soldiers turned on their own officers it became very bad. And the Count was sick then and couldn't be moved. So they shot him as he lay in bed. His stepdaughter was a headstrong sort of young lady and would not deign to flee. Well, they tortured her to death, or, depending on whom you believe, she shot herself. She was a person with many strange qualities, very well educated and haughty. She would not let me, or the Catholic priest, even, past the threshold. They said all kinds of things about it in the village and the *shetl*. Well, God be their judge. But one thing is for sure: both she and the old Count were freethinkers and would not pay attention to anybody».

After dinner my host, donning his priestly mitre with its flaps reddened and darkened with age, kindly guided me to the Count's estate to see what remained of it. Along the way he continued his story.

«It's strange, of courses», he said, «that the young lady, even though she was not advanced in age, relatively speaking, still would not marry and preferred to live with an old man who was neither husband nor father to her. She kept domesticated wolves in her apartments, did not entertain guests, and never went out visiting. Paying no attention to anybody else, she would just read thick tomes day and night or else go horseback riding. She had an enormous stallion, black and fierce. The peasants even considered him an evil spirit. I was once coming home late from a pastoral visit and nearly collided with her. She flew past like a whirlwind, all in black, motionless at a full gallop except perhaps to adjust her cap now and then. The horse she rode was foaming and panting. And beside them, those accursed wolves. My mare almost pitched me out of my diligence because of those wolves, even though they were domesticated. When the soldiers later on were pillaging the manor and began driving the horses out of the stable, that black stallion knocked down one of them with his front hooves and trampled him. The other soldiers shot the horse dead on the spot. The wolves met the same fate. They did not want to let the robbers into the Count's stepdaughter's room».

Two stone pillars bore the marks of escutcheons that had been pried off. An iron grille connected them, across the empty space where once the gates had been. A hedge, untrimmed for years, had grown wild; and supple branches not yet green but thick with buds thrust upwards. It was a fine day in early April. Here and there little flowers glowed in the young grass. Tramping through the brush and cuttings of paths made not long ago, and moving past two wings of comparatively recent construction that were now without roofs or windows, we made our way to the place where the palace stood.

¹⁸ The Polish title *Pan*, «Sir», indicates the owner of the estate was a Pole and therefore a Roman Catholic; hence the Russian Orthodox priest's surprise below that not even the Catholic priest (*koioud*) was allowed into the manor house.

«They've been cutting down the park since 1917, they couldn't destroy it all, and now they don't dare,» the priest continued. «And what a park there was, to the other side of the estate!» He pointed towards where peasant cows were grazing among the stumps, and where chestnuts or maples that for some reason had not been chopped down were still standing. Here and there rose American pines with their short, trimmed branches almost to the crown resembling tall brushes, or cedars with their downward dragging crests. In the heap of debris from the front façade of the palace was visible a beheaded stone statue of the seventeenth century: he had been a medieval warrior holding a shield emblazoned with the crown of the Count. The same crest had survived by chance on the pediment. It was a two-story building, badly scarred by fire, without roof or windows, and with little towers, mostly in ruins, to either side. Bricks, fragments of shattered glass, rusted iron roofing, and pieces of the facing stone of the hearths lay all over. A withered peach tree pressed like an orphan to the wall between huge windows with shattered frames. Through the gaping windows of the upper story, through the shattered roof, glared the blue sky. The sooty walls of the rooms still preserved the traces of peeling green and blue paint. The parquet floors had been stripped; the fireplaces and ovens, wrecked. There were no doors visible.

«The floorboards, beams, and the rest of the wood went for fuel for the distilling,» my companion explained. «The peasants make plenty of moonshine these days. The Poles, our new masters, seized three stills, but they say there are thirty six more they haven't found that remain and are functioning. And it's not as though just the rich were at it, but the poor as well: one man only had five *puds* of grain left but he's still making vodka out of it».

We walked around what had once probably been a beautiful and elegant palace. We stood on a terrace, half of which had collapsed, and took in the vista that opened before our eyes, which was somewhat spoiled by the traces of the cuttings and the cows at pasture. Then, along one of the surviving avenues, our footsteps crunching in the gravel, we came to a small lake. It was bordered by slabs of moss-coated gray stone, here and there overgrown with grass.

«The labor of serfs,» the priest seemed to feel it necessary to comment about the masonry; and we went on, descending easily past bushes that had not yet turned green.

«All rose bushes. The uncle of the last owner planted them. They were a special variety raised in the greenhouse. Nothing left of that now, either. First they knocked out all the glass panes and now they're picking them out to repair the windows in their own huts. They break those often: they'll get drunk and go round to show each other a thing or two. That's all it takes».

We walked up to the terrace over the mooring on the lake. It was paved in white marble. Here and there the stone was broken, even removed in places to reveal the bricks below. Part of a parapet had collapsed into the water. Their appearance seemed somehow familiar to me. I walked down the steps leading to the water and saw stone owls in the niches to either side of the stair. The head of one had been knocked off; the other was missing only its beak. Beneath the niches, just as in Stepanov's painting, were huge iron rings.

Completely forgetting the priest who was accompanying me, I rushed in haste back up the overgrown steps and began attentively to scrutinize the upper part of the balustrade. There I fairly soon found what I had sought. But only traces remained of the monogram Gosh had scratched. It had been scraped away with a sharp instrument. Only the circle remained untouched. Near the circle, in a hand that was unfamiliar to me but seemingly feminine, someone had written in pencil a single word, *Nolo* («I do not want to»).

The dreams of my two friends had met a convergent fate. One of them himself had desired that the vision in slumber achieve transformation into reality; as for the other, though he strove in actuality to meet the princess of his oneiric vision, she also did not want to become acquainted in waking life with the man whom she had spared in dream.

APPENDICES

Appendix 1³⁹**Крымские очерки, 4**

Ты помнишь ли вечер, как море шумело,
В шиповнике пел соловей,
Душистые ветки акации белой
Качались на шляпе твоей?

Меж камней, обросших густым виноградом,
Дорога была так узка;
В молчанье над морем мы ехали рядом,
С рукою сходилась рука.

Ты так на седле нагибалась красиво,
Ты алый шиповник рвала,
Буланой лошади косматую гриву
С любовью ты им убрала;

Одежды твоей непослушные складки
Цеплялись за ветви, а ты
Беспечно смеялась — цветы на лошадке,
В руках и на шляпе цветы!

Ты помнишь ли рев дождевого потока
И пену и брызги кругом;
И как наше горе казалось далеко,
И как мы забыли о нем!

Crimean Sketches, 4

Do you remember how the sea thundered that evening,
How in the briar the nightingale sang,
And dense springs of white acacia
In your riding cap were nodding?

Between the rocks thickly overgrown with vines
The trail was very narrow as we rode
Above the sea together; in silence
Our hands found each other and were joined.

With such charm you bent forward in the saddle
To pluck the purple briar blossom
And adorn with it
Your bay pony's shaggy mane.

The folds of your cloak,
Disobedient, caught on the branches;
Yet you laughed without care: flowers
On the pony, flowers in your hands and on your cap!

Do you remember the roar of the rain gushing,
And everywhere the spray and foam?
How distant our grief to us seemed then,
How we forgot it all.

Appendix 2

Крымские очерки, 9

Приветствую тебя, опустошенный дом,
Завядшие дубы, лежащие кругом,
И море синее, и вас, крутые скалы,
И пышный прежде сад — глухой и одичалый!
Усталым путникам в палящий летний день
Еще даешь ты, дом, свежительную тень,
Еще стоят твои поруганные стены,
Но сколько горестной я вижу перемены!
Едва лишь я вступил под твой знакомый кров,
Бросятся в глаза мне надписи врагов,
Рисунки грубые и шутки площадные,
Где с наглым торжеством поносится Россия;
Все те же громкие, хвастливые слова
Нечестное врагов оправдывают дело.

Crimean Sketches, 9

I greet you, desolated home,
Oaks wilted, fallen round,
The blue sea, and you, steep cliffs,
And garden once luxuriant — now abandoned and alone.
To weary travelers on a scorching summer day
You still afford refreshing shade,
O house, and your violated walls still stand.
Still what grievous changes I behold!
Barely have I entered your friendly shelter
When the enemy's graffiti wounds my sight:
Crude drawings and vulgar jokes
Abusing Russia in their triumph shrill,
The same loud and boastful words used still
To justify the cause of a dishonorable foe.

³⁹ Here is the complete Russian text, with my translation.

Вздохнув, иду вперед; мохнатая сова
 Бесшумно с зеркала разбитого слетела;
 Вот в угол бросилась испуганная мышь...
 Везде обломки, прах; куда ни поглядишь,
 Везде насилие, насмешки и угрозы;
 А из сада в окно вползающие розы,
 За мраморный карниз цепляясь там и тут,
 Беспечно в красоте раскидистой цветут,
 Как будто на дела враждебного народа
 Набросить свой покров старается природа;
 Вот ящерица здесь меж зелени и плит,
 Блестя как изумруд, извилисто скользит,
 И любо ей играть в молчании могильном,
 Где на пол солнца луч
 столбом ударил пыльным...

Но вот уж сумерки; вот постепенно мгла
 На берег, на залив, на скалы налегла;
 Все больше в небе звезд, в аллеях все темнее,
 Душистее цветы, и запах трав сильнее;
 На сломанном крыльце сижу я, полон дум;
 Как тихо все кругом, как слышен
 моря шум...

Sighing, I pass on: a fluffy owl
 Noiselessly takes wing from behind a broken mirror
 And to his corner runs a frightened mouse...
 Everywhere I look, debris and dust;
 Everywhere is violence, and mockery, and threat.
 But roses, creeping through the window from the garden,
 Gripping its marble cornice here and there,
 Flower in flung loveliness without a care
 As though nature wished to shield us
 with its own protection
 From these doings of a hostile nation.
 Here a lizard between the paving stones and the green,
 Glistening emerald, sinuously slips,
 Glad to play in the tomb-like quiet
 Where the sun's rays' dusty pillar strikes the floor...

But already it is dusk, and gradually
 Murk has hidden shore and gulf and cliff:
 More stars now throng the sky. The avenue is dark:
 Stronger is the smell of grass;
 Denser, the fragrance of the flowers.
 Absorbed in thought, I sit on the broken porch.
 How silent is everything around; how loud the sea's roar...

Heaven Is Here and the Emperor Is Near: A Traveler's Guide to Heaven

James R. Russell

(Armenian Studies, Harvard University)

Abstract: The visionary literature of the ancient and medieval Near East provides descriptions of heaven and guides to travel there. In the literature of Israel, the Prophet Isaiah envisages a holy mountain; the Mishnah, a royal palace with successive chambers leading to the Divine Throne. It can also be a walled garden (this is the meaning of the word "paradise", from Persian) watered by streams: Eden has four (and medieval Armenian travelers saw it floating in the air). One might travel to Heaven in life. The Zoroastrian Arda Viraz visited the Otherworld(s) by ingesting a deadly narcotic, *mang*; the Prophet Muhammad rode the creature called Buraq; and others employed mantric meditation or a ladder (Hebrew and Arabic *sullam*, Ethiopic *ma'areg*, hence Arabic *mi'raj*). This was a dangerous journey: the foolish or faint hearted might mistake certain stones for water, or go mad. Heaven is divided from earth by a layer of hard stone or iron (Iranian *asman* > *ahan*, cf. Greek *akme* and Russian *kamen'*; Armenian *erkin/erkar'*). Some have seen it as a protective shield; others, as a prison wall, depending on their view of its king.

天低皇帝近：一份通往天堂的旅客指南

詹姆斯·罗素教授

(哈佛大学近东语言及文明学院)

摘要：近东古代与中古的幻想文学提供了关于天堂的描述以及前往的旅行指南。在以色列的文学中，先知以赛亚设想了一座圣山，《密西拿》设想了通往神圣王座的、有着鳞次栉比房间的庄严宫殿。它也可以被墙包围、溪流浇灌的花园（这是出自波斯语的“伊甸园”之意）：伊甸园有四个（中古的亚美尼亚旅行

者曾看到它漂浮在空中)。一个人或许一生中旅行到过天堂。琐罗亚斯德教徒 Arda Viraz 在吸食一种麻醉剂 (*mang*) 时访问过另一个世界; 先知穆罕默德骑着叫布拉克的生物; 其他人采用真言冥想或者梯子 (希伯来与阿拉伯的 *sullam*, 埃塞俄比亚的 *ma'areg*, 阿拉伯的 *mi'raj*)。这是一个危险的旅程: 愚蠢的人与胆小的人可能将石头误看成水, 或者发疯。天堂由一层坚硬的石头或者铁从大地分离 (伊朗的 *asman/ahan*, 参看希腊的 *akme* 与俄罗斯的 *kamen*; 亚美尼亚的 *erkin/erkat*)。一些人将天堂是为一个护盾; 其他人则将其视为狱墙, 这取决于它的王的想法。

“Heaven is high and the Emperor is far away.” — Chinese proverb

To my father, Joseph Russell, on his 87th birthday.

Some years ago the American writer Michael Chabon while rummaging in a bookshop came across a Yiddish phrase book for travelers, part of a series in various languages (French, German, and so on) published by Dover. The volume enables the foreign traveler to buy plane tickets, book a hotel room, ask a policeman for directions, decipher street signs, and so on, in Yiddish. Yiddish is a very rich language of the Eastern European Jewish diaspora derived from Middle High German with a great many Hebrew, Aramaic, Slavic, and other elements. But it was never the official language of any country, with the dubious exception of the tiny Jewish Autonomous Region of Birobidzhan in the USSR, which is still nestled happily somewhere around Mongolia, with a handful of speakers of Yiddish. But you could never purchase a ticket to get there on Aeroflot in Yiddish. Israel employs Modern Hebrew, which is a completely different language— and most of the people who did speak Yiddish perished in the Nazi Holocaust in any case. It survives among a very few speakers around the world, mostly ultra-Orthodox Jews, and subsisted till recently as a significant secular literary idiom: a Yiddish writer, Isaac Bashevis Singer, received the Nobel Prize. The phrase book thus has none of the practical utility of such a volume in Spanish or Italian: it is an imaginative appreciation of the character and sound of the murdered past of a living people, maybe a way to help that people understand itself and chart its future. The book with its imaginary Yiddishland stimulated Chabon

to write a brilliant counterfactual novel *cum* detective *noir* thriller, *The Yiddish Policemen's Union*, about a temporary refuge, a Yiddish-speaking Jewish protectorate of the USA that he situates in Sitka, Alaska. The novel, though not intended as such, served for this reader as kind of a foil or mirror, exerting its negative capability, if you will, a powerful argument for the importance and genius of the revived Hebrew language and the flourishing, independent State of Israel. It is a reflection on such vital concerns as the condition of exile, the place of Diaspora language and culture in the construction of present-day Jewish identity, and the inherent precariousness of a territorial claim by a proverbially homeless and landless minority.

So today I would like to offer an analogous, though shorter and more discursive phrasebook, Lonely Planet guide, and *vade mecum* combined to another place, Heaven, that is just as fictional, and is physically even more improbable than the Yiddishland of the phrasebook Chabon discovered. I think such a treatment may help us to appreciate how Heaven, which all available evidence indicates is only an imaginative and imaginary invention of the human imagination, can still be an idea of real value in life. It holds up a mirror to the real world, affords a contrast to things as they are, and helps people to think about and plan how we want to lead our lives and fashion our society and surroundings. It is a meditation on important social concepts such as authority, responsibility, and mutual cooperation. Thinking about heavenly occupations assists us to refine our earthly pursuits. The abstraction of heavenly harmonies and languages helps us to hone practical thinking about the origin of language, the idea of a universal language, and the relationship of the capacity of speech, apparently unique to humans among the creatures of this planet, to the cosmos as we perceive it through science, mathematics, harmonics, and art. The order (or disorder) of heaven enables us to reflect on society and how to improve it. And the various cultural traditions about heaven combine to form a major part of our spiritual heritage, sheltering all that remains to memory of the unnumbered dead, their loves and pleasures and hopes so like our own as we age, and crawl to the only end of age.

So you want to go to Heaven. The first thing the sensible traveler does is to consult a map. That will look different depending upon the tradition you hail from. One of the titles of God, lifted from that of the ancient Persian monarchs, is King of

Kings. Heaven is, accordingly, often presented in Jewish sources along the lines of an ancient royal residence consisting of a series of palace chambers through which one passes, rather like Persepolis near Shiraz or the Forbidden City in Beijing. One approaches the innermost chamber, where is God holds court on the Divine throne or chariot, through successive halls, called in Hebrew *hekhaloth*. The word *hekhal*, meaning the hall of a palace, is a loan into Hebrew from Sumerian, and evidently maintained its Mesopotamian majesty and gravitas long after the actual edifices of ancient Iraq had crumbled into dust; for it was subsequently adopted from Hebrew into the Arabic *haykal* of the *Qur'an*. Each hall is different, and is constructed of marvelous and otherworldly materials that awe the visitor with their splendor and strangeness. In the Mishnaic tractate *Hagiga*— the *locus classicus* of journeys to Heaven in the tradition— the little band of travelling Rabbis, led by the saintly Rabbi Akiva, are warned not to cry “Water, water!” when they behold the stones of marble of which one hall is constructed. What this probably means is that in heaven what is liquid on earth can be solid simultaneously, without having frozen into ice— heaven is a place where the usual physical laws not only do not apply but can contradict each other, and a traveler unprepared or unfit to appreciate his new surroundings is unworthy of being there and risks extreme culture shock— madness or worse.

The tenth-century Armenian mystical poet St. Gregory of Narek composed a series of 95 meditations that are to be imagined by the reader as a progression through a kind of imaginary *enfilade* of physical rooms and mental states like the serial order of the *hekhaloth*-halls: the stages of the Divine Liturgy and the three parts of the church building culminating in the holy altar. These divide into three groups of chapters or prayers, then, in the text; and the first point of division is at chapter 33, a number that has great symbolic significance for the Pythagoreans and later Christians. (Numbers, as we are to observe again, matter a lot in Heaven.) Thirty-three is the age at which Christ was crucified and rose from the dead; and St Gregory intended Chapter 33 to be recited by the celebrant of the Divine Liturgy at the point of the consecration of the Host, over and over until he sees a light coming towards him from Heaven. This repetitive practice is akin to the induction of ecstasy by the rhythmic chanting of a mantra again and again in other traditions. The light itself is a piercing of the veil between the upper world and the lower; and St. Gregory refers in the text to

“the solid liquid at thy last curtain” (*loytsn matsuats verjnim varagurid*). This cryptic, alliterative expression uniting opposites refers most likely to the same mysterious building material as the marble of the *Mishna* one is cautioned not to call water. The Armenian word for curtain in the text, *varagoyr*, is almost certainly a loan from Middle Iranian, the same source as Hebrew *pargod*, the word for the curtain in the Holy of Holies, as the last and most sacred building of the Temple at Jerusalem was known. The Muslim Dome of the Rock now stands on the site. In the Ancient Near East the king was concealed by a curtain; the Torah scroll in the Ark is veiled thus in the synagogue; and Orthodox churches have a curtain that is drawn to separate the laity from the priests during the Divine mystery, the ritual where the chapter of St. Gregory’s text is to be employed. The Christian Gospel claims that at the moment of Christ’s death on the Cross, the *pargod* was torn in half. There are multiple possibilities of symbolism afforded by Christian typology: the body is the temple of the soul and death tears it asunder. Christ’s death, a ransom paid for our sins, shattered the temple of the law. His death, preceding resurrection, tore the veil from the face of the ultimate mystery of mortality and removed the barrier between the Creator and the sons of God—mankind. The last curtain is the one that separates one, then, from the ultimate, awesome mystery. In the Christian liturgy that mystery is the transubstantiation of the bread into Christ’s body, the breaking of all the defined categories of life and death, human and inanimate, the transcendence of all states of mind limited by earthly logic, salvation.

So the halls of heaven are not merely the *divan-e ‘am* and *divan-e khass*—the public, then privy, chambers of a terrestrial Persian palace, or even the buildings of the Temple. They are stages of a mental and spiritual journey that challenge and confound the senses of the traveler. If he is unprepared, the experience can lead to insanity and death, as indeed happened to some of Rabbi Akiva’s fellow travelers in the Mishnaic text. But suppose one arrives at the chariot of the Divine presence unscathed. What happens then? On the face of it, the experience is somewhat anticlimactic: one participates in the celebration of the angelic liturgy, singing the praises of God in the company of the congregation of the cherubic and seraphic hosts. But it must be a spectacle of blinding light and color, of vastness and ineffable beauty; and emotionally the closeness to God is a state of ecstasy. It is the ultimate *nostos*, or

homecoming, the deepest loss restored and most passionate yearning fulfilled. Ordinary travelers are privileged to take part in this ceremony of the Divine court. That is what the pious Jew does; and then he returns to the world to perform the very same liturgy, the *Qedusha*, or Sanctification, every Sabbath in the synagogue, with renewed faith. The trip has thus enriched and enhanced that which he habitually does. It makes the Sabbath, that crucial punctuation of the rhythm of the week, that much holier. One stresses closeness to God, not union. God, the Qur'an explains, is closer to man than his jugular vein. But they are not the same; and when the Muslim mystic, who experienced *fana'*, the extinction of the ego and unity with God, and exclaimed "I am the Truth!" he was condemned as a blasphemer. The successful traveler to Heaven returns enriched, maybe even transformed, but still as his own person, as himself.

Other travelers have more to do than pray in God's presence. Prophets may address the King, with petitions on behalf of their people, or discuss practical questions. During the *Laylatu 'l-qadr*, the Night of power, the Prophet Mohammed woke in the darkest hour, was taken *Al-Aqsa*, the "farthest mosque", which was soon associated with the Temple Mount in Jerusalem, and then vaulted heavenward mounted on a magic steed called Buraq. In the *Mi'raj nameh*, the Book of Ascent, the Prophet when he met God in Heaven was instructed to command Muslims to pray 250 times a day. In modern Chinese this number is a slang expression for an idiot but it is unlikely God was joking. Maybe He wanted everybody to become a Sufi mystic and make every breath a prayer, or perhaps He just didn't get out much and His expectations of people were unrealistic. In any case, the Prophet, modest and obedient, would have carried this order back down and made it law. So Muslims are fortunate that much as Dante had Virgil as a guide when he embarked on the three-part tour of *The Divine Comedy*, the Muslim Prophet traveled in the experienced company of our father Abraham—the patriarch to whom one formally traces the three great scheduled faiths of the Middle East. (There are many other religions in the region, and a few are mentioned here, but in the mainstream Western religion business they are just charter airlines—without the Abrahamic accreditation.) Abraham was used to bargaining with God, having tried to save Sodom and Gomorrah once by getting the Lord to agree to spare the sinful cities of the plain if as few as ten righteous men might be

found there. Abraham got the number of daily prayers down to five. So when you're in Heaven, be prepared to bargain.

Mohammed saw various interesting phenomena in heaven, including a gigantic white rooster portrayed in manuscripts that I believe is simply the harbinger of the dawn sacred to the Zoroastrian angel Sraosha. The latter survives as Soroush in Islam—the only ancient Iranian divine name thus preserved by the later religion—and Sogdian Zoroastrian funerary reliefs unearthed near Xi'an depict bird-headed humanoids performing rituals: they may represent Sraosha again. These richly detailed carven narrative panels are thus a testimony to one of the sources of Muslim miniature painting and iconography in later centuries. Persian miniatures did not originate by a sort of Islamic parthenogenesis: they are an inheritance of Zoroastrian art. The traveler to Heaven, in any case, should not be startled to see a very large bird: a rooster, perhaps, or an eagle. In some Iranian silk brocades and silver of the early Islamic period it is a giant eagle, rather than the equine Buraq, that ascends to heaven bearing a naked human figure—the enfranchised soul, perhaps—secure in its talons. It would seem that this is the magical Simurgh bird, whose name is etymologically “eagle”; and the artistic composition of the scene is probably owed in part to a Greco-Roman source, since that tradition favored the naked body in a way Iran did not. Specifically it may derive from a portrayal of the abduction of Ganymede. The latter was a handsome Anatolian shepherd boy whom Zeus, the happily married father of the gods but a man of catholic tastes, took a fancy to and made his cupbearer (a euphemistic job description) on mount Olympus. This snow-capped mountain in northern Greece, easily visible from my grandmother's hometown of Salonica on a clear day, is a heaven. But only the gods and their chosen favorites live on Olympus, drinking their ambrosia and squabbling with each other. The rest of us, no matter how virtuous we are, go down to Hades; and even the heroic, aristocratic few assigned to the Elysian fields find their shadowy existence in meadows of pale asphodels so depressing that they would rather be slaves on earth than kings of the dead. Elysium is evidently quite unlike the Parisian namesake of the place. As my friend and teacher Prof. Martin Schwartz of Berkeley once commented on a dream I'd had about a departed mutual friend in the Hellenic afterlife, “A Greek hell is bad news.”

But there are, happily, other flowering fields for us barbarian non-Hellenes to tiptoe through. The Biblical Eden, whose name means simply “pleasure” (*ma'adanim* is modern Hebrew for delicatessen items at a supermarket), was the garden God made for Adam. His name is related to redness, earth, and blood—the ingredients of our generically named prototype—and Eden was quite definitely earthly. Eden is thus not Heaven *stricto sensu*, but since it has come to be called Paradise, a synonym of Heaven and a metaphorical destination of the souls of the pious after death, we can consider it in the survey of heavenly geography. Paradise, Hebrew *pardes*, Greek *paradeisos*, are both loans from Old Persian again: the **paridaiza* was the walled park or garden of the Achaemenian King of Kings. It was separate from the palace complex but not far away from it—like the park at the far end of the Forbidden City. His subordinate satraps constructed lesser palaces and *paradeisoi* for themselves in the far-flung provinces of the empire; so Greeks, Jews, and others might behold them without making the long journey as tributaries to the capital. So again, Heaven is modeled on an impressive feature of the dwelling of an earthly monarch; and much as the throne room has a curtain, the garden has its wall. Heaven is that which is inaccessibly above or impenetrably within, and separate from the inferior, the profane, *hoi polloi*. The wall of Eden is convenient to the Biblical myth: once Adam and Eve sin by sampling the forbidden fruit of the tree of the knowledge of good and evil (in the West, an apple since its Latin name is the same as *malum*, “evil”) and are expelled, the wall is there to keep them out and an angel with a flaming sword guards the door. Armed guards such as this formidable being are an impressive aspect of the staff of any royal palace or government building down to the present day; the traveler to Heaven has to be prepared to empty his pockets and pass through the X-ray monitor.

The imperial paradises of the ancient Persians were stocked with game so the king might go hunting whenever he wished; and there was an irrigation system of channels—an important feature in a desert climate. These watercourses are lovingly stressed in the Islamic image of Paradise in the *Qur'an*, which was composed in the arid desert climate of Arabia. In the book of Genesis, these channels possess an additional, cosmic symbolism. They are not mere rivulets but the four main rivers of the known world, all made to rise in Eden. The Tigris and Euphrates that define Mesopotamia, literally the land between the rivers, both take their course southwards

from the Armenian mountains, and these are the two we can still confidently locate. What the other names referred to is now less clear. But the symbolism is lucid and that is what is more important: four is the number of the earth's directions, its quadrants, the number that establishes its squareness, the squareness of our houses, our fields. And for the purposes of Christian symbolism, the four are made to branch from a single spring, conveniently rendering them cruciform as well. This squareness figures very prominently in the classical Chinese conception of heaven, as we shall see presently. And the beginning learner of Chinese easily remembers that the character for a country is a square enclosing a map of salient features of its landscape.

Eden is not outside the known regions of human habitation or distantly above the earth, but at the inmost heart of our world, at its center, though access is barred to us. It is some distance above us now: medieval accounts agree that it floats over the earth, in the air. Not everybody can see it; but according to a medieval legend a band of six Armenian monks did, after traveling six months and climbing a great mountain. It is strange it took them so long since Eden, Armenian sources aver, is a local destination: it hovers in the air just to the northwest of lake Van, in the district of Hark'. (In his *Discourse on the Terrestrial Paradise*, London, 1666, M. Carver avers that it is in Sophene, a district bounded by the Euphrates a bit farther to the west.) They were not allowed to enter, but they could see the garden and sniff the enchanting fragrance of its blossoms. They returned to report what they had smelled and seen to St. Nerses the Graceful (died 1173), the Catholicos or supreme patriarch of the Armenian Church. He included their description in his *Commentary on Genesis*, a book that, unfortunately, is lost but may turn up in an old and forgotten manuscript someday. However a densely illustrated Armenian manuscript from Kaffa in the Crimea of the *Lives of the Desert Fathers*— the early Christian mystics and monastics— has a wonderful and unique narrative miniature painting which depicts the black-cowled monks climbing the bare gray slopes of the rocky mountain, the opulent garden bursting with multicolored flowers above, and, on the right and down below, one of them telling St. Nerses about it afterwards.

We've noted walls and rivers as geographical features of Heaven. One should note in passing that ancient geography sets limits to the earth itself; and post-Biblical

and medieval sources add a wall at the end of the civilized world, erected by Alexander the Great to keep out the barbarian hordes of Gog and Magog. Though this is an old legend, and is a mere metaphor of any fortress or city wall, perhaps those who continued to elaborate it had learned of a real wall like Alexander's imaginary one, erected by the emperors of the fabulously remote realm of Seres, that is, China. And as for rivers, Jewish tradition places one, Sambatyon, at the end of the earth as well. It is so named because it throws up stones into the air on every day of the week but the Sabbath, Aramaic Shambat. Beyond it the hordes of the lost Ten Tribes of Israel wait to irrupt into the cruel kingdoms of Edom and take vengeance on the Gentiles—a variant of the myth of Gog and Magog. When the Mongols invaded the West in the 13th century, Armenian and other sources were certain they were Gog and Magog. But then life went on, Armenian princes travelled to Karakorum, and Armenian artists learned to paint Chinese dragons. Just beyond the dangerous waters of Sambatyon are the still more perilous Mountains of Darkness. If you make it you will find a well; and in that well is an articulate cat and a chain. Did Pushkin get his own learned cat on its golden chain in *Ruslan and Ludmila* from this myth by some circuitous route? And the cat serves faithfully a pair of fallen angels called by various names—in a Qur'anic variant of the myth they are the rhyming duo of Zoroastrian archangels who preside over the waters and plants, Harut and Marut (Persian Khordad and Amurdad). These angels, once introduced by their cat, offer to teach magic to travelers for free. One medieval account locates the two, now called Jannes and Jambres after another strand of Biblical legend (where they are the magicians who opposed Moses at the court of the Egyptian Pharaoh), and their well, not in mountains but in a walled garden in Egypt, that proverbial locus of dark sorcery. An early modern Armenian poem declares that Jannes and Jambres are the culprits who first brought the tobacco plant from Hell and planted it in their evil vegetable patch. So walls and rivers are re-arranged and re-situated to create a sinister anti-Eden whose denizens are a couple a lot less friendly than Adam and Eve. The world map of Andrea Bianco, 1436, situates Eden at the very top, that is, in the East (the North was still not the top of the world in mapmaking yet), on a kind of peninsula separated by a bay to another peninsula to its left. That other one has the wall of Alexander separating it from the mainland; and the hordes of Gog and Magog skulk sullenly behind it. On his Edenic peninsula Andrea helpfully marks the inn of St. Macarius,

who wanted to visit Eden but was not allowed in.¹ Macarius did, however, visit the *kepotaphion*, “garden tomb”, or *paradeisos*, “enclosed garden” of Jannes and Jambres.² The sources place this in Egypt, the land of dark sorcery; but for all we know, the anti-Eden is just across the bay from Eden itself. So make sure you turn right if approaching the shore from the West and visit the right Eden, and don’t eat the apples when you get there. If you do find yourself in the wrong one, don’t talk to the cat and don’t smoke the weed. Or you could wind up like Alice in Wonderland...

Another map of Heaven would depict it as a mountain. The Armenian legend, as we have seen, has Eden hovering above a high mountain; and one is reminded that Zion, a name of the holy city Jerusalem and its temple, is a word whose original Hebrew meaning was “mountain summit”. The Temple sat on a vast man-made platform on a hill rising above dizzyingly steep valleys. The God of the Prophet Isaiah has a “holy mountain” where the lion and lamb lie down together at peace— this is clearly a mythical, otherworldly place, a heavenly mountain specifically not of this earth or time, where animals instinctive rend and eat each other. Isaiah’s Heaven is thus seen not only as another place, but in another age, the Messianic one. The ancient Greeks, as we have already seen, considered an earthly mountain, Olympus, the home of the gods, though not of the souls of virtuous men; and the ancient Anatolians portrayed eagles and other representations of divine beings perched on mountains. So Heaven as a mountain peak is another geographical model and one ought to take along sturdy hiking boots. For the Japanese and the Polynesians— sea peoples all— the Otherworld is not vertically but horizontally distant, lying beyond the illimitable, level expanse of the Pacific Ocean. If you belong to an Austronesian culture you have to row a canoe. The geographical fact about heaven common to all the atlases of human culture is that it is not here. Moreover, once one alights in Heaven, has one really arrived, or is there still farther to go? How many heavens are there, stacked like

¹ See Jean Delumeau, *History of Paradise: The Garden of Eden in Myth and Tradition*, New York: Continuum, 1995, p. 67, Map 10.

Russell, “Hārūt and Mārūt: The Armenian Zoroastrian Demonic Twins in the *Qur’ān* Who Invented Fiction,” in S. Tokhtasev and P. Luria, eds., *Commentationes Iranicae: Sbornik statei k 90-letiyu V.A. Livshitsa*, St. Petersburg: Institute of Oriental Manuscripts of the Russian Academy of Sciences and Nestor-Historia, 2013, pp. 469-480.

pancakes one on top of the other? Christians agree on seven levels; Siberian shamans have to ascend 27 to reach the highest, inhabited by the great Uralo-Altaic god Bai Ulgen. So in visiting heaven you may need not only to go from one room to the next, and the next; but also up, and up, and up some more. Sometimes a lower heaven may be a kind of waiting room, or place of study and preparation (the Latin word *auditorium* has been used) for admission to a higher one. Zoroastrians do not plan to stay in Heaven indefinitely: at the end of time, when evil is defeated and the material world is purified of imperfection, disease, and death, the souls of men will receive their *tan i passen*, “final body”, and return to live here on earth.

But let us return to the tactile, visible, and olfactory experience of the place. Since the learned deal mainly with marks on paper, our chosen medium can circumscribe our appreciation of existence: one can write down a description of a physical place easily enough, or make a map, or even scribble a musical score. But how does one write in any precise, descriptive way, of a smell? Yet smell is a sense that plunges deepest into human emotion and memory, more evocative often than any picture. Smell is a sense that mystics have cultivated and refined in a way savants generally do not; so it seems important that it was precisely the aroma of the flowers of Paradise that the medieval Armenian travelers focused upon. It suggests a subtle sophistication of preparation for the trip. Heaven attracts all the senses, though. In the Zoroastrian *Hadhokht Nask*, the soul upon arrival in Heaven is given spring butter and basil to eat. Basil is, as its Greek name implies, the royal herb, its pleasant aroma and taste suitable for the divine. It is an earthly plant, though; of food that originated in heaven we know the *manna* of the Bible, a kind of seed with the taste of honey that God sent down to the Israelites in the desert of Sinai to make into cakes. Offerings for the dead often include food; and it would seem therefore that there are sometimes shortages there. In an Armenian folktale, a credulous peasant woman gives the lunch she has just cooked for her younger son to a deceitful stranger who claims to be a traveler from Heaven and friend of her deceased first born. We Sephardic Jews eat a meal of hard-boiled eggs and hard, sweet rolls called *roskas* at the grave. This is picnic food, to be sure; and the togetherness of a family repast at the time of loss and place of farewell is therapeutic, a good affirmation of the continuation of life. But these are durable viands, too; and metaphorically they are provision for the departed

Over the ages, humans imagined various kinds of food in Heaven. The great social event of ancient life was dinner with family and friends: funerary bas reliefs and frescoes from ancient Greece and Iran eastwards depict the deceased feasting with loved ones, reclining on a couch or sitting stiffly at a table, staring out solemnly at the viewer, munching bread, drinking wine. Christ's last full day on this earth, a Thursday in the spring month of Sivan of the year AD 30, ended with the Passover *seder* meal with his disciples, its conviviality dampened by premonitions of His arrest, betrayal, judgment, and crucifixion on the morn. Numerous frescoes in Roman catacombs, whether they be Jewish, Christian, or pagan, depict the family of the deceased at the dinner table, eating together. One looked forward to more such occasions and reunions. Is the fare of Heaven vegetarian? Man kills for food; and on many tombstones from Greece, Anatolia, Armenia, and Iran the somewhat static scene of familial culinary exertions is paired with the more dynamic one of the deceased at full gallop, hunting on horseback. This exciting and pleasurable exercise was the way our ancestors put meat on the table. It was also what a man did to prepare himself as a warrior, and in Persian epic poetry the shorthand expression for the way real men—the heroes— pass their time, is *razm o bazm*, “hunting and feasting”. As below, so above, it would seem. There is an old joke: a Rabbi, a Priest, and a Mollah are, unusually, traveling together. The last night of their journey they have just enough food left for breakfast the following morning, and they agree to remember their dreams from the end of such a special trip. On the morn, the Mollah tells his friends of a dream feasting with the Prophet and being entertained by virgins. The Priest describes sitting with Christ as at the Last Supper. I had insomnia, says the Rabbi, and since I figured you guys were up in Heaven feasting, I ate everything we had saved for breakfast. So if you're about to take that long flight to Heaven, with airline cuisine to look forward to, have a bite and maybe a tippie afore ye go.

Pack food for your trip; but also check your wallet. Coco Chanel said the best things in life are free; and the second-best are very expensive. The same might be said of the afterlife. The ancient Greeks placed an *obol*, a small coin, in the mouth of the deceased to pay Charon, the ferryman over the river Styx into the otherworld; and the

Chinese offer special otherworld paper money for the dead for various necessary purchases. Manichaeans describe heaven as a teeming city, with bazaars—a rather ordinary place, compared to the royal precincts and government compounds of other imagined heavens. But you need cash to get something at a bazaar. So it would suggest, again, that money is useful, no matter whatever one's cosmology or how noble one's mission. As Cervantes reminds us: an innkeeper whose bill has not been paid admonished Don Quixote, Next time you embark on a heroic quest, Sir Knight, take along money! As my Mom says, "Rich or poor, it's good to have money."

Heaven also has sound: Rabbi Akiva and other mystics hear the Divine liturgy: Holy, holy, holy is the Lord of Hosts! His glory fills all the world! (*Qadosh, qadosh, qadosh Adonai tseva'ot, melo' kol ha-arets kevodo.*) The Zoroastrian name for heaven is *garo.demana*, literally the "house of song" in Avestan; hence Pahlavi *roshn garodman*, "the luminous house of song" and Armenian *gerezman*, which has become the word for a tomb. (Armenian uses for Heaven *drakht*, a Persian word meaning, simply, a tree—Paradise the park, again.) The Divine liturgy imagined by the Hebrew prophets gives us the text but not the score: the composers of religious music have striven to approximate the strains of divine songs; and the mathematical affinity of the golden section in painting, the widening volute chambers of the nautilus shell, and the intervals on the neck of a guitar suggests that harmony and number, the language by which the cosmos speaks, may be a musical as well as a verbal language. It would be well for the traveler to Heaven to be musically literate, in order fully to appreciate the experience; and to have a decent singing voice. Does heavenly music employ instruments? The divine beings of ancient Indian mythology called *apsaras* and *gandharvas* carry lutes; and wherever Indian artistic influence is felt, in the iconography of Buddhism and of Zoroastrianism in Sogdiana and along the Silk Road into China, the angels hovering in the supernal clouds of the divine worlds flourish these instruments. And funerary furniture and offerings, from Egypt to China, supply stringed instruments as part of the necessary baggage of the more sophisticated otherworld traveler. Bards entertained kings at court with lyric and epic poetry chanted to the accompaniment of a lute or harp. But this placid music was punctuated for announcements, wars, and the like by the stirring martial blast of trumpets. The Jerusalem Temple had its players of the *shofar*, the trumpet made of a ram's horn; and

God and His host signal the redemption of Israel, or the end of the world, with the trump of doom.

Purists in the Christian tradition abhorred the use of musical instruments in the liturgy, preferring to imagine a massed chorus of voices singing in unison. In an early modern Armenian folk tale an ambitious priest makes a pact with Satan to advance in the hierarchy and become a bishop, on condition that he keep a tiny harp in his robes. When he has attained the highest post, the devil's orchestra bursts out in church with the mighty twangs and brays of many instruments: the incriminating object is discovered and the sinner is tied to the tail of a horse and let loose to be dismembered on the rocks. Clearly Armenian Christianity had no time for the guitar-toting practitioners of folk masses. And one recalls that the classical Persian poet Onsori, recasting the ancient Greek myth about the invention of the lute from a tortoise shell with stretched sinews through which the wind blew, has Ahura Mazda—the good Creator God—find the shell. But it is Ahriman, the devil, who shapes and tunes it for him. And Onsori adds that what the Greeks call Dionysian song is the music of Harut, one of a pair of fallen angels. A boy out-fiddles the devil in American folklore. Clearly some music is held to stimulate the lower passions and to conduct the listener, not to the House of Song but down the primrose path to Hell. So opinions about what one hears in Heaven are divided: some imagine all the orchestra of the Jerusalem Temple that the Psalms allude to; while the more puritanical insist on plainsong, eschewing even polyphony.

Who travels to Heaven? The dead, mostly, on their final journey, wait with their passports at the gate, hoping to receive a residence permit. Prophets go there to ask questions and take orders: ancient Israel has about forty we know of because they left writings that were accepted into the canon or are otherwise mentioned in Scripture, and some went to Heaven or saw it. Probably many more are unrecorded, since prophecy was quite common—there was a place in Jerusalem you could go to be enraptured if you wished—and few put brush to papyrus after the trip. There are mystics hoping for an ecstatic experience, a fulfillment of their faith, even an erotic union with the Divine. Again, considering the numbers who have thronged mystical orders over the centuries, we know of only a few from texts. Then there are the

frequent fliers, the shamans: with the help of drugs, drums, chants, and other techniques they go to the Otherworld for practical purposes— to obtain useful knowledge for their communities, to assist the sick, to deal with divinities involved in earthly affairs. They go back and forth more than anybody else, on business visas. Their drums often have maps of the place. Like all successful businessmen, they know how to communicate without a phrase book: shamans of the Hindu Kush region whose native language is Burushaski, for instance, display an uncanny proficiency in the unrelated Indo-European Shina speech. They also have associates up (or, out) there: animal and spirit familiars to help out on trips. A study of Tibetan Buddhists calls them “civilized shamans” and that is a good designation for a highly literate tradition of immense philosophical sophistication that employs all the panoply of shamanistic spirit travel. So it is no surprise that there is a Tibetan guide to the intermediate states of the afterlife, the *Bardo Thodol*, which in English is translated imprecisely *The Tibetan Book of the Dead* on analogy with the well-known ancient Egyptian work. The latter inspired *The Western Lands* of the American writer William S. Burroughs—a brilliant guidebook for the otherworld traveler of the present age.

The word trip will have a special resonance for people of my generation and conjure up vivid memories. American young people of the 1960s employed various methods, most involving what the Food and Drug Administration calls controlled substances, to take very uncontrolled trips. A bad trip left the traveler in much the same state as the companions of rabbi Akiva who went mad, or became heretics, or died. But tripping to Heaven for the merely curious did not begin with LSD. Lucian of Samosata, a second-century satirist author and playwright who grew up among speakers of Syriac, Parthian, and Armenian and wrote in Greek, has the curious adolescent hero of his *Menippus* hook up with an enterprising Zoroastrian priest named Mithrobarzanes who promises to take him to heaven and hell and back and has him perform all sorts of ascetic exercises in preparation. He might also have taken *mang*, the hallucinogen employed by the seer Jamaspa at the court of Vishtaspa in Zarathustra’s day and by the righteous Viraz, who undertook the dangerous journey in a time of universal doubt and despond in order to bring back to the Iranians the assurance that their path, the way of Zarathustra and Ahura Mazda, was right. One can add to this list accidental travelers: in recent years narrators of near death experiences

have made tidy fortunes describing how they walked through tunnels to the light, meeting much-missed loved ones before being sent back to serve out the rest of their earthly sentence.

How does one get to heaven? For the Zoroastrians and Muslims, it is a bridge over an abyss; another way is ascent, on a ladder or stair. The chief obstacle is what is in between our earth and heaven above. Between heaven and earth is the air, the intermediate space called in Indic *antariksha* ("dominion of between"); in Armenian, *anjrapet* ("not-water-dominion"). Christians populate it with demons, and it is a place of danger. One can climb a ladder. The Greek saint who had a vision of this, St. John Climacus (that is, of the *climax*, "ladder"), beheld demons at every rung trying to drag the traveler down with various temptation; angels try to assist the worthy. The Hebrew for a ladder is *sullam*, the word used of Jacob's Ladder; and the Ethiopic is *ma'areg*; from the latter Christian culture was loaned Arabic *mi'raj*, for the Prophet's night journey. The word *sullam* is used as well in Islamic texts; but it is the former term that has yielded "mirage", the English word for a deceptive vision that evaporates as you approach it. The Spanish Catholic mystic, San Juan de la Cruz, whose family were converted Jews, employs the ladder in his great poem. Perhaps he knew the earlier Hebrew text of the eleventh-century Spanish Jewish poet Moshe ben Ya'aqov Ibn Ezra: *Heqitsoti tenumat ra'ayonai/ Le-yashen ta'avat nafshi v-'einai./ Ve-tarti kholfot ha-zman be-libi/ Le-hashmi'a 'atidotav le-aznai... Akhapes bo khaddar hokhma ve-a'al/ be-li sullam elei ginat 'adanai*. "I roused my thoughts from their slumber/ To put to sleep the desire of my (lower) soul and eyes./ And I turned over in my heart the changes of time/ To let my ears hear the things to come... I shall seek in Him the chamber of wisdom and ascend/ Without a ladder to the gardens of my Edens." The pious man, the Rabbis say, has a ladder in his inner room: that is, a means of ascent to heaven within his heart.¹

Another means of travel is a bridge spanning the interval between worlds. Zoroastrians believe that the soul on the fourth morning after death ascends on the

¹ See S. Solis Cohen and H. Brody, *Selected Poems of Moses ibn Ezra*, Philadelphia, PA: Jewish Publication Society, 1934, pp. 6-9; and V.A. Altmann, "The Ladder of Ascension," in *Studies in Mysticism and Religion presented to Gershom G. Scholem*, Jerusalem, Israel: Magnes Press, 1967, pp. 1-32.

rays of the rising sun to the mountain of judgment (Middle Persian *chagad i dadig*) and begins to cross the Bridge of the Separator (*chinvato peretu* in Avestan). For the righteous it is a safe nine spear-lengths in width; but for the damned it narrows to the sharp edge of the blade of a sword and the doomed plummet through the air into hell. On the famous Wirkak sarcophagus, made for the tomb of a Sogdian communal leader (*sapao*) in China, there is a roiling sea beneath the bridge from which the horrible fanged jaws of monsters rear up in hungry anticipation. When the bas-relief was discovered, I was among several scholars who immediately connected it to the description of the soul's peril in the Parthian Manichaean funerary hymns *Angad Roshman* and *Huyadagman* published by Boyce and revised by Sundermann. The third-century Sasanian high priest Kartir, a foe of Mani, induced an out-of-body *psychanodia* in which he crossed the bridge and confronted a leonine monster on it. So there was some variation in the way Iranians of the pre-Islamic era, whether they were Zoroastrians or Manichaeans, imagined the perilous experience of crossing the bridge between the worlds. The journey might be made after death or as a shamanistic traveler in life: either way, it was perilous, and accomplishing it was proof of the pilgrim's piety and bravery. Islam borrowed the myth of the Zoroastrian bridge of the separator, making it the thickness of a hair; and the Armenians, who had once been Zoroastrians themselves, adopted as Christians the Islamic image in their folk beliefs as the *maze kamurj*, "the bridge made of (a single strand of) hair".

Various activities take place in Heaven. Travelers arrive and make their way through the halls of the palace, one by one, trying to maintain their sanity. The arriving souls of the dead are offered local basil and butter or munch on the box lunches thoughtfully deposited in their tombs and pyramids. They unpack their huge trunks full of musical instruments, terracotta horses, servants, and carriages (all of which stretch and spring to life), and count their money, subtracting, if they are Greek the obol they have paid Charon for the ferry crossing of the Styx. Heaven's angelic bureaucracy is large. Even in the timelessness of eternity it takes a while to rummage through books of judgment, sort out entry visas, supervise events on earth, and report to superiors. Alasdair Gray's novel *Lanark* is a modern satire on the bureaucratic tangles of the otherworld. The emperor himself, God, head of the pyramidal heavenly corporation, sits on a throne and several orders of angels and mystics sing His praises.

And what is He himself doing? Genesis and the Qur'an agree that He created the universe by an utterance: His thought and act are one. But the Qur'an observes that God is of such a kind that when he decides on a matter He says "Be" and it is (*kun, fa yakunnu*). His language has a special power: words really are deeds, at least when He is talking. (He teaches with a pen, qalam, too: the divine language has a system of writing.) But what is striking about Divine grammar here is the use of the present tense. It prompts a question: Is God still creating, or was Genesis a one-off? Was there one big bang or are there many? Parallel universes and multiple dimensions? Is he the *deus otiosus* of the Deists, a retired God done with doing, just tinkering now and then with the cosmic clock He made to keep it running? A traveler preparing to visit Heaven may ponder these questions for quite practical reasons: the Jewish Kabbalists who used to go there studied not only *Ma'aseh Merkava*, the Work of the (Divine) Chariot, which deals with where He sits and how to get there, but *Ma'aseh Bereshith*, the Work of Genesis, and *Sefer Yetzira*, the Book of Creation, both of which are about what He did, or still does. Part of their technique of travel was psychotropic: they hyperventilated and chanted repetitive mantras based on permutating patterns of the 22 letters of the Hebrew alphabet. Shamans do much the same, speeding the process (they do this for a living and with lots of customers time is money) by adding drugs, from the *mang* of the ancient Iranians and the *amanita muscaria* or fly agaric mushroom of the Siberians to the *ayahuasca*, peyote, and psilocybin of the Americas. Perhaps the ancient Israelites had similar drugs: the visionary prophet Ezekiel mentions *peneg*, which could be *bangha*, hemp. This is all standard stuff, on the level of the advice in a Lonely Planet guide. But let us focus on the issue of Creation. The Rabbis also made golems.

What is a golem? According to some cosmological systems condemned as heretical by a triumphant Christianity, God did not create the world *ex nihilo*, from nothing, but from pre-existing undifferentiated matter, *hyle* in Greek. According to one strand of cosmological speculation that took hold in the Balkans, God stared at the ocean, the primordial abyss, and was at a loss about how to make the world. A duck named Satanael, that is, the devil with the divine suffix El, "God", tacked on, cf. Michael, Gabriel, Raphael, Uriel and the rest, helpfully plunged down to the bottom of the bottomless and brought up some mud— some hyle, that is— for God to work

with. There is a sort of parallel to this myth that was current among Zoroastrians that we know about through contemptuous references to it in Armenian and Manichaean literature: Ahura Mazda was at a loss as to how to create light till a demon named Mahmi showed him. So a golem is an artificial man one makes from an inert lump of clay— *golem* is the rough Hebrew equivalent of *hyle*, raw material— and animates by employing complex rituals, perambulations, recitations of complex alphabetic patterns. The most famous historical, or, one should say, legendary golem is the one Rabbi Loew made in Prague to protect his fellow Jews from attackers motivated by the infamous blood-libel— and to help him out around the house. If monsters and robots did not become unmanageable or go berserk we would not bother to compose stories about them; and Rabbi Loew's had to be put down and disassembled. The pieces are supposedly in the attic of the ancient Prague synagogue. Pure science fiction; but the great Israeli scholar of Jewish mysticism Gershom Scholem argued that some accounts of the ancient mystics actually trying to make these Frankensteins *avant la lettre* are true. Maybe in altered states of consciousness they even believed for a time that they had succeeded. As the writer Michael Chabon explains, "The ritual itself was the point of the exercise: performing it... would induce a kind of ecstatic state, as the adept assumed a privilege ordinarily reserved for God above: the making of a world. It was analogical magic: as the Kabbalist is to God, so is a golem to all creation: a model, a miniature replica, a mirror— like the novel— of the world."¹ The implication of the practice is that God is still making worlds. The traveler to Heaven will see this happening and ought to prepare himself by learning something about it, if only better to appreciate the spectacle, to get the most out of his encounter with God the Creator.

The Book of Creation mentioned above, *Sefer Yetsira*, is a very concise treatise— an outline or sketch, almost— of fewer than ten pages, on two subjects. The first is the contraction of the Divine essence away from an infinitely small point and the emanation of ten quanta, or atoms, or spheres, or counters of Divine energy and qualities— the *sephiroth*— into it. These are linked together by the 22 letters of the Hebrew alphabet, each forming a pathway, to form a pattern, a matrix of existence, that is simultaneously the Tree of Life that grew in Eden and suffuses the living

¹ Michael Chabon, "The Recipe for Life", *Maps and Legends*, San Francisco: McSweeney, 2008, p. 164.

worlds, the body of the Primordial Man Adam Kadmon that enables us to understand the physiology of golems, and Jacob's Ladder— the vehicle of ascent and descent from Heaven. They are abstract qualities, static directions, and motions all at once.¹ The ten *sephiroth* are also— since Divine essence can be made different things and kinds of things at once— the ten dimensions: North, South, East, and West (or in Greek, Adam again, formed of *Anatole* (East), *Dysis* (West), *Arktos* (North) and *Mesembria* (South)— a nifty cosmological acronym); up and down; beginning and end; and good and evil. In the cosmic scheme, good and evil are just... directions. The other half of the text has two wheels moving in opposite directions, each with the 22 letters on it, forming 231 possible bilateral roots mechanically. Meanings are assigned to these arbitrarily, resolving in one stroke, as the great historian of Kabbalah Professor Joseph Dan of the Hebrew University once observed, the problem of the relation of the signifier to the signified. Although the text of *Sefer Yetsira*, only a few pages in length in all, may be witness to a large and long tradition of cosmology— the snow-capped, miniscule acme, as it were, of a giant mountain of linguistic and mathematical speculation hidden from us by the clouds of time— it still stands strangely and starkly alone in Jewish thought. That is in contrast to the analogous corpus of Indian tradition on *mantra* and *yantra* or the huge library of commentary in China on the triadic and hexagrammatic system of 64 permutations of the binary system of broken and solid lines of the *I Ching* and the creative action of Yin and Yang in the wheel of being (cf. the two wheels of the *Sefer Yetsira*, perhaps). The isolation and esoteric status of the Jewish text contrasts with the centrality and visibility of these systems in India and China and allows one to hazard the suggestion, at least, that Israel might have received the system, unique and exotic in its own milieu, or been inspired to shape it, from another culture where it was commonplace. This tantalizing hypothesis need not worry the traveler to Heaven; but wherever in Asia he hails from it would seem that a little knowledge of math and physics (and perhaps harmonics, too) will go a long way to helping him speak the idiom of Heaven,

¹ T.S. Eliot in the poem "Burnt Norton" of *Four Quartets* evokes the ten stages of the dark night of the soul of St. John of the Cross as *sephiroth*, though it is unlikely he knew them as such, much less anything about Kabbalah or the *Sefer Yetsira*. "The detail of the pattern is movement./ As in the figure of the ten stairs." "Here the impossible union/ Of spheres of existence is actual." See also Helen Gardner, *The Composition of "Four Quartets"*, New York: Oxford University Press, 1978, p. 89 and n.

a powerful one in which words do not just denote things, but create them. .

It is possible that one may be understood speaking earthly languages in Heaven, though preferably the sacred ones: Sanskrit, Hebrew, Arabic. Dr. John Dee, court astrologer to Queen Elizabeth, used a scrying stone and chart, and the assistance of a decidedly shady Welsh amanuensis, to converse with angels in a rather cacophonous language and crabbed, inelegant script— both hitherto wholly unknown— that he called Enochian, after an enigmatic early figure in Genesis who went to Heaven without dying first. Arriving and realizing one has to know Enochian would be an unpleasant surprise; but fortunately there are dictionaries available in the better occult bookshops. Musing about the heavenly idiom is invariably involved with speculation about the primal language, the speech of Paradise. For all men spoke only one before the power of Heaven shattered the tower of Babel (which had been erected in order to get there: skyscraper as ladder). The dispersion of men and the confusion of tongues leading to the present plethora of languages ensued. This aetiological myth expresses a longing, not only to know our beginnings, but to repair the sundered, to restore to our factious race an imagined and lost human unity and harmony. For early Christians, Hebrew was the primal speech; but what with anti-Semitism and the growth of local nationalisms, other languages became candidates for official status. Some *philosophes* of the eighteenth century *Verklärung* nominated Chinese, because of its melodic tonal aspect and monosyllabic structure, both of which they regarded as aspects of a primordial linguistic capacity. And it employed hieroglyphics, the most ancient kind of writing. So it had to be first. Why not? *Xuexi Hanyu!*

Heaven's inhabitants might be curious to know about the traveler's home. Americans like to say that our political differences end at the water's edge; and it may be prudent for the visitor to Heaven to present a positive image of the Earth's friendly relations and shared values. A good way to do this is to stress that the relation between heaven and earth is not of competing tribes claiming special relationships but of a moral reciprocity that harmoniously extends over all. "As above, so below," declares the Western Hermetic maxim. The chapter "Inward Traveling" of the *Guanzi* affirms this: "For the heavens (*tian*) the ruling [principle] is to be regular (*zheng*): for the earth (*di*), the ruling principle is to be level (*ping*)... If you can be regular and tranquil,

only then can you be stable (*ding*).” David Pankenier, in a study of the beginnings of Chinese writing, proposes that the latter word, meaning also “right”, would have been written originally with a homonymous glottograph consisting of a simple square.¹ These geometric metaphors of rectitude have, it would seem, a geographic implication, too: both Heaven and Earth have four sides each. Heaven and Earth are complementary in a marital and conjugal sense, also. In the earliest recorded Armenian religious hymn, Heaven, Earth, and the Sea are all in labor to give birth to the fiery Zoroastrian divinity Vahagn (Avestan Verethraghna). The poem contains an intricate play on the etymologically related words for Heaven (*erkin*) and Earth (*erkir*), both of which contain the common root *erk-*, meaning “two”, from Proto-Indo-European **dw-*; the word-play is extended logogrammatically in the hymn to the homonymous verb *erkner*, “labored”, to suggest that Heaven and Earth have lain together for the god to be born out of the womb-like sea. The linguist Luc Baronian has proposed that Armenian *erkat*’, “iron”, which seems early to have been loaned into neighboring languages, was formed with the *-at*’ suffix one finds, for instance, in *arcat*’, “silver”, from the *erk-* root. One observes that this would accord with the cosmological conceptions of ancient cultures to Armenia’s west and east— as is often the case, with Armenia presenting a strikingly individual reflex of these concepts. Heaven as iron: Iranian and Old Indic *asman*, “sky, heaven”, cognate to Greek *akme* “stony mountain summit” and Russian *kamen*’ “stone”, implies Heaven was a dome or level of adamantine rock; in the *Gathas* of Zarathustra, Ahura Mazda clothes himself in “the hardest stones” (*aseno khraozhdishteng*). The word for “stone” becomes “iron” in later Iranian. This is undoubtedly analogous to the sky-mantle found in other mythologies, notably in the cosmic Psalm 104 of the Bible.

For the Iranians, the hard stone of heaven was perceived originally as an egg-shaped shield enclosing the created world, with the sea filling the lower part and the earth a disk floating upon it. When the evil Ahriman assaulted the cosmos, the Pahlavi *Bundahishn*, or Book of Creation explains, he punctured the egg from below in the shape of a snake and was then trapped in the center of the earth, which fled to form

¹ See David W. Pankenier, “Getting ‘Right’ with Heaven and the Origins of Writing in China,” in Li Feng and David P. Branner, eds., *Writing and Literacy in Early China*, Seattle: University of Washington Press, 2011, pp. 41, 49.

the mountains, the space vacated becoming the hollow funnel of hell. So the shield that protected the world from Ahriman is now his prison. The Manichaeans, who inverted this dualist cosmology in such a way as to suggest that the evil spirit, not the good God, fashioned the world, regarded the stone or iron sky as a prison wall for us. We are spirits in the material world, as the English rock band *The Police* sing. Our task is liberation: Mani's Parthian followers appropriated the Buddhist Sanskrit term *punya*, "merit": by accumulation of *pun*, which to them was not transcendent morality but just a kind of rocket fuel, we attain the escape velocity to crash through the guards' barriers and travel to the remote heaven (*parnirvan*, from Buddhist *parinirvana*) of the true and alien God, who has nothing to do with the evil of materiality. That is a rather sardonic understanding of virtue; and accordingly, the journey to heaven for the Manichaean is not so much an ascent as an escape. Clearly, Manichaeans and other Gnostics when they want to see Heaven have a different destination in mind than Jews, Christians, Muslims, and Zoroastrians. Or maybe not, and we all go to the same place and just don't know it. Once upon a time, an angel conducting a visitor around Heaven asked him to be quiet while passing one particular cloud with people on it playing harps. Why? he asked. Oh, said the angel, That's the place for the Catholics. They think they're the only ones here.

The first man in space, the Soviet cosmonaut Yuri Gagarin, dutifully reported to Moscow that he saw neither God nor angels up there. Imagine there's no heaven, sang John Lennon some years later— above us, only sky. Christ taught, according to Luke, that the Kingdom of Heaven is within you: don't look upwards, look into your heart. A great Chinese poet, calligrapher, and statesman experienced the same insight, though he expressed in an intriguingly different way: he once mused that we look up at the stars and say that is Heaven; but those in the stars look towards us and say that is Heaven, so surely we are in Heaven. Chairman Mao Zedong's verse suggests it is our responsibility to make life on earth socially, politically, economically like what we imagine the happy state of heaven to be. This takes the ancient ideas of what is regular, level, and right, and adds to them an imperative of ethical action. Looking up from Heaven, the traveler may see our blue orb of jasp in the blackness of space, and realize it is time to come home.

You are returning from Heaven, and like any tourist you would like to bring back a souvenir. The English visionary poet Samuel Taylor Coleridge once mused: What if a man dreamed of Eden and awoke holding a flower from there? Yes, he replied wryly to his own question. Yes, and what then? The science fiction writer H.G. Wells, who visited the young Soviet Union and reported “I have seen the future and it works,” wrote *The Time Machine*, about a future that did not work. In the year 802,701 the surface of the earth is a garden inhabited by the beautiful, indolent Eloi, who are fed, clothed, and housed by the ugly subterranean working class of Morlocks, who climb up the wells from the machinery of their caverns to take a few Eloi to eat. The time traveler saves a lovely Eloi maiden, first from drowning, then from hungry Morlocks. She loves him and gives him a flower. When he escapes back to the past, to late-Victorian London, and the time machine flickers into solidity in his laboratory he finds himself still clutching the blossom, answering Coleridge’s question. Wells’ Paradise is distant in time; and more recent science fiction offers the same answer with a trip instead through space. The American *Battlestar Galactica* imagines humans from a distant galaxy who have created cybernetic slaves to support their luxurious way of life. The slave robots, endowed with feelings, rebel and destroy the planet: the surviving men take off across the cosmos to find the true earth where, according to an ancient myth, the human race originated—our world. But they land in empty ruins: we have already destroyed this Eden and all its inhabitants in a nuclear holocaust. What then? asked Coleridge. The answer is: It doesn’t matter. Human beings have created both heaven and hell, and the most beautiful flower means nothing if it does not grow in a garden where all of us are equally the gardeners, living in a just society, performing meaningful labor, enjoying together the fruits of all the material and spiritual culture of the planet. Some decades ago, Chairman Mao spoke to the miners of Anyang. He drew the first character, shaped somewhat like the Roman capital letter I, of the word *gongzuo*, “labor”. The upper and lower horizontal bars, he explained, are Heaven and Earth. The straight and true vertical line that supports heaven, that makes the cosmos whole, is the strong back of the worker.

I began this excursion through heaven with the invocation of a fiction. But as Brian Boyd has argued in his work on the genesis of stories, fiction is an evolutionary adaptation. Humans are awkward bipeds with a long adolescence: we don’t run as fast

as tigers and we don't acquire intuitive survival skills as soon as wolves. It is only by dreaming and imagining, of creating unreal situations and crafting solutions for them, that we survive. Creative work, writing stories, painting art, is part of the labor whereby we survive and evolve. The anthropologist Weston La Barre called this lifelong process neoteny: we retain an awkward adolescence throughout our lives, always learning, always trying out the new. Heaven is just such a useful fiction, a meditation, like Thomas More's *Utopia*, on how to make life here better and fairer, as well as a reflection on how things are, what we like best. The dystopias of Wells, of the spacemen of battle star *Galactica*, are equally warnings about how these heavens, if we are not careful, can become hells.

When I was a boy my father gave me a book he had enjoyed when he was little. *Shvambrania*, a memoir of childhood by the Soviet writer Lev Kassil, is named after an imaginary country the author and his little brother Oska invented in their childhood in the town of Pokrovsk on the Volga river. Meanwhile, Russia plunged into the First World War, then the Revolution and Civil War, and the Kassil family walked out of the old Russian Empire into the new Soviet Union as the book ended. Yes, and what then? I wrote a letter, rather a message in a bottle, to the Writers' Union— this was in 1962, in the midst of the Cuban crisis, and one might as well have been sending a message to the Moon— asking Kassil, wherever he was, whether he still played with *Shvambrania* and what language its people spoke. Some weeks later an envelope from Moscow with a big hammer and sickle arrived from the Moon, from the far galaxy, from the year 802,701, from Kassil. "Dear Jimmy," Kassil wrote, and I now paraphrase from memory, "as we make a new life which will be really better for everybody, the dream of *Shvambrania* that Oska and I played has become real. The *Shvambranians* used to speak only Russian; but as the book has been translated into many languages they have become polyglots, speaking many languages. The *Shvambranian* admiral Ardelar Keys had a ship; and I have a boat named after it, which I gave to the cadets of a school on the Moscow river. But I kept the *Shvambranian* flag on it, which I now dip three times for you." The letter, my flower from the future, was sealed with a cork stamp of the arms of *Shvambrania*.

We have taken quite a trip together, talking about golems and cash, lunches

and banquets, gardens, palaces, songs and orchestras, exotic languages, cosmic geometries, mountains, bridges, ladders, and sea monsters with snapping teeth. The traveler to heaven is a polyglot, like the modern Shvambrianian: he speaks Armenian and Greek, Hebrew and Arabic, Persian and Sanskrit. And he has to know a bit about Buddhism and Confucianism, Judaism and Islam, Zoroastrianism and Hinduism. Many dreams of many people across the ages and the lands. "If you dream alone, it's just a dream," says a Brazilian folk song. "If you dream together, it's reality."¹ As the First World War of the last century was grinding towards its end my grandfather, a working class printer born a slum in lower Manhattan, joined some other people like the journalist John Reed, who was to write *Ten Days that Shook the World* and rest in the Kremlin wall. The Communist Party of the USA and the people who as "fellow travelers" supported some of its aims, shared with revolutionaries around the world the dream of making a heaven on earth for the dispossessed and the exploited. In the decades that followed, they were pioneers in the struggle for civil rights for Black people. Many of them fell in the desperate and lonely battle against fascism in Spain. They joined the fight against the imperialist exploitation of China. I grew up with a photo Grandpa had in his study of Dr. Norman Bethune, who came to participate in the liberation struggle of this country.

I'm very honored to be here. After the cataclysms of the last two centuries, China's present successes, achieved through hard work and intelligence alone—without colonial rapacity, without natural resources plundered and sold—bring happiness to my heart. Weary cynics where I come from used to say anybody who is not a Communist before age thirty has no heart; but anybody who is, after age thirty, has no head. At sixty I fear I'm still like a child, very much a neotenic dreamer, still awkward and learning, taking trips and having a hard time keeping a straight face. Perhaps a bit like your scholar poets of the Tang dynasty, living in the mountains and getting drunk with their friends. But I really do hope that in this vexed world we will renew our collective commitment to the values and labor of world culture, that we will all dream together, our collective work building the only heaven there is, right here, in this palace, this garden, this holy mountain called planet earth. I'm happy to be your fellow traveler on this trip. So in two of the languages of Heaven, to the men

THE INTERRUPTED FEAST.

By James R. Russell,
Harvard University.

"You bring forth a great feast, including a magnificent table, chairs, service, and food and drink. The feast takes 1 hour to consume, and the beneficial effects do not set in until this hour is over. Every creature partaking of the feast is cured of all diseases, sickness, and nausea; becomes immune to poison for 12 hours; and gains 1d8 temporary hit points + 1 point per two caster levels (maximum + 10) after imbibing the nectar-like beverage that is part of the feast. The ambrosial food that is consumed grants each creature that partakes a +1 morale bonus on attack rolls and Will saves and immunity to fear effects for 12 hours.

If the feast is interrupted for any reason, the spell is ruined and all effects of the spell are negated."

— "Heroes' Feast, Conjunction (Creation)": instructions for a computer game.

Philip of Macedon had a concubine named Olympias. The story goes that an Egyptian priest named Nectanebos, or perhaps the god Zeus Ammon, fathered a boy on her. Philip cast her out after some years and married his sister Cleopatra instead. The boy, by now a champion athlete, charged into the wedding feast and made a cutting remark; a joker named Lysius looked at the youth and added that he hoped Philip's next son might look like Philip. The young man, enraged, killed the jester with a goblet. Philip drew his sword but stumbled over his couch: the youth, mocking him, seized the sword and had at the guests, wounding most of them. It was the wedding brawl of the Centaurs and Lapiths all over again, or Odysseus and Telemachus massacring the suitors of Penelope as they dined, comments the narrator. Alexander the Great, in the *Romance of Ps.-Callisthenes*, had spoiled the party in truly classic fashion. The story was popular in Armenian translation and has echoes in later literature.¹

¹ A.M. Wolohojian, tr. from Arm., *The Romance of Alexander the Great by Pseudo-Callisthenes*, New York: Columbia University Press, 1969, pp. 41-42; on the tradition, see J.R. Russell, "The Mother of All Heresies: A Late Mediaeval Armenian Text on the *Yuskarparik*," *REArm* 24, 1993, pp. 273-293; and "Sasanian Yarns: The Problem of the Centaurs Reconsidered," *Atti dei Convegni Lincei*, 201, *La Persia e Bisanzio*, Roma: Accademia Nazionale dei Lincei, 2004, pp. 411-438. This paper evolved during a seminar on Iranian apocalyptic at Harvard in the Fall Term of 2014 with Walter Scott Chahanovich, PhD candidate in the NELC department and friend, to whom I am grateful for many stimulating discussions and learned insights.

Dining, feasting, was and has always remained a sanctified activity in most human cultures, with special rituals and etiquette abandoned in many other areas and customs of modern life. In the Near East in particular, rules of hospitality so deeply rooted as to define the quality of human character itself form a protective ring around banqueting couch, dinner table, and seat cushion. The feast recapitulates and reaffirms the social order; and violation of its rules is social chaos. The order of precedence to be followed in seating arrangements was so strict in ancient Armenia that it was set forth in a special text, the *Gahnamak* or "Book of Places" that specified the place of each *naxarar*, or hereditary dynast, in the *xoran*, the banqueting pavilion of the king. In the *History* of P'awstos Buzand, the fourth-century Sasanian king Šābuhr II insults his guest in Persia, the Armenian king Aršak II, by seating him at the foot of the table at a feast: the Armenian disrupts the meal with a torrent of abuse, declaring the Persian king an upstart and usurper and ordering him to yield the head of the table to him, since it is his, Arsacid, line that are the legitimate rulers. Aršak is arrested on the spot and bundled away in chains to languish and die in the dreaded prison called the Fortress of Oblivion.² The Sasanian, at the behest of his Magian advisors, had earlier sprinkled Armenian soil under where the Armenian king was seated in the pavilion, hence Aršak's candor—the premise being that one speaks boldly and truthfully on native ground. Violation of the rules that guarantee the safety of a dinner guest and the sanctity of the occasion is so grave an offense that Armenian even has a special compound word which might properly be applied to the Persian's behavior, *selananeng* "being deceitful at table".³ One does not interrupt a feast; but one also does not violate its rules.

And there is also an order of the activities to which feasting belongs. In ancient Iran, the customary and cherished occupations of noblemen and kings form a rhyming pair, Persian *razm ō bazm*, "war and feasting", **in that order**. The former word is found in Arm. *pate-razm*, "war"; the latter, in *bazm-oc* "feasting couch". One went on the hunt, or to war, and then returned to feast: on Armenian funerary bas-reliefs the deceased is shown as an armed horseman, diadem of victory or blessing or both in hand, arriving at a banquet.⁴ That is the natural order of things, as much

³ See J.R. Russell, "Two Notes on Biblical Tradition and Native Epic in the *Book of Lamentation* of St. Grigor Narekac'i," *REArm* 22, 1990-91, pp. 135-45.

⁴ One such bas-relief is discussed in J.R. Russell, "On The Image of Zoroaster," lecture at the conference "Looking Back: Zoroastrian Identity Formation Through Recourse To The Past," School of Oriental and African Studies, University of London, 11-12 October 2013, in connection with the opening of the exhibition "The Everlasting

in the hereafter as in this world. When the order is reversed: when a feast is interrupted and the host, usually a nobleman and hero, is called off to fight— it signifies a moment of particular crisis, often a turning point that results in death. This study explores two such instances of what one may define as the *topos* of the interrupted feast in Armenian literature, both enshrined in highly ritualized genres— elegy within a lament, and heroic epic narrative within a chronicle. Both come from the same region and period: the Armeno-Syrian borderlands in the Crusader period, spanning the 10th-12th centuries. One text celebrates the heroism of a scion of the ancient Pahlawuni noble house; the other issues from the pen of a Pahlawuni patriarch of the Armenian Church. I compare both to a third and undated text, the folk ballad of prince Aslan, which sets out the *topos* in a stark, elemental way and elaborates it, engaging other psychological and spiritual themes with resonances in Ancient Greece and Buddhist India— one recalls that Armenia is at the midpoint between those western and eastern exemplars of the types of Indo-European poetics and thought.⁵ The ballad of Aslan was recorded in modern times from oral informants; but some form of it might have been a part of a heroic epic cycle of the heroes and princes of Sophene, Arm. Cop'k', in Western Armenia: an analogous tale supplies an ending to the Byzantine Akritic cycle that took shape in nearby Melitene (modern Malatya).

The Catholicos of the Armenian Church, St. Nersēs Šnorhali (ca. 1102-1173), wrote in the middle of the path of his life the *Lament* over the fall of the ancient Syrian Christian city of Edessa (modern Urfa, in Turkey) to Muslim invaders. *Oĥ Edesioy* belongs, then, to the Silver, or Cilician, Age of Armenian literature.⁶ Its language, though still a Classical idiom, is syntactically light and flowing; and the vocabulary is leavened by contemporary expressions and loans from the languages

Flame: Zoroastrianism in History and Imagination," Brunei Gallery, SOAS, in press in Sarah Stewart, ed., *Proceedings* (2014).

⁵ On the method of "triangulation" of an Armenian mythological theme or type between Greece and India, see J.R. Russell, "The Armenian Shrines of the Black Youth (*t'ux manuk*)," *Le Muséon* 111, fasc. 3-4, 1998, pp. 319-43.

⁶ Manik Mkrtč'yan, ed., Nersēs Šnorhali, *Oĥ Edesioy*, Erevan: Academy of Sciences of the Armenian SSR, 1973. The text was translated and annotated by Theo Van Lint, "Lament on Edessa by Nersēs Šnorhali," in K. Ciggaar and H. Tenle, eds., *East and West in the Crusader States*, II, Leuven: Peeters, 1999, pp. 49-105. All translations here are my own. For a study of St. Nersēs' life, works, use of pre-Christian motifs, attitudes towards Islam, and experience of its assaults see J.R. Russell, "The Credal Poem *Hawatov xostovanim* ("I confess in faith") of St. Nerses the Graceful," in J.J. van Ginkel et al., eds., *Redefining Christian Identity: Cultural Interaction in the Middle East since the Rise of Islam*, Orientalia Lovanensia Analecta 134, Leuven, 2005, pp. 185-236.

of neighboring peoples. But it is still steeped in the vivid imagery and energetic oral narrative patterns of Arsacid Armenia, and thus has roots in pre-Christian antiquity, in the culture and religion of the Arsacid Parthian dynasty in Iran (250 BC-226 AD) and Armenia (where the dynasty endured to AD 429). St. Nersēs belonged to the ancient noble house of the Pahlawuni—“Parthians”—from which St. Gregory the Illuminator, Armenia’s patron saint, had sprung; and one of his kinsmen, Gregory Magistros Pahlawuni (ca. 990-1059), a warrior, administrator, and secular scholar, had preserved in his *Letters* precious specimens of pre-Christian Armenian oral epic including an elegiac lament of king Artaxias I (Arm. Artašēs), which would date from some time after the death of that monarch in the mid-second century BC. It is thus not surprising that one finds an elegy replete with ancient native *topoi* in the *Lament*, as well as the expected Biblical images and citations of a work firmly rooted in the Christian faith and worldview.

Edessa, “daughter of the Parthians”, home of Abgar—the first Christian king—was called “the blessed city”. Literary Syriac was born there; but Armenians have since ancient times also regarded it (and, indeed, Abgar), as their own. It lies near Harran; and legend has it that Abraham underwent a trial by fire there at the hands of Nimrod and emerged victorious.⁷ Its fall in 1144 was a bitter blow and a dire portent of more disaster to come, as Christian power waned in the lands of the birth of the faith. Nersēs, who resided at Hromkla near Aintab, not at all far away, heard eyewitness accounts of the battle from his own kinsmen. The final section of the *Lament* is apocalyptic, a venomous denunciation of Islam and its founder Muhammad and a vengeful foretelling of the longed-for destruction of Mecca and the extermination of the Muslims. Islam had come on the Armenian scene with the seventh-century conquest of the capital, Dvin, and subsequent military occupation of the country by the Arabs and their clients, who ruled “Arminiya” from there and from Xlat’ (Ar. Aḥlat), on the northwest shore of Lake Van. The revolts of the ninth century, that of the mountaineers of Sasun in 840 in particular against the depredations of the Turkish general Bugha, led to the liberation of much of Armenia under the rule of the native Bagratid and Arçrunid dynasties.

Armenian visions of the end times in particular, and apocalyptic literature of the Christian East generally, were to draw upon the *Apocalypse* of pseudo-Methodius, which was most likely composed in the eighth century, at a time when the Aramean⁸ Christian community began to be seriously depleted by mass

⁷ See J.B. Segal, *Edessa, “The Blessed City”*, Oxford: Clarendon Press, 1970.

⁸ I employ this useful term, which has recently been adopted as an official designation by the State of Israel, broadly to define the Church of Persia, Jacobite,

conversions to Islam. Unlike the Armenians, who compared themselves to the Maccabees—defenders of both a faith and a nation—the Arameans had no articulated national aspirations or sense of a secular identity that might complement their cohesion as a religious community, and, rather like the Copts in Egypt they were reduced to the permanent status of a tolerated but often precarious second-class minority in the Islamic world. Yet even though the vision of Nersēs deals with the situation of his own time and is to some extent informed by the tradition after ps.-Methodius, it also is suffused by strong patriotic themes independent of Christian ideology that express a hope of political, national liberation. And we may still discern, besides, some local and ancient affinities to Zoroastrian apocalyptic in the Armenian material. Some of this Iranian material is a substratum in tradition; and some of it is not so much loaned as simply parallel, for Iranians, too, had a national consciousness and martial mettle like that of the Armenians. They had to deal with the consequences of what was to them Arab aggression and oppression: in the Iranian case, the gradual conversion of the majority of the Persians to the new religion and the consequent degradation of the Zoroastrians in their own country.⁹ In the *Lament* of St. Nersēs (text p. 130, line 969) salvation takes a highly symbolic but also vividly concrete form, as the conquering Franks *Zk'arn glen zseworak, / jgen Karmir covun yatak*, "roll away the black-hued stone [i.e., the Ka'aba] / and cast it to the bottom of the Red Sea." One might compare to the image the assertion in the short ninth-century poem in Zoroastrian Book Pahlavi on the coming of the redeemer Wahrām ī Warzāwand (Bahram the Miracle-worker): *ān šāh Wahrām ī Warzāwand az dūdag ī Kayān be āwarēm kēn ī Tāziyān Čiyōn Rōdastahm āwurd gurz *dlz kēn ī gēhān a-šān mazgitihā frōd hilēm be nišānēm ātaxšān uzdeščārīhā be kanēm ud pāk kunēm az gēhān* "We will bring that Bahram the Miracle-worker from the house of the Kayanians for vengeance upon the Arabs like Rostam the mace-bearer, for *long (*darāz?*) vengeance upon the material world.

Chaldaean, "Nestorian", and other Christians of the Middle and Near East who employ(ed) in ritual and/or principally speak/spoke Syriac or other dialects of Aramaic.

⁹ On the elegy of Artaxias preserved by Grigor Magistros Pahlawuni, with comparison to a similar poetic composition in Middle English, see J.R. Russell, "Some Iranian Images of Kingship in the Armenian Artaxiad Epic," *REArm* 20, 1986-87, pp. 253-70. On Armenian apocalyptic in the eleventh century, see J.R. Russell, "Revelations of Darkness: Medieval Armenian Apocalyptic in the Epic of Sasun and the Visions of Yovhannēs Kozeṛn," *Journal of Armenian Studies* 6.1, 1998-99, pp. 3-15.

And then we will tear down the mosques and establish fire [temples]; we will dig up the shrines of idolatry and purify the earth [of them]..."¹⁰

It is noteworthy that Muslim apocalyptic also envisions the uprooting of the black stone of the Ka'aba at the end of time— but in this case it is not to be plunged into the sea, of course, but to be transported from Mecca to the Temple Mount at Jerusalem, joining the storied stone that the Dome of the Rock encloses. The "straight path" of the opening chapter of the Quran, derived from the Zoroastrian Bridge of the Separator (Pahlavi *čīnvād puhf*), is the road of the souls to judgment: here it will spring from mount Moriah, arching over the valley of Kidron.¹¹ This vision clearly derives from and builds upon the night journey of Muhammad from Arabia to Jerusalem and his ascension on the steed Buraq from the Rock on the Haram al-Sharif, the Noble Enclosure, into the empyrean: the *mi'rāj*. Under Byzantine rule that enclosure, the Temple Mount, had been left intentionally in ruins, its desolation a rebuke to the Jews, who were besides forbidden even to dwell within their holy city. But in the seventh century the Muslim Arabs welcomed the Children of Israel home, reverently cleaned and restored the Temple Mount, and built the beautiful Dome of the Rock there— not quite mosque, but not temple either, but a commemorative shrine of a universally sacred place. These pious constructions were a reproach to the Byzantines and other Christians (and it is to be recalled that the Armenian presence in Jerusalem was especially prominent); so perhaps Nersēs' hoped-for disposition of the Ka'aba was in part a delayed retort to the Muslims.

There is an additional layer of symbolism to the plunging of the Ka'aba specifically into the Red Sea. The latter is the closest body of water to Arabia and to Mecca in particular, to be sure; but it is pre-eminently, in Biblical terms, the sea that parted for Moses and then closed over the pursuing Egyptian host, drowning them. Christians regarded the crossing of Israel from slavery to freedom as a typological foreshadowing of Christ's baptism in the Jordan, which was to free mankind from the bondage of sin. A widespread legend, minutely studied in many publications by

¹⁰ The Pahlavi poem was published by H.W. Bailey, *Zoroastrian Problems in the Ninth-Century Books*, Oxford: Oxford University Press, 1971, pp. 195-196. I have re-transliterated the text and translated it slightly differently, and propose the reading of a *long* vengeance on the basis of Zarathustra's apocalyptic prophecy in the *Gāthās* of *daragham dragvō.dabyō rašō* "long destruction for the followers of the Lie" (Yasna 30.11).

¹¹ Oleg Grabar, *The Dome of the Rock*, Cambridge, MA: Harvard University Press, 2006, p. 56.

Prof. Michael Stone of the Hebrew University of Jerusalem,¹² held that Adam and Eve after their expulsion from Eden were terrified at the setting of the Sun. Satan assured them that it would rise again in a few hours' time, provided Adam put his signature (*cheirographos* is the term from Greek employed in the title of the apocryphon) to a document in which our forefather was tricked into swearing fealty to the Prince of Darkness till the unborn experience birth and the undying suffer death. A watertight clause, one would think, but the despairing Adam accepted. In the end, though, the unborn and undying Christ, through His Nativity and Resurrection, outwitted the deceiver. Accordingly, the stone bearing the Cheirograph of Adam was imagined (and sometimes portrayed in illuminated manuscripts) as lying shattered—abrogated—at the bottom of the Jordan at the feet of Christ. There is sometimes also a drowned Egyptian charioteer; and this would be the vanquished Satan. Perhaps St. Nersēs intended a third typological layer, in which the Ka'aba was to be seen as the latter-day satanic cheirograph; and the Pharaonic warrior, as the Muslim invader. For after all, in the closely contemporary Armenian epic of Sasun the Mesopotamian home of the "idolatrour" Arabs is stubbornly identified as Məsər, that is, Mišr, "Egypt".

The general theme of the Pahlavi poem on Bahram the Miracle-worker is related closely to those of the longer apocalyptic texts *Ayādgār ī Jāmāspīg* and *Zand ī Wahman Yasn*, which, however ancient their origins, crystallized in the form we have in around the ninth century. They are set, in pseudepigraphical fashion, in the times of the prophet Zarathustra and, for all their detailed *vaticinatio ex eventu*, do not evoke the strikingly concrete, shocking image of the demolished mosques. The passage about the mosques mentions also shrines with idols. This could be merely a stylistic parallel embellished by archaism: the third century Sasanian high priests Tansar and Kartīr both boast—the first, in his famous Letter; the second, in inscriptions—of having put an end to the ostensible religious diversity of Arsacid society. Kartīr suppressed image-cults, whether these were the *bagīns* of Armenian and other Zoroastrians of the Parthian era, or the temples of Hindus in the domains of the King of Kings. Or the disdainful reference to idolatry may refer to the *buddharupas*—statues of the Buddha—in the Buddhist monasteries, *vihāras*. (Richard Bulliet long ago suggested that the oft-encountered New Persian toponym Nawbahār may refer to these.) Monumental Buddhas, such as the two carven in niches at Bamiyan, Afghanistan—in historical Bactria—were in plain view along the roads. The most likely derivation of New Persian *bot*, "idol", is simply from

¹² See Michael E. Stone, *Adam's Contract with Satan*, Bloomington, IN: Indiana University Press, 2002 (reviewed by this writer in *IJCT* 10.2 (Fall 2003), pp. 309-312.

"Buddha". And if texts may be further adduced as testimony in support of the existence of Buddhist establishments with their images, a number of Buddhist texts, such as the famous *Bilawhar and Bōdasaf*, to be considered presently, came into Arabic literature through Iran in the early Islamic period.

However it is also possible that the Pahlavi text may refer to the Muslims themselves as idolaters: in the Christian West, Muslims (called Mohammedans!) were believed to worship a golden image resembling the Roman god Mercury called a Mawmet, i.e., a "Mohammed"; and in the Armenian epic of Sasun, which crystallized between the ninth and twelfth centuries and bears traces of the events of the early Islamic era, the Armenian heroes are called *xač'apašt*, "worshippers of the Cross"; their Muslim enemies, *krapašt*, "idolaters"! These designations are of course manifestly unfair, if not also supremely ignorant, since Islam is uncompromisingly monotheistic and iconoclastic in a way Christianity is not. But most religious polemic would not exist if its authors were deeply learned and eirenic in spirit. So the *uzdēsčārīhā*, "idol-temples", may perhaps be a Zoroastrian addendum to the thick Christian dossier of slanderous apocalyptic invective that slanders Islam as idolatrous.

Before the vengeful and apocalyptic vision, though, is the long lament over the fall. Nersēs takes us on a melancholy tour, bewailing Jerusalem, then Rome, then Constantinople, then Alexandria and Antioch. With Edessa, the bird's eye visionary journey across seas and land, and ages of destruction and loss, has arrived close to home. So at that point there comes a short but powerful elegy for the lost homeland, the fabulous realm to the north: *Mec Hayk'*, Greater Armenia— and for its Arsacid kings and their noble and delightful way of life. Line 75, penned in faraway Cilicia to the south, "here on this underside of the world", invokes greater Armenia, the house of T'orgom (i.e., Biblical Togarmah), and the clan (*azg*) and offspring (*cnund*) of Japheth, where stood the "throne of the sons of the Parthians, the Arsacid kings" (*at'oš Part'ewazanc' t'agaworac' Aršakuni*) at the holy city of Ējmiacin (lit. "The Sole-Begotten Descended", called in the poem by its older, Arsacid name, Valaršapat, "City of (King) Vologases") and where the patriarchal line of St. Gregory the Illuminator, "son of the Parthian" (*Grigorios Part'ewazin*, line 83)— St. Nersēs' kin!— held sway. "But I ask, O desired one,/ Seeking answer to my case" (line 99) cries Nersēs— and then his elegiac litany begins:

Ayžm ur ē t'agn k'o zardī ew kam psakn hrašali?
Ur zardarank'n dšxoyi: harsin ordwoy t'agawori?
Ur patmučan harsnarani kam oskehuš verjawori?

Aha barjaw ays vaṭagoyṇ, yoyž heṭac'aw, oč' erewi:
Anurjk' 'w erazk' ēin yaytni, ard cackec'an i zart'mni.

"Where now is your crown (t'ag) adorned, or its marvelous diadem (psak)?
 Where are the decorations of the royal princess (dšxoy), bride of the son of
 the king?

Where is the robe of the nuptial chamber or its golden fringes trimmed
 (oskehuṛ verjawori)?

Why is the groom not standing at the altar (xoran) or his party (p'esawérk'n)
 in the temple (tačar)?

Where are the children bearing the canopy; why do they not sing David's
 songs?

Why have they fallen silent and do not play the trumpet of the Apostle Paul?

There is the pair of fatted oxen; and why are they not offered in you in
 sacrifice?

And the cupbearers— why do they not serve the flagons of sweet (anuš)
 wine?

Where are his boon companions to welcome back the Prodigal Son,
 Or his father's wide embrace— to hug the sinner in a kiss?

Where is the sweet voice of the musician, or the lovely lilting melody?

Where are the readers of Holy Writ or the priests at the convocation?

Where are the Patriarchal throne and the priests at the holy altar?

Where are the deacons at their service, or the ministers of the holy Mass?
 Where, O censor, are your incense spices, both the invisible and the seen?
 Where is the assembled congregation on the day of the high festivals of the
 Lord?

Where are the throne and the appointments of the king (*t'agawor*) in
 Vałaršapat, your city?

Where are the dynasts (*naxarar*) of the regal lord (*ark'ay*) of the province of
 Ayrarat?

Where are the princes leading up the front, or the arms-bearers that come
 behind them?

Where are the warriors in the field; the legions, on the battle line?

Where are the grandees (*mecamec*) on the banquet couch (*bazmoc'*), the
 groaning board (*sełann amenali*)?

Where are the freemen (*azat*) in the palace (*tačar*); or the sons of the lords,
 in the flower garden (*całkoc'*)?

Lo, all this was taken long ago;
 far away and no longer to be seen.

They were reveries, apparitions of a dream,
 now hidden in the wakeful day."

St Nersēs has constructed his elegy with care for a subtle symmetry and planned coincidence of images. It begins with a visual picture of the Arsacid crown and the diadem that was tied around it. The words for both are Parthian. But at an Armenian wedding the bride and groom are crowned and diademed with a band now called a *narot*; so the image of national sovereignty merges with that of a royal wedding. The wedding is held at the high altar of the cathedral church; but the Parthian words for both of these, *xoran* and *tačar*, mean also "banqueting pavilion" and "royal palace", the proper places for the wedding feast of a prince and princess. In the lines that follow, the poet deftly mingles images of secular feasting with Biblical themes: there is singing, but it is the Psalmist's; there is trumpet music, but it is that of Paul of Tarsus; oxen are killed and cooked, but the Prodigal Son and fatted calf are recalled; and there is wine. The latter is "sweet", and Nersēs selects not the common *k'alč'r* here from Indo-European, which he does employ elsewhere, but *anuš*, Clas. Arm. *anoyš*, from Iranian *anaoša*-, "ambrosia, nectar, immortal (drink)". One may sense secular, if not pagan, overtones as the guests get down to drinking.¹³ Nersēs then describes churches, palaces, kings, noblemen, and warriors in their glory— a concise but encyclopedic vision of ancient Armenian society. The

¹³ Wine was the main business of ancient feasts: Hebrew *mišteh*, "feast", comes from the root *šth*, "drink".

banqueting couch follows war immediately, as is the proper order; and the word *tačar*, meaning either “palace” or “cathedral church”, is used again towards the end, mirroring its appearance at the beginning. In the strophe it is parallel to *caṭkoc’*, “flower garden”: the freemen (*azat*) are assembled in one and the sons of lords stroll through the other and it is hard to tell which meaning of *tačar* we ought to understand—the royal *tačar mayri* of Arsacid Christian Armenia had been, after all, the **palace** forest or hunting preserve, a place attached to the royal residence as the *caṭkoc’* seems to be to the *tačar* here; and had nothing to do with churches. So the elegy ends as it began, with a royal feast and with apparent plays on the ambiguous term for cathedral and palace. But the feast that begins and closes the intricate, colorful, teeming vision is interrupted: it was a dream, and suddenly one is awake, in the new and disastrous reality.

The elegy, despite its somewhat dreary monorhyme in the Armenian (an unfortunate hallmark of Nersēs’ poetry, which is in all other respects so luminous and complex), is of astonishing poetic power. To the reader it may conjure the verses, yet to be written, of François Villon, Where are the snows of yesteryear; or even more powerfully, perhaps, a scene still farther in the future and more distant from embattled Cilician Armenia, in English. The consonance of the details are so uncanny as to suggest a relationship; but even though the last king of Armenia had pleaded his case before Parliament at London, and though the “Lytell Chronicle” of the Cilician Armenian king Het’um and the romance of Bevis of Hampton, with its Armenian setting, had been popular reading in Chaucer’s England, the Bard cannot have known of Nersēs. Their parallel visions, hint at a synchronicity, rather, an invisible affinity of great creative artists whose explanation may exist in the otherworld but cannot in this. Towards the close of *The Tempest* of Shakespeare the magician Prospero, having conjured an entertainment of spirits for the wedding feast of his daughter Miranda, suddenly interrupts it: “I had forgotten the foul conspiracy/ of that beast Caliban and his confederates/Against my life.” Ferdinand, the royal groom, is shocked; and the great mage comforts him: “... be cheerful, sir./ Our revels now are ended. These our actors, as I foretold you, were all spirits and/ Are melted into air, thin air;/ And, like the baseless fabric of this vision,/ The cloud-capped towers, the gorgeous palaces,/ The solemn temples, the great globe itself,/ Yes, all which it inherit, shall dissolve.../ ... We are such stuff/ As dreams are made on, and our little life/ Is rounded with a sleep.” (IV.i.139-158) The play is a comedy and the noble sprite Ariel has already disarmed the plotters, thwarting their plan of a treacherous and cowardly attack. Miranda and Ferdinand are married, and Prospero is vindicated.

We meet the theme of an interrupted feast with grim consequences, but ones that will be set to right, in another kind of comedy, a text that long predated Nersēs and that found its setting in his neighborhood and in a cultural setting akin to that of the old Armeno-Iranian world evoked in his elegy. Most likely he knew it well. The apocryphal Book of Tobit, set in Nineveh, capital of Assyria; in Ecbatana, capital of the Medes; and at points along the road in between, is a sort of Oriental romance of the Hellenistic type with a strong Persian flavor: it includes the cameo appearance of the Zoroastrian archdemon of wrath, the only Zoroastrian demon known by name in Scripture. This is *Aēšma daēvā*, Hebrew Ašmedai, and English Asmodeus (in Armenian, Eznik refers to demonolaters at **hešmakapašt* and one common Georgian word for demon is *hešmaki*, from **aēšmaka-*).¹⁴ But let us return to the banquet table. In II.1-14, Tobit reclines to feast on the Jewish festival of weeks, Shavuoth, at a suitably groaning board; but before partaking of his meal he asks his son Tobias to go and see if he can find a poor man with nowhere to eat. Tobias returns, not with a destitute guest, but with the alarming news that he has found the body of a Jew who was murdered and dumped in a trash heap. Tobit leaves the table, his interrupted feast untouched, and rushes off to give the man's remains a decent burial. After a chain of bizarre mischances he is blinded. His wife chides him for having been so charitable: See what has come of it! chitters the shrew. But in the end all turns out for the best: his son Tobias and the comely Susannah (whose previous suitors a jealous Asmodeus had murdered, all seven of them) are married, and Tobit, cured of his blindness, dies happy and at peace.¹⁵ But now let us consider the second Armenian text, one without a happy ending.

The *Chronicle* of Matthew of Edessa (Matt'ēos Urhayec'i, ca. 1070-ca. 1140) deals with the struggle of the Armenian Christians against the invading Muslims and with apocalyptic visions brought on by the devastation wrought by the invader: its closing date is 1036. The early modern scholar Č'amč'ean suggested Matthew might have died in the siege of Edessa by Zangi in 1144— the very historical event that brought forth the *Lament* of St. Nersēs!— but this is unlikely. Towards the beginning of his narrative, Matthew evokes in the densely patterned language and imagery of epic the scene of a feast: Vasak Pahlawuni and his son Gregory (i.e., Grigor Magistros Pahlawuni, mentioned above) are at table making merry in the clan fortress of Bĭjni, in AD 972. The Pahlawunik' were to abandon that ancestral home as Seljuk attacks

¹⁴ See J.R. Russell, "God is Good: Tobit and Iran," *Iran and the Caucasus* V, Tehran, 2001, pp. 1-6.

¹⁵ For a discussion of the episode see N. MacDonald, "Food and Drink in Tobit and Other 'Diaspora Novellas,'" in Mark Bredin, ed., *Studies in the Book of Tobit: A Multidisciplinary Approach*, London: Continuum, 2006, p. 175.

and conquests pressed the Armenians to emigrate westwards into Byzantine-held Cappadocia, where Gregory was to become a military administrator and deeply educated man, one of the few in medieval Armenian tradition with no ecclesiastical connection. The fateful Battle of Manzikert (Arm. Manazkert), 1071, took place around the year of Matthew's birth, and the memory of these defeats and losses might add some retrospective poignancy, a sense of impending doom, to the setting. Vasak sees a man hastening on foot towards his party of revelers, and predicts he is bringing bad news. The messenger indeed bears tidings of the fall of the district of Nigk'. "Roaring like a lion," Vasak girds himself for battle, stopping only for communion and confession on his way to the fray. They confront the Muslim army and Vasak engages in single combat with "a dark Ethiopian", cleaving him in two.¹⁶ I have broken up the printed Armenian prose text¹⁷ into strophes, to give some sense of the underlying narrative flavor of its style, which owes its narrative power to the strength, color, and cadences of such oral epic as the cycle of Sasun:

"At that time

The king of the Dailamites mustered his forces
 Against the forces of the Christians,
 And suddenly came upon them
 In the Armenian province of Nigk'
 Near the fortress of Bjni.

And Vasak, commander of the Armenians,
With his beloved son, Gregory,
Seated with other freemen glorious
Was making merry.
And Vasak looked upon the rocky way
And lo! A man was making haste
Along that path, on foot.
And Vasak, seeing, said:
A bearer of ill tidings is that man.
And the man reached the gate of the fortress of Bĭjni
And raising his voice in a loud cry said:
All the province of Nigk' is taken prisoner!
Then like a lion roared
The brave commander Vasak,
And rising put on his clothing, iron armor,
And seven freemen after him,
And other riders after them as chanced upon the hour.
And the freemen formed their ranks behind Vasak:
And brave Philip coursed swift,
And Ć'orduanēl the Wolf,
And others still.
And these were men brave and winners in war;
But Vasak's heart could not stay patient
Till his forces all assemble,
For some five thousand men stood at his hand.
But out of pride in his strength
With only five hundred men
He went forth like a lion into Nigk' province.
(He entrusted the house and castle of Bĭjni
To Gregory, his son.)
And Vasak reached a monastery:
With all his forces received Holy Communion
And they were shriven of their sins,
With good confession to Christ Jesus.
And on the way they came upon a village
And saw the ones of alien race
Had slaughtered all the villagers at random,
And the armies of that alien race
Had surrounded the church
And all the faithful who were within

They mercilessly put to the sword.
Brave Vasak when he saw
Roared loud-voiced as a lion
And fell upon the alien horde.
And they killed some three hundred of their men
And the ones remaining fled,
Escaping to the army of the alien race.
And the multitudes of the camp began to move
Against the Christian army.
And when they saw that without number or measure
Was the alien army's horde,
Then they set death before them, all together,
And began to excel in the virtue of war.
And like wolves in the midst of goats
Or like eagles in a flock of fledgling birds,
So they coursed heroic in the fray
Ran through many and cast their corpses on the ground.
Then a champion came forth from the alien army,
A black Ethiop, a brave man.
They called him also Seven Wolves
For what seven wolves do with a flock of sheep
In the deeds of war he did still more.
And lo! The Ethiop advanced
Thundering like a black cloud,
And lightning fires from his armor leapt.
He called and named and stirred Vasak.
Brave Emran looked,
Saw the man like a mountain wreathed in storm,
Turned to Vasak and said,
This is a man brave and invincible
Whose like earth never bore.
And Vasak said,
O lion, brave Emran,
Why are you terrified at his sight?
Now I will come forth against him
And give him all the gifts
That David gave Goliath,
That blasphemer against God.
Then like a wild beast that man came upon him
Swinging his mace at brave Vasak

So as to take him on the point of his lance.
 But Vasak was swift, and quickly turned,
 And brought the steel saber down on his helmet, hard,
 And cleaved the brave Ethiop in twain
 So his body in parts fell to earth."

The Armenian term used in Matthew's time of a Muslim, *aylazgi*, literally means one of alien race; and it is the term he uses repeatedly in the text. It is pejorative and contemptuous, as designations of unfriendly outsiders tend to be, so one has retained its literal meaning in the translation.¹⁸ Besides, an inscription on the bas-relief of David and Goliath on the Church of the Holy Cross on the island of Ałt'amar, Lake Van, Armenia, AD 920, identifies the armor-clad Philistine (i.e., *mutatis mutandis*, "Palestinian") giant towering over the comely Israelite slip of a lad as an *aylazgi*. So the equation of the Armenians, whose Bagratuni royal clan claimed Davidic ancestry, with the embattled Chosen People of God, was already a long-established topos in iconography: here is its literary echo, with Vasak promising to give Seven Wolves as good as David gave Goliath.

Hacking an enemy down the middle with a saber is not a unique feat of martial strength, but Vasak does roar like a lion when roused to battle (and when he is in the thick of it, too). In Armenian tradition the *locus classicus* for lions and tearing down the middle is the defining episode in the career of the hero *Mec* ("Great") or *Ariwc* ("Lion") Mher (i.e., Mithra) in the second of the four "branches" of the oral epic cycle *Sasna crer*, "The wild men of Sasun". Mher's great feat of strength—killing a predatory lion by gripping it by its jaws and tearing it in half, which is probably the hardest way to do the job—earns him the epithet *ariwcawjew*, pron. *arryutsadzev*, which can mean either "tearing a lion in half", from the verb *jewel*, "tear in half" or "leontomorph", from the noun *jew*, /*dzev*/ "shape". An apposite prototype for this heroic deed of prodigious strength is Samson, of course; and he is depicted performing the feat, and named, on a bas-reliefs at Ałt'amar. There are also local prototypes. Bas-reliefs on the walls of the *apadāna* at Persepolis¹⁹ depict Achaemenian kings in single combat with leonine monsters, so this is at once a regal and heroic image. It was very much alive in the medieval Armenian imagination: the portrait in bas-relief of a medieval Armenian prince on

¹⁸ The modern term for any non-Armenian is *ōtar*, an Iranian loan and the equivalent of Sanskrit *avatara*, "avatar", though without any of the reverential and supernatural associations of the latter.

¹⁹ The Old Persian word is loaned into Arm. as *aparan(k')*, "palace"; its more truncated New Persian form, *ayvān*, has the correspondingly more limited meaning of an open arch in a building.

his tombstone portrays him as a lion.²⁰ In the Roman Mithraic order the initiate in the ritual of his fourth degree had to pass the statue of a fearsome leontocephalous man, the Deus Areimanius, or god of death (the epithet is a loan from Persian Ahreman, the name of the demonic opponent of the good Creator God Ohrmazd). As he did this, his old self was symbolically burnt out of him with a blast of flame issuing from the mouth of the statue, and his symbolically reborn soul was anointed with honey, the latter with its yellow color and energy seen as a liquid form of fire. This was the death and rebirth of the Mithraist. The tale of Lion Mher is the second part of the four "branches" of the Armenian epic, and at its conclusion the hero suffers a tragic death, which serves as both the nadir of the cycle and its great turning point, as the greatest of the heroes of Sasun, David, is born just as his parents die.²¹

In the Sasun epic, the great hero David (Arm. Dawit') is to perish by treachery: a seductive Muslim princess, like a latter-day Clytemnestra, kills him naked and defenseless in the bath. The *topos* suggests that certain men, like the American folk hero Jesse James, are invincible in a fair fight but their very nobility makes them vulnerable to the wiles of low men: "the dirty little coward/ Who shot Mister Howard/ Done laid poor Jesse in his grave." So the listener or reader of an epic might expect the death of Vasak Pahlawuni to happen through the cunning of an inferior, and indeed it does, right after the slaying of the Muslim champion Seven Wolves.²²

"Then the brave Vasak turned back alone
 And strode like a lion enraged,
 Passed through the midst of the alien host—
 And he was weary from the great fight—
 And he turned and went up
 On the mountain called Quince,²³
 And after all the troubles of the fight
 Sat down under cover of the rocks.
 And the peasants saw him,
 They who had fled.
 Then some one like the slayer Cain
 Came and found him
 Sleeping off his heavy pains.
 He struck him and cast him
 Down from the high rock,
 And thus was perfected in a martyr's death
 The brave Pahlavuni, Vasak."

There are two themes here: the obvious one is the death of the hero by the treacherous act of a lowly wretch. The verb *katarec'aw* "was perfected", used of the killing of a Christian martyr, adds the appropriate religious overtone to the death of a Davidic hero. But its very setting is an archaic topos as well: Vasak must rest after his martial exertions, and in that state he is at his most vulnerable. In an intricate poem preserved from an oral source by Movsēs Xorenac'i, the ancient and heroic dragon-slaying Armenian god of war and victory, Vahagn, is born of a fire in the sea; and one observes that the Vedic war gods, to whom the Irano-Armenian divinity is closely kin, must curl up in sleep, small as babies, and recover their strength in the

²³ Arm. Serkeweloy, Mod. Arm. Serkevli leṛ ("mountain of Quince"), in the region of Arakacotn of the province of Ayrarat; till the 1840s there was a village, Serkevli, nearby: see T' X. Hakobyan et al., *Hayastani ev harakic šrjanneri teṭanunneri baṭaran*, Erevan: Erevan University Press, 1998, 'vol. 4, p. 590.

sea after a fight.²⁴ They are vulnerable then. The image of the Armenian hero-king Tigran in Xorenac'i's transmission of epic tradition borrows from the image of Vahagn; so the scene of Vasak's rest under a rocky overhang is steeped in archaic associations.

The leonine, mighty Vasak evokes, then, a very particular kind of epic hero. But the scene in which he appears has wider resonances as well. We may now consider the Armenian epic ballad mentioned above, about the young prince Aslan (whose name means "lion" in Turkish, it is a fairly common Armenian name).²⁵ It opens with Aslan making merry at a feast with his retinue of brave young warriors. When they run low on wine he dispatches a servant to go and buy some. The man returns empty-handed, and when the prince asks why, he explains that on the road he came upon a pauper who had died and he gave all the money away to the man's relatives so he might have a proper funeral— shades of Tobit's beneficence! Young Aslan, who apparently has led a charmed and protected existence hitherto in which he was unaware of the grim facts of life— destitution, old age, sickness, and death— is enraged that this unfamiliar and uncouth intruder, death, has interrupted his feast. So he goes off to challenge the angel of death, Gabriel, and they engage in single combat. Aslan defeats the angel, at which point God Himself intervenes and strikes down the prince. After Jacob, perhaps, it will not do for mortals to wrestle angels to the ground. But to this reader it seems unfair, at least, if not treacherous in the manner of the foul varlet on mount Quince. Aslan thus comes to the unpleasant realization that he, like every man, is mortal. He does not accept his own death, though, and begs his parents and friends to die in his place. They turn him down, to his astonishment; the latter are in his debt for his boundless hospitality and the former ought to give their all for their son. Only his wife, Margarit ("Pearl"), offers to die in his place. It is left to the reader (or listener) to judge for himself whether this is an instance of deplorable servility like immolation in *suttee* or the ultimate fulfillment of the injunction of Holy Writ that man and woman leave their parents and become one flesh. Touched by her self-sacrificing devotion to her husband, God grants the couple 140 years of life— twice the Biblical three score and ten. In the

²⁵ See J.R. Russell, "An Epic for the Borderlands: Zariadris of Sophene, Aslan the Rebel, Digenes Akrites, and the Mythologem of Alcestis in Armenia," in R. Hovannisian, ed., *Armenian Tsopk/Kharpert*, UCLA Armenian History and Culture Series, Historic Armenian Cities and Provinces, 3, Costa Mesa, CA: Mazda, 2002, pp. 147-183.

character of Margarit one can easily discern the theme that in literature we encounter first in Euripides' play *Alcestis*, itself based upon an ancient myth. And an earlier version of the ballad of Aslan, perhaps still with leonine epithet intact, might once have formed an episode of a longer epic cycle of the Armenian Zariadrid kings of Sophene (Arm. Cop'k').²⁶ The Armenian ballad, which exists in numerous versions in late Middle Armenian and most likely took shape in the later medieval period, when Aslan was a relatively common name, perhaps assimilated around then aspects of the life of the Buddha, which were transmitted through the Christianized tale of Jehosophat and Barlaam, Arm. *Yovasap' ew Barałam*— Biblical Jehosophat (Heb., "God is Judge") renders Bodhasaf, i.e., Bodhisattva! According to the well-known narrative of the *Buddhacarita*, Siddhartha's father wanted his son to succeed him as a great king and not go the way of a religious teacher; so he kept the prince in a kind of false paradise, an enclosed palace of gardens, youth, health, and pleasure. But the prince was curious about what lay outside and exacted permission to go out on a tour. Although the king contrived a kind of Potemkin village along the predetermined route, lest unsettling impressions intrude, the gods manifested themselves as a beggar, a sick man, an old man, and a corpse. These distressing spectacles spurred the prince to ponder the question of suffering in the world, and so he left his home, wife, and son. The scene of his Great Departure, on the noble steed Kanthaka, inverts the iconic theme of a warrior riding to battle: the Buddha is not going to inflict death, or even to engage in combat with it (as Aslan does) but to overcome it, and all the suffering of sentient beings, through meditation and enlightenment.²⁷

The motif of the interrupted feast, then, is a *topos* worthy of interest in the continuing decipherment of the great code of Armenian epic poetry. We have seen the image of feast employed by Nersēs to evoke all the splendor and panoply of a vanished world: the sudden interruption of the feast as though it were a dream carries all the emotional strength of the loss. Matthew of Edessa uses the interrupted feast as the starting point of a short epic replete with vivid imagery, it close wrapped in the lineaments of archaic tragedy. The ballad of Aslan stands in timelessness, even as it is undatable: its hero is the archetypal adolescent standing

on the threshold of adulthood, testing an ennobling heroism, recoiling from fundamental truth, and discovering in love all the consolation a human being can have. Such compressed images and themes in the type of the interrupted feast, then, augment their power by resonating with local cultural values of particular depth—the particular obligations of hospitality, the order by which fight should precede feast, and so on—and with archetypally human, moral concerns—life and death, innocence and deceit. But without art these are all arid and bloodless: only the skill of a deft storyteller setting the scene and selecting the sounds of words, can bring them to immortal life. And he must have the companionship of a good reader. The demiurgic artist enfleshes the dream and enfranchises the dreamer, affording him the mental pleasure that is the province of the imagination; and that is the true purpose of its kingdom, literature.

James R. Russell

Hārūt and Mārūt: **The Armenian Zoroastrian Demonic Twins in the *Qurʾān*** **Who Invented Fiction**

The Zoroastrian divine guardians of the plants and the waters, Haurvatat and Ameretat, find themselves demonized in the Qurʾan as two demonic beings, *Hārūt* and *Mārūt*, biding their time in a well in Babylon and teaching magic, apparently having taken on the roles of another winsome pair, the fallen angels Shemhazai and Azazel. Their tuition is offered after the caveat that it is all a lie. Why then does no customer ever refuse their services?

Haurvatāt and Amərətāt, “Wholeness” and “Immortality” are the rhyming pair amongst the seven Aməša Spəntas, the “Holy Immortals” of the Avesta who preside over the seven good creations of Ahura Mazdā: in the forms Xordād and Āmurdād they survive in modern Persian as names of months. In a Manichaean Middle Persian to Sogdian glossary, MP *ʾ(mwr)dʾd hrwdʾd* is glossed as Sgd. *hrwwt mrwwt*, i.e., *Amurdād Harwadād* as *Harwōt Marwōt*. The names do not occur in a known Manichaean text so one does not know what the translator understood by them; and since the *h-* is not Sogdian, Henning suggested that the forms in the latter language “were probably borrowed from the same source from which Armenian *Haurot Maurot* are derived.”¹ Armenian sources know the Aməša Spəntas as the “seven helper/adjutant (*hamharz*) gods (*astuac-kʾ*)” but unlike a number of prominent *yazatas* they are not remembered as objects of cult and the names of only three are attested. Spəntā Ārmaitī, Phl. Spandārmad, “Holy Devotion”, the female guardian of earth and mother of mankind, in the NWMĪr. form *spandaramet-akan* with a Pth. adjectival suffix translates the Biblical Gk. Dionysian revels detested by the Maccabees. The probably older form from SWIr., *sandaramet-kʾ* with *pluralis tantum* is the generic underworld; and by the Middle Ages the radically shortened *sandarkʾ*, cf. the analogous form *Sondara* in Cappadocian, are a class of chthonian demons². As for *hawrot mawrot*, it is the name of a flower.

On Ascension Eve (Arm. *Hambarjum*), unmarried girls sprinkle its petals into a bowl of water in which they also place identifiable personal items and then stand vigil overnight under the stars. The heavens open then (so does the cave of the apocalyptic hero of the Sasun

¹ Henning 1940, pp. 16, 19 (=1977, pp. 17, 20).

² Russell 1987, Ch. 10 on Spandaramet and Ch. 12 on Hawrot Mawrot.

epic, P'ok'r Mher, "Little Mithra") and their secrets stream down to earth. On the morn as each girl's object is removed a quatrain about her future fortune in love and marriage is recited. Such a vernal *vičaka-xat*, "game of lots" in ancient Iranian culture may have been a source of Heb. Pūrīm and Esther³. The water and flower reflect the original associations of the twin divinities. In Arm. dialects there is attested a form *xorot morot* with diminutive *xorotik morotik*: in central Armenian Van and Muš the words mean "lovely, beautiful"; and in the northeast — Javaxk' and Širak — they refer also to a blossom with a rosy hue and sweet scent. The word *xorotik* (or *xorot*, without the diminutive suffix *-ik*) alone also can mean "beautiful"⁴. This suggests that the semantic development of the word(s) as "comeliness" was assisted by association with the unrelated but homonymous *xortik*, "delicious, choice morsel" from Mĭr. *xwartik* (Malxasyanc', s.v.); cf. Tk. *parça*, Mod. Heb. *ḥatīx(ā)* "piece", said of a desirable girl or boy⁵. Such association would foster a *volksetymologische* understanding of the paired form as analogous to others in X + privative prefix *m-X*, even though the second element in such compounds is often actual, e.g., Arm. (*v*)*olor-molor* "wandering around lost" or Č'inumač'in, the latter literally China-and-*Mahā*-China, but it has the same force as Yiddish *Ek Velt*. And at the proverbial world's edge skulk the giants of Biblical apocalyptic myth Gog and Magog, whom we shall encounter again presently, known to Armenians also by their Arabicized forms *Yajuj* and *Majuj*, from which Arm. *joj*, "giant", may derive⁶. The *xorotik-morotik* compound when it means "beautiful" always refers to a loved and desired person, not a thing. So in the Arm. folk song *Tehkonda: Xorotik, xorotik, xorotik-morotik im yarn ē* "Pretty, pretty, lovely is my beloved!" — or *Ay! Xorotik-morotik, Ay! Sirunik kak'avik* "Oh lovely, oh lovely little partridge!" The strutting partridge gives its name to the generically lewd dance in Arm. celebrations of physical love and early medieval polemics against it.

Though it might appear that the divine names underwent degeneration to become common nouns the reality could be more complex. One recalls for instance that the Parsi Gujarati form, Ordibehešt, of the name of another Aməša Spənta, Aša Vahišta, who presides over fire, can be used simply for "fire" — so closely is the visible creation suffused for the Zoroastrian with the presence of its tutelary divinity⁷. So plants and waters might have been called *hawrot* and *mawrot* by pre-Christian Armenians who still knew what the names meant. The Armenian "game of lots" is now a sanitized and innocuous rite of young girls sanctioned by church

³ Russell 1990, pp. 33–40.

⁴ Dialect dictionary 2002, p. 363.

⁵ And here in the Ebonic parlance of the USA of my youth, the happy exclamation when a lovely girl walked by uptown, "Mmm, mmm, MMM! Sho' like a piece o' dat!" For the other amorous uses of English "piece" one need only consult the constantly-growing Urban Dictionary on the Internet.

⁶ The rhyming *šogmog(-em)*, "delation, flattery, lie" perhaps inspired another form of the name of the pair in which initial *j-* is altered to *sh-*: Zaruhi Pōtosean of Šāhbāyī, Van, told her son Grigor, *Eđt'ə glxani hrēšə piti gay Hayastani vray ew mec paterazm piti əllay, isk al Šugug Mugug piti gay anor dēm*, "The seven-headed monster will come against Armenia and there will be a great war; and Šugug Mugug as well will come against it" (oral comm. by Krikor Boghosian). The seven-headed dragon and Gog and Magog are standard fare from the Book of Revelation.

⁷ Russell 1988.

and society. But it might once have been a nocturnal (and therefore perhaps goetic)⁸ ritual of lecanomancy and love magic — or, indeed, something more malevolent — on the fringe of a Mazdaismicate⁹ society employing sacred names imbued with poetic rhyming potency and manipulating herbs and possessions of the subject or target person of the rite. Such a magical rite, employing several of the central features of the Armenian *vičakaxal*, is indeed attested in a source whose roots are in late antiquity. In the *Sēfer ha-Rāzīm*, “Book of Secrets”, a compendium of spells that advertises itself as having come to king Solomon from the personal library of Noah, there is a list of eighty angels of the “second encampment” who serve one TYGRH. In order to cause various kinds of dire harm to an enemy, or to do other damage, one may call on these four score malevolent beings by taking water from seven springs on the seventh day of the months in the seventh hour of the day in seven different unfired pottery vessels. These are to be exposed beneath the stars for seven nights, after which one is to pour their contents into a glass vial over which one has pronounced one’s foe’s name. One then smashes the seven vessels and scatters the shards to the four directions, reciting appropriate incantations¹⁰. So the innocent quatrains of latter days may but palely reflect what were defixions of yore. Much magic in antiquity was specifically love magic, which was employed not only to arouse desire but also, more sinisterly perhaps, to destroy the bonds of wedlock: one need only peruse that *locus classicus*, the historiola of St. Cyprian of Antioch, to see how the black art worked. So *hawrot* and *mawrot* may have to do with a lioness of a magical rite that in later centuries becomes an Armenian folkloric pussy cat.

So now we consider the two Aməša Spəntas in the 102nd verse of the second *sūrā*, *al-Baqara*, of the *Qur’ān*. This is a scripture that still awaits its Kittel, but this longest and doubtless latest, summarizing chapter adds an immense quantity of regional oral lore to the basic teachings of the new religion, probably as it approached century mark. The passage is taken to be an admonition directed specifically to Jewish believers at Medina. “Solomon did not disbelieve; but the demons (*aš-šayātīnu*) disbelieved. They taught mankind magic (*siḥra*) and that which was revealed to the angels twain (‘*ala ‘l-malakaynī*) in Babel, Hārūt and Mārūt, but they did not teach it to anybody till they said, ‘We are naught but a temptation (*fitnatun*), so do not disbelieve (*fa lā takfur*).’ And from these two, people learn that by which they can cause division between husband and wife: but they injure no one save by God’s leave.” Islamic tradition confines the two angels to a well in Babylon¹¹ and mentions

⁸ Compare the “black *yasna*” described by Plutarch in *Peri Isidos kai Osiridos*, where Persian witchcraft inverts the canonical rite even as witchcraft in Christendom perverts the Mass.

⁹ Pardon the neologism; but it is a useful construction and why should Islamicate societies have all the fun?

¹⁰ Morgan 1983, pp. 25–28.

¹¹ Why Babel? Presumably because of the babble of tongues (and, in early Islam, of creeds) there since God’s hand smote the proud tower of the rebellious, the din reminiscent of the whisperings (*waswasa*) of the *jinn* and the mutterings (*zamzama*) of the *majusis* (Magians; magicians!) with their *niranjiyyat* (spells, lit. Zoroastrian *nirangs*, sacred formulae of power). Dr. Geoffrey Herman has called my attention to Goldziher 1884–8, p. 124: in A.H. 102 Mujahid at Babylon requested that the Jewish exilarch show him Harut and Marut, who hung upside down, great as two mountains, in their well. So it would seem that in the early Islamic period the connection was still strong of the Koranic myth to Jewish tradition in the lands that had only recently been the center of Sasanian power.

the incident with the girl who became the star Zuhra, i.e., Venus. Muslim legend elaborates the myth considerably; and the reliance upon Jewish sources, as will be seen, is palpable. So in the Persian-language Lahore *Tafsīr*, for instance, we read: “Khwāja Imām, may God be pleased with him, said: We heard it said in some commentaries, There came to ‘Ā’īša, may God be pleased with her, a certain woman and said, My husband took another woman to wife and I am tormented by jealousy. A woman told me, I’ll take you to a place where they will teach you something. You pronounce it over your husband and he will not even touch that other woman. At night she arrived, leading two of what could have been either cats or dogs, God knows. She mounted one and seated me on the other and off we went. We traveled till we reached a place where we saw two people suspended upside-down. She led me to them and left me there. They said: Do not learn what we say, or else you will become an unbeliever. But I said, I must learn it. If you have to, they said, then go to that furnace. And I saw a place like a furnace. When I went there I was frightened, turned around, and said, I went to the furnace. They replied, What, then, did you see? I said, I didn’t see anything. They retorted, That means you didn’t go there. So, go back! Don’t learn or you’ll become an unbeliever. I did not obey. So they said, Go on then, go right up to the furnace, to see. I didn’t go all the way that second time either. I went up to the furnace only the third time, looked, and saw something like a horseman clothed in white. White cloth covered his head. He rose out of the furnace and flew up to the sky. I returned and related what I had seen. They said, That was your faith, and it flew up and away. Now learn. And they pronounced those words. I committed them to memory and returned home. As they taught me, I cast a kernel into the earth and pronounced those words. In the same instant a stalk grew, became green, rose, and started to sprout leaves. As soon as that plant appeared, I immediately repented.” Idris intervenes on behalf of the woman to God¹².

The names are familiar; but the narrative alludes to a longer story concerning another pair of angels known from the corpus of texts on Enoch concerning the giants or *nephilim*; in the cycle of legends about king Solomon; and in later Jewish mythological literature. Originally the two are Šemihaza or Šemhazai¹³, and ‘Azael; and the former has two sons, Hiya and Hiwa. The rhyming names of the latter were chanted, the Talmud notes, by boatmen as they strained at their ropes. The Manichaean version of the Book of the Giants knows Šahmizād and his sons Ohyā and Ahyā. A Sogdian text equates the former with Sām; and the twin angels are in Persian named as Sām and Narīman. The Avestan epic hero of the cycle of the *kavis*, Kərəsāspa, belongs to the Sāma clan and is called *naire.manah-*, “manly-minded”; so the Iranizing version of the narrative has equated the fallen angels, it would seem, with him. In Pth. the giants themselves are *kaw-ān*, “kavis”. Later Jewish lore stresses the rhymed character of the twins’ names by calling them ‘Aza and ‘Azael. The giants in the earth practice telling lies (Aram. šqrh, kdbyn); and in the apocryphal Book of Jubilees (8.1–4) the Watchers

¹² Abdullaeva 2001, p. 84, who cites also the comment of Ḥasan Baṣri on a tradition that the two teachers of magic were Zoroastrians that one should therefore read not *malakayn*, “twain (fallen) angels” but *malikayn*, “two kings” (p. 82). This suggests that some remembered the Iranian origin of the names of the two.

¹³ The name sounds, as Shaked has suggested, as though it might be simply Heb. *ha-šēm ha-zeh*, lit. “this name”, maybe a cautious circumlocution. Pious Jews refer to God discreetly as Hashem, “The Name”.

(Gk. *egrēgoroi*, Aram. *‘irin*), who unlike the vigilant angels of the heavenly host are fallen beings, are said to have initiated divination using astrology¹⁴. So the apocryphal literature of Jews, Christians, and Manichaeans that existed at the dawn of Islam had a pair of fallen angels whose names sometimes rhymed and who lied and invented magic.

As to Solomon, he is said to have traveled on the pinions of an eagle to Tadmor in the Mountains of Darkness to visit ‘Aza and ‘Azael. He forced them by his ring with the holy Name to teach him mysteries. This is but one episode of Solomon’s many-faceted career as a magician; and again there seems to be considerable cross-fertilization between Jewish and Iranian myth, especially in the Islamic period. For Muslim tradition attributes the origin of the Persian vernal New Year, Nō Rūz, which became a popular and carnivalesque feast as far afield as Egypt, variously to the primordial king Jamšīd and to Solomon — the latter having established it to commemorate the day when that same potent seal ring (*khatam*), which had been stolen by a demon (*jinn*), was recovered¹⁵. In the texts of the *Testament of Solomon* that demon was none other than Ašmedai, i.e., the Avestan Aēšma Daēva. Jamšīd’s fatal hubris in Persian epic culminates in the demand that men worship him rather than God since he can cure every disease. This finds a parallel in the legend that Hezekiah concealed (Heb. *gānāz*) Solomon’s *Sēfer Raḥū’ōt*, the book of cures that included every disease and its remedy and therefore might tempt the sick to pray to the king rather than the Creator. Zoroastrians consider Ahreman the author of disease and do not see the demonstration of human excellence in medicine as overweening pride, but as an aspect of the lifelong “martial striving against the demons” recommended by the Phl. credo¹⁶; so perhaps here the vector of influence ran from the monism of Israel, where God is author of good and evil, life and death — eastwards¹⁷.

The story of the two angels, called most often ‘Aza and ‘Azael in the later Jewish sources, may be summarized as follows. At the time of creation the angels who begged of God that they be let loose upon mankind to prove our iniquity — and unworthiness to receive their worship — were allowed to become the precious stones, gold, and purple dye that entice people. ‘Aza and ‘Azael in particular protested that, whatever the conditions of the world, they would acquit themselves better in it than men. But they tried instead to rape the girl who escaped to become Istahar/Venus/Nāhīd. Opting for punishment in this world rather than hell, they were sent to the Mountains of Darkness beyond the river Sambatyon. This is where Gog and Magog are, as well as the Ten Lost Tribes, all behind the security barrier erected by Alexander the Great. They are imprisoned in a deep mountain cavern: one of them repented and, though chained upside down, can see; the other sulks below in the dark. But their social life is rather busy. Afirra and Kastimon, two even nastier demons from a world below, sometimes come to bother and scare them. Naamah — Ašmedai’s mother — tempts them. Genun the Canaanite, son of Lamech, invented musical instruments there: ‘Azael entered them, and that is how music became seductive and led men into promiscuity. After they had discovered

rock and roll, the Canaanite went on to invent beer, pubs, and iron weapons¹⁸. So God created the Sabbath and the *sitra aħra* took care of Saturday night.

The most frequent visitors to the angels in the Mountains of Darkness are humans like Solomon seeking to learn magic. 'Azza the recalcitrant sulks in his pit; but 'Azzael sees people approaching. Then they both cry out and burning serpents surround them. They dispatch their animal familiar, a *Mischwesen* called *unimata* with the head of a snake, the body of a cat, small paws, and two tails. The postulant must then cover his face and make an offering of the ashes of a white cock. The *unimata* then conducts him to the fallen angels' binding chain, which he must strike thrice. The two then teach him magic over the course of fifty days¹⁹. The details are intriguing, and recall the epic myths of Zoroastrian Armenia: Movsēs Xorenac'i, whose *History of the Armenians* is often dated to the fifth century and at all events reached its present form no later than the eighth, provides the details of a much older oral epic still recited by the *gusans* ("bards") in his day. The epic of the Artaxiad dynasty contains many archaic elements and telescopes the events of the second and first centuries B.C. In one episode the Armenian king Artawazd, cursed by his father Artasēs, falls into the chasm of greater Ararat (Arm. Azat Masik'). He is chained there, held by giants called *k'ajk'*. Since dogs are gnawing at the chains to free him, mediaeval Armenian writers report that blacksmiths begin their working week by striking their anvils thrice to strengthen the chains of Artawazd. Artawazd's mother, Sat'enik, was something of a witch; but there is no record of Artawazd receiving and teaching visitors. Nor are there any snakes in the myth, which is so reminiscent of the tale of Aži Dahāka, Zohhak, chained or crucified in Mt. Damāvand and tortured by the two snakes that spring from either shoulder. But Armenian lore abounds in *višaps*, serpent-dragons, in the region of Ararat²⁰. Perhaps the Jewish tale has shifted the serpents of an older version of the story to the *unimata*'s ophidian head and double tail. The offering is sinister: the harbinger of dawn and bird of the yazata Sraoša is holy to Zoroastrians; and Manuk Abelean notes in his work on Armenian folk belief that a heavenly rooster wakes the angels. Gabriel, whose name is popularly connected with "rooster", is in Jewish belief the first to rise²¹. A 14th-cent. MS from Herāt of the *Mi'rāj nāme* depicts the Prophet Mohammed in the first heaven meeting a giant white cock whose feet touch the earth and whose comb brushes the foot of the divine throne²². In the context of Iranian religion killing a white cock would be a perversion, a reversal of the sacred analogous to a blasphemous parody of the Eucharist.

It seems possible that an Iranian Zoroastrian myth, or, more precisely, the pre-Christian Armenian reflex of one about an evil titan chained in a mountain chasm, was involved in the shaping of a Jewish tale first elaborated in the books of Enoch about two fallen angels who tell lies generally and more specifically teach magic. From their other associations with

¹⁸ Graves and Patai, 1963, pp. 100–106, with refs. to Dillmann 1853, pp. 92–93.

¹⁹ Bamberger 1952, pp. 178–181, with refs. Louis Ginzburg in vol. 4 of his *Legends of the Jews* and Angelo Rappoport in vol. 1 of his *Myth and Legend of Ancient Israel* report substantially the same details of the myth.

²⁰ On Artawazd, see Russell 1987 Ch. 13 "Captive Powers"; Russell 1994; Russell 1986–87; and Russell 2006.

²¹ Cited by Scholem 1965, p. 147 n. 4.

²² Ségué 1977, Pl. 9 (fol. 11).

seductive fashions, lewd music, and strong drink, love magic would seem to be their particular specialty. The tale evolved in a milieu where Iranian and Jewish traditions were strongly interpermeable; and this is apparent also in the Solomonic cycle where it is reflected. It entered Manichaean lore, where a secondary re-Iranization seems to have occurred: the angels are renamed Sām and Narīman and the tradition knows their Aramaic equivalents. It is not known whether a version of the myth known to Manichaeans in Sogdiana called them Harwōt and Marwōt; but if there was, it must have come from the west of the Iranian world, most likely from Armenia, where the legendry surrounding Hawrot and Mawrot was so deeply entrenched. The details of the legend also argue for an Armenian locus; and the names in the *Qurʾān*, Hārūt and Mārūt, are closer to the Armenian forms than to any others. De Menasce has explained the motif of twin beings with reference to the Indian legend of the two Aśvins who took a fancy to princess Sūkanya (*Mahābhārata* 3.123–125); and Dumézil saw in them an expression of the “fonction terrestre”²³. The two Aməša Spəntas at least personified water and plants employed in a magical rite. Many traditions like twins with rhyming names in any case: the Dioscuri do not rhyme but Remus and Romulus do; and closer to home the first generation of the heroes of the Armenian epic of Sasun consists of such a pair, the strong, heroic Sanasar and his smaller, weaker, more moody twin brother Baḏasar. By the seventh century of the Christian era and the end of the Sasanian age, the Jewish, Christian, Manichaean, and Mandaean mythology and demonology the early Muslims encountered in Iraq, Syria, Egypt, and Israel was rich in Iranian names and terms: in a world where the king of the demons is named in the inscription on a Jewish magical bowl as Bagadāna, it comes as no particular surprise that there should have existed a version of the myth of ‘Aza and ‘Azel in which the two fallen angels bore the alternative Iranian names Harut and Marut and had a specific association to the water and plants used in a ritual by Armenians. One might have encountered the latter at every turn. In Mesopotamia, Mani’s mother Maryam had been of the Armeno-Parthian noble house Kamsarakan, and Armenians were ubiquitous at court; Armenians thronged the schools and streets of Antioch and Nisibis; an Armenian papyrus is known from Egypt (the poor historical Artawazd had also languished in captivity at Alexandria, a prisoner of Marc Antony); and Armenian monks and pilgrims in the Land of Israel were exceedingly numerous.

Unless the “two youths” (*šənēy ha-bākhūrīm*) invoked in the name of Samael in a Geniza fragment to afflict N the son of N with noise and discharges from the back are our demonic twins, they do not seem to appear in Jewish magical texts themselves. ‘Azel (ʿzʾl) is one of the angels who stand before the divine throne, on a Jewish Aramaic amulet from Aḡabeyli, near Maraş — clearly a pious sort and not one of our boys²⁴. But one of the Iranian twins may perhaps survive in an Armenian spell that, appropriately, deals with love. The late Dr. Levon Boyajian of New Jersey owned a magico-medical manuscript that had been copied by his grandfather, whose family had migrated from Čʾmškacag (Chemishgezek, the ancient town that was home to the Byzantine emperor John Tzimiscēs) in the province of Dersim (now Tunceli), Western Armenia, to Aleppo. He probably compiled the manuscript there in

²³ De Menasce 1947.

²⁴ On the two youths, see Naveh and Shaked 1993, p. 235 f. For ‘Azel in the amulet, see Naveh and Shaked 1985, p. 68 f.

the 1920's, copying both recent cures and old spells, and brought it to New York. Dr. Boyajian's son donated the book to the National Association for Armenian Studies and Research at Belmont, MA, where I have studied it. On p. 62 is a magical operation and spell to release the binding (Arm. *kap*) of a bridegroom. One is to clap one's hands, recite the prayer beginning "Heavenly God" and the Psalm beginning with the words "Ascribe might" and write the name of the afflicted man on two slips of paper. The bride and groom are to wash in water in which the first piece of paper has been placed; and the groom is to bind the second to his right arm. With God's help he will be released. On the paper is to be written the nonsense words of the spell: *Hasawil, mat'um, marum, mat'ëumn, mariwn, mahk'on, awasi, azawmi, marut'*. The final word may be a rendering of Arabic *Mārūt* as an Armenian heard it, with a trilled *r*: the rhymes of late medieval and early modern Armenian spells consist often of *voces mysticae* and actual lexical items drawn from the prayers and spells of Muslim — and, more rarely, Greek — neighbors. So the name of at least one of the two fallen angels may still be attested in an actual magical rite as well as in a women's ritual that may once have been such a rite as well: one notes in both the use of water in which objects have been immersed²⁵.

I have suggested that the imaginary place at the edge of the world of the confinement of the two fallen angels — the Mountains of Darkness, beyond the river Sambatyon and the wall built to contain Gog and Magog and their hordes (Ezekiel 38, Revelation 20) — was thought to be in the environs of Armenia, or at least a mythologized image of it. What evidence do we have for this? The ten lost tribes of Israel were also thought to dwell in these parts: God punished them for their sins and they were exiled by the Assyrians to the northeast, to Media somewhere beyond the river Gozan (cf. I Kings 14–15, II Kings 17.6). Talmudic tradition locates them around Adiabene and Hamadan and mentions a river Sanbatyon — in the third century Commodianus has them *Persida flumine clausi*. Their new abode, which came to be called Arzareth after *erets aheret* ("another land", in Deut. 29.28) seems to be a place of snowy mountains (if a word SLWG may suggest Heb. *šeleg*, "snow"). One candidate is the Elburz chain south of the Caspian. The latter is mentioned as a place where they were; and if one notes the testimony of Josephus (Wars 7.7.4) to the effect that Alexander built his wall to keep out the Scythians, whom he identifies with Magog, then that barrier would have been at the Caspian Gates near the western shore of that sea²⁶. The *Qur'ān*, Ch. 18, knows both the wall and its builder, Zeus Ammon's son the *dhū 'l-qarnain*, "two-horned"; and has the barrier between two mountains. This is a persistent detail: the 14th-cent. Swedish *Konung Alexander* adds that the twin peaks *waro hogh ok mykith lang* "were high and very long"; and ancient Armenian sources call P'ok'r and Azat Masik' — Little and Greater Ararat — *erkar*, "long"²⁷. And the turbulent river Araxes, that Tacitus writes will not bear bridges, (Virgil

²⁵ Though it is difficult to argue from silence, perhaps *Harut' (for Hārūt) was heard as too close to Harut', a common diminutive of the proper name Yarut'iwn, "Resurrection", to be suitable for a negative spell; while Mařut' carries the suitably frightening phonetic signature of Arm. *mah* "death", *ma(r)šel* "wear out, decay", *meřnil*, "die", and so on.

²⁶ Josephus, a native of the Galil, lived, rather ironically, not very far from the only town that is known to have borne the name of the ostensibly remote and fabulous Scythians, Scythopolis (Heb. Bēṭ Še'an). Presumably he even met a few serving in the Roman cavalry.

²⁷ In Movsēs Xorenac'i, *History of the Armenians*, I.26, the Mede Aždahak has a dream that foretells his doom: he finds himself "in an unknown land (*yerkr*) near a mountain long from the earth

follows him, making the Araxes the edge of earth and Empire on the shield of Aeneas), flows past it. The historian and the poet meant by the political metaphor that Parthia would never submit to Roman domination; but it can make of the river a Sambatyon as well, a limit of the known world. For is not the incursion of Parthians into the Land of Israel an apocalyptic har-binger of redemption in the Talmudic literature?

So the country where another troublesome couple, Adam and Eve, were expelled from a garden of delights and the Ark of Noah rested, might be a fair candidate near the Caspian Gates for the Otherworld of Arzareth. And as the tale developed, Gog, Magog, and the “hidden” tribes were blended together even as the two words of Deuteronomy had been: John Mandeville speaks of “they of Caspye... Iewes of x. lynages, that men clepen Goth & Magoth.” That is all very well; but the *topos* of confinement implies another of escape. Orosius in the fifth century warns that the Jews teeming around the Caspian will break out (*erupturus*). *Pesikta Rabbati* 31.10 has the exiles migrating home-wards in *meḥilīm*, “tunnels” — like the *gilgul* of the bones of the men to be resurrected at Doomsday in the vale of Jehosopha, perhaps. In the uneasy folklore of the Middle Ages the belief was widespread in Germanic lands that the hordes of Gog and Magog waiting to burst from their confines and ravage Christendom were indeed the ten lost tribes — not the weak and despised Jews they knew, though, but Jews called either *rote* “red” (and oversexed) or *groß* “big” (like the giants, *‘anaqīm* and *nefilīm*). And what the persecutors feared, their victims hoped for: David Reuveni came to Rome in 1624 boasting that he could harness the might of these muscular Jews to retake Jerusalem. Eldad the Danite, who appeared in Qayrawan with tales of the ten lost tribes, went one better, for he spoke in a strangely-flavored (as it seems to recent researchers, a Najrani-tinged) Hebrew. Mandeville claimed Jews learnt the old tongue in order to be able to communicate with the ten tribes, presumably when the latter might come as a conquering, liberating army²⁸. The Zionist project, with its sunny aim of *skazku sdelat’ byl’iu*, “making reality of a fable” (as a Soviet song promises; *Im tirtsū ēn zū agādā* was how Herzl put it), was determined to bring back the exiles. Yitzhak Ben Zvi in *The Exiled and the Redeemed* muses on those deported by Assyria long ago. And Eliezer Ben Yehuda, whose contribution was the revival of spoken Hebrew, muses in his memoir, “At that time [1881, the year of his *aliya*],

(*erkar yerkrē*) in height, whose summit seemed encased in the severity (*sastkut’eamb*) of ice; and they said, you would think, this is in the land of the progeny of the Armenians (*haykazanc*). And as I looked longer (*erkaragoyns*) at the mountain, a woman clothed in purple (*ciranazgest*), having a veil of heavenly color (*erknagoyñ*) about her, appeared seated on the edge (*i cayri*) of such a height, lovely, tall in stature, and red-cheeked (*karmrayt*), gripped by the pains of giving birth (*erkanc*). And I looked longer still (*yerkaragoyns*) at this apparition and was in wonder, suddenly the woman gave birth (*cnaw*) to three fully-grown men (*eris katareals*) of the stature and nature of the progeny of the gods (*diwc’azanc*). The first, gripping the flanks of a lion upon which he was mounted, sped west; the second, on a leopard, headed north; but the third, reining a monstrous dragon (*zvišap anari*), advancing upon our realm, attacked.” On the antiquity of this passage, its relationship to other Iranian epic material, and its poetics and encoding of material from the song of the birth of Vahagn, see Russell 2009.

²⁸ On the ten tribes and *rote Juden*, see Benite 2009; and Gow 1995.

Palestine was more like a fairy tale to most Jews, hardly more real than the kingdom of the sons of Moses across the River Sambatyon.²⁹

Ben Yehuda was partly inspired to resurrect Hebrew, and to use it as his everyday tongue in Israel, by the Russian translation of George Eliot's novel *Daniel Deronda*; and it has been argued that she invented a character who undertakes the project of personal and national liberation and renewal as a Jew because she could not face writing as candidly about the similar needs of women. Fiction thus writes reality; and by imagining as Arzareth the very land of which my nation now sings, *En li erets aheret*, "I do not have an Other Country", a mythologized land of exile is transposed and imposed upon an actual place of return. But irony seems as essential to writing as gravity is to physicality: the two angels fell and are confined in this Otherworld because they could not control their own libido, so now their profession is to teach others how to arouse and manipulate it, reminding their clients that everything they are about to say is a temptation or even rebellion (for *fitna* has both these senses).

The angels Hārūt and Mārūt, says the scripture, taught *sihr*, "magic". This much accords with the rest of the evidence; and their warning, that what they are about to say is all nothing but *fitna*, again agrees with the tradition already noted that the giants and their ilk specialized in lying and deceit. But two decades ago Cyril Glasse, the scholar of Islam, offered to me this haunting paraphrase of the angels' caveat: "Everything we are about to say to you is a lie; now then, listen carefully!" And everyone *does*. There is no implication that the warning effectively repels anybody. If it did, the Prophet would not be telling the tale. One might aver that any man who has just traveled to the terrifying limits of the world to learn witchcraft is not going to be deterred by the health warning on the package. But in a more general way, what is it that we know is not true, yet we listen to it despite that, or even precisely because it is untrue? It is literary art, fiction. Pindar (Nemean ode 7.22–23) writes of Homer, *epei pseudesi hoti potanai te makhanai/ semnon epesti te* "for on his lies and his winged skill something sacred is present." It is not very far from the *semnon*, the holy, to *sihr*, the magical; and indeed with reference to certain kinds of poetry and rhetoric, there is a famous *ḥadīth*: *Inna mina 'l-bayāni la-siḥran* "There is a kind of eloquence like magic."³⁰ Our little life is rounded by a sleep: aware of its confines and of the pain of the sentence and the sorrow of its end, literary imagination a lie we welcome, knowing it is a lie. It is magical indeed, providing wonder and relief and a sense of freedom. Suspending disbelief, we break down Alexander's wall and cross the river Sambatyon at will. Brian Boyd has argued of late that fiction is an evolutionary adaptation, a way of gaming out possible roles and situations in order to cope with them better, rather in the manner that a motorcyclist scans the road ahead and anticipates (imagines) potential situations he will have to deal with at very short notice. But fiction is more than a limbering up of the mind to deal with future challenges. It is also demonic, *fitna* in the sense of revolution, since it is man's protest against the way things are, an attempt to create in another fashion than the Creator, and to speak of matters such as the vagaries of human passion in which we, and not God, are at the center. Hārūt and Mārūt, not the unfolding genome, invented it, all right. Lev Nikolayevich Tolstoy perceived this in his old age, repented, turned from fiction

to Christ, and, Solomon-like, repudiated the great books of his earlier life. One evening his wife was reading such a book to him, though. It dealt with illicit passion and the problems of family life. "It's rather good," he admitted. "What is it?" It was, she told him, a novel entitled *Anna Karenina*.

THE CURVING SHORE OF TIME AND SPACE:
NOTES ON THE PROLOGUE TO PUSHKIN'S *RUSLAN AND LUDMILA*

James R. Russell

Золотое руно, где же ты, золотое руно?
Всю дорогу шумели морские тяжёлые волны,
И, покинув корабль, натрудивший в морях полотно,
Одиссей возвратился, пространством и временем
полный!

("Golden fleece, where are you now, golden fleece?
All the journey long roared the heavy sea waves,
And, leaving the ship that had worked a canvas of
the seas,
Odysseus returned, replete with time and space!")

—Osip Mandelstam (1891–1938)¹

As lucid as you like or as deep as you choose to dive.

—Adam Gopnik, on the *Alice* books of Lewis Carroll²

Preface

On a muddy winter morning in 1967, a ninth-grader was standing in a noisy, crowded line at the cafeteria of the Bronx High School of Science, memorizing Mikhail Yur'evich Lermontov's poem "The Sail" («Парус») from a mimeograph handed out in Ms. Meisel's first-year Russian class. An older boy ahead of him—a fearsome upperclassman—noticed, and, with a gentleness he never forgot, carefully wrote out for him in Russian script an enchanting poem about an oak by a curving shore, a learned cat, and a forest whose unknown paths bore the footprints of unseen beasts.

¹ Concluding lines of the poem «Золотистого мёда струя из бутылки текла...» ("Golden honey from the bottle streamed..."), 1917, in Осип Мандельштам, *Стихотворения, Проза*, Библиотека Поэта, Москва, 2001, 66 (Osip Mandelstam, *Poems and Prose*, Poet's Library, Moscow, 2001, 66). Mandelstam wrote the poem at the dacha of S. Sudeikin in Alushta, on the Black Sea coast of the Crimea, where he had gone for a respite from the chaos in revolutionary Petersburg.

² Martin Gardner, ed., Lewis Carroll, *The Hunting of the Snark: The Definitive Edition*, with an Introduction by Adam Gopnik (New York: W.W. Norton, 2006), xvii.

The magic and beauty of Pushkin's poem, like first love, never left the boy as he grew into a man: beneath the playful verses he felt there was a great and powerful mystery. Most all Russians know every image in the *Prologue* to *Ruslan and Ludmila*; and I imagine many a reader has wondered what profundity of meaning lies beneath the limpid beauty of the light surface. (Pushkin's friend Küchelbecker thought *Ruslan and Ludmila* a lovely creation, but one without any substantial meaning.)

This essay approaches that question, albeit with respect to the *Prologue* rather than the larger poem: Is there the possibility of a profound, symbolic, spiritually fulfilling meaning? One starts with a cursory survey of the history of the text, its literary context, and its reception; this is followed by a close reading. One then employs an illustration of the poem after Pushkin's death by the rather obscure artist Ramazanov to establish a visual structure, as though the poem were ekphrastic, travelling from left to right and up and down, onto the temporally sequential scene established by Pushkin: curving seashore at the beginning, i.e., on the left; oak, Cat, and Poet at center foreground, with an undine in the branches above; and mysterious forest on the right. Supernatural beings from Russian folklore and myth emerge from the sea and fly through the air, creating a vertical pattern to the Otherworld vision.

One then maps Ramazanov's illustration of 1843 in turn upon William Blake's painting of 1821, "The Sea of Time and Space". Neither Pushkin nor his illustrator is likely to have seen it, though Pushkin and Blake shared some interests and common traits: they liked Ossian and were interested in the epic and mythological heritage of their respective nations, they saw themselves as prophetic voices in the cast of Isaiah, and they were both irreverent, transgressive figures in their societies trying to invent a fundamentally new aesthetic. So far, though we deal with parallels rather than filiation, we are still securely situated in the contiguous environments of 19th-century Europe. But then, for the interpretation of Blake's painting, we must resort to material that, though very much more remote, is—one would plead—not at all irrelevant. This is where the New York high school boy deploys the weapons of the mature Orientalist.

Blake's sources for his painting, unlike Pushkin's for his poem, can be traced to various Neoplatonic texts of Late Antiquity, notably to Porphyry's *De Antro Nympharum* ("On the Cave of the Nymphs"), an esoteric interpretation of a mysterious image in the *Odyssey* of Homer; and from these it can be established that the English poet has evoked a vision of a place outside the normal continuum of time and space, a point of transit where some souls enter physical incarnation and others depart from this world

on the journey to heaven. There is a Gnostic religion, Mandaeanism, most of whose adherents now live in southern Iraq and Iran whose founders, rebelling against the established Temple cult of Israel, settled to the immediate south and southeast of Armenia. In the third century a man named Patteg, a proto-Mandaean, and his wife Maryam Kamsarakan, whose name suggests Christian and Armenian connections, had a son they named Mani who went on to found the great Manichaean faith: apparently he had close Armenian associates and actively propagated his new religion in Armenia.

The layout and architecture of the Mandaean temple complex, the *manda*, explicitly embody the structure, symmetry, and symbolism—for concrete ritual purposes—of the painting by Blake. Such parallels, from the two antipodes of the Classical world, are striking, but not, ultimately, surprising: the ideological sources and casts of mind and imagination of Blake and his Gnostic precursors are in many respects kindred. Varied as the sources of Pushkin's mythological learning are, in folk tale, European poetry, and Old Russian epic, they are not Gnostic. The cosmic structure of the *Prologue* to *Ruslan and Ludmila* is his very own: he has come up with a Slavonic Cave of the Nymphs by the power of his own vision. There is his profundity; there, the mystery of his beautiful poem.

The second part of the essay explores the work of several visionary Russian writers after Pushkin: Vladimir Nabokov, Velimir Khlebnikov, and Daniil Kharms—who have been inspired by elements of the *Prologue*. They employ in their encounters with the poem new insights into the imagining of an Otherworld: “trans-rational” (Rus. *zaum'*) and absurdist lexicons and thematic structures (inspired in part by the inventions, known to the Russians this time, of another Englishman, Lewis Carroll), non-Euclidian mathematics, intentionally supernatural connections, the mystical teaching known as Kabbala, and graphic experimentation (personal ciphers, and the enigmatic Voynich manuscript).

1. *The Prologue to Ruslan and Ludmila*

Pushkin's first great *poema*,³ *Ruslan and Ludmila* (RL), was approved by the censor Timkovsky on 15 May 1820 and published in late July or early

³ The useful Russian word *поэма* has no exact English equivalent. It can be characterized as a composition in verse, verging on the scale of an epic in length, whose theme, however, is more that of a novel or romance.

August 1820: he had begun it in 1817, while still a student at the Lycée of Tsarskoe Selo; and he read the completed text to friends at the end of March 1820. But before it appeared in print at St. Petersburg, the poet himself was exiled to south Russia and Moldavia; in July 1820, in the Caucasus, Pushkin composed a sad Epilogue in which he mourns the departure of poetic inspiration. *RL* is the second-longest poetical work in the corpus of Pushkin's writings, after the "novel in verse" *Evgenii Onegin*: it consists of six Cantos of 2,822 lines in all, in iambic tetrameter. The sources from which Pushkin drew inspiration and background material are numerous: Ariosto's *Orlando Furioso* and Voltaire pervade the tone and spirit of the work; and Pushkin borrowed happily from the texts of Russian epic (the controversial Old Slavonic *Slovo o polku Igoreve*, "The Lay of Igor's Campaign", or, simply, the Igor' Tale), of folk tales (*skazki*), and of heroic ballads (called now *byliny*, a conscious neologism of Pushkin's day). He drew also from contemporary artistic treatments of these old and folk sources: Karamzin's *Il'ya Muromets* and Zhukovsky's ballads—especially "Rusalka of the Dnepr". Like many other Russian and European poets of his time, he was fascinated and moved by Macpherson's *Ossian*. The modern Irish novelist Colm Tóibín, in his foreword to the first full, book-length English edition and translation of *RL*, offers a vivid evocation of the contrary energies that find harmony in the *poema*, as in so much of Pushkin's *oeuvre*: "Pushkin thus came to the story of Ruslan and Lyudmila with all the ironies and sense of crafty distance which his education had offered him. He had the energy of a natural storyteller and the resources to usurp that energy... He managed what is almost unmanageable: to offer parody and enchantment at the same time. He offered the mock heroic without losing the heroic."⁴ This evaluation shares the Russian critical insight into Pushkin's "lightness" (лёгкость), by which is meant poetry whose playful gracefulness of style seems effortlessly to convey an extraordinary depth of meaning and feeling. Yuri Lotman has observed that *RL* prepares the reader of *Eugene Onegin* for the irony and contrast of Pushkin's style.⁵

Zhukovsky's acclamation, "To a victorious pupil from a defeated master," has come to epitomize the immediate popularity and success of the poem amongst the Russian reading public. The first edition sold out at once, with some paying 25 rubles for a copy. Critical acclaim was to

⁴ Roger Clarke, *Ruslan and Lyudmila* (trans. Alexander Pushkin; London: Hesperus, 2005), viii.

⁵ Ю.М. Лотман, *Пушкин* (СПб: Искусство-СПб, 1997), 194; Yuri M. Lotman, *Pushkin* (St. Petersburg: Art-St. Petersburg, 1997), 194.

come somewhat later: some critics found *RL* indecent, and I. Dmitriev, for example, wrote “A mother orders her daughter to spit upon this tale” («Мать дочери велит на сказку эту плюнуть»). Pushkin took all such insults to heart; so years later he replied, in *Eugene Onegin*, “Of course the mother would have ordered/ Her daughter to read his [works]” («Еро [труды] конечно мать/ Велела б дочери читать»). Though the criticism was trivial in this case—the censor had approved *RL* for publication, as noted above, and had done so without requiring any revisions or excisions—one has to notice the dark clouds gathering. Pushkin is the author of the *Gavriiliada*, an obscene parody of the Annunciation; his own “Exegi monumentum” is a *blague*, a practical joke, about Derzhavin’s earlier ode; he called Falconet’s equestrian statue of Peter I an idol (Rus. *kumir*) and aroused the ire of the Emperor. There must inhere in Pushkin’s lightness and playfulness a tendency to intentional *transgression* that characterizes much artistic innovation but necessarily leads to confrontation with the established order and its canons of propriety and taste. Pushkin suffered ostracism, persecution, and death at the hand of d’Anthès, partly because of his own transgressive character, and that of his work.⁶

Pushkin composed the *Prologue* (text 1.1: «У лукоморья . . .», “By the bow-curve of the seashore . . .”) to the poem late in 1824, during his sojourn at his estate at Mikhailovskoe in 1824–1826. On 12 October 1826 Pushkin read the *Prologue* and other compositions to a gathering of friends in Moscow at the home of D. Venevitinov; and in a memoir written forty years later M. Pogodin professed still to feel the excitement of that occasion. It was published in the second edition of *RL* at Petersburg, 1828. The reviews of the new edition stressed the novelty, individuality, and originality of the *Prologue*, which sketched out, enthused the *Moscow Telegraph*, “a whole

⁶ Anthony Julius, a British lawyer, literary scholar, and art critic, offers a forensic exploration of the legal ambiguities of the frequent conflicts between artistic creativity and conventional morality in *Transgressions: The Offences of Art* (Chicago: University of Chicago Press, 2002). The aspect of sexual misconduct, in the artist’s work or his life, seems to be a particularly frequent component of the confrontation. An artist’s defiant response makes clear that the transgression is not an all-too-human peccadillo but an ideological stance and protest, and thereby makes the rift radical, sometimes tragic. The painter Thomas Eakins, whose use of nudity and whose possible homosexual leanings scandalized the prim academic establishment of the arts in Philadelphia, declared in 1894, “My honors are misunderstanding, persecution, and neglect, enhanced because unsought” (Julius, 44). That is, Eakins considered everything he did natural and right. Two generations later, the Armenian poet Charents, a Pushkin scholar to be discussed in a note below in connection with the poem “The Prophet”, was to be persecuted, then murdered by the puritanical Stalinist régime, whose disapproval he incurred not only by his work, but by his defiantly transgressive sexual behavior. *Plus ça change . . .*

world of Russian tales presented by the hand of a great master of Russian realities and fantasies."⁷ The Epilogue, which, as noted above Pushkin had in fact written in 1820, when he completed the body of *RL*, was also included with the text only in the second edition, though in 1820 it had been published separately. John Bayley wrote that *RL* leaves the "feeling... of a society apprehending itself... in a sort of microcosmic idyll."⁸ The *Prologue* evokes a microcosm of its own; and it is on it that this study focuses. Pushkin based the first part of the *Prologue* on one of his nurse-maid Arina Rodionovna's tales, which he jotted down in his notes (text 1.2); and Bayley observed that in reworking the passage for his poem, Pushkin strove for the greatest conciseness, stripping the first line, for example, of the unnecessary verb *stoit*, "stands":⁹ the microcosm was to be as micro as possible. Pushkin pared his own draft down further, excising the adverb *tam* "there" (which will play a major, and contrastive, role in lines 7–29) and a whole extraneous line (*I den' i noch' tam kot uchenyi/ Ne skhozhi ni s odnim kotom* "And day and night there a learned cat/ Unlike any other cat there is").¹⁰ The *Prologue* to *RL* is not unique as an addition to a large work: Pushkin was to write one to *Eugene Onegin*¹¹—but "By the bow-curve of the seashore" is an extraordinary, independent poem that merits discussion on its own. It is a powerfully compact work of visionary, mythological lyricism, and nothing decisively links it to the poem it introduces. Indeed it is at variance with the latter: Pushkin heard the tale from a "monastic chronicler" (*RL* V.225–228), not the Learned Cat of the *Prologue*. Lotman, noting the contrast between the *Prologue* and the rest of *RL*, seeks to explain how the poet might have justified to himself its

⁸ John Bayley, *Pushkin: A Comparative Commentary* (Cambridge: Cambridge University Press, 1971), 49.

⁹ *Ibid.*, 51.

¹⁰ See A.C. Пушкин, *Полное собрание сочинений*, т. 4, (Москва: Изд. АН СССР, 1937), 276 ("Черновой отрывок пролога"): A.S. Pushkin, *Complete Works* (vol. 4; Moscow: Publishing House of the Academy of Sciences of the USSR, 1937), 276 ("Draft excerpt of the Prologue").

¹¹ "Разговор книгопродавца с поэтом", "The bookseller's conversation with the poet", it should remind one of another series of prologues situated in ironic detachment out-side the action of the work underscoring the artificiality of the latter. This is the prologue in Heaven (cf. the setting of the Biblical book of Job) and the prologue in the theater (cf. the play *Shakuntala* of Kalidasa) preceding the first part of Goethe's *Faust*. The Prologue to *RL* is characterized, in contrast, not by an attitude of detachment, but by its opposite: an immersion in the mythological material that is, if anything, deeper than in the *poema* itself.

inclusion in the second edition: "When working on *RL*, Pushkin was not yet able to penetrate the genuine world of Russian folklore as deeply as he could after his stay in Mikhailovskoe. However, in preparing the new edition the poet did not go about redoing his earlier *poema*. He introduced into it the excerpt 'By the bow-curve of the seashore...' and this illuminated the text in a new way, without changing it."¹²

The *Prologue* can be divided into three parts: the introductory lines 1–6 that set the scene; the main narrative and list, lines 7–29; and a coda partially recapitulating 1–6 but with an intrusive element. To the third part belongs a concluding couplet that serves in part as a transition to the body of the poem. The lexicon of the *Prologue* stands out, both from the rest of the work and from Pushkin's corpus in general: the characters come from Russian folklore, and some of them—Tsar' Kashchei, the witch Baba Yaga, a Learned Cat—appear only here.¹³ The *Prologue* is exceptionally, densely populous:¹⁴ between lines 1 and 29 we meet the Cat, the Forest Sprite, a Mermaid (*Rusalka*), beasts, a hut on chicken feet, thirty Knights, their Seaborn Sire, a Prince, a fearsome King, a Wizard, a Hero, a Princess, a Brown Wolf, the witch Baba Yaga, a walking mortar, and king Kashchei gloating over his gold. That makes fourteen named, more or less animate

¹² Lotman, 758: Работая над «Русланом и Людмилой», Пушкин ещё не обладал той мерой проникновения в подлинный мир русского фольклора, которая стала доступна ему после пребывания в Михайловском. Однако, готовя новое издание, поэт не стал переделывать свою раннюю поэму—он ввёл в неё синтезирующий фольклорные мотивы отрывок «У лукоморья дуб зелёный...», и это по-новому осветило текст, не меняя его.

¹³ The *leshii*, a forest sprite or hamadryad, appears once more in Pushkin's oeuvre—but in an autobiographical sketch that is more explanatory background to *RL* than it is a different work: Не смотря на то, что всем окружающим нас строго было запрещено пугать нас ведьмами, лешими, домовыми, няньки все-таки иногда говорили о них между собою, "Even though it was strictly forbidden to those around us to frighten us with witches, forest sprites, and house spirits, the nannies still sometimes talked among themselves about them": see АН СССР, Ин-т языкознания, *Словарь языка Пушкина* (Москва: Госиздат иностранных и национальных словарей, 1957), 2:479 s.v. (Academy of Sciences of the USSR, Institute of Linguistics, *Dictionary of the Language of Pushkin*, Moscow: State Publishing House of Foreign and National Languages, 1957, 2:479 s.v.). On Pushkin's word for the bow-curve of the seashore, *lukomor'e*, see 2:512 s.v. In his works, Pushkin used the word *koldun* "sorcerer" 17 times (including *RL*, l.280, where it is a *koldun* who has kidnapped the heroine); *nevedomyi* "unknown", 35 times but *nevidannyi* "unseen" only twice; *rusalka* "mermaid", 10 times and *rusalochka* (diminutive), three.

¹⁴ See В.А. Кошелев, *Первая книга Пушкина* (Томск: Водолей, 1997), 199 (V.A. Koshelev, *Pushkin's First Book*, Tomsk: Aquarius, 1997, 199): "The condensed [Rus. *sgushchénnoe*] beginning anticipates as it were the world of Pushkin's tales, that were not yet created." The author also points out in support of his suggestion that in the Prologue Pushkin uses thrice the word *skazka*, "tale", which is found nowhere else in the *poema*.

individual characters, plus the Knights, the unseen “people” (*narod*), and an unspecified number of unseen beasts whose tracks appear on unknown paths. The other verbal material of the passage is rich; but the word *tam*, “there”, stands out for repetition: it is met fourteen times (corresponding, indeed, to the number of particular characters introduced), sure evidence that Pushkin intended his reader to regard the *Prologue* in part as a mythological list, reminiscent of the mnemonic *tour de force* of ancient epic—Homer’s catalogue of ships in the *Iliad*, for example. The provision of such a list establishes bardic mastery and authority.

It also creates an Otherworld strongly defined by the repeated adverb *tam* as separate from this world; and the dense foregrounding of mythological realia—Nabokov called it the “*it-ness*” of a story—is also a salient feature of the literature of fantasy.¹⁵ If one considers the *Prologue* as ekphrasis—a literary description of a picture—the hypothetical painting from which Pushkin worked would be a canvas full of characters on land, in the sea, and in the sky, with exemplifications of diverse opposites: faithful virtue (Princess and Brown Wolf) and degrading vice (the evil Kashchei with his golden hoard), or sorcery (Baba Yaga) and its overthrow (the Hero riding the vanquished Wizard). This is a magical world, so creatures that should be in one realm can appear in its reverse: Knights come out of the depths of the sea; but the aquatic Mermaid is seated high in a tree. This is not a forced effect: there are submarine knights, and the *rusalki* of Russian folk belief haunt the branches during the week of Rusalia, after the feast of the Trinity, to lure their victims to be tickled to death or drown in a watery grave. It enables one to see into places normally invisible, as one should expect of a cosmogram. (Pushkin plays on the roots *ved-* “know” and *vid-* “see”, with their derivatives, as we shall see presently, to stress this perception of the marvelous.) And the whole should be anchored by the central image of the oak, the world tree where the Learned Cat reproduces the diurnal revolution of the heavenly spheres (*i dnyom i noch'yu*: “by day and by night”) on his literal *catena aurea*, literally spinning the tales and songs Pushkin is there to transcribe.¹⁶ This World Tree is the

¹⁵ Adam Gopnik *apud* Gardner, xviii.

¹⁶ In one Russian folktale, «ходит по тому столбу учёный кот...вниз идёт—песни поёт, а вверх поднимается—сказки сказывает; голос его за три версты слышен» (“A Learned Cat walks at that pole...he goes down and sings songs; upwards he ascends, and recounts tales—his voice can be heard three versts away”). See А.Н. Афанасьев, *Народные русские сказки* (т. 1; Москва, 1984). 287 (A.N. Afanas'ev, *Russian Folk Tales*, vol. 1; Moscow, 1984, 287). In Derzhavin's *Царь-Девуца* (*Tsar'-Devitsa*, 1812), «И по веткам птички райски/ Скакивал заморской кот» (“And along the branches, paradisiacal

central point where the poet brings everything invisible into plain view through the Logos of his imagination.¹⁷ A painting cannot reproduce one effect, indeed: everything except Pushkin himself is in motion. The poet alone sits immobile at the very center of the composition.

After line 30, Pushkin enters this magic cosmos, his own fictional landscape: between lines 30 and 35, the personal pronoun "I", used five times (*ya*, 4x; *mne* [dat. sg.] 1x), is the only animate inhabitant of the coda, save for the Learned Cat, who belongs to the opening scene that is being recapitulated. In the coda, all the verbs are 1st pers. sg. past (*byl* "[I] was", *pil* "drank", *videl* "saw", *sidel* "sat") until the Cat's sole *govoril* ("he told me his tales"), after which the verbs are 1st pers. again, but now, strikingly, in the present tense (*pomnyu* "I remember", *povedayu* "I shall relate"). The density of the usage of the pronoun serves, again, to stress the sudden and visible entry of the author. And the distribution of verbs symmetrically from past to present, to either side of the Cat's narration, suggests that Pushkin, the Cat's interpreter, forms a bridge between the mythological world *in illo tempore* and the present time of the literary public. The unity of time of the *Prologue* is difficult to define and contrastive, which suggests an Otherworld quality of a great deal of time telescoped into a few sidereal moments. Pushkin recorded in his notebook that the "thirty splendid knights" («тридцать витязей прекрасных», who are to appear again in his *Tale of Tsar Saltan*) "are the same down to a hair in the timbre of their voices, their height, and their appearance; and they emerge from the sea for only one hour" («точь-в-точь ровны и голосом и волосом, а выходят они из моря только на один час»); in the poem this happens at dawn («о заре»). But the poet also avers that the Learned Cat recounted or spoke (Rus. *govoril*, in the habitual mode of the verb, as is *pil*, "drank", of the mead Pushkin there imbibed) its tales («сказки»), of which the narrator apparently remembers but one («одну я помню»); so there were more, and it all took much longer, then, than an hour. If the Learned Cat is

birds—/ Loped the Cat from Beyond the Seas"). Pushkin seems to have opted for a cat who like a planet circumambulates the oak to stress the tree's centrality, rather than go up and down or run through the branches—where, in any case, the undine is seated.

¹⁷ Koshelev, 200, notes that in 1820 Pushkin traveled in the company of General N.N. Raevsky through the Pridneprovsko-Azovskaya steppe: in those parts there still stands the *Zaporozhskii dub*, "Zaporozh'e oak", which received sacrifices in ancient times. It was a place where Cossacks gathered for councils, and is still sacred in Ukrainian tradition (see В.Д. Михайлов, «К локализации пушкинского лукоморья», *Временник Пушкинской Комиссии*, вып. 26, СПб, 1995, 192–196 (V.D. Mikhailov, "Towards a localization of Pushkin's *lukomor'e*," *Bulletin of the Pushkin Commission*, no. 26, St. Petersburg, 1995, 192–196).

standing in for Arina Rodionovna, then it is in fact all his early childhood that the poet telescopes into a single magic, radiant hour of dawn.

In the earlier section of the *Prologue* there is an incantatory, *mantra*-like couplet: *tam na nevedomykh dorozhkakh/ sledy nevidannykh zverei* "there on unknown paths/ are the tracks of unseen beasts" with the assonant, Indo-European etymological figure *ved-/vid-*: in the coda, Pushkin annuls both negatives with *videl* "I saw" and *povedayu* "I shall relate": these link knowing to seeing. Both *vid-* "see" and *ved-* "know" come in Slavic from proto-Indo-European roots whose assonance goes back to the primordial figures of the poetics of that giant language family. The poet has become seer and teller of what was unknowable and unseen, bringing it to the outer, present world (Rus. *svet*), and to light (also *svet*). The poet's seeing and knowing of the invisible and the unknowable is underscored also in line 13, *tam les i dol videnii pobny*. The forest (*les*) looms darkly to the viewer's right in the composition of the scene; but no dale (*dol*) has yet been mentioned, though the two form a nice, traditional figure. They are full of what Roger Clarke translates as "wraiths"; but *viden'e/videnie*, on the evidence of Pushkin's own usage, might be more precisely translated simply as "vision". The reference seems to be as much to phantasms one beholds in the dream state as to the prophetic or theophanic vision.¹⁸

¹⁸ In the *Словарь языка Пушкина* (*Dictionary of the Language of Pushkin*), s.v., are these citations: Германи... записал свое видение (Hermann... wrote down his vision); Тут он видит чудное виденье: на помосте валяются трупы (Now he saw a weird vision: corpses lay strewn on the platform); Однажды утром Чарский чувствовал то благодатное расположение духа, когда мечтания явственно рисуются перед вами, и вы обретае живые, неожиданные слова для воплощения видений наших... (Once in the morning Charsky experienced that blissful disposition when one sees one's dreams sketched plainly before one, and acquires vivid, unexpected words with which to embody our visions...); ...в неясных видениях первосония (...in those unclear visions one has when dropping off to sleep); На рассвете она задремала, но тонкий сон её был встревожен печальными видениями (She finally fell asleep at dawn, but her light slumber was disturbed by gloomy visions). Pushkin refers here to the conscious, waking dream, Rus. мечта, the dream in sleep, Rus. сон, and the intermediate state. A salient feature of Homer's strange, supernatural cave of the nymphs at Ithaka, to be discussed presently, is that it has two entrances—one for gods and one for mortals—and shortly after Odysseus arrives there, is entertained by Eumaios, and finds his way to Penelope, the latter explains to him that dreams have two gates: prophetic ones (i.e., divine ones) come through gates of horn, while false (i.e. personal, circumscribed, mortal) ones emerge through gates of ivory (*Odyssey* 19.562–565). There is a correlation here, structural and thematic, that is too obvious to ignore, of the point of entry of dreams and that of gods or souls. One scene is that of the meeting of the two worlds; the other, of the consciousness of the two. So with his use of *videnie* Pushkin intimates an oneiric state in which his mythopoetic landscape is perceived. On Pushkin's use of themes and images of dreams, and of their subsequent employment in Russian literature, notably in Gogol's absurdist writing foreshadowing

Either way, the poet sees and describes alertly, where others cannot; and this is precisely the quality of the prophet. In his poem of 1826 "The Prophet" (*Пророк*), Pushkin uses images drawn directly from the Biblical book of Isaiah to describe his painful transformation into a seer: his eyes and ears are changed, and he is able to perceive the tingle of heaven, the flight of angels, the tread of monsters beneath the sea, and the growth of the vine in the dale («дольней лозы прозябанье»¹⁹). That is, Pushkin sees and hears things in heaven, on earth, and below the sea that are invisible and inaudible to mere mortals—just as in the *Prologue*. The link between the situation of the poet as seer in this poem and his self-identification with Isaiah in "The Prophet" is of interest because, as we shall see presently, it is precisely Isaiah who occupies the same compositional place as Pushkin, in a painting whose general structure and wealth of mythological detail closely parallel the *Prologue*: William Blake's "The Sea of Time and Space".

Another collocation to the figure *neved-/nevid-* in the *Prologue* can be cited from Pushkin's most powerful work of Russian social and historical mythopoesis,²⁰ that archetypal *poema* of St. Petersburg, *The Bronze*

Kharmes, see Michael R. Katz, *Dreams and the Unconscious in Nineteenth-Century Russian Fiction* (Hanover, NH: University Press of New England, 1984).

¹⁹ The Soviet Armenian poet Eliše Čarenc' (Yeghishe Charents), 1897–1937, loved Pushkin; and an unpublished translation of the poem, entitled in Armenian *Margarē*, "(The) Prophet", together with a kind of fugue based upon it, are found in his MSS. See J.R. Russell, "Ch'arents' the Prophet," *Journal of the Society for Armenian Studies* 11 (2000): 11–38, repr. in J.R. Russell, *Armenian and Iranian Studies* (Harvard Armenian Texts and Studies 9, Cambridge, MA, 2004), 1073–1099. It is worth noting, in connection with the collocation of William Blake's painting "The Sea of Time and Space" and the *Prologue* to *RL* in this essay, that Bayley in his monograph on Pushkin (*op. cit.*, p. 145), compares «Пророк» ("The Prophet") to Blake's "Hear the Voice of the Bard", the first poem of *Songs of Experience*.

²⁰ The scene of the *poema* is the disastrous flood of 7 November 1824: Pushkin in the text speaks of Peter's having founded a city under the sea, and thereby connects Petropolis to Atlantis as a place of hubris, divine wrath, doom, death, and enduring mystery. Since Petersburg itself survived both this inundation and another exactly a century later, the Neva becomes in the work of later poets the locus of mystery and dark kingdom of Persephone. That did not stop Mikhail Dmitriev from imagining in his poem «Подводный город» ("The City Under the Sea"), 1847, a descendant of the fisherman Peter saw mooring his boat to all that is left of Petersburg: the point of the Admiralty spire protruding from the waters (see В.В. Яковлев, *Петербург в русской поэзии XVIII-первой четверти XX века*, СПб: Филфак СПбГУ, 2002, с. 185–186; V.V. Yakovlev, ed., *Petersburg in Russian Poetry, from the 18th Century to the First Quarter of the 20th Century*, St. Petersburg: Faculty of Philology of St. Petersburg State University, 2002, 185–186). Evgenii, a poor young clerk of noble ancestry ruined by the flood, curses Falconet's equestrian statue of Peter and the idol (кумир, *kumir*: Nicholas I disliked the implication and struck the word from Pushkin's MS.), detaching itself from its pedestal, pursues the crazed wretch to his death. In one

Horseman (*Медный всадник*), 1833. Peter the Great (d. 1725), founder of Russia's "window on Europe" (he did not think to pound a door through the wall), stands on the shore of the "barren waves" («на берегу пустынных волн») of the Neva, where a sad Finnish fisherman casts his nets. Here and there behind the monarch, wooden huts loom black here and there («чернели избы здесь и там»)—"and the wood, *unknown* to the rays/ of the sun *hidden* in fog/ soughed roundabout" («и лес, *неведомый* лучам/ в тумане *спрятанного* солнца/ кругом шумел»). The tripartite spatial and thematic composition of this *opening* scene of the work: river or sea (the emperor stands at the place where the great river flows into the Gulf of Finland), central motionless figure in a space with marginal structures, mysterious forest—corresponds *grosso modo* to that of the *Prologue to RL*. Here instead of *nevid-* "unseen" Pushkin has employed the verb *spryat-* "hide", preserving the long, sonorous form, though, of a passive participial form in four leisurely syllables: *spryatannogo*. The poet perhaps intends by having the sun's visage hidden rather than merely unseen to introduce the sinister note of Divine disfavor that will swell as the city founded by the demonic autocrator is whelmed in dark floodwaters. The dark coloration distinguishes this poem sharply from the sunlit dawn of the *Prologue to RL*. The negative feeling of alienation and unease is intensified in other ways, too: one observes that the inhabitants of the gloomy landscape in this prologue to *The Bronze Horseman* are all non-Russians (финский рыболов, убор(ий) чухон(е)ц: "Finnish fisherman", "impoverished Finn"), in sharp contrast to the happy profusion of Slavonic creatures in the *Prologue to RL*: Peter, the Westernizing king, is building his new capital in an alien place!

The meaning of the word *svet* in the line *povedayu teper' ya svetu* should perhaps be limited here in the strict sense to high society—members of the Arzamas club, the customers of Smirdin's Petersburg bookshop, Pushkin's friends. He does not seem to expect for this light work, at this early stage of his life, the cosmic reading public of *Exegi monumentum*, "all Great Russia, and every tongue there spoken". But that was the public he actually did get—and *svet* still has also the broader meanings "world" and "light". In a prophetic poem about the fate of the world composed between 1910 and

stroke, Pushkin created the two dominating myths of the city: that of supernatural malevolence and that of the alienated man or "man from underground" (разночинец, человек из подполья, и т.п.)—that animate the uneasy visions of Gogol, Dostoyevsky, and their successors down to the present day.

1914, *Golos iz khora*, "A Voice from the Chorus", Alexander Blok speaks of the *kholod i mrak gryadushchikh dnei*, "the cold and *murk* [thanks for this elegant correspondence to V.V. Nabokov] of the days to come" and the insane whirling of the planets. The poem has the famous line *Vsyo budet chernee strashnyi svet*, "All blacker will shine the awful light." Though light cannot be dark save in the poetic imagination, and the image of the world and of planets pervades Blok's poem, the contrary image is still achieved in part because the primary meaning of *svet* is "light".²¹ One presses this observation because Pushkin is making the unseen visible, bringing it to light. The material of lines 1–29 of the *Prologue* to *RL* is unseen, not only because it belongs to a mythic Otherworld, but also because it belongs to the heroic age of the past, cf. the couplet from *Ossian* that was the original prologue and in the second edition precedes the first Canto: *Dela davno minuvshikh dnei, / Predan'ya stariny glubokoi*, "Deeds of days long gone, / Traditions of deep antiquity."

This invocation of Slavonic antiquity by a bard setting out to recount a heroic poem should remind one of a particular monument of the Russian heroic era, the *Slovo o polku Igoreve*: Pushkin begins the *Prologue* with the memorable words *u lukomor'ya* "by the bow-curve of the seashore", a phrase he uses nowhere else;²² but the Igor' Tale does contain a similar phrase, *iz luku morya*, which Nabokov identifies with a bend of the Sea of Azov (called Surozh in the epic) at the mouth of the river Don.²³

²¹ The English translation of this line in Mochulsky's *Blok* renders *svet* as "world", one of its two meanings, but this is definitely wrong. I doubted my intuitive understanding of the meaning of the word as "light" (cf. the Hermetic *nyktelios*, "nocturnal Sun", used notably by the Romantic poet Gérard de Nerval in his "El Desdichado") and polled a number of Russian friends at random. They all read the word as "light", not "world". However there may still be an implicit contrast with the standard Russian expression for the whole wide world, *belyi svet*, lit. "the white world". Yet note Mandelstam's phrase «ночного солнца не заметишь ты», "you will not notice the nocturnal sun", and, a bit farther afield but still illustrative of the poetic capacity to enfold impossible contradictions, these lines from the song "Gates of Eden": "Of war and peace the truth just twists/ Its curfew gull just glides/ Upon four-legged forest clouds/ The cowboy angel rides/ With his candle lit into the sun/ Though its glow is waxed in black/ All except when 'neath the trees of Eden" (Bob Dylan, *Lyrics*, 1962–1985; New York: Knopf, 1985, p. 174). One recalls also George Seferis' verse, *Angeliko kai mauro, phôs* "Angelic and black, light".

²² См. *Словарь языка Пушкина*, т. 2, с. 479 (*Dictionary of the Language of Pushkin*, vol. 2, p. 479) s.v.; this also places the action firmly in ancient Russian epic time, and indeed in *RL*, l. 57 (p. 7) he mentions the bard Bayan. It is worth noting in passing that the hermit Ruslan encounters who has failed in love as shepherd, hero, and wizard (*pastukh, geroi, koldun*), recapitulates the Indo-European social triad of herdsman, warrior, and priest.

²³ Vladimir Nabokov, *The Song of Igor's Campaign: An Epic of the Twelfth Century* (New York: McGraw Hill, 1960), 113, n. on line 366. In the "Lament of the Women of Rus'" in the

The poet's plunge into *glubokaya starina* takes him to the first *pamyatnik*, the first *monumentum*, of Russian literature itself: it is an assertion of his comparable stature. So Pushkin has not only crossed between worlds—from one *svet* to the high *Svet* of St. Petersburg²⁴—he has also conquered Time.

The coda contains one element that is not in the initial stanza of green oak and Learned Cat, and it is so casually introduced as to induce the reader to suppose the poet is concealing its novelty—a device that serves to focus one's attention more keenly. *I tam ya byl, i myod'ya pil*, "And there I was, and the mead I drank." What mead? We have been told nothing of it hitherto, though the heroes will drink it in I.96. Russian folktales often end with a requisite draught of mead; so the "and...and" could mean merely that Pushkin did that too, did everything that is expected in the conclusion of a tale. Who gives the cup to Pushkin, the Cat? The Rusalka? Baba Yaga, as she tilts past in her mortar? Or is this some divine potation, the very stuff of prophetic and poetic intoxication, gushing out of a dimension beyond even that of the sprites and witches? It is not the grape wine of Biblical climes, either, this drink—nor, indeed, the Bordeaux of *Eugene Onegin's* soirées—but honey-based, northern Indo-European stuff: the *madhu-* of Vedic India and Iran, that with which the earliest Greek was *methysmenos*, "intoxicated". The stressed appearance of the author's persona with potation, at least, is an intrusive element in the coda: Pushkin wants one to notice he has been there. He is an Isaiah-like prophet, a new voice in Russian poetry and life, the fulcrum and demiurge of his mythic cosmos, an Odysseus who has mastered space and time.

text of the *Slovo*: «...взмути рѣки и озера; иссуши потоки и болота, а поганого Кобыя изъ луку моря от желѣзныхъ великихъ плѣковъ половецкихъ яко вихрь, выторже» cit. by Edward L. Keenan, *Josef Dobrovský and the Origins of the Igor' Tale* (Cambridge, MA: Harvard Ukrainian Research Institute/ Davis Center for Russian and Eurasian Studies, 2003), 279 f. Keenan, whose monograph is intended to prove that the ancient Russian epic is in fact an inspired forgery based by a late-18th-century Moravian Slavist on other epic poems, notes that the phrase *luka morya* appears thrice in the *Zadonshchina* and in the Slavonic text of the *Wisdom of Ahiqar* (*Povest' ob Akire premudrom*) with which the MS. of the *Slovo* was bound. Dahl, s.v., explains the *lukomorskie polovtsy* as steppe-dwellers (Pechenegs, Polovetsians) of the Azov littoral.

²⁴ Pushkin finished *RL* on 26 March 1820. In mid-April the government learned of his political verses ("Freedom", "To Chaadayev", etc.); and rumor had it he was to be exiled to the far northern monastery of Solovki. But on 6 May of that year the poet was ordered from the capital to the South of Russia instead. He was not to enjoy the high society of Petersburg again for seven years.

Plate 1

2. Ut pictura poesis

In 1843, the year after the completion of Mikhail Glinka's opera *RL*, N.A. Ramazanov illustrated the *Prologue* (plate 1).²⁵ The oak, elevated on a hillock at the center of the composition, its branches spreading to either edge, balances and knits together a very intricate, busy picture and draws the viewer's attention to Pushkin and the Learned Cat. The Rusalka on her branch, the captive Princess and Brown Wolf on the left in the foreground, and king Kashchei on the right, form a light triangle pointing upwards, of immortal, mythopoetic hyper-realities, superimposed symmetrically against the dark, funnel-like, downward-pointing triangle of the oak, which has its roots in the black earth, the Slavonic *mat' syra zemlya*, source of the living-and-dying generations of leaves (and, metaphorically,

²⁵ See Министерство культуры РСФСР, *Всесоюзный музей А.С. Пушкин: Каталог*, Москва–Ленинград: Госиздат «Искусство», 1957, с. 45, 271 (Ministry of Culture of the RSFSR, *All-Union Museum of A.S. Pushkin: Catalogue*, Moscow-Leningrad: "Art" State Publishing House, 1957, 45, 271).

of men). The purpose of this arrangement is, again, to center poet and cat. On the viewer's left is the curving seashore, with the knights emerging from the waters and the prince in the air above them. On the shore, to the right of the tree and just before the forest begins, are Baba Yaga's mortar, the wooden hut on chicken legs, and so on. The hut is originally in folk belief the witch's; and it stands "as though on the invisible boundary between Home and Forest and was a special 'liminal' point for entry into the otherworld of folktale."²⁶ Thus, a horizontal tripartite analysis yields sea to the left, land with a world-tree and the center and liminal space to the right, and the dark forest to the far right.

If one approaches the picture using the vertical schema of reversed and superimposed triangular patterns, Ramazanov's own poetics of composition has, subtly and most certainly unwittingly, also reproduced the schema of a common and very important Hindu *yantra*. The latter, a Sanskrit term meaning something like "mechanism", is the graphic counterpart of the *mantra*—the latter means *hieros logos*, a word or sound of not only semantic value but intrinsic power. Some *yantras* are made for protective, thaumaturgic, or healing purposes; when they are cosmic maps, or *mandalas* (lit. "circle"), they are intended for meditation (*dhyana*). A *mandala* always has a central point (*bindu*) representing primordial consciousness (*chitta*); and if mantras are written on a *yantra*, then the seed syllable (*bija-akshara*) is placed on the *bindu*. Ramazanov's *yantra* is the six-pointed star consisting of two intersecting figures: a light upward-pointing triangle (*trikona*), generally symbolic of the male *lingam* principle, against the dark downward-pointing triangle that represents the female principle, the *yonī*. The *yantra* expresses the balance and harmony of the multifarious powers in the universe of male and female, life and death, good and evil, light and darkness. Pushkin, the Russian *kavi* ("poet-seer") and his *guru* ("teacher") Cat are *bindu* and *bija-akshara*: the center, capable of poetic perception and creative consciousness, that generates the whole through the *logos*—poet as *poietes*, "maker", in the literal sense.²⁷ When Andrei Sinyavsky noted Pushkin's lightness, or when Bayley characterized *RL* as a balanced mixture of the heroic and the profane, they perceived, this very cosmic clarity and symmetry, the serene and playful profundity

Plate 2

of Pushkin's lyric. The mythic geography of the *Prologue* invites comparison with two parallel, graphic schemata. Both have a serious religious and philosophical character, which sets them apart in intention from the Russian work; but the boundaries between secular and profane may be violated when discussing mythopoesis, even when it is as self conscious and even parodic as Pushkin's.

3. William Blake's Painting

One may compare to Ramazanov's ink-and-watercolor illustration, with its horizontal and vertical patterns, a painting dated 1821 by the English visionary poet and artist William Blake, *The Sea of Time and Space* (plate 2). The picture is strikingly similar in both general composition and particular details. There is a populous seascape to the left; a tree in the foreground center with a human figure nearby whose singularity and importance is indicated by the unique use of red color in his vestments; and more figures and an obscure cave on the right. It is also extremely and

intricately busy, a cosmically huge vista of land and sea full of humans, animals, mythological beings, and magical objects. It even has a watery sprite entangling a man. The painting is a microcosmic allegory, but of what? Kathleen Raine suggested that Blake was trying to represent the cosmic process of apogenesis and genesis: the descent of the soul into the material world, its fate here, and its ascent at death into spiritual rebirth. She argued that Blake's source was the treatise *De antro nymphaeum* by the Neoplatonic philosopher Porphyry: "On the Cave of the Nymphs" is an allusion to the grotto at Ithaka where Odysseus stored his treasures at his homecoming, in the *Odyssey* of Homer. Following several mysterious allusions in the epic itself, the ancient interpreters, regarding the Homeric text as a kind of sacred scripture, suggested that the grotto was an allegory of this world, a place where fate was spun, whose two entrances represented the points where souls entered the material world (*genesis*) and departed from it (*apogenesis*).²⁸ Raine's suggestion did not at first gain general scholarly acceptance; but recently Christopher Heppner has averred that Raine, even if she overstressed a particular text whose details did not correspond with satisfactory exactitude to those of the painting, was at least on the right track. *The Sea of Time and Space*, in his view, treats a Neoplatonic theme and portrays the human life cycle, but draws its inspiration from multiple sources, including Thomas Taylor's translations and commentaries on Plato and Ovid's *Metamorphoses*. He also argues that the man painted boldly in red is the Biblical prophet Isaiah: Blake has combined the characters and symbolism of different cosmologies, with a view to exalt Scripture and condemn paganism.²⁹ But Blake also refers in his *poema*, *Milton*, to the sea of time and space after which the painting is named (text 2.3): the English epic poet tragically descends thither, and sees the noble giant Albion, who personifies the sacred essence of England, stretched out there in death. Blake was, like Pushkin, very fond of *Ossian*, the native British epic. The cosmology of the painting may, thus, combine not only Classical and Biblical material, but Blake's own mythopoetic

²⁸ See *Odyssey* 13.96–112 for a description of the grotto, which is by an olive tree (cf. the дуб зелёный) on the shore of the semi-circular bay (лукоморье!) of Phorkys, the Old Man of the Sea (дядя морской!) at Ithaka. Thomas Taylor's (1758–1835) translation of Porphyry, *On the Cave of the Nymphs*, was reprinted with an introduction by Kathleen Raine, by Phanes Press, Grand Rapids, MI, 1991.

²⁹ The painting "The Sea of Time and Space", 1821, was made with pen and ink, water-color and gouache on gesso ground on paper. It is reproduced, with discussion of Heppner's analysis, in Robin Hamlyn and Michael Phillips, eds., *William Blake* (NY: Abrams, 2000), 192–193 and pl. 240.

Albion as well. A few remarks on the aspects of Neoplatonism that might have attracted Blake most strongly are in order here.

It may fairly be said that although Plato regarded the world as a legitimate entity, a part of the great chain of being, physicality is nevertheless an inferior state to that of pure spirit. Consequently the sojourn of the human soul during the term of the physical life of the body is the result of a descent from a true and happier home. The meaning of our existence, so replete with suffering, is to be understood as a hard schooling and purification preparatory to re-ascent to the realms of our origin. The world is a kind of penitentiary (Gk. *phylakē*); and death is liberation if it follows a virtuous life. The Neoplatonist school emerged in the early Christian centuries, reflecting both a trend towards religiosity and spirituality in philosophical speculation itself, and a pagan encounter with the Christian faith. Another, related set of movements of religious thought in the period comes under the rubric of Gnosticism. Arthur Darby Nock saw the various trends of Late Antique religious speculation conveniently (and, by orthodox Christians, disparagingly) termed Gnosticism as an extreme, even deranged, form of Platonism, in which the sleep and forgetting of this life is not so much a trial to be endured as a deception to be overcome. Where Platonism situates the world low on a chain of being but still regards it as valid, the Gnostics tend to a radical dualism: the world is bad and was created by a devil who has deceived his unlucky prisoners into thinking he is a god. The world is not a hard but just penitentiary: it is a concentration camp run by a deranged cosmic sadist.

Gnostic thinking is revolutionary *kat' exokhēn*, since of necessity it must reformulate the world-affirming cosmology of the canonical religion that serves as its substrate in such a way as to demonize and overturn the creator-god of that previous creed. Though the third-century Neoplatonist philosopher Plotinus famously disparaged the Gnostics as rejecting the very universe to which they belonged, the Neoplatonists nonetheless did regard physical genesis as a tragedy; and apogenesis, as the true soul-birth. Blake's contemporary William Wordsworth, and other Romantic poets who had access to the same translations of the Neoplatonists as Blake, seem to have rediscovered the Gnostic ideology and the revolutionary sentiment that was inseparable from it, and so relevant to the spirit of their own age. A salient feature of Gnostic mythology is the introduction of a dense crowd of divine and demonic beings whose names derive from heterogeneous sources, and who inhabit a spiritual world whose imaginal geography is superimposed upon the template of an intimately familiar earthly one. We have already seen how Blake could combine Neoplatonic,

Biblical, and *sui generis* local, British imagery. He took an engraving of the Classical sculpture of Laocoön and his sons being smothered by serpents, and re-interpreted it as Jehovah flanked by Adam and Seth, surrounding the picture with dense graffiti proclaiming the truth of Hebrew art and decrying its Greco-Roman usurpation. Such inversion and co-optation of pre-existing material is typical of any new religion, but it is especially common in Gnostic writings.

William Blake's propensity to make up his *own* supernatural beings had as its proximate inspiration, as E.P. Thompson argued, the tradition of revolutionary, dissident personal visions cultivated by Protestant sectarians, particularly the Muggletonians of the 17th century. The same sectarians are the ancestors of a more structured and socialized new religion, Mormonism, that came into being in northern New York state in Blake's (and Pushkin's) lifetime. Blake's spiritual places and beings fuse Biblical, British, and imagined, glossolalic names. At this juncture, let us note some coincidences: Pushkin creates a similarly dense landscape to Blake's; and he populates it with his own, local Slavic mythical beings, much as Blake uses Albionic material: both were interested in their national mythologies and were inspired by *Ossian*. Though Pushkin identifies himself as the central figure in his composition, he regards himself, as Blake does, as a prophet in the mold of Isaiah (who seems to be the man in red in Blake's painting). As one has seen in the epigraph to this essay, Osip Mandelstam, the most uncannily Pushkinian of modern Russian poets, who wrote also a poem on *Ossian*, makes Odysseus himself the Sea of Time and Space, returning after his otherworldly wanderings to the Cave of the Nymphs!

4. *The Mandaean Connection*

One has likened Blake's religious and artistic creativity to the activities of the ancient Gnostics; and in adducing for closer comparison as a test case a discrete Gnostic system—a defined religion based on Gnostic ideology—we shall see a striking and illuminating parallel to Pushkin's *Prologue*.

Although it might be thought that Gnosticism, a fundamentally transgressive rebellion against the world-affirming stance of a pre-existing religion, should be opposed to any establishment or institution as part of the problem or deception it seeks to remedy, in fact there were in Late Antiquity at least two established Gnostic religious institutions: the Mandaean religion, and Manichaeism, which originated from it. The third-century religious reformer Mānī (the name seems to mean "vessel",

to which was appended Aramaic *da ḥayyē*, “of life”, hence “Manichaeus”) was born in Arsacid Mesopotamia to a man named Pattēg, who followed the cult of the *Mughtašila* (Arabic, “those who baptize themselves”, i.e., the Mandaean, as we shall see presently), and a woman Maryam (i.e., Mary) of the noble Parthian clan of the Kāmsārakān, which was well established in Armenia. Christianity in Armenia boasts of origins in the mission of the Apostles Thaddeus and Bartholomew. Though the Apostolic legend is strongly mythologized, it is at least indisputable that the practice of the faith in Armenia long predates the conversion in the early fourth century by St. Gregory the Illuminator of king Tiridates the Great. Given her Christian name, it is thus at least possible Mānī was the son of an Armenian mother. A list of his writings mentions two Epistles to the Armenians; a Manichaean Apostolic narrative may be a recasting of an Armenian Christian Apostolic legend; and one of Mānī’s companions at the time of his martyrdom was a man bearing a name, Bāt, that is best attested in Armenian. Manichaeism certainly existed in Armenia thereafter, though it became a catch-all term for heresy in Christian polemic. Even so, the Paulician, T’ondrakite, and later heresies that flourished on the Armenian plateau have a distinctly Manichaean/Gnostic flavor to them.

Mānī created a complex, multi-tiered Gnostic cosmogony and cosmology, in which he created some beings and borrowed many others from Christianity, Zoroastrianism, and Buddhism, averring that the followers of these religions had misunderstood and corrupted the original revelations of their prophetic founders. It was probably this strategy of re-interpretation of pre-existing teachings that earned the Manichaeans the designation *zandīg*, “explicator” in Middle Persian, which was maintained into the mediaeval period in the Near East, cf. the Arabic loan *zandīq*, pl. *zanādiqa*. Of course the seventh-century Arab religious reformer, Muḥammad, was to do much the same thing, presenting his new Scripture-in-verse, the *Qur’ān* (“Call”), not as an innovation, but as a clear (*mubīn*) exposition of the truths of the Old and New Testaments that the Jews and Christians had muddled over time. The Manichaean strategy was parasitical: in the West, the translators of its scriptures gave their work a pseudo-Christian cast; in China, the same teachings were phrased in such a manner as to make the Buddhist element predominant. Cultural variation may account for some of this; but, given the malignant effect of Manichaeism on the earlier faith communities it infiltrated, one might better liken the process to the adaptation of a virus to a host it is invading. It is noteworthy that the one prominent, revealed religion of antiquity that Mānī made no attempt to co-opt was Judaism. Though Gershom Scholem perceived a

Gnostic aspect in Kabbala, an internal mystical trend in Judaism of uncertain beginnings, the Manichaeans hated rootedly the pro-cosmic Creator God, the teleological history of the nation of Israel, and the Temple cult of Jerusalem. Part of the reason for this seems to be that the cult of the abovementioned *Mughtašila* came into being precisely through a radical rejection of and rebellion against Second Temple Judaism.

Though Manichaeism is long dead, the sect to which Pattēg adhered still survives, as the religion of the small Mandaean community of southern Iraq and Iran. The Aramaic designation *manda'* (*dā ḥayyē*), "knowledge (of life)" (Mandaic Aramaic *manda d hiia*), is an obvious equivalent of Gk. *gnōsis* itself, with the mention of life familiar from the second element of the name of Manichaeism, though it has been suggested that the Mandaic word *manda* is a loan from Persian meaning "dwelling".³⁰ According to native tradition, the early members of the community fled to a mountain in Media—northwestern Iran—they named Harran *gawait̰ha* ("the Inner"),³¹ in the days of king Ardban, i.e., in the Arsacid period. The foundation of their faith is the belief that the creative and sustaining force of the universe is the Great Life, which comes to us through the waters of the *Yardna*, i.e., Jordan—this and other Biblical references in Mandaean cosmology suggest their ancestors were native to the Land of Israel. But, as one may expect of the precursors of Mānī, Mandaean Gnosticism radically inverts the religion of the Chosen People: a Hebrew name of God, *Adonai*, in Mandaean designates the *melka*, "king", of darkness; and, scandalously, Madaeans commemorate in *mourning* the wicked host of the pursuing Egyptians whom God drowned in the Red Sea in the Exodus!³² The Madaeans employ a form of Aramaic script peculiar to themselves: it is employed talismanically, and each letter possesses a symbolic value. A salient feature of Mandaean manuscripts is the employment of vividly angular line drawings of sacred beings, objects, and scenes. It is a tradition that cherishes, as the Manichaeans did, long poetical texts, mysterious spells, calligraphic writing, and the production of graphic art. William

³⁰ See E.S. Drower, *The Madaeans of Iraq and Iran* (Leiden: Brill, 1962), 10.

³¹ The "outer" Harran would be the ancient city of Abraham's sojourn, which lies a few miles south of the ancient Syro-Armenian stronghold of Christianity, Edessa (modern Urfa, in Turkey). For centuries Harran was the center of the Neoplatonizing, Gnostic Sabian religion, whose connections to the Mandaean faith are numerous and obvious. So many of the early Madaeans lived in regions contiguous to, or overlapping, Armenia and territories inhabited by Armenians, on the south and southeast: Maryam's Kamsarakan kinsmen would thus have been likely to encounter them.

³² Drower, *The Madaeans* 76, 89.

Blake would have found it most congenial. The complex of Mandaean cosmology and mythology presents a richly heterogeneous plethora of beings, from the gods and heroes of ancient Iran (e.g., Bahrām, the *yazata* Vərəθraγna of the Avesta; and the Saka hero Rostam familiar from the *Šāhnāme* of Ferdōsī) to the Egyptian creator-god with Hebrew divine suffix, Ptaḥil. That is, where William Blake lodges an individual creative protest against the Creator God of the establishment of the Age of Enlightenment, whom he calls Urizen (i.e., “your Reason”) and shapes a cosmology within his aesthetic craft, drawing from diverse sources, the Mandaeans do all this as an established religious system. So when Blake paints a cosmic painting of the sea of time and space, with tree and prophet and cave, expressing Neoplatonic and other values, one might hope to find a Mandaean parallel. And it is found, indeed, as a concrete object, as no less that the central locus of the principal rituals of Mandaean life and faith.

The name of the Mandaean temple complex in the literary language is *mashkhana*, lit. “dwelling place”.³³ This is, of course, none other than the Aramaic equivalent of Hebrew *mishkan*, a designation of the holy Temple at Jerusalem. In common Mandaic the place is called simply the *manda* (plate 3), as though it embodied everything essential to the Mandaean system. (It is noteworthy that the *manda d hiia* is often represented as a great tree: cf. the tree at the center foreground of Blake’s painting, and Pushkin’s green oak.) The *manda* is a hut enclosed by a fence within a sacred precinct. Only priests may enter the building itself. It must be constructed near a source of “living” water, i.e., a *yardna*. Two channels—one flowing in; the other, out—from the latter are dug, forming a bow-curve in front of the cult building. The *manda* is, correspondingly, the place where the rites of the soul’s earthly *genesis* and *apogenesis* are consecrated: the former being the baptism whose prominence is indicated by the early Arabic designation of the sect; the latter, the liturgy of *masiqta* (“ascension”) performed at death. The enfranchised soul travels North over the great white mountain Sur, up past the guard-houses (*maṭaratha*) of the imprisoning planetary demons to Ptaḥil: it boards a ship of light and travels across a kind of celestial Styx to the shores of the worlds of light and bliss from which it originally came before the descent into matter.³⁴

Since William Blake and the Mandaeans worked from kindred sources of inspiration—the Neoplatonism of his *De antro nympharum* is not

FIG. 7. The Manda

Plate 3

remote in time or ideological and religious orientation from the Gnostic movements of the Second Temple period in Israel and the Arsacid period in Armenia and Parthian Mesopotamia—it is not surprising that their visions of the geographic particulars of the meeting-point of the spiritual and material worlds should, *mutatis mutandis*, coincide. There is no documentation to suggest that Pushkin saw Blake's painting; and it is equally certain he was innocent of the intricacies of Mandaean orthopraxy. Yet his *Prologue* has its curving seashore, sacred tree, a kind of precinct, and all sorts of beings coming in and out of the Otherworld. In the middle is the human figure observing or controlling it all: Blake's Prophet, the Mandaeans' Priest, Pushkin himself.

In considering the Russian poem, one must concede that we deal with coincidence. C.G. Jung might have preferred the term synchronicity—his acausal connecting principle—to coincidence; and perhaps he would have adduced the Pushkinian correspondence as an example of the operation of an archetypal pattern of the collective unconscious. *Pace* the critics of Jung's methodologies: though scholarship is defined by methods depending upon argument from material evidence and must exclude therefore the inherently supernatural categories of synchronicity and archetype, it is also, on the same grounds, not possible for a scholar to reject outright

the possibility that synchronicity, archetypes, and the supernatural may in fact exist, even if they cannot be adduced in a study of this kind.³⁵ It is, however, reasonable to propose that Pushkin, in a manner *parallel* to Blake and the Gnostics, employed a “poetics of composition” (the term belongs to the Russian Structuralist Boris Uspensky) in which the various symmetries of the scene: curve of sea, space of shore, dark line of forest; central tree and author, drawing in the viewer; the sense of entrance and exit at the meeting point of the mythological and the quotidian—have a pleasing harmony that observant human inhabitants of the same world (with seas, trees, forests) are likely to represent in much the same way, whether for ritual (Mandaeans), a painting (Blake, Ramazanov), or a poem (Pushkin).

It is time now to consider the effect the *Prologue*, or elements of it, exerted upon some visionary Russian writers after Pushkin; and how they developed these themes. The image of the Polaris-bound Mandaean soul, freed from the body and rocketing over a great white mountain, reminds one of the memorable confusion of white *fountain* and *mountain*, the punning misprint not nonsense but a web of sense, in the near-death experiences recounted in the novel *Pale Fire* of Nabokov.

5. After Pushkin 1: Nabokoviana

Vladimir Nabokov completed another work by Pushkin, the unfinished drama *Rusalka* (1832). The *Rusalka*-Mermaid is the mythological creature mentioned in the *Prologue*; so the striking appearance of Pushkin in the poem is the element that surely inspired Nabokov's final line in his completion of *Rusalka*, where the poet is made abruptly, even absurdly, to appear with mildly comic alliteration: «Пушкин пожимает плечами» *Pushkin pozhimaet plechami*, “Pushkin shrugs his shoulders.”³⁶ In his first

³⁵ However one must stress that if an artist reads Jung's books, for instance, it is merely perverse not to acquaint oneself with Jung's ideas when studying and interpreting the artist's work. It is worth quoting in this connection the important observation of James Elkins, *On the Strange Place of Religion in Contemporary Art* (NY: Routledge, 2004), 52: “The difference between the art studied in universities and the wider world of art practices can almost be defined by the acceptance, or rejection, of Jung. Inside academia scholars make use of Lacan and other post-Freudians; outside it, and in studio practice, people read Jung and Joseph Campbell.”

³⁶ One should note, in addition to the obvious alliteration with the initial *p*-, the subtler employment in all three words of an affricate series: *ж-з-ц*. Cf. Nabokov's cunning alliteration of the cluster *gn-* in the following note. Nabokov published his addition under his *nom de plume* Sirin in *Новый Журнал* (*The New Journal*), NY, 1942.2, 181–184; see discussion

novel in English written in America, *Bend Sinister*, Nabokov enters the narrative at the end and allows the hero, Adam Krug, to see him. This intervention reaches farther in thematic effect than Pushkin's, since Nabokov's authorial entrance allows his character to discern a transcendent reality beyond the firing squad within the fiction.³⁷ But it is reasonable to suppose that the *Prologue* inspired it. As Jane Grayson has noted, Nabokov in his completion of the drama drew upon mermaid tales going back to Classical myth and prehistory. The myth of the mermaid, who avenges love betrayed by luring victims down to her watery realm, evokes themes important to Nabokov: lost treasures, kingdoms, people. It is a tale also of metamorphosis, of communication between two worlds.³⁸ The *topos* of submersion, like that of ascension, can be used to evoke transit from this world to the next, which Nabokov believed conceals a meaningful symmetry we are to discover. So he uses the image to describe a point of literary criticism, in *Pale Fire* (Library of America ed., p. 444): "Actually, it turns to be beautifully

by J.R. Russell, "A Scholium on Coleridge and an Armenian Demon," *J. of the Soc. for Armenian Sts.* 10 (1998, 1999 [2000]), 70 n. 24, repr. in J.R. Russell, *Armenian and Iranian Studies* (Harvard Armenian Texts and Studies 9; Cambridge, MA, 2004), 996. From their correspondence we know that Edmund Wilson expected that Nabokov would provide an unorthodox ending to *Rusalka*; but Nabokov responded, in a slightly condescending, didactic way, that Pushkin would not have done so. An ineluctable quality of Pushkin is lightness and richness without innovation or, sometimes, even sublime content. But what Nabokov leaves unsaid in the exchange is that he considers "Pushkin shrugs his shoulders" to be within the bounds of Russian classical conventionality. So the basis for this conviction has to be its precedent, this Prologue.

³⁷ Nabokov adumbrated this effect in an earlier novel written in Russian, *Приглашение на казнь* (*Invitation to a Beheading*), where the hero Cincinnatus simply walks away from the scene of his execution and through the flimsy fabric of the fictional reality, towards a world inhabited by people like him. Since he has been accused by a ludicrous totalitarian tyranny of *gnoseologicheskaya gnusnost* ("gnostical turpitude") for being insufficiently transparent, one must conclude that he is headed for what is to him the Otherworld—and for the reader, this sublunar world—in which his libertarian, individualistic creator dwells. Nabokov would have noticed that in *RL* the *Rusalka* provides a wonderful Otherworld for a knight whom *Ruslan* hurls into the Dnieper: «... И слышно было, что Рогдая/ Тех вод русалка молодая/ На хладны перси приняла/ И, жадно витязя лобзая,/ На дно со смехом увлекла,/ И долго после, ночью темной/ Бродя близ тихих берегов,/ Богатыря призрак огромный/ Пугал пустынных рыбаков» (A.S. Pushkin, *Полн. собр. соч.*, т. 4, с. 36= *PL* 2.496–504; A.S. Pushkin, *Complete Works*, vol. 4, 36= *RL* 2.496–504) "And it was heard that Rogdai/ A young mermaid of those waters took/ To her cold bosom/ And, covering the hero with greedy kisses/ Conducted him away in laughter to the bottom,/ And long after of a dark night/ The knight's gigantic shade/ Wandering near the quiet banks/ Did frighten lonesome fishermen."

³⁸ See Jane Grayson, "Rusalka and the Person from Porlock," in *Symbolism and After: Essays on Russian Poetry in Honour of Georgette Donchin* (ed. Arnold McMillin; London: Bristol Classical Press, 1992), 171.

accurate when you once make the plunge and compel yourself to open your eyes in the limpid depths under its confused surface."

In the seventh chapter of the novel *Bend Sinister*, which Nabokov had originally intended to call *The Man from Porlock*, with a nod to the *locus classicus* of a vision interrupted, Coleridge's "Kubla Khan", there is a scholarly fantasia in which Ophelia, the *Russalka letheana*, or Mermaid of Lethe, floats in the waters of a Coleridgean river god Alpheus; and her lover Hamlet's mirror-double is Telmah, i.e., Telemachus: another prince in search of a lost father. (This is an early example of the use of meaningful looking-glass words to multiply realities and evoke *potustoronnost'*, "Otherworldliness", that Nabokov was later to employ in *Pale Fire*.) It is plain that Nabokov had Pushkinian *rusalki* in mind for many reasons; but one can also prove that the mermaid of the *Prologue* to *RL* in particular was of importance to him. The center of *Pnin* is the Joycean "Pninsday" chapter, in which through the citation in a Russian class of Pushkin's poem of 1829, *Brozhu li ya vdol' ulits shumnykh* ("Whether I wander down noisy streets..."), and other machinations, the author links the chronology of Pnin's own life to the fateful dates of Pushkin's. This is preceded by the visit of Pnin's estranged wife, Liza, a cruel and shallow woman whose poems are obscene (and hilarious) parodies of Anna Akhmatova's lyrics—the verses enraged Akhmatova when she learnt of them.³⁹ Pnin is the opposite of Liza in every way: his love and telepathic empathy with their son Victor (this is a reprise of the Hamlet/Telemachus theme) is in contrast to her neglect; his loyalty and kindness are brighter against the background of her callousness. Liza is a cheap imitator of Akhmatova; Pnin shares an occult connection to Pushkin himself. After Liza leaves, the distraught, despairing, lost Pnin sits crying in his American landlady's kitchen: Joan tries to distract him with ads in a magazine, one of which shows a sailor, cat, and mermaid on a desert island. The sailor's thought-balloon converts the semi-human, semi-ichthyic *rusalka* into a full woman; the cat's, into a whole fish. But the marooned sailor is perhaps an intrusion of Pnin, who is called the "water-father" at various points in the book. Is the shipwrecked feline a certain Learned Cat? If so, then Pushkin, communicating astrally across the *poshlost'* ("vulgarity") of American consumer culture, is telling Pnin that it's all right. You are not lost. I'm here in the

³⁹ She should not have taken umbrage. The Russian equivalent of Lewis Carroll's parody, "How doth the little crocodile..." in Nabokov's translation of *Alice in Wonderland* is a parody, too—but of "God's little bird no labor knows, no care..." in Pushkin's *The Gypsies!* On the influence of Carroll's "Jabberwocky" on Daniil Kharmis, see text 5, below.

poem, and so are you—as me. As noted above, the fates of the two will become similarly merged in the next chapter of *Pnin*, through Nabokov's manipulation of dates.

It seems to me that Nabokov perceived in Pushkin's lightness the liberating, luminous hope of his *potustoronnost'*. In one stanza of *RL*, the kidnapped Ludmila decides to commit suicide by drowning—in the original plan, Nabokov's "My Poor Pnin", the water-father, was to kill himself—but doesn't. Early on Pninsday, the hero teaches the poem in which Pushkin wonders where death will find him: *v boyu li, v stranstvii, v volnakh* "in battle, wandering, or waves"—and this strophe is repeated in a reverie towards the end. The triplet: *V volnakh reshilas' utonut'; Odnako v vody ne prygnula/ I dale prodolzhal put'* (II.351–353, p. 32) "She decided to drown in the waves/ But did not jump into the waters/ And continued on her way." And the following stanza ends with and even more playful, resumptive triplet, to stress the cheerful lightness of the heroine's essential nature: *Ne staru est', ne budu slushat'; Umrui sredi tvoikh sadov! Podumala—i stala kushat'* (II.375–377, p. 32) "I shall not dine, I shall not heed:/ I'll die here in your gardens!/ She thought, and thereupon began to eat." Nabokov, who noticed that *volshebnik*, "sorcerer", was a partial anagram of his name and encoded it into his *ars poetica*, the poem "Fame" ("Слава"), must have delighted in the wittily Voltairean and quite disingenuous avowal by Pushkin, the greater magician, in *RL*: *Ya kazhdyi den', vosstai ot sna,/ Blagodaryu serdechno Boga/ za to, chto v nashi vremena/ Volshebnikov ne tak uzhe mnogo* (IV.1–4, p. 50) "Every day, arising from sleep/ I give heartfelt thanks to God/ That in our times/ There aren't very many sorcerers."

Another of Nabokov's concerns, allied to the problems of the Otherworld, of memory and loss, and of preternatural affinity, was that of time. *Speak, Memory* begins with a disquisition on it,⁴⁰ and towards

⁴⁰ Nabokov mentions a friend who had a particular horror of films made before his own birth, for they depicted a world going about its business utterly without his existence. (After our death, we are not so entirely absent, since some remember us, and our deeds leave their traces and effects.) It is certain that Nabokov knew the writer and poet Delmore Schwartz: the latter wrote about the former's work in correspondence with the editor of the publishing house New Directions; and Mrs. Mary Kennedy of Cambridge, Mass., who was then married to the Faulkner scholar Prof. Calvert Collins, recalled to me that Schwartz and Nabokov were often in the same company as evening guests at her home near the Harvard campus during World War II. So one wonders whether Nabokov ever read Schwartz's short story, "In Dreams Begin Responsibilities", in which the narrator dreams he is seated in a cinema watching a film of his parents' courtship. He jumps up from his seat to shout: his horror does not come, though, from a perception of his previous

the end of his earthly life the writer had Van Veén append an essay on it to *Ada*. Pushkin, as one has suggested above, managed to transcend time in his *Prologue*. The *rusalka*, by appearing seated in a tree, is a markedly Russian mermaid, different from the undines of other European folkloric traditions. But she also serves as an emblem of the poet's unique ability imaginatively to command the two worlds, to transform both, and to effect their intercommunication. The seated *rusalka* prefigures the seated Pushkin. His introduction of her is homage to Zhukovsky, whose ballad inspired Pushkin's; and Nabokov in his time further refracted with characteristic cunning the sorcery of his predecessors.

6. *After Pushkin 2: Into the Fifth Dimension with Khlebnikov and Kharms*

The aspect of glossolalia that one finds in the poetry of William Blake: the invention of names or words that are phonetically impressive but often nonsensical or only para-semantic, like *mantras*—is of particular importance when one considers how poets of the 20th century were to encounter Pushkin's mythopoesis and craft their own. The creative manipulation of sound and speech, whether to express the personal apperception of a religious reality that normal language is inadequate to represent, or to shape a new and mythopoetic literary vision, is common to early Christians and Gnostics, and to Russian Futurians and absurdists, including two whose work is particularly indebted to Pushkin's *Prologue* to *RL*, Velimir Khlebnikov and Daniil Kharms. The latter in particular acknowledges a debt to Lewis Carroll, the author of the poem "Jabberwocky"—which has been invoked, in turn, to describe the operations of ancient religion! One can, in other words, reasonably adduce ancient Near Eastern religious data in the attempt to understand ostensibly secular poetry of recent times.⁴¹ We shall discuss a Russian Futurian transmutation of the landscape of the *Prologue* to *RL*, one in which time is made into a concrete object. So it is apposite to mention that one of Blake's likely sources, the 18th-century English Neoplatonist Thomas Taylor, has a rather tactile evocation of time that could have informed the image of water in Blake's painting: "Even

nonexistence, but from a desire never to have been born. It is no new sentiment. *Areion mē einai*, the Greeks averred; and W.S. Burroughs used latterly to quote with approval the Mexican adage, "The worst mistake is to have been born."

⁴¹ See the citations of Patricia Cox Miller, Morton Smith, and Hart Crane in the discussion of "Jabberwocky", texts 5.1, 5.2.

time, with restless motion, slides away/ Like living streames."⁴² If one juxtaposes the pictures by Ramazanov and Blake, the curvature of the shore of Pushkin's lyric may be not only Arina Rodionovna's traditional *incipit* to a *skazka*, but also a concrete evocation of time, in which the circle of repetition and the linearity of change merge as a curve, a bow.

But it is Velimir Khlebnikov who first reflects in subsequent Russian poetry on this possible facet of Pushkin's work: the reduction of the temporal to a mere dimension like those of space—the creation of a landscape of which the space-time continuum is but a component. The creatures and setting of the *Prologue* to *RL* are diffused through several poems and prose pieces (texts 2.1–6) written around 1907 by the *budetnik* "Futurian", who evokes concisely a higher-dimensional, poetically envisioned universe through neologisms in which such abstractions as time and feeling are made into concrete objects: beings fly on *grustyl'ya*, "sorrow-wings" (2.6); a *vidyaz'* "seer-knight" (2.3) accomplishes his quests; and the landscape is dominated by *vremysh* "time-grass" (2.1). The mead is that *vechnosti vino*, "wine of eternity", particular to Russia (2.4); and the *Rusalka* (2.2) expands from a mythical creature into a being who incorporates also the homonymic seasonal festival *Rosalia*. Pushkin's *izbushka* receives a neologistic epithet, *vremataya*, "made of time, chronish"; the forest itself is *vremovoi*, "timeful". As for the "Russian spirit" Pushkin extols in the *Prologue* (though playfully undermining Baba Yaga's sinister taste for Russians to eat), Khlebnikov underscores and celebrates the etymological link between the Slavs, *slava* "glory", and *slovo* "word, epic, lay" (2.5). Strangely, and coincidentally, the present-day British writer Scarlett Thomas within her novel *The End of Mr. Y* has composed a sonnet as Prologue to an imaginary work on an Otherworld. This Prologue begins with the evocation of a "time-wrought" seashore; and its structure parallels in important ways that of Pushkin's poem, through Khlebnikov's lens (see text 6.1). Thomas does share some interests, at least, with another Russian poet who revisited Pushkin's curving seashore: the absurdist Daniil Kharms.

Kharms (text 4.1) wrote two versions of a poem beginning with the line "Надо кикать лукоморье" ("The curving shore [*lukomor'e*] deserves a coo"). The shorter and earlier version is in his fourth notebook, dated 18 August–30 September 1925, in 34 lines on two pages. The incipit is pure

⁴² Thomas Taylor, *Works of Plato*, II, 672, cit. by Christopher Heppner, *Reading Blake's designs* (Cambridge: Cambridge University Press, 1995), 250.

Pushkinian mythopoeisis: the use of the word лукоморье in the very first line is sufficient to show this—but with the simultaneous introduction of a rare but venerable verb from the Slavonic epic antiquity of the Igor' Tale that so interested Pushkin: кикать (*kikat'*). It is to be employed twice as an infinitive (l. 1,13), once in a form of the 3rd pers. pres. (кикает, l. 22), and once as a perf. ppart. reflexive (накикавшись, l.14). It is onomatopoeic, used of the call of a bird (e.g., «кичет лебедь белая», “the white swan cries”; in the Igor' Tale, Yaroslavna «зегзицею кычет» “coos like a cuckoo”);⁴³ and it appears in the standard Russian dictionary of Dahl (II, p. 107) immediately before the entry on кикимора, *kikimora*. This is a juxtaposition Kharmis is unlikely to have failed to notice. For this is the name of a Russian mythical house spirit who lives invisibly behind the stove by day and emerges at night to make mischief with looms and spindles. One who sees her spinning will die, so it is likely these instruments retain their ancient significance as symbols of fate. Variants of the name of this creature include кика and кыка, so a derivation from кикать is at least possible (the element *mora/mara* means by itself an illusory vision or sprite). If the *kikimora* is the “*mara* who cries (*kikaet/kichet/kychet*)”, though, then the derivation would have to do with a sound rather than the bird-like appearance of other mythical, siren-like beings such as the Sirin or Gamayun. For the *kikimora* appears as a woman with long, flowing hair: she is sometimes thought to be the wife of the male house spirit, the *domovoi*. The *kikimora* likes not only settled habitations, but empty houses as well; and she can be introduced into a new dwelling under construction by vengeful carpenters—who put a sort of little voodoo doll in the foundations—if the builder is stingy with the vodka!⁴⁴

The mythical creature *kikimora* makes a brief appearance, in fact, in a play based upon the *Prologue* to *RL*. Yulii Kim, whose bardic songs were popular among the Soviet generation of the 1960's and later, published

⁴³ Edward Keenan, *Josef Dobrovský*, 243, 258, provides a list of ten birds in the epic, for whose song nine different verbs are used. The *zegziitsa*, “cuckoo” (modern Rus. *kukushka*) uses *kykati* (modern *kikat'*).

Ryan, *The Bathhouse at Midnight: An Historical Survey of Magic and Divination in Russia* (University Park, PA: Pennsylvania State University Press, 1999), 43, 227; Linda J. Ivanits, *Russian Folk Belief* (Armonk, NY: M.E. Sharpe, 1989), 57.

recently a play, "Rusalka on the Branches: A Pushkinian Tale",⁴⁵ in which Zhora, a New Russian thug who owns a holding company called Lukomor'e and plans to open a sort of Russian Disneyland, accompanies Sasha (i.e., Alexander Pushkin) to the real otherworld *Lukomor'e* in search of a mermaid for a sideshow. To underscore the role in Russian culture of the new kleptocracy, the author makes Zhora the latter-day catamite d'Anthès, who murders Sasha but ends up as the transgendered fake of his own freak show. Kim takes careful note of all the points where Pushkin has departed from the formulae of the folktale: of the unexpectedly brown wolf, for instance, this colloquy: "Sashka: He isn't gray. He's brown. Zhora: Brown means it's a *bear*, Sanya." (P. 378: «Сашка: Он не серый—он бурый. Жора: Бурый— это медведь, Саня.») Where Pushkin has the innocent, exultant "There is the Russian spirit—there is Russia's scent!" and Baba Yaga perambulates on the land in her mortar, Kim restores the Slavonic equivalent of a real witch's threatening, cannibalistic "Fee, fie, foe, fum! I smell the blood of an Englishman!" (p. 416: «Фу, фу...здесь русский дух...здесь Русью пахнет», "Foo, foo...there's a Russian spirit/scent...it smells here of Rus'."). In a nod to the masterpiece of 20th-century Russian mythopoesis, Mikhail Sergeyevich Bulgakov's novel *The Master and Margarita*, the Learned Cat introduces himself by the name of Woland's feline assistant, Behemoth (p. 374). So, on p. 379, the Wolf calls the noxious Zhora a "swamp demon" (*kikimora bolotnaya*). Kim writes in a literature permanently suffused in Pushkin's charm, where Kharm's has joined the stream of poetry loved and recited; so the appearance in this intricately self-conscious play of the *kikimora* may be the imprint of the echo of a Kharm'sian bird whose *kikat'* at the curving shore itself echoes both Pushkin and the archaic monument of the Igor' Tale.

The mixture of magical and folkloric resonances in a word reaching back to the beginnings of Russian poetry, together with the power and symbolism of its onomatopoeic sound, would have multiply appealed to Kharm's: the word *kikat'* would have lain on a boundary between the actual and the unseen, between the semantic and *zaum'*, rather like the obscure English words Lewis Carroll, whose work Kharm's read and liked, resurrected as neologisms in his compactly mythopoetic crypto-epic "Jabberwocky". Did Kharm's realize the layered powers of his terminology? Since he uses *kikat'*

⁴⁵ Юлий Ким, «Русалка на ветвях: Пушкинская сказка», *Моя бабушка Россия*, Москва: Время, 2003, с. 362–440: Yulii Kim, "Rusalka on the Branches", *My Mother Russia* (Moscow: Time, 2003), 362–440.

so often in so many forms, it means at least that he concentrated on the word—so perhaps he did. But as Lewis Carroll remarked in a letter of 1896 to young readers, “Words mean more than we mean to express when we use them.”⁴⁶

The rhythm of Kharms’ poem, the phrase «из за острова» (“out from the isle”), and the reference to Pechenegs, summon other old themes of Russian folk and epic culture: the ballad of Sten’ka Razin, and the Polovtsy/Pechenegs of the Igor’ Tale. The mention of Alyonka (Аленю, l. 15) refers to the genre of the Russian folk tale, or *skazka*; and Alexander, “half Asia”, the Minotaur, Phoenicia, and an Isle of Darkness, belong to the fantasia of the *Alexander Romance*, with its panoply of mythical monsters, miraculous locomotion, and adventures in remote, fabulous climes. Ammon may refer to the Egyptian god reputed to be the divine father of Alexander of Macedon, who was depicted on coins with the ram’s horns of the Nilotic divinity curling out of his leonine tresses (hence Alexander’s appellation in Qur’anic literature as *dhū’l qarnain*, “he of the horns twain”).

Kharms mentions also the word *kabala* (l. 6). The poet was fascinated by magic and the occult, by Egyptian symbols (especially the *ankh*), and by the Hebrew alphabet and the Jewish Kabbala.⁴⁷ In notebook 8 (18 October 1926–13 May 1927, l.139) he provides a careful diagram of the Kabbalistic Tree of Life, with the names of the *sefirot* transcribed into Cyrillic and translated into Russian; and in notebook 22, from the early 1930’s, he lists the letters of the Hebrew alphabet, with their symbolism noted both in Cyrillic and in a private cipher (I, 400; III.147). In the latter notebook (I.416) he has a shorter list of the Hebrew letters, alongside which is the Tetragrammaton, an apparent experimental mutation of it, and the phrase ГАМ ЗУ ЛИТЕЙВО, *gam zu liteyvo*, which is a transcription of an Ashkenazic pronunciation of the old Talmudic maxim *Gam zû lə-tôvā*, “This, too, is for the best.” So Kharms has taken the template of the mythical geography of the *Prologue* to *RL* and has widened its reach to include the Asiatic climes of mediaeval romance and the mysteries of the Kabbalah, whilst in his usage of *kikat’* deftly fusing the poetico-magico-linguistic practice of *zaum’* with the same springs of Russian folklore and

⁴⁶ Lewis Carroll, *The Hunting of the Snark: The Definitive Edition* with an Introduction by Adam Gopnik (ed. Martin Gardner; New York: W.W. Norton, 2006), xxi; see text 5.2.

⁴⁷ Pushkin was aware of his own Ethiopian ancestry; and one of his prized possessions was a seal ring with a Hebrew inscription. He had some interest in the occult themes so popular among the Gothic writers of the late 18th century; cf. his *Queen of Spades*, for instance.

mythology from which Pushkin had drawn. And how might Kharms have seen his own place within his fantastic landscape? Kharms and his fellow Чинари, "Chinars" (this neologism, used as a designation of their literary circle, may refer to the angelic ranks, Rus. *chiny*, in the mystical writings of Ps.-Dionysius the Areopagite on the structure of the Divine world) were convinced that entities from a world or worlds that abut on or overlap ours can appear as emissaries.⁴⁸ So the idea of the *lukomor'e* as a transit-point of the Otherworld would not have seemed at all bizarre to him: Alexander's (?) island of Ammon, ships, perhaps a Kabbala in ruins like a sort of three-dimensional text (unless he means the homonym, old Rus. *кабала*, a form of slavery or indebtedness), storms "on order", golden domes, the black earth, and Alyonya and the Pechenegs present the diffracted geography of a mythical realm beyond space and time into and out of which the mind travels; and one imagines Kharms at home in it.

Conclusion

Pushkin's *Prologue*, immortally famous in every way a poem can be, and perfect as the Russian bard's every line was, has of course literally and figuratively echoed down the nearly two centuries since he wrote it. It is not surprising that later visionary geniuses of the Russian poetic art, perceiving the rich and strange intricacy beneath its bright and simple surface, have refracted its multiple meditations upon myth and story, poet and tradition, space and time and the joyful surprise that lies ever glimmeringly beyond. It can be, indeed, as lucid as you like or as deep as you choose to dive—a lively South Russian seashore where delightful creatures disport themselves around the Zaporozhian oak, or a sea of space and time lapping against a mystic shore where a poet seated by the World Tree draws his readers into a timely, multi-dimensional otherworld of transformation. One can enjoy the shimmering Voltairean surface or submerge oneself in Neoplatonist, Gnostic, Armeno-Irano-Aramaic Mandaean depths, or do both: Pushkin's art admits the dualities of aesthetic and intellectual, even spiritual, pleasure.

There is a final duality adumbrated in the poem. The Russian literature that all the world cherishes began with Pushkin, though it emerges from a written tradition, also, that is a thousand years old. The epic and

⁴⁸ See Eugene Ostashevsky, tr., *OBERIU: An Anthology of Russian Absurdism*, Evanston, IL: Northwestern University Press, 2006, p. xxvii.

mythology in the poem are fresh and new, the stuff of a highly self-conscious Romantic “discovery” of European antiquities. And Russia itself was the newest of the European state-empires: the sacrifice of Moscow and the victory over Napoleon in 1812, in a way, marked its entry into the politics of the continent’s great powers far more decisively than the reign of Peter the Great. The Slavonic languages are excluded from some surveys of ancient tongues, on the arbitrary and misleading grounds that their written monuments do not predate the fifth century AD. Yet the Indo-European poetic arts were pre-eminently characterized by their orality: the Russians are equally an ancient people, kin to the Venedi of Tacitus; and their undeniably ancient language is steeped in the deep poetic structures of millennia. (In this essay one has touched upon the play of *ved-* and *vid-*, for example.) Pushkin’s lightness and depth, his playfulness and seriousness together, reflect a duality of Russia as venerable sage and strong and cheerful youth, the nation’s antiquity and modernity. Taken together these are the wholeness of life, the integrity of vision, the balance of time at whose center sit, talking, Pushkin and his Cat.

Texts

1. Alexander Sergeyevich Pushkin (1799–1837).

- 1.1. *Prologue to Ruslan and Ludmila* (А.С. Пушкин, *Полное собрание сочинений*, т. 4, Москва: Изд. АН СССР, 1937, с. 5–6; A.S. Pushkin, *Complete Works*, vol. 4, Moscow: Academy of Sciences of the USSR, 1937, 5–6):

У лукоморья дуб зеленый;/ Златая цепь на дубе том:/ И днем и ночью кот ученый/Все ходит по цепи кругом;/ Идет направо— песнь заводит,/ Налево—сказку говорит.// Там чудеса: там леший бродит,/ Русалка на ветвях сидит;/ Там на неведомых дорожках/ (10) Следы невиданных зверей;/ Избушка там на курьих ножках/ Стоит без окон, без дверей;/ Там лес и дол видений полны;/ Там о заре прихлынут волны/ На брег песчаный и пустой,/ И тридцать витязей прекрасных/ Чредой из вод выходят ясных,/ И с ними дядька их морской;/ Там королевич мимоходом/ (20) Пленяет грозного царя;/ Там в облаках перед народом/ Через леса, через моря/ Колдун несет богатыря;/ В темнице там царевна тужит,/ А бурый волк ей верно служит;/ Там ступа с Бабою Ягой/ Идет бредет сама собой;/ Там царь Кащей над златом чахнет;/ Там

русский дух...там Русью пахнет!/(30) И там я был, и мед я пил;/
У моря видел дуб зеленый;/ Под ним сидел, и кот ученый/ Свои
мне сказки говорил./ Одну я помню: сказку эту/ Поведаю теперь
я свету...//

Дела давно минувших дней,/ Преданья старины глубокой.⁴⁹

By the bow-curve of the seashore there is a green oak;/ A golden chain
on that oak:/ And by day and night a Learned Cat/ Goes round con-
stantly on the chain;/ He goes to the right—chants a lay;/ To the left—
recites a tale.// Wonders are there: there a Forest Sprite wanders,/ A
Mermaid sits upon the branches./ There on unknown paths/ Are the
tracks of unseen beasts;/ A hut there on chicken feet/ Stands without
windows, without doors;/ There wood and dale are full of visions;/
There at dawn roll in the waves/ Onto the empty, sandy shore,/ And
thirty splendid Knights/ File out of the waters, bright;/ And with them
their Seaborn Sire;/ There the Prince in passing/ (20) Takes prisoner
the fearsome King;/ There in the clouds before the people/ Across
forests, across seas/ The Wizard bears the Hero;/ There in a dungeon
pines a Princess,/ But a Brown Wolf serves her loyally;/ There a mortar
with the Witch/ Wanders going by itself;/ There king Kashchei with-
ers over his wealth;/ The Russian spirit is there... there is the aroma
of Rus'!/ (30) And there was I—and the mead I drank;/ By the sea I
saw the green oak;/ Sat beneath it, and the Learned Cat/ Told me his
tales./ One I remember: this tale/ I shall recount now to society...//
Deeds of days long gone,/ Traditions of deep antiquity.

- 1.2. У моря лукоморья стоит дуб, а на том дубу золотые цепи, и по
тем цепям ходит кот: вверх идет—сказки рассказывает, вниз идет—
песни поет.

By the sea, the curving seashore, an oak stands, and on that oak
are golden chains, and by those chains walks a cat: he goes up and
recounts tales; he goes down and sings songs.

2. WILLIAM BLAKE (1757–1827). Text from *Milton* (composed 1804–1811),
in *The Complete Poetry and Prose of William Blake*, edited by David V.

⁴⁹ I have included this couplet, a translation from "Carthon" in the *Ossian* of James Macpherson, partly because in the first edition of *RL* it was both Prologue and Epilogue: true to the ancient form of ring composition, it concludes Canto VI. But the separate concluding couplet also allows one at least the fleeting feeling of the Prologue as a sonnet; cf. Scarlett Thomas' sonnet, a parallel in some respects to the Prologue, text 6.1.

Erdman, commentary by Harold Bloom (Garden City, NY: Anchor, 1982). Robin Hamlyn and Michael Phillips, *William Blake* (NY: Abrams, 2000), discuss the painting "The Sea of Time and Space" (pp. 192–193 and pl. 240) and agree with the interpretation advanced by Heppner, discussed above. The text from *Milton* in which Blake mentions the Sea of Time and Space, though, is not cited.

- 2.1. And all the Spectres of the Dead calling themselves Sons of God,/ In his Synagogue worship Satan under the Unutterable Name (p. 104, plate 11[12], lines 13–14).
- 2.2. The nature of Infinity is this: that every thing has its/ Own Vortex; and when once a traveller thro' Eternity/ Has passed that Vortex, he perceives it not roll backward behind/ His path, into a Globe itself enfolding, Like a Sun (p. 109, plate 15[17], lines 21–24).
- 2.3. First Milton saw Albion upon the Rock of Ages,/ Deadly pale, outstretch'd, and snowy-cold, storm-cover'd—/ A Giant form of perfect beauty, outstretch'd on the Rock/ In solemn Death: the Sea of Time and Space thunder'd aloud/ Against the Rock, which was enwrapped with the weeds of Death./ Hovering over the cold bosom in its vortex, Milton bent down/ To the bosom of Death: what was underneath soon seemed above,/ A cloudy heaven mingled with stormy seas in loudest ruin,/ But as a wintry globe descends precipitant, thro' Beulah bursting,/ With thunders loud and terrible, so Milton's Shadow fell/ Precipitant, loud thund'ring, into the Sea of Time and Space (p. 109, plate 15[17], lines 36–46).

3. VELIMIR KHLBNIKOV (1885–1921). Texts from the ed. Велимир Хлебников, *Собрание сочинений в трех томах*, СПб: Академический проект, 2001 (Velimir Khlebnikov, *Collected Works in Three Volumes*, St. Petersburg: Academic Project, 2001), cited by vol. and page no. In an autobiographical sketch of 1914, the poet notes that he was born 28 Oct. 1885 in the Astrakhan' steppe, and "in my veins there flows the Armenian blood of the Alabov [clan]" («в моих жилах есть армянская кровь (Алабовы)»).

- 3.1. (I, 61): Времыши—камыши/ На озере берегу,/ Где камня временем,/ Где время камнем./ На берега озере/ Времыши, камыши,/ На озера берегу/ Священно шумящие.

(1907, 1908)

Reeds of time, blades of grass/ On the shore of the lake,/ Where the stones are time's means;/ And time, a thing of stone./ On the lake

belonging to the shore,/ Reeds of time, blades of grass/ On the shore
of the lake,/ Sacred sussurus.

(In my translation I have rendered Khlebnikov's invented *vremysbi*, a compound, pl., of *vremya* "time" and *kamysh* "tall grass" as literally as possible, and have tried to retain the assonance of the final strophe. To convey the cultural markedness of tall grasses to Americans, Walt Whitman provides the echo. Khlebnikov himself was probably inspired to use these grasses as the incipit of his evocation of the mythical world by K.D. Bal'mont's Symbolist landscapes of the 1890's: the poem *Kamyshi*, with its echoes of Poe, and the famous *Bezglagol'nost'* ("Speechlessness"), with its strophe "Недвижный камыш. Не трепещет осока." ("The grasses are motionless; the reeds do not stir.") Here is the looser, though more tuneful, rendering by Velimir Khlebnikov, *The King of Time: Selected Writings of the Russian Futurian* (tr. Paul Schmidt, ed. Charlotte Douglas; Cambridge, MA: Harvard Univ. Press, 1985), 16: "The streams of time/ On stone dreams,/ The rush of streams/ On time's stones./ Rustling sedge/ At the lake's edge—/ Reverent hush,/ Reverberant rush.")

- 3.2. (I, 46–47): Русалка телом голубым/ Немоб осенних красоту/
Воспеть хотела./ Туда, о, к ней! Туда, о, к ним!/ И вмиг к реке! И
вмиг в волну!/ Туда, где рень! Туда, где пена!/ Но где же цель? Но
где же тело?/ Но где же плен? Но где полон?/ Она, она, о ужас
слышу,—зеленая жена!/ И вопль ее, толпа испугом—/ О ужас,
ужас, о сором!..// На простыне к высокому небу/ Русалочьего
заманника подбрасывают.

(1907)

A mermaid with sky-blue body/ The beauty of autumnal mutenesses/
Wanted to extol in song./ There, to her; there, to them!/ Instantly into
the river and the wave!/ There, where the shoal is; there, where the
foam!/ But where is object; body, where?/ Where is captivity; the cap-
tive, where?/ She, she, I hear the fear—wife all green!/ And a fright-
ened mob is her howling,/ O horror, horror and shame!/ They toss the
mermaid's prey/ On a blanket high into the sky.

- 3.3. (I, 63): Видязь видений безликих/ Вероши в яви/ Есть узывностынь
редкой мечты,/ В русалиях яви голубоши,/ Безмерной, бесценной,
беспленной,/ Бестешной Мокоши/ Есть русалие хлябей мечты,/
Есть Русь хлябей домирного,/ Хлябей довещной черты/
Домирного мира.

(1907)

The visioknight⁵⁰ of visions faceless/ Of a thing of faith awake/ Is the hearkenfreezing of a rare dream,/ In the Rusalienes⁵¹ of skyblueness waking,/ Of boundless, priceless, uncaptured/ Mokosh⁵² light and unconsolated./ There is a Rusalience of the gulfs of dream,/ A Rus⁵³ of abysses before the world,/ Of gulfs of the shape before form/ Of the world before it was made.

- 3.4. (I, 58): Россия забыла напитки,/ В них вечности было вино,/ И в первом разобранном свитке/ Восчла роковое письмо./ Ты свитку внимала немливо,/ Как взрослым внимает дитя,/ И подлая тайная сила/ Тебя наблюдала нехотя.

(1907)

Russia forgot her potations:/ In them was the wine of eternity,/ And in the first scroll unrolled/ Fateful script she read./ You listened to the reading laxly mute/ As a child hears an adult out,/ And a stealthy secret power/ Regarded you against its own will.

- 3.5. (I, 63): Кто в славобе чародей,—/ Славодейное искусство/ Почитают, славянина/ Называя: соловей.

(1907)

Who is wizard in matters of glory:/ His praise-crafter's art/ Naming the nightingale/ Declares: Slav.⁵⁴

⁵⁰ Khlebnikov's neologism, *vidyaz'*, with *vid-* "see", patterned on *vityaz'*, "knight", cf. Pushkin's Prologue, line 16. On Khlebnikov's invented vocabulary, see Наталья Перцова, *Словарь неологизмов Велимира Хлебникова* [Natal'ya Pertsova, *Dictionary of the Neologisms of Velimir Khlebnikov*] (Wiener Slawistischer Almanach, Sonderband 40, Москва, 1995).

⁵¹ *Rosalie* combines Latin Rosalia, a festival of roses and waters (cf. Gk. *Anthesterion*, and the Armenian *Vardavar*, or Feast of the Transfiguration, to which Vyacheslav Ivanov devoted a dreamily lyric poem, to which in turn Vahan Teryan testily replied in verses on the Armenian massacres that were going on at that very moment), with *rusalka*. Nabokov's Pnin thinks of Ophelia, the drowned maiden, the *rusalka*, in connection with Russian summer festivals when garlands of flowers were cast upon the river waters.

⁵² A Slavonic god of the waters, cf. *mok(r)-*, "wet"; Khlebnikov connects the being to his other neologisms ending here in *-osh'*.

⁵³ Though many invoke Russia's archaic name, note in particular Pushkin's use of it in the Prologue: *Tam russkii dukh, / tam Rus'yu pakhnem!*

⁵⁴ On the issue of Slav-slovo-solovei, see J.R. Russell, "Solov'i, solov'i," St. Nersess Theological Review 10 (2005): 77–139; Rus. tr. in *Россия XXI век*, Москва, 2006.4, с. 156–197 (*Russia in the 21st Century*, Moscow, 2006, no. 4, 156–197). In his "star language" Khlebnikov asserted the connective identity Славянство–восход–звук: Слава слова и слава солнца. Сияние слов. Солнечная природа слов. "Slavonicity-ascent-sound: The glory of the word

3.6. (III, 32):

ИСКУШЕНИЕ ГРЕШНИКА

...И были многие и многия: и были враны с голосом: «смерть!» и крыльями ночей, и правдоцветиковый папоротник, и врематая избушка, и лицо старушонки в кичке вечности, и злой пес на цепи дней, с языком мысли, и тропа, по которой бегают сутки и на которой отпечатались следы дня, вечера и утра, и небокорое древо, больное жуками–пилильщиками, и юневое озеро и глазасторогие козлы, и мордастоногие дива, и девоорлы с грустильями вместо крылий и на любви вместо босови, и мальчик, пускающий с соломинки один мир за другим и хохочущий беззаботно, и было младенцекаменное ложе, по которому струились злые и буйные воды и пролетало низко над землей сомнениекрылая ласточка и пел влажокликий соловей на колковзором шиповнике, и стояла ограда из времowego тесу, и скорбеветвенный страдняк ник над водой, и было озеро, где вместо камня было время, а вместо камышей шумели времыши. И зыбились грустняки над озером. И плавал правдохвостый сом, и давала крути равенствозубая щука, и толчками быстрыми и незаметными пятился назад—справедливость—клешенный рак. И шествовала времяклювая цапля и глотала лягушей с мировой икрой на приятноватых ногах, и был старец, возделывавший лжаное поле, и молодежеперый кур застыл перед проведенной чертой...

(1907)

(Paul Schmidt, tr., Ronald Vroon, ed., *Collected Works of Velimir Khlebnikov*, vol. II, Cambridge, MA: Harvard Univ. Press, 1989, 10: "A SINNER'S SEDUCTION. There were many of them, many of them black-birds with nightwings saying 'Death!' and truthflower ferns and a time-thatch cottage and the face of an oldwomer in eternity's tripes and a snapping hound on a chain of days whose tongue was thought and there was a path, and on the path one day followed another and left behind prints of daytime and evening and morning, and a skybarked tree eaten up by fiddle beetles and a youngering lake and horneyed goats and astonishing centipusses and girleens with whinings where they might have had wings and love instead of lore, and a boy setting

and the glory of the sun. The scintillation of words. The solar nature of words." See Barbara Lönnkvist, *Universe in word: Poetics of Velimir Khlebnikov*, Rus. tr. СПб: Академический Проект [St. Petersburg: Academic Project], 1999, 70–71.

one world after another loose from a straw and laughing for he cared about nothing and was a stretch of youngstones too and over it the swift and snapping water ran..."⁵⁵

4. DANIIL KHARMS (born ДАНИИЛ ИВАНОВИЧ ЮВАЧЁВ, DANIIL IVANOVICH YUVACHNEV, 1905–1942). Kharms a friend of Khlebnikov's and a member of the Орден заумников, "Order of Transrationalists"—practitioners of *zaum'*. Texts from (I) Даниил Хармс, *Полное собрание сочинений: Записные книжки, дневник, книга 1*, СПб: Академический проект, 2002 (Daniil Kharms, *Complete Collected Works: Notebooks, Diary*, vol. 1, St. Petersburg: Academic Project, 2002); (II) *Поэты группы "ОБЭРИУ"*, под ред. М.Б. Мейлаха, Библиотека поэта, большая серия, 3-ье изд., СПб: Советский писатель, 1994 (M.B. Meilakh, ed., *Poets of the Group "OBERIU"*, Poet's Library, Major Series, 3rd ed., St. Petersburg: Sovetskii Pisatel', 1994). For Kharms' cipher, Kabbalistic diagram, list of Hebrew letters, Osiris-symbol, etc., see I and Рисунок Хармса, сост. Ю.С. Александров, СПб: Изд-во Ивана Лимбаха, 2006 (*Kharms' Drawings*, compiled by Yu. S. Alexandrov, St. Petersburg: Ivan Limbakh, 2006).

⁵⁵ Vasilii Kamensky gave Khlebnikov an advance for this piece, recognizing in it a completely new and exciting poetics. The poet promptly spent the money at a Caucasian restaurant, hiring musicians and dining on shashlik (see София Старкина, *Велимир Хлебников, король времени: Биография*, СПб: Вита Нова, 2005, с. 75; Sofia Starkina, *Velimir Khlebnikov, the King of Time: A Biography*, St. Petersburg: Vita Nova, 2005, 75).

человека/ И апостола зыда мокром/ через шею опракинул (*sic!*)/
в море остров в море Потемье/ в море шарка финикии

"The curving shore deserves a coo/ For riding from the stable/
Out from the isle of Ammon/ Where there are grapevine growing,
reins./ She was spinning with her hands,/ And there the ruins of
Kabbala are.⁵⁶ Snowstorms meanwhile have been hired/ To go with
golden onion domes./ And someone far away/ (10) In a fur-fringed
vest was crying woe,/ While in the sky passed/ Ships in the shapes
of ships./ One has to crow like *chernozem*,⁵⁷/ And having crowed
into the trumpet one's fill,/ red-bunting-decked Alyonka/ And the
Kabbalistic ruins, too,/ Stop looking at that Pecheneg:/ You won't
see Kabbala,/ Nomadic...⁵⁸/ While in the sudden lakes (?)⁵⁹ other
unexpected/ (20) Telegrams on the line,/ It seems to Alexander/ That
someone behind the bushes crows/ (From hurrah) at break of day to
evening—when the sunshine goes—/ From embroideries in silk to
princes' (sunset) canvasses in oil,/ Blue tomes of half of Asia/ Full of
monsters⁶⁰ will arise deformed./ in blue tomes of half of Asia/ Arabs
torture Alexander,/ and he's got half an isle;/ Alexander leaps to his
ship/ (30) Dragging man and minotaur on board./ But the Apostle
itches, damp,/ Throws the isle over his shoulder into the sea, the sea
of Darkness,/ Where date palms scrape..."

- 4.2. Kharms published a longer and revised version of the poem (4.1), completed in August or September 1925; it is reprinted in II, No. 257, pp. 484–487. On its relation to the foregoing it may be apposite to quote the general observation of M.O. Чудакова, *Рукопись и книга*, Москва: Просвещение, 1986, с. 113 (M.O. Chudakova, *The Manuscript and the Book*, Moscow: Enlightenment, 1986, 113): "The printed work in a new edition is not infrequently subjected to the author's revision. From another point of view, that which had seemed to the

⁵⁶ The Rus. *kabala* has two meanings: either Jewish Kabbala, or, with the very same spelling, an old Muscovite term for indentured slavery. Given Kharms' interest in Judaism and esoterica, I have opted for the former meaning.

⁵⁷ The rich Russian "black earth" of the nation's breadbasket.

⁵⁸ Two lines in the manuscript are illegible: I've taken a stab at "nomadic" for Rus. **koche*... because the Pechenegs were nomads.

⁵⁹ Rus. *v zazyorakh*: preverb *za-* + loc. pl. of *ozero*?

⁶⁰ Rus. **nelyudi* (restored), "unhumans", which I understand as exotic monsters, rather than a derogation, as in Marina Tsvetaeva's designation in 1938 of the German fascist invaders of Czechoslovakia as unhumans (Rus. *нелюдей*, gen. pl.) in the sense of reprobate subhumans.

author a preliminary variant of a poem now at a certain moment takes its place alongside the later variant. They seem to share equal rights. (Mandelstam's mature period, as is well known, is notable for such a relationship: to those who valued his earlier verses, the new ones seemed incomplete and not perfected.) The tendency to see in the poet's 'creative workshop' a necessarily progressive movement from the less successful to the improved played its role here, as it seems." The longer poem Kharms published is not necessarily the better or the more polished; I would argue that it stands in relation to the tighter, earlier poem much as the concisely epic *Drachenkampf* "Jabberwocky" (text 5.1) of Lewis Carroll, whose work Kharms loved—and whose absurdist experiments with language and theme must be considered a major inspiration of Kharms' work—does to the longer *Hunting of the Snark* (discussed in 5.2), which borrows transrational neologisms from the former.⁶¹

5. LEWIS CARROLL (REV. CHARLES LUTWIDGE DODGSON, 1832–1898). After listening to "Jabberwocky" in *Through the Looking Glass*, Alice exclaims to Humpty Dumpty "It seems very pretty, but it's *rather* hard to understand!" And in fact Carroll uses 28 neologisms (four of which are actually revivals of obscure words) in the poem of 24 lines, by the expert count of the English lexicographer Eric Partridge.⁶² This density of odd new word-creatures—some of which describe, indeed, fictional animals—recalls that of Pushkin's folkloric beings in the *Prologue* to *RL*; and it lends *Jabberwocky* the same pleasing compactness as a self-enclosed magic world. Carroll called the inventions that pack two meanings into a single word, portman-teaux. These occur in natural languages (e.g., blot, from black and spot or dot); and another feature of the binary quality of the neologisms is echoic reduplication. Thus, a sword goes *snicker-snack* ("snicker" means a knife blade). Partridge gamely attempts to explain the words Humpty Dumpty does not: *manxome*, for instance, is a rather overstuffed overnight bag with a maniac, a Manx (odd tailless cat, presumably), and the adjective

⁶¹ "Вот мои любимые писатели: Гоголь, Прутков, Метринк, Гамсун, Эдвард Лир, Люис Кэрроль" (Хармс, *Зап. Книжки*, II, с. 196, 14 ноября 1937): "Here are my favorite writers: Gogol, Prutkov, Maeterlink, Hamsun, Edward Lear, Louis Carroll" (Kharms, *Notebooks*, II, p. 196, 14 November 1937).

⁶² See his essay "The Nonsense Words of Edward Lear and Lewis Carroll," *Here, There, and Everywhere: Essays Upon Language* (London: Hamish Hamilton, 1950), 162–188.

fearsome. The Jabberwock itself is to be understood as an echoic dialectal compound of “jatter” (shatter) and “whacker” (something enormous).

Why do this? Aside from the sheer delight of creative expression and the pleasure of vision communicated to the reader, it would seem that words combining the usual and the strange, or terms that seem half-known but just outside the perimeter of everyday sight, are meant to expand one's capacity to perceive, to enable one to accept the impossible as real. This is what makes a fantasy successful. So, in the third-dimensional world we cannot see grasses made of time, or wings whose motive power is the emotion of sorrow; but the Khlebnikovian portmanteaux *vremysh'* and *grustil'ya* transport one into a fifth dimension through the skillful manipulation of the conventions of language. In comparing the setting of the *Prologue* to *RL* to the mysterious landscape of William Blake's painting and, more remotely, to the sacred geography of the Mandaean ritual space, I have deliberately violated the distinctions generally drawn between profane and sacred modes of representation and expression, since a strict division of these categories impede the study of mythopoesis, an activity related to both. And indeed the use of invented or nonsense language in ancient religion was believed to enable the mind to grasp the ungraspable paradoxes of the supernatural. In the Gnostic text *Thunder, Perfect Mind*, for instance, the Goddess declares, “I am the hearing which is attainable to everyone and the speech which cannot be grasped. I am a mute who does not speak, and great is my multitude of words.” If that deity is one's reality, muses a modern scholar of the text, then how do you show you've learnt her speech?⁶³ The answer is, you alter your own language, introducing *voces mysticae*, glossolalia, and neologism. But perhaps the strongest vindication of one's method allowing application of religious material to the study of a secular text may be found in the converse evocation of Lewis Carroll by a historian of early Christianity in a study of proto-Pentecostal speech: “...denial of the relation between Christian and magical prayer overlooks the main problem—to explain, not why the spirit spoke to the churches, but why it spoke to them in jabberwocky” [emphasis mine].⁶⁴

⁶³ See Patricia Cox Miller, “In Praise of Nonsense,” in *Classical Mediterranean Spirituality: Egyptian, Greek, Roman* (ed. A.H. Armstrong; NY: Crossroads, 1986), 482.

⁶⁴ Morton Smith, *Clement of Alexandria and a Secret Gospel of Mark* (Cambridge, MA: Harvard University Press, 1973), 232, who points out that recorded Christian glossolalic lexical items are similar to pagan ones, and that correspondingly in the ostensibly pagan corpus of the Greek magical papyri, the divinity *IAŌ* (a Greek rendering of the Hebrew Tetragrammaton) is the most common, followed by *Adōnai*, a transcription of the Hebrew for “the Lord”.

It is significant that Kharms had an abiding interest in various kinds of magic and mysticism, all of which employed the manipulation of letters and sounds and the use of obscure and barbarous words. His matrix of interests overlapped considerably with those of the early Christians, magicians, and Gnostics.

But were Carroll or Kharms to require an advocate of their own literary jabberwocky, they could not have found a more eloquent one than their brother poet Hart Crane: when in 1926 Harriet Monroe, the Editor of *Poetry*, expressed bafflement at his poem "At Melville's Tomb", he wrote back, "...as a poet I may very possibly be more interested in the so-called illogical impingements of words on the consciousness (and their combinations and interplay in metaphor on this basis) than I am interested in the preservation of their logically rigid significations at the cost of limiting my subject matter and perceptions involved in the poem."⁶⁵

5.1. "Jabberwocky", from *Through the Looking Glass*.

'Twas brillig, and the slithy toves/ Did gyre and gimble/ in the wabe;/ All mimsy were/ the borogoves,/ And the mome/ raths outgrabe./ "Beware the Jabberwock, my son!/ The jaws that bite,/ the claws that catch!/ Beware the Jubjub bird,/ and shun/ The frumious Bandersnatch!" / He took his vorpal sword/ in hand:/ Long time the manxome/ foe he sought—/ so rested he by/ the Tumtum tree/ and stood awhile/ in thought.// And as in uffish thought he stood,/ The Jabberwock,/ with eyes of flame,/ Came whiffing through/ the tulgey wood,/ And burred/ as it came!// One, two! One, two!// And through and through/ The vorpal blade/ went snicker-snack!/ He left it dead,/ and with its head/ He went/ galumphing back.// "And hast thou slain/ the Jabberwock?/ Come to my arms,/ my beamish boy!/ O frabjous day!/ Callooh! Callay!"/ He chortled in his joy.// 'Twas brillig, and the slithy toves/ Did gyre and gimble/ in the wabe;/ All mimsy were/ the borogoves,/ And the mome/ raths outgrabe."

- 5.2. *The Hunting of the Snark*, 1876. (Page references to: Lewis Carroll, *The Hunting of the Snark: The Definitive Edition*, with an Introduction by Adam Gopnik (ed. Martin Gardner; New York: W.W. Norton, 2006.) Carroll in his Preface to his *Agony in Eight Fits* explains, "...this poem is to some extent connected with the lay of the Jabberwock"

⁶⁵ Langdon Hammer, ed., *Hart Crane: Complete Poems and Selected Letters* (NY: Library of America, 2006), pp. 165 and 803 n.

(p. 10). Thematically it is also a quest for a monster; but the hunters do not catch the Snark, nor is it clearly described or describable. It is also likely to become a Boojum and catch them instead; and a number of commentators have suggested that the poem deals with the insanity of quotidian concerns and the horror of the approach of oblivion, of the senseless end of one's life. But *Snark* is just as likely an absurd and surreal work whose only logic is that of the shifting forms, dimensions, and rules of a dream. This much longer poem is largely in standard English, with the only neologisms *snark* and *boojum*; but Carroll reuses a number of invented words from *Jabberwocky*: in his Preface the author notes the proper pronunciation of slithy toves and borogoves; and in the body of the text we find beamish (p. 36), uffish (p. 41), galumphing and Jubjub (p. 45), outgrabe (p. 49), bandersnatch (p. 63), frumious (p. 65), and mimsiest, the superlative of the adj. mimsy (p. 65).

A reader who enjoys the clean thematic lines and consistent invented speech of *Jabberwocky*, from Carroll's earlier period, may like less this longer, darker, less manageable product of a later stage of the writer's career. *Jabberwocky* has the geographical and temporal integrity of a quest narrative: it starts in a sort of crepuscular (*brillig*) bower (*wabe*); after the father's instructions, the youth goes forth into the dense, dark forest (*tulgey wood*). He rests against a *Tumtum* tree at almost the exact center of the poem, too: compare Pushkin's Yggdrasil!—and when, having slain the Jabberwock, he rides swiftly (*galumphs*) back, all is now bathed in morning light. The boy himself is aglow (*beamish*), and the day is splendid (*frabjous*). By contrast, the hunters of the Snark set out with a blank map and at the end the Baker vanishes: all is deliberately anti-logical, so when the Pig is charged with desertion, for instance, it pleads an *alibi* in mitigation (p. 107)!

6. SCARLETT THOMAS (1972–). Text from *The End of Mr. Y* (Orlando, FL: Harcourt, 2006), 26–27. The novel deals with a young university lecturer of English at a provincial university in Britain: her name, Ariel, recalls that of Prospero's angelic sprite in *The Tempest* of Shakespeare. Ariel is writing a thesis on an obscure 19th-century novelist, T.E. Lumas, whose forgotten book, *The End of Mr. Y*, contains a recipe for a potion compounded of holy water and a homeopathic drug that takes the hapless hero Mr. Y—and can transport the reader—in a drugged trance called “*telemancy*” into a sort of fifth-dimensional noösphere called the “*Troposphere*”, where one has

telepathic connections to other people. Thomas includes large portions of the fictive novel in her text, including the Prologue (text 6.1), a sonnet in iambic pentameter whose geography and mythic otherworldliness reminded me strongly of the *Prologue* to *RL*. It is as markedly and eerily depopulated as Pushkin's landscape is crowded with strange beings. At the end of both Troposphere and novel is a Garden of Eden with its Tree, to which the heroine and her appropriately named lover Adam repair. Spatially, the poem can be plotted as seashore on the left, then forest with, among other things, a cave (cf. Blake's "Sea of Time and Space" and *De Antro Nympharum*) and an oak (Pushkin, also the twin-trunked tree at the center of Blake's painting). There is a cabin (though not on chicken's feet) and a key. The scene is time-wrought: this recalls Khlebnikov's Futurian refraction of Pushkin's mythic landscape, and Kharms' subsequent homage to it. The implication is that place=time=thought, the last being the determinant of duration: we are in the world, that is, that *includes* sea of time and space but is not submerged within the latter itself.

From a previous novel by Thomas, one learns she has been interested in higher mathematics, cryptography, and the Voynich manuscript with its unknown script, fanciful drawings, and associations with the magical and the occult. (John Dee, court astrologer to queen Elizabeth I, and Athanasius Kircher after him, owned the book; and its authorship is attributed, probably wrongly, to Roger Bacon.) One might compare to this matrix of interests the obsession of Daniil Kharms with Kabbala and the Hebrew language, his monograms and symbols based on Egyptian hieroglyphs, his cosmological drawings, and his frequent use of ciphers. (The one he used most often is a substitution script of his own invention whose characters are drawn from a variety of sources, including Chinese and Japanese, the Samaritan form of Hebrew, and an alphabet based on alchemical and astrological signs that has been employed by occultists for centuries, most recently in the "Cipher MS." of the Golden Dawn group to which W.B. Yeats belonged.) Thomas and Kharms also share an interest in non-Euclidean mathematics and the fifth dimension: Kharms' notebooks are full of mathematical formulae and speculation.

The structural and thematic parallels to Pushkin's *Prologue* to *RL* seemed striking to me, all the more so because text 6.1 is the sole passage in verse in Thomas' novel. I think sea, empty space, and dense forest is a symmetrically pleasing triadic composition, one often encountered in nature, whose multiple possible symbolisms make it attractive as a setting for an imaginative, mythopoetic writer, particularly one like Thomas whose set of interests matches so closely that of Kharms—the Russian

who responded so creatively to Pushkin's poem, his imagination fertilized by the linguistic experiments of his own countryman, Velimir Khlebnikov, and of Thomas', Lewis Carroll. Rather than speculate as to whether the kinship I perceived was a case of filiation or of parallel creative vision, I wrote to ask Prof. Thomas whether she knew the Russian writers, and received a gracious reply by electronic mail on Friday, 3 November 2006, 2:31 PM, which I cite in part herewith: "To answer your questions... No, I am ashamed to say that I have never read Pushkin, and so the echo is accidental. I've never been entirely sure why I decided to have Lumas introduce his novel in verse. I remember at the time thinking I'd cut it if anyone pointed it out; but I was rather fond of it and since no one said anything, I left it in... I was reading Thomas Hardy and Edgar Allan Poe at the time; I remember that. I have always been very interested in Blake. You're more than welcome to quote me if I say/have said anything interesting enough. All I can think of now is that something of Pushkin has leaked into my part of the Troposphere, and I've picked it up unconsciously. But then I'd be believing in my own novel, and that would never do...!" This leaves at least the possibility of inspiration by Blake's painting; but more likely we deal with an independent vision conditioned in part by the multiple factors mentioned above.

- 6.1. "PROLOGUE. I see ahead a time-wrought shore;/ A fishing boat lifts on a wave;/ No footprints on the sandy floor,/ Beyond—an unfamiliar cave.// Or—forest tree'd with oak and yew/ A dark mare waits to carry me,/ Where nothing stirs yet all is true,/ A cabin door, and here—the key!// Perhaps I'll wander in a field,/ With poppy-flush on carpet green:/ However thought has been concealed/ No sleeper's eye can now undream.// In any place that I take flight/ The dark will mutate into light."

2 Early Armenian civilization

James R. Russell

Introduction

It would be fair to suggest that every nation has an identity, a variety of geographic, linguistic, political, religious, cultural, and often physical features by which it defines itself, or through which others perceive it; and its history is bound up to some degree with the effort to preserve that identity, in the context of contacts with others. But to the same extent no self-defined nation, with perhaps the rare exception of peoples living in insular isolation, is homogeneous – national identity evolves, and changes, as a result of diverse influences and interactions with others. The Armenians today are no exception, though they are in some respects anomalous: their language and culture are perhaps the last surviving relic of the ancient Anatolian civilizations; and they are an east Christian island in a Muslim ocean.

The Armenian plateau, which forms the highest western rampart of the tectonically active mountain system stretching from the Balkans to the Himalayas, is divided by mountain ranges that run mostly on an east–west line, with the Taurus and Antitaurus rising over Syria and Cilicia to the south, towards the Mediterranean, and the Pontic range between Armenia and the Black Sea to the north. Because of this, the country, despite its temperate latitudes, has a harsh, continental climate of long winters with heavy snow in the mountains, being cut off from the temperate climate of the Mediterranean. There is little rainfall; all arable areas require irrigation. Of the large valleys of Armenia, the plain of Ararat, where modern Yerevan stands, is the lowest and is relatively warm and fertile. Though the Tigris and Euphrates both rise in the Armenian highlands, even these rivers, like the others, are fast-flowing mountain torrents, not navigable through most of the country.

There are many native grains: both wheat and barley. Xenophon drank beer during his winter sojourn in Armenia, to be mentioned below. There are also grapes and wine: tradition held that a vine at the little church of Akori on Mt. Ararat, buried in the earthquake of 1840, was the one planted by Noah when he alighted from the Ark. (Mediaeval

Map 2.1 Topography

tradition held Mt. Cudi, far to the southwest, to be the biblical mountain where angels gave St. James of Nisibis a piece of the wood from the Ark.) The country is good for herding sheep, for both meat and wool. And there are other food animals. Ancient Armenians ate a great deal of pork. The Urartians, somewhat oddly, decorated some of their war-helmets with hammered reliefs of chickens; the Romans, who got this fowl from an Armenia that was allied to Parthia, called it the 'Parthian bird'. Through Armenia the apricot, too, came to Rome. The ancient Armenians were good warriors and cavalymen: in Achaemenian times Armenia offered 20,000 foals to the Persian court every year. Armenia has gold and silver mines, and fine marble and the masonry stone tufa; the Romans imported red *sandix* pigment from the country, and Armenia exported the famous red dye extracted from the *vordan karmir* worm. Carpets and textiles were produced in antiquity, and Armenia is still famed for them.

For all their rugged and isolating features, the Armenian highlands stand athwart the busiest crossroads of world history: between the powers of the West (Greece, then Rome, then Byzantium, and now Turkey) and the East (Achaemenian, Parthian, Sasanian, and Islamic Iran); and between those of the North (Scythian, Cimmerian, Alan, and other Caucasian peoples, and now Russia) and the South (Assyria and later Mesopotamia, and then the Arabs). Armenia has been assaulted incessantly and conquered often, especially, given the prevailing layout of its mountain ranges, by the great powers to the West and East, though raids by Caucasian tribes are a constant through antiquity as well. Armenia's geography and history together militate against centralized rule, and Armenians have rarely enjoyed full political independence. The threat and reality of invasion and of foreign, often oppressive, rule is a constant in Armenian history, from ancient to modern times. It is to be expected, then, that Armenian identity is a vital issue, a political matter, sharply defined and generally contrasted to a world around it perceived to be threatening.

Armenian tradition expresses identity mainly in terms of conflict, enshrining at its core a struggle, ostensibly extending over millennia, to maintain and protect the nation's distinct character. The struggle is expressed in mythical, religious, and historical terms – very different sets of metaphors and events, through all of which, however, a continuity is perceived. This chapter will consider many of these formative narratives and images; but it will be concerned still more with the diverse heterogeneous factors, the influences that anciently shaped an Armenian people. Many of these – especially certain Anatolian and Iranian components – might be considered alien from the standpoint of the present, but would not have been so regarded then. Reflection on what is and is not considered alien leads to another issue. The balance of the evidence suggests that the Armenian language was introduced into eastern Anatolia from southeastern Europe some three millennia ago; its present-day speakers are the

descendants of those migrants and of various ethnic groups, some of which were present earlier (e.g., the Urartians), others subsequent arrivals (e.g., the Parthians, an Iranian people).

Armenian origins: myth, language and archaeology

Human beings lived in the river valleys of the Armenian plateau in the Palaeolithic and Mesolithic eras. In the fourth to third millennia BC arose the Kura/Araxes and Trialeti cultures, which practised metallurgy and developed sophisticated techniques of animal husbandry, but did not evolve urban systems of settlement. In general, Armenia did not have large cities in antiquity; where there were such towns, most of the inhabitants were foreigners, either immigrants or exiles brought in to develop trade. The hilltop settlements of Elar, north of Yerevan, and Šengavit', on the Hrazdan River that flows through the modern capital, date from the fourth and third millennia BC: circular houses, and elaborate stone altars and sanctuaries have been found there, with figurines of cattle and women that perhaps were employed magically for fertility. At Vardenis, from the second millennium, was found a disk divided into four, with human figures – perhaps a seasonal calendar; at Lēšašen, fourteenth century BC, was excavated a huge wheeled carriage used for burial, with bronze bird- and steer-finials, sun disks, and portrayals of helmeted charioteers. A strange sanctuary of the first millennium BC, with what look like multiple bowls and candelabra, was excavated at Metsamor. The Armenian mountains abound in indecipherable petroglyphs and drawings: the overall picture is of uninterrupted population, inventive technology, and a vital artistic and spiritual culture from the dawn of humanity to the present. Like other peoples, Armenians see themselves as the inheritors of the most ancient culture of their land, and doubtless the descendants of that culture's bearers were eventually assimilated and became Armenians. But the Armenian language – and thus, we may safely presume, a significant part of the Armenians' ancestry – came from elsewhere.

The vocabulary of the Armenian language consists largely of loan-words from Parthian, a Middle Iranian language. From the reign of the Medes (c. 685 BC) to the fall of the Sasanians (651 AD), Armenia was steeped in the political and religious culture of Zoroastrian (or Mazdean) Iran. The linguistic influence is so pervasive that, until the late nineteenth century, Armenian was thought to be an Iranian language. However, the great linguist Heinrich Hübschmann demonstrated that the core vocabulary of Armenian developed from proto-Indo-European according to sound laws profoundly different from those of Iranian. Armenian thus belongs to a separate branch of the *satəm* group of Indo-European: the mostly Eastern tongues that form the word for a hundred (reconstructed proto-Indo-European **kwomtom*) with an *s*, not a *k* (Russian *sto*; but Latin *centum*, etc.).

The Classical Greek historian Herodotus, writing in Ionia in the early Achaemenian period, describes the Armenians as Phrygian colonists who in

their speech resemble Phrygians; and linguists assign Armenian to the Thracio-Phrygian branch of that hypothetical construction, the Indo-European linguistic tree. Thrace is at the tip of southeastern Europe, facing Anatolia, and of its older languages only a remote descendant, Albanian, survives. The Phrygians, a people whose language is long extinct, and who inhabited Northwestern Anatolia in ancient times, were descended from settlers from Europe. By the mid-first millennium AD their language had been replaced by Byzantine Greek. Of the indigenous languages of Anatolia, Armenian alone survived Hellenization or Islamization. The Phrygians have left few inscriptions – though they wrote their language in a script derived from Greek that is not hard to decipher – and these are almost all epitaphs, so the content is very limited. But from these, a very few words that are closely cognate to Classical Armenian have been found. For example, *nise-moun*, the dative of the demonstrative pronoun, meaning ‘to this’, is so close to Armenian *smin*, which means the same thing, that it is a firm indication that the languages may indeed be closely related. Phrygian *soubros*, ‘pure, holy’, has cognates in various Indo-European languages, including, most closely, Armenian *surb*. Herodotus reports a somewhat fanciful story about an Egyptian pharaoh who performed an experiment designed to discover the world’s oldest language, which, the king supposed, would be the one a baby would speak of its own accord if not instructed otherwise. He had an infant isolated from all speech, till it pointed to a piece of bread and said ‘*Bekos!*’, which, Herodotus explains, means ‘bread’ in Phrygian. Prof. De Lamberterie connects the word to Armenian *bek-anem*, ‘I break’, from which he suggests the Phrygian term is cognate to Armenian and means ‘a piece, something broken off’. The Armenians probably had other cultural similarities to the Phrygians. For instance, the latter worshipped a rock-born god, Agdistis, while the Armenian oral epic cycle of Sasun begins with the rock-birth of the first generation of heroes, an episode probably derived from old Anatolian traditions, if not specifically Phrygian ones.

The first speakers of Armenian would thus have to have migrated eastwards across the vast Anatolian peninsula, probably in the mid- to late second millennium BC. There is evidence in place names for such migrations: the Muški, related to the Phrygians, gave their name to Mazaca (Armenian Mažak, Latin Caesarea, Turkish Kayseri) in Cappadocia, for instance; and a Greek reference to the Armenians as Melitenioi, i.e., people of Melitene (Hittite Melid, modern Turkish Malatya) still farther east, on the Euphrates, would place the proto-Armenian speakers even closer to the Van region, which, with the plain of Ararat to the northeast as a later centre, was to become the centre of historical Armenia. The lowlands around Van were called simply Hayoc’ Jor, ‘Valley of the Armenians’, a name that survived the 1915 Genocide and is still echoed in the Kurdish name of the place, Khavazor.

Professors Gamkrelidze and Ivanov dispute the hypothesis of Armenian migration, which is presented in greatest detail by Igor Diakonoff in his

Pre-history of the Armenian People, and argue instead that Armenian – and indeed proto-Indo-European itself – is native to eastern Anatolia. Their suggestion, which is perhaps understandably attractive to people anxious to prove the legitimacy of Armenian territorial claims back to remotest times, has not gained general scholarly acceptance for many reasons. It would seem from the numerous and far-reaching sound-changes of Armenian that the language developed in relative isolation from other speakers of Indo-European and in proximity to non-Indo-European speakers, particularly the Urartians and speakers of Kartvelian languages (i.e., early Georgian, Mingrelian, etc.). Armenian *erku*, ‘two’, derives from a proto-form **duo-*, but through two stages of sound change; *ji*, ‘horse’, corresponds to a poetic term attested in Sanskrit for a steed ‘impelled’ swiftly forward, *hayah-*; but the Armenian form of the base **ekwos-*, which also means ‘fast’, is *ēs*, ‘ass’. Indo-Europeans and horses are always found together: the Armenian development might mean that Armenian speakers migrating from an earlier place where there were horses found themselves in a place where horses had not yet been introduced, or at least were still very uncommon and gradually came to use the standard word for horse for the only equid they found there: the donkey. Conversely, the first Mesopotamians to encounter horses called them *anshukurra*, ‘mountain asses’.

However, the very survival of a poetic term for a noble steed in Armenian and across Indo-European poetic language indicates that the Armenians retained an early layer of Indo-European culture – oral poetry, mythology, and religious belief – which, with the application of suitable methods, one can recover. Armenia is more or less midway between the Hellenic and Indic spheres of Indo-European culture. In Greece much of the mythological material we now possess underwent a transformation of expression and purpose in the Classical period, becoming social and political metaphor. In India the same mythological stock material becomes part of religious storytelling and metaphysical theory. So, for instance, the Centaur, a mythical creature associated with sex and with the passions, appears in Greek mythology as the disruptive wedding-guest to be defeated by the founders of Athens. Marriage and political order control and sublimate the lubriciously chaotic power of the horse-man. In India, on the other hand, the probably cognate Gandharva is a divine musician who appears also as a kind of third power in human conception, the essence of the passion that generates a child. Armenia, in between, presents the myth through two layers at least: Iranian, then Christian. The rather dangerous creature who makes tempting music is identified with an Iranian mythical being that is part fairy, part randy ibex, the *yuškaparik*. Movsēs Xorenac’i, an Armenian historian who probably wrote in the eighth or ninth century but whose oral, mythological sources are often of immemorial antiquity, has no hesitation in identifying the *yuškaparik* with the Centaurs of Greek mythology; and a later mediæval text goes further in identifying the siren-like creature and its song not only with the impulse to promiscuous sex, but with the origins of heresy – the Centaur has been Christianized.

The same array of divergent interpretations from West to East of a common mythological figure or archaic antiquity can perhaps explain an enigmatic Armenian myth. Peasant women make offerings in ruined Christian chapels in various parts of Armenia to a being called the *t'ux' manuk*, the Black Youth. Folk songs describe him coming down out of the wild mountain forests along the course of streams to seduce girls at the village well. P. Vidal-Naquet, in his study *The Black Hunter*, considers a mythological figure named Melanthos, the Black One, who also lurks at the edge of settlements: his story is worked into the Athenian Apaturia ritual, which marks the socialization of the impulses of adolescent sexuality. In India the Black Youth is of course the Black god himself, Krishna, whose love-play with the cowgirls on the riverbank becomes the durable prototype of mystical love.

A third case is that of the legendary Armenian king Ara *gelec'ik*, 'the Beautiful'. According to Movsēs Xorenac'i, the Assyrian queen Šamiram (i.e., Šammuramat, Semiramis) fell in love with him, but he refused her advances. She ordered her armies to invade Armenia and capture him alive; but he was killed in battle, and the queen ordered his corpse placed in an upper room, where supernatural 'Ara-licking' (*aralēz*) dogs would come down from the sky to revive him. But, the Christian historiographer adds scornfully, the corpse decayed; so Semiramis dressed up a courtier and presented him to the credulous common folk as the risen Ara. Behind the Christian narrative one perceives the ancient mythological type of the beautiful youth, slain by reason of the lust of a powerful woman and lover (sometimes his mother or stepmother), who is then resurrected. This is the type of the Phrygian divine pair Attis and Cybele; in Greece, it becomes the complex tragedy, with political overtones, of Hippolytos and Phaidra. The Persian tale of Siyāvōš in the *Šāh-nāme* of Ferdōsi is a reflex of the same type. But there is also the added element of an other-world journey, in which the man dies, journeys to heaven and hell, and returns to life, bringing knowledge of divine retribution and reward, in the *Katha Upanishad* in India and the *Arda Viraz Namag* in Zoroastrian Iran. There is evidence to suggest that Armenian myth, midway between, combined this latter gnostic theme of the *Himmelsreise der Seele* – the heaven-journey of the soul – with the Hippolytos myth: the tenth book of the *Republic* of Plato, early fourth century BC, contains the myth of one Er, son of Armenios the Pamphylian, who is slain on the battlefield but returns to life and reports the reality of divine justice. Er is obviously none other than Ara. So in this third case as well, one must look behind various strata of later culture and ideology, and with judicious comparison – a kind of triangulation among surrounding, kindred Indo-European cultures – discover the Indo-European myth still present in Armenian tradition after at least three millennia of other accretions and colorations.

Much religious terminology still in use in Armenian comes from the Iranian vocabulary of Zoroastrianism: *patarag*, 'divine liturgy', is the

Parthian word for an offering; *hrašakert*, ‘miracle’, is Avestan *frašō.kərəti*, the renovation of the world after the defeat of evil. The pre-Christian Armenians used Iranian *bag* – ‘god’ in toponyms: Bagawan, Bagaran, Bagayarič, etc. But the chief term for ‘God’ still used, *Astuac*, is most likely native Armenian, of proto-Indo-European derivation. Prof. De Lamberterie has argued that it be connected to *ast-em* ‘wed’ and *hast-em* ‘create’, with cognates in Germanic. Mediaeval Armenian folk-etymology of *Astuac* as *hast-ol*, ‘creator’, is thus likely to be right, if not for sound scientific reasons.

It is important to stress here that Indo-European is a term used of a language and cultural group that was, even at its early stages, probably large and widespread enough to be physically diverse; and over the centuries of migration, in which fairly small numbers of Indo-Europeans, moving in different directions, mingled with other populations of the same size or larger, this diversity was greatly augmented. To the extent that archaeology provides evidence, the migrations were peaceful and gradual, without evidence of mass destruction or of radical or sudden change. The image of the racially homogeneous, fair-haired and blue-eyed Aryan conquerors is a pernicious fantasy reflecting the imperialist attitudes of nineteenth-century Europeans, not a valid historical model. Correspondingly, the migrant speakers of proto-Armenian were probably comparatively few; and they intermarried over the centuries with the peoples of eastern Anatolia, Syria and Mesopotamia, and the South Caucasus. To this day, some Armenians are fair-haired, but most are dark: there is no single Armenian type. When at the end of the fifth century BC Xenophon’s mercenary army crossed the Armenian highlands to the sea in the retreat that their general chronicles in his *Anabasis*, there were various ethnic groups and building styles in Armenia. Roman historians centuries later knew of a score of languages spoken in the country, upon which Artaxias I imposed linguistic unity – by which is meant, most likely, the use of Armenian as an official language – only after 190 BC. Early Armenia was, undoubtedly, a country ethnically and linguistically heterogeneous.

The beginnings of Armenian history

Armenians call themselves *hay*, a word of unknown derivation: the country was called in ancient times simply by the plural form (*Mec*) *Hayk*, ‘(Greater) Armenia’; or else, with the Iranian toponymical suffix still used, *Hayastan*. *Hay-* has been connected to the place Hayasa-Azzi, but this province lay too far north of Van, and west of Ararat, it is argued, for its name to have been so important. And the *-asa* ending cannot simply be made to go away. So a better explanation must be sought. In Armenian forms of Indo-European root words the intervocalic *-t-* is lost and the initial *p-* becomes *h-* or is elided entirely: this is why the Armenian equivalent of Latin *pater* is *hayr*, ‘father’, and of Greek *poda*, ‘foot’, *otn* or *het*. So *hay* could come from a boastful **potiyos-*, ‘ruler, master’; or it might derive from

Hatti, for the proto-Armenians had to traverse the lands of the once-mighty Hittite Empire, and Hatti is the name the Hittites used of themselves. As for the word 'Armenian', it is first attested in the Old Persian version of the inscription of the Persian king Darius the Great of 518 BC on the rock at Behistun above the main road from Media to Babylon, where he records his victories over the various rebellious chiefs of the satrapies of the kingdom, including Haldita and Arkha of the *armina*-. There is a bas-relief of the captives before the king on the rock, too; and a sealing with the same scene was found recently at a site that may have been the Achaemenian satrapal residence, near Gyumri (formerly Leninakan, Kumayri, Alexandropol) in the Republic of Armenia. Igor Diakonoff thought the latter term derived from the place name Arme-Šupria, from whose second half would come *som-ekhi*, the Georgian word for an Armenian. Another possibility would be a derivation from the base *arm*- of Armenian *armat*, 'root', meaning 'native, indigenous', in which case the term might originally have been applied by Armenian speakers to the majority of the population, which consisted of non-Armenian speakers; and by outsiders to the country as a whole. In the Babylonian text of the Behistun inscription, the equivalent of Armenia is Uraštu, better known from the Assyrian form Urartu, or Hebrew Ararat (which properly denoted the whole mountainous country where Noah's Ark came to land, not, as in later usage, its highest peak). And indeed the Urartians were the people indigenous to the land that became Armenia.

The Urartians called their country Biain-ili; and this name survives in Armenian Van (the city, which the Urartians called Tušpa; the latter persisted in Tosp, the Armenian name of the district around Van city). Assyria was Urartu's main rival: Šalmaneser III (861–51 BC) depicts on the Balawat gates the capture of Arzašku, on the northeast shore of lake Van, and the flight of the defeated Urartians into the mountains. Under Sarduri, Menua, and Argišti I, Urartu expanded, reaching the zenith of its power around 750 BC. The country's political fortunes waned thereafter, under the successive blows of Tiglath Pileser (744–27) and Sargon II (721–05). Subsequently, Urartu was invaded by the Scythians, and in 585 it fell to the Medes, whose capital, Ecbatana, is today the city of Hamadan on the western edge of the Iranian plateau. Thereafter, Armenia's development was bound up with Iran. But the Urartian component in Armenian identity is significant. Not only do very many Urartian toponyms survive in Armenian form (Biaina>Van, Tušpa>Tosp, Erebuni>Yerevan, Arzašku>Arčēš, etc.), but also, it would seem, do some proper names. One of the *armina*-conspirators against Darius I was named Khaldita, a name which contains the name of the chief divinity of the Urartian pantheon, Khaldi. The very common Armenian name Aram is probably a form of Urartian Aramu, the name of a king who reigned 860–40 BC. The regal dynastic clan Arcruni of the Vaspurakan region believed themselves to be descended from an eagle (Armenian *arciw*, *arcui*). The latter bird-name in Armenian probably is a loan from Indo-Iranian (cf. Sanskrit *rjipya*-, Avestan *ərəzifya*-), but it is

possible that it may have entered the language *via* Urartean, where Artsibi, meaning 'eagle', is attested as the name of a swift, royal steed (the swiftness of the bird of prey is the poetic cliché: Artasēs in an epic fragment rides a black steed swift as an eagle – the blackness is itself potent, for there is an Urartean fresco of a splendid black horse, and one recalls that the name of the Iranian hero Siyāvōš, attested in Armenian as Šawarš, means 'black stallion'). And there was a noble clan called Artsiuniuni in Urartu. Urartu began as a confederation of 'the forty kings of Nairi', of whom this family had been one. These were probably clan-based dynasts, and this decentralized form of power, well suited to a country broken by mountains into cantons isolated by the harsh winter snows, carried on into the high Middle Ages in Armenia with the institution of the *naxarar*.

Naxarar is itself a well-attested Parthian term from Old Iranian **naxwa-dāra-*, literally, 'holder of the foremost (rank)'; so the pre-existing institution acquired the name known to us from texts, in either the Artaxiad (190 BC to the early decades of the first century AD) or Arsacid (c. 50–429 AD) dynasties. Its importance to Armenian society cannot be overestimated. The Mamikonean *naxarars* were the hereditary commanders-in-chief of the Armenian forces; so the great Christian warrior-saint and martyr of the fifth century, Vardan, was of this charismatic clan. The Bagratunis, hereditary vassals of the Arsacids, claimed descent first from Tork' Angel (a divinity of dark and vast powers derived from Tarhundas, the Anatolian weather-god, whom Armenians syncretized with Nergal, the Mesopotamian lord of the underworld), and then, after conversion to Christianity, from the house of David: their name comes from Iranian *baga-dāta-*, 'God-given'. After the final eclipse of the Mamikoneans in the uprising against Muslim Arab occupation that culminated in the battle of Bagrewand in 775, it was the Bagratunis who forged new Armenian kingdoms in the north-central part of the country and built the great metropolis of Ani. The patriarchs of the Armenian Church, from St. Gregory the Illuminator in the early fourth century down to St. Nersēs Šnorhali ('the Graceful') in the twelfth, traced their lineal descent back to the Parthian noble clans of the Surēns and Pahlawunis.

Aspects of Armenian material and spiritual culture can be traced to Urartu. The Armenian word *cov*, 'sea, lake', is most plausibly from Urartean *tsue*, 'idem'. The words for mulberry, plum, and apple (*t'ut'*, *salor*, *xnjor*) derive from Urartean. Down to recent times, Armenian farmers used an Urartean irrigation canal at Artamet (Turkish Edremit, near Van) whose construction they attributed to queen Šamiram. The craft of the Armenian mason, characterized by finely joined, smoothly dressed stone façades, is probably an inheritance from Urartean work. The Armenians, long famed for their metalwork, learnt this skill, too, from the Urarteans: metallurgy on the Armenian plateau can be traced back to the Kura/Araxes and Trialeti cultures. The Urarteans, like other ancient Near Eastern peoples, often employed in their art the symbol of the Tree of Life: the latter figures

prominently in mediaeval Armenian songs and folk nuptial rites, of course with an overlay of Christian symbolism. There are Urartean metal figurines of harpies; and these creatures, often with additional Iranian features, are ubiquitous in Armenian sculpture and manuscript painting. The early inhabitants of the Armenian plateau carved cigar-shaped stones with sinuous figures of serpents and other creatures, apparently in connection with cultic observances connected with rivers. The Armenians call these stones *višap* – a Middle Iranian word for a poisonous aquatic monster – and tell stories about abductions of maidens by river-dragons. And their ancestors, carving the Holy Sign upon the stones, rechristened them as *xač'k'ars*, the 'Cross-stones' that dot the Armenian landscape, to which blood sacrifices are still offered. Steles inscribed with Urartean cuneiform were pressed into service as *xač'k'ars*, as well.

In the Van area there are a number of blind portals carved into the living rock, which the Urartians called Gates of God, believing that the god dwelt in the rock behind. In Armenian epic and folk-lore it is still believed that Mher, i.e., the Zoroastrian god Mithra, guided by a raven, zodiacal circle in hand, waits till the end of time behind one of these, the *Mheri durn* ('Gate of Mithra', Turkish *Meher kapişi*) at Van. On Ascension Eve, when Heaven is believed to open, so does the god's portal; and then he can be seen on horseback, covered with hair from head to toe like the Promethean wild-man of Caucasian lore. The Mher of folk epic is banished, and called Cain; but behind the Christian deprecation of the ancient divinity, who assumes the features of Antichrist (a feature the anti-clerical Bolsheviks eagerly adopted: in early Communist propaganda, it was proclaimed that Mher was loose at last and ravaging for joy), one can easily discern the main features of the Mithraic cult that was diffused across the Black Sea and over Anatolia to the Roman Empire. Mithra is an apocalyptic being in Iran; and the Roman Mithras is born of rock, a tell-tale Anatolian feature. In Armenian epic recitations, Mher's great-grandfather is rock-born.

The Iranian Medes destroyed Nineveh, capital of Assyria, in 612 BC. They overran Urartu – and thus Armenia – in 585. Memory of the conquest in Armenia is filtered through the Persian legends of the rebellion of Cyrus against the Mede Astyages. The name of the latter means 'spear-caster' (*Rštivaiga); but to the Persians, for whom he was a tyrant, it sounded like that of a mythical monster of the Avesta, half-man, half-dragon, Aži Dahāka; and the Armenians remembered Astyages by the Middle Iranian form of the monster's name, Aždahak. Media (*Māda-) becomes in Armenian *Mar-k'*, by a change of intervocalic -d- to -r-, but Armenian fabulists heard in this term Persian *mār*, which means 'snake', so the Medes become the *višapazunk'*, 'progeny of the Dragon', and the Armenian hero Tigran (the name is Middle Iranian) in a surviving fragment of oral epic easily assumes the standard Indo-European and Iranian role of the hero fighting the dragon to release a captive maiden (in this case his own sister Tigranuhi). Xenophon in his *Cyropaideia*, 'The Education of

Cyrus', mentions one Armenian, Tigranēs in Greek (from Old Persian **Tiγrāna-*, presumably), as a childhood companion of the Achaemenian, so it is possible that by Xenophon's time, at least, there were Armenian noblemen who bore Iranian names and attended at the Achaemenian royal court.

Alexander the Great bypassed the Armenian mountains in his haste to conquer the retreating armies of Darius III; and the Orontid (Armenian Eruandakan) satrapal house became vassals of the Seleucids. At Armawir in the plain of Ararat there were large inscribed stones with excerpts from Greek drama and the *Works and Days* of Hesiod, and mention is made of Pharnaces and Mithras, both common Irano-Greek dynastic names of Pontus. But there is little other evidence of Greek influence. After the Romans crippled Seleucid power in Anatolia at the battle of Magnesia (190 BC), two Orontid *stratēgoi*, Artaxias (Artašēs) and Zariadris (Zareh), shook off Seleucid suzerainty and founded independent kingdoms in Greater Armenia and Sophene. Xorenac'i refers to boundary-markers of estates (a common feature of Hellenistic society) of Artašēs, and some have been found, with his name in Aramaic inscriptions. He founded the city of Artaxata (Artašat, literally 'Joy of Artašēs') on the gentle hills of the valley of the Araxes at the foot of Mt. Ararat, which, classical authors report, the fleeing Hannibal helped him to design; and a medal has been found with a Greek legend, *dēmos Artaxisatōn*: 'municipality of the people of Artaxata'. Artašēs also brought Greek statues of the gods for the temples: for each Zoroastrian *yazata*, Xorenac'i lists one or more Greek equivalents. These have not been found, but other evidence from the area would seem to corroborate the veracity of Xorenac'i's report.

In the first century BC the Orontid king Antiochus of Commagene, a cousin of the Armenian royal house, erected two open-air shrines with altars and statues of the gods on Nemrut Dagħ, where there was also his sacred tomb (*hierothēsis*). Each statue is identified in a Greek inscription: Artagnes, i.e., the Iranian Vərəθraγna, Armenian Vahagn, corresponds to Herakles, just as in Xorenac'i's text; and a Greek bronze of Herakles found in Parthian Mesene has a later Parthian inscription on its thigh identifying the figure as the same Iranian divinity. The chief divinity of the pre-Christian Armenian religion was Aramazd, i.e., Ahura Mazdā, the Lord Wisdom of Zoroastrianism. His evil opponent, Angra Mainyu, the Frightful Spirit, is attested in Armenian as Haramani or, in a later form, Arhmn. There are various references, mostly indirect, to the seven Aməša Spəntas, the Holy Immortals; and the lesser divinities Vərəθraγna, Mithra, Anāhitā, and Tiri are attested in Middle Iranian forms: Vahagn, Mihr, Anahit, and Tir. The Syrian god Baʿl Šamīn, Lord of Heaven, was worshipped alongside Aramazd as Baršamin. Vahagn, who bears the epithet *višapak'al*, 'dragon-reaper', appears to have combined features of the Indo-Iranian divinity attested in India as Indra *vritrahan*, 'killer of the (dragon) Vritra (i.e., Opposition)' and the local Urartean divinity Teišeba (Hurrian Tešub). The

various temples were supported by estates; and those of Anahit were so extensive that the Greeks knew the province of Acilisene also as *Anaitikē khōrā*, 'the place of the Anahit (temple)'. The words for religious establishments were mainly Middle Iranian, as one might expect: that for a shrine was *mehean*, lit. 'place of Mithra' (cf. the modern Zoroastrian usage *dar-e Mihr*, 'gate/place of Mithra'); *bagin*, lit. 'of the god', probably was a shrine with a cult-image; and *atrušan* was a fire-temple, where the living icon of the Mazdeans blazed. Priests were called *k'urm*, though, an Aramaic term. An Aramaic inscription at Arebsun, near Nevşehir, describes the marriage of the Semitic god Bel to the Iranian *daēnā mazdayasnī*, the personified Good Religion of Mazdā-worship. Such syncretism was very much the usual pattern in Anatolia.

Reference has been made to the oral epic in which Artasēs marries Sat'enik. The same epic, as reported by Xorenac'i, refers also to the cursing by the king of his son Artawazd, who is subsequently captured by supernatural giants, the *k'ajk'*, while he is hunting on Mt. Ararat: they imprison him in the cleft of the mountain till the end of time. Dogs gnaw at his chains, and it was a custom for Armenian blacksmiths to strike their anvils thrice on the first day of the week, to strengthen the chains of Artawazd. Professor Nina Garsoian has suggested that a historical Artawazd who was taken captive by Mark Antony to Egypt, where he died in 35 BC, might have become in epic lore the occulted king. The legend finds an echo in the cursing of Little Mher by his father, David, in the Armenian Epic of Sasun, where Mher is confined till the end of time behind the Urartean Gate of God at Van. Epic theme has combined here with apocalyptic beliefs about the Zoroastrian *yazata*. One can reconstruct an entire, separate epic cycle about the Zariadrids to the west. Parts of it seem to have survived in Armenian balladry, and in the mediaeval Byzantine epic *Digenēs Akritēs*, whose locus is the Malatya region.

The most famous of the Artaxiad kings, though, was undoubtedly Tigran II the Great (95–56 BC), whose short-lived empire included Antioch; the Tykhē, or goddess of the fortune of that city, adorns the obverse of his tetradrachms, on which he styles himself *basileus basileōn*, 'king of kings'. Both written and oral epics about Tigran existed in early Christian Armenia, of which only fragments remain: it has not even been possible to identify with certainty the capital he founded near Amida (Turkish Diyarbakir), Tigranocerta (Tigranakert). Tigran forced thousands of Jews to migrate to Armenian cities: most of their descendants were exiled yet again, to Iran, by early Sasanian invaders in the fourth century AD, but some of the Jews of Armenia might have become the nucleus of the early Christian community there, as was the case elsewhere in Asia Minor. There is no indigenous Armenian Jewish community, however: Armenian and Christian identity quickly became inseparable, and the small Jewish communities of eastern Anatolia, most of whom lived close to the

Figure 2.3 Armenia circa first century BC

older, established centres in Syria and northern Iraq were Arabic- or Kurdish-speaking.

In the first century BC Armenia was a battleground for the Roman and Parthian Arsacid empires, with its cultural and political sympathies very much on the side of the latter. Armenia's alienation from Rome finds expression in Roman myth. In the *Aeneid* of Virgil, the hero receives a new shield whose design is a world map (as does Achilles in the *Iliad*); Aeneas's shiny new acquisition bears not the living, poignant cosmic map of Homer, but a self-conscious, propagandistic map of the Roman Empire, bounded not by the great stream of Ocean, but by the Araxes, which according to the historian Tacitus, 'suffers no bridges': Armenia is, irrevocably, part of the East. Plutarch expresses this same conviction in a vignette of barbarous splendour. When Crassus was killed by the Parthian general Surenas after the battle of Carrhae (modern Harran, just south of Urfa), a messenger brought the Roman's severed head to the banquet at Artaxata where the Armenian king was celebrating the marriage of his daughter to the son of the ruler of Parthia. A Greek actor named Jason, who had been entertaining the guests, seized the head and declaimed the speech of Agave in the *Bacchae* of Euripides as she holds up in triumph the severed head of her own son, Pentheus, who had denied the worship of the sensuous Asiatic god Dionysus. The import of the story is clear: the Oriental potentates might enjoy Greek culture, but they will never be part of the West – they are effeminate, cruel, luxurious.

The coming of Christianity to Armenia

Within a hundred years of the banquet at Artaxata, that is, by the mid-first century AD, Tiridates (Trdat), brother of the Parthian king Vologases (Valaxš, Armenian Vafarš), was on the Armenian throne. Christ's Apostles, tradition holds, had arrived shortly before, and the legend of their mission, deeply coloured by Artaxiad epic, was itself to serve as the literary template for the Apostolic legendry of Manichaeism. The Arsacid (Armenian Aršakuni) dynasty became firmly established in Armenia, despite constant Roman interference, both military and diplomatic, in the country's affairs; but in AD 226 Ardešīr, son of Pāpak, of the Sasanian house of Persia, overthrew the Arsacid Ardawān V. From the first, the Sasanians, who styled themselves successors to the Achaemenians and bearers of Iranian national renewal, sought to employ the militant Zoroastrian priestly hierarchy to impose a system of centralized rule and uniformity of cult. Such policies had been largely alien to Parthian society, and the Armenians, who in any case regarded the Sasanians as regicides and upstarts and felt bound to avenge Ardawān's blood, were now at war. Roman interests in the region prevented a decisive Sasanian victory; and the Persians were in any case as ready to woo as to fight the Armenians, knowing the way of life of the latter to be fundamentally similar to their

own. The reasons for the conversion of Tiridates the Great of Armenia to Christianity in the early decades of the fourth century are not clear. Iran strongly opposed the move, and was on repeated occasions to attempt to force the Armenians to return to the Mazdean fold, most notably in 449–83, in the war chronicled by Etišē *vardapet*, when Vardan Mamikonean was slain. If political considerations played a role, Rome at least would have had to approve, which would suggest a date of c. 325 or a little earlier during the reign of Constantine the Great, but Armenians traditionally hold the date of the Conversion to be 301, when they would have been entirely, rebelliously, splendidly, on their own.

St. Gregory the Illuminator baptized Tiridates: the father of the former was a nobleman, Anak Surēn Pahlaw, scion of one of the great Parthian families; and tradition thereby throws the weight of Arsacid prestige behind the act, which is itself safely enclosed in standard patterns of epic. At first, such Christian writings as there were in Armenia were in the Aramaic dialect of Edessa, Syriac, or, somewhat less frequently, in Greek; but at the end of the fourth century a restless, charismatic visionary named Maštoc' invented, for the first time, an alphabet for the Armenian language. The script was written, like Greek or Latin, in separate characters, from left to right, with the vertical strokes thick and the horizontal ones thin, and in all these respects the opposite of the majority of Eastern alphabets. The system of vowels derives, clearly, from Greek also, but many of the letters come from Aramaic prototypes, perhaps inspired in part by Manichaean experiments in the adaptation of the Aramaic alphabet to non-Semitic languages. With this invention, the establishment of schools for the training of priests, and the systematic translation of a vast corpus of Christian and classical literature into Armenian, the Christianization of Armenia, and its political orientation towards Christendom, became irrevocable. But the difficult position of the country, its relative remoteness from the West, and the proud sense of itself garnered over millennia of civilized development and the play of diverse cultural influences also ensured that, though Armenians might sometimes look to their co-religionists with hope, they were ultimately destined to stand alone.

Magic Mountains, Milky Seas, Dragon Slayers, and Other Zoroastrian Archetypes

JAMES R. RUSSELL

HARVARD UNIVERSITY

It is commonplace in the poetry of the Vedas, so closely akin in so many ways to the Avesta, to find “the reproduction in a hymn of the syllables of the sacred name which is the object of the hymn.”¹ Related to this phenomenon is de Saussure’s hypogram, which is “concerned with emphasizing a name, a word, making a point of repeating its syllables, and in this way giving it a second, contrived being, added, as it were, to the original of the word.”² And one links to the hypogram the *locus princeps*, “a tightly drawn sequence of words which one can designate as especially consecrated to that name.” This concept of a marked word, associated with one or more key phrases, that can be divided and deployed across a text, allows one to propose “an emanatist conception of poetic production,” in which the hypogram generates, as it were, the poem of which it is the crucial element.³ This technique might have arisen out of a more general desire for order and symmetry; and the “why” of the whole process could have been “superstitious belief”⁴—that is, religion. But it is also an aspect of the intellectual complexity of oral poetry and the culture that engenders it.

A similar method can be employed in the study of certain highly formal kinds of literature where conservatism is preferred, complexity is appreciated, and the use of *mythologemata*—defined mythological types and episodes, with their marking motifs—is expected by an audience. The heroic epic, with its high social importance, close association with sacral tradition, and roots in the arts of oral poetry, is an ideal genre for the use of these methods. So one pro-

poses thus to consider several examples from the corpus of Armenian heroic epic and its remoter poetic descendants in hagiographical legend and folk magic, within the context of the Zoroastrian mythology and pre-Islamic Iranian epic in which Armenian culture is steeped. One hopes thus to present new appreciations of these works as literary art that delights the intellect, and to demonstrate the long and powerful endurance in literature of the images and values of the Good Religion of Ahura Mazdā, the Zoroastrian faith, in Armenia, the only Christian society and culture for which that faith is the ancient substratum.

Vahagn’s Birth

Scholarly opinion seems irreconcilably divided as to the period in which Movsēs Xorenac’i (= MX), called by subsequent writers the *patmahayr*, “Father of Histories,” lived: proposed dates range from the *oskedar*, or “golden age” of the fifth century A.D. to the eighth or ninth. But the value and antiquity of the oral texts of epic that he heard and recorded from the *gusans*, the minstrels, is indisputable. One ancient poem he claims to have heard recited to the accompaniment of the *p’andiṛn*, a stringed instrument like a lute, describes the birth of Vahagn, that is, the Zoroastrian *yazata* of victory and strength Varəθrayna- (Sgd. Wašayn, Hellenized Commagenian Artagn(ēs), Mlr. Varatrān, Varahrān, Bahrām) (MX 1.31).⁵ It belongs to a larger epic cycle on the hero-king Tigran.

*Erknēr erkin, erknēr erkir,
Erknēr ew covn cirani.
Erkn i covun unēr
Ew zkarmrikn eḡegnik:
Ānd eḡegan p'ōḡ cux elanēr,
Ānd eḡegan p'ōḡ boc' elanēr,
Ew i boc'oy'n vazēr
Xarteaš patanekik.
Na hur her unēr,
Boc' unēr mawrus,
Ew ač'kunk'n ēin aregakunk'.*

"Heaven was in labor, earth was in labor,
Labored too the purple sea.
The labor in the sea held
Also the little red reed.
Along the reed's shaft smoke ascended;
Along the reed's shaft flame ascended—
And from the flame darted
A golden-tressed little youth.
He had hair of fire,
Fiery he had a beard,
And his little eyes were sun-orbs."

The text goes on to relate the exploits of Vahagn, whom the historian likens to Herakles, in slaying dragons: he plunges into the sea (for Armenians, this is the deep and vast Lake Van, in the heart of their country) and kills only those who have grown large enough to swallow the earth. So for this reason perhaps he is acclaimed, not by the precise equivalent of *vṛtra-hān-/vərəθra-ja-*, as though he were a smiter of adversaries in general, but rather more selectively as *višapak'ač'*, "dragon-reaper"—though this still seems a calque upon his Iranian name itself, perhaps from an Armenian *zand*, or local vernacular translation and commentary of Avesta. The temple of Vahagn at (Y)Aštišat in the hills above Muš, some fifty miles west of Lake Van, was the most important shrine of pre-Christian Armenia: its name, meaning (though the etymology is disputed) "rich in yašts," evokes the wealth and vitality of the place. After the baptism of the nation, the monastery of St. John the Forerunner, Arm. *Surb Yovhannēs Karapet*, built on the site, was the principal object of pilgrimage after Jerusalem and remained so down to its destruction by Kurdish irregulars and Ottoman army troops before and during the Armenian Genocide of 1915. The hymn of the god's birth does not correspond to an existing text in the Zoroastrian canon, but aspects of it are closely akin to the Vedic traditions of Indra and the Puranic ones of Karttikeya,⁶ and it may thus

reflect a tradition of "peripheral" Iran now lost to the Parsi and Irani communities. Though it deals with the birth of a Zoroastrian *yazata*, it utilizes densely the distinctive, native poetic resources of Armenian, where both heaven (*erkin*) and earth (*erkir*) contain the element *erk*- "two," extended here in phonetic and semantic play to parturition—the verb *erkn-em*. When the third element, the sea (*cov*), is introduced, the discordant new sound *ts-* is underscored by the epithet *cirani*, /tsirani/, "purple," yet the dominant pattern is recapitulated in the strophe by encoding: *Erkn i covun unēr* > *erknēr*, "labored."⁷ In this hymn of birth, *erkn* "labor," is the formative hypogram. Of importance also are the colors, purple and red (*karmir*) and blond (*xarteaš*), all expressive of fiery energy; and the image of fire burning in the element that is its contrary, water, is a supernatural feature that is striking to the listener. Air, earth, fire, and water all labor together for the young, fully formed god (he has a beard) to spurt forth from his submerged shaft ready to smite dragons and to personify victory.

Though Xorenac'i assures us that the remarkable little poem is about the birth of Vahagn, the name does not appear there plainly. But the method of analysis one proposed to employ reveals that the Armenian name of the *yazata*, Vahagn, as it was pronounced in Xorenac'i's time, or, more likely, as it would have been known to Armenian Zoroastrians of the Parthian era, **Varhagn*, may indeed be encoded into the alternate lines (first, third, and fifth) of the final five lines of the hymn—the latter half of its eleven lines—in which he is described. These are also the lines that stress his fiery nature: *VĀzēR—HuR—AreGakuNk'*. (The intervening second and fourth lines, by contrast, emphasize his anthropomorphic qualities: *patani*, "boy," *mawruk*, "whiskers"). Note that the final part of his name in encoded form is doubly paronomastic, since the line, *Ew ač'kunk'n ēin aregakunk'*, contains the plural of *akn* "eye" (*ač'k*, with its diminutive) and that of *akn* "source" (in the marked compound term consisting of *aregi*, gen. of the unmarked *arew*, "sun," with "source," yielding *aregagn*, here in its plural). Arm. *akn* as "source" usually means a spring of water, as in the pleonastic *akn-aḡbiwr*, "source-spring"; so the coding not only recapitulates the play on duality of *erkin/erkir—erknem*, but also, through the allusion to water, refers one to the third image, that of the sea. Arm. *akn* has a third meaning, too,

in addition to “eye” and “spring”—“jewel.” The pearl, a hard, precious, shining jewel born mysteriously of the sea, is an enduring and complex symbol in several Near Eastern traditions, including religions of pre-Islamic Iran and Armenia. It might have additionally echoed in the imagination of the hearers of the hymn, for whom the sun was both spring of light and the jewel-like orb of heaven, born every dawn from the sea.⁸ We may now observe how an Armenian epic fragment, formed entirely upon the template of Iranian epic and steeped in the terminology and values of Zoroastrianism, uses hypogramatically the hymn of Vahagn to associate its royal hero, Tigran, with the divine dragon slayer. Subsequently, an Armenian warrior, Vasak Mamikonean, drawing upon the imagery of the epic of Tigran in turn, will encode his own name into a riddle-boast.

The Parents of the God

The hymn does not say who the mother and father of the god actually were. In Zoroastrian belief, the father of all mankind is *Ahura Mazdā*, the Lord Wisdom; and our mother is the *Aməša Spənta*, “Holy Immortal” *yazata* of the earth, *Spəntā Ārmaiti*, Holy Devotion: in Armenian, *Aramazd* and *S(p)andaramet*. But the patroness of childbirth is the *yazata* called *Arədvī Sūrā Anāhitā*, the Watery, Powerful, Unblemished one, who sits on the axial mountain *Harā Bərəzaiti*, high Harā—her cult epithet in one Anatolian inscription is thus, in Greek letters, BAR-ZOXAPA, Barzokhara, from **bərəzō.harā-*, “she of high Harā.” From the summit of the axial peak where this mighty, beautiful, gigantic woman is enthroned, the waters roll down to *Vourukaša-*, the sea “of broad shores,” called the “sea of milk,” *kṣīrasamudra-* in the Sanskrit translation of the Avesta. The pre-Christian Armenians hailed Anahit as *mayr amenayn zgastut'eanc'*, “mother of all modesties.” She, her mountain, and her sea, will also figure in the dream visions of the epic motifs to be studied.

The Armenian Epic Cycles

Movsēs, who recorded the hymn of Vahagn, is also our principal source for the epic cycle of the Artaxiad dynasty of the second and first centuries B.C., though there are a few passages preserved by

other writers.⁹ It begins with the heroic deeds of the founder, Artaxias I (Artašēs), and his kidnapping on the banks of the river Kura of the Alan princess Sat'enik (i.e., Satana, mother of the Nart heroes of Ossetic lore).¹⁰ It continues with the wars of Tigran against the Mede Aždahak, and ends with the occultation of Artawazd till the end of days in Azat Masik'—Greater Ararat. The material of the Artaxiad cycle, reshaped and crystallized around the epochal resistance of the Armenians to the Arab Caliphate in the ninth century A.D., re-emerges as the Epic of Sasun. The lady Covinar bathes in Lake Van, drinks of a milky fountain spurring from a rock that rises out of its waters,¹¹ and duly gives birth to the first heroes, the unequal twins Sanasar and Baḏasar: her impregnation is in most respects the same as the Alan Satana's; and the milk of the sea is simply semen. The battle of David of Sasun (Sasunc'i Dawit') with the Arab tyrant Msramelik' is parallel again, to Tigran's war with the Medes and their ruler Aždahak; and the confinement till the end of time of P'ok'r Mher—Mithra the Younger—in Ravens' Rock (*agtawuc' k'ar*) at Van recapitulates the apocalyptic conclusion of the Artaxiad narrative. Armenia was largely Zoroastrian till the early fourth century: the aspects of the two characters bearing the name Mithra in the Epic of Sasun, taken together, provide a verbal *tableau vivant* of the episodes and values that evolved into the Mithraic cult. Ahura Mazdā, Miθra, and Anāhitā—Ohrmazd, Mihr, and Anāhid—form the triad of gods frequently invoked by the kings of Zoroastrian Iran, though *Vərəθraγna*—Bahrām—remains extremely important. In Armenia one word for a pre-Christian temple is *mehean*, literally “the place of Mithra,” corresponding to the recent Persian usage *dar-e Mehr*, the place where rite of the *yasna* is performed; but the Armenian triad consists of Aramazd, Anahit, and Vahagn, not Mihr.

There are two famous kings named Tigran in Armenian history, and the oral bards apparently conflated them and their epic deeds. The first was the friend of Cyrus known to Xenophon; the second, Tigran II the Great, who reigned in 95–56 B.C.: his short-lived empire included much of Syria and Atropatēnē—ancient Media. The name of the Median king, Astyages in Greek, whom Cyrus the Great defeated, was probably **Rištivaiga-*, “Spear-caster,” in his native tongue. But the ideology of the epic of dynastic ascent and legitimization requires that the old ruler defeated be a

paradigm of evil or misrule. The investiture relief of Ardešīr I at Naqš-e Rostam shows the hoof of the king's mount trampling the head of the defeated Arsacid Ardawān V. The new monarch receives the ring of divine favor from the hand of a mounted, anthropomorphic Ohrmazd facing him, whose horse crushes the serpent-wreathed head of the prostrate arch-demon Ahreman. The language of symbols could scarcely be more lucid; and the Armenian compound *smbaka-kox*, "hoof-trodden," is the easiest *ekphrasis*.¹² Now the name of the king Astyages, whom Cyrus overthrew, sounds like Av. Aži Dahāka, MPers. Aždahāg, Arm. Aždahak, the serpent-man personifying tyranny and misrule whom Thraētaona (MPers. Farēdōn, Arm. Hrudēn, and Armenian-in-Greek Rhodanēs, in the *Babyloniaka* of Iamblikhos) defeated and imprisoned in mount Damāvand. In Armenian the word for a Mede is *mar*, which results from the shift of intervocalic *-d-* to *-r-*, but sounds serendipitously like Persian *mār*, "snake." Xorenac'i calls the Medes also *višapazunk'*, progeny of the dragon (*višap*). Thus Tigran takes the place of Cyrus and in his epic he becomes, as the conqueror of Aždahak, a champion against a dragon, like the "dragon-reaper" and paragon of victory Vahagn *višapak'až*. Let us consider very briefly two Iranian epics of investiture relevant to the narrative about Tigran: the story of Cyrus in the *Histories* of Herodotus and the *Res gestae* of the first Sasanian king, Ardešīr. Then we may observe how the Armenian oral epic, while formed by the Iranian model, encodes key images from the hymn of the birth of the *yazata* into the *Geste* of Tigran.

Cyrus and Astyages

Astyages the Mede (Herodotus 1.107f.) dreams first that his daughter Mandanē floods Asia. Alarmed by the explanation offered by his dream-interpreters, he marries her off to a Persian named Cambyses and after a year dreams again that vines growing from her private parts overwhelm the continent. No mountain here, but the woman is evidently a giantess. When the dream-interpreters inform him that her offspring will overthrow him, the king entrusts the little Cyrus to a trusted servant, Harpagus, to kill. The latter hands the baby over to a cowherd (*boukolos*) Mithradates and his wife Spacō (an Iranian name that, Herodotus informs us, means "bitch") in the land

of the Saspeiroi, that is, the province of Sper in Armenia—and they save him. Several playmates choose the one called the cowherd's son (*touton dē to tou boukolou epiklēsin paida*) as their leader. When he flogs one of them, the son of the noble Mede Artembares, for insubordination, the youth complains of the *boukolou pais* to his father, who exclaims to Astyages, about having been thus outraged (literally, been made hubris of, *periubrismetha*) by "your servant the cowherd's son" *tou sou doulou boukolou de paidos*. The designation "cowherd's son" is, thus, used thrice: this is a powerful way of marking the lowly status of Cyrus. But the latter returns home, grows up, raises an army, and overthrows Astyages. To the Iranian audience of the epic from which Herodotus drew and embellished his narrative, the Avestan myth of the defeat of the dragon-man and his imprisonment in the mountain would probably have been understood as the implicit substratum, the old story on which the new one was patterned, whose details would then be subconsciously imposed on the imagined scene. As we shall see, the motifs of dream, mountain and fecund woman, flight, demotion, and dragon-fight are to be variously encoded into successive epic iterations of the theme.

Ardešīr and Ardawān

The second Iranian epic to be considered here, the chronicle of the overthrow by the Persian Sasanians of the Arsacid Parthian dynasty in the third decade of the third century A.D., *Kārnāmag ī Ardešīr ī Pāpakān*, "The Book of the Deeds of Ardešīr, son of Pāpak,"¹³ is patterned largely upon the *Sage* of Cyrus. It seems to have reached completion in its present form, perhaps two centuries after the highly mythologized events it describes. The signs of the birth of Ardešīr in the text are much the same as those found in the seventh book of the Pahlavi *Dēnkard* that herald the nativity of Zarathustra: *Pāpak šab-ē pad xwamn did čiyōn ka xwaršēd az sar ī Sāsān be tābēd ud hamāg gehān rōšnīh kunēd. Any šab ēdōn did čiyōn ka Sāsān pad pīl-ē ī āraštag ī spēd nišast estād ud harw kē andar kešwar pērāmōn ī Sāsān estēnd ud namāz qwiš barēnd ud stāyišn ud āfrīn hamāg kunēnd. Any sidigar šab hamgōnag ēdōn did čiyōn ka Ādur Farnbag, Gušnasp, Burzēn Mihr pad xānag ī Sāsān hamāg waxšēnd ud rōšnīh*

ō hamāg gehān dahēnd. "One night Papak saw in a dream how the sun was shining from the head of Sasan and making the whole world shine. The next night he saw how Sasan was seated on a caparisoned white elephant and everyone who was in the clime stood around him, bearing worship to him and offering continuous praise and blessing. On the next, third night he saw in the same fashion how the sacred fires Farnbag, Gushnasp, and Burzen Mihr all were blazing in the house of Sasan and giving light to the whole world." The wise men (*dānagān*) and dream-interpreters (*xwamn-wizārān*) of Papak explain to him that the Sun and elephant represent courage, strength, and victory (*čērih*, *tuwānagih*, *pērōzih*). These are attributes of Vərəθraγna/Vahagn/Bahrām: in Armenia he is insistently associated with the sun; and, as we shall see presently, the ninth-century author of a Pahlavi poem of the apocalypse is to envision Bahrām ī Warzāwand, "the Miraculous," coming on a white elephant to liberate Iran. The *yazata* is not directly mentioned in the passage, then; but his presence may perhaps be felt. And later on in the text, Ardešir is to slay a mysterious, dragon-like adversary, as well.

The three sacred fires (of Persis, Atropatene, and Parthia), the interpreters of dreams continue, signify the three castes of Iranian society, all of which legitimize the house of Sasan together. Now Papak is governor of Persis; but Sasan, a mere shepherd in his service, is a descendant of the Achaemenian king Darius (*Dāra ī Dārāyān*)—during the troubled times of Alexander's misrule, we are informed, the royal family, much reduced in circumstances had fled to live among the Kurdish shepherds (*Kurdiḡān šōbānān*) to the north-west. This detail recapitulates the *topos* of the sojourn of Cyrus among the Saspeiroi—that is, also in Armenia. Since Armenia was traditionally the appanage of the Iranian crown prince, the detail signifies also immanent ascent to the throne.

Papak summons Sasan after the dream and gives him his daughter in marriage, and they have a son. By fifteen, the archetypal age of youth in its full bloom in Iranian culture, Ardešir shows great proficiency in learning (*frahangih*) and riding (*asabārih*). He is accordingly summoned to attend as a page at the court of the Arsacid Parthian king, Ardawān; and, predictably, usurps the prerogative of the king's son by closing in on the kill first during a hunt. For this act of *lese majesté* Ardawān Ardešir *rā ō axwarr ī stōrān*

frestēd "sends Ardešir to the stable of the beasts of burden." Following this potently coded and immediately recognizable act of humiliation—one recalls the threefold emphasis of Herodotus on Cyrus as the "cowherd's boy"—Ardešir takes his revenge by escaping with the king's favorite concubine (*kanizag*) on two fast horses. By nightfall they meet two women: these are seers who appear in epic to offer important advice—who tell them to ride till they reach the sea (*daryā*). Then they will be safe. Over the next three days a ram, the incarnation of divine fortune (Av. *xvarənah-*, MPers. *xwarr*, Arm. l-w *p'atk'*, from a Mlr. reflex of Olr. **arnah-*), gradually overtakes and joins them. At this point, Ardawān's Magi tell him, there is no use in the pursuers tiring out (*ranjēnidan*) their horses: the doom of the Arsacid house is sealed.

Although the phrasing of the text, with its frequent repetitions, preserves the memory of an oral source—there is an earlier, terse version of the *Kārnāmag* at the beginning of the history of the conversion of the Armenians attributed to Agathangelos—it is plain that the author has elaborated a work of Sasanian propaganda as well: the ranking of the three fires and the demotion of the third, Parthian one to the low estate of the herdsmen (*vastryōšān*), is a tendentious treatment of the symbolic triads ubiquitous in epic composition. That is to be expected in a work intended to have political importance, where symbols will represent countries: in the epic of Tigran, there will be three mounted warriors conquering realms to the north and west, as well as Iran in the south. And in another iteration of the tale the twin peaks of Ararat, as we shall see, will be pressed into service as representations of Greece and Persia. But what is the significance of Ardešir's headlong flight to the sea? It has neither political, nor thematic, nor apparent symbolic meaning. If one recalls the collaboration of heaven, earth, and sea in bringing forth fiery Vahagn, though, perhaps here the sea (*daryā*) that will seal the fortune of the once and future king is intended to complete the triad whose first two elements are the divine radiance (*xwarr*) from heaven that alights on him and the earth upon which he superbly and swiftly rides. The regnal fire of the Sasanians at Staxr was Ādur Anāhid; so if the image of the sea recalls Vourukaša, then the image of the goddess so important to the dynasty, and to the *topos* of birth, may be encoded into the text as well.

Tigran's Triumph

Now let us consider the epic narrative of the Armenian king Tigran the Great. The first suggestion in the Armenian text of the presence of Vahagn is in Xorenac'i's description of the king (MX 1.24) as *xarteašs ays ew aṭebek cayriw herac' eruandean Tigran*, "this Orontid Tigran, golden-tressed, with grey breaking at the tips of his locks": Vahagn is blond, *xarteaš*, as well, the term encoding also the color and blaze (Arm. *xar*-, "burn," *xaroyk*, "fire") of fire that pervades the poem, whilst *cayr* "edge" and *bek*- "break" evoke perhaps the gray foam on the breaking waves of the *covn cirani*, the purple sea, in which the Zoroastrian god is born, and in which he fights and defeats dragons as well. Arm. *aṭi*-, "salt, gray" in this period will not have been phonemically distinct from *ali-k*-, "wave," too. The passage may also acrophonically encode the name *Varhagn—again with the pronunciation of the name of the *yazata* that Armenian Zoroastrians would have employed in the Arsacid period.¹⁴ The references to the sea here and later, since it does not figure in the war, are to be oblique and elusive. But they are still necessary, I think, because the three parts of the visible cosmos, sky, earth, and sea, must come together for the cosmic legitimization of a king.

These glancing allusions to the sea continue. Aždahak—the epic villain whose Middle Iranian name in Armenian is a fusion of that of Astyages and that of the Iranian serpent-man monster-tyrant, making him a kind of ideological as well as physical *Mischwesen*—has a fearful monitory dream. Though it is not the same dream as the one in the *Histories* of Herodotus, a work with which the Armenian writer was most likely not familiar, it is still similar to the Greek material. This argues for both filiation and authenticity: the Armenian epic draws from the Iranian traditions cited by Herodotus and did not arise independently, and the dream is neither the Armenian writer's invention nor a learned calque upon an unrelated Biblical or Classical episode. It is what he says it is. One is struck by the degree to which the Armenian oral epic tradition to which the narrative properly belongs has imposed upon the basic material of the dream both a native locus (the hero is Tigran, not Cyrus) and a linguistic patterning based upon the hypograms of the song of the birth of Vahagn. The latter is cited, indeed, by Xorenac'i as part of a larger epic

cycle about Tigran; so the encoded material likening the hero-king to the hero-god in their essential aspects is part of the rhetorical argument of the Armenian epic. Vahagn slays dragons; and Tigran slays a man-dragon. And the authenticity of the passage argues additionally for the integrity of the narrative cited by the Armenian historian as a whole—the poem about Vahagn cannot have been a mere interpolation, despite its taut poetic structure so different from the style of the contextual material; nor did Xorenac'i cobble together the narrative by himself.

Xorenac'i's introduction to the dream sequence, then, sounds several marked terms: *i sastkut'enē cp'anac' xorhrdoc'n linēr nma i teslean erazoc'n erewut'anal i k'un*, "from the severity (< *sastik*-) of the billows (*cup*) of [secret] thoughts (*xorhurd*) it happened to him in a vision of dreams (*eraz*) to become manifest in sleep" (MX 1.26). So he summons his advisors and speaks to them *yerkir hayelov i xoroc' srtin*, "staring at the earth, from the depths of his heart."¹⁵ Arm. *sast-em*, an Iranian loan, means to issue a stricture, a severe command; so the strength of the waves perhaps implies in anticipation the severity of the decree of destiny against the dreamer. The waves of this sea are deep, as is the counsel to be derived from them: as we shall see presently, Arm. *xorh-urd*, "thought, mystery," is often treated in Armenian tradition in a folk-etymological fashion as though it contained also the Iranian loan *xor*, "deep," also used in the passage; and Arm. *eraz*, "dream," derives from Mlr. *rāz*, "secret," a term associated with hidden depth. The word *cup* /*tsup*/, "billowing," the action of waves, encodes the intrusive sound *ts* of /*tsov*/ and /*tsirani*/. Although the historian probably composed these introductory lines, he might still have borrowed its imagery from the preliminary praise-song of his oral source, and the images alert the good listener to the encoded images to follow in the description of the dream.

The Median king in his dream finds himself "in an unknown land (*yerkri*) near a mountain long from the earth (*erkar yerkrē*) in height, whose summit seemed encased in the severity (*sastkut'eamb*) of ice; and they said, you would think, this is in the land of the progeny of the Armenians (*haykazanc*). And as I looked longer (*erkaragoyns*) at the mountain, a woman clothed in purple (*ciranazgest*), having a veil of heavenly color (*erknagoyn*) about her, appeared seated on the edge (*i cayri*) of such a height, lovely, tall in

stature, and red-cheeked (*karmrayt*), gripped by the pains of giving birth (*erkanc'*). And I looked longer still (*yerkaragoyns*) at this apparition and was in wonder, suddenly the woman gave birth (*cnaw*) to three fully-grown men (*eris katareals*) of the stature and nature of the progeny of the gods (*diwc'azanc'*). The first, gripping the flanks of a lion upon which he was mounted, sped west; the second, on a leopard, headed north; but the third, reining a monstrous dragon (*zvišap anari*), advancing upon our realm, attacked."

The one on the dragon comes on, as though on eagle's pinions, he and Aždahak fight, first with spear-tipped lances (*i tēg nizacak'*) and then with other weapons, and the Mede, he whose name really was Spear-caster, is killed. The sound-symbols of the hymn of the birth of Vahagn inform fully the poetics of this dream vision, with *erkn*, "labor," as the generative hypogram: most prominent is the phonetic and thematic play of the duality of heaven and earth, *erkin* and *erkir* with their common element *erk*- "two," encoded into the process of parturition (*erk-anc'*) as in the hymn. Here the play is extended to include the word *erkar*, "long," used in the normal sense of duration twice, but also of height. And after several iterations of it, the word is acrophonically encoded into the phrase *eris katareals*, the three fully grown, literally, perfected, men. Moreover, the latter Arm. word *katar*, "perfect" can mean also the summit of a mountain, further enforcing and extending and echoing the image. And one recalls that Vahagn was born perfectly formed, too. (This is not a trivial coincidence since it does not have to happen that way, with gods: Hindu mythology has both the mature Kṛṣṇa and his boyhood persona, Bālakṛṣṇa.)¹⁶ The colors *cirani* "purple" and *karmir* "red" of the hymn are here applied to the woman giving birth. There is no sea; but in its place is the breaking of water in birth pangs, as well as the water issuing from the flanks of Mandane in the dream of Astyages related by Herodotus. The sons of the Armenians (*hayk-azn*) are equated rhetorically with those of the gods (*diwc'azn*); and one of them, Tigran, is indeed like Vahagn the dragon-slayer, though he is riding a *višap* instead of killing it. The dragon is described as *anari*, "monstrous," an epithet that can be analyzed to mean either "non-Iranian" (with *ari*), or "un-manly" (with *ayr*). The Armenians of the pre-Christian era probably were considered to belong to Erān, though after the overthrow of the Parthian Arsacids in Iran proper and the Conver-

sion in Armenia they were Anērān—non-Iranian. But the hybrid dragon-man Aži Dahāka is to the propagandists of his victorious enemies both non-Iranian and sub-human, hence the appropriateness of the usage here, perhaps, of the mounted dragon-with-man (and Armenians call a horseman *ayr-u-ji*, lit. "man-and-horse"). Aždahak is seeing himself not just conquered, then, but mounted and ridden, much as Ahreman is in Avestan lore by Taxma Urupi! Tigran is also marked as the third hero, corresponding thus to the Avestan conqueror (but not slayer!) of Aži Dahāka, Θraētaona son of Āθwya—in M. L. West's felicitous rendering, Mr. Third McWaters.¹⁷ So Tigran here is encoded as Farēdōn here, as well as, of course, Vahagn, by visual placement and theme rather than by name.

The "long" mountain that is also high is presumably Ararat, with its twin, snow-bound summits, one for each titanic foot of the giant woman all red and purple and sky-blue, its flanks stretching across the plain. The woman is multiply marked by the signal sound of *cov*, "sea" and the *locus princeps* of its epithet, *cirani*, "purple": she sits on the mountain's edge (*cayr*) and gives birth (*cnanim*). The choice of "edge" to anticipate "summit" (*katar*), a word artfully employed above, may perhaps allude to the sea of wide shores or edges, Vourukaša, over which the goddess of fertility, Anāhitā, presides on her high mountain.

Vasak's Boast

Long after the end of the Artaxiad dynasty, the memory of Tigran endured and his name attained proverbial status: the fifth-century Armenian translator of the *Grammar* of Dionysius Thrax was to employ it in rendering "Hector" in the Greek. In the third century A.D. the Iranian Arsacids fell; the line was to endure in Armenia through the Christianization of the country, but it, too, was not to withstand the Sasanians' power. A fifth-century writer named P'awstos set down a history of the wars in the preceding century of the last great Armenian Arsacids and of the commanders-in-chief of their armies, from the *naxarar* clan of the Mamikonians (for every Agamemnon must have his Achilles) against the Sasanian Shapur II (Arm. Šapuh, MPers. Šābuhr). The title, *Buzandaran*, is something of a mystery and can mean either "a repository of narratives belonging to the Byzantine," if that is where our

Armenian Faustus hailed from (some of his narrative was indeed known to later Byzantine Greek historiography), or perhaps “epic histories,” from a form putatively reconstructed as deriving from an OIr. compound **bavaṭ-zanta-*. It is at any rate indisputable that the *History* is at many points pure heroic epic. And it draws from precisely the hypogrammatic patterns we have seen elaborated in the episodes of the epic of Tigran and Vahagn cited by Xorenac’i.

In 4.54, Shapur, entertaining the brave, captive Armenian king Aršak II, is advised by the Magi secretly to sprinkle Armenian earth over half the ground of the banqueting pavilion. Shapur leads his guest around, and sure enough on his native soil the Arsacid, who has meekly sued for peace, declares his true intention to wrest the Iranian throne from its Persian usurper. Later on, Shapur seats Arshak at the foot of the table, instead of at the head, as protocol would require. Arshak, again on the Armenian soil strewn earlier upon the floor, rises to his feet and demands Shapur surrender his own seat. The latter has Arshak chained by the neck and cast into the prison near modern Dizful known as the Fortress of Oblivion (Pers. *Andimišk*; Arm. *Andmōšn/Anuš berd*). The dominant mythological image of the several scenes of this episode is native soil giving strength to a man: we know it best from the story of the Greek giant Antaeus. It both parallels and foregrounds, if you will, the second half of the chapter, in which Vasak Mamikonean, the captured commander of the Armenian army, is brought before the Persian king. The noble dynastic house, or *naxarar-dom*, of the Mamikoneans, held the hereditary office of commander-in-chief (Arm. *sparapet-ut’iwn*, from Mlr. **spāda-pat*, cf. Pers. *sepāhbod*, etc.); and the epic of the Mamikoneans forms a parallel strand to that of their Arsacid lords in the *Buzandaran*, much as the *Šāh-nāme* will celebrate the hero Rostam. There is in the text even a praise song in which the three aspects of Vasak’s Mamikonid valor seem to be modeled upon the Zoroastrian ethical triad of good thoughts, words, and deeds.¹⁸

On the morn, then, Shapur “began to punish¹⁹ him [Vasak]. Since Vasak was small in person, the king of the Persians, Shapur, said to him, ‘Fox (*aṭuēs*), you were the troublemaker who vexed us so much. You are the one who killed Iranians (*ari-k’*) for so many years. But what will you do

now? I will kill you like a fox.’ But Vasak replied, saying, ‘Now, when you see me small in person, you have not taken the measure of my greatness, for till now I was a lion to you, and now a fox. But when I was Vasak, I was a giant (*skay*).’²⁰ My one foot stood on one mountain, and my other foot stood on [another] mountain. When I leaned on my right foot, I brought the mountain on the right down to the ground. When I leaned on my left foot, I brought the mountain on the left down to the ground.’” Shapur asks what the two mountains are, and Vasak explains one was the king of the Persians; the other, the king of the Greeks. He adds that when the Armenian Christian patriarch Nersēs was alive, “his counsel abided with us and we knew how to give counsel to you” (*xrat nora ekac’ ar mez, gitac’ak’ tal k’ez xrat*); but now the Armenians “have fallen with eyes wide open, of our own accord, into a pit” (*mezēn ač’awk’ bac’awk’ ankak’ i xorxorat*). After this rueful admission, the commander is flayed alive; and his hide, stuffed with straw, is taken to the Fortress of Oblivion.

Vasak’s intricate retort forces his interlocutor to ask that the riddle be explained; and it works on several other, interlocking levels of thematic and poetic intricacy to which the skilled hearer of oral epic will have been attuned. Riddles, like those posed by the sorcerer Axti to the youngest of the Parthian Friya clan, *jōišt i Friyān*, in the short Pahlavi text named after the latter, are in Zoroastrian tradition not just a game but a deadly duel, resulting at the end of the narrative in the death and damnation of the wicked magician. Puzzles—a kind of visual riddling—are the stuff of high-level diplomatic confrontation, too, as in the Pahlavi *Wizārišn i čatrang*, “The Explanation of Chess”: the Indian king sends the game to the Sasanian Xusrō I *Anōšag-ruwān*, demanding tribute if the Persian cannot figure it out. Fortunately the court sage Wuzurg-Mihr does so, and goes on to baffle and humble the Hindu monarch by sending him—a backgammon set. So this paradigm from the wisdom literature of the Ancient Near East generally and Iran in particular of the riddle informs confrontation between the Persian king and the Armenian general and presupposes the participation of a holy man or wise counselor: in this case it is St. Nersēs, distinguished by his absence.²¹

Shapur’s mockery opens with the word *aṭuēs*, “fox”: this chief image provides the phonetic

code, the hypogram, to be recapitulated, divided, and elaborated in Vasak's reply. It is justified by the Armenian prisoner's short stature—but this is itself an epic *topos*. Josephus, writing in the first century A.D., relates in his *Jewish Antiquities* (*Ioudaikē arkhaiologia*, 18.314) a tale steeped in Iranian epic tradition: Asinaios and Anilaioi, two brothers from Nehardea, Parthian Babylonia, are sons of a widow. Apprenticed to a weaver and punished with a whipping, they react to the indignity (Gk. *hubris*) by obtaining weapons and gathering youths of the lower classes to fight with them. Calling themselves generals, they establish a fortress and defeat a Parthian force. The Arsacid king Ardawān, duly impressed, invites them to court, but only Anilaioi, the braver of the two, comes. When the courtiers mock the youth for his diminutive stature, Ardawān reproves them, saying the Jewish fighter has a soul greater than his body (*hōs meizona en tēi parathesei parekhato tēn psychēn tou somatos*).²² The rhyming names of the two recall Sanasar and Baldasar in the Armenian Epic of Sasun, as well as other unequal twins elsewhere; and of course the hero can be killed only by treachery. So in the *Buzandaran* the key word is reinforced by a stock image and setting.

Vasak in his boastful reply to Shapur's humiliating taunt divides his own name in two, suggesting Shapur understands only half of it, and of him. *Vas-* echoes the final syllable of the word for "fox," Armenian *ahuēs*; while *skay*, "giant" (literally, "Scythian"), corresponds to the second half, *-sak*, of his name. This verbal word play introduces a second, visual level of duality: the man of little stature, now a giant bestrides twin peaks, rather like the titanic woman in the dream-vision of Aždahak in the epic of Tigran whose progeny were to bring doom to Armenia's foes. For the Armenian listener these must evoke Great and Little Ararat; and as for giants, the ones called *k'ajk'* who imprisoned king Artawazd II, the son of Tigran the Great, were believed, well into early modern times, to dwell within the chasm of Azat Masik', the greater of the two mountains, into which the doomed king fell. So Vasak's explanation, that these are two kings whom he could defeat when he stood still on his native ground, is an answer calculated to shame the Persian but to surprise and please the listener—not by shaming his ignorance but by adding a new meaning to the twin peaks, that of Armenia's double adversaries, Persia and Rome, while recalling how in the epic

of Tigran the two other riders had sped northwards against the barbarians of the Caucasus, and west again, against Rome.

There ends Vasak's boast, but not his speech. In epic the hero, whether a noble warrior or the king he serves, and often enough, both of them, will display a flaw of character such as impetuosity or hubris, and must have the benefit of the advice of a wise man or counselor. Homer supplies the long-winded Nestor, remote ancestor perhaps of Hamlet's Polonius;²³ in the *Memorial of Zarēr* it is Jāmāsp who soothes the violent anger of the Kayanian king, Vištāsp; and Median Astyages and Parthian Ardawān have in their employ a staff of astrologers and Magi. In Armenia, only recently baptized, the Patriarch Nersēs in the *Buzandaran* bears not only the name of a *yazata* (Av. Nairyō.sangha-, Phl. Narseh) but the title of a Sasanian *mōbedān mōbed*: he is *ḵatagov zrkeloc'*, cf. MPers. *driyōšān jādag-gōw*, "advocate of the poor," i.e., the poor in spirit, the community of the faithful—Prof. Nina Garsoian established the derivation of the Armenian title from the Iranian one known in Sasanian sacerdotal usage. So it is he who dispenses *xrat*, "counsel," the Armenian word, as is well known, itself a loan from MĪr.; and Vasak uses the word twice in order to contrast it, and the metaphoric heights of the mountain from which he has fallen himself, to *xorxorat*, literally "a deep, deep pit"—as though, following the standard pattern of reduplicative formation in Armenian, the word had been something like **xeraxerat* to start with. The fact that Arm. *xor*, "deep," from MĪr. *xwar*, is etymologically unrelated to Av. *xratu-*, Gk. *kratos*, etc., has never stopped Armenians from considering things deeply meaningful (*xor-imast*) or going on to powerful alliterating play in religious poetry, as in *Xorhurd xorin*, "Profound mystery," the Hymn of vesting in the Church.

There is a poignantly vainglorious aspect, too, to Vasak's boast; and if he had listened to the counsel of Nersēs he might have heard his pride compared to a mountain; and humility, not to a pit but to a valley, as in the sixth book of the Zoroastrian *Dēnkard*, which deals with counsel of wisdom: *Mardomān xwēštan ne čagād be gabr be kunišn, čē gabr harw āb ī wārēd pad-eš be estēd* "Men are to make of themselves not a mountain peak, but a valley, since all the water that rains into a valley stays there," for a valley represents nobility of mind (*ēr-menišnīh*), whilst a mountain

peak (*čagād*, cf. Arm. l-w *čakat*, “brow”) is arrogance and animosity towards the good (*abar-menišnih ud weh-dušmanih*).²⁴ So the images of Vasak’s boast become an occasion for a remorseful reflection on wisdom—again, nothing strange in epic, when one recalls how in the *Histories* of Herodotus, Croesus, about to be killed by Cyrus, remembered the wisdom of Solon. Pride as a high mountain and humility as a deep valley are commonplaces: what is interesting here is the specific employment of themes and images that are deeply resonant in shared Armenian and Iranian Zoroastrian epic.

The collocation of *xrad*, “wisdom,” with profundity, though intuitive to many traditions, can be traced in the particular case of the Zoroastrian sources to the very beginning—to the *Gāthās*, where in Yasna 48.3 the Prophet Zarathustra declares, *aṭ vaēdāmnāi vahištā sāsnaṇqm/ yqm huddā sāsti ašā ahurō/ spāntō vidvā yaēciṭ gūzrā sēnghānghō/ θwāvqs mazdā vanghəuš xraθwā manānghō*: “Now for the one who knows are the best of the commandments/ That the wise Lord decrees in Truth—/ Holy, knowing—which are the deep teachings:/ He becomes your like, Mazdā, through the counsel of the Good Mind.” The verse rhetorically associates the pious man of insight with God Himself, even before declaring him Mazdā’s own likeness: the man is *vaēdāmnā*, “knowing,” and Ahura is *vidvāh*, “knower”; while the superlative “best” (*vahištā*) of the divine strictures that belong to the knowing man, in the first strophe, is linked to the “good” (*vanghəuš*) of the name of Vohu Manah, by whose agency counsel, *xratu-*, comes. Now these two characterizations of wisdom at the beginning and end of the verse are semantically related, and poetically linked, to the third one in the middle, “deep teachings” (*gūzrā sēnghānghō*): “teachings” and “strictures” are connected by sound and meaning, by the underlying verbal base *sah-*, “declare”; the nominative plural ending in *-ānghō* of “teachings” anticipates and resonates with the genitive singular ending of *Manah-*; and that leaves the structural parallelism, equal syllable count, and rhyme of *gūzrā* “deep” and *xraθwā* “by counsel.” Profundity endures, not surprisingly, as an image in the tradition: the Zoroastrian book of Creation, the *Bundahišn*, compiled in the ninth century A.D. but probably echoing Avestan usage, advertises itself as conveying *saxwanihā ī zōfr ud abd*, “utterances that are deep and miraculous.”²⁵

The episode in the *Buzandaran* is a confrontation; and may be resolved accordingly into a series of oppositional dualities. Aršak and Vasak are both in conflict with their powerful captor, Šapur. Both are strong on their native soil, but weak away from it. Vasak is divided within himself, within his own name: the present half is a fox, *aṭuēs*, short in stature; the former half was a giant, *skay*, that bestrode two mountains and could bring both down to the ground. The reflection on the lost patriarch Nersēs becomes an occasion twice to employ the word *xrat*, “wisdom,” to shape the pseudo-etymological but semantically potent figure, *xorxorat*, “deep, deep pit,” that again underscores the duality of height and depth but does so in a manner that undermines Vasak’s previous boast. The *Buzandaran* deals with the end of a dynasty, so it is apposite to introduce a tone of pathos and poignancy, as well as, perhaps, the spiritual and apocalyptic hope wisdom literature offers.²⁶ However it is also likely that there is a kind of ideological conflict within the text itself: the clash of old Arsacid heroic values with the new Christian ones represented by successive hermits and clerics. It is noteworthy that Aršak’s father, Tiran, killed the holy man Daniel and was stigmatized as a sinner for the foul deed: he was later blinded for attempting to trick Šapuh-Varaz, the Sasanian *marzpan* of Atropatēnē, into accepting another hero than the one the Persian had admired (3.20–21). The *marzpan* would not have known the difference, had Tiran’s own chamberlain, P’isak, not betrayed him. As noted above, Haig Berberian discerned in the latter episode the *topos* of the later bandit-epic of Köroğlu, “Son of the Blind Man,” a narrative that was to crystallize over a millennium later around the historical events of the Jalālī uprisings against the Ottomans during the century-long series of wars between the Turks and the Safavids.²⁷ The *topos* has sufficient weight to carry the tragic message of Arsacid decline; but the *post hoc, ergo propter hoc* logic of the narrative makes Tiran’s betrayal and humiliation condign retribution for his sin, as well. So we may deal with the intrusion of an authorial voice that is itself riven by conflicting values, by the ambivalence of a man bestriding, as it were, the peaks of two kinds of culture.

One might reasonably ask about the expectations and abilities of the audiences of these narratives. P’awstos belonged partly to an oral culture still, and Xorenac’i, probably writing later, drew

his sources in part from one to whose enduring vitality he bears witness. The listener in such a culture has a sharp ear for punning and rhyme and kenning far more sophisticated than the simple remnants that persist—and, it is to be noted, are overwhelmingly oral!—as humor and riddle. They could pick out sound patterns the lazy reader is deaf to. They lay in wait for word tricks and caught them. They had strings of images, myths, *topoi* in their prodigious memories and expected them to be rehearsed, elaborated in the virtuoso manner of a good oud player launching into a *taksim*. So for example the story of Aršak: we have left the poor Armenian king to his fate, but what happens to him? He is taken to Andimišk, the Fortress of Oblivion (I do not know whether Orwell was aware that the Sasanians had anticipated modern totalitarianism in making their enemies “unpersons”), where his faithful eunuch Drastamat (the Middle Persian word means “welcome” and one wonders whether it was a trade epithet) begs the Armenian’s captors to allow him a last feast with dancing girls. They relent, Aršak sits on his couch, lives a few final hours according to the manner of kings, and then stabs himself to death with a fruit knife. A pointless detail, one might think; yet in the Babylonian Talmud the Exilarch and the Sasanian king consume an *ethrog* (nowadays, the name given to the citron employed on the feast of Succoth) together. It is an odd detail, two grown men, one powerful, the other venerable, with a small citrus fruit between them. But it is not a bizarre incident, it is dessert: they have just feasted together and it was after lunch, after taking some wine, that the pleasantly sated Iranian king was expected to consider petitions with favor. They are friends, then, enjoying a good moment, and at peace—the only weapon around (for you checked your weapons at the door, except perhaps for an Arm. *nran*, which I derive from Ir. **ni-rāna*- “on the leg,” a basic, pocket-knife-sized dagger kept in a scabbard strapped to your thigh, or perhaps—as with New York City horse cops—shoved in the top of your riding boot) is the little fruit knife, bringing the leisurely pleasure of the meal to its conclusion. So the few words tossed off to describe the setting were enough to summon a full stage set of meaning for the Jew in Iranian Mesopotamia.²⁸ And how tragically inverted the image is in P’awstos, how brutal the pathos: the dessert is Aršak’s last; the little blade, the instrument of his suicide. I was a giant once;

now I am a fox. . . . The audience connected the contrasts in wording to the ironic contrasts of the setting. It is the consummate blending of the verbal and visual.

The Hypograms and Dragon-battles of a Saint by the Sea

The great mystic poet of the Christian Armenian tradition, St. Gregory of Narek (Grigor Narekac’i, ca. 951–1003), lived opposite the island of Ałt’amar on the southern shore of lake Van, where, we recall, Vahagn dives for dragons. His compilation of 95 prayers, the *Matean oġbergut’ean* (“Book of Lamentation”), combines complex theological meditations with intricate poetic structures, litanies, and other structures designed to overwhelm and purify the sense and mind of the faithful. The book employs themes and images from both Scripture and native Armenian tradition, often on several levels of text and subtext. The poet employs sophisticated strategies: hypogram, alliterative patterns, and, on one occasion, the placement of evocative and symbolic terms at points in the text so as to form a visual image to be perceived upon the written page. It is the most important and frequently studied native work of Armenian religious literature within the medieval corpus; the saint has attained folkloric status in ballads, supernatural properties are ascribed to the *Matean*, and individual chapters are employed as amulets, or copied in magical texts.²⁹

In the eleventh chapter of the *Matean*, Gregory declares himself the least of those who confess in faith, but believes Christ can miraculously save even him (11.1): *K’anzi ziard oġ’ ardeawk’ ċ’k’nał-k’an zban: ew i mt’ut’enē erkewanut’ean xawari zteal: ew Astucov awžandakeal ew awgneal sirt meławori, or and marmnapēs cicatēln at nmin hecē hogepēs. Or t’ēpēt i hambarjmanē barjrut’ean geraġunic’n storasuzeal canrut’eamb yandndayin vhin xorxorat gboyn korcanman, noragiwt meławk’n anjreleawk’, uni ew nšxar nšulic’, p’rkut’eanc’ kenac’ hpawor ibr kayracakn lusoy pahec’eal i mits ew yogi orpēs žurn nšanawor ew zarmanawor t’anjramac, hrašiwk’ makardeal vehin hramani i yataks nerk’ins nirheal jrhoroc’n.* “For what can be finer than this word, purified of the dark and murk of doubt, and the heart of the sinner that, helped and assisted by God, laughs in body but cries in its soul.

For although he is plunged down heavily from the elevation of height into the profound abyssal chasm of the pit of perdition by new contrivances of sin no water can wash away, still he grasps the reliquary of the rays of radiance, tangible to the salvation of his life, like a lightning bolt of light, preserved in mind and soul, like the fire, signal and miraculous, congealed to thickness, coagulant by the commands of the One above, sleeping on the innermost floor of the depths of the waters."

The pericope deals with multiple oppositions: damnation and salvation, light and dark, height and depth, fire and water, solid and liquid. The etymon *erk-* "two" of Arm. *erkewanut'iwn* "doubt" at the beginning signals these; and the qualifying *zt-em*, "separate, purify" suggests spiritual birth. We are in familiar mythological territory now, though in a Christian universe. So the multiply marked watery abysses, called *xorxorat* here as in P'awstos, mean not profound wisdom but the fallen state of a sinner. The height above is marked twice by Arm. *barj-*, "high," cf. the Harā *bərəzaiti/Barzokhara* of Anāhitā/Anahit; and there is an additional paronomastic play on *Veh*, "the lofty or good One," God, and *vih*, "chasm." Arm. *nšxar* can be either a remnant or relic, or a piece of communion bread, the latter to figure in a legend of the saint's *Drachenkampf* to be considered presently; its first part is alliteratively tied to *nšoyl*, "beam" and *nšan*, "sign" (very often used as the Holy Sign, the Cross) in the next verse. Now the light the sinner grasps in the watery depths is twice qualified as *t'anjramac*, "thick-congealed" and *makard-eal*, "coagulated." Both these terms in Arm. refer specifically to milk: *makart-em* means to make *mac-un*, "yogurt"—so an allusion to birth, perhaps, in the milky sea nourished by the Lady upon her mountain above its wide shores? And as to fire burning in water, one remembers the labor in the sea gripping the reed, along whose shaft fire rose up, and Vahagn darted forth. All this, as we have seen, was encoded into premonitory dream visions; and Gregory chooses to conclude the passage with the soul presently to wake and be saved—not overthrown, this is an inversion of the old heroic *topos*—lying fast asleep (*nirh-eal*).³⁰

The divine figure who may be said to be the hypogram of the *Narek* is not Vahagn, of course, despite the apparent allusions in the above passage to the connected themes and images of the hymn of his nativity; but God, Arm. *Astuac*. The word

is of uncertain etymology, though the traditional one, from *(h)ast-em*, "make" with a parallel *has-tuac*, may be right. (Another *Volksetymologie*, from *ast ēac*, "he led here," is certainly *falsch*.) So in 3.1, after a series of both positive and apophatic litanies describing God, the author declares Him *vkayēal anun*,/ *čšak k'ak'rut'ean*,/ *bažak berkrut'ean*,/ *hastič' hogwoc' hac'* "witnessed name,/ taste of sweetness,/ cup of happiness,/ creator of the souls' bread." The first phrase intimates that God's name is to be mentioned; the next two allude to the body and blood of Christ; and the third encodes the word *(H)Ast-u (=o+w)-ac*, *Astuac*, "God" as anticipated, evenly across three terms metonymically representing the Holy Trinity. First is the Creator, *hast-* + suffix of agent *-ič'* for God the Father, then the gen. pl. of *hogi*, "spirit," for the Holy Spirit, and finally *hac'*, "bread," for the incarnate Son, Jesus Christ.

Armenian folklore is rich in legends about Gregory of Narek. According to one, the saint, having proved his piety to a band of inquisitors, sends them home with the gift of fire burning in a jar of water—a miracle adumbrated by the wondrous image in his own iteration of the hymn of Vahagn that we have seen. The source of another is very recent: a MS of A.D. 1837 written at Astrakhan', on the northern shore of the Caspian: A childless couple from the isle of Alt'amar, a few miles off the coast of Lake Van, visit Narek and pray at the grave of the saint for a child. When a son is born to them, they name him Gregory after the saint; and in his seventh year they take him on pilgrimage to the monastery. But their boat is blown many miles off course and young Gregory falls overboard near Arčēš—a city mostly submerged by the rising waters of Van, a sort of Armenian Dunwich—and a sea monster attacks him. Gregory holds off the creature with his staff, takes the child to the sea bottom, and makes a tent of his cope and crozier. He makes the sign of the Cross (*nšan*) and the refuge is flooded with light. Once a week, St. Gregory gives his namesake a piece of *nšxar*, communion bread, to eat. Meanwhile the boy's parents cry so much they lose their sight; and friends persuade them to visit Narek again to pray for healing. When they arrive, not only is their blindness cured, but they see their boy sitting on the saint's tomb, hale and hearty though dripping wet. Here is a story cultivated from the epic-steeped vision of chapter 11, with the missing heroic *Drachenkampf* added to the undersea plunge. That, too, finds support in the text of the

Matean: in the 82nd chapter, Narekac'i writes that hermits "heroically" (*ariabar*) help the soul to escape the *laynacawal* *cp'anac' ašxarhis covu*, "the broad-swelling breakers of the sea of this world", even as God saves them *i žaneac' kerč'ac' gazanac' ew kam yatamanc' višapac'* "from the fangs of devouring beasts and from the teeth of dragons", desiring that we be raised (*veracil*), not sink (*ənkəmīl*), emerging *i xoroc' andndoc' i loys berkrut'ean* "from the deep abysses into the light of happiness."³¹ The symbolism of the religious hymn that infuses the heroic epic cycles of Zoroastrian Armenia has thus made the transition, not only into Christian mystical poetry, but from formal writing back to the source from which that writing had emerged—into the living folklore of the country.

Magic Mountain and Milky Sea

Magic spells take full advantage, of course, of every possibility the sound-pattern of a strophe provides, since the overt intent is to overwhelm the senses and mesmerize the hearer, the client, or the target of sorcery. And, as is well known, magic by its very antinomian nature will draw upon local, pagan, folkloric, mythological resources that canonical texts generally (though by no means always, as we have seen with the Narek) recoil fastidiously from. A variant of an Armenian spell against the evil eye attested in several closely similar versions reads as follows:³²

Očun k'ez Mariam, mer Mariam, / Ela i saṛn Alalia [or Galilea], / Mta i dasn Amasia, / Amasia cov mə kar, / Catana vra bun mə kar, / Bnin mējə ōj mə kar, / Ōskun t'asə kt'ec'i, / Arcat'ē t'asə makrt'ec'i, / Pačik mə paṇir zarki: / Ašk' ənoḥin keruc'i, / Č'ar ašk'ə čat'i, Č'ar sirtə patti: / P'ušə, tatašə mtne č'ar ašk'ə: / T'u t'u t'u t'u t'u.

"Greeting to thee, Mary, mother Mary. / I went up on the mountain Alalia [or Galilea], / I entered the valley Amasia. // In Amasia there was a sea, / Upon the tree there was a nest: / In the nest there was a snake. // I milked and filled the golden bowl, / I made curd of it in the silver bowl / And put a piece of cheese within. // I gave it to the evil eye caster to eat. / May the evil eye split, / May the evil heart burst, // And thorns and tares stab the evil eye. // *Tu tu tu tu tu!*" Here Mary sits in the place of Anahit on Tabor instead of Ararat, above a valley in Armenia where there is a sea whose milk may

be obtained and coagulated (*makart-em*) to make a potion against evil.

And against a loss of appetite, the magicians of Valaršapat, in the shadow of mount Ararat, chant:³³

Gnac'i covə: / covn ēr cirani, / Covi mišin cat kar: / Catn ēr cirani. / Catī vra čuḥk' kar: / Čuḥk'n ēr cirani. / Čḥk'an vra bun kar: / Bunn ēr cirani. / Bni mišin čut kar: / Čutn ēr cirani. // Anotk'ni ela, / Andanak mort'ec'i, / Anžxa kul tvec'i, / Petrosi matažazə ktrec'i.

"I went to the sea (*cov*):/ the sea was purple (*cirani*)./ In the sea there was a tree:/ The tree was purple./ On the tree there was a branch:/ The branch was purple./ On the branch there was a nest:/ The nest was purple./ In the nest there was a bird:/ The bird was purple.// I climbed without feet,/ I skinned it without a knife,/ I ate it without disgust,/ And stopped Peter's gagging." The alliterative poetics of the color of Vahagn's sea seems to have mesmerized the conjuror.

Ancient Dreaming

During the peaceful protests that followed the Iranian general elections in the summer of 2009, a woman painter identified by the false name Negin by her friend, a journalist writing anonymously, was attacked and severely beaten by the *basisis*—the paramilitary young thugs employed by the régime. She described a dream she had while recuperating: "I was sitting in the mountains and looking at two peaks in front of me. It was a placid scene. Suddenly, the peaks began to tremble, and rocks and snow fell off and landed nearby. The trembling grew more intense and then the mountains split in two and collapsed, and there was a great cloud of dust in the sky. When the dust settled, I could see beyond the ruins of the mountains. There, on the plain, very small and far away, I saw different types of military equipment: jeeps and tanks and rocket launchers on wheels being driven around." The article continues, "Negin had asked several friends what they thought her dream meant. They had all said that the collapse of the mountains represented the collapse of the Islamic Republic's claims to divine legitimacy. The plain full of tanks and guns represented the militarization of society, the victory of the Revolutionary Guard and the *Basij*."³⁴ We

have pursued over the centuries and across the kindred traditions of Zoroastrian Armenia and Iran a recurrent and fairly consistent archetypal pattern within the social context of its literary performance, its association with the sacred, and its interpretation by the wise. It involves a dream vision, often a divinized and titanic woman representing fertility, a magic mountain, the triad of heaven, earth, and sea, images and scenes of war, and the subsequent explanation of the dream as signifying the withdrawal of divine fortune from a tyrant. In Armenian tradition, from the Artaxiad epic cycle of the second century B.C. to modern legendry about a Christian mystic and saint, the narrative pattern is seen actively to encode both the phonetic and lexical marked signals of the hymn of the birth of the Zoroastrian *yazata* Vərəθraγna/Vahagn and to recapitulate the act that defines his victorious heroism: the slaying of the dragon that personifies misrule: the *višap* or *aždahak*. The dream vision of a modern Tehrani woman, imbued with both her collective cultural inheritance and her particular artistic sensibility, is a remarkable example of the persistence of poetic memory, articulating new forms of political resistance in an ancient land.

Her vision does not allude to the ancient god of victory whose presence intricately pervades the Armenian dossier; but he, too, figures in the Iranian texts. Prof. Sir Harold Bailey published at the end of the volume of his Ratanbai Katrak lectures, *Zoroastrian Problems in the Ninth-Century Books*, a Pahlavi poem composed after the Muslim conquest whose author longs for the advent of the messianic Bahrām (i.e., Vərəθraγna/Vahagn) the worker of wonders (*warzāwand*), who is to appear on a white elephant, rather like the house of Sāsān in the vision of the *Kārnāmag*. This Bahrām, even if his model was at first, as Czeglédý suggested, the late Sasanian rebel of Arsacid lineage, Bahrām Čōbīn, has become the central figure of modern Parsi Zoroastrian apocalypticism. Professor Bailey, with whom I was acquainted, emphasized throughout his work as few Iranists do the importance of Armenian studies to the discipline; and Prof. Mary Boyce, the giant scholar of ancient and modern Zoroastrianism, invited me after her first Ratanbai Katrak lecture at Oxford to write on Zoroastrianism in Armenia, under her supervision. Legend now inherits her: the powerful goddess of fertile scholarship bestriding the snow-capped summits of

knowledge—as Highgate hill seemed in winter as I trudged towards our tutorial—and I watched her shred my essays as a Mede or Parthian might contemplate the imminent loss of his throne. But afterwards there was tea, and her fruit cake, and the warmth of her conversation, and her steadfast, stubborn love for everything Zoroastrian. For her, and for her pupils, that heritage is not only a religion, but a whole civilization. My adviser in Armenian at Oxford, and several fellow students at my alma mater, Columbia, had insisted discouragingly that the material for the research I had begun, on Zoroastrianism in Armenia, was too sparse to prove a thing, maybe even nonexistent. They were wrong, she was right, as she was right about so many things, right in her impassioned assertion of the integrity and continuity of the Zoroastrian tradition, right in her impeccable standards of scholarship and probity, right in her unassailable dignity and personal courtesy and kindness. I am deeply grateful for the honor to have presented to you, on English soil once again, this *opusculum* to her immortal soul.

Appendix

A number of the Armenian texts preserved from antiquity down to modern times in which we find the name of the god Vahagn as hypogram and the cluster of images associated with him as locus princeps include narrations of dreams. I would like to propose that the methods employed in studying the texts may be applied also to the question of dreams and their interpretation itself. Ancient cultures, including Iran, attributed great practical importance to the dream. It was often believed that a dream was a message sent by a god; though Penelope in her remarkable speech in the *Odyssey* about the gates of ivory and horn reminds us that dreams (like the gods themselves) can lie to man as well as tell him secret truths. Perhaps it was such a feeling of ambiguity about dreaming that led to the demonization by the Zoroastrians of the female supernatural being Bušyastā: it is possible she began her career as a goddess of sleep and became the demoness of sloth, though in Judaeo-Persian *bušāsf*, demonized but also demoted to common noun, means “sleep” once more.

The dream-interpreter seems to have been expected to be clairvoyant: the Mīr. *rāz* “secret”

of the Arm. l-w *eraz*, "dream," was not just the symbolism but the vision itself—the sage often had to tell the dreamer what it was the latter had dreamed. But even without such feats, dreams possessed great power and were central to religion and politics. In the *Gāthās*, the twin spirits of good and evil become manifest to Zarathuštra *xvafanā*, "by means of a dream." This vision of a dualistic cosmogony may be echoed in the beginning of the Hermetic *Poimandres*; and, probably through the transmission of Iranian lore by Armenians to Balkan sectarians, we find a similar picture of the antagonistic spirits at the beginning of time in the dream of Prince Vladimir in the old Russian spiritual poem, the *Rime of the Book of the Dove* and in a still more recent dream of the same kind recorded by a leader of the dissident Molokan sect.³⁵ In the former case, the attribution of the dream to the very monarch who presided over the baptism of Rus' and the nation's entry into the communion of the Orthodox Church is tendentious, since little could be more overtly heretical than a dualistic cosmology. In the latter case, having a dream of a dualistic cosmology at once endows that vision with supernatural sanction, for dream is a kind of prophecy and also absolves the dreamer of any guilt that might be incurred by the accusation of heresy. Heresy is *kat' exokhēn* a choice; but the dream is an unconscious, unwilling act.³⁶

The cosmological revelatory dream is of obvious significance, since everything, literally, flows from the beginnings of the world and knowledge of such beginnings is power. Among the topics and texts considered dangerous and forbidden to Jews of the early Rabbinic period was *ma'aseh berešith*, "matters of Creation." A heterodox cosmogony, like that of the Molokans, undermines everything else.

Monitory dreams come in various kinds: the ones we have discussed are portents of doom vouchsafed to kings. In the *Agathangelos*, the principal source for the conversion of the Armenians, a woman repeatedly sees an *arhawirk'* in which she is commanded to feed the imprisoned St. Gregory. The word now means "terror" but seems to have had the specialized sense of identical dreams in which one is commanded in an increasingly terrifying manner to do something or else suffer dire consequences. A common aspect of such a dream across cultures in the Near East is its repetition; and we have seen one such.

But dreams foretelling good news can be equally potent: Assyrian armies marching to battle were emboldened (or so official records claim) by their king's dream, duly propagandized, of victory.

These dreams are of wide social impact, but what of the more private variety? Armenians, like other Near Eastern peoples, buy and use dream books (*erazahan*). These are for the most part simple glossaries of images and events (apples, cypress trees, lions, weddings, that sort of thing) with fixed meanings. They derive ultimately from the *Oneirocritica* of Artemidorus with many Byzantine and Islamic intermediaries. A recently printed *Erazahan* from Beirut advertises itself as "new" because it includes images like "elevator" (Arm. *verelak*, a calque on the French) that did not exist in olden times. It also displays some nuance in its approach, urging the dreamer to consider the conditions (*paymanner*) of the time of his dream (sleeping it off, sleeping on a hard bed, etc.) and to remember that dreams concerning recent everyday events have no deep symbolic significance. The implication is that a dream that reflects some immediate circumstance, or regurgitates a commonplace experience, does not go deep enough to warrant close attention—whether or not it induces anxiety, provides catharsis, or causes some other reaction. In literary terms, it lacks high significance.

So even a traditional, rather pedestrian manual of dream interpretation acknowledges that the dreamer does have a role in his dream. He is not merely the passive recipient vessel of a fully formed vision from outside. Artemidorus, too, recognized that the soul shaped the dream it received—it was, to use the later Freudian term, the dream censor. And the Armenian *Erazahan* also emphasizes that some dream images are more symbolically, meaningfully potent than others—and that these are more widely shared than the immediate, private stock of personal iconography available to the dreamer. Such a view, which, one must assume, goes back to traditional conceptions, is a recognition in its way of the same phenomena and processes that C. G. Jung was to call the archetypal imagery of the collective unconscious. We shall return to these matters presently.

Allied to the belief that a dream came from a god was the practice of sleeping in a temple (incubation, *enkoimesis*) in the hope that the resident divinity might provide an effective dream—most often, having to do with recovery from a disease.

Healing through the help of some supernatural agency was a fundamental concern before the advances of modern medicine; and Zoroastrians, for instance, still employ *nīrang*s and the Ardi-behešt Yašt (spells enclosing an Avestan mantra, and the hymn to the Bounteous Immortal Aša Vahišta, Best Righteousness). Matters of love and marriage were a close second in order of importance. Certainly the existing corpus of *defixiones* from the Mediterranean world suggests this. In the case of Iran, Athenaeus in the *Deipnosophistai* mentions that Zariadris and Odatis fell in love by dreaming of each other and the Persians paint the story in their temples. Quite aside from the reliability of the report—how did Athenaeus know what the Persians were doing in their temples?—and the paucity of evidence (the frescoes at Kuh-i Khwaja don't tell the story; and the Sogdian frescoes are in homes, not temples), the Greek writer does not explain why the Persians did this. Avestan Zairivairi and Middle Iranian Zarēr (and Armenian Zareh(r), a royal name of the second century B.C.) are two different forms, but it would seem that at some stage they came to be used of the same scriptural and epic hero.³⁷ In the archaizing Pahlavi text *The Memorial of Zarēr*, the pagan Chionites tell the Iranians under threat of war to give up the newly-adopted Good Religion of Mazdā worship. The sage Jāmāsp informs Zarathuštra's royal patron, Wištāsp, that the latter's brother, Zarēr, will die if the king accepts the challenge. Though distressed and angry, the king accepts the sacrifice a just war requires. The episode, a pivotal one in Iranian *Heilsgeschichte*, thus has much in common with the theme of the Indian *Bhagavad Gītā*;³⁸ so there would have been good reasons to paint scenes from the life of the noble Zarēr in a shrine. Thus, portraying an important Avestan figure in a temple with his queen might not have had anything to do with incubation, and there is no testimony that Iranian Zoroastrians slept in fire temples. Armenians might have done so, though: the temple of the Zoroastrian *yazata* Tir bore the epithet *erazam-oy*n, which probably means either "connected to dreaming" or "dream-interpreting."³⁹ And in the seventh century the Armenian scholar Anania of Širak, to whose authorship is attributed the magical text *Vec' hazareak* ("The Book of the Six Thousand") fell asleep in a chapel at Trebizond and asked a shining youth—the incarnate Sun—whether there are people in the Antipodes. It is a cosmological question; and Anania's account of

his dream introduces an *angelus interpres*, who cites the book of Job and replies to the dreamer's query that no, there are not.⁴⁰

For centuries, seekers of a visionary dream with its interpreting angel have chanted an Aramaic spell that apparently includes a corrupted form of the Aramaic *tamaggēš*, "you will magianize," which could mean something either quite generally magical or something more specifically Zoroastrian, given the proximity of speakers of the language in late antiquity to Sasanian Zoroastrians. The latter possibility is not wholly unreasonable, considering that the word is found in the Manichaean *Hymn of the Pearl*, with its strong cultural and lexical Parthian influences—the prince-hero is to vanquish the dragon who keeps the sought after pearl of great price, by "magianizing" him.⁴¹ The spell comes towards the beginning of the *Ghāyat al-ḥakīm*, a vast Arabic magical compendium known to the mediaeval West as the *Picatrix*, which enumerates the spirits of the decans, planets, and zodiacal signs, the angels of the days of the week, and so on, with prescriptions about what times are propitious for what activities, how invocations ought to be made, to whom, with what compounds of incense, and so on. The idea is that a magic act, including, it would seem, the request for a particular dream, has to involve manipulation of harmonies and correspondences on a cosmic scale. This corresponds well to the instructions given in the pseudo-Maimonidean *Megillat setarim*, "Scroll of secrets" studied by Prof. Moshe Idel for *še'elat ḥalōm*, "asking for a dream." The text forms a continuum starting with the letters and words of the *Sefer yetsirā*, the "Book of Creation": these are linked to the roles of angels, the positions of planets, the practice of fasting, etc. So the dream, itself intended to convey secret wisdom, is itself linked to a vast interlocking system of secretive and powerful cosmological affinities.⁴² One can easily see why Jewish texts prohibited access to the *ma'aseh berēšit*, the matters of the beginning-time of the world, to the insufficiently prepared or improperly motivated.

To return, however, to the motif of love and the shared dream: the latter seems to be a common *topos* of romance. We have seen a Perso-Greek example; and the Indian *Kathāsaritsāgara* has King Vikramaditya and the maiden Malayavati fall in love by each seeing the other in a dream. This theme, suggested Roger Caillois, points beyond the mere structure of literary artifice to a more

important issue. The fiction of a shared dream is a manner of compensating for the intrinsic loneliness of the act of dreaming, the impossibility of even reviewing and verifying and accurately recording what one has dreamed.⁴³ "If you dream alone, it's just a dream. / If you dream together, it's reality," says a Brazilian folk song.⁴⁴ In Vladimir Nabokov's novel *Pnin*, the lonely Russian émigré professor and his son Victor break through their shells of alienation by dreaming, unbeknownst to each other, the same dreams. Real life does not provide such experiences of transcendence, when unconscious meets unconscious and the awful and essential loneliness of every soul with respect to every other, is overcome. But dreaming for all its isolation is still social, since whatever another learns of it, comes by way of language and narrative technique, and these are by their nature not isolated, but part of the culture.

So when we examine a dream we are always and inevitably studying a text, hearing a narrative. By its very nature as an expression of the unconscious, the dream is not something even the dreamer himself can ever consciously experience, unlike, say, a walk in the country. Even to him the dream is a recollection framed in words. And the dream itself, shaped as it is by a human mind, may itself develop around words rather as Saussure suggested certain texts do. In his *Interpretation of Dreams* Sigmund Freud suggests as much: "There is no need to be astonished at the part played by words in dream-formation. Words, since they are the nodal points of numerous ideas, may be regarded as predestined to ambiguity; and the neuroses (e.g., in framing obsessions and phobias), no less than dreams, make unashamed use of the advantages thus offered by words for purposes of condensation and disguise."⁴⁵ By using words as nodes, or as starting points of marked strings (e.g., *erku* > *erkin* > *erkir* > *erkn* and *erknēr* > *erkar*; *cirani*, *cov* > *ciranazgest*, etc.)—which amounts to the same thing since speech is linear—the dreamer or narrator of a culturally significant dream is doing consciously in his narrative of recollection what his unconscious, if Freud is right, has probably done already. So the dream narrative has a special significance in that it is a real meeting point between those two poles of the mind, the conscious and the unconscious.

Freud's insight about the propensity of words to condense and disguise—to conceal—in dreams may be extended to the activity of the dream-interpreter, the Sasanian *xwamnwisār*, whose

skill is precisely to reveal that which is inherently a veiled secret (one recalls that the Armenian word *eraz*, "dream," comes from Middle Iranian *rāz*, "secret," in the first place). The dreams of Astyages are nightmares, crises—and it is just at times of crisis in a society that the esoteric is violated and unveiled, that apocalypses are advertised and proclaimed. The otherworldly and symbolic becomes actual. The dreams we have examined belong to cycles of epic; and the events of epic lie inherently in a closed and completed past heroic age. In Psalm 126, the children of Israel sing, *Be-šūvā Adonai et šivat Tsiyyōn hayyīnū ke-ḥōlemim / Āz yemālē šēḥōq pinū ū-lešōnēnū rīnā*, "When the Lord returned the captivity of Zion we were as dreamers: / Then our mouths were filled with laughter; and our tongues, with song." But in the post-heroic era of a long, dark exile Yehuda Halevi, determined as he was to return home, could no longer connect the unconscious archetype of the imaginal world to the realia of poetic speech: *Be-šūv ševūt Tsiyyōn hāyā ke-ḥōlēm / Ū-be-hēqītsō ēn pōtēr ḥālōmō*, "At the return of Zion he was as a dreamer: / And at his waking there is no interpreter of his dream." Dream is a lesser form of prophecy; and the gates of prophecy are closed. There may be no remedy for the loneliness of the soul. The heroic age may be sealed in an infinitely receding past, since nobody alive ever saw it. The gates of prophecy are closed: we may speak decorously to God in a temple, but if we aver that God also speaks to us, we will soon be speaking to doctors. Yet art, as Friedrich Nietzsche declared, saves us from the truth. So hopes of revelation, of union, of return, are delivered through dream in the artifice of written fiction. One way or another, suffering humanity finds its opiate; and the creative artist, the delight of invention and the glory of poetic speech.⁴⁶

Notes

1. J. Starobinski, *Words upon Words: The Anagrams of Ferdinand de Saussure*, trans. O. Emmer (New Haven, 1979), p. 22. The revolutionary discoveries by Professor Martin Schwartz of the University of California, Berkeley, in the application and development of this method, are transforming our understanding of the *Gāthās*.

2. *Ibid.*, p. 18.

3. *Ibid.*, pp. 33, 43.

4. *Ibid.*, p. 95.

5. Movsēs Xorenac'i, *Patmut'iwn Hayoc'*, ed. M. Abelean and S. Yarut'iwnean (Tiflis, 1913), pp. 85–86. The standard translation and commentary is that of R. W. Thomson, Moses Khorenats'i, *History of the Armenians* (Cambridge, Mass., 1978).

6. See J. R. Russell, "Carmina Vahagni," *Acta Antiqua* 32.3–4 (1989), pp. 317–30, repr. *Armenian and Iranian Studies*, Harvard Armenian Texts and Studies (Cambridge, Mass., 2004) (hereafter *AIS*), pp. 357–70. On the *yazata* in Armenia generally, see J. R. Russell, *Zoroastrianism in Armenia*, Harvard Iranian Series 5 (Cambridge, Mass., 1987).

7. For a study of these patterns see J. R. Russell, "Sound as Symbol: The Case in Pagan and Armenian Christian Poetics," *Le Muséon* 109.1–2 (1996), pp. 113–26, repr. *AIS*, pp. 713–26.

8. See J. R. Russell, "The Epic of the Pearl," *Revue des Études Arméniennes* 28 (2001–2002), pp. 29–100, repr. *AIS*, pp. 1261–1332.

9. One of these is the elegy of the dying Artaxias, preserved by Grigor Magistros Pahlawuni, himself a distant scion of the Arsacids: see J. R. Russell, "Some Iranian Images of Kingship in the Armenian Artaxiad Epic," *Revue des Études Arméniennes* 20 (1986–1987), pp. 253–70, repr. *AIS*, pp. 157–74. It contains several of the word-images of the hymn of the birth of Vahagn: *cux*, "smoke"; *vazel* "run"; and *p'oʔ*, here a fluted pipe as "trumpet" rather than "stalk." These may be fortuitous, but at the least it may be suggested that they are small signals of the stock vocabulary of a single large epic cycle.

10. On the relationship of the Armenian epic cycles to the *Nartæ*, with a specific case of borrowing from Armenian, see most recently J. R. Russell, "Argawan: The Indo-European Memory of the Caucasus," *Journal of Armenian Studies* 8.2 (Fall, 2007 [2006]), pp. 110–47.

11. The name of the mythical "sea of wide shores" Vourukaša is rendered into the Sanskrit translation of the Avesta as *kṣīrasamudra*-, "milky sea," as Prof. Martin Schwartz has noted; and the mythical seas of shamans of the Hindu Kush are milky, too. This would suggest either that Iranian tradition acquired this additional mythological and folkloric dimension, reflected in medieval Zoroastrian learning, or that the Sanskrit term is a window into a very ancient *topos* either shared by Iranians and their neighbors or, more likely, diffused into Iran and eastwards from ancient Anatolia. The singular abundance of Armenian and Kurdish references to magical milky springs makes the latter suggestion attractive. It is, however, just as possible that various cultures look back to a paradisiacal primordial age when the seas were as sweet and nourishing as mother's milk, rather than cold, salty, stormy, and dark—and human imagination in divers times and places acted similarly in shaping the archetype of this facet of mythical geography.

12. In much the same way Arm. *jerba-kal*, "arrest," lit. "have by the hand," possibly a calque upon Middle Iranian *dast-graw*-, describes how captors lead their prisoners on Iranian bas-reliefs.

13. See, most recently, O. M. Chunakova, transcription, translation, introduction, commentary, and glossary, *Kniga deianii Ardashira syna Papaka (Kārnāmag ī Ardešīr ī Pāpakān)*, *Pamiatniki pis'mennosti vostoka* 78 (Moscow, 1987). I have transcribed and translated the text here myself, from the edition of Edalji Kersāspji Āntiā, *Kārnāmak-i Artakhsīr Pāpakān* (Bombay, 1900).

14. See J. R. Russell, "The Lost Epic of Tigran: A Reconstruction Based upon the Fragments," *AIS*, pp. 1031–50.

15. Movsēs Xorenac'i, *Patmut'iwn Hayoc'*, ed. M. Abelean and S. Yarut'iwnean (Tiflis, 1913), pp. 74–77.

16. On his parallel in Armenia, see J. R. Russell, "The Armenian Shrines of the Black Youth (t'ukh manuk)," *Le Muséon* 111.3–4 (1998), pp. 319–43, repr. *AIS*, pp. 925–49.

17. See M. L. West, *Indo-European Poetry and Myth* (Oxford, 2007), p. 260 and n. 71.

18. P'awstos, 4.2, *barenšans barehambawk' bar-egorck* "with good signs, good renown, good deeds" in battle: see J. R. Russell, "Problematic Snake Children of Armenia," *Revue des Études Arméniennes* 25 (1994), pp. 77–96, esp. p. 81, repr. *AIS*, pp. 621–40.

19. Arm. *patuhas-em*, from Mlr. *pātīfrās*-, will have had at this time the sense of severe interrogation, appropriate to their dread interview. The translations are mine; but one may consult the monumental translation and study by N. G. Garsoian, *The Epic Histories (Buzandaran Patmut'iwnk')*, Harvard Armenian Texts and Studies 8 (Cambridge, Mass., 1989). The suggestion that Arm. **buzand* means "epic history" rests upon the inherently unstable foundation of a *hypothetical compound* word in Iranian proposed by Prof. Anahit Perikhanian. Though her suggestion may be right, one cannot dismiss on present evidence the simpler and traditional derivation from "Byzantine"—and Faustus is certainly not an Armenian name!

20. The Armenians, according to Xorenac'i, traced their legendary descent to, among others, Paroyr *Skayordi*, i.e., "Partatua ("Able in battle") the Scythian's Son." This would argue for a secure etymology of *skay* or *hskay*, "giant," from "Scythian." Were a derivation from Ir. *kavi*-, as Prof. Martin Schwartz has suggested in correspondence, to be sought, one might expect the earlier, and northwestern, Mlr. *kaw* to be the form entering Armenian. We may indeed encounter it in the ancient toponym Kavakert (*kav* seems to be the common noun "clay" in other place names with the element, e.g., Kavablur "Clay Hill," that are attested only in recent times), see T'. X. Hakobyan et al., *Hayastani ev harakic' šrjanneri tehanunneri bataran* [Dictionary

of the toponyms of Armenia and contiguous regions], vol. 2 (Erevan, 1988), p. 965 s.v.

21. On the two books, see M. Boyce, "Middle Persian Literature," *Handbuch der Orientalistik* 1.4.2.1 (Leiden, 1968), pp. 54, 63.

22. Students of epic generally follow Aristotle and note the hubris of the tragic hero; but less attention is paid to those who *hubrizontai*, are "hubrissed," as it were. Yet the flogging of the hero to be, his toiling down in the stables rather than riding up on the back of a war horse, are elements that we meet again and again, from Josephus and Sasanian epic and Talmudic tale down to the frame narrative of the 17th-century Anatolian Robin Hood—Köroğlu, "Son of the Blind Man." The latter, celebrated in epic tales and balladry in Turkic, in Iranian dialects, and in Armenian, even in Modern Greek, is an epic that, as Haig Berberian long ago discerned, sprang from the soil and legend of Arsacid Armenia. The hero of such an epic of the dispossessed and the downtrodden will have a beginning as formulaic in its evocation of the images of oppression and humiliation as the praise songs of the upper classes.

23. Would smiting the sledded Polacks on the ice be an echo of irony?

24. See S. Shaked, ed. and trans., *The Wisdom of the Sasanian Sages* (*Dēnkarđ VI*), Persian Heritage Series 34 (Boulder, Colo. 1979), E 35 b on pp. 204–5 (and cf. no. 208 on pp. 80–81).

25. See J. R. Russell, "The Rime of the Book of the Dove (*Stikh o Golubinoi knige*): From Zoroastrian Cosmology and Armenian Heresiography to the Russian Novel," in *From Daena to Din: Religion, Kultur und Sprache in der iranischen Welt* (*Festschrift Prof. Dr. Philip Kreyenbroek*), ed. C. Allison et al. (Wiesbaden, 2009), pp. 141–208, pp. 142, 187: the Russian text might originally have been called *glubinnaia*, "deep"; *golubinaia*, "of the dove," would be a *lectio facilius* supported by association with the image of the Holy Spirit. It is a mysterious book, too; and in Armenian a famous cryptogram is called *aławmagir*, "the writing of the dove," an additional association attractive for the presumed change of title: see J. R. Russell, "The Script of the Dove: An Armenian Hetaerogram," *Journal of Armenian Studies* (in publication).

26. For a discussion of the relationship of the *Buzandaran* to other epics about the end of an era in Indo-Iranian cultures, see J. R. Russell, "A Parthian *Bhagavad Gita* and Its Echoes," in *From Byzantium to Iran: In Honour of Prof. Nina Garsoian*, ed. J.-P. Mahé and R. W. Thomson (Atlanta, 1996), pp. 17–35, repr. *AIS*, pp. 693–711.

27. See J. R. Russell, "From Parthia to Robin Hood: The Armenian Versions of the Epic of the Son of the Blinded Man (*Köroğlu*)," forthcoming in the *Journal of Armenian Studies*.

28. During a recent visit to Jerusalem I noted this Armeno-Talmudic parallel to my former pupil, Prof.

Geoffrey Herman, who, I was happy to learn, had seen it too: his work on Irano-Talmudica is rich in precisely these illuminating details. The Hebrew word *ethrog* is not likely to be native, and is probably a loan from an Iranian term ending in *-anj* and originally denoting a sweet lime or the like. A raw citron would be a rather unpleasant fruit to consume, and certainly not fit for the likes of the Rēš Galūtā and Particeps Siderum.

29. There are excellent translations of the *Matean* into Russian (Ulubabyan), French (J.-P. Mahé), Mod. W. Arm. (Patriarch T'orgom Gušakean), and English (Thomas Samuelian). On the saint and his life and work generally, see J. R. Russell, intro., G. Narekats'i, *The Book of Lamentations*, Classical Armenian Text Reprint Series (Delmar, N.Y., 1981) and "The Sources and Contemporaries of St. Gregory of Narek," *Armenian Review* (1988). On individual sections of the book and liturgical hymns by the saint, see J. R. Russell, "The Song of Christ's Ascension (*Taš ham-barjman*) of St. Gregory of Narek," *St. Nerses Theological Review* 2.2 (July 1997), pp. 113–30; "A Mystic's Christmas in Armenia," *Armenian Review* 40.2 (Summer 1987), pp. 1–13; "Ch. 25 of Narek's Book of Lamentations," *Raft*, 1988; "Two Notes on Biblical Tradition and Native Epic in the Book of Lamentation of St. Grigor Narekac'i," *Revue des Études Arméniennes* 22 (1990–1991), pp. 135–45; "A Poem of St. Grigor Narekac'i," *Revue des Études Arméniennes* 19 (1985), pp. 435–39; and "The Four Elements and the Cross in Armenian Spirituality, with an Excursus on the Descent in Merkavah Mysticism," *Jewish Studies Quarterly* 44.4 (Tübingen, 1997), pp. 357–79; on the creation of text-visual images, see J. R. Russell, "Bedros Tourian's Cruciform Poem and Its Antecedents," *Journal of Armenian Studies* 6.2 (Winter–Spring 2000–2001), pp. 27–45. All the foregoing are repr. in *AIS*. See also J. R. Russell, "The Memory Palace of St. Gregory of Narek," *Hask hayagitakan taregirk'* (*Hask Armenological Yearbook*), n.s., Year 10 (2002–2006), Antelias, Lebanon: Armenian Catholicossate of the Great House of Cilicia (2006), pp. 59–81.

30. On the Iranian origin of Arm. *nirh* see J. R. Russell, "'Sleep' and 'Dreaming' in Armenian," in *Proceedings of the Fourth International Conference on Armenian Linguistics*, ed. J. A. C. Greppin (Delmar, N.Y., 1992), pp. 147–69, repr. *AIS*, pp. 477–99.

35. See J. R. Russell, "The Rime of the Book of the Dove (*Stikh o Golubinoi knige*): From Zoroastrian Cosmology and Armenian Heresiography to the Russian Novel," cited above. Among the various Russian sectarians—the Dukhobors, who preserve a long version of the *Rime of the Book of the Dove*, are among these—are the Molokan (lit. "Milk-drinker") *Pryguny*, or Jumpers, practitioners of an ecstatic and esoteric type of Christianity who reject icons and crosses, condemn the eating of pork and baptism in water, regard military service as anathema, and celebrate the Sabbath on Saturday. They endured vicious persecutions at the hands of the Tsars, the police, and the Orthodox Church; but were allowed by Nicholas I in 1839 to settle in the Russian Transcaucasus and Armenia, building little villages like Nadezhdino and Alexandrovka, Konstantinovka and Sukhoi Fontan, in the districts of Erevan and Alexandropol, of Kars and Dilijan. They revered the snowy summit of Mt. Ararat as "mother of all the world"; and some of the surviving Armenian sectarians—Paulicians, Tondrakites—joined their number. I have met one of these, a woman whose family left Russia for Los Angeles at the turn of the 20th century. She now lives in Mevasseret Tsiyyon, a town near Jerusalem, Israel; and in December 2009 she showed me the English-language Molokan lectionary and source book printed in California in 1983, a translation from the Russian *Dukh i zhizn': kniga solntsa* ("Spirit and Life: Book of the Sun"), 1928: *Divine Discourses of the Preceptors and Martyrs for the Word of God, the Faith of Jesus, and the Holy Spirit of the Religion of the Spiritual Christian Molokan-Jumpers*, on pp. 172–73 of which is the testimony of one of the leaders of the sect, Maxim Gavrilovich Rudomëtkin (ca. 1818–1877, b. Morshansk, Tambov region, Russia): "This [revelation] I myself clearly saw in the rapture of my true Spirit, and heard concerning it discourses from the God of gods, on an occasion during some unknown time when I was unexpectedly transported to a vast and immeasurable airy field, or in other words, to a foggy sea, not yet inhabited by anyone. 2. And upon it I stood alone. And there I suddenly saw close to me two Gods walking, both appearing in the image of man, Who now came straight to me and greeted me in Their dignity. 3. And hereupon they began first to tell me of Themselves—Who They both were and what Their developments had been since the beginning: 4. Who of Them was the primary Omnipotent, and Who namely was derived gradually from Whom—as was needful. 5. I ask the reader to see this more clearly further on in this very book of mine, which from the first word will reveal to you all that is needed in full. 6. And this is the reason I have delivered this book to the public, so that each reader and listener could obtain the power of the knowledge of the mystery concerning the God of gods and the God of all men, and God the Spirit Which emanates from Them both. 7. And wherein this

mutual spirit of theirs is ever dividing itself into two classes, amongst both Angels and men under the name: clean and unclean spirit. 8. And thus these two spirits everywhere without interruption wage war and battle between themselves under the leadership of their chief authorities, who are Alfeyil [Jesus Christ, n.] and Lebeyil [the devil, n.], or, in short, light and darkness. 9. Therein the God of gods, their Father God Himself, allowed them both to fight it out from the beginning and until the end of the age, manifestly using angels and men. 10. He who desires and does good obeys the Spirit of truth; he who desires and does evil obeys the spirit of deceit. 11. This is why it is here necessary to note that since before the ages, using these two leaders and their spirits, the God of gods Himself governs and judges each according to his works. 12. He Himself committed all to both these leaders and their spirits to eternally judge and lead all men, the good and the evil alike, each according to his worth, during this age and the one hereafter. Amen." The vision of a dualistic cosmogony corresponds, thus, to the old oral ballad about the Book of the Dove that Molokans also recited. So Rudomëtkin's narrative either is a dream inspired by the ballad, a visionary dream independent from it, or a literary recasting of the ballad presented in the form of a dream retold. In his book on glossolalia, *Tongues of Men and Angels* (New York, 1972), pp. 184–85 and n. 6), W. J. Samarin, a Los Angeles native, mentions that the Armenian Shakarian family came to America as "Pentecostals": they were presumably Molokans, who were accepted simply as "Russian Pentecostals" by American Pentecostal Christians.

36. Or is it? The American Jewish poet and prose writer from Washington Heights in Upper Manhattan, Delmore Schwartz (d. 1966), became famous with his short story (and poem with a similar title) "In Dreams Begin Responsibilities," in which the narrator dreams on the eve of his twenty-first birthday that he is watching a movie of his parents' courtship. He shouts at the figures on the screen to stop, and warns them their children will be monsters; but an usher in the theater admonishes him that he cannot always do what he wants to do. The story, written in the late 1930's employs artfully the images of what was still the relatively new medium of film and introduces into the mainstream of American letters Freudian concerns with the unconscious and neurosis and the overheated emotions of Jewish family life from which they had sprung. The idea that one is in fact responsible for one's dreams as their author, even though one is also a passive observer, even a victim, of their progress, is an unsettling paradox. It reminds one of the paradox of the individual as both maker and helpless sufferer of the sardonic twists of history that T. S. Eliot—who first discovered and promoted Schwartz—outlines in his poem "Gerontion," which Schwartz has his character read aloud in another story and movie theater, "Screeno." It seems a long way back

to Aždahak, but the latter has through his corruption and villainy set the stage for the destruction he foresees in his dream, so some of his terror must be sudden, tragic self-knowledge. The Christian idea of original sin makes such responsibility despite unconsciousness a matter of cosmic and universal guilt, which can be absolved only by the radical catharsis of magic involving the deep taboos of human sacrifice and cannibalism (the Crucifixion and Holy Communion).

46. The great American writer H. P. Lovecraft (d. 1937), a student of Near Eastern myth and of Poe, has a god imprisoned in a sealed cave in a city beneath the sea—like Mher in the Carved Rock, or God in the seventh chamber of the heavenly Hekhalōt—summon his faithful through dreams. "The Call of Cthulhu" and submarine R'lyeh seem terrifying, as all apocalypses are; but beyond the fear is liberation and ecstasy. So in "The Shadow over Innsmouth" a young man discovers he is one with the terrifying beings under the ocean, and at first recoils from the sickening realization. Yet in his dreams the watery city of Yha-n'thlei appears to him, his earlier fear turns to wonder, and he resolves to return to this antipode of Zion's mount—boldly to offer his dream of return a practical explanation and to dive beneath the waves to dwell in glory forever. Lovecraft's use of his own dreams in his work, and his deft manipulation of mythological *topoi* and archetypes, has so captivated readers in a culture, most of whose literary sophisticates are disdainful of modern epic, considering it retrograde and even puerile (cf. Edmund Wilson's contemptuous dismissal of Tolkien) that some believe his inventions to be realities rather as evangelicals may believe in the literal truth of Scripture. At this conclusion, I would like to record my thanks to Dr. Hrach K. Martirosyan of Leiden University for his careful reading of the draft of this paper, which saved one from several embarrassing errors. Such further errors that may remain are, of course, my own.

**ARMENIAN SECRET
AND INVENTED LANGUAGES AND ARGOTS**

*Светлой памяти Карена Никитича Юзбашяна
посвящается это исследование.*

Preface

Much of the research for this article was undertaken in Armenia and Russia in June and July 2011 and was funded by a generous O'Neill grant through the Davis Center for Russian and Eurasian Studies at Harvard. For their eager assistance and boundless hospitality I am grateful to numerous friends and colleagues who made my visit pleasant and successful. For their generous assistance in Erevan and St. Petersburg I would like to express particular thanks to Dr. Erna Shirinian, Matenadaran Institute of Ancient Manuscripts, Erevan; Professor Muhammad Dandamayev, St. Petersburg State University and the Institute of Oriental Studies of the Russian Academy of Sciences; Dr. Valerii Nikanorov, Institute of Ethnography, Russian Academy of Sciences, St. Petersburg; and Professor Nikolai N. Kazanskii, Director of the Institute of Linguistic Research, Russian Academy of Sciences, St. Petersburg. For their help in searching for material on the invented Seh-lerai language I am grateful to many friends and colleagues, including Michael Grossman of the Middle East Division of the Widener Library, Harvard University, Cambridge, MA; Dr. Raffi Tingir, New York; to Dr. Arika Okrent, Philadelphia, PA; Dr. Olga Kerziouk of the Esperanto division of the British Library, London; Prof. Johann Strauss of the University of Strasbourg; to Dr. Raymond Kevorkian, Director of the AGBU Nubarian Library, Paris; Prof. Valentina Calzolari of the University of Geneva; the staff of the Planned Languages collection of the Austrian National Library, Vi-

enna; and Osman Köker, Birzamanlar Yayıncılık, Istanbul. And as so often, I have profited from the conversation and learning of my friend Marc Mamigonián, Academic Director of the National Association for Armenian Studies and Research, Belmont, MA.

In September 1982, in the days of the Armenian *voskē ašun*, the “golden autumn”, the Institute of Linguistics of the Academy of Sciences of the Armenian Soviet Socialist Republic hosted an international conference on Armenian linguistics. That Armenia was able to do this in one of the frostier years of the Cold War was itself an aspect of the unique, even charmed, status of what the Russian poet Osip Mandelstam had called the “Sunday country”, the sunny sliver of the civilized Mediterranean world, the place of rest within the laboring Soviet Union. One session of the conference was held at the Matenadaran, that Parthian temple of ancient manuscripts that looks out from the brow of its hill down Erevan’s central avenue (then Lenin, now named Maštoc’, after the inventor of the Armenian alphabet) and out towards the snowy, inaccessible peak of Ararat. Prof. Karen Yuzbashian and I became acquainted then. Just as I purchased a stack of books, the news came through on the wireless that the export of books had been forbidden, by decree of the Supreme Soviet. *Ia etogo prosto ne poimu*, “I don’t understand it,” I murmured in exasperation to Karen Nikitch, who by way of reply made a sweeping gesture as if to embrace the entire USSR and asked, *A ostal’noe, Vy ponimaete?* “And the rest you *do* understand?” We passed quickly from *vous* to *tu*; and his ironic remark was the first *bon mot* of many I was to hear over the long years of our friendship, which ended, only on the earthly plane, with his passing in March 2009. His paper that day had dealt with an invented language, the *i uštuni lezu*, a word-list of which he had discovered in a Leningrad manuscript he was cataloguing. The list had been published by its previous owner nearly a century before. Karen modestly concluded that he had nothing of importance to add to some preliminary and tentative suggestions, and, though I returned to the subject in conversation over the years, he did not publish his paper. And there things stood. In 2011 I studied a cipher manuscript at Erevan, and from there, after an absence of four years, I returned to St. Petersburg, Mandelstam’s *gorod, znakomyi do slēz*, the city familiar to the point of tears, intending to study a manuscript containing three

unusual Armenian cipher alphabets. As I perused it I discovered with a sharp, tender shock that it was the very one where Karen had found his enigmatic *ĩ uštuni* language. I copied out the glossary and decided it deserved another go.

Whether I am right, the reader can decide. But I thought that the list deserved publication in English, in the context of a general consideration of Armenian and other planned languages and argots; and I was intrigued that *ĩuštuni* came with its own elegant cipher script (the third of the three in the MS; so after the Persian *khāĩ ĩ -e sevvom* I have named it the “Third Script”), one which its inventor employed mainly, though not, it would seem, exclusively, for the encoding of magical spells that are of considerable anthropological and botanical interest in their own right. A few days after I had begun perusing MS A 29, my friends Oksana Nikol’skaia and Khachatur Bely visited Karen’s grave in the Armenian cemetery on Vasil’evskii Island and placed flowers there. Then we went to Khachatur’s studio near Vosstanie Square and ate Armenian *lavash* bread and cheese, three gathered in His name.

Karen’s manuscript, A 29 at the Institute of Oriental Studies of the Russian Academy of Sciences on the Palace Embankment, lives in a library situated on the second floor of an 18th-century palace; and in the reading room, the *Zelēnyi zal* or Green Hall, if you listen very carefully you can sense Alexander Pushkin’s *blesk, i shum, i govor balov*—the sparkling light, and sound, and speech of balls. The windows, many times the height of a man, take in the refracted glitter of the waters of the broad Neva; and at noon the cannon fired at the Peter and Paul Fortress opposite shakes their panes. Shortly after I had parted with the ghosts of cavalry officers and princesses, *The New York Times* published a glib article by James Gleick asserting that for all the pleasure he once felt when handling an ancient manuscript, the digital experience has fairly replaced it. Let him keep on thinking it: I had the Green Hall to myself.

This study, then, addresses the topic of Armenian secret languages and argots in a historical, cross-cultural, linguistic, and social context, considering the invented language and cipher script of MS A 29, another curious case of Armenian invented language (Seh-lerai), and the secret argot of the felt-beaters of Moks.

1. Secret languages and argots

“When a people preserves its language, it preserves the marks of liberty,” intoned the 19th-century Filipino nationalist José Rizal. One might add that since the condition of unfreedom is more the norm than liberty, secret languages and ciphers have long been devised. Perhaps secret language is as old as human society itself. Its purposes and uses are quite varied; but there seem to be a few that are most frequent. Jargon has been defined as the specialized vocabulary of conventional groups in society — the brevity of accepted terms is convenient, it has to be learned, but there is nothing intrinsically secret about it. Argot, on the other hand, can be defined as a system of non-verbal symbols, vocabulary, and verbal expressions within a natural language that is used expressly for the purpose of concealment. The reason for secrecy in this case is criminal or deviant behavior (as fluctuatingly defined by the dominant culture of the time); and the argot serves the additional function of affirming membership in the in-group and of validating its antinomian character. It is a “boundary-maintaining mechanism” in which words for outsiders are pejorative; for insiders, euphemistic and even laudatory. In the prison argot of West Bengal, for instance, a notorious character is called Rustam¹. The latter is the mighty Saka warrior whose heroic exploits pervade the *Šāh-nāme* “Book of Kings” of Ferdōsī — the national epic of Iran popular throughout the East. To call a man Rustam is not merely to praise him, but to evoke, at least to an extent, the heroic code of an archaic culture. Argots can, thus, have a markedly ancient component, as we shall see also in the case of the felt-makers’ coded speech in Moks. This is worth keeping in mind, since at least in American English the idea of slang often carries with it, to the contrary, the aspect of novelty and of rapid change². But it can just as often be a magical window affording a glimpse into antiquity.

Some subgroups are either integrated into society or destroyed; and their argots either lapse into desuetude, are absorbed into mainstream speech, or endure in part in the argots of other subcultures. The Greek

¹ [Lerman 1967, Mehrotra 1977, 8, 9.]

² This is particularly the case with the African-American “gangsta” parlance of the inner city; and websites such as Urban Dictionary enable one to track the speed and flux of such linguistic change.

military régime of 1967–1975 repressed the scholar Elias Petropoulos for his work on the argot of Greek homosexuals, *Kaliarda*, with its enormous vocabulary³. Farrell in 1972, three years after the Stonewall uprising, could still title an article on the speech of American gays “The Argot of the Homosexual Subculture”. However the Greek junta collapsed, Gay liberation advanced, *Kaliarda* has gone into many editions and is a standard work of research, and gay people in most civilized nations need no longer conceal their way of life, nor do repressive laws force them to consort with criminals. So now expressions Farrell classified two generations ago as argot — “get real”, “get lost”, “tacky”, “bummer”, etc. — have found their way into the mainstream of American English. Other terms that reified the subcultural and deviant character of gay life have faded away as homosexuality itself has come out of the “closet” and its distinctive subcultural traits have mostly melted away⁴.

The Thugs, a criminal (by any definition) subculture of the Indian subcontinent were another, quite different, deviant group with a patois of their own: masquerading as guides or helpers, they would attach themselves to bands of travelers, exchange signs of recognition and instructions in their argot, and then strangle, rob, and bury their victims, dedicating the murders as offerings to the goddess Kali. Nothing remains of this group but its name; for the British were able in the 19th century to rid India of this ancient scourge⁵. But some lexical items of the Thugs entered the argot of other deviant groups who are only marginally criminal. The Pandas of Varanasi are a class of priestly practitioners and guides who fleece pilgrims to the holy city on the Ganges⁶. In addition to using pure neologisms such as *khotar* for “policeman”, they sardonically endow innocuous expressions with deviant meanings: *panditī*, lit. “estimable Sanskrit scholar” means “marijuana”; and *tirāth karnā* “make pilgrimage” is used to mean “to get drunk”. Pandas of

³ Petropoulos 1982.

⁴ Farrell 1972.

⁵ Sleeman 1836.

⁶ “Pandas of today earn their living by goondagiri,” as the newspaper *Aaj* (i. e., Hindi *āj*, “today”) of 8 June 1973 (cit. Mehrotra 1977, p. 24) puts it in endearingly quaint Indian English. A *gunda* is a hoodlum; *gundagiri*, well, thuggery!

Varanasi and Dalals — silk merchants — of Delhi have absorbed into their lexicon a number of words and code names for numbers from Thug argot.⁷ This use of symbolic nouns and proper names for numbers would be of particular value in concealing financial transactions; and Al Bīrūnī noted their use in India a millennium ago⁸.

Secret codes have also been employed by creative artists and dissidents in societies terrorized by state surveillance and repression, notably in the Soviet Union, though Russian sectarians of the Tsarist era and others had long and widely employed the transpositional cipher called *lioreia* or *tarabarskaia gramota*⁹. A case in point from the Soviet era is that of the great Armenian poet Ehišē Č'arenc' (generally rendered in English as Charents, b. Kars, Russian Armenia, 1897). He was ostracized from society, then arrested and murdered by the police in 1937. Shortly before his death he drafted the first stanzas of the unfinished epic *Poema anvernagir* "Poema without a title" whose epigraph contains the enigmatic line: *IT'+LA+A+ŽB+ŽA+IB+ČZ*, which can be deciphered by considering each number the ordinal place of a character in the Armenian alphabet, so: S+T+A+L+I+N=106. Č'arenc' seems to be seeking the mystico-numerical significance (in Jewish mysticism this is called *gematria*) of the sum of the letters of the name of the dictator whom the poet, who was no stranger to every kind of philosophical and ideological contradiction, both revered slavishly as a leader

⁷ Mehrotra 1977, pp. 32, 35–36, 39, 88.

⁸ Mehrotra 1977 offers several examples: for zero, *akāša* ("space"), *śunya* ("voidness"); one, *adi* ("beginning"), *rupa* ("form"); two, Yama (lord of the underworld, the primordial Twin), Aśvin (twin horsemen); three, *trikāla* ("three times", i.e., past, present, future), *loka* ("(3) worlds", i.e., heaven, hell, and this); etc. Here sacerdotal arcana, the philosophy of mathematics, and perhaps commercial secrecy intersect.

⁹ See Priēmysheva 2009, vol. 1, p. 77: the code transposes the consonants while leaving vowels in place, thus:

б в г д ж з к л м н
ц ш ч ц х ф т п р

Thus, P.I. Melnikov (A. Pecherskii) in his novel *V lesakh* ("In the Woods") has a St. Petersburg sectarian write a *tarabar*-encoded letter with such phrases as *onilasi i shel' pamots*, i.e., *opisali i ves' narod* "they described the whole people".

and execrated bitterly as a tormentor. At another point he calls Koba (the Georgian diminutive of Joseph, the tyrant's Christian name) *lgc'zt jzčbk'č'cp'žjbl ylbh bljvr*, i. e., through a substitution cipher arrived at by transposing the order of the letters, *ibrev helap'oxut'yan miak aspet* "as the sole paladin of the Revolution" — the incriminating implication being that the mustachioed bandit from the Caucasus had impudently usurped the nobility of Vladimir Il'ich Lenin¹⁰.

As early as AD 1250 one encounters in central Europe the German designation *Rotwelsch* for a *Sondersprache* intended for use in bypassing social norms of communication and expressing tabooed things. It was a speech of thieves and robbers more than a professional jargon, and contained numerous lexical items from the tongues of marginal or outcast communities — the Jews and the Roma. So for instance the word for a thieves' lair, *čor-bayis*, contains both the Indic, Romani word for a thief and the Ashkenazic pronunciation of the Hebrew term for a house, *bayit*. The word *krey*, "horse", employed in the same argot, is derived from Romani *graj*, "*idem*", itself a loan from Arm. *grast* "beast of burden, pack animal": many of the Roma of Europe had come through Armenia, and their speech in places as remote as Wales contains Armenian lexical items¹¹. The Roma of Armenia in turn employed their speech, *Lomavren* (i.e., a form of "Roma" + the archaically pronounced Classical Armenian suffix for custom or language

¹⁰ See discussion in Abgaryan 1991, pp. 157–160. A more interesting (but not Armenian) case is that of the Russian absurdist writer Daniil Kharms, who kept an enchanting diary of drawings, Kabbalistic notes, and chronicles of erotic desire in a simple substitution cipher whose letters he culled from sources as mutually remote as Samaritan and Japanese — a reflection of the catholicity of his interests: see [Russell 2010]. The Soviet graphic designer and architectural draftsman Yakov Chernikhov also invented elegantly typographical cryptograms in the 1930's. He also sketched fanciful landscapes with impossibly elaborate, exotic Indian-style buildings; and it would seem the two exercises of escapist imagination often go together. See [Chernikhov 2009], pp. 118–119, 203.

Matras 1998; perhaps the element *rot*, "red", in the designation *Rotwelsch*, with its Hebraisms and Jewish associations, can be associated with medieval superstitions about the detested and feared *rote Juden*, "Red Jews" of the Apocalypse, cf. [Gow 1995, Benite 2009, and Russell 2012].

—*awrēn* (now pronounced — *ōrēn*), Mod. Arm. *a/ērēn*, cf. *hayērēn*, “Armenian”), which contained numerous loans from Iranian languages, as a secret jargon¹². In the 10th century the *Ḥudūd al-‘ālam* (“Limits of the world”, an Islamic text on geography in Persian) mentions a secret language called *lutrā*, which Melikian explains as a loan from Hindi/Urdu *lutra*, “exiled, dumped” — perhaps a deprecatory designation of the itinerant Roma, and thus, presumably, of their speech also. But it would seem the origins of this speech lie in a very ancient argot of Iranian Jews whose encoded words were Aramaic¹³. The natural languages, then, of Roma and Jews, who were stigmatized as marginal or deviant subcultures, whether for their itinerant way of life (on which cf. the Armenian felt-beaters of Moks, *infra*, with observations on other “Mercurian” inventors of argots) or independent religious beliefs, were at times considered argots themselves, or at least contributed to the argots of criminals — so one still finds Hebrew words, *via* Yiddish, in Russian underworld slang. For instance, Hebrew *ketubbah* “marriage contract” in its Ashkenazic pronunciation becomes the common Russian slang word *ksiva*, “document”. And then there are the argots that survive their speakers. In Holland, whose Jewish community was almost entirely exterminated in World War II by the Germans, the slang name of Amsterdam is still *mókem*, from Hebrew *māqōm*, “place”. In Hungary, whose Jewish population was similarly decimated, the slang for a friend or pal endures as *haver* (pronounced *hóver*), from Hebrew-in-Yiddish again.

For the 17th-century Armenian traders of New Julfa, their native dialect and script served as a secret language on its own; and there were also argots and secret languages within Armenian itself. Armenians of

¹² [Voskanian 2002.]

¹³ In an important article summarized in the *Encyclopaedia Iranica*, “Loterai and its long history”, Prof. Martin Schwartz (University of California, Berkeley) has studied a 14th-century Persian MS of the “Book of Grifters” (*Ketāb-e Sāsiyān*) containing a glossary of Loterā’ī, an argot defined as employing Judeo-Iranian grammar “with a special substitutive vocabulary which is used in the presence of gentiles to prevent them from understanding.” He demonstrates that these substituted or code words are Aramaic, in forms datable to the early Achaemenid period, that is, *ca.* the 6th–5th cent. BC.

the village of Banazur in the Hadrut region of Ārc'ax (Mountainous Karabagh) all knew an Armenian form of the secret language called by the Iranian name Zargarī, lit. "goldsmiths' (argot)", in which one simply adds a -z- to each syllable, e.g., Arm. *cnund*, "birth" > Zargarī *cəzənəzund*, etc. They employed also reversed speech (Arm. *t'arserēn*), turning *hac* "bread", for example, into *c'ah*. The ethnographer Sruanj-teanc' cites the same example but calls it sparrows' language (see *infra*)¹⁴. As we shall see presently, the Armenian felt-makers of Moks at times manipulated words in this way, in order further to complicate their own secret argot.

In his famous discussion, following the funeral oration of Pericles, of the corruption of Athenian society under the pressures of the Peloponnesian War, Thucydides describes how the meaning of words changed: the attributes of a simple and honest nature were derided as naïve, while words describing base and violent qualities came to be praises. But it is the twentieth century, perhaps uniquely, that has provided the case of the transformation of an entire national language into the argot, not of a subculture, but of a dominant, majority criminal culture. Victor Klemperer, who before World War II had been a professor of French literature at Dresden University, became an eyewitness to, and survivor of, the horrors of Nazi Germany, keeping clandestine notes on the transformation by the Germans of their own tongue, once the speech of a civilization, into a criminal argot. After the War he gathered his notes into a book, *Lingua Tertii Imperii*, in which he describes, for instance, how the epithet "fanatical", once a term of opprobrium, became an adjective of approbation. At one point he calls *LTI* a "prison language". It is important to stress that, unlike in the Soviet Union, where writers and others satirized Party jargon and the Russian language became a bulwark of poets against totalitarianism, the majority of Germans seem

¹⁴ [Melikian 2002]; [Adams 2009], p. 37, citing English *nosper* for "person" and *top o' reeb* for "pot of beer", calls this "back slang". My grandmother Bertha Russell (1900–1981), who came from the village of Wolka Turebska near Rozwadów to the Lower East Side of Manhattan in 1906, kept her Yiddish, forgot most of her Polish, and learned English perfectly, both the received type of school and the back slang of the street, whole sentences in which she sometimes recited to me with astonishing speed.

to have found a sense of togetherness in the shared knowledge of their implication in the crimes of their Third Reich. Their criminal argot, this Nazified German, it may be argued, both grew out of this collective degeneracy and served to reinforce and validate it¹⁵.

2. Philosophical and hypothetical languages

Some secret languages have been devised, not to conceal criminal activities, but to restrict esoteric teachings to an intellectual or spiritual elite. Their inventors feared misunderstanding by readers insufficiently prepared, as well as persecution by the orthodox establishment. The philosopher Leo Strauss, himself a refugee from fascism, wrote of such practices in medieval Europe in his famous essay, *Persecution and the Art of Writing*. Zoroastrian sectarians in India, followers of the Parsi priest and esoteric philosopher Dastūr Āzar Kaivān, who flourished in the reign of the emperor Akbar, invented an artificial language for the book of their traditions and teachings, the *Desātir*¹⁶. In a Perso-Turkish milieu of around the 15th or 16th century there was created a language for the use of mystics called *Bāl-a i-Balan*: it displays characteristics of the languages of its inventors, and was probably invented to conceal esoteric teachings from censorious orthodox divines¹⁷.

There are traces of such erudite mystification in Armenian MSS. Fr. Nersēs Akinean cites¹⁸ this autograph of Catholicos Grigoris Aḥt'amarci'i, a poet who delighted also in macaronic verse: *P'ar'k' k'ez kioni: k'ol arek'sagoyñ kisagndi ew Demetri ararič'. Awrñnut'iwn ew p'ar'k'*,

¹⁵ *LTI Notizbuch eines Philologen* was published two years after the war; for an English translation see [Klemperer 2000], esp. p. 76. For the argument that knowledge of Nazi barbarism actually united the Germans, see Kühne 2010. The Nazis also employed a code language of concealment and euphemism; so "resettlement" in both documents and official conversation on the program of the extermination of the Jews meant "liquidation". Yücel Güçlü, a functionary of the Turkish government tasked with promoting denial of the historicity of the Armenian Genocide, regularly uses the same mendacious terminology in his "researches".

¹⁶ [Russell 1993], p. 87.

¹⁷ [Bausani 1954] and 1970, p. 83 f.

¹⁸ [Akinean 1958], p. lxi.

gohut'iwn ew am(enayn) barexawsut'iwn handerj erkrpagut'eamb s(urb) errordut'ean... ("Glory to thee... ? and creator of the hemisphere and of Demeter. Blessing and glory, thanks and all intercession with worship of the holy trinity...") And he cites an earlier example of this enigmatic invocation, from the colophon to a hymnal (*Šarakan*) dated AD 1335, belonging to one Mkrtič' Avtalean of Tigranakert (Amida-Diyarbakir) published by the ethnographer Abp. Garegin Sruanjteanc': *P'ark' k'ez: hon aregsagon kisagndi ew demetri, ararič' yamenayn ar-aracoc' yimanaleac' ew i zgaleac'...* ("Glory to thee... ? creator of the hemisphere and of Demeter, from all creatures both intelligible and tangible...") The word *kion* may be Greek for "pillar"; the *hon arexagon*, perhaps corrupted Greek for "the hexagon", so the invocation might be, an erudite praise of God, the pillar that extends through the six sides of this *kisagund*, "hemisphere", down to the underworld of the earth mother Demeter, that is, Armenian Sandaramet — though in Greek myth it is Atlas, not Zeus, who is the pillar *ouranou te kai khthonos*, "of heaven and earth". If the mysterious *kion* is indeed Greek, then one might cite the conclusion of a magical spell discussed by Ōdabašyan¹⁹: *oč' erknic' siwn ew getinn geran, oč' covun xub, oč' ap'ac' mēf maz busani ew oč' ays banis xap'anumn lini* "neither heaven's pillar nor the ground plank, nor yet the seal of the sea — a hair will not sprout on the palm of the hands any more than there can be a warding off of this spell." The eleventh-century scholar Grigor Magistros Pahlawuni, famed for his erudite verbal obscurities, mentions both Demeter and *kisagund* ("hemisphere") in the same passage of a letter dismissing the magic of Nectanebos (the Egyptian priest-magician who fathered Alexander the Great on the credulous concubine Olympias, in the *Alexander Romance* of Ps.-Callisthenes)²⁰. This would be the earliest collocation of the two easily identifiable marked terms in the code phrase, and thus perhaps the latter's source. And one may cite a colophon, less mythologically enigmatic but still polyglottic, as a further example of learned sacerdotal obscurity cited by Fr. Lewond Ališan from an autograph of the

¹⁹ Ōdabašyan 2000, p. 47, citing his previous article in *Patma-banasirakan handes* 1986.3.

historian Zak'aria of K'anakeṛ::²¹ *P'ark' k'ez apeniaz simakra ḫmert'ō ḫ Dēou t'antri, a(stua)c im K'(risto)s* "Glory to thee who art without need (Mlr. *abeniyāz*), *simakra* (?), O God (Geor. *ghmert'i*, voc.), O God (Gk. *theos*, gen. sg., and Latin *Deo*), O God (Tk. *tangri*)."

Then there is the language invented as a game or intellectual exercise by one person, sometimes taken up and used by other people to form an in-group, enjoy secrecy, or even create an artificial, amateur subculture not based upon a shared profession or social status or definition. Thus the Oxford Germanic philologist J.R.R. Tolkien as a private hobby invented a number of languages, some influenced by his studies of the *Nibelungenlied* and other Germanic epics, others strongly colored by Finnish, which he admired for its euphony; and this pastime, which he candidly confessed to as "a secret vice", became the basis of the *Lord of the Rings* cycle of epic romance and myth. The Rūštuni language seems to belong to this category — it was for its maker an intriguing and private pastime. But private fantasies, as we can see with Tolkien's vast legacy, spread into popular culture and imagination. A martial empire of alien beings, the Klingons, battle the heroes of the American television and cinematic science fiction series "Star Trek"; and one of the writers of the programs, a linguist, devised a cacophonous, complete — and complex — Klingon language that role-players have adopted and learned²². The particular activities, concerns, and values of a subculture spawn an argot; and it seems the reverse is true, as well, so that an invented language becomes a tool for the creation of an imaginary culture to surround it. Thus, mild-mannered American speakers of Klingon can escape with their hobby from the ubiquitous banalities

²¹ Ališan 1890, p. 178 and facsimile, fig. 69.

²² One might find this material unsuitable to a scholarly paper; but I found out long ago that a number of my Harvard colleagues, superb philologists, are unabashed Trekkies — fans of Star Trek. Others enjoy the *Dune* books, with their generous helpings of Arabic. And I offer a course on H.P. Lovecraft, the American writer of horror stories, who also invented languages and drew material from ancient ones, much as his precursor Edgar Allen Poe did in *The Narrative of Arthur Gordon Pym*. An abridged version of the latter, translated most likely from the French of Baudelaire by one "H.E.V.Č" into Western Armenian, was published by the Vienna Mekhitarists in 1857: *Nandugedc'i Art'ur Korton Bimin pataharnera*.

of “Have a nice day,” “Thank you for caring,” and so on into a distant civilization that possesses very little in the way of phatic communication²³, its only form of greeting being the brusque “What do you want?” My favorite Klingon proverb is “Revenge is the best revenge.” Typical paradigmatic sentences in the Klingon primer include “They are searching for the enemy in order to kill him,” “I don’t care,” and “That helmet suits you.”²⁴ In a way, intergalactic Klingon brings one back, the long way, to the Caucasus; for its inventor, Marc Okrand — as I am informed by my learned Kartvelologist friend Michael Grossman of Widener Library — was inspired by Georgian phonology and idiom: the familiar salutation *Gamarjoba!* means, literally, “Victory!”, not Hello. Klingon proper names such as Kang, Kor, and Torg sound pleasingly brusque to Americans imagining themselves a bit more macho than they are; but such names would not sound outlandish to Armenian ears, attuned to Xorenac‘i’s Tork‘ the Ugly (*angel*). It will be seen that the supposed sounds of foreignness shaped *Ruštuni*, as well.

In contrast to the harsh tones of Klingon one may cite another invented language, J.R.R. Tolkien’s Sindarin, the speech of the delicate and poetic elves, which is as euphonious as Klingon is jarring, and as sweetly eirenic as Klingon is fractious. Typical expressions include “pools of golden water” (*loeg ningloron*) and “silver shining tree” (*galathilion*). Even the battle cry *Lacho calad! Drego morn!* (“Flame light! Flee night!”) has some of the bromide undertaste of such saws as “Better to light a candle than curse the darkness.”²⁵ Esperanto, to be examined presently, is a pleasant sounding tongue, a bit like Italian to the ear. That measured euphony may be one reason it won out over another planned language, the harsh Volapük, which had been its principal competitor in the 19th-century arena. The invented language we are presently to examine from an Armenian MS had a script invented for it and as a substitution cipher for magic spells in Armenian; and Tolkien used both Runic characters and an elegant cursive like old Irish book hand for his

²³ By “phatic” I mean, following Everett 2008, those aspects of language that convey no information but serve rather to maintain social channels.

²⁴ See [Okrand 1985 1992].

²⁵ [Salo 2004; 103, 183, 213].

invented Sindarin. He also loved magic: in what corner of the world is the wizard Gandalf's name not known?

Some invented languages in fiction are used to reflect the aspects of an imagined utopian or dystopian social order. George Orwell's totalitarian Newspeak in the novel *1984*, a parody of Soviet and Nazi perversions of Russian and German, has given us "unpersons", "thought crimes", and a number of other neologisms that are sadly still usable long after the chronological year 1984 has receded into the past; whilst the Pravic of Ursula Le Guin's anarchist planet in *The Dispossessed* reflects its Edenic surroundings by lacking any possessive pronouns. The Sapir-Whorf hypothesis holds that the thought of which a person is capable is circumscribed and determined to a degree by the native language he speaks. Though the theory has not gained general acceptance, and is most strongly opposed by the Chomskian school, Orwell seems to have toyed with it. In *1984* the secret police interrogator O'Brien remarks contentedly to his victim Winston Smith, the hapless protagonist, that in time Newspeak will so mold and limit human perception that thought crime, i.e., dissidence, will be impossible. Aklo, the name for a language of witchcraft in Arthur Machen's novella *The White People* (1899) was adopted by the American writer of horror fantasy, H.P. Lovecraft, as the dark speech of his evil cultists. And most recently Alan Moore in *The Courtyard* presents Aklo, in a sort of Whorfian riff, as a wholly unhuman language that alters fundamentally the perceptions and moral capabilities and judgments of those who learn it, destroying their humanity²⁶.

Yet another sort of invented language altogether is the kind intended to be the very opposite of secret — the planned international language. There are two kinds: the *a priori* type, with an entirely arbitrary and artificial vocabulary meant either to make the categorization of thought more rational or to put all learners on a level playing field, or the *a posteriori* kind — a language based on roots and endings culled from natural languages. Esperanto, invented by Ludwik Zamenhof (1859–1917), a Jewish oculist from Bialystok, is of the latter sort. Its inventor, a witness to the anti-Semitism and pogroms in the Pale of Settlement of the Russian Empire, hoped with his *internacia lingvo* to promote

²⁶ [Rogers 2011].

world peace through mutual understanding, generally, and to eradicate Jew-hatred in particular. In 1887 he published at Warsaw in Russian his booklet outlining the rules and lexicon of his new language²⁷. It is interesting to observe that Zamenhof's contemporary and countryman, Eliezer Ben Yehuda, championed another sort of invented language (in a sense) — Modern Hebrew — after reading in Russian translation George Eliot's novel, *Daniel Deronda*, on a Jew who resolves to revive his ancestral tongue in its homeland. Ben Yehuda emigrated to the Ottoman-ruled land of Israel in 1882, where his descendants still flourish and the language he revived is the native tongue of some seven and a half million citizens of a successful, democratic modern country. Zamenhof and his family, though sympathetic to Zionism, remained in Warsaw: his daughter Lidia (b. 1904) helped to lead the Esperanto movement after his death and embraced also the universalist Baha'i religion. Zamenhof himself had created a kind of universal ethical religion, Hillelismo (after the first-century Jewish sage Hillel), which he later renamed Homaranismo, which was to exist parallel to older and separate faiths as a way to remind people of their common humanity.

Hitler, who was anything but enamored of internationalism, humanism, and universalism, singled out Esperanto for attack in *Mein Kampf* as part of an imagined Jewish conspiracy²⁸; and his henchman Rein-

²⁷ Given the human character, it is a conundrum how a universal language could ameliorate matters. In a popular science fiction novel the mild-mannered English survivor of the destruction of planet Earth, adrift in outer space, is enabled to understand diatribes in the non-human Vogon language — and, worse, Vogon poetry — by sticking a Babel fish in his ear. Adams 2005, p. 60, comments: "the poor Babel fish, by effectively removing all barriers to communication between different races and cultures, has caused more and bloodier wars than anything else in the history of creation." So it might seem, in Adams' cosmos at least, a good job that God knocked the tower down.

²⁸ *Mein Kampf* is today a bestseller in Arabic and other translations throughout the Islamic world, along with the fictitious *Protocols of the Elders of Zion*. Esperanto is not popular there, although in the early 20th century the Iranian Baha'i leaders encouraged its study and use. There are about 500 Esperantists in Israel, according to a friend; and Jerusalem has a Zamenhof Street. Michael Chabon, an American writer, imagined the counterfactual history of a temporary, Yiddish-speaking Jewish state in Sitka, Alaska in his novel *The*

hard Heydrich made special efforts to ensure that the Nazi régime suppressed the language. He also compiled lists of Esperantists for arrest and execution. Zamenhof's study and library were destroyed during the German terror bombing of Warsaw in September 1939. Most members of the Zamenhof family were shot in Nazi prisons soon after, or gassed at Treblinka during the liquidation in 1942 of the Warsaw Ghetto. In considering the contrasting fortunes of the Ben Yehuda and Zamenhof clans, one thinks of the comparably parallel fates of two Jewish scholars from ostensibly civilized Germany: Gershom Scholem, an ardent Zionist, focused his studies on Judaica, emigrated to Israel after World War I, and embarked upon a career of many decades at the young Hebrew University of Jerusalem. Scholem's close friend Walter Benjamin, a universalist whose scholarship was of a correspondingly broader, socialist-humanist character, elected to remain in Europe and died in the Hitler era. One might conclude that the language called "One who hopes" is based upon a hope that is quixotically vain. Yet the language lives, and the number of speakers may be as large as some three million worldwide. Another estimate is but half a million, but even that figure is a thousand times the combined number of all other speakers of all other invented languages. There are still congresses of Esperantists in many countries around the globe, and one Esperantophone rock musician speaks it as a mother tongue alongside the natural language of his native country, Denmark²⁹. Esperanto has evolved the forms of a true living language: it has slang (e.g., *krokodili*, "to speak a national language in a setting when one should be speaking Esperanto"), obscenity and vulgarity (*pisi*, "to piss"; *fiki*, "to fuck"; *kaldu* "scram" from *kuru al la Diablo* "go to the devil"; and *fikumin*, "fuck off"), and new idiomatic constructions based upon its morphological peculiarities (-*end*- "which has to be" + pres. verbal ending > *endas* "is necessary"; *kafumi*, "to relax with friends over coffee", verbal inf. based on "coffee" with -*um*-infix)³⁰. One member of the founding family, Zamenhof's grandson Ludovic, survived World War II, and addressed an Esperantist congress

Yiddish Policemen's Union (2007). The action begins, appropriately, at the Zamenhof Hotel.

²⁹ See [Okrent 2010] for a general survey of Esperanto, Klingon, etc.

³⁰ [Schubert 1989, 134–146, 204.]

at Mainz in 1958. Delegates were nervous about what he might say, in Germany. But these were his words: "It has been a tradition in former Congresses, especially those before the war, when the Zamenhof family was in the literal sense numerous, that some member of the family should greet the Congress in the name of the family. I myself have had the honor of doing this several times... Today I should like to make a change, and instead of greeting you in the name of the Zamenhof family, I would like to greet you all, gathered together in this Congress, as the great family of Zamenhof in the literal sense of the word."³¹ It is hard not to respect an undertaking that engenders such perseverance and nobility of spirit, and one reflects that the Esperantists may well be among the redeemers of the honor of the human species, and not the losers.

It is worthy of note that Armenians figure most prominently in the history of Esperanto in the Transcaucasus. In Tiflis, Hayk Artem'evich Astvatsatriants (Astuacatreanc') from 15 March 1910 published and edited the journal *Kaŭkaza Esperantisto* ("The Caucasian Esperantist"), which featured articles in Esperanto, Russian, Armenian, and Georgian on art and music, *belles lettres*, and the theater, and provided also lessons in Esperanto and a review of the press. At Baku from 1911, Abel Ivanovich Ter-Bagdasarian (Tēr-Baḏdasarean) published, and Yakov Kalustovich Khodzhamir (Xoḡamir) edited, the commercial and humor paper *Nerkarar* (Arm., "The House Painter") in Esperanto, Russian, and Armenian³². The Esperanto movement suffered periods of censorship and repression in Tsarist Russia; and in the Stalinist period was wholly banned, with many of its members killed, in the Soviet Union. But in the late 1980s my friend Oksana Fyodorovna Nikol'skaya encountered an employee of the Tbilisi Botanical Garden who proudly told her he had translated into Esperanto the Georgian national romantic epic *The Man in the Panther's Skin* of Shota Rustaveli. And Esperantists are very active in Russia today.

There is the most interesting case of a little-known *a priori* universal language invented by an Armenian: Karapet T'ənkərean (Tenger, Tingir, *nom de plume* Tg(h)ransar, 1754–1808), son of Grigor *Hoca*,

³¹ See [Boulton 1960], 217; on Zamenhof's daughter, her Baha'i ties, and her fate, see [Heller 1985].

³² See [Vlasov 2011], pp. 57–58 and 58 n. 1.

a member of the aristocratic Armenian *amira* class of Constantinople, sired three boys and one girl. The eldest, Petros (Western Arm. Bedros), was born to his mother Mariam on 3 Sept. 1799 and at the age of twelve was enrolled as an acolyte of the Armenian Catholic seminary of the Mxit'arists (Ger. Mechitharisten) at Vienna. Ordained on 1 Nov. 1818, he returned to Constantinople but left for Bucharest in 1828 following the persecution of the Armenian Catholics of the capital by the Armenian Patriarchate. He then went to Vienna and Rome, gave up holy orders, and in 1844 settled in the wealthy suburb of Boudja (Tk. Buca) near Smyrna (Izmir). He had studied by then Greek, Latin, Arabic, Persian, Italian, English, French, and Sanskrit, besides Turkish, German, and, of course, the Classical dialect of his native Armenian. A few years later his well-to-do family built him a fine stone house on a hill at Aspra Khōmata ("White Lands"), where he labored to invent the vocabulary, script, and grammar of *Seh-lerai*, whose name means "universal language" (*hamašxarhayin lezu*; it is mentioned with various other spellings, including Sahleray and Sehlerai). He published an ABC of the language at Smyrna in 1864: the script he invented for it consists of a complex system of 19 consonantal characters to which various additional marks are added for the purpose of voicing or devoicing; a vertical bar signifies the place of a vowel, and smaller marks are added for the 12 vowels (these include Armenian and French diphthongs). (See Plates 8–11.) Bedros composed poems in his new language; and his disciples read these in French translation. In his alphabet he engraved on a plaque that he hung out over his house door the Seh-lerai word *Ayzeratand* (or *Ayzeradant* if the word is to be read in W. Arm.), that is, "Temple of Wisdom" (*tačar imastut'ean*) in his new language. Although the name of Bedros' Mozartian *Weisheitstempel* is polysyllabic and decidedly Irano-Armenian in feel, from the one existing sentence in Seh-lerai it would seem its inventor aimed at a monosyllabic system, comparable perhaps to the planned, *a priori* language of Gabriel de Foigny (*La Terre australe connue*, 1676)³³. The name Tg(h)ransar sounds rather like an Armenian compound of Tigran (the name of the great Artaxiad king, r. 95–56 BC) and *-sar*, "head, summit", but it apparently means *noēkē kinēsis*, "mental motion" in Seh-lerai.

³³ See [Eco 1998, 77–95].

Bedros was widely loved and respected for his kindness and learning. One day in 1881, feeling death approaching, he lay down on a couch prepared in his temple: his disciples found his body at peace on the morn. He had been in life a strict vegetarian, so one has the impression that the language accompanied a mystical or humanitarian and universalistic teaching, an invented culture like the one Zamenhof was to conceive later on. In the September and October 1921 issues of the Greek Esperantist journal *Bizantio*, Dr. Anakreōn Stamatiadēs (Eng. Stamatiadis, 1 Sept. 1868–24 Jul. 1964), a prominent physician and serious Esperantist (his Greek-Esperanto dictionary is standard and has been reprinted in recent years), published in Greek and Esperanto a summary of Bedros' little booklet on the script he had invented for his language. The grammar and dictionary of Seh-lerai, though prepared for publication, seem never to have been printed. That was the year of the demise of the postwar Turkish administration, that had, even half-heartedly, prosecuted the perpetrators of the Armenian Genocide; and in 1922 the invading army of Mustafa Kemal ("Atatürk") burned Smyrna to the ground and massacred or drove its Greek and Armenian Christian populations into the sea. The cosmopolitan culture and hopes of Bedros Tenger died in Turkey perhaps even more cruelly than did those of Zamenhof; for as we have seen, Esperanto rose from the ashes, whilst Seh-lerai was very nearly relegated to oblivion³⁴. The hill where

³⁴ [Ayvazean 1893; 91–95; Pōtosean 1951; 34–39; and Russell 2010]. Albani and Buonarroti 1994, p. 371 s.v. *Sehlerai*, report that the inventor of Seh-lerai published at Smyrna in 1864 under the pseudonym Tghransar (with *-gh-* in Latin letters and *gamma* in Greek) a description of his language, but misspell the name of the book. Its correct title is *Ans haïlanzar ou Alpha-Gnomonomic de Sehlerai*. They provide a sample sentence with translation: *Rum shai yran bes lerai vom, shaiz il le sam lerai iun sim, mim serai vam shaiz il le som* "Nel mondo sarà preferita una lingua scientifica unica à numerose lingue con una scienza unica." [Drezen 1967; 61], has this notice: *La libro de Tghransar portis la nomon "Alphabetarion Ansailanzar Sahlerai" kaj estis eldonita en Smyrna. La eldonjaro de la libro ne estas konata, sed lau la havataj informoj ĝi estis publikigita en ĉiu okazo ne pli malfrue ol ĉe la fino de la XVIII jarcento.* ("Tghransar's book bore the name *Alphabetarion Ansailanzar Sahlerai* and was published at Smyrna. The date of publication of the book is not known, but according to the information we possess it was published at any event no

Bedros' Temple of Wisdom once stood is called to this day *Tıngır tepe* ("hill"), and statues of the Persian Sufi poet, theologian, and saint Mevlana Jalāl al-Dīn Rūmī stand at the summit. (See Plate 12.)

There is yet another category of invented language: the hypothetical one based on mathematical ideas that can overcome the normal boundaries of rational thought as expressed by means of natural languages. In his novella *Youth Without Youth* the Romanian scholar of Oriental languages and comparative religions Mircea Eliade imagines a character attempting to discover the source of all language. Despairing and alone, at seventy, he travels from his hometown to the capital, Bucharest, to end his life. It is Easter Sunday. He is struck by lightning and rejuvenated, endowed with the preternatural ability to learn a new language almost instantaneously. He begins to keep his diary, partly for his own cognitive purposes and partly for secrecy, in an invented language that

later than the end of the 18th century." [Tr. by J.R.R.]) But that would place the invention of the language at or before the date of Bedros' birth; and this erroneous notice seems to be the source of a similar assertion by the linguist Mario Pei in his *One Language for the World* (New York: Biblo and Tannen, 1968, p. 147) — that Sehlerai (as he calls it) was invented around 1800 but published in 1921. The latter date is erroneous as well and must refer to the date of Stamatiadis' Esperanto translation in *Bizantio* (Tgransar 1921). A copy of Tgransar's book, perhaps the only one in existence, was given in 1928 to Aram Andonian, the first librarian of the AGBU Nubarian Library at Paris (and author of *Mec oçirə* ["The Great Crime"], one of the first histories of the Armenian Genocide); the present director, Dr. Raymond Kevorkian, has very kindly provided to me a scan of it, which I plan to reprint with a study of its contents, which include comments on the phonology of Armenian, Hebrew, Russian, and Arabic (with characters in the original typefaces of these languages). I have forwarded the scan to the Esperanto divisions of the Austrian National Library at Vienna, the British Library at London, the Library of Congress at Washington, DC, and the Widener Library at Harvard; so this extremely rare and unusual work, which, it seems, has not been seen for some ninety years, can now be widely consulted. I am grateful to my colleague Professor Valentina Calzolari of the University of Geneva for her suggestion that I contact the Nubar Library. Vağarşag Seropyan (Vağarşak Serop'ean) published a biographical article with useful references, "Tıngıryan, Bedros", in the *Yaşamları ve yapıtlarıyla Osmanlılar ansiklopedisi* ["Encyclopedia of the lives and deeds of the Ottomans"], Istanbul, 1999, vol. 2, p. 624.

can transcend both spatial differentiation and temporal sequentiality. To do this it employs the *teoria ensamblurilor* (Romanian, “theory of aggregates”), a semantic refinement of set theory allowing for a set not located in a time-space sequence³⁵. So Eliade’s character can express logically in his language concepts that can be phrased within space-time only as paradoxes or not at all. One is reminded here of a reverse process in language — that of endowing a simple natural word with greatly expanded, trans-rational semantic content — that happened in actual history: the Russian Orthodox mystical practitioners of *imiaslavie* “Name-worship” declared that the name of God was, simply, God (i.e., any arbitrary name of God in any language was His ineffable one); and mathematicians inspired by them conceived of God as the temporally and spatially paradoxical but nonetheless conceivable set of all sets, i.e., a set including itself³⁶. Shortly after citing Eliade’s assertion in another work, *Myth and Reality*, that the purpose of mythic ritual is to overcome time, the American science-fiction writer Philip K. Dick in his novel *Valis* has his protagonist start thinking in a language of two thousand years ago — in a properly Eliadian moment of linguistic and cognitive transcendence he then “saw the ancient world appropriate to that language”³⁷. Eliade, a committed fascist, gave the hypothetical language of his lightning-struck, immortal superman an otherworldly, archetypal, even mythopoetic quality. James Joyce, a contemporary whose views could scarcely be more different than Eliade’s, wrote his hymn to a plain, mortal Irishman: *Finnegan’s Wake* is an alliterative, encyclopedic deluge of argots and languages and word games that critics of the 1930s called an “Esperanto of the unconscious”, “an inter-racial language... to express the collective inner vision of mankind.” Invented languages and argots crop up in the flood of the text: “Volapucky” (after Volapük), “florilingua”, “sheltafocal” (cf. the Irish argot called Shelta, which Joyce studied)³⁸.

3. The St. Petersburg Manuscript

And so we come to the Armenian MS with its invented language and three invented ciphers. (See Plates 1–6.) The complete description of St. Petersburg Or. Inst. MS A 29 by Prof. Yuzbashian is translated in the appendix. He mentions the three Armenian cryptograms therein: there are keys in the MS to all three; but only the third recorded, henceforth to be called the Third Script, is actually employed in the writing of texts. None of the ciphers is known to exist anywhere else; so they attracted the attention of A.G. Abrahamyan, who provides all three keys in a description of the MS in his work on Armenian cryptography, with a reference to the 1894 publication of Ałaneanc³⁹. Abrahamyan does not seem to have examined the MS, and relied upon copies of the cipher keys made by P(aruyr) Muradyan at Leningrad. The first cipher, on fol. 1a (not 37b, *pace* Abrahamyan), is based upon the third, on fol. 44a. The second, on fol. 37b, consists of letters imitative of the Devanagari script without the upper horizontal bar, but so complex and elaborate as to be quite impractical. The third, which is spare and elegant, was intended for use in writing an “alternative” (Arm. *aylakan*) language to which the copyist gives the name *ruštuni*. But except for three words immediately following the key, it is used in the MS only for encrypting Armenian — for the most part, magical spells and incantations. These are deciphered, transcribed, translated, and annotated in the appendix: they have not been published before.

All three are simple substitution ciphers, and the keys follow the order of the Armenian alphabet, with the additional ligature or digraph for *ew* (“and”) and the characters for the letters *ō* and *f* (in the Armenian alphabet these were added in the Middle Ages to the original 36 letters of Maštoc⁴). Abrahamyan writes of the MS, “About ten pages of text of magico-astrological [Arm. *axtarakan*] content are encrypted using the third key. Apparently it was employed for the purpose of writing spells [*p’it’i-ner*]. These are of no historical value so we consider it superfluous to provide numerous examples. It is not difficult to observe that the three cryptograms cited are secret scripts made of complex lines and could not be widely employed. So it was. Except for the Leningrad MS

³⁹ [Abrahamyan 1978], 158–159.

considered here, no other text encrypted with these ciphers has been discovered.”⁴⁰ It is manifestly untrue that the Third Script is complex or unusable. Quite to the contrary, close examination of the MS shows that the copyist wrote it swiftly, fluently, and with a delicate and confident calligraphic flare. Nor is it true, except in the most literal sense, that the use of the Third Script was confined to MS A 29: the cardboard of the inner cover at the beginning of the MS is made of discarded bits of text, mainly jottings it would seem, in Georgian, in standard Mesropian Armenian, and in the Third Script and Armenian language, all most likely in our anonymous author’s hand. One scrap reads: *meṛaw ibrew amac’ wat’snic’ [sic!] nasur k’alak’i or ew asi aristotel* “He who is called also Aristotle died around the age of sixty years in the city of *nasur.” Another scrap in mixed Third Script and Mesropian is in Armenian too narrow to yield any entire word excerpt *calr* (“laughter, ridicule”). It would seem that our writer, if indeed he was the inventor of his cipher, had used it for various purposes in various places over some, probably many, years. Though he did not create a universal language to be written with it, as Bedros Tenger did at Smyrna a few generations later, or a mythology to embody it, as Tolkien did a few generations after that, he was interested in magic and mythological lore (see the text on the *hamasp’iwr* flower) and he did create an *a priori* language with the intention of learned application (as well as obscenity!). His script is based largely upon the forms of the letters of the Armenian and Georgian alphabets, in the latter case particularly the *nuskhuri*, or minuscule hand, of the *khutsuri*, i.e., Classical Georgian script, which is itself in its origins a modification by St. Mesrop Maštoc’ of the Armenian *erkat’agir* (uncial, lit. “iron letter”) alphabet he had devised at the beginning of the fifth century⁴¹. Another, more famous countryman and contemporary of our scribe, hailed from Tiflis, the Georgian capital: the

⁴⁰ [Abrahamyan 1978], p. 159.

⁴¹ The *Vita* of the saint, *Vark’ Maštoc’i*, by his pupil Koriwn, mentions that Maštoc’ devised alphabets for Armenian, Georgian, and Caucasian Albanian (Aḡuan) — the first surviving MS in the latter, a palimpsest, was discovered and published nearly two decades ago by Alexidze and Mahé. On the Arm. alphabet, including the cipher called *Atuanic’ gir*, see [Russell 1994 and 1994(b)]. For tables of the Georgian scripts see [Fossey 1948, 180].

bard Sayat' Nova, who died in 1795 (three years after the stamp in our MS). The poet's *devt'er* or *tetrak* — the manuscript book of his own songs — is written in two alphabets, curvilinear Georgian *mxedruli* and the standard Armenian minuscule called *bolorgir*. But the latter is used for Sayat' Nova's compositions in Tatar (i.e., Azeri Turkic), while the songs in Armenian are written in Georgian script⁴². Page 103 of the *devt'er* mixes the Armenian and Georgian alphabets⁴³. Since the bard often employed Tatar, Armenian, Georgian, and Persian all together in a single song, it is not hard to imagine that the same sense of artistic play and interchange might have motivated his idiosyncratic manner of writing. So the mixture of Georgian and Armenian is, if anything, quite normal for the time and place.

The order of the letters of the Third Script is the same as that of standard Armenian. B is a combination of Arm. p and b; Z, an extended form of z; Ē resembles the ē of an earlier and then still extant and flourishing Armenian cryptogram called “Aḥuan” or “dove-script” whose extensive use I have discussed elsewhere; (see Plate 7)⁴⁴ Է may be com-

⁴² It is curious that although Sayat' Nova had scribal abilities in Armenian — towards the end of his life he copied a MS of the *Narek* prayer-book at the monastery of Sanahin — his Mesropian letters are rather choppy and awkward, whilst his *mxedruli* shows a fluid and serendipitous calligraphic ease. And it is that script he chose to write his native, Armenian tongue. It would seem that in the consciousness of the Armenians in Georgia, the Georgian alphabet *was not foreign*.

⁴³ [Č'ugaszyan 1963.]

⁴⁴ See Russell 2010. At Erevan I had the opportunity to study Matenadaran 6644, which is the oldest and richest MS for texts encoded in the “Aḥuan” cipher, which the author of the MS calls *gawazanay gir*, “the script of the scepter/crozier”. It is, as one might expect, eclectic and with a leaning towards the occult. There are texts on astrology, on other cryptograms (notably, on fol. 132v, the very old one consisting of vertical lines and dots that is found even on Cross stones and may be derived from the appearance of Urartean cuneiform inscriptions on steles Armenians saw and sometimes co-opted, indeed, as *xač'k'ars*), and (fols. 107v–108v.) on the numerological significance of the Mesropian script: *ew zn kat(a)r(ea)l t'iw ē, isk vec'ic' vec'n lz ē* “and z [the sixth letter] is a perfect number; and six times six is XXXVI” — the Armenian alphabet has 36 letters, and the magical text *Vec' hazareak* (“The Book of the Six Thousand”) plays on its Pythagorean symbolism. See [Russell 2013(b)].

pared to “Aḥuan” ə; T’ is a modification of t’; I is an upside-down, reversed *nusxuri* i; L is a modification of l; C may be a form of “Aḥuan” c; K is based on Georgian k; J is Arm. j with a bar added; Ł is a doubled ł; Ć is the preceding symbol upside-down; M is a flipped-over *nusxuri* m; Y is an “Aḥuan” y on its side; Š is a shortened form of the preceding character for n; O is based on *nusxuri* o; Č’ seems to be a lower-case č’ on its side; P is Arm. lower-case p without its long vertical bar; ĵ is based on *nusxuri* d; Ř and S are reversed forms of each other; V is an elaborated Arm. v; and F is based on *nusxuri* r. T is a lower-case Latin t or cruciform. K’ the 36th letter of Armenian, the last in the classical alphabet, is dignified by the Chi-Rho chrismon to signify Christ’s presence as Omega (last letter) as well as first, in the standard script. In the Third Script it is a circle, the ancient symbol of perfection⁴⁵.

As Prof. Yuzbashian noted in his description of the MS, there is a table of the letters of the Russian alphabet, with the Old Slavonic names of each letter (*Az, Buki*, etc.), towards the end of MS A 29. This reminds one that it belonged to the period in which Russia was becoming the dominant power in the Transcaucasus and immediately preceding the liberation in 1828 by Russia of the Khanates of Erevan and Nakhichevan and other areas — the ancient heart of eastern Armenia including the plain of Ararat, the sacred mountain itself, and the holy city Echmiadzin. Down to the mid-18th century the Armenian community at New Julfa of Isfahan, with its far-flung trading network, had been the center of the nation’s commercial and cultural life outside the domains of the Ottoman Sultan; and Julfa Armenians shifted some of the balance of trade to the Transcaucasus corridor. They also forged links with the Russian Empire: in the 17th century Armenians had become established at Astrakhan on the north shore of the Caspian. With commercial expansion came emancipatory political activism.

⁴⁵ It is noteworthy that the 36th and final letter of the Tengwar table of letters invented by Tolkien for Elvish and other languages of Middle Earth is likewise a circle — of anomalous shape when compared to the rest (Tolkien 1955, p. 1092). It is unlikely this is merely fortuitous and without symbolic purpose; for Tolkien was a meticulous calligrapher from early childhood, and employed a hand based on 10th- and 11th-century models for both his English and his invented Tengwar (see [Hammond and Scull 1995; 201–202]).

The dawn of the 18th century saw the mission of the Armenian Israyēl Ōri to the court of Peter I the Great (1682–1725) to plead for Russian liberation of the Christians of Armenia. Following his successful campaigns against the Swedes, the Tsar, urged on by the petitions of the Armenian *meliks* (hereditary landed nobility, heirs to the ancient *naxarar*-doms) of Arc‘ax (Karabagh), crossed the river Terek in the North Caucasus in 1722. The savage repression of non-Muslims by the Iranian Nāder Šāh in the 1740s signaled the end for the Armenians of the power of the New Julfa global network, and the need for political protection by a Christian power. Yet the Russian southward advance was very gradual until Catherine II the Great (1762–1796) pressed Russian claims and concluded an alliance with the Georgian king Erekle II (1762–1798). In 1795 the Persian Qajars sacked Tiflis, the Russians retreated, then advanced once more and annexed Georgia and abolished its native monarchy in 1801. Between 1809 and 1812 Russia continued to absorb territory to the south, including the important Armenian center of Akhalkalaki⁴⁶. Though the Armenian Church cautiously avoided political entanglements, whether in overtures to Russia or rebellion against the Muslim powers, the gifted Catholicos Simeon of Erevan (1763–1780) took steps to consolidate the authority of Echmiadzin as the Mother See of the Church, reducing the centrifugal authority of other jurisdictions and defending the integrity of Armenian landed and other properties on the plain of Ararat and in the immediate vicinity of the holy city, from Muslim encroachment. But he still ordered that the pathbreaking manifesto calling for Armenian national liberation be burned. This was the *Nor tetrak or koč‘i yordorak* (“The New Pamphlet called Exhortation”) of two New Julfa Armenians at Madras, Nersēs Baṛamean and Yakob Šahamirean⁴⁷. MS A 29 bears the seal of one Grigor from 1792. So despite the lack of a colophon one can be quite confident that it was written in the late 18th century, at a time when Armenians were using ciphers actively and often. The author lived in Georgia: there is Georgian writing in the cartonnage and the shapes of

⁴⁶ See [Bourmoutian 1998; 3–6].

⁴⁷ For a translation of the *Jambṛ* “Chamber” — a primary documentary source on the life and politics of the Ararat region in this period — see Bourmoutian 2009.

a number of the cipher characters are based on the Georgian *nusxuri* hand, as discussed earlier; and the table of the Cyrillic alphabet suggests the pounding hoofbeats of the Cossacks' mounts could be heard getting louder and louder.

Here is the discussion of the MS and its context, by Fr. Ałaneanc', in his chronicle of the history of the Armenian Church in the eighteenth century, in my translation and with my comments and elucidations in square brackets⁴⁸:

"Till now only one sort of cryptogram is known. It is well known that during the clamor about the conflict of David and Daniel at the beginning of this century the parties of the two opposing Catholical sees had no other means available to them save to destroy each other's capabilities and so obtain victory. Fr. Nersēs of Aštarak [a village near Erevan], who was later to become Catholicos [supreme patriarch] of All Armenians, belonged to Daniel's party. The people of this party, in order to keep their correspondence secret, employed a form of cryptographic script in the place of Armenian when writing to each other. As some of their letters are preserved in the library of Holy Echmiadzin [holy see of the Armenian Apostolic Church, near Erevan], the late Abp. Gabriel Ayvazeian succeeded in finding the key and reading them. Some of these were penned by the hand of Catholicos Daniel himself. Fr. Ayvazian's reading is mentioned in M. Msereanc', *Patmut 'iwn kat 'ulikosac Ėjmiacni* ["History of the Catholicos of Echmiadzin"] and in A. Eric'ean's *Niwt'er Nersēs V-i kensagrut'ean* ["Materials towards a Biography of Nersēs the Fifth"]. Thereafter an article authored by one 'Miaban' ["Monk"] appeared in the January 1888 issue of Ararat in which the author, on grounds unknown to me, called the cipher 'Nersēsian', rejected Fr. Ayvazeian's reading in its entirety, and claimed the honor of primary decipherment for himself. He supposed the cipher to have been devised by 'Nersēs V', though he advanced no proof of this. Scarcely two months had passed when in the April issue T'. Zak'arean, a student at Petersburg, who had studied at Echmiadzin during the tenure as principal of the late Abp. Ayvazeian, published an article with a rather convincing factual demonstration that Ayvazeian had read a number of the encoded letters for the first time long before, in 1868–1869; so the hon-

⁴⁸ Ałaneanc' 1894, cols. 842–846, tr. from Armenian mine.

or of priority belonged not to 'Monk' but to Abp. Gabriel. So much for our knowledge of Armenian cryptograms. But the present Memorial in our opinion sheds new light on the matter. One *mahtesi* [i. e., Arabic *muqaddasī*, an Armenian Christian who had made the pilgrimage to the "holy (city)" of Jerusalem] Yōnan, from Axalc'xa [an Armenian town in southern Georgia], and Simeon Catholicos in Holy Echmiadzin, corresponded in a similar cryptogram 'newly devised' as early as 23 July 1766 in order to conceal their dogged efforts in opposition to the spread of Catholicism. It is not known who invented this 'newly contrived writing', but it is not hard to surmise that Simeon Catholicos, who could resort to many techniques with his intelligence and skill at contrivance, could have invented without difficulty such a cipher to suit his purposes. It is a fact at any rate that the cryptogram was invented before *mahtesi* Yōnan left Axalc'xa, since Simeon was already acquainted with the manner of its writing and was employing the same in his encrypted messages to Yōnan. One must assume, even as the usage of the phrase 'newly invented' indicates, that the cryptogram was entirely new, since it was employed for the sole purpose of keeping letters secret. One must infer from this that its existence was unknown to anybody else and Simeon could thus have invented it and taught it to *mahtesi* Yōnan, whom he dispatched with some instructions to Axalc'xa. But this is only a likely supposition and we are not prepared at this point to assert it as fact, since we do not possess even one of those letters that might allow us to shape an idea about the cipher. We do not know it or what it was like. In the time of the Catholicosate of Simeon, Catholicos Daniel was already a fairly well known cleric. The man of letters Melk'ised in his *Čar govut'ean goveleac'* ["Oration of praise of the praiseworthy"] devotes an entire chapter of praise to him... Fr. Nersēs, who in his own words (*Amenayn Hayoc' kat'ulikosner XIX darum* ["Catholicos of All Armenians in the 19th Century"], by A. Eric'ean, Tiflis, 1892) was in 1816 already 46 years of age, studied in the days of the Catholicate of Simeon at Holy Echmiadzin in the school newly erected by Simeon himself. So the two of them, both Daniel and Nersēs especially — for the latter spent all his childhood and youth in the monastery of Echmiadzin — could have been acquainted with the 'Simonian cryptogram'. It would not be improper or entirely without foundation to consider that Nersēs might thus have used the cryptographic symbols of Simeon

Catholicos. In the expectation that the future will enlighten us about the situation by revealing the encrypted correspondence of Simeon Catholicos and *mahtesi* Yōhan, and to satisfy the interest of philologists, we present here some information of importance to Armenian cryptography. These days, by fortunate circumstance, we acquired a few manuscripts, one of which is of particular importance in this regard. It is a booklet [Arm. *grk'oyk*] of modern date, in our estimation a product of the end of the last century [i.e., the 18th century] or the beginning of this, written by a fairly unskilled writer in an ugly notary hand, on crude paper, half of the book yellowish and half of it blue. [This is A 29.] It contains various short writings but the most interesting of its contents are the Armenian cryptograms. The book is undated and has no colophon, and it is not known who the author was. In only one place, on fol. 45, in minuscule [Arm. *bolorgir*], are these words: *i melsamac jahānkal yakobē ew grigorē* ["by the sinful torchbearers Yakob and Grigor"]. Whether these names belong to the two poems adjacent to the line, which form an acrostic of both names, or to the whole book, is not known. The book contains three ciphers. 1. On the very first page of the book is a cipher ABC in the order of the Armenian alphabet, with the Armenian plaintext written above each character. At the head of the ABC, in the letters of another type of cipher [the Third Script, actually], is inscribed this heading: *ayl imm kerp tar'k'* ["letters of another type"]; and below, in the letters of both cipher types, [i.e., both this one and the Third Script], is written, *nōtr tar'k' en aysokik'* ["these are notary letters"]. The letters are employed to express one thoughts in Armenian words that are concealed. The first system is not used at all in the book. 2. On page 75 of the book is a second cryptographic alphabet in Armenian order, number, and equivalence. But these letters have their own special language. On the following page [fol. 37b] the names of the letters of the cipher are given: *ah, bof, gam, doh, eh, zēfa, ēs, əp', t'ov, žimla, in, lin, xōs, crva, kuk, hōvt'a, jul, tway, čič, mirvat', yi, narut', šō, obi, č'uk', p'raṽ, fōm, rēli, sov, vrxa, trōi, rōsi, c'un, wrē, p'ap', k'rōm, ewta* [for the diphthong/digraph *ew*], *ōri, f'rasi*. Immediately beneath these is written, *Aylakan lezu or ew asi ruštuni* ["An alternative language which is also called *ruštuni*": the word *aylakan*, which I translate "alternative" and Yuzbashian in his catalogue seems to have understood as *uslovnyi*, Rus. "provisional, conditional, hypothetical", is not stan-

dard Armenian and it is not clear whether by it the writer of the MS meant a hypothetical, invented language of his own or one he has learned in which other words are substituted for Armenian]. It is unknown why this language is called *ruštuni*. We do not know whether this was the inventor's name or whether he had some connection to Rštunik' [the region on the southern shore of Lake Van, directly north of Moks] — and the book affords no idea. Thereafter follows a fourteen-page glossary of the language, which we present here for those interested. This second type of cipher is not used in the book either, except for a few words, which were erased by a later hand and can be read only with difficulty. All the letters of the ABC were likewise erased, and we were barely able, with the assistance of learned analysts, to read them⁴⁹. 3. On the reverse side of the glossary, page 90 of the book, is inscribed the ABC of a third cipher, which has this title: *ays lezui tārḱ's ays ē kerp aybubēnk'* ["These are the letters of this language, the shape of the ABC's" by which one should, presumably, understand the *ruštuni* language immediately preceding]. And below in this cipher, with the Armenian letter equivalents beneath, is written, *t'agaworesc'ē Tēr yawitean* ["May the Lord reign eternal"], and *ayl ews bārḱ'* ["some more, other words", i.e., in *ruštuni*]: *milduvēwk' tramabanut'iwn/ sēlduvēwk' čartasanut'iwn/ jēmsavēwk' k'erakanut'iwn* ["*milduvēwk'* logic/ *sēlduvēwk'* rhetoric/ *jēmsavēwk'* grammar"]. This ABC is employed thereafter, right to the end of the book, in many places for various medical and magical purposes, and for potions. We print the three cryptograms here with their Armenian equivalents. There is no further information about Armenian cryptography. In the newspaper *Azgasēr* ["Patriot"], edited by M[esrop] T'ahādean, in the 105th number for the year 1847 (14th August, p. 261), appears this notice: 'In the list of MSS

⁴⁹ This second script looks a bit like an ersatz Devanagari shorn of the top bar most letters have; and the character for m in particular is identical to the m of present-day Gujarati, where the bar is lost. Sayat' Nova, the bard of Tiflis contemporary with our writer, may have traveled to India; travelers from northern India left graffiti at the "fire temple" of Baku; and in any case populous and well-to-do Armenian communities of merchants from New Julfa flourished in India in the late 18th century. So it is quite possible for the inventor of the cipher to have seen a sample of Sanskrit script at some point.

sent to us by the relatives of the Ēnfičians we read “The *arhest grč’ut’ean* [“scribal craft”] of Frs. Gēorg and Aristakēs”, in which are contained some three hundred symbols.’ We considered for a moment that those symbols might be cryptographic. But from subsequent investigation it became clear that this very MS volume had been acquired by the library of the Lazarev academy in Moscow and the symbols [Arm. *nšanagrēr*] of Gēorg and Aristakēs are the same that the late M[krtič’] Ēmin published in his translation of Movsēs Xorenac’i and that Is. Yarut’iwneanc’ printed in his *Hayoc’ gir* [“Armenian Writing”], and have no connection to cryptography.”

Ałaneanc’ alludes in the above discussion to two letters written in the “code of Nersēs of Aštarak” that were published in *Ararat* in 1888. It is appreciably different from the three ciphers of MS A 29 in the shape and style of the letters, though it is, again, a simple substitution cipher. Fr. Yovhannēs Karbec’i, who was to become Catholicos, wrote the first on 28 April 1801; Bp. Rōt’eos, a supporter of Nersēs against his rival, Dawit’, wrote the second. There is another letter in the cipher dated 26 January 1813 sent from Tiflis by Nahapet Aršakean to Fr. Nersēs: this one is of great historical interest as testimony to the epochal event of the previous year, 1812 — the capture of Moscow by Napoleon Bonaparte, the great fire, and the French retreat in winter from Russia:

“Here is the news. [Napoleon] Bonaparte [*Pōnapōrtñ*] with 200,000 men departed and went away to his country. It is certain, what I write here. If you say they write or say otherwise it is empty or [newspaper? — Rus. *gazeta*, here Arm. *k’azeti*] writing. And this is the place for performing prayer [*malepni*, i.e., Rus. *moleben’*], as you know. He took 200 wagons of gold and silver from Moscow with him, and it seems there is yet to be a great battle in the winter. The day of this writing, a letter came from Galterē[w?]ski. They have joined battle with the *šāhzādeh* [Pers., “prince”], have captured the latter’s entire camp and there has been great slaughter, so that only the *šāhzādeh* got away, and they seized all his guns. This filth [? — *altut’iwn*] was more than four times. I received a letter from Nakhichevan from the prelate Ōhan: they wrote of their displeasure and want to summon Fr. Grigor. And Galterewski broke his leg in the battle, so they will send a good doctor from here on the 27th of

the month, as well as reinforcements. They have taken Lank‘aran [i.e., Lenkoran], Tališ, and P‘arš.’⁵⁰

As we shall see presently, the itinerant felt-beaters of Moks, the region immediately south of Rš̄tunik‘, had a secret language. Since they traveled all over Armenian, perhaps the name of the ancient and fabled region north of their home mountains came to be associated with secret or invented speech generally. The invented Rš̄tuni language, known only from this one manuscript, is of the *a priori* type: the vocabulary is not derived from any known natural language (except, perhaps, the first word in the list, *mētray* “God”, which might have been, with deletion of first consonant, metathesis of an inner cluster, and change of ending, from Georgian *ghmertī*, about which, as we have seen above, one erudite Armenian author of a colophon knew enough to put it properly in the vocative!) and there seems to have been a conscious effort to make its phonology as different from that of Armenian as possible (there are over 130 occurrences, for instance, of the rare letter *ō*; *ē* is used word-internally with far greater frequency than in standard Armenian; and *f* is also used far more often than in any dialect, literary or rural, of the language). But the phonemic character of the language is still Armenian, with variant voiced and unvoiced stops: both *trōpēn* and *drōbēn* mean “man”; cf. “Eastern” *mard* and “Western” *mart*! The stops *c/j* and *ḡ/č* are likewise interchangeable. The word count is approx. 250; but the selection of terms with invented equivalents seems to have been arbitrary, with the author flitting from one category to another, and enjoying plenty of naughty obscenities in between — there is nothing approximating the Swadesh list or other register of frequently used terms in human speech. A tourist on the planet Rš̄tunistān would not find the glossary very useful for many of his needs. The morphology is inconsistent but still observably based on Armenian. There is a gen. sg. *-i*, *-in*, or *-vin*, cf. Arm. *-i(n)*; gen. pl. *-r*; abl. sg. *-ēm*, cf. Arm. *-ē(n)*; inst. sg. *-yē*; and loc. sg. *-inō*. As in Arm. there are possessive pronominal suffixes: 1 sg. *-ib*; 2 sg. *-n*. Abstract nouns are formed in *-vewk‘*

⁵⁰ [Abrahamyan 1978, 167, 170–171]. The person whose name is given as Galterewski (otherwise unknown) is most likely the Russian Colonel P.S. Kotliarevskii, one of the commanders who seized the fortress of Shah Bulagh in Karabagh in 1805 (See [Bournoutian 1998, 132 n. 5]).

(cf. Clas. Arm. pl. *-k'*) and *-ēt'ōn* (doubtless from Arm. *-ut'iwn*). Influence of the Armenian assonance of the pair *erkin* and *erkir*, heaven and earth, may be reflected in the formation of *rōšmēxe* “earth”, *rōlvē* “world”, and *rōčki* “heaven”. *Nim* “outdoors” may be related to *nimō* “sun” (and note *nimōfrē*, “he went out”). The relationship of *mēvōn* “water” to *mivat* “drink!”, or of *sēmat* “apple” to *sēmsay* “pear” seems less the result of a conscious plan than of proximity — the words fell into categories the creator of *Ruštuni* was thinking about as he made them up. (*Srōfit* “bring!” for instance, is next to the semantically unrelated factitive verbs for “drink” — see below — which sound much the same, and are unrelated to *mivat* above.) One notes that the latter translates the simple Arm. *arew*; but for Arm. *aregakn*, a poetically marked compound term for the solar orb, the inventor has created an entirely unrelated word, *ziwōtēp*. Verbs are formed on the Armenian pattern as well, though, again, the forms themselves are fanciful: pres. 1 pl. *-ōt'*; aor. 1 sg. *-t*, *-lēf*; aor. 2 sg. *-lēt*; aor. 3 sg. *-ta*; imp. 2 sg. *-ō*; imp. 2 pl. *-ōt'ē*; prohibitive imp. *t'u-* (e.g., *srōfētōn* “make sm. drink”, *t'usrēfēti* “do not make sm. drink”). There is a past participle in *-(a)wō*, cf. perhaps Clas. Arm. *-eal*. This language is then a private game and not a particularly inventive one, without morphological departure from Armenian. But this indulgence in the pleasant sounds its inventor associated with alienness does at least give us a useful sense of what a native speaker of Armenian in the 18th century thought his mother tongue did *not* sound like.

4. The Argot of the Felt-Beaters

The invented language in MS A 29 is called *Ruštuni*; so let us now examine an argot from a region contiguous to the Armenian canton of *Rštunik'* on the southern shore of Lake Van, that was studied by the teacher of the scholar who first brought the invented language to the attention of contemporary scholars. Karen Nikitich Yuzbashian was a pupil and biographer of the great Armenologist and Oriental scholar Iosif Abgarovich Orbeli, scion of the ancient *naxarardom* (the hereditary dynastic clans of ancient Armenia), who as director of the Hermitage piloted Russia's greatest museum and center of scholarship through the darkest days of the Stalin terror of the late 1930's and the terrible

blockade of Leningrad by the Nazi German invaders during the Great Patriotic War (Hitler's attack reminded many Russians then of the destructive but doomed campaign of the *zaznavshiisia* "upstart" Napoleon chronicled above). In the postwar era, many Leningrad scholars, including Prof. Yuzbashian and his family, were housed in comfortable flats in Orbeli Street — named after the great scholar — adjacent to the pleasant wooded neighborhoods of Kolomiagi and Udel'nyi Park.

In 1911–1912 Orbeli had led an ethnographical expedition to the mountainous region of Moks (Clas. Arm. Mokk', Tk. Müküs), which is separated from Lake Van by the district of Gevaş, ancient Rštunik'. One enters by crossing the pass dominated by the monastery of St. George called *P'ut'kavank'* (lit. "Monastery of the Guest House"), whose famous rooster would warn travelers of snowstorms⁵¹. The Armenians of Moks were bilingual in their native tongue and Kurdish; and there were also Gypsies (Roma, Arm. *Lom*), called by the locals *mətarb*, i.e., Arabic *mutrib*, "minstrel" (a word found in Middle Arm. also, as *mtrup*)⁵². Orbeli was impressed by the archaic character of the local culture: he notes, for instance, how the Kurdish *bek* would supply honored guests with pillows, one after the other, much as the Sasanian kings had done⁵³.

In the village of Vozim (Arm. Ozm(i)) of Moks, Orbeli recorded a glossary of the professional secret argot of the men who pounded wool to make felt (called *təpolkerēn*, "(felt-)beaters' language"), and found that a number of lexical items were to be found in lists compiled at another village, Arnanc', from which he drew the reasonable conclusion that the jargon was widespread. Wool manufacture and the beating of wool to make felt was a major seasonal business of the Armenians of

⁵¹ [Russell 2000, 121–132] n. 34; and Russell 2002.

⁵² [Russell 1987, 96]: the poet Yovhannēs of T'lkuran asks that at his death his shroud be a green leaf (the traditional honorarium of the dervish), and that *Mtrup beren inj k'ahanay* "they bring a minstrel as my priest."

⁵³ [Orbeli 1982, 34]. The Babylonian Talmud records a reversal of the process: as a Rabbi lost a disputation, his rival took one mat of honor after another away from beneath him. When the last one was removed, he died: see [Sperber 1982, 84–95]. Iranian social imagery pervades the narrative of the incident: dismissal of the unfortunate teacher, once praised as a lion, as a "fox" recalls Shapur's abuse of Vasak in P'awstos (Russell 2012(b)).

the whole region. But what is so special about felt (Arm. *t'al-ik*)? Before the invention of synthetic, waterproof material, felt was the choice of need. It was warm, resistant, durable, flexible, and relatively light. Felt was essential for tents, saddle cloths, and outer ware such as the cape and tall *başlık* hat that still keep Anatolian shepherds warm and dry. The crowns of the ancient Armenian kings, looking rather like cap-sized hulls of ships, with ear flaps added, were modeled upon the ancestor of the modern *başlık*.

Leonardo Olschki in his brief study of Dante, *The Myth of Felt*, notes that in the Middle Ages felt was considered “a plebeian product and a symbol of barbarism, poverty, and contempt, if of anything.”⁵⁴ In Germanic the derivative adjective *filzig* came to mean sordid, mean, and stingy; and Jews, always a marginal group, were sometimes required to wear a piece of felt on their outer clothing. The popular Old French history of the Mongols of the Cilician Armenian princely traveler Het'um, ca. 1307, describes the custom of investiture, whereby seven men raised up the new Khan on a black carpet made of felt, though they could afford much richer fabrics. In the Middle English version of the chronicle the Armenian observer exclaims, “for al the lordship or riches they have conquered, they wolde neuer chaunge theyr first gyse”⁵⁵. So in the late 13th century Armenians seem to have considered felt a lowly material. So it would appear that in Armenia, too, felt, for all its economic importance and usefulness was regarded as base and continued to be so. That would explain in part why felt-makers occupied a social niche similar

⁵⁴ [Olschki 1949, 5].

⁵⁵ Burger 1988, p. 27 (Book Three, line 7 et seq.). In ancient Iran and Central Asia it would seem, then, that felt was believed to be the stuff of the clouds, whatever its earthly status, thus providing an explanation for the Mongol belief and consequent ritual. T'ovma Arcruni reports in his history of the Armenian royal Arcrunid house of Vaspurakan, 10th century, that Šaxrik' who were *hamakdēn*, i.e., members of the priestly caste who knew in its entirety the *dēn* — the Zoroastrian scriptural revelation, law, and lore — had come to Armenia. They described their homeland as a place where *tuanjean amp t'anjraxor ibrew zt'al lmeal balajew spitakap'ayl yoyž* “in the daytime the cloud was thick and dense as pounded felt, in the shape of fog glowing brilliantly white” (text in [T'ovma Arcruni 1887: 28; Thomson 1985: 90–91]; and see discussion by [Russell 1987(a): 5–15]).

to that of gypsies or thieves. We considered above the argots of subcultures outside Armenia. Subcultures are generally fairly close to the normative, dominant majority culture (with exceptions, such as that of the Roma, who are for practical purposes entirely outside it); so there is a fair amount of transfer, the slang of the standard language often originating in the argots of the underworld⁵⁶. In the case of the Armenians, who as a Christian minority in the Ottoman or Persian dominions were already a subculture in a way (their Julfa dialect, for instance, became a medium for effectively secret correspondence in the New Julfa global trade network), the felt-beaters would have been a subculture within another one. There is a large stock of Armenian loan words in Turkish, both as standard vocabulary and as slang. But the non-Muslim ethnic groups, or *millets* — Armenians, Greeks, and Jews — all were outside the dominant culture though not considered sociopathic as the Roma might be; so another paradigm than that evolved by Maurer and other students of argots and slangs should be constructed to describe these linguistic phenomena in what have come in recent years to be termed “Islamicate” societies.

A prosperous felt-maker of Moks before setting out on faraway business (always on foot) would host an elaborate feast for the people of the village, slaughtering several animals for the food. The occasion and its expense affirmed the social bonds that might otherwise be strained by his absence and the other tensions of life such as the constant possibility of attack. Felt-makers worked mostly in Ottoman Turkey; but some traveled on business to such far-flung destinations as Tiflis, Baku, and Rostov-on-the-Don, in the Russian Empire. The fact that traveling was the basis of their livelihood seems to have been a significant contributing factor for the creation of their argot. As Priëmshcheva observes in her study of the secret languages of 19th-century Russia, “What a number of these groups who possessed invented languages had in common was that their representatives led a wanderer’s way of life. This fact most likely intensifies the socio-psychological necessity of self-identification as well as of elevation of the prestige of one’s own mode of activity.” She also cites the observation of N.I. Grech in 1840 concerning Russian argots that they were used “by people who amongst the ancient Greeks

⁵⁶ [Maurer 1981: 3–4].

worshipped Mercury,” i. e., by those who made their living by travel⁵⁷. Orbeli writes,

“During their peregrinations, the felt-makers worked out a rather interesting language of their own, more a thieves’ argot than professional jargon. Almost every inhabitant of Moks knew a few Felt-maker words; many were even grafted onto Armenian speech and employed by people who had never plied the felt-maker’s trade. But one encountered quite serious difficulties at one’s very first attempt to compile a more or less thorough list of felt-maker vocabulary. Of the non-felt-makers, nobody knew even an insignificant part of the lexicon; while it was hard to get anything out of the felt-makers themselves. Nearly all were afraid to betray this ‘professional secret’, while those who had no need to conceal the meanings of their words and therefore had no reason to cherish the mystery, generally did not know most of the vocabulary. At the transcription of felt-maker words, there was another difficulty even more unpleasant than the responses ‘I don’t know any more,’ ‘That’s what there is of the felt-maker language,’ and ‘That’s all, there’s nothing more.’ In order not to be seen to refuse one’s request to be taught felt-maker speech while not giving the secret away, some began to think up words. And one felt-maker, when I assured him that I would not betray the secret to their clients and patrons, answered, ‘Go and give it away if you like. It makes no difference, we’ll just think up a new language tomorrow’ — and straightaway supplied examples of new words. Felt-makers learned their felt-maker language from their fathers. In answer to the question as to what use this language served, and to what end it was invented, some felt-makers responded that it was so that the Kurds would not understand it. Yet others averred it was a children’s

⁵⁷ [Priëmysheva 2009, vol. 1: 31–32 and 104]. For the word I translate here as “invented” language, the author (like Yuzbashian in his catalogue entry for Petersburg MS A 29) uses Russian условный, literally “conditional, provisional”. Grech’s insight of nearly two centuries ago is of great interest, as the term “Mercurian” to classify such cosmopolitan, “globalized” peoples as the Jews, Armenians, Overseas Chinese and others as against other “Apollonian” ethnic groups notable for rootedness to land and military, aristocratic, hierarchical traditions (Germans, Russians, etc.) was (re-)invented by Yuri Slezkine (2004, ch. 1).

amusement; but the bolder ones declared, 'To make stealing easier!' It is perhaps for the latter reason that the craftiest felt-makers knew the argot best. The felt-makers were generally reckoned talented thieves, and many anecdotes recounted their artfulness — mainly it was wool they stole. It is of interest that in the 'Song at the Stone Mortar' mentioned earlier the people of Vozim are mentioned as minters of coins, that is, counterfeiters, which is an expression that generally means a skillful thief or master criminal. The 'thieves' language of the felt-makers was not something especially hard to understand, though when they were conversing among themselves rapidly it was quite impossible to comprehend it, particularly when they added the use of the 'sparrows' or 'birds' language, that is, transposing the syllables of every word. [See *infra*.] In its grammar the felt-maker language conformed, naturally, to the rules of Armenian and the great majority of lexical items were Armenian as well. The felt-maker resorted to his argot only for the most important subjects of conversation. Interestingly, in every settlement the felt-makers pronounced felt-maker words precisely according to the particularities of the local Armenian dialect. Thus felt-maker speech lived the same life as Armenian; and this depended, to a great extent, on the fact that most felt-maker words were Armenian ones allegorically employed."⁵⁸

The list of felt beaters' words Orbeli compiled was published in 2002, twenty years after the posthumous publication of his ethnographical survey of Moks containing the above description, as an appendix to his glossary of the Moks dialect. The glossary of the argot is appended to this study with translation, annotation, and commentary. Several interesting points are to be noted: the bulk of the "secret" vocabulary is Armenian employed allegorically, and the phonology and grammar are entirely Armenian as well. For the purpose of additional secrecy the felt-makers spoke rapidly and employed the transposition of syllables of "sparrow" language (Arm. *cti lezu*), rather like the "Pig Latin" American kids used in my childhood. It is interesting, *inter alia*, that the Armenian-based cryptogram (referred to above in connection with the shapes of the letters of the Third Script of MS A 29) employed widely by Armenian craft guilds and other professionals was called

⁵⁸ [Orbeli 1982: 8, 14, 29, 34, 39–42] (tr. from Russian mine).

either *Atuanic' gir*, “Caucasian Albanian writing” or, homonymically, *alawnagir*, “the writing of the dove”⁵⁹. The chirping of the birds was a secret language; even as their ability to fly is a kind of locomotion enabling them to escape and hide. Some speakers, most likely to discourage Orbeli from investigating further, indeed deprecated felt-maker language as a mere children’s game. The glossary was not, apparently, a closed canon: speakers could add to the argot new inventions of their own, if indeed this was not just a boast intended to unsettle the inquisitive Orbeli again.

Another Armenian secret language like that of the felt-makers of Moks was the jargon of a far lowlier guild — the traveling traders and crooks who originated in the village of Savra near Salmast in Persian Armenia, many of whom migrated to the Russian Empire in the 19th century. They were called, derisively *xač'agoł* “Cross-thief”, *pařaw nerkoł* “strangler of old women”, *ēš nerkoł* “donkey-painter”, or simply *savrgelc'i* “villager of Savra”, for they were reputed to masquerade as priests and then steal the church treasure, or befriend an old woman, then kill her, and abscond with her possessions, or just engage in shady horse-trading. The 19th-century Eastern Armenian novelist Raffi (Yakob Melik'-Yakobean), a native of Salmast and scholar and ethnographer of his native Persarmenia, wrote in his novel *Xač'agołi yišatakarana* (“The Cross-Thief’s Memorial”, based upon a notebook left by one Murad) that the Cross-thief “spoke with his companions in a special language that nobody can understand unless he belongs to the society of the Cross-thieves. It is a secretive, provisional (*paymanakan*) language; it is the argot of bandits.” Though in Russia they were called Armenian Gypsies (*hay c'igan*, using Rus. *tsigan*, “Roma”), theirs was not a distinct language like Romani but “a sort of artificial, archaic, provisional language” (*mi tesak šincu, hnac'ac, paymanakan lezu*); and at

⁵⁹ See [Russell 2010] on the *alawnagir*; and [Russell 2009] on the esoteric old Russian ballad *Golubinnaia kniga* (“Book of the Dove”) and its Armeno-Iranian associations. The Classical Persian poet Farīd al-Dīn ‘Aṭṭār chose the metaphor of birds for his allegorical Sufi work, *Mantiq al-ṭayr*, “The Conference of the Birds”. The varied twittering of the *hazaran bulbul* (“nightingale of thousands (of songs)”) seems to form a nexus between music and language; and the bird with her wings flies between men and angels.

night they could communicate employing bird and animal noises. Raffi compares the argot of the Cross-thieves to Armenian secret “bird” (*cut*) and “sparrow” (*čnčhuk*) language, mentioned above. This language is discussed also by the 19th-century ethnographer who first discovered and published the Epic of Sasun, Bp. Garegin Sruanjteanc‘, who writes in his study *Mananay* [“Manna”], “Among the Armenian people there is yet another thing of value: speaking in a language derived from that of crows and sparrows, by reversal of words, as for instance saying *c‘ah* instead of *hac* [“bread”] or *dram* instead of *mard* [“man”], and so with every noun and verb. A similar usage obtains even in writing, where we are informed of the use of the brother of each letter: b for a, g for b, d for g, and so on. So instead of writing *oski* [“gold”] one writes *zvel*, etc.”⁶⁰ (In Erevan Matenadaran MS 6731, fol. 154 v., the marginal explanation *gir mi ar(a)j bʻnē* “take one letter before” accompanies the encoded *č‘čč‘c‘yʻp*, i.e., *olormea* “(Lord) have mercy!”) In the Armenian town of Hajin code expressions were employed: to warn a newcomer of the presence in the company of an Armenian-speaking Turk, one said *mōyā dzōg ē* (standard Arm. *matə cak ē*), “The sieve has a hole!” To signify he understood the warning, the Armenian guest would reply *vospə k‘ayod ē* (standard Arm. *ospə k‘arot ē*), “The lentils have pebbles!” The people of Hajin said *ayūēsə pey* (standard Arm. *aluēsə ber*) “Bring the fox” for “Bring cheese”; *sev čuy pey* (standard Arm. *sew fur ber*) “Bring black water” for “Bring coffee”; and *viyivnoc ‘unink’* (standard Arm. *verewnoc ‘unink’*) “We’ve somebody upstairs” for an unwelcome guest. The code words *mendzə* (standard Arm. *mecə*) “the great one” and *bədig osgin* (standard Arm. *pztik oskin*) “the little gold (coin)” were England and France respectively; while the other Christian power involved in Ottoman affairs was the *mendz arč* (standard Arm. *mec arj*), “great bear”, Russia⁶¹.

Felt may be a poor man’s material, but in the argot of its beaters one can mine treasure. Walt Whitman, the 19th-century American bard who

⁶⁰ [Raffi 1962, 303–304, 309–312; Sruanjteanc‘ 1876, 311] f. Prof. Bert Vaux of Cambridge University notes that the Armenians of the Van area sometimes called their Armenian speech *čnčhuknerēn*, “sparrows’ language”, presumably because of its incomprehensibility to foreigners.

⁶¹ [Pōlosean 1942: 285 f].

dreamed of a democratic polity where subculture and dominant culture were one, whose poems recognized no boundary of class or occupation or prescribed form of speech, once wrote, “Slang... is the attempt of common humanity to escape from bald literalism, and express itself illimitably, which in the highest walks produces poets and poems, and doubtless in prehistoric times gave the start to, and perfected, the whole immense temple of the old mythologies...”⁶² There are aspects of the felt-makers’ argot of Moks that are, indeed, strikingly poetic. As we shall see, they shed some light on the old mythologies, too. Here are some examples from Orbeli’s register.

Cätkil, “to laugh”, is in standard Armenian “to flower”, formed clearly by extension or comparison with Armenian *cicalēl*, “laugh”, analyzing the word correctly as a reduplicative — *cal-r* alone is “laughter, scorn”, cf. the Greek cognate *gelos* — and adding a diminutive suffix to produce a metaphorical homonym. The word *cōv*, meaning “large, great” in the argot, is standard Armenian for “lake, sea”; and these two easily associated images, of the flower opening in beauty and scent and the mouth opening in love and happy sound, are used assonantly in poetry: in the famous Song of the Nativity (*tal cñn-dean*) of St. Grigor Narekac’i (951–1003), who lived on the northern side of the mountains of Moks, is this well-known strophe: *Ač’k’n cov i cov cicalaxit cawalanayr yařawawtun erku p’aylakajew aregakan nman*, “Her eyes, sea into sea dense with laughter dilated in the dawn, like two flashing-formed springs of the Sun.”⁶³ The Western Armenian poet Daniël Varuřan (1884–1915) was no less sensitive to such semantic and phonetic collocations, with their heady aroma of pagan antiquity. In the poem “Cleopatra” of his cycle *Het’anos erger* (“Heathen Songs”, published at Constantinople in 1912), which seems to evoke the procession of the bark of Isis, we read these lines: *Sahē, ov naw, sahē řut/ Calkacical ap’n i ver/ Nuř m’awasik karmrakut/ Aygiēn mēřd ē inker* “Glide, O boat, glide swift/ Along the **flower-laughing** shore;/ Here a red-kerneled pomegranate/ Has fallen in you from the orchard.”⁶⁴

⁶² [Adams 2009: 119].

⁶³ See [Russell 1985: 435–439].

⁶⁴ [Varuřan 1986: 258].

Kēcāk, used of any kind of fire (for which Armenian possesses numerous words: *hur*, *krak*, *xaroyk*, *hrdeh...*), is literally “lightning”; cf. the *t’ur kecaki*, the magic Saber of Lightning of the heroes of the Sasun epic. Here it would seem a term from the higher, poetic register, perhaps from the oral epic itself, has replaced the standard word.

Xänjārör in the argot means both “wool” and “felt”, but in standard Armenian the word *xanjarur*, “swaddling clothes”, would refer particularly to the scene of the Nativity and the infant Christ. Similarly dignifying the trade is *āspätäur*, “bast sandal”, literally “God’s gift”, standard Armenian *astuacatur* (also a common proper name as a calque on Theodōros), for the felt-makers traveled everywhere on foot. These are the kinds of self-validating terms any marginal group might (and does) cull from tradition for its argot.

Aruc in the argot refers to any horned cattle, but comes from standard Armenian *arīwc*, “lion”: for the semantic development cf. the term for fire, above. *Bäšō*, the word used by the felt-beaters for the Sun, is an Armenian dialect term for an animal with a white spot on its forehead (perhaps from Tk. *baş*, “head”)⁶⁵. This may reflect an archaic concept of heaven as a living face. One type of Armenian Cross-stone (*xačk’ar*) depicts the crucified body of Christ (most do not) and is called the All-Savior (*Amenap’rkič’*): a Cross-stone of this type of 1279 from Urc in the Ararat region, now at Echmiadzin, shows the Sun, with a human face, resting upon the back of a bird, above the Cross and to Christ’s right; the Moon, to His left, rests upon the back of a horned bull⁶⁶. According to Zoroastrian cosmological teachings, when the evil spirit Ah-remān slew the beneficent first-created bull (Avestan *Gav aēvō.dāta-*), its semen was taken to the Moon (which thus has the epithet *gao.čīθra-* “having the seed of the Bull”) and purified; and animals and plants were born from it⁶⁷. The horns of the crescent Moon were equated with those of a bull and from the Zoroastrian practice of setting horns on the dome of a fire-temple came the Muslim custom of placing a crescent on a mosque. Since medieval times Iranians have paired the lion and Sun as their national symbol: perhaps the felt-beaters imagined the brilliant

⁶⁵ See [*HLBB*, Vol. 1: 164].

⁶⁶ See [Azaryan 1978: 86].

⁶⁷ [Boyce 1975: 139].

orb on the forehead of that golden beast of power and grace. *Kācān* means “dog”, lit. “biter”; cf. the evolution of Mlr. *gazān* “biter, stinger” into Arm. *gazan* “wild beast” in general⁶⁸.

Ārtār, “milk” is Arm. *ardar*, “just” in the sense of “pure”. In the Epic of Kašt from the Moks region, in the Arm. dialect of Musa Dagħ, and in 19th-century Western Armenian butter is called *ardar iwł* “pure oil”⁶⁹. Oil is called *pāspālun* or *pāspālāun*, from standard Arm. *psplal*, “to glisten”. *Curān*, “honey”, is probably from Arm. *corem*, “flow”. I cannot help being reminded of Mandelstam’s lines of 1917 in *Tristia, Zolotistogo mēda struia iz butylki tekla/ Tak tiaguche i dolgo, cho molvit’ khoziaika us-pela:/ Zdes’, v pechal’noi Tavride, kuda nas sud’ba zanesla, my sovsem ne skuchaem — i cherez plecho pogliadela* “The stream of golden honey from the bottle flowed/ So viscid and long, that my hostess had time to pronounce:/ Here in sad Tauris, where fortune has swept us/ We miss nothing at all — and glanced over her shoulder.”

In the Song of the Birth of Vahagn, *erkn-im*, “being in labor”, *erkin*, “heaven”, and *erkir*, “earth”, are used in an intricate play of dualities; and it has long been noticed that Armenian *erkan* “millstone”, can reflect this ancient cosmological semantic cluster, with its rich array of phonetic interconnection so productive for poetry. In the argot of Moks, we find the word *nerk’yāvāk* for “woman, wife,” literally, “bottom millstone”; and, correspondingly, *vērāvāk* for “husband, man”, literally “top millstone”. The assonant collocation of the paired heaven and earth seems to be part of the fundamental linguistic furniture of an Armenian speaker; cf. the similar words for heaven and earth discussed above in Ruštuni.

Other designations of the two genders may reflect similarly archaic concepts and images. *Kāk’yāv*, “daughter-in-law” or “young girl”, is standard Armenian *kak’aw* “partridge”, a word used commonly in folk poetry of attractive girls. In Classical Armenian texts, from the translation of the Bible onwards, the word and its various nominal and verbal derivatives is synonymous with dancing, particularly a kind of suggestive, strutting dance performed by women (infamously, by Herodias)⁷⁰;

⁶⁸ See [Russell 1987(b):. 459].

⁶⁹ [Russell 2000: 90–91], n. 19; see also [Riggs 1847 s.v.]

⁷⁰ “Twist and twirl” is still Cockney rhyming slang for “girl” in London: see [Maurer 1981, p. 149].

and the complement to the felt-beaters' partridge in the argot is her *c'ic'*, "husband". This is standard Armenian *c'ic'*, meaning "(sharpened) stake" and "erect." In a medieval glossary it means "nail" or "tent peg"⁷¹; and here, it could be slang for a penis, *pars pro toto* of the man. (The word for "penis" itself is the equivalent of "beater", an approving nod to the felt-beater himself as well as an intuitively obvious association with the sexual act.) Movsēs Xorenac'i in his *History of the Armenians* recounts in chapter six of his first book how the son of Ziusudra (i.e., the Sumerian precursor of Noah), Zruan (i.e., the Zoroastrian god of infinite time), who was also Sem (that is, Biblical Shem), gave his name both to mount Sim (that is, the mountain named for Sanasar, the progenitor of the heroes of Sasun) and the province of Zaruand. And he notes, *Bayc' arawel yačaxagoyn hink'n Aramazneayc' i nuags p'andran ew yergs c'c'oc' ew paruc' zaysosik asen yišatakaw. Ew aysok'ik zroyc'k' sut ew kam t'ē ar-darew leal, mez č'ē inč' p'oyt'. Ayl vasn giteloy k'ez zamenayn, or inč' i lroy ew or inč' i grots', anc'anem and bnawn i girss yaysosik, zi imasc'is zar k'ez parzmtut'iw n imoc' xorhrdoc'.* "But even more often still the ancients of the progeny of Aram in the strumming on the lyre and in the songs of *c'c'oc'* and of dances recite these in memorial. And it is of no concern to me whether these narratives are a lie or occurred in reality. But only so that you may know all, whatever one has heard and whatever comes from books, do I cover entirely in this book, so that you may understand the candor of my counsels to you." The MSS offer the variant readings *c'uoc'*, *c'oyc'*, and *c'c'oyc'*; and R.W. Thomson compares to this passage an apparently similar usage in para. 180 of Agathangelos' *History*: as the lustful Trdat enters the chamber where the defenseless virgin nun Hrip'simē has been confined, the crowd inside and outside the precincts of the palace breaks into celebration. *Ar hasarak ergs areal barbarec'an kayt'iwk' vazelovk', c'uc' barjeal mardkan* "they all gave

⁷¹ This is the Rasūlīd Hexaglot, a 14th-century compilation from Yemen. The Armenian forms, probably collected in lands under Ilkhanid rule, reflect the phonology and morphology of Cilician Armenian. In the MS, *c'ic'* is the equivalent of Arabic *al-watad* and Persian *mīx* "nail" (cf. perhaps the present-day American expression "to nail somebody", i.e., to have sexual intercourse with them). The glossary is divided by topics; and by happy circumstance Arm. *c'ic'* rubs shoulders with *t'alik'*, "felt". See [Golden 2000: 179].

voice, breaking into song, capering and running, men raising up a *c'uc'.*" The latter word, taken by lexicographers to mean a song or celebration, seems to be related to Armenian *c'oyc'*, "show" (which in turn may well be a cognate of English "show"!); and Xoreñac'i's word would seem on the face of it to be a simple genitive plural of the same, meaning "of celebrations" or "displays" or the like. Khalatians (Xalat'eanc') translates Xoreñac'i's passage accordingly, песни древних арамазнийцев (армян), воспевавших на память, при представлениях и в пляске...⁷² rendering the mystery word *c'c'uc'*, which he gives in this form, with *-u-* rather than *-o-* in a footnote, as "performances". But the rather wide variety of spellings in the MSS suggests, at least, that the treatment of the term as meaning a show or performance by uncertain scribes just might be a case of *lectio facilior*; so I would venture the tentative suggestion that *c'c'oc'* be the genitive plural, not of *c'oyc'*, but of the rarer *c'ic'* — the word the woolbeaters of Moks were to use *pars pro toto* of a man, alongside the archaic designation "partridge" of a woman. Then the *patmahayr* or Father of Histories of Armenia may have been referring to ithyphallic songs of men — the counterpart of the lewd *kak'awk'* "partridge dances" of women. Such performances are well attested in Armenian antiquity. A sermon attributed to the fifth-century Catholicos Yovhannēs Mandakuni (more likely to be the work of another Catholicos John, Mayragomec'i, who lived three centuries later), has become the *locus classicus* for discussion of Armenian *gusans*, or minstrels. In "Concerning the lawless theaters of the demonic", the incensed cleric declares weak-willed women particularly susceptible to the lewd suggestions of drama: "For the custom itself is evil and so are those who encourage it: wine (*gini*), the minstrel (*gusan*), and Satan," where "women are cast into the role of prostitutes; and men, as rutting stallions mounting mares (*jioe' matakaxazac*')." There are also clowns or jesters at these performances: "For where jesters (*katakk'*) and minstrels and lewd play (*xal*) and mockery (*calr*) be; there the demons, too, join in the dance."⁷³ One recalls the ithyphallic satyrs who lurk at the beginnings of satire itself.

The slang of the felt-makers of Moks may perhaps then have preserved an archaic and antic designation of men and women. The felt-

⁷² [Khalat'ians 1896: 44].

⁷³ [Mandakuni 1860: 131–137].

beaters used the verb *xirkil* or *xilkil*, for the sexual act, lit. “plow a winter field”) — cf. the English idiom “plow” for “fuck”; the *tatič* lit. “beater” (vb. *tatil*), as noted above, is the penis⁷⁴. *Xärnäkum* was the party, mentioned earlier, that a felt-maker held before going away. Its literal meaning, “confusion”, possibly has lewd sexual overtones beyond a social mixer: *xärnel* just means “mix”, but Arm. *xärnakumn* is often in Classical and homiletic literature used to imply illicit intercourse. The party might have been more than a mixer.

Kyätälämān is the mouth, lit. “spoon holder”, but whatever salacious metaphors, wild parties, and the like the felt-makers enjoyed, the *širip* ‘*xāl*’ was still the woman of the house, lit., the one who moves or plays (*xalam*) the ladle (*šerep*). In the traditional Armenian *glxatun* — a house with central hearth beneath the squinch-constructed smoke-hole (*ert’ik*) — the ladle hung from the chief of the four pillars supporting the dome, and the woman who held the ladle fed the family⁷⁵. Some things never change, and God be praised.

5. Appendices

1. Description of St. Petersburg *Institut Vostokovedeniia* (“Institute of Oriental Studies”, abbrev. Or. Inst. here) MS A–29.

Yuzbashian 2005, pp. 76–77.

“142. IV, A 29, Miscellany. Lacks general title, contains diverse materials: examples of cryptography, prayers, theological compositions, dictionary of a hypothetical language, predictions, medical advice, etc. The manuscript was intended for personal use and has the character of a draft. Occasional jottings are left out of the description.”

I. Fol. 1a. Cryptographic alphabet corresponding to Armenian from *a* to *k*’, followed by [the ligature] *ew*, *ō*, *f*; abbreviations *ac im* [i.e., *As-tuac im*, “My God”] and an example of cryptography.

⁷⁴ The Middle Iranian loan *framaštak* is a Talmudic Aramaic hapax meaning “penis” that one quickly recognized in the common Modern Arm. *hrmštk-el*, “shove, push in” — clearly old, but not attested in the classical texts, at the time of whose composition **hramaštak* would presumably still have carried its slangy, lewd overtones (see [Russell 2013(a)]).

⁷⁵ See [Abrahamian and Sweezy 2001: 108].

II. Fols. 2a. Multiplication table, Arabic numerals.

III. Fols. 3b–31b. *Harc 'munk' erkbnakac' ar žolovs ullap'arac' nax i yAdamay, ew patasxanik' noc'in ənddimut'eanc'* ["Questions of dyophysites to the councils of the Orthodox, beginning with Adam, and the responses to the refutations of the same"] (fol. 5a), named in the preface as *Calik c'ankali* ["Desirable flower"] (fol. 3b), beginning: *Harc': Orpēs stelceac' Tēr Astuac Adam...* ["Question: When the Lord God created Adam..."]. Refutation of the errors of the dyophysites in the form of questions and answers. The authors of the composition are Yakob and Grigor (fol. 21a–b, acrostic; fol. 23a, attribution). References to the works of Grigor Tat'ewac'i, Pseudo-Dionysius the Areopagite, Cyril of Alexandria, etc.

IV. Fols. 3a–34a. *Bank' omank' xrt'ink'* ["Some difficult words"], beginning: *Diwc'aznakan: Hrč'akatr ew kam yoyž taratr...* ["Heroic: notably (?) or very (?)"] Explanation of particular "difficult" words.

V. Fols. 37a–44a. *Aylakan lezu or ew asi ruštuni* ["Allegorical language which is also called *ruštuni*"], beginning: *Řštuni: Hayoc'. Mētray: Astuac...* ["*Řštuni* to Armenian: *Mētray*=God"]. Alphabet and dictionary of the hypothetical *Řštuni* language. Text published in Aganian [Ałaneanc'] 1894, cols. 845–852.

VI. Fols. 44b–49a. Cryptographic alphabet and texts of medical and other content. The same script is found on fols. 2b, 63b–64a, and 67a, and on the [inside] cover. See Abramian [Abrahamyan] 1973, pp. 244–280 with illustration.

VII. Fols. 50a–62b. Predictions, medical advice, the beginning of an explanatory dictionary, explanations of some philosophical terms, etc.

VIII. Fols. 64b–65a. *Aybubenk' bolor groc' Hayoc' ew i usac'* ["Alphabetical list of all the letters of Armenian and Russian"], beginning: *a-Aa*. Comparative table of the Russian and Armenian alphabets, with the names of the Russian letters: *az, bugi, veti* [i.e., *Az, Buki, Vedi*], etc.

The manuscript is a convolute of two parts, on white paper (fols. 1–36) and blue. The copyists of the first part are Yakob and Grigor (?). Paper with Georgian text is glued into the binding; and several other signs indicate the provenance of the manuscript from the milieu of Armenians in Georgia. From the collection of Fr. Aganian [Ałaneanc']. On fol. 3b is the seal of Grigor (the copyist?) from 1792; the manuscript was copied around this date.

17.3 cm. x 10.5 cm.; 67 fols.; text in a single column; 21 lines [per page]; paper; *šlagir* [Armenian cursive]; cardboard covers; inner front leaf preserved.”

The MS contains also, on fol. 21r, a short list of the abbreviated signs and hieroglyphs one finds in other Arm. MSS.⁷⁶ There is a text on the dimension of Noah’s ark (fol. 8v.); notes on the Antichrist (Arm. *nerñ*) and his descent from the tribe of Dan (fols. 14v., 25v.), and instructions for the recitation of Psalms so that one may behold divine light (*ard et’ē kamis gitel k(a)m tesanel zloyš gerazanc’ik*, “now if you wish to know or see the surpassing light...)(fol. 34v.)⁷⁷.

2. Glossary of the *Āuštuni* language, MS A 29, published by Ałaneanc’ 1894, cols. 845–852. I have checked the reading by Fr. Ałaneanc’ against my own direct transcription of the manuscript, and generally have accepted his reading. Where he has replaced a word thought obscene by a euphemistic circumlocution I provide the original. The MS gives the *Āuštuni* in the first column; the Armenian translation by the author of the MS, in the second; in the third, I add the English equivalents, though sometimes the Armenian itself is unclear.

mētray astuac God
awt’ay manuk child
vinōt bari good
mrēxt zawak boy
vrōvē šun dog
pituni anicac accursed
ēfrat’i hreštak angel
mētrayvin astucoy of God
asu hac’ bread
mēvōn řur water
srōřit ber bring! (2 pers. sg. imp.)

⁷⁶ For a discussion of these see Russell [2013].

⁷⁷ This recalls the instructions given by St. Gregory of Narek, 10th cent., for priests preparing to offer the Divine Liturgy to recite certain passages of the 33rd chapter of his 95-chapter cycle of mystical and theological odes, the *Matean olbergut’ean* (“Book of Lamentation”) until they behold a visible light coming from heaven: see Russell 1996–1997.

awrid džoxk [sic!] hell
silubēn satanay Satan

lōlōp 'i sadayēl Sadael

lōgōfin beliar Belial

nimō arew sun

nimōfrē dusēkaw [sic! standard Arm. *durs ekaw*] he came out (aor.)

nim dus [sic! standard Arm. *durs*] outside

rōm ari come! (2 pers. sg. imp.)

o[r]p[ē]s asē ays lezu t 'ē rōmnīm vrōvē pituni or t'argmani dus ari šun anicac "As this language says, *Rōmnīm vrōvē pituni*, which is translated, 'Come out, accursed dog!'" [This abusive challenge in *Ruštuni* is then written out in the second cipher, of fol. 37a, with a symbol for Arm. *v* differing very slightly from the one in the key.]

verōtim manazil [Arabic *manāzil*, "houses", used as an astrological term in Arm.]

axin jew type, form

axvay hanon (?) — possibly Arm. *hanel* "remove"?

hōmēn hayi he looks

suti biz bristle

law ēlin ōrhneal ē he is blessed

aft'ōnē k'ristos Christ

lōbi a[stuaca]yin(?) divine; Aṭayeanc' reads this as the arm. adjectival ending *-ayin*.

sisō glux head

sisōvēn šlink' bowing, humbling of the neck and head

ašwu jeṛn hand

asēnē hambarē [sic!] be patient! (2 pers. sg. imp.)

asēn hambark' [abbrev. of *hambarec 'ēk'?*] (2 pers. pl. imp.)

sfōnēt disnim [sic! standard Arm. *tesnem*] let me see (1 pers. sg. pres. subj.)

asēnēsfoṇēt hamb[e]rē tesn[e]m hambar[ec'ē]k' noc'in kerpi
"Asēnēsfoṇēt: 'Hold on, let me see!' [The plural] 'Hold on' [is said] the same way."

[A list follows of the *Ruštuni* numbers one to ten:]

šuš, jēnō, krōn, lē, lōvēn, asur, krōmēn, hō, zunē, lōf.

[A list of *Řuštuni* words with the Arm. letters *i, l, x, c, k, h, j, ł, č* with *patiw* superscript, i.e., the numbers 20–100, above each in order:]

finōs, ibōr, sōlir, drōmē, xōf, slōnē, ōmē, čēmsay, mēvalēt.

verj hambaris xōgēn ṛ “That is all of these numbers; *xōgēn* [is] 1000.”

[Below this is an elaborate church-like drawing inscribed with the name Grigor, doubtless one of the pair named in the acrostic poem. Then the list resumes on fol. 40b:]

sōlēfan amenayn all
tolaš tačar temple
siforot'ēm bnu[t'i[wn] nature
aṛafēl aṛak'eal apostle
hramēt'ēm hrelēn fiery
trōpēn mard man
trōpēni mardoy of a man
*aspārī šṛlatasēr (?)*⁷⁸
šuršētōm ant'aṛam imperishable
valapert daṛabay (*davi daṛaba* is an idiom meaning an argument or conflict; the word is Arabic in origin and means literally “beating”).
asp šṛlat (?)
axbrōsi hetak'rk'ir interesting
xwēm golov being
prēr azg clan, nation
prērēm azgēn from the clan, nation (abl. sg.)
aswōt ark'ay king
aswōtin ark'ayin of the king (gen. sg.)
aswōtr ark'ayic ‘of the kings (gen. pl.)

⁷⁸ If one reads *lalatatasēr*, then “lover of vice” (Arabic *ghalat*, “transgression” + *-sēr* “loving, -phile”, used in various compounds and a verb in Arm., see Russell 1987, p. 44.); and cf. *asp šṛlat* (Aṭaneanc‘) or *lalat* (my reading) below.

aswōt trupē ark'ayakan kingly
aswōtaruhip ark'ayuhi queen
aswōtutin ark'ayacinn the king's progeny
atr goł thief
šinōxa gerezmand thy grave
adron mizan scale
abid kšerk' weights
ōtēr mulk' king (Arabic)
bēšōy šinē make (2 pers. sg. imp.)
bēšōlēf šinec 'i I made (aor.)
bēšōlēt' šinec 'ir you (2 pers. sg.) made
sirafēt adap 'xanay school (Persian, *adab xāna*)
č'ušēt mšal a measure of weight (Arabic, *mithqāl*)
mēt dang a piece, measure (Persian)

žanlibōn or ew asin ozni "which they also call a hedgehog"

⁷⁹ See [Bedevian 1936: 342 no. 1981; and *HLBB* s.v.]

On fol. 44b are three more words, following the key to the third script:

Ayl ewš bark' ("Some more words"):
milduvēwk' tramabanu[t'jɪ[wn] logic
selduvēwk' čartasanu[t'jɪ[wn] rhetoric
jēmsayvēwk' k'erakanu[t'jɪ[wn] grammar

3. Glossary of the secret language of the felt-makers of Moks, Orbeli 2002, pp. 355–358: *Argo sherstobitov* ["argot of the wool-beaters"]. Orbeli's use of umlaut and circular superscription (here replaced by a macron) denote short and long a; other umlauted vowels are as in Turkish. The -y following a consonant denotes palatalization. His comments are in parentheses; mine, in square brackets.

Āmārnač' or, stone.

Ānjez, mullah (primary meaning [=p.m.], "raven").

Āntip// *āntāēp*, bad, ugly.

Āroc', oven.

Āruc, horned cattle [from Arm. *ariwc*, "lion"].

Āspätāur, bast sandal (p.m., "God's gift").

Āvgyēr, beard.

Ārtār, milk [from Arm. *ardar*, "just" in the sense of "pure", cf. *ardar iwł*, "pure oil", for "butter"].

Bäšō, sun.

Bäläzök, forearm (p.m., "bracelet").

Bərān, small cattle (p.m., "bleating") [more likely from Kurdish *beran*, "ram"].

Gyārdān, necklace (p.m., "neck").

Gyōsil, to beat.

Dōš, breast [from Tk.].

Zərō, lira coin (cf. *Kāžō*) [possibly from Iranian *zarr*, "gold"; Ottoman Turkish *oski*, "gold coin" is a loan from Arm. *oski*, "gold", the latter in post-Classical dialects generally pronounced with on-glide v-].

Zināc, meat (p.m., "slaughtered").

T'evnuc', clothing (p.m., "shoulder cloak").

Ink'y, good, beautiful.

Lōtrā, see *Āspātāur*.

Xānjārōr, 1. wool, 2. felt [from Arm. *xanjarur*, “swaddling clothes”].

Xārnākum, party held by a felt-maker before going away (p.m., “confusion”) [possibly has lewd sexual overtones; Arm. *xārnakum* “mixing up” is often in Classical and homiletic literature used to mean “illicit intercourse”].

Xātxātun, raisin (p.m., something piece by piece, or with pits).

Xirkil// *xilkil*, perform the sexual act (p.m., “plowing a winter field”) [cf. the English idiom “plow” for “fuck”].

Xuz, Turk [possibly from Ghuzz or Oghuz, Turkic tribal names, with popular etymological and pejorative contamination by Arm. *xoz*, “pig”].

Cālāc, candle rolled into a ball (p.m., “wrapped”), cf. *Kəpč’ān*.

Cālkil, to laugh (p.m., “to flower”).

Cāvār ānil, to talk too much (p.m., “to cook pilaf”).

Cērnuc’, stick for beating wool [into felt] (p.m., “handle”).

Cēt’il, to eat (p.m., “become smaller”) [cf. the Arm. idiomatic *jet pet* “small and great”].

Cēt’un// *cēt’āun*, dinner.

Cēkāc’, trousers [perhaps from Arm. *cak*, “hole”, into which the leg is inserted, cf. Biblical Hebrew *mixnasāyīm*, “idem”, lit. “twin inserters”].

Cəxk’yēš, pipe for smoking (p.m., “chimney”), i.e. *cux k’aš* “smoke-puller”.

Cəvil, to drink.

Cux// *cāux*, tobacco (p.m., “smoke”), perhaps shortened *cxaxot*, lit. “smoke-grass”.

Curān, honey [probably from Arm. *corem*, “flow”].

Curil, to run away [cf. *Curān*].

Cōv, great (p.m., “sea”).

Kāžō, lira coin, cf. *Zərō* [possibly from Arm. *k’a(r)žē*, “it’s worth”?].

Kākul// *kākāul*, cotton wool (p.m., “soft”).

Kānāč’āmusk// *kānāč’āmāusk*, Russian (lit., “green-eyed”).

Kānt’, woman, wife (p.m., “handle of a vessel”).

Kānč’ān, rifle (p.m., “shouter”).

Kāvkuł, shoes.

Kārmir čūr, wine (p.m., “red water”).

- Kyāp* ' , bread.
Kāk'yāv, daughter-in-law, young girl (p.m., "partridge").
Kēcāk, fire (p.m., "lightning").
Kyālxānuc ' , hat (p.m., "headgear") [standard Arm. *glxanoc*].
Kēcān, dog (p.m., "biter").
Kēcēyk // *kēcēk*, daughter, girl (p.m., "skein").
Kəpč'ān, candle (p.m., "kindling"), cf. *Cālāc*.
Kərvān, nut.
Kyətālāmān, mouth (p.m., "spoon holder").
Ktrācurēk [-*urēyk*], a five-piastre coin [contains standard Arm. ppart. *ktrac*, "cut off", so "piece"].
Kətril, steal (p.m., "cut").
Kətruc ' , 1. knife, 2. saw (p.m., "cutter").
Kəraŋgyl, go away, escape (verb formed from p.m., "heel").
Kyörcāc, satin (lit., "woven").
Kor'k'yēt ' , felt-maker's tool (lit., "stick with a curved end").
Korəngyān c'ānil, see *C'ānil*.
Korkil, to arrive.
Kuru, bag for wool (from the imperative form of the verb "to lose" with the sense of "hide!").
Härt'nuc ' , bag, wallet (p.m., *samannik* "mud brick" (?)).
Čālāc ' , mouth (p.m., "watermill").
Čärtək'yar, root tooth (p.m., "white stone").
Čəməc'əc'il, to kill (p.m., "squash, squeeze").
Čəmil, aorist *Čəməv*, to die (p.m., "to be squeezed").
Māzwor // *māzwür* , 1. goat, 2. priest (p.m., "hairy").
Māunj, 1. blanket, 2. felt.
Māusk, eye (cf. also *Musk*). *Muskäyn*, early in the morning, at dawn, tomorrow⁸⁰.
Māuskil, to look.
Māt, brother (p.m., "finger").
Mērāc, yoghurt (p.m., "fermented").
Munč ' , 1. socks, 2. shoes.
Musēk, night.

80

[HLBB, Vol. 4: 95], cites *mauskil* "to look" and *musk* "eye" as *cackabanut'yun* "secret language"; and mentions also *musēk* "night".

Musk, window. Cf. *Māusk*.

Nerk'yävāk, woman, wife (p.m., “bottom millstone”).

Nəstvāc, floor [lit., that which is sat upon].

Noḡil, to sleep.

Šenk', 1. house, 2. door. [Cf. standard Arm. *šēnk'*, “building”.]

Šārēšt cāxil, to collect alms.

Širip'xāl, woman of the house [lit., the one who moves or plays—Arm. *xalam* — the ladle — Arm. *šerep*].

Šorāc, milk (cf. *Artār*) [cf. *šor*, “stream of milk from a cow’s udder” in standard Moks dialect, Orbeli 2002, p. 304].

Šōrəkoł, man of the house.

Č'alə'nk'y, Let's go! [Cf. Indic *čal-* through Romani?]

Č'ārč'ārac, *t'an* [i.e., yoghurt mixed with water] (p.m., “tortured”).

Č'ur, money (p.m., “dry”).

Č'ōnā, Go! [From Kd. *ču-* “go”?]

Pälärčil, to kiss.

Pärc', hand.

Pästil, to defecate.

Päräkəpuč', horse [lit., “fine-tail”].

Pärakil, to urinate.

Pärkupučäx, paper [lit., “fine edge, corner (?)” Tk. *bucak*].

Pat cak əē, Careful! They're listening in on us! This will give us away! (p.m., “there’s a hole in the wall.”)

Pərtun// pərtən, felt (cf. *Xänjərör*).

Pəspəlun// pəspəlāun, oil [from standard Arm. *psplal*, “to glisten”].

Pülür, piaster.

Pün, house (cf. *Šenk'*) [from standard Arm. *bun*, “native”, derivative verb *bn-ak-em*, “dwell”].

Sēzəē, wife (cf. *Kānt'*, *Nerk'yävāk*).

Sēzuc', see *Sēzəē*.

Sēx, dagger (p.m., “riveting hammer”).

Suril, 1. to run away, 2. to escape (cf. *Curil*).

Vāzān, dog [possibly from Arm. *vazel*, “to run” > “runner”, cf. *Kəcān*].

Vāzkān, lentil.

Vānk'yəē, 1. a little, 2. There isn't any!

Vānk'yil, to steal, cf. *Kətril*.

Vānk'yōm, theft.

- Vārək*, daughter-in-law, young girl (p.m., “chick”, cf. *Kāk’yāv*).
Vāstkoł, father.
Vārəc’c’il, to steal, imperative *Vārəc’c’u’* (cf. *Vānk’yil*).
Vārıl, to go, aorist *vāric’*. See also *Vāērnāl*.
Vērāvāk, husband, man (p.m., “top millstone”).
[Vāērnāl], to go, aorist *vāerc’āv*.
Vilkil, see *Suril*.
Vōstān xərıl, to be hungry, aorist *xērāv*; *Vōstān xərük aē*, he is hungry.
Vōstānc’ə, wheat.
Tāxtāk, tongue (p.m., “board”); see also *Tāxtəxkič’*.
Tāknuc’, felt (p.m., “bedding”), cf. *Pərtun*.
Tākpün, mosque. (From Ar. *takbīr*, the act of declaring *Allāh hū akbar* “God is great”?)
Tārčūr, vodka (p.m., “bitter water”).
Tātākān, bull; see also *Tātōl*.
Tātōl, see *Tātākān*.
Tāk’yčūr, tea (p.m., “hot water”).
Telāc, see *K’yārānāc*.
Tāxtəxkič’, see *Tāxtāk*.
Təp’əsil, to carry off.
Təp’ič’, penis [lit. “beater”, cf. standard Moks dialect *təp’il*, “to beat”, Orbeli 2002, p. 336].
Təxōl (1), 1. felt-maker, 2. man of the house.
Təxōl (2), ram.
Tīp// təp, good, beautiful (cf. *Āntip*).
Tīr-pāc’, door (p.m., “Open! Shut!”).
C’āx, beard (p.m., “straw”).
C’ānil, to fear.
C’ərük, boy, son [cf. standard Arm. *c’ruk*, “snout”].
C’ic’, husband; cf. *Vērāvāk*. [Cf. standard Arm. *c’ic’*, “stake, erect”.]
Wornuc’, trousers; cf. *Cēkāk’*. [Probably to be understood as **(v)or-noc’*, lit. “container of the anus”.]
Worvānk’y, *cacık* [Tk., thickened yogurt to which diced cucumber or yogurt is added] (p.m., “sediment, waste”).
Wotnuc’, 1. socks, 2. shoes. [Arm. **(v)ot-noc’*, lit., “container of the foot”; cf. reconstruction of *wornuc’*, *supra*.]
P’āt’ət’āc, cigarette [lit. “roll up”].

P'ētatil, to fuck. [Possibly from standard Arm. *p'ettel*, “to pluck out”.]

P'it'nil, to be tired.

P'ukār//p'āukār, daughter-in-law, married daughter.

K'yālāk, upper part of the torso (p.m., “boat on inflated skins”)

K'yāmuc, loop on a stick.

K'yār, village. (From Semitic *qīrya*?)

K'yārānāc, cheese; see also *Telāc*.

K'yet'rik, bag for wool; cf. *Kuru*.

K'yerāšt, wrist (p.m., *vila* (?)).

K'yāšōl, 1. village elder, 2. shepherd (p.m., “herder”).

K'yōš, bek [Tk. or Kd. chieftain].

4. Texts in the “third script” of Petersburg MS A 29

Although the author of the MS seems to have intended his script for use with his invented language, and for philosophical tracts, it is employed here mainly to encode all or part of various magic spells. A number are transcribed and translated here: where they mix the standard Mesropian script of Armenian with the cipher, the words in standard Armenian are transcribed in bold face. Sometimes but not always they are the most innocuous parts of the text, unsurprisingly; but sometimes also a word may be written with a mixture of the two scripts, either with the intention of complication for reading or perhaps because of a *lapsus calami*. In at least one case the scribe confuses the characters for the letters *g* and *d*, which are adjacent in the Armenian alphabet — an indication that although he wrote the cipher elegantly, he was not so thoroughly practiced in it as not to be thinking any longer of which letters of the standard alphabet its characters replaced. One interesting lexical feature of the spells is immediately evident: over and over, the scribe idiosyncratically employs (and variously spells) the adverb *anpatčar*, literally “causeless” and generally used as such in Clas. Arm., with the secondary meaning, now most common in vernacular Mod. Arm., “definitely, absolutely”. This may reflect the idiom of the day: on 12 March 1747, for instance, an Armenian merchant of Tokat employed the word to mean “must absolutely” in addressing a letter to

a merchant from Bursa at Canton in China⁸¹. It is at any rate an indication that, whatever his source for these incantations, the rendering of them is his own.

Fol. 45v. *grē t'ē filani ordi filann korč'i* (magic square) *ays veroy greal tlisms eōt 'n ktor t'lt'i vrēn ōrēnn* [for *ōrinak?*] *mēk ktorn tār kraki vrēn deṛ gc'ac' č'aes* [for *gc'ac č'es?*] *asa: lic' zeresn anarganōk'.* *Filani ordi filanin hōr anun tu* [for *tur?*] *ew apa asa ayn salmosn. A(stua) c o nmani k'ez?* *minč'ew ayn teln or asē o(r)p(ēs) baz kez" w zlerins ew apa jgea krakn ōrn mēkn e ways veroy greal salmosn asa minč'ew eōt 'n ōr ew apay k'o č'araēamn* [for *č'arakamn?*] *veṛan: zk'ēn A(stuco)v.* "Write this so that X's⁸² son X will be lost. (Magic square) Make copies on seven pieces of paper of the talisman written above, take one, hold it over a fire and just before you cast it in say, 'Fill his face with dishonor.' Give the father's name of X son of X and then recite the Psalm, 'God, who is like unto you' up until the place where it says 'as a fire He burns the mountains'⁸³ and then cast it into the fire. Recite as above once a day for seven days and then your *enemy... you, by God."

Fol. 45r. *Gir siroy siracit mazn ays ē surma šinē ač'k't sirē k'ez anp(a)tčār.* "A love spell: Take a hair of your beloved and use it to dab antimony around your eyes, and she will definitely love you."

Ayl gir siroy akr'awi lelin muškow hetā pahē siren k'ez anpatčār. "Another love spell: keep a crow's liver together with musk (?), and they will definitely love you."

Wasn [sic!] hiwandi grē nerk'oy t' lismns aḡ jeṛn pṛnea tur t'ē cicali apri t'ē lay meṛni. (Magic symbols) "For a sick man: write the talisman below on your right hand and have him seize it. If he laughs, he will live; if he cries, he'll die. (Magic symbols)"

⁸¹ [Aslanian 2011: 89 and 92] fig. 4.

⁸² Arm. *filan*, from the Turkish loan form of Arabic *fūlān*, "somebody or other".

⁸³ Ps. 82.1, *Astuač o k'ez nmanic'ē* "O God, who may be likened to You?"; Ps. 82.14 ... *orpēs boc' zi kizu zlerins* "for as a fire He burns the mountains." The author may be citing from memory, since the precise first verse he cites is actually Ps. 88.8, *Tēr Astuač zawrut'eanc', o nmanē k'ez*, "Lord God of hosts, who is like You?" Armenians in olden times knew much of the Psalter by heart; and numerous Psalms were employed for magical purposes: see for example the modern magico-medical MS analyzed in [Russell 2011].

Grē nerk'oy dliṣn gnē [for *dnē*] *furn t'ē takn ankani mēni, t'ē takn č'a ənkni ku apri. Ays ē:* (Magic symbols) "Write the talisman below and put it in water. If it sinks to the bottom, he will die; if it doesn't sink to the bottom, he'll live. This is it: (Magic symbols)"

Fol. 46r. *Xrat vasn anerewoyt 'ut 'ean ar dan maztak V msxal ew gnay hangstarann. Krak tar hetd ew cxē e(w) karda ays nerk'o greal anuank's minč'ew V shat' amēnn ar minč' i jeri p'ayt ar:*

*ōsē mušin di mušin mēhr
dišn mēhrdišin mēhmēlēsēmi
ahiun ahiun ahran hēho
šin k'umšin mēhmēšun t'ēr
mušin aprašin k'elšin hēy
eljibēāē ors mazgel. Vēl
k'ēlmayē mēr duk' xam
č'a eaknč'is* [for *erknč'is*⁸⁴] *ha!*

"Advice concerning invisibility: Take a portion of mastic, five measures⁸⁵, and go to your chamber⁸⁶. Take fire with you and suf-fumigate it and recite the names below, for five hours⁸⁷. Do it all while holding a staff in your hand⁸⁸. (*Nomina barbara*)⁸⁹ Don't fear, then!"

⁸⁴ Cf. the instruction in the spell on Fol. 47r., *infra*, with the same word and injunction not to fear after performing a magical operation in a graveyard.

⁸⁵ Arm. *msxal*, for Arabic-in-Persian, *mithqāl*.

⁸⁶ Arm. *hangstaran*, lit. "place of rest" — a word for which our author gives a *Řštuni* equivalent (*ap'it'rōnap'it'*) in his glossary, even adding its locative singular form!

⁸⁷ Arm *shat'*, for Arabic in Turkish *sā'at*.

⁸⁸ The word here is Arm. *p'ayt*, "piece of wood, stick", a term used also of the Tree of Life of the Cross; but the context here would indicate a magician's staff, analogous to the *gawazan* "crozier, scepter" of a clergyman or noble, or the sword of an exorcist (see [Russell 2000(a) and 2001]).

⁸⁹ These rhyming nonsense words appear to contain Persian *mehr*, "love", and Turkish *elçibey* "emissary". As with the *Řštuni* language, their phonetic un-Armenianness is stressed by the frequency of long vowels and the absence of sounds like /dz/ and /ch/. The intent here seems to be to mimic a spell in Persian. See Russell 2012(c) on *nomina barbara* and *voces mysticae* in Armenian magical texts.

Gi[r] vasn siroy. Knoġ kat'n kt'ea tur aynk'(a)n or XLIX msxal alurn xmorn ē ayn uzacit nman pat[k?]er šinē ew apay ays t'lisms nerk'oy gre(a)l hasarak tan(a)k'ov grē i v(e)r(ay) t't'i ew kpc'ru i v(e)r(ay) xmorē pat[k?]eri p'orin ew dir melm mōrmōti fro(y) č'ayrē aynpēs takana(y) siri anpatčar tlišmn or ē ays: (Magical symbols) ew apa gre siracit ano(w)nn i groc's t'lms t'ē filani dustr filann inc sirē ays ē. "Love spell: sprinkle enough of a woman's milk to make dough of forty-nine measures of flour. Make an image in the likeness of the one you desire. Then write in common ink this talisman written below and fasten it to the belly of the image made of dough, and place it in the juice of a soft bramble plant so that it doesn't burn, that way she may grow hot and definitely love you. This is the talisman: (Magical symbols) And then write the name of your beloved, in the writing of this talisman, thus: may X's daughter X love me."

Fol. 46v. *V(a)sn knoġ č'aylanaloy et'ē uzarliki tak'in knikn vrēn pahē č'i yłana*. "For a woman's not becoming pregnant. If a woman keep over her the root of the wild rue⁹⁰ she will not become pregnant." Marginal note: *boxsur mariam* "starwort"⁹¹.

⁹⁰ This is *Peganum harmala*, Tk. *üzerlik otu*, Pers. and Arm. *s(i)pand* (see Bedevian 1936, p. 444 no. 2575 and Gabikéan 1968, p. 187, no. 1392: *uzērlik*, *iwzērlik* in the Arm. dialect of Sebastia/Sivas) burned as incense by Iranians, who attribute to it numerous magical properties; the Iranian name means "holy", and Prof. Martin Schwartz has proposed that it was a component of the original mixture of entheogenic plants pounded in Indian and Zoroastrian sacrificial ritual, the Av. *haoma*, Ved. *soma*; and explains the Turkic name as meaning "conferring a hundred virile potencies" [Flattery and Schwartz 1989: 149–150]. As for the root the spell prescribes, the greatest amount of psychoactive components in *Peganum harmala* is in mature seeds (up to seven percent) and in the roots (up to just over three percent), but the latter is richest through the early part of the year till the former ripen [*Ibid.*, pp. 34, 82]. The plant was believed by mediaeval Muslim doctors to induce menstrual flow [*Ibid.*: 32–33]; so perhaps this was a reason the Armenian magician-herbalist prescribes it against conception — after which a woman's menses stops until the child's birth.

⁹¹ Ar. *baxūr maryam*, Tk. *mariam buhuru*, Arm. *maremaxnkeni* ("Mary's frankincense") or *p'ok'r mškacalik* "little musk flower": [Bedevian 1936: 435 no. 2521].

Go to the grave of a dead man on the night of the third day after the second hour and lie upon it with a virgin. With both hands take up earth from that grave and grip it tightly in the palm of your hand, then come quickly to, and cross, a fordable river. No matter how much they terrify you, fear not. Pay no heed to what is behind you and do n't let out a sound, just keep going. The function⁹² of this soil is that if you take just a little of it and bind it with

⁹² Arm. *xasiat'*, more commonly *hasiat'* in magical texts, from Arabic-in-Persian: in the much-corrupted late Middle Armenian paraphrases of the Testament of Solomon, where the ancient king and archmage interrogates some seventy-two demons, "What is your *hasiat*?" (i.e., role, function, specialty) is part of the standard list of questions posed to each spirit in turn. And the demon willingly recites both its particular baneful talent and the talisman capable of summoning and controlling it: see [Russell 2012(c)]. The magical rite of MS A-29 apparently combines zombification with inducement of a comatose state.

butter⁹³ and place it upon a man's breast, he will give you whatever you seek, while he himself will be asleep, and will forget whatever he had given (?). Then remove the soil from his breast and keep it for yourself. Any sleeping man's chest you put it on, he'll stay asleep like a corpse. Be ye well."

Fol. 49r. *Et'e t'ln* [for *t'lsmn?*] *mējn k'o sermn kat'ac'nes um or tas utel aržamayn k'ez sirē: ayspēs* (Magical symbols). "If you ejaculate your semen onto this talisman, the person to whom you give it to eat will love you instantly. Thus: (Magical symbols)."

The text on Fol. 67r-v is not so much a spell, though it is of magical content, as a curiously garbled account of the Armenian magical flower called *hamasp'iwṛ* (lit. "all-spreading"), which first sprouted from the blood of martyrs, and to which are ascribed numerous virtues⁹⁴. The author of the MS has not got the name of the flower right and conceals it in cipher the two times it is mentioned; the rest is in Armenian plaintext. The misreading, *hamarfiws*, is of interest since as a standard Armenian compound the word *hamasp'iwṛ* is not in the least esoteric or unusual, though the flower it denotes is probably mythical. One might not therefore exclude the possibility that he was miscopying a manuscript not his own in which the word was already written in cipher: in the cryptogram, the characters for *f* and *p'* are nearly identical, and the characters for *s* and *ṛ*, already adjacent in the order of the Mesropian alphabet and cipher alike, are 180-degree inversions of each other. The cartonnage facing fol. 1r, as noted, is made of glued-together fragments of cipher text. Though its style of handwriting does not differ from that of the MS proper, the rather unlikely misreading of the word *hamasp'iwṛ* and one's suggestion of the reason for it, as well as the presence of text in the cipher in the material of the cardboard binding, together allow the possibility that our author might not have been the inventor and sole user of the cryptogram. I have in a study of another cryptogram attested in many MSS coined the term "hetaerogram" for a cryptogram so widely shared by some guild or sodality (Gk. *hetaira*) as to be more

⁹³ Arm. *eallu*, i.e., standard Tk. *yağlı*, "possessing or containing oil". One standard Western Armenian term for butter is *ardar el* or *iwl*, lit. "pure, righteous oil" [Riggs 1847: p. 8].

⁹⁴ See [Russell 1997: 93–94 with refs].

a marker of belonging than a method of concealing information. Perhaps we deal, then, with a “hetaerogram” here, though that suggestion must remain hypothetical until and unless another MS by another hand comes to light. The author seems at the end of the brief text to have conflated the *hamasp* ‘*iwr*’ with the mandrake (Arm. *loštak*), about whose human form and loud cry Armenians and others hold many superstitions in common.

“Explanation of the *hamasp* ‘*iwr*’⁹⁵ flower. Dionysus the philosopher was eyewitness to this flower, the *hamasp* ‘*iwr*’, which is even the key to all things locked. It is sweet in scent in gardens; its leaf is green and it has an eye on the left on the leaf (?) that is red, and around it bends (?). Its flower is purple in hue, and in the place where it spreads out (?) it is blue. It is then for all philosophers and scholars and the studious. And when they take it to Rome, they compound it with oil and smear it on their feet, hands, faces, and mouths. It speaks 22⁹⁶ kinds of languages and writes and

⁹⁵ The final *s* instead of *ř* seems to be a scribal error: in the cipher, the character for the latter is the former flipped vertically over.

⁹⁶ This is an unusual number for a magical text in that it has no obvious Pythagorean or other cosmological symbolism, though the Hebrew alphabet does have 22 letters. Perhaps the tradition is grabbed here, as elsewhere, and

reads 22 alphabets. And when you emerge from the grave all the flowers talk with you. And they say that it is a medicine for various things. And if you want to find it, go to the village Örc⁹⁷ of Black Mountain, from it, to the city of Karin which is Erzerum, to the mountain Bark'oy to the valley of Masunk' in the plain of Masis facing Xaxo. Find it around mount Varag⁹⁸: on the summit there stand three boulders, and on one of them you will find this flower full of grace. It is fully blossoming in the month of June, from the 20th, and on 11th K'ałoc'. And fast for three days and beseech the Holy Spirit that he may give it to you. It sprouts from 21 branches and divides into 10 branches. And they say that when the flower has feet like a man and rears its head or turns openmouthed to your eye, restrain it⁹⁹. It is (good) for you for snakes. Hope in God and go."

The Demon Weed

J A M E S R. R U S S E L L

HARVARD UNIVERSITY, CAMBRIDGE

The Zoroastrian world teems with *xrafstras*—the evil beings cobbled together by a resentful Ahreman in opposition to the good creations of Ohrmazd. Though Christian doctrine affirms that all creation is the Lord's, in practice the faith is no stranger to dualism and demonization: the curious Middle Armenian poem offered here for the first time in translation into any Western language has as its subject a weed of the New World no denizen of the Sasanian realms could have known. But in the course of its demonization it was associated with Egypt, proverbial in the Biblical and Mazdean worlds alike as a place of dark magic. It is a pleasure to offer this small lucubration to a great scholar and esteemed colleague, Prods Oktor Skjærø.

One hears little good of tobacco these days. But even before billion-dollar judgments against the cigarette companies, people disapproved of the plant. Chekhov's dramatic monologue, *O vrede tabaka* ("On the harm tobacco causes") starts out that way, but after the first few lines it is plain that what the lecturer really wants to tell us about is his nagging wife and miserable life: the audience is left with the conviction that the pleasure and distraction tobacco can afford far outweigh the harm to one's health it can do. Chekhov was a physician, and did not live much past forty. And for those who do, no prizes are offered: eat broccoli and work out, but you will still be sick and lonely someday, and you will die. The gift of wine offered by Dionysus to mankind was understood by the Greeks as pity on our lot. Follow the advice of Baudelaire in his *Paris Spleen*: Get drunk! (And have a smoke while you're at it.) On wine, on anything at all you please. But you must get drunk!

The seventeenth-century Armenian poem here offered in translation, *Patmut' iwn piłc t'ut'unin*, affords a brief and fascinating glimpse into every-

day Armenian life four centuries ago, when the use of tobacco in the Old World was little more than a century old. It has an unintended resemblance to Chekhov, in that what it has to say about something else— weird East Christian legendry, in this case—is much more interesting than the subject of tobacco, though here the plant becomes literally a demon weed. It not only kills you. It sends you to Gehenna. Maybe it does. But I do not mean this article to be understood in any way as discouraging or disapproving of smoking or any other merciful vice that lightens the terrible fardel of time. Fire up your *narghileh*, and read the verses as a postprandial entertainment.

Tobacco is pure American, and, like much else in the culture of this fair land (though not Mom's apple pie), it is pleasurable, harmful, and addictive: the natives have been using it constantly up and down both continents for eight thousand years as a recreational, medicinal, and shamanistic drug. It is smoked, drunk in decoctions, chewed or applied in wads, inserted into the rectum in enemas, patted on the vagina as a pain-killer, mixed with the bodily juices of decomposition of a dead shaman and quaffed sacramentally, or mixed with other, more potent, hallucinogens like *yagé*. The first European references to it belong to Christopher Columbus and his crew. In 1527, Bartolomeo de las Casas reported that the Indians smoked the plant in cigars called *tobacos*. In 1557, André Thevet calls tobacco by the Indian word *petun*, from which Turkish *tütün* and the Armenian loan from there, *t'ut'un*, come (modern Arm. *cxaxot*, "smoke-grass," is a purist neologism).¹ In modern Turkish, *Nicotiana glauca* is *tembeki*, *N. rustica* or *N. tabacum* is *tütün*.² Most people smoke tobacco now, as cigarettes, cigars, and bidis; but in the Near East it is smoked also with a waterpipe, called by the Iranians a *qalyun* (pronounced *ghalyun*, and thus transliterated in the

Arm. poem, which uses that word repeatedly), by the Turks and Greeks *narghileh*, and by the Arabs, *shisheh*. People often mix opium or hashish with tobacco to enjoy a waterpipe, though this is illegal. One contents oneself with the legal and sufficiently enjoyable mode: a mixture of tobacco, apple, and molasses made in Egypt, which produces a pleasant and mild fragrance. A great pleasure of life in Iran today is to relax in a *qahve-khāneh* with friends, drinking tea, eating dates, and smoking a *qalyun*. A girl or boy carries around to the customers a metal *manghal*—brazier—with smoking incense of *sepan*—rue—to ward off the evil eye. A modest consideration is appreciated.

The Armenian poem is of anonymous authorship (though the writer, given his chiding of clergymen who smoke and his harping on church and hell, might have been a man of the cloth) and the earliest manuscript containing it dates to 1701; some of it derives from a rather less colorful or interesting poem by one John (Yovhannes) that does not refer, for instance, to the Egyptian magicians I will mention presently. Manuscripts of John's poem predate this one by half a century, and texts of both are fairly numerous, so it may be assumed that tobacco-smoking had become a real social problem amongst Armenians perhaps as early as the year the Mayflower weighed anchor at Plymouth Rock, in 1620—and certainly by the time England relieved the Dutch of New Amsterdam, two-score years and some thereafter. The Arm. poem is printed in H. Sahakyan, ed., *Uš mijnadari hay banastełcut'yunə XVI–XVII dd.* (The Armenian poetry of the late Middle Ages: 16th–17th centuries), vol. 2 [Erevan, 1987], pp. 643–47; and John's *Vasn t'ut'uni*, "Concerning Tobacco," appears on pp. 335–39 of the same volume.

The poet makes some astonishing claims that are extra-Biblical, to say the least, about Jannes and Jambres, the Egyptian magicians of uncanonical Old Testament legend who opposed (and, according to the pagan Numenius, second-century A.D., defeated) the magic wrought by Moses. This devious duo are known in Armenian: the most obvious and probable conduit will have been, in all ages, the *Penitence of Cyprian*, a work of ca. the fifth century about a magician of Antioch who converted to Christianity, whom the devil had hailed as "a new Jambres." Another source might have been the Chronology of Michael the Syrian, in which the Byzantine emperor Leo IV is

said to have sent to the Caliph al-Mahdi, "who had devoted himself to the practice of witchcraft and guided himself by the stars" a copy of the "book of Jannes and Jambres the sorcerers that they had employed against Moses, and he received it with delight."³ Our author claims they planted in the earth the limbs God caused the Serpent in Eden to lose, and tobacco grew from these.⁴ Perhaps what inspired him was the beginning of the text of the pseudepigraphon, where a king, presumably that of Egypt, has summoned his sages to examine the "growth of some miraculous tree or other plant, the branches of which have quickly formed a shelter from the sun's heat."⁵ It sounds a bit like the way tobacco grows. Jannes arrives and sits under an apple tree in the text. Later, he gives Jambres a book of spells there: the apple tree could have reminded our late-mediaeval Arm. author of Eden. In the Christian East, the tree of the knowledge of good and evil is the fig; but there were Catholic missions in Anatolia, so the Latin tradition of the apple as the deadly fruit of our perdition—*malum* means both "apple" and "evil"—had been in currency in the East long enough by the seventeenth century for an Armenian to have made the association! Since the anonymous poet insists that Scripture is silent on tobacco, but claims that books (unnamed) condemn it, his source might have been the inspired sermon of an earlier divine.

The History of Foul Tobacco

O Christians, give ear!
See how foul a thing tobacco is:
They pay money—throw it in the fire—
And do their souls harm besides.

(5) The *qalyun*-pipe is richly adorned:
Putting their mouths to it, they lap it up like dogs,
Drink, and expel the smoke from their mouths,
Their noses, eyes, and ears.

They expel the smoke in billowing clouds:
(10) The angels flee the stench,
Soar up, and rise to Heaven
And make complaint to the Son of God.

There is a man hungry for tobacco
Who smokes fifty waterpipes in a day

(15) And swallows the smoke, which reaches
his gut
And—worse than a dog⁶—turns and comes out.

He's withdrawn his hands from any work,
Fallen to the demons' lot.
What wretched children all they are!
(20) And not a scrap of bread's left in his house.

At night his thoughts dwell on it.
He turns and tosses, cannot sleep,
Gets up, sits down, and strikes the flint—
And imbibes filthy tobacco greedily.

(25) This world has phony priests
Who drink to excess foul tobacco—
They are like the evil Pharisees
And partners to the Hebrews' company.

They sit and drink in public
(30) With hacking coughs like junkyard dogs.
Their waterpipe is marble black;
Of finely worked ebony, its handle.

The laity see all this
And are emboldened to imitate it.
(35) The pastor knows how to read—they say—
And must know best, for ignorant are we.

He's the shepherd, we're the sheep,
We'll follow him home, wherever he goes.
If he doesn't say that it's a sin,
(40) Then what do we care about such things?

Tobacco is a weed that grows:
Scripture does not refer to it.
But now it's found a cozy home,
A dwelling for the demons' throng.

(45) The sermon's plain when you get up close:
Worms and blood fall off the tongue.
The serpent deceived Adam and Eve.
The evil Tempter was the cause.

They didn't keep the Lord's command:
(50) Deceived, they ate of Eden's fruit.
As soon as they had, they felt regret,
And were stripped of the ineffable light they
wore.⁷

They saw that they were naked
And wrapped themselves in fig leaves.
(55) Where are you, Adam?—cried the Lord.
For shame he fled and hid.

He says: You did not keep the commandment!
Come on, get out! This is not your house.
They say: The serpent tricked us—
(60) And point at the tree with the fruit.

Our Lord cursed the serpent.
Off fell its limbs—it had to slither.
The demons collected them
And took them to the bold devil.

(65) We found the potion of perdition—
They said— Destroyer of men's souls.
Jannes and Jambres, they say, in the Garden
Planted them, and tobacco grew.

First they called it *k'ark 'i*.⁸
(70) This is tobacco—the devil said.
They sowed its evil seed in the world,
A trap, a moth to eat men's souls.

Thus have they hunted down mankind,
Made a place for themselves, a home.
(75) Men have forgotten church and prayer:
Night and day they drink foul tobacco.

They do not want the aroma of incense.
They are blinded by this ugly smoke.
They have consigned their will to Satan,
(80) Signed on with the wicked foe.⁹

They impoverish their widowed souls,
Consigning them to hell's undying flames.
They collect somewhere and drink that scum
And, like hounds barking, belch coarse coughs.

(85) With smoke you have blackened your soul.
You never come to church to pray.
Wretch! Go and see for yourself
What the interpreter of Scripture has to tell.

They fasten on the waterpipe and pass it round,
(90) And, taking it, raise their hands above their
brows
And declare: Let its dust and flame
Pile up and on our heads crash down!

They take it from the Muslims' mouths,¹⁰
Drink, suck the poison up.
(95) The body enjoys a little pleasure,
But the soul becomes black within.

They have become the demons' habitation,
Spending the whole day in that company,
For all the writings testify:
(100) Repulsive is foul tobacco.

The soul clamors from within,
To the angels makes complaint
And says: Take me out of this place,
Out of this repulsive and foul body!

(105) Better far the reek of hell
Than this foul tobacco that they smoke:
They smoke it, spill the smoke on me,
And murder me right now.

My place is hard and ugly, foul
(110) And dark and muddy, gloom:
Satan's fattened us all up
To make of us the fiend's food.

Brethren, I counsel you,
Think well on what I've said.
(115) Do not perform Satan's will,
For hard and bitter is the day of death.

You despatch yourselves to hell for nought—
You do harm to your own soul.
When that evil *k'ark'i* grows green,
(120) They say it is shunned by the bee.¹¹

Notes

1. See J. Wilbert, *Tobacco and Shamanism in South America* (New Haven, 1987), passim; and M. Dobkin de Rios, *Hallucinogens: Cross-Cultural Perspectives* (Albuquerque, 1984), esp. pp. 42–51.

2. See A. K. Bedevian, *Illustrated Polyglottic Dictionary of Plant Names* (Cairo, 1936), pp. 414–15 (nos. 2406–8).

3. *Žamanakagrut' iwn* Teafn Mixayēli Asorwoc' Patriark'i (Jerusalem, 1871), p. 353.

4. This is not the most fanciful or grotesque conception: in Russian lore, for instance, tobacco was said first to have grown from the huge genitalia (*udishch*) of Satan. The folkloric theme animates the story "What is Tobacco" (1906) by A. N. Remizov, discussed in E. Obatnina, *Tsar' Asyka i ego poddannye* ("King Asyka and his subjects") (St. Petersburg, 2001), p. 156.

5. See A. Pietersma and R. T. Lutz, intro. and trans., "Jannes and Jambres," in J. H. Charlesworth, ed., *The Old Testament Pseudepigrapha*, vol. 2 (Garden City, New York, 1985), pp. 427–42. Simon Magus, Jannes and Jambres, Cyprian of Antioch, & Co. tend to travel together in late and odd Armenian pseudo-pseudepigrapha: see J. R. Russell, "The Mother of All Heresies: A Late Mediaeval Armenian Text on the *Yuškparik*," *Revue des études arméniennes* 24 (1993), esp. pp. 276–79 and nn. 8–11. Cyprian is best known to Armenians

from the *Kiprianos* a small amuletic prayer-book that bears his name. In addition to an abbreviated version of the Penitence, it contains various prayers—some Armenian Apostolic, some Catholic—to protect the reciter by the Holy Sign against unclean spirits.

6. Muslims dislike dogs, thinking them dirty. In Armenian, the animal bears the additional pejorative connotation of fornicating (cf. Clas. Arm. *šn-em*, "I copulate"; *šnūt'iwn*, "fornication"). A *tekke*, or den, with *narghileh*, *raki*, and Middle Eastern blues, was of course also a good place to pick up a wanton girl or boy. Vices should never come singly. The finest music of the genres of the *rebetika* and *amanedhes* of Modern Greece belong to the milieu of such establishments—in Constantinople, and, later, Athens.

7. The Hebrew tradition has Adam and Eve in garments of skin ('*ôr*), which was later misunderstood as light ('*ôr*): the earlier lyric poet Yovhannēs T'lkuranc'i (whose lyric *oeuvre* this writer translated and published in the Univ. of Pennsylvania Arm. Series, 1987) is among those who repeat this common detail.

8. Unless saffron is meant, this is an unknown word.

9. Arm. *jeṛagir*, with the sense of "signature" here, a signed contract (usually in Modern Arm. it means "manuscript"), refers to the apocryphal tale of the *Cheirograph of Adam*, where the first human couple, freshly expelled from Eden, are terrified at nightfall. The devil promises them the Sun will rise again in a few hours (being just a bit older than they, he knows about the alternation of day and night) if only they will swear fealty to him, the contract to last till the unborn is born and the immortal dies. This is Christ, of whom Satan has no foreknowledge—so the devil was tricked in the end, and Jesus freed mankind of its bond. The cigarette that bears a lipstick's traces here signs a ticket to infernal places. See M. E. Stone, *Adam's Contract with Satan: The Legend of the Cheirograph of Adam* (Bloomington, 2002), reviewed by J. R. Russell, *International Journal of the Classical Tradition* 10.2 (Fall 2003), pp. 309–12.

10. The word often used for a Muslim is, as here, *aylazgi*, "alien": Armenians learnt from their Muslim neighbors to smoke, though it was Christians, of course, who brought the weed to the Old World. In the poem, social intercourse with the unbelievers is also implied, and condemned. It is quite likely that the cozy den, with *narghileh* and music, was one of the few places where men of various faiths might socialize together.

11. With the start of this doubtless interesting *non sequitur*, the stub of the poem unexpectedly burns out. A continuator on this theme of "Where the bees don't suck" (*pace* the Bard), might borrow Ariel from *The Tempest* as an angel, and say, "Thank you for not smoking."

ЖИЗНЬ ДОРОГИ И ДОРОГА ЖИЗНИ: ОТРАЖЕНИЕ ОДНОЙ МЕТАФОРЫ В ЖИВОПИСИ И
ЛИТЕРАТУРЕ СРЕДНЕАЗИАТСКИХ КУЛЬТУР И АРМЯНСКОГО СРЕДНЕВЕКОВЬЯ

Поговорка гласит: «Жизнь прожить — не поле перейти», ибо жизненная дорога не прямая как стрела времени и не ровная и гладкая как скатерть. Согласно преданию, Магомет утверждал, что путешествие равняется одной шестидесятой мучений ада. Равнины «Мишны», однако, определили именно одну шестидесятую как меру незначительности: сон, например, является одной шестидесятой пророчества — и по сей день арамейское выражение *ботул бэ мишн*, т. е. шестидесятая доля не считается — употребляется в языке идиш. Пророк ислама, очевидно, либо не хотел преувеличить трудности дороги, либо не желал уменьшить страх верующих перед судным днем. Жизненный путь в переносном смысле и так тернист, не говоря уж о собственно дороге. А для значительной части экономического ключевого населения Средней Азии — я имею в виду купеческий слой согдийцев, а также монахов и проповедников различных религий и этнических групп — Великий Шелковый путь действительно был дорогой жизни. Важные торговые пути проходили и через Армянское нагорье, и с раннего средневековья до наших времен международная торговля способствовала образованию армянских общин (*գաղութ*, заимствование от арамейского *галут*[а]) от Средиземноморского побережья до Юго-Восточной Азии.

Соответственно с реальными условиями жизни и хозяйства, в живописи согдийцев и других ираноязычных народов Средней Азии нередко встречается тематика дороги. Значительная часть владельцев пенджикентских домов, в которых на фресках изображены путешественники и подвиги героев, либо состояла из купцов, либо была каким-то образом связана с международной торговлей. Жизнь представлялась как трудная дорога, однако материальные условия жизни зависели в то же время от этой же самой дороги. Само по себе это совсем не удивительно: ведь каждое нравоведение, известное владельцам домов, где были обнаружены фрески, утверждало, что нам выдана лишь транзитная виза по пути в потустороннюю жизнь, где нас ожидает, в зависимости от выбранного вероисповедания, буддийское или манихейское перевоплощение и повторение всего процесса, или же несколько более затяжной цикл, согласно представлениям евреев, зороастрийцев и христиан. Несмотря на существенные различия между этими системами, каждая из них завершается вечностью и считает привязанность к переменчивому земному бытию одинаково суетливой и напрасной.

Поскольку господствующая церковь во многом определяла сферу армянской живописи (в отличие от религиозного плюрализма Центральной Азии, где, по крайней мере, до мусульманского завоевания подобных ограничений не было), то из ее произведений, передававших светские сюжеты, сохранилось очень немногое: это рукописные миниатюры к «Истории Александра Македонского», «Истории Младенца Фармана» и нескольким другим средневековым романам, а также к пособиям по астрологии и колдовству, таким как «Алавид»¹. В настоящем докладе опыт сравнения сосредоточен на одном из редких произведений светской литературы (хотя и само понятие «свет» в данном контексте не совсем точное или удовлетворительное). Собрание притч, житий святых, и назиданий *Ջրաց պղնձէ բաղաբի* («Повесть о медном городище»), получило свое название еще в средневековье от своей самой длинной части — знаменитой повести из сборника «Тысяча и одна ночь», переведенной с арабского на армянский в нескольких вариантах, начиная с конца X в. Дошедший до нас в самых ранних рукописях текст, очевидно, подвергнулся языковым и стилистическим изменениям и принадлежит к XIII в.² Рассказ широко известен: халиф Маруан желает посмотреть на злых духов-джиннов, заточенных Соломоном в банки. В поиске этих сверхъестественных узников, посланники дамасского двора проходят пустыни и находят старинные над-

¹ См.: *Macler F.* L'enluminure armenienne profane. Paris, 1928; *Feydit F.* Amulettes de l'Armenie Chretienne. Venise, 1986; *Симонян А.* (ред.). Повесть об Александре Македонском. Ереван, 1989 (на арм. яз.). В связи с последним, интересно заметить, что детали и общая композиция страницы, где изображено единоборство героя с единокором в «Венецианской рукописи Мхитаристов», № 424, ст. 95а (ст. 384 в издании Симоняна) — явно восходят к персидским прототипам. О книге *Алавид* см. доклад автора: *Russell J. R.* A Preliminary Report on a Newly-Acquired Armenian Magical Manuscript at ALMA // Armenian Library and Museum of America Newsletter. Fall 2001 (Watertown, MA).

² См.: *Հ. Ն. Մկրտչյան, «Պղնձէ Բաղաբի Պատմութեան արաբական և հայկական տարբերակները», Պատմա-բանասիրական Հանդես, Երևան, 1986.2 (113), էջ՝ 130—138.*

писи и городища, где все возвещает о тщетности нашей доблести и славы. Наконец, у берегов океана, на краю земли они обнаруживают банки и возвращаются на родину. Однако при вскрытии их темный джинн восклицает: «Каюсь я, грешник, о пророк Господний!». Халиф в горечи познания надевает ризу юродивого и покидает свой трон³.

Символика повести и некоторые из ее особенностей имеют древнеиранские корни, в то время как ее тематика отражает нравоведение, типичное для буддизма, а буддийские притчи сами нередко проникали на запад при посредстве манихейских переводчиков: такова судьба знаменитого произведения «Билаухар и Бодасаф», которое в христианизированной переработке очень популярна чуть ли не по сей день. Остальные тексты в армянском печатном собрании — «История вешего Пахлула», «Назидания царя Нуширвана», «Советы Ахикара Премудрого», «История Юноши и Девы», «Житие святого Алексия», «Житие Хусика и сына его Степана» и «Развлечения для молодых» — либо прямо говорят о мудрости и о суете бытия, либо косвенно освещают эту же тему, посредством повествований о длинных и мучительных путешествиях, о преобразовании характера и извилистой перемещенности жизни, о неожиданном обнищании и просвещении некогда гордых, пренебрегавших судьбой, временем и смертью. В некоторых текстах чередуются стихотворные части и проза (как, впрочем, и в армянском варианте «Истории Александра Македонского» вставлены *кафы* средневековых редакторов), в других указываются роли, исполненные различными читателями: вместе с тематикой жизненной дороги и т. п., собрание охарактеризуется постановочным характером⁴.

Почти все произведения этого собрания переводные, в первую очередь, с арабского, хотя сами арабские тексты, за исключением «Ахикара» и «Жития св. Степана», восходят к более древним источникам, по большей части, индийским. Армянское собрание переиздавалось многократно на протяжении двух столетий (последние издания в Тифлисе относятся ко второй половине XIX в., а перевод на западноармянский *аишхрхабар* осуществлен в Стамбуле после Первой мировой войны). Большинство рукописей, содержащих три-четыре текста из основного списка, относится к XVI в., однако ссылки на эти тексты показывают, что подобный сборник существовал гораздо раньше. Он, таким образом, сопутствовал развитию купеческого и торгового классов в армянском обществе и возмужанию светской культуры; а тематика дороги и накопления жизненного опыта отражает настоящий быт и религиозное мировоззрение этого социального слоя. Хотя отдельные тексты из собрания частично тщательно редактировались и публиковались⁵, его феномен пока еще не привлекал должного внимания исследователей. Отсюда и цель настоящего доклада: предварительно определить широчайший контекст этого собрания в целом.

Однако историческую и культурную значительность сборника «Повесть о медном городище» можно установить, только рассмотрев его в целом, правильном контексте. Для того, чтобы определить этот контекст, я беру группу так называемых *бьен-уэн* — «текстов трансформации преобразования» на китайском языке, найденных в Дуньхуане и относящихся к танской династии — периоду теснейших культурных, культовых и экономических связей между Китаем и иранской Средней Азией. Само название Дуньхуан, греч. *вроана*, является, по всей вероятности, заимствованием с иранского, ср. согд. *drw'n*: «крепость». В. Мэр⁶ охарактеризовал *бьен-уэн* как повествование, имеющее общую форму композиции прозы со стихообразными частями — язык последних часто ближе к современной разговорной речи, чем текст в прозе (то же самое может быть отмечено и в армянских стихах-*кафах* к «Истории Александра»). *Бьен-уэн* также имеют характер исполнения, притом сопровождаемого картинками. Эти тексты рассказывают о путешествиях и переменах судьбы: например, Махамандагальяна уезжает по делам службы, а по возвращении узнает, что его мать умерла и за свои грехи попала в ад. Он становится монахом для того, чтобы искупить грехи матери, и боги ее прощают. В этом рассказе есть много общего со средневековым армянским «Житием Степана Артаметского», и не потому, что они обязательно связаны одним источником, а потому, что служили общей цели для читателей и слушателей, образ жизни и интересы которых сходны. *Бьен-уэн* отражают, безусловно, и особенности местной цивилизации: Будда сам цитировал преобразования в проповедях его закона (*дхарми-катхэ*); более того, подобного рода трансформации

⁴ В своем предисловии к книге: Kevorkian R. H. Catalogue des «Incunables» arméniens (1511—1695) ou Chronique de l'imprimerie arménienne. Genève, 1986, Жан-Пьер Махе замечает, что назидательный материал в собрании передается в развлекательном виде для того, чтобы предотвратить безостановочное, досадное чтение и заставить читателя активно задумываться над текстом и даже участвовать в нем.

⁵ Например, Срапян А. (ред.). Повесть о юноше и девушке. Повесть о царе Пахлуле. Ереван, 1983 (на арм. яз.).

⁶ Mair V. H. T'ang Transformation Texts. Cambridge (MA), 1989.

типичны для шаманских и даоистских повестей. Это вполне естественно: есть основание предполагать, что именно кризис конфуцианского мировоззрения за несколько столетий до возникновения *бьен-уэн* возбудил в китайском обществе интерес к даоизму и алхимии.

Посредине между армянскими и китайскими ойкотипами жанра сборников нравоучительных повестей, притч, и назиданий, где применялся образ жизненной стези, есть общий источник, сугубо космополитический и, одновременно, коренной иранский и ближайший к Индии. Волшебная, исчезнувшая страна, о которой с вожделением и боготворением сказали бы, «Имя твое — Согд»⁷. Согдийские фрески, найденные при раскопках городища Пенджикент и принадлежавшие, очевидно, местной знати (так называемым «свободным», ср. арм. *азаты*), занимают на стенах три регистра, представляя тем самым три социальных и вселенских слоя — божественный, героический и общечеловеческий⁸. Б. И. Маршак сумел истолковать почти полностью темы этих настенных картин, ссылаясь на индийскую литературу, на цикл подвигов сакского героя Рустама и на эзоповские притчи⁹ (в армянской устной литературе часто встречаются повести о Рустаме в качестве приложения к Сасунскому эпосу, а по свидетельству Моисея Хоренского, повести о геракловых подвигах — *сагджика* — были весьма популярны с незапамятных времен). Некоторые из индийских сюжетов пенджикентских картин засвидетельствованы и на согдийском языке — в текстах, слегка переработанных проповедниками манихейства. Таким путем, как известно, притчи «Панчатантры» и другие тексты проникали через сасанидский Иран на христианский (и, в дальнейшем, на мусульманский) Запад. Многие из пенджикентских фресок изображают тему дороги: купец отправляется в путь, спрятав золото под деревом; другой купец обещает жертвоприношение духу морей; продавец сандала очутился в стране такой далекой, что местные жители либо не знают, что такое сандал, либо такие нищие, что купить его не могут. Эти сказки повествуют о глупости, хитрости и мудрости, о нравственности и о суете мира сего, но в контексте торговли и путешествий — т. е. в духе мироощущения согдийского общества.

В Армении тексты возмещают отсутствие потерянных фресок светского содержания, а на фоне согдийской живописи и дальнего эха Дуньхуана собрание *Ջրոյց Պղնձէ Բարդաբի* — уже не курьез или изолированное явление. Мы можем восстановить его контекст: оно является характерным отражением общей духовной и художественной культуры просвещенного среднеазиатского космополиса купцов, проповедников, монахов, переводчиков, художников и читателей — буддийских, христианских, зороастрийских — скитальцев по жизненной дороге, протянувшейся от крымского побережья, от Су(г)дака, по армянским хребтам и долинам, через иранские равнины до Чинумачина и океана.

⁷ Разнообразие языков и письменностей всего красноречивей свидетельствует о космополитизме согдийского общества в эпоху поздней античности, см.: *Sims-Williams N. Sogdian and Turkish Christians in the Turfan and Tun-Huang Manuscripts. Firenze, 1992.*

⁸ Между прочим, и армянское собрание можно разделить, *mutatis mutandis*, на такую троичную композицию, где христианские жития, светские назидательные пословицы и загадки, предназначенные для молодежи, занимают соответствующие места.

The shrine beneath the waves

JAMES R. RUSSELL

To the memory of my beloved teacher and friend Professor
Mary Boyce,

August 2, 1920–April 4, 2006.

*Ashtadz hokin lusavore: May God keep her soul
in eternal light.*

There shines and palaces and towers
(Time-eaten towers that tremble not!)
Resemble nothing that is ours...

But lo, a stir is in the air!
The wave—there is a movement there!
—Edgar Allan Poe, *The City in the Sea*

We have lingered in the chambers of the sea
By sea-girls wreathed with seaweed red and brown
Till human voices wake us, and we drown.
—T.S. Eliot, *The Love Song of J. Alfred Prufrock*, 1917.

Sasna tser (The Wild Men of Sasun), a narrative that has sometimes been hailed as a secular scripture of Armenian Christian culture, is generally known as a composite text of four chapters (each called in Armenian *chugh*, “branch”) assembled from scores of oral recitations. At the beginning of the epic, in this composite text, the twin brothers Sanasar and Baghdasar go to Lake Van, and the former, who is braver, dives to the bottom to a chapel where he drinks from a Milky Fountain (apparently the same one by which he and his brother were engendered), and the Madonna gives him his talking horse and magic weapons. But if one examines the dossier of primary oral variants—and this study of a discrete, key episode is the first to do so—the tale, already rich in mythological data, becomes much more complex: The chapel of the Madonna is located in some narratives on a high mountain, and in others on the Van islet of Arter (fig. 1). The latter figures in a legend of a vision of the Madonna vouchsafed to the tenth-century mystical theologian St. Gregory of Narek in which the monk is transported from his home on the southern shore of the lake to the islet. A legend about the saint has him save a drowning child, battle an aquatic monster, and build a refuge on the bottom of the lake; several passages in St. Gregory’s *Book of Lamentation* touch metaphorically on these themes. Since the evidence of the Ossetic Narts, an epic cycle closely related to the Armenian, suggests the legend of Gregory’s flight to Arter was itself informed by old epic material, the study of the oral variants reveals a

continuous dialogue between folk epic preserved in oral dialect and formal Christian literature written in high *grabar*, classical Armenian. The cross-fertilization proven is so rich that the designation of *Sasna tser* as “secular,” which would separate it from the nation’s formal religious culture, ought to be discarded as misleading; moreover, one offers the complementary assertion that it is methodologically erroneous to study Armenian literature of the mediaeval period without reference to the sources of mythology and folklore.

1.

It is a phenomenon universally observed that a sacred place remains a locus of pilgrimage even after the religion that first elevated it to sanctity is succeeded by another. In Armenia, particularly in the Van region, some Christian shrines that replaced Zoroastrian ones continue, their names slightly modified by the Kurmanji ear, to be sacred to Muslim Kurds. An example is *Pur’ki Surt Gevorg* (in Armenian) “the Guest-house of St. George” (in Kurdish, *Dira Khani*, “Monastery of the Guest-house”); in Turkish, *Horozvank*, “Monastery of the Rooster”) on a mountain pass in Moks, south of Van. The monastery’s cherished rooster—the bird sacred to the Zoroastrian divinity Sraosha, Persian Soroush—used reliably to warn travelers if a snowstorm was coming. Monks traveled across the country to collect charity for the maintenance of the inn, armed with a scroll narrating the miracles of the rooster, who was depicted above the text (it is also carved upon the lintel of the entrance to the site). When the rooster died, it received Christian burial; and its reincarnation was promptly sought and found.¹ Since the 1915 genocide, neither the monk’s *Paternoster* nor the cock’s *Coccorico!* is heard at St. George’s Inn: Only the ruins, legend of sanctity, and name endure.

Armenia can claim as fairly as Jerusalem to be the center of the world: Two of its occulted holy places are well known and axial to scriptural history; bygone visits to their vicinity, somewhat less so. The Ark of Noah rested on a mountain of Ararat—the Hebrew for Urartu (the name of the Lake Van and the city on its shore

1. See Karapet Sital, *An Armenian Epic: The Heroes of Kasht (Kasht’i k’ajet)*, int., trans., annot. J. R. Russell (Ann Arbor: Caravan Books Anatolian and Caucasian Series, 2000), pp. 123–132, n. 36.

Figure 1. The Vaspurakan region and Lake Van, Armenia. Drawing by the author.

preserves the country's native designation, Biaina). But when St. James of Nisibis climbed Jabal Judi, the mountain identified by early Christians with Noah's peak,² an angel put him to sleep before he could attain the summit. He was rewarded for his pious pains with a piece of wood from the Ark. The garden of Eden, physical access to which has been denied to the sons of Adam for all but slightly under one day of the existence of our fallen race, floats in the sky atop a cosmic mountain towering over the province of Hark' (also called Khnus, Turkish: Hınıs) in western Armenia, northwest of Lake Van, where the Tigris and Euphrates rise. Though most cannot see the garden itself, the waters of its four mighty floods cascade down to earth. The four rivers, symbolic of the four cardinal points of the compass, define Eden as the world's center. For the purposes of Christian exegesis it is fortunate that they are, additionally, cruciform.

But some have been vouchsafed a vision of Eden. According to a legend recorded and illustrated in a

fifteenth-century Armenian manuscript from Kaffa, in the Crimea, of the *Lives of the Desert Fathers*, a band of traveling monks were allowed to behold Paradise in all its glory from afar: In a corner of the miniature painting portraying the scene, one member of the party is shown relating the vision to the patriarch of the church, St. Nerses the Graceful (Shnorhali, died in 1173) at Hromkla in Cilicia (fig. 2). He subsequently wrote of it in a lost commentary on Genesis.³ The flowers and trees of Eden appear in the miniature as intricate gems of color, but the sword-bearing guardian angel at the garden's gate did not give the visiting monks a blossom as a souvenir. The core of the text is the *Apophthegmata Patrum*, the powerful compendium of the lives of the holy men who dwelt in the vast solitudes of the desert west of Alexandria: The book, St. Augustine wrote in his *Confessions*, spurred his conversion to the Christian faith. The Armenian manuscript adds portraits and narratives of later meditative religious leaders, notably the tenth-century Byzantine father of Hesychasm, St. Symeon the New Theologian, and the latter's contemporary, St. Gregory of Narek. Narekats'i spent

2. Greater Ararat; in Turkish, *Aghri dagh*; in modern Armenian, Masis (from classical Armenian: *azat* ["free, noble"]; *Masik*), perhaps from Old Iranian **masyah-* and meaning "very big": There is another mountain, Sip'an or Subhan *dagh*, north of Lake Van, called *Nekh Masis*, the epithet perhaps from *nakhwa*, "first" across the modern border from Erevan, is in myth the place of the confinement of the apocalyptic King Artawazd. This noble snow-capped titan towers over the sacred city of Echmiadzin, and folk and ecclesiastical belief gradually accorded it the honor of having been Noah's mooring place.

3. See Nira Stone, *The Kaffa Lives of the Desert Fathers: A Study in Armenian Manuscript Illumination*, (Leuven: Peeters, 1997), cited in J. R. Russell, "The Credal Poem *Hawatov Xostovanim* (I Confess in Faith) of St. Nerses the Graceful," *Armenian and Iranian Studies*, Harvard Armenian Texts and Studies 9 (Cambridge, Mass.: 2004; thereafter *AIS*), p. 1016 and n. 47.

most of his life in the monastery of Narek, which stands in the midst of a small village (Kurdish: Nerik; Turkish: Yemişlik) on a hill over tilled fields: the monastery, refounded in the region of Sebastia of Cappadocia in the eleventh century by refugees from the Seljuk invasions, stood on its original site also till its final destruction by Kurdish marauders in 1912.⁴ The shore of Lake Van is but a short distance to the north, directly opposite Aght'amar island, where in 920, thirty years before Gregory's birth, King Gagik of the Armenian realm of Vaspurakan had built the church of the Holy Cross. The church is richly encrusted with bas-reliefs, prominent among them the scene of Jonah and the whale.

The Biblical legend was interpreted by Christian exegetes as a prefiguring of the election of the Gentiles; and on the bas-relief at Aght'amar, Jonah's whale is in fact not a whale at all, but a vishap, or sea dragon. This Iranian word was given to the mythical creature whom the old Urartean weather god Teisheba defeated; for the exploit was at the time of the Armenians' adoption of Zoroastrianism attributed to a similar divinity, Vahagn (Avestan: Verethraghna). The latter's name means "he who smites opposition"; but that opposition was incarnated as a serpent—Verethraghna's Vedic counterpart, Indra, slays a dragon named Vritra (cognate to Iranian verethra-), and the god thereby acquires the honorific epithet vritrahan- (han- being the Indic reflex of the form gan-, "strike," in Iranian—so, Verethraghna). The Armenians found, thus, literal and metaphorical depth for their reading of the story of Jonah in the fearsome abysses of their very own inland sea, Lake Van. Narekats'i employed those layers of story and imagery in his meditations on the imperilment and rescue of the soul. These were in turn to shape legends about him and

to help to propel a place associated with him into the very oral epic whose roots had originally shaped his own visions: a case of multiple, reciprocal influences of written and oral narratives and of ecclesiastical and folk reciprocity as well.

Farther out in Lake Van, just northwest of Aght'amar island, is the tiny, monastery-crowned islet of Arter. The saint, as we shall see, beheld from his monastery a vision of the Virgin hovering over the island. He was magically transported thither across the water to her. Because of the use of vishap-legendary in the lake and the topos of his magic locomotion over it to the isle, Arter was to find its way into an important episode of Armenian oral heroic epic. In the last years of his life, St. Gregory retired to a cave above the village of Pagan, high above Narek in the foothills of the great Moiks range—the mountains where St. George's Inn offered shelter to travelers. There he compiled a cycle of ninety-five meditational prayers, the *Book of Lamentation* (Matean oghbosur'ean). These poetically intricate litanies can be divided into three sections, corresponding architectonically to the porch, nave, and altar of a church; temporally, they follow the progress of the Divine Liturgy as well. Narekats'i's masterpiece bears a number of similarities to the Hesychastic ideas and practice of St. Symeon, particularly the attainment through prayer of the vision of celestial light: Though contemplative prayer had existed in the country before him, Narekats'i so powerfully revived it that he can fairly be said to be its refounder. If a traditional Armenian home had a book other than the Bible or Psalter, it was usually his cycle, called simply the *Narek*. The book, perhaps because it was constructed to be employed for a supernatural journey—the attainment of mystical experience—gradually acquired in folk belief the reputation of possessing magical powers; and ballads and folktales recited over the next millennium accordingly celebrated not only Narekats'i's sanctity, but also his thaumaturgical abilities.

In the two centuries after St. Gregory's passing, St. Nerses, discussed above in connection with the visit of a party of monks to the foot of the Edenic mountain, and his successor Catholicos Gregory (sumamed Tgha [boy]), continued the venerable practice of contemplative penitential prayer. They sought in particular to perpetuate Narekats'i's summation of the tradition. Nerses in his poems, very many of which for their beauty and lucidity have been adopted into the Armenian Hymnal and Divine Liturgy, emphasizes the imagery of fire and light in a manner at once redolent of Hesychasm and consonant with the Zoroastrian

4. When I first visited Narek in 1994, an ugly, boxy new mosque was under construction on the hill where the monastery had once been. Some stones with small crosses inscribed by pilgrims to Narekavank were re-used in the building; and I photographed a large cross-stone (Armenian: khach'kar) with an equilaterally-armed cross, perhaps tenth-century, and multiple inscriptions, that lay nearby—it was being used to ford an irrigation ditch. When I returned in 1997, the villagers, who still call the village Nerik (the Turks renamed it Yemişlik), told me that right after my departure a few years before, Turkish government officials came and shattered the khach'kar to pieces. This act of deliberate vandalism characterizes the policy of the successor-states to the architects of the Armenian genocide: In the last few years, the authorities in Azerbaijan have systematically destroyed tens of thousands of Armenian cross-stones in Julia and elsewhere. This act, analogous in its systematic barbarity as an attack on religious culture to the demolition of the Buddha statues at Bamiyan, has merited little international attention and no action of any kind.

substrate of Armenian Christian culture.⁵ This substratum is evident not only in dualistic symbolism, but also in an abundant Parthian terminology coopted to Christian use; in iconographic forms;⁶ and even in the manipulation of pre-Christian *topoi*, both from Zoroastrian religious usage and from heroic epic, in hagiography.⁷ This nexus is important, because popular tradition invests great saints with a magical power indistinguishable from their mystical piety and wisdom. Such tradition in Armenia often takes the literary form of balladry, as in the case of a popular medieval poem on Narekats'i,⁸ or of legends about features of the landscape or places of pilgrimage sanctified by association with a holy man and his deeds.

In Armenia, both these forms—ballad and folk tale or legend—borrow freely from the epic themes, imagery, and ideology of the country's pre-Christian religious system. This is not at all surprising: the same process obtains, *grosso modo*, in other Christianized cultures. In Romania, for example, where the Sarmato-Thracian substrate and peripheral position in Christendom relative to Islam are somewhat analogous to Armenia's situation, the correspondences are striking. The case of Armenia is still of special interest: It has a rich and unbroken documentary record in its indigenous language and unique script fifteen centuries old, containing testimony

going back perhaps a millennium further still. Armenia is the only distinct and living Christian civilization whose previous creed was the religion of ancient Iran, Zoroastrianism. It is important here also to note that there is no sharp distinction that can be drawn between ancient Iranian epic tradition, heroic poetry, and the scriptural corpus of the Mazdean faith itself; the chivalric code of the warrior was not at odds with the morality of the Magi. Armenian oral heroic epic is steeped in Christian tradition—where the dogma of the latter is at odds with the heroic ethos, Christian Armenian writers have often reshaped the material to hand in creative, controversial ways. Let us examine one well-documented example of the process of cooptation and adaptation at work.

The anonymous chronicler of Armenia's conversion, the *Agathangelos*, or "Messenger of Good (Tidings)," describes the persecution of the nation's patron saint, Gregory the Illuminator (*Iusaworich'*) at the hands of King Tiridates. Narekats'i was named after this Gregory. For his mistreatment of God's messenger, the monarch is transformed into a boar (Parthian loan-word *varaz*): As Nina Garsoian demonstrated in a series of brilliant and groundbreaking studies,⁹ this alteration of the *topos* of Nebuchadnezzar's metamorphosis into an ox in the book of Daniel is a deliberate inversion of the Zoroastrian sacred symbol of the boar, which is both the totem of the divinity Verethraghna (Vahagn) and the seal of the Arsacid royal house. Vahagn—as we have noted above—is also a dragon-slayer who drags sea monsters (*vishap*) from Lake Van and casts them into the sun to burn. The Arsacid charisma holds to its heart this *Drachenkampf*, and it was to be absorbed also into Armenian folk epic and into a legend of Narekats'i. Following Professor's Garsoian's line of research, I have further shown how the episode of Gregory's imprisonment in Khof Virap, where he was tormented by serpents, both recapitulates Christ's harrowing of Hell and inverts the Iranian myth of the tyrant Azhi Dahaka (Persian: Zohhak). The latter is plagued by two snakes that grow out of his shoulders. On a bas-relief on the drum of the ninth-century Bagratid church of the Holy Apostles at Kars, where, in keeping with Armenian tradition, St. Gregory is elevated to the dignity of a

5. On Narekats'i, see J. R. Russell, "A Poem of Grigor Narekats'i," "A Mystic's Christmas in Armenia," "On St. Grigor Narekats'i, His Sources and His Contemporaries," "A Shipwreck Awesome and Marvellous: Chapter 25 of the Lamentations of Narekats'i," "Two Notes on Biblical Tradition and Native Epic in the 'Book of Lamentation' of St. Grigor Narekats'i," "Virtue and Its Own Reward: The 38th Meditation of the Book of Lamentation of St. Grigor Narekats'i," "Armenian Spirituality: Liturgical Mysticism and Chapter 33 of the Book of Lamentation of St. Grigor Narekats'i," "The Four Elements and the Cross in Armenian Spirituality, with an Excursus on the Descent in Merkavah Mysticism," "Bedros Tourian's Cruciform Prayer and Its Antecedents," and "Loytsn matsuts: On Cosmological Mysteries in Armenian Tradition," all in *AIS* (see note 3). On Shnorhali's imagery, see "A Credo for the Children of the Sun," also in *AIS*.

6. An example is the Armenian practice of depicting in bas-relief the cross surmounting a pair of wings, the latter an emblem of sanctity in Zoroastrian iconography: see J. R. Russell, "The Scepter of Tiridates" in *AIS* (see note 3), p. 1141 and pl. 2. To the dossier may now be added several cross-stones with such wings at the monastery of Mughni near Erevan.

7. On the subject generally, see J. R. Russell, *Zoroastrianism in Armenia*, Harvard Iranian Series 5 (Cambridge, Mass.: 1987) and "Pre-Christian Armenian Religion" in *AIS* (see note 3); on *topoi*, see my "Scythians and Avesta in an Armenian Vernacular Paternoster and a Zok Paternoster" and "A Bas-Relief on the Cathedral of the Holy Apostles at Kars, Armenia" in *AIS* (ibid.).

8. See J. R. Russell, "Introduction," in Grigor Narekats'i, *The Book of Lamentations*, Classical Armenian Text Reprint Series (Delmar, N.Y.: Caravan Books, 1981).

9. See N. G. Garsoian, "The Iranian Substratum of the Agathangelos Cycle," in *East of Byzantium: Syria and Armenia in the Formative Period* (Washington, D.C.: Dumbarton Oaks, 1982), pp. 151–174; and "The Locus of the Death of Kings: Iranian Armenia—the Inverted Image," in *Armenia between Byzantium and the Sasanians* (London: 1985), vol. 11, pp. 27–64.

thirteenth Apostle, he is shown with a snake on either shoulder. But, unlike Zahhak, he is vanquishing them; and the Arsacid who has imprisoned him is to become a Christian monarch.

Tiridates also wielded a mighty saber, the legendary *Hay(ha)luni*: In a series of legends St. Gregory literally inverts the instrument of death, making it a cross—the weapon with which Christ vanquished death. Still more interesting is the sword's subsequent fate: It is either sealed in stone, in a mountain shrine above the Armenian city of Erznka (Turkish: Erzincan), where it can be seen only by the faithful, or it is submerged in the lake northwest of Van called *Khach'iva*, literally "cross-washing."¹⁰ Both details—of a sacred place visible only to the faithful, and of a locus high in the mountains, under water, or on a tiny island—will be of relevance presently to our discussion of a sacred shrine in Lake Van in Armenian epic. The motif of Vahagn the dragon-slayer at Van will be seen to be not only re-used, but deftly reshaped, in the epic episode under water, too. The sword itself remains an accessory of oral epic: In the Epic of Sasun to be considered, the heroes receive in the sea, and return to the sea, the *r'ur ketsaki*, or "lightning saber." It is of more than passing interest, also, that the Armenian mythological material might through the vector of the oral epic, the Narts, of Armenia's Alan neighbors, have helped to shape the legend of King Arthur's sword, Excalibur, with the Sword in the Stone and the Lady of the Lake.

The monks who traveled to Hark' and were permitted by its guardian angel to behold Eden from afar can be compared to Rabbi Akiva and his companions, who, according to the famous account of the Mishnaic tractate *Hagigah*, traveled to the heavenly antechambers, the *Hekhaloth* of the divine presence. These visions rewarded piety and may be understood metaphorically as a state attained by the soul. But it is relevant to our discussion to note that in neither case was an eirenic way of life a prerequisite to vision even for such saintly souls: St. Nerses Shnorhali wrote a vengeful lament upon the fall of Edessa (modern Urfa) in which he called for a new Frankish crusade to extirpate the Saracens, seize the black stone of the Ka'aba, and drown it deeper than Prospero's book. And Rabbi Akiva in his time had supported the armed uprising against pagan Roman rule led by Shim'on Bar Kokhva. Armenian epic heroes whose whole life is dedicated to fighting will also be deemed fit, because of their quality, to behold another

realm as well. St. Gregory the Illuminator may have inverted the fabled Arsacid saber to form a cross—but Christian soldiers have marched onward since Constantine more to war than as if to it, with sharp swords in hand, not the cross of Jesus.

2.

In 1874, Bishop Garegin Srvandztyants' first published an oral heroic epic of which scores of recitations have been recorded in the century since. The epic centers on four generations of a family originating in the Van region from the house of Gagik. They establish their fortress in the mountain fastness of Sasun "mighty" (a folk etymology, since the toponym is a contraction of an older Armenian form *Sanasun*, *Sanasneayk'*), west of Lake Van and south of the plain of Mush. They wage ceaseless war against what are called, unjustly but typically, the *krapashr* ("idolatrous") invading armies of the Arab Caliphate. Although much of the material of the epic is archaic and presents special interest for the study of the origins of Mithraism, the main story line crystallizes around the Armenian rebellion of A.D. 851 that eventually brought to power the Artsrunids in Vaspurakan and the Bagratids in the northeast of the country. The latter invented a claim of Davidic ancestry; and the principal hero of the cycle, with whom the majority of the recitations deal, is *Sasunts'i Davit'*, David of Sasun, who belongs to the third generation of the *tsner*, the wild or recklessly brave heroes of his line.

However, most of the narratives strive to accord priority to David: He is a culture hero who introduces various animals to human use. His battle with *Msramelik'* (lit., "King of Egypt"),¹¹ the caliph, recapitulates all previous victories. At the tragic end of his life he fights, Rostam-like, with his only son, *P'ok'r Mher* (Mithra the Younger); as befits a man at the inglorious end of a heroic age, he dies by treachery. He is also made to rediscover the magic talking horse of the heroes, *K'umkik Jelali* ("Fierce Little Colt" who resembles, again, Rostam's steed *Rakhshi*), and to rededicate the shrine of the heroes, the Holy Mother of God of Marut'a, *Marat'uk Surb Ashtatsatsin*, which his father *Mets Mher* (Mithra the Greater) had erected in

11. By Meser Armenians meant not Cairo but the other nearer metropolis, Baghdad. It is conceivable that the biblical association of Egypt (Hebrew, *Mitzrayim*) with darkness and black magic influenced the designation of the despised enemy. In Zoroastrian Pahlavi, the invader Alexander of Macedon is derided as *msrayig-menishar*, "the dweller in Egypt."

10. See my articles on the scapler of Tiridates and the church of the Holy Apostles at Kairi, cited above (notes 6 and 7).

Sasun on a mountain near Tsovasar, the “Sea Mount.” The heroes of Sasun all invoke *Bandzrik Mara’tuk Surb Astuatsatsin*, “The High Marat’uk Holy Mother of God,” together with their magic weapons. Before going into battle, David, too, cries out *Ya havatam khostovanim/ Bandzrik Marat’uk Surb Nshan / Hisus ordi du ognakan* (“By [the prayer] ‘In faith I confess,’ / By the Holy Sign of High Marat’uk, / ‘Jesus the Son’ be my help!”) combining—anachronistically, if he is to have lived in the ninth century!—an invocation of Marat’uk with two compositions by St. Nerses Shnorhali: the credal *Hawatov khostovanim* and the didactic poem *Yisus ordi*. Nerses is thus drawn into the epic orbit. In an act of devotion of which the saint might have approved less, David follows advice given in a dream by sacrificing forty heifers to *Bandzrik Marat’uk* and bathing in their blood.¹²

One of the last Armenians in Diyarbakir, ancient Amida, which Armenians still call by the name of the capital of Tigranes II the Great, Tigranakert, is a woman, originally from Sasun, who was converted to Islam in childhood. She grew up speaking Kurdish and in adulthood settled near the ruined church of St. Stephen. When in 1997 I met her and questioned her about things Armenian, she was, understandably, uncommunicative and nervous, but when I asked her whether the name *Marat’uk* meant anything to her, her face was transfigured by a kind of ecstatic wonder. Pointing up and to the north, she exclaimed that the mere sight of holy Marat’uk could cure one of a scorpion’s sting.

Srvandztyants’ left this description:

Marut’a, or Marat’u mountain, is the holy and pious one amongst them. It seems to bear the name of the ascetic and bishop Marut’a—he who brought the remains of Bp. Simeon and the Eastern Martyrs from Persia, collected tens of thousands of relics and built the city of the martyrs, Np’rkert, which is not distant from this mountain. Sasunk’, or Sasno mountain, is the strongest of the brothers, unconquerable, with its iron flanks and stone brow. It was the hospitable abode of Adramelik’ and Sanasar [Sarasar], the sons of Senek’erim [Sennacherib], king of Assyria, millennia ago. The peak called Tsovasar [lit., “Sea Mount”] is their beautiful sister, near the monastery of the apostles

[Armenian *Arrak’elots’ vank’*], is called thus because there is a small lake on its summit. Roundabout the lakelet bloom bashful violets, displaying the meadows in a sky-blue color; and innumerable, diversely tinged blossoms of all kinds dazzle every creature by their shape and hue. And the rhubarb [*khawartsil*] on this mountain is incomparable and most noble.¹³

Adramelik’ and Sarasar become the rhyming twins Sanasar and Baghdasar, progenitors of the heroic line of Sasun. The notice by Srvandztyants’ of Marut’a’s relic-gathering activity is too modest; and details of the life of the saint go some way to explain why he became popular among the rugged Armenian mountaineers of Sasun.

In the fourth century, one Mariam, a woman of noble Armenian blood married to the governor of the province of Sophanene, gave birth to a son, Marutha. This is an Aramaic name: The members of the family were, like many in the southern reaches of Greater Armenia, speakers of Syriac. The boy studied medicine and later, while accompanying a Roman embassy to Ctesiphon in 399, he cured king Yazdagerd’s son of either demonic possession or migraine. Accounts differ, but either way he humiliated the Magi, who, despite their reputedly as physicians, had been unable to help the prince. Nine years later, Marutha returned to appeal to the Shah to accord better treatment to Persian Christians. When offered a parting gift, he asked to be given relics of the faithful. He received two hundred eighty thousand, according to his Armenian *vita*, and transported them all to Maypherkath (Syriac; the Armenian *Np’rkert* reveals the Armeno-Parthian origin of the toponym, with its suffix *-kert*, “built (by)”) or Mayafarīqīn, a few miles from Amida. The town, now called Silvan and thought by some scholars to be the location of ancient Tigranakert, got a new name thanks to Marut’a: Martyropolis.¹⁴ The saint’s noble Armenian pedigree, his renown as a healer, and his brave advocacy of Christians at the Sasanian court would have been elements instantly attractive to Armenian folk; and the collection of so many holy relics in an ancient and possibly royal Armenian town would have added to his charisma. Marut’a in its dialect forms might also have come to be associated among Armenians with an element of the name of the magical *horot-morot* flower, which is called after two closely associated *Amesha Spentas*, or

12. Garegin Srvandztyants’, *Erker* (Erevan: 1978), vol. 1, pp. 99, 101, 105. It is only the prodigious, epic number of animals of this taurobolism that Nerses might not have liked. For Armenians approve of and practice blood sacrifice: In 1982 I saw villagers in Sevan, Armenian SSR, sacrifice a cock before a *khach’k’ar* and smear a cross of blood on the forehead of their sick child. The Armenian church approves ritual sacrifice of a firstling (*matagh*).

14. See E. K. Fowden, *The Barbarian Plain: Saint Sergius between Rome and Iran* (Berkeley: University of California Press, 1999), pp. 48–57.

"Bounteous Immortals" of the Avesta (there are seven in all): Haunvatat and Ameretat (Persian Khordad and Amurdad), "Health" and "Immortality" preside over the waters and plants. On Ascension Eve, Armenian village girls used to prepare a bowl of water for divination and sprinkle over it petals of the flower: Heaven opened during the night (and, incidentally, the cave at Van in which P'ok' Mher, David's son, is immured till doomsday), spilling cosmic secrets. In Armenian dialects, the name of the flower and the assonantal pattern with privative *ma-*, will have contributed to the formation of the expression *khorotik-morotik*, meaning "pretty." The possibility of an association of Marat'uk and Morot/Ameretat might seem too implausible to be worth mentioning, were it not for a folk poem recorded by Srvandztyants' in the area, which tells of seven men reaping grass on Marat'ku koghere, "the flanks of M'airat' (ulk): two are named Urtik and Murtik."¹⁵

Thus far, we have assembled the dossier where the corpus of Armenian oral heroic epic and the legends of Armenian and pan-Christian holy beings—the Theotokos, St. Nerses Shnorhali, St. Grigor Narekats'i, Marut'a—intersect. Heroes and saints are not necessarily irreconcilable in character, but Christianization of an older *topos* often requires manipulation or even reversal. Epic draws more promiscuously upon both the charisma of the saints and pre-Christian, mainly Zoroastrian, substrata: dragon-combat, magic swords. The geography of epic and Christian legends is also coterminous—both magical—the Garden of Eden, the unapproachable summit of Ararat—and terrestrial—the monastery of the High Mother of God of the Holy Sign of Marut'a on a Sasun mountaintop, the various monasteries and islands of the Van region. Let us now examine one of the most complex sacred places of Armenian tradition: one that is sometimes a rock with a milky spring flowing out in four directions, sometimes a submarine chapel enclosed within a palace complex with a garden, sometimes a particular holy isle, and sometimes a mountain cave.

Diverse transcriptions of the Epic of Sasun, starting with those made by Srvandztyants', were published in three huge volumes in 1936, 1944, and 1951 by the Armenian Academy of Sciences. These variants are sufficiently divergent that it cannot be asserted with confidence that there was a single Ur-text, and in the case of oral epic such a text is neither a desideratum, nor likely to exist. But classical literary study has its

habits: One wants *die Quelle*. The nineteenth-century nationalists wanted an Armenian Homer and the twentieth-century Stalinist commissars of culture wanted a monument of primordial folk culture with which to crush Formalism. And anyway the bones of the story, known in its entirety by some bards but recited only in part by most, are coherent enough that the artificial, composite text achieved at Erevan in the mid-1950s upon which translators have relied (Frédéric Feydt while translating into French for the UNESCO series; Artin Shalian—into English) is not misleading if one wants a general idea of what the epic of Sasun is about. But the intriguing differences of detail are, of course, lost. It is that detail that this study of the invisible, inaccessible, or submarine shrine requires; so the discussion to follow will enlist not the version settled upon in the composite text but the kaleidoscopic, many-voiced testimony of actual, separate recitations. These are given in my translation from various Armenian dialects in the appendix.

3.

The composite text of the Epic of Sasun does give the bare bones of the story, and it begins, in general, thus: cross- or God-worshipping Armenia is at war with the idolatrous (!) Arab caliphate.¹⁶ The Caliph of Baghdad (called Meser [Egypt] in the text) demands the hand of King Gagik's daughter, Tsovinar, in marriage, threatening to devastate Armenia otherwise. She agrees to sacrifice herself for the sake of her people, but asks to take a walk along the shore of Lake Van. She gets thirsty, and God causes a rock in the lake to gush water. She disrobes, swims to it, and drinks one-and-a-half handfuls; after nine months, she gives birth to unequal twins, Sanasar and Baghdasar.¹⁷ After some time, the two escape from the caliph, flee north to Armenia, and found Sasun, building a church there. They then go down to Lake Van to look for a sea-born horse: The elder and greater, Sanasar, dares to jump into the water, but

16. Medieval Christians in the West, most of whom had no direct contact with Muslims, were wont to believe that Muslims worshipped a tiny gold statuette of Mercury called a *muammer* (Muhammad). Since Armenians lived in close proximity to Muslims, idolatry must refer to the Ka'aba. Unlike Greeks and Russians, Armenians do not have a tradition of painting and venerating icons: The cross is the main object of worship. See J. R. Russell, "The Armenians, the Holy Cross, and Dionysius Bar Salibi," *AIS* (see note 3), pp. 1193–1203.

17. See J. R. Russell, "Iran and Israel in the Epic of Sasun" and "Epic in the Armeno-Iranian Marchlands" in *AIS* (note 3) for detailed discussion.

15. Srvandztyants' (see note 12), p. 606; on the flower and Ascension (Hambardzum) ritual, see J. R. Russell (note 7), pp. 375–398.

his brother is afraid to follow him. Sanasar descends to the bottom and finds there a garden, palace, and pavilion. The talking steed K'urrkik Jelali is hitched there, with the Lightning Saber hanging from its saddle. Sanasar proceeds to a chapel and falls asleep: The Mother of God comes to him in a dream and instructs him to take the magic weapons. Upon waking, he drinks water from a fountain and sleeps again, waking strong and huge enough for the armor of heroes to fit him and for him to tame K'urrkik Jelali. Sanasar's son, Mets (Great) Mher, later builds the monastery of Marut'a.¹⁸

Lake Van itself is a place of danger, known for its *vishap* (sea dragons): On the church of the Holy Cross at Aght'amar the bas-relief of the story of Jonah shows one such *vishap* swallowing the prophet; and since antiquity Armenians have believed that the sudden squalls that arise on the lake are caused by *vishaps* thrashing their tails when the god Vahagn drags them from the depths to be burnt up by the sun. Therefore Sanasar's dive is proof of his superior courage. In a convoluted reflex of the myth, when Sanasar—who calls himself *tsovayin*, “sea-born”—first mounts fiery K'urrkik Jelali, it flies to the sun, trying to burn him. But he masters it. Sanasar later fights *vishaps*: in one variant, in Lake Van.

Tsovinar's name evidently contains the Armenian word *tsov* (sea), a loan from Urartean *tsue*. An Urartean inscription on the blind carved door at Toprak Kale, Van, believed by Armenians to be the place of P'ok'r Mher's occultation and accordingly called *Mheri durnn* (Mithra's gate), mentions a sea god, *Tsueninaue*: The epic narrative may thus echo an ancient *hieros gamos*. The suffix *-nar* could be from an old Iranian word for “woman,” with an original long *a* (with a short *a*, the word *nar* means “man”), and perhaps the toponym Narek might once have been understood as an adjectival form of the latter. The spring from which Tsovinar drinks and becomes pregnant is sometimes called a *kat'naghbiur* or “milky fountain”: It would seem Sanasar imbibes this same liquid, a sort of Divine *semen virilis*, to gain strength. Such a collocation of milk, semen, and power, for which there is other Armenian evidence, has a parallel in the kindred Indo-European tradition of India, as well as in Syriac Christian religious poetry.

The milk, as we shall see, can flow out and down from a rock in the four directions of the compass: In the

Avesta, the waters of the cosmic sea Vourukasha (lit., “that of the wide boundaries,” and Van is described in the epic as “boundless”) flow down from the axial world-mountain *Hara Berezaiti* (high Hara); and in the Sanskrit translation of the Zoroastrian scripture, Vourukasha is named *Kshirasasamudra*, “the sea of milk.” This place in the Mahabharata is the abode of the *nagas*, “serpents,” and the hero Bhima visits it (1.21).¹⁹ Anahita, literally “the undefiled,” was hailed in ancient Anatolia by the epithet *barzohara* (of high Hara). She inhabits those cascading waters and enables the pregnancy of women to be successful. One recalls that the unblemished (*anarat*) Theotokos is hailed as “high” (*bardzr*; dialect: *bandzrik*). These details of Avestan sacred geography and of the cult of the goddess Anahit, much beloved by the ancient Armenians, underlie the pattern of the narrative. The birth of Sanasar and Baghdasar reminds one both of the births of the Nart heroes of Ossetic epic to the lady Satana and of the *petrogenesis* of Mithra in the Roman mystery rites. The controversial argument has been advanced that the orally transmitted myths of the Ossetes' Alan ancestors were a vector for the transmission of such tales to Celtic Europe with its Arthurian cycle, Eastern Anatolia being the original source.

Let us now look at the place where the Princess Tsovinar conceives and where her sons return to become heroes in the variants of these episodes in the appendix, which I refer to henceforth by my numeration. The princess becomes pregnant from the same spring that makes her son Sanasar a hero later on; sometimes he gets his magic weapons, too, at the same place where the spring flows. So some of the narratives take pains to stress the parallelism of Tsovinar's and Sanasar's motivations, as well as their experiences. The princess in some versions goes to kill herself (see appendix, section 3) rather than be the wife of an idolatrous alien, and when her sons return to the same place, they, too, prefer suicide to being sacrificed to the idols (sections 4, 5). But in other versions she is impelled by a supernatural agency, such as an old man, speaking in a dream (2). In this case, her experience is parallel to Sanasar's dream of the Virgin (or, in 2, of the same old man) to be considered presently. If that place is the sea, she goes by boat to an unnamed island (1), or to a great rock (10), or to the Isle of Arter (7, 8, 9). Sanasar later goes either to Arter also, with its palace (8), or to a place under the

18. David of Sassoun: *The Armenian Folk Epic in Four Cycles*, trans. Artin K. Shalian (Athens, Ohio: Ohio University Press, 1964), pp. 5–13, 44–49, 149.

19. J. R. Russell, “Some Iranica in Eznik,” *AIS* (see note 3), pp. 1340–1343.

sea with other palaces, a chapel, and a garden—where he sleeps and the Virgin counsels him in an initiatory dream (7). He either tumbles through the waters (5) or goes as if on dry land—though all that his uninitiated brother Baghdasar, who is of faint heart and little faith, can see is water (4, 7, 8). The lake is a place of danger. Only a hero can both brave its perils and take its hidden blessings: So, in one episode, Sanasar gets a dragon in Lake Van drunk, dives to the sea bottom, and steals a ring from its mouth (6). When the monster discovers its loss, it raises a frightful storm. If the locus is land, the girl goes to the mountain shrine of the Mother of God at Marut'a (2) or to the springs of the pilgrimage place of the Mother of God at Hili (11). At loci of both land and sea, there is sometimes a cave (3, 8): This reflects the contamination of the first part of the epic by the final segment in which P'ok'i Mher is immured in a cave at Van till the end of time. The water from which she drinks comes from an "immortal" (*anmahakan*: 1, 2) or "white" (*svtak*: 10), or "milky" (*kar'n/aghblur*: 12) spring. If the spring gushes plain water, then there is some sign of sanctity added: Pieces of holy wafer (*rshkhaz, masunk'*: 3) are to be found at the place, or the girl drinks only after a priest's blessing (7). The life-giving water flows in all four directions around the rock—one may recall here, perhaps, the four rivers of paradise.

In a number of variants, Baghdasar, the smaller of the twins, is afraid to dive into the water and waits anxiously for his brother on the shore. He is smaller in spirit, as well: He envies his brother's size and newly acquired strength and sexual prowess. The Armenian epic narratives, from the fragments dealing with the kings of the early second century a.c. down to Sasun, are intimately related to the Ossetic cycle of the Nart heroes. There are specific parallels to the episode in the Sasun epic under discussion. We encounter Nart twins named Aekhsaer and Aekhsaertaeg, whose names may contain the Iranian base *khsha-* (to reign); and Professor John Colarusso notes that another pair of twins in a Northwest Caucasian version of the Narts, Pyzyghash and Pygya, pursue a dove to the sea. The younger of the two goes after her under water; the elder, Pygya, who is more restrained, waits on shore. Even more intriguing is the episode in the Ossetic legend, noted by Colarusso, of the visit of the Nart Uryzmaeg to the aqueous realm of Don Bettirs: The hero is snatched up by a giant eagle and deposited upon a pillar in the sea. This incident suggests that the legend of St. Gregory of Narek's vision of the Virgin and Child above Arter and his magic transportation to the rock islet might have had an

antecedent in an epic topos now lost in Armenian but attested still in Ossetic—essentially, a *Nebenüberlieferung*. The reshaping by the Arter/Narek legend of some variants of the Sanasar/sea episode should thus be regarded as one stage in a continuous process of mutual interchange and cross-fertilization of folk epic and official Christian narrative in the Van region of Armenia.

The place at which the mother of the race of heroes becomes pregnant is, in all cases, a spring. As a rock rising from the waters of Van, it seems to be the phallus of the sea god Tsuenaue at the wedding of his sea-bride Tsovinar, whose children are to be boyavin, sea-born. The place is marked as sacred: It is the Isle of Arter in Lake Van, which has a little monastery. The hero Sanasar drinks of the same spring; but now it is on the sea bottom and is in a complex of palaces and gardens, with a chapel. The Virgin speaks to him there in a dream; and it is plain that the undersea shrine is a double of the one on the mountaintop in Sasun: The High Mother of God of Marut'a, or Marat'uk. He must demonstrate faith and courage by diving into the waters, but then they either part for him, as the Red Sea did for Israel when it came out of Egypt, or he tumbles safely through the depths. To his timid brother, though, his safe progress is invisible, as though both journey and destination belonged to a spatial and perceptual Otherworld. His magic weapons come from the undersea realm; and to it they are to return. The variant in which the locus is the carved rock of P'ok'i Mher's, imprisonment and suspended animation places the spring outside ordinary time as well. But here, too, the aspect of sanctity is indicated by the presence of pieces of holy wafer in the cave.

In text (2), the girl's name is given not as Tsovinar, but Sandukh. The element *sar-* is common to the name Sanasar (from an original, biblical Sarasar, perhaps by assimilation to Partho-Armenian Sanesan) and to the original form, Sasunus of the toponym Sasun. There was also a shrine of St. Sandukht in the monastery of Narek, however, next to the tomb of the saint; and several versions of our text name the place Tsovinar and her son visit as the holy Isle of Arter, which is associated with a legend of St. Gregory of Narek that shares elements of the epic narrative—as noted above, it has a specific parallel in an episode in the Ossetic epic of the Nart hero Uryzmaeg. The islet, now called in Turkish *Kuş adası* (Bird Island) is to the northwest of Aght'amar. Tradition explains the name by a pun: Narekats'i was at prayer at Narek when he beheld a vision: The Virgin was floating on a cloud above the islet with the Christ Child in her arms, and a voice said: "Gregory, come to the

Lord (*arr Ter*).” To the legend belongs also his punning reply: “*Arr, Ter, zhogin im* (Take, O Lord, my soul).”²⁰ He was thereupon transported miraculously to the islet, where he adored the Holy Mother of God. Though she is not named with the epithet Marut’a in narratives of the legend, her power to work from afar—to transport Gregory over land and sea to the little rock—is typologically akin to the ability of the Holy Virgin of Marat’uk to cure a scorpion’s sting from her distant mountaintop—it suffices for the afflicted person to look toward it. *Arterivank’* (Arter Monastery) was built in his memory: Inscriptions found at the site date from 1292 to 1766.²¹ It is not difficult to see how St. Gregory’s vision and supernatural journey across the waters to the Isle of Arter in the legend could have influenced the epic in oral transmission—and indeed, since Narek is at the heart of the region where the ancient sources of the epic took shape, the legend of Arter itself might have arisen out of a local myth.

Text 13 comes not from an oral recital of an epic, but from a tale, obviously of local origin, about Narekats’i written in a late and corrupt classical Armenian, in a

nineteenth-century manuscript.²² In this story, a childless couple from the island of Aght’amar visits the monastery of Narek, prays for St. Gregory’s intercession, and is granted a son who is named after the saint. When the boy turns seven, the parents set sail again on pilgrimage, but their boat is blown off course in a storm opposite Archesh. The boy, somewhat like Jonah in the scene on the bas-relief at Aght’amar, falls overboard. Indeed, a sea monster is about to devour him; but St. Gregory appears, holds back the *vishap* with his staff, and takes the child safely to the bottom of the sea. There, young Gregory remains happily for a year beneath a tent of the saint’s crozier and cape. Narekats’i signs the four directions with the cross, and the submarine refuge is flooded with light. The boy is nourished by holy wafers that the saint brings him. Meanwhile, his parents are blind with crying, so on the anniversary of their son’s disappearance they are persuaded to visit Narekavank’ in the hope that the saint may restore their sight. Upon arrival, they find their son, bewildered and dripping wet but strong and healthy, seated on Narekats’i’s tomb. This tale brings together many familiar elements: a storm and a monster, a supernatural journey, an undersea shrine. If the legend of Narekats’i’s Isle of Arter has colored the epic, the epic has evidently reciprocated by weaving a legend out of itself around the saint.

One detail is curious. Arter Island is just northwest of Aght’amar, and both are but a short distance from the southern shore of Lake Van, where Narekavank’ once stood. But the boat carrying Gregory and his parents when the storm rises stands off Archesh, which is on the northeastern shore of the lake, many miles in the wrong direction. Unless they had taken ship at Avants’ (now Iskele), the port of Van city—going with other pilgrims to visit the Isle of Lim as part of a long itinerary—the presence of Archesh would make no sense. But there are two cities of the same name: the early modern one on the shore and the ancient and medieval one down below, under the rising waters of Lake Van. So, perhaps, the lure of that Armenian Atlantis, coupled with the submarine theme, accounts for its otherwise inexplicable mention: Drowned cities have always excited human imagination.²³ St. Gregory of Narek

20. In the fifth-century *History of the Armenians* of P’awstos Buzand, which is very rich in epic and mythological material, fourth-century Armenian soldiers battling the Sasanian armies cry “*Arr Arshak kaj*” as they slay their foes. The phrase means either “To brave Arshak!” or “Take, brave Arshak!” Either way, it is a dedication to their lost king, Arshak II: Narekats’i’s pun is a remote echo of the same usage and even has similar reference to sacrifice and transit to the Otherworld.

21. See J. M. Thierry, *Monuments Arméniens du Vaspurakan* (Paris: Paul Geuthner, 1989), p. 292. Here are two folk versions of the Arter legend, reprinted in Aram Ghanalanyan, *Avandapatum* (Erevan: 1969), p. 84, no. 224:1 from Mko, “*Vana tsovi kghziner*,” (Ardzagank’: 1882), p. 20: “Grigor Narekats’i had a great desire to see the Mother of the Lord with the Christ child in her arms. And once there appeared from that little island opposite his place of prayer that which he desired. Captivated by the vision, Gregory went across the sea [*ants’num e tsove*], bowed before the Mother of the Lord . . . who called to him, *Arr zTer k’o, zor khndreir* [“Take your Lord, whom you sought”]. Because of this the name of the island remains Arter.” Another version comes from A. Solak’yan, “*Vana banahyusut’yunits*,” *Azghagrakan handes* 19 (Tiflis: 1910):99: “Grigor Narekats’i used to cry in his place of prayer night and day; he prayed so much that the rocks under his knees wore out. His request [*khndirk’n*] was to see just once with his own eyes the Mother of God with Jesus in her arms. For many years he wept and wailed, struck the rocks on the ground with his hands and poured out bucketfuls of tears . . . one night he suddenly [*nakyakhtan*] beheld light streaming from the sky over lake Van [*Vana tsovu erknuts’ los m’ kat’av*]. A fine wind arose and the Mother of God appeared over the island opposite, her arms cradling [Jesus]. Narekats’i, when he beheld it, said, ‘*Arr Ter khokis, arr mka* [Take, Lord, my soul. Do it now] since I’ve attained my desire.’ The vision vanished [*tesilk’ vert’s’av*], the name of that island remained Arter.”

22. Erevan MS 9861, written in Astrakhan in 1837, a miscellany containing Nerses of Lambron’s Life of Narekats’i, a collection of prayers, and prayers of St. Ephrem Syrus (*Ts’uts’ak dzeragrats’ Mashtots’i anvan Matenadaran*, ed. O. Eganyan et al. [Erevan: 1970], vol. 2, p. 1006).

23. Dunwich, in East Anglia, gradually sank below the North Sea (see Rowland Parker, *Meh of Dunwich: The Story of a Vanished Town*

seems to reclaim, for a time, his namesake and the gift of his intercession in an undersea realm where he wields occult powers. This aspect of the tale, an obvious folklore motif, has a parallel in the Russian *bylina* (ballad) of the merchant of Novgorod, Sadko, whom the tsar' vodiansoi (emperor of the waters) enriches but then takes to his undersea kingdom by way of payment.²⁴ The Armenian legends of a stone phallus, timeless cave, holy islet, or shrine beneath the waves of Lake Van are seen to reflect the successive strata of Urartean, Iranian, and Christian religious traditions, which combine in a great national epic cycle, chanted by exiles and the dead, in a lost paradise that is not Eden, but Van.

The venerable comparison of the soul's plight to that of a shipwrecked man drowning in turbulent seas, the story of Jonah and his monster, and the local topos of the Drachenkampf in mythology and heroic epic seem to be blended in the eighty-second chapter of Narekats'i's own meditations (appendix, section 14). In that prayer, hermits are evoked as valiant (arapets) fighters who help the soul to escape the turbulent sea and to fly (rimuts'nal) to the safety of a ship's haven (nunahangistn). He summons with the word "ark" (tapan/ak') the Deluge and Noah. In the prayer, God is He who lifts out (veratsich') rather than the one who submerges (enighmich'), saving the soul from the fangs of vishap. St. Gregory was in every way the ideal candidate for cooption into the great mythologem of the shrine beneath the waves: in his hieros topos, every topos is there.

[New York: Holt, Rinehart and Winston, 1978]. H. P. Lovecraft (who died in 1937 in Providence, Rhode Island) named a mythical town in Massachusetts after lost Dunwich in one of his tales of supernatural horror. But in his story "The Call of Cthulhu," a semi-divine, octopoid sea monster is immured in suspended animation in a tomb in the city of R'lyeh, deep beneath the waters of the Pacific ocean. When the stars align in a certain order, he is to rise to wreak destruction and salvation. His followers recite this mantra in the invented Aklo language of Lovecraft: *Pf'inglui mglw'nath Cthulhu R'lyeh wgahngai Ithaq'n* ("In his house at R'lyeh, dead Cthulhu waits dreaming"). It is as though Lovecraft had read the Armenian epic—the cycles of both Sanasar and Pok'y Mher! But although there were many Armenians in New England in his day, there is no evidence he knew of Sanasar and his heroes. There is little doubt, though, that he knew Lord Tennyson's poem "The Kraken," about the fearsome giant octopus of Nordic nautical lore (see Richard Carlington, *Mermaids and Mastodons: A Book of Natural and Unnatural History* [New York: Rinehart and Co., Inc., 1957], p. 49. The sea monk and sea bishop, illustrated on p. 59, must have inspired Lovecraft's fish-men in "The Shadow over Innsmouth").

24. *Byliny*, ed. B. N. Putilov. Series Biblioteka Poeta, (Leningrad: Sovetskii Pisatel', 1957), p. 224 ff.

In the same Slavic north where Sadko plied his maritime trade, there is a city that God caused to sink to safety beneath the waves of Lake Svetloyar (the Luminous), lest it be defiled by the Tataro-Mongol infidels. It is to remain invisible till the second coming of Christ. This is Russian Great Kitezh; its double, Little Kitezh nearby, was lost to Khan Batyi in the thirteenth century. One might prudently regard this as no more than the sort of a parallel, which abound in folklore, save for the notice in an old Russian chronicle that Great Kitezh was founded in memory of "the holy martyr St. Gregory of Greater Armenia" (na pamyat' svyatago svyashchennomuchenika Grigoriya Velikiya Armenii).²⁵ Perhaps, then, the famous legend of Kitezh contains an echo of the episode we have studied in the epic of Sasun and of the tales surrounding another Gregory, the saint of Narek, that intersect, as we have seen, with the epic. He might thus have been conflated in Russia with the better-known St. Gregory the Illuminator—who was himself the hero of another cycle of epic considered above. The millennial occultation of Kitezh reminds one of the cave of Pok'y Mher; the two towns Little and Great Kitezh, of new and old Archesh; and the divine protection from infidel defilement, the flight of both Tsovinar and her twin sons. It would not be the only case by any means of an Armeno-Slavic correspondence in medieval times;²⁶ but that is for another study, and this one is ended.

APPENDIX²⁷

1. 52, pp. 238–240. Recited by Murat Hovsep'yan of Ayarat and transcribed by Sargis Haykuni.

(King Ghumrik's daughter goes on an outing to the sea—Lake Van—before being taken in marriage by the idolater (knapash: Muslim king.)

She went for a walk, strolling along the sea shore, / What did she see? / In the sea she saw an island (Turkish: ada). / She said, "What's that island there?" / The heralds (jam'yek'n) said, "We have no idea (khabar, lit.: "news")." / The king's daughter ordered them to bring a boat (lor'ken, from Russian lodka). / She sat down in the boat and set out for that island.

26. J. R. Russell, "Solov'i, solov'i," in *Studies in Honor of Prof. Nina Ganssler*, St. Nessess Theological Journal, forthcoming in 2007.

27. From Sasna tseret, ed. Manuk Abeghyan and Karapet Melik-Ohanjanyan (Erevan: 1936), vol. 1 (n51) and (Erevan: 1951), vol. 2 (n52).

It was a short trip—she took that way, and went. / She came, and there appeared a door to a hall [*zagħ*, from Russian *zal*]. / She entered and saw: there was a little monastery in that hall. / In that monastery there was a spring. / That spring flowed and spilled into the sea.

(She has a priest say a mass, telling him *Mer Ter Astvats me durr bats'i* ["May our Lord God open a door above us"], and drinks one-and-a-half handfuls of the water. Nine months later, Sanasar and Baghdasar are born.)

They went to the land of their fathers, / Arrived at that island of the sea.

Where their mother had gone and drunk water. / "Son," she said, "you go too, / Drink from that immortal spring [*anmakhakan haghbrits'i*]." / The boys went and drank from that spring in the middle of the monastery. / They were sated, and by God's command they came out huge, full-grown men. / They came out of the monastery and on its top they saw a colt standing. / The two brothers seized it, brought it down, / And it, too, drank water from the spring, was sated, became great. / The boys saw there was a door in the monastery; so they opened it. / It was a storeroom: a saber hanging on the wall, / And a helmet lay there—they took that, too; / There was a pair of shoes, and they took them.

2. S2, pp. 392–393. An anonymous reciter from Van, published in *Azgarakan handes* (The Ethnographic Review; Shushi and Tiflis) in 1910.

(Lord Ter-Nerses has a daughter, Sandukh, whom the idolater-king wants to marry. The monastery of Narek contained a chapel to St. Sandukht; the name might have contaminated the epic, replacing Tsovinar, because of the contamination by the Narek cult of the narrative or because the element *san-*, Iranian "conquer," was seen as common to this name and, by popular etymology, to Sanasar. The original name of Sasun was Sanasun, too. An old man [*khalivor*, from standard Armenian *alewor*: a similar mysterious old man appears to the twins to name Sasun for them] advises her in a dream to take a walk on the mountain opposite, saying, "When you go, you'll find an immortal spring [*anmakhakan āghbūr em*] there." She and her horse should both drink of it. She arrives at *Marut'a pants' r sar*, "The high mountain of Marut'a," and drinks. Later on, the old man returns in a dream again, and says her son is to build a church [*zhām*, lit., "hour", cf. Armenian *zhamatun*, "chapel"] there to be called *Marut'a Pants' r Aspatsatsin*, "High Mother of God of Marut'a.")

Upon saying or not saying these words, he brought many giant [*chöch'*] cross-stones [*khach'ak'ār*] and planted them at the spot as a sign of what he had said, and thereupon instantly vanished.

3. S2, pp. 92f. Recited by Arrak'el Shakoyan of Nor Bayazet and transcribed by Ervand Lalayan in 1905.

(The princess is here called *Pirzat khanum*, Persian for "lady born to an old/holy man"; and her son is not Sanasar, but Mher. She is betrothed to a Muslim king. Here, the place where she becomes pregnant seems accordingly to be identified with *Mheri durm*, "Mithra's gate," the place of the millennial confinement of *P'ok'r* Mher. After the latter fights with his father, David curses him [S2, pp. 164, 172]: "You are Mher— / So why have you caused me pain these three days? / I ask of God there / That you remain in the Carved Rock [*Kerpats k'ar*], / Your daily food be three pieces of holy wafer [*nshkhar*], / And death not come to you till Christ comes for the judgment." The door of the cave—an Urartean blind portal—opens miraculously on Ascension Eve. K'urrik Jelali's stale drips from the lintel the rest of the time: opening gate, Communion bread, and dripping water—urine instead of semen?—all play a role in this version.)

The girl stood in thought, and said, / "Better let me go and kill myself. / I won't go become an idolater / And lose my faith of light. / The girl got up / At break of day / And went into the mountains: / She was going to kill herself. / She went, saw a cross-stone planted in the ground, / Knelt and took refuge in her God [*Yiran Astvats apavinet's*: this may reflect the Muslim *tawakkul*, but the latter itself derives from Zoroastrian Middle Iranian *apastan*, "refuge (in God)," and the latter word also is loaned into Armenian] / And her eyes shed many tears. / Then she looked and saw there was a door at the side: / She saw the door open. / She saw pieces of Communion bread [*masunk*] there, / Entered, prayed. / It was summertime, and she was thirsty. / She walked around, saw water dripping from the ceiling, / Went and drank three handfuls of water. / Her heart felt very straitened there; / So she turned back and went outside, and the door shut. / After six months had passed, the child made itself known in her womb [*ereken p'ori meje malem arav*]. / The heralds brought her mother the tidings: / "Your daughter is pregnant."

(Her mother is scandalized. The girl explains.)

When I was sad, I rose and went / Up on our mountain to kill myself. / There was a chapel [Armenian *maturr(n)*, from Greek *martyrion*, lit. "shrine of a martyr"] there. / I went in, said my prayers, drank water: / The child has come from that water. / By God in His place, / In mine am unblemished [*anarat*].

(The child is born.)

The child grew in one month as if it had been a year. / When he was a year old, / He was as big as a twelve-year-old boy. / Whatever name they gave him wouldn't stick. / When he played with the other kids, the boy / Would strike them and break their arms, break their legs. / His neighbors complained

to his grandfather, / "He's killing our children, slaying them," / The latter went in turn and said to his lord, T'oros [K'eri / "Uncle" T'oros, a figure in the epic], / "Put him on a horse / To go hunting with his friends. / Cast a spell [sere, from Arabic *sihr*] on that horse." / They brought a horse, gave it to him, / He mounted up and rode off to the hunt. / He went, and came straight to that chapel. / The horse reared: / The boy fell down on his face and lost consciousness. /

When he got up and entered the chapel a dream came / And said: "Your name is Mher. / Your mother's tears have ascended to God / As your sacrifice. / It is God who has granted you: your name is Mher. / Now go tell your grandfather the king / And bring ten heifers who have not calved. / Bring priests to perform a mass: / The chapel's door will open / So that you may put a charm [amayik: the word is used also of magic scrolls] on your breast, / Lift the saber with your arm, / Take the mace [guzuz, from Persian *guzr*] in your hand, / And go to do battle with the idolater / That the Armenian faith not perish. / Your horse, K'unike Jalat'e, is in the cave [jeri mejn al]. / Thus has God ordained for you."

(Sacrifice is duly offered to Mayram Asvat'sabin, Mary Mother of God, at the place, which is called Marat'uk.)

4. 51, pp. 130–131. Transcribed from a reciter from Moks by Garegin Hovsep'yan and published in 1892.

They went along the sea shore: / Sanasar was the elder brother; Baghdasar, the younger. / Sanasar said to Baghdasar, "Let's jump into the water. It's better than walking: / The idolater king is going to sacrifice us to his idols." / Baghdasar's heart wasn't in it, so / Sanasar threw himself into the sea. / By God's command he went through the sea as if on dry land. / The sea opened, he walked through a garden / And saw: a horse was saddled there, / The Lightning Saber [Keb'akan T'ur] hanging from it. / He took heart to mount the horse. The horse said, / "Earthborn one, what are you doing, what have you in mind?" / He said, "I'm going to ride you." / It replied, "I'll give you to the sun [eregakan] and roast you!" / He said, "I'm sea-born [tsavayin], I'll hang under your belly." / When it gave him to the sun to roast, he hung under its belly. / When it turned over, he got on its back. / It said, "I am your horse, you are my master. / You are of a troubled sort— / Let's go. Drink some water and relax [vahan?]. / He went and saw a helmet there. / He stuffed it with two litres of cotton / But still it would not stay on his head. / There was a belt there: / He wound it round his waist seven times, but it did not stay. / There was a pair of shoes: he put in each a litre of cotton / And put them on, but they were still too big. / He couldn't understand that when he drank water, he'd fall asleep. / He drank water, slept. / He slept a while, God gave him grace: / He rose, took the two litres of cotton out of the shoes, / Put them on his feet; / The girdle, round his waist; the helmet, on his head. / He rose, mounted

the horse, rode through the garden, / And beheld again the surface of the sea."

5. 51, pp. 311–312. Recited by Sakho of Moks and transcribed by Sargis Haykuni, published in 1901.

Sanasar and Baghdasar rose and walked along the sea shore. / Both sat down there and wept. / Sanasar said, "Brother, / Come, let's jump in the sea / And drown. It's better than the king taking us / To sacrifice to idols." / Baghdasar said, "Brother, / Life is sweet. I won't jump in." / Sanasar got up and jumped into the sea himself. / He invoked the name of God / And it made him tumble head over heels [shalaputik] through the sea. / He reached the sea bottom, looked—what did he see? / There was a palace [k'oshik] and a chamber [sare] there, / With a pool [havuz] between them. He jumped in. / A horse was hitched there, and to each of its four legs hung: the Lightning Saber, / The A'aben Girdle [possibly from Turkish *atabay*], the Little Helmet for the head, / The Belt [k'emur] for the waist. / He entered and bathed. / He mounted K'urrik Jalali, flew out of the sea. / Sanasar was a kid when he entered the sea: / He came out, filled out, became fiery [hreghen].

6. 51, pp. 321–322. Same source as #5.

(A Drachenkampf: Sanasar here does not so much fight the dragon, though, as narcotize it in order to snatch a ring from its mouth. One recalls here the Gnostic Hymn of the Pearl in Syriac, in which a Parthian prince is sent to seize the Pearl of great price kept by the dragon in the Sea of Egypt. The prince is himself drugged; but when he awakens, he performs magic on the dragon and accomplishes his quest. The text is a kind of compressed epic, evidently intended for proselytes, perhaps of Manichaeism, in the Armeno-Irano-Syrian region: see J. R. Russell, "The Epic of the Pearl," in *Armenian and Iranian Studies*, Harvard Armenian Texts and Studies 9 (Cambridge, Mass.: 2004), pp. 1261–1332.)

The old man slept, but Sanasar still could not sleep. / He saw the old man asleep / And went that night into the town, / Found forty camels, forty loads of wine. / He took them in the night, left them on the shore of the sea. / The camels returned—he stayed there. / He emptied those forty loads of wine into the sea: / The dragon got tipsy [veshap sarkhosh?av]. / He went then, diving to the sea bottom, / And saw the dragon had raised its head. / He dipped his hand down from above / And seized the ring from the dragon's mouth. / Turned back, came to the inn, lay down on his side. / When the morning light dawned, the sea was raging. / A dragon-wind [veshap k'ami] burst upon the town. / The king summoned his herald. / "Who has removed the ring from the dragon's mouth?" / They searched and found no one, asked the old man, / Who said, "Last night nobody but that boy came to

my inn: / As soon as he got there, he just collapsed and fell asleep." / Sanasar said, "What's all this about?" / They told him. / Sanasar said, "I did it. / Do what you can about it." / They said their piece; Sanasar, his—and the fight began.

7. S1, pp. 476–477, 479–481. Recited by Vardan Mokhsi-Bazikyan of Moks and transcribed by Harut'yun Gilanyan of Moks in 1911.

A month passed, a year passed, / Again they visit the priests of Gagik the king. / They go on pilgrimage to Hili monastery, above Vostan [now Gevash, a town on the shore of Lake Van opposite Aght'amar and near Narek]. / There she sits eating and drinking on the meadow, / Two springs, one to either side. / The girl takes the cup at her bosom, gives her great aunt to drink, / Filling it with water from that spring. / The priest seals the water with the sign of the cross, / Gives it to the girl and she drinks. / He gives her some more from that spring, / Gives it to the girl from the one on the other side: she drinks. / Both springs cease to flow. / They give there glory to God; / And, having completed the pilgrimage, turn back / And come to the court of king Gagik. / Some time passes and the girl is pregnant. / They inform the idolatrous king, saying, / "Your wife, king Gagik's daughter, is with child. / You had said you would not come to her for seven years, / But you have. What say you? What shall we do?" / He replies, "Be on your guard! / Let's see when the child comes, whose will it is. / I'm the lord and she's my wife: don't you get involved." / Then he waits, nine months are completed, / And God grants two boys: so it is. / The priest takes them, baptizes them, / And names the bigger boy Sanasar; / The smaller, Baghdasar

Then there is trouble among them. / Sanasar and Baghdasar also rise, / Take their household, mother, priest, / And go to the home of their uncle, to king Gagik. / They tell king Gagik: / This is the matter, this is how it happened. / King Gagik says to them, / "You're decent lads, go to Ärtrel [i.e., Arter], / And let things be set straight by the Mother Theotokos [Mayr Astvaratsnits']. / If you're worthy, the Battle Cross [Khach' Patratin: the latter word is often found elsewhere as standard Armenian *paterazmin*, "of war"], / the Lightning Saber, K'urrik Jälali, / The armor, everything's there. / You'll see whether it comes to you." / Then the boys left, / Went to the meadows of P'shävank', / And walked around there. / By God's command as they walked / The sea opened before them to Ärtrel. / Before Sanasar's eyes it becomes dry. / Sanasar goes straightaway to Ärtrel. / Baghdasar stays there, saying, / "Alas! My brother went and was lost in the sea." / Sanasar reaches the place, / Loses consciousness in the church, / Sleeps, and sees a dream: / The Mother Theotokos comes by miracle in the dream and says, / "Your Battle Cross is here. / Rise and kneel before me seven times in prayer. / If you are worthy, you shall receive / K'urrik Jälali, / An armored shirt, / the Ozeni Belt, / The K'äzähk Helmet, / The K'üsül Shoes, / the Lightning Saber, / The Nerez

Dagger. / All are there—take them. / Go, attain your heart's desire, / Then bathe in the spring / And your strength will be greater than that of seven: / One will be as seven, you will fill out." / Then he arose, bathed in the spring. / He took those things, / God's grace was full above him, / He mounted K'urrik Jälali, / The way opened in the sea, / He departed and returned to his brother's side.

8. S1, pp. 533–535. Recited by Vardan Mukhsi-Bazikyan of Moks and transcribed by Senek'erim Ter-Hakobyan in 1915.

(In his initiatory dream in this variant, Sanasar is told by the Virgin *ke ketrch'anas* [you'll become a brave hero]. The Armenian civic and religious fraternities of Erznka in the thirteenth century—and Ukraine, in later centuries—were called *ktrchworats' miut'iwnk'* [unions of *ktrich*], the latter word meaning a brave, heroic young man. These organizations bear similarities to the Iranian organizations of *javanmardan* [young men]. Other designations of the latter include Arabic *futuwwa* [young men], *akhi* [brotherhood], and 'ayyan. The latter word comes originally from Middle Persian and means "helpers," but it also has a connotation of reckless, outlaw behavior—cf. the Armenian designation of the heroes of Sasun as *tsurr* [crazy, wild]. The ethic of the Iranian and Armenian associations is closely bound up with the traditions of the hero in epic: The member must be intrepid and athletic, as well as altruistic and mystically religious.)

So it happens that he and his brother come home. / They take their mother, the priest Melik'set', and their great aunt, / And set out for Aght'amar. / Sanasar and Baghdasar spend some time there, / And go to the sea shore for a walk. / Before Sanasar's eyes / The sea becomes dry land all the way to Arter; / But in Baghdasar's eyes it stays the sea. / On that dry land he has seen, Sanasar / Goes to Arter through the sea. / But all Baghdasar can behold is the sea. He cries, says, / "My brother went into the sea and was drowned." / Sanasar goes, reaches Ärtrel [Arter], / When he arrives, a church is there. / He walks into the church. / When he enters the church / He loses consciousness, falls in a heap, sleeps. / A dream comes in his sleep: in the dream / The Mother of God comes and says, / "Hey, Sanasar, arise. / There's a cave [*meghare*] here: dig it open. / There's armor: a shirt; / Armor: the Belt; / Armor: K'äzähk Helmet; / Armor: K'üsül Shoes. / There's a great pot, in the pot a sheath, / And in the sheath, a saber. / The saber's name is Lightning Saber. / On the sea shore is a stone / Beneath the stone, a bridle. / Seize it, draw it away, / And a horse will come out of the sea: it is a sea [*tsovayin*] horse. / The horse's name is K'urrik Jälali. / Sanasar, rise, go to the palace [*därbese*], bathe in the water. / You'll become strong, become gigantic [*ke chüch'anas*], you'll become a brave hero [*ke ketrch'anas*]. / Take all those things. Take them for yourself." / Sanasar woke from sleep, stood up, said, / "What a dream I saw! / Is it true, or a lie?" / He went where she had shown him, / Dug the cave open, saw / What he had seen in his

dream, and removed it all. / He bathed in water at the palace, became strong and brave. / Put on the armor—the Shirt, / Bound on the armored Girdle. / Put the K'azakh Helmet on his head, / Put on the armored K'asıl Shoes, / Put on the Lightning Saber, / Went to the sea shore, turned aside the stone, / Struck the sea with the bridle, caught K'ürrik Jalali, / Bridled him, mounted him, left Arter and came away.

9. 51, p. 609. Recited by Manuk Harut'yunyan of Mokts and transcribed by Karapet Melik'-Ohanjanyan in 1933.

(In this variant, it is not the Caliph of Baghdad who wants Gagik's daughter, but the son of the Kurdish ruler of Vostan, who sees her walking at Aght'amar.)

They went and stayed a year there. / The girl sent word to king Gagik, / Saying, "I cannot abide here. / Bring a boat at night and take me away." / When he took her away, the girl said, / "A horse will take me to Aght'amar, to get to Artel [Arer]." / When she went, she became big with child. / Three or four years she stayed concealed there. / There she bore two boys, twins [jemek]. / One's name was Sanasar; the other's, Baghdasar. / The boys grew daily bigger. / Ten years passed. / The boys said to each other, / "We can't stay here. What will we do here! / We can't stay on this island, in this sea. / Let's go to another frontier, another land." / They got up and went to a foreign place. / The boys said, "We won't go on to other villages, / Let's build our home here." / They set their hands to it and built themselves a home. / They brought giant [chöch-chöch] stones and built.

10. 51, pp. 835–840. Recited by Yeghiazar Hakobyan of Gavash and transcribed by Harut'yun Avch'yan in 1909.

There was and there was not an Armenian king. / He had a daughter. / That king's daughter was very pretty [khorot]. / The eyes of the king of Persia [Ajmx, genitive of Ajam] / Fell on the daughter of the king of the East [Arevikts]. / The king of Persia was very powerful: / He sent word to the king of the East, / Saying, "Give your daughter to my son." / Twice more he sent word, / Saying, "Give your daughter to my son." / The other replied, "I am Armenian. You are Persian. / I will not give up my daughter." / The Persian king said, / "If you don't give your daughter to my son, I'll flay the lot of you." / When the girl heard this, she thought to herself, and said: / "On account of me they will kill all these people. / Their boys will be left orphans [het'im, from Arabic yatim] and will curse you. / Then they'll carry me off by force . . ."

(The girl marries the Persian king's son.)

They stayed in the palace half a year, / Then sent an answer [jwab, from Arabic jawab]: / "Are we prisoners here! / You don't let us leave the house." / The king said, "They're right, let them go outside and take a walk." / The gatekeepers allowed

them to go outside and walk around. / The king's daughter had never seen what the sea was. / They strolled through the Royal garden [Khas bakhch'], from Persian Khass bakhcheh], / She emerged and beheld the Blue sea [Kapot tsou, from Armenian Kaputan, a name of Lake Van]. / She did not see the sea's edge: she went up to it, / Stood on a rocky place, looked around, / And saw the sea had no limit. / She was dismayed, sat down, and said, / "Oh, if only there were a little water, I'd drink." / She walked around some more, but saw no water in the rocks. / She looked towards the sea and saw a great rock [choch' k'ar] standing by the sea shore, / A white fountain [svtak alhpai] pouring from the rock, / The water of it covering all four sides [inor ch'ors pallor pmir er]. / So that a man without taking his clothes [khalav] off / Could not get to that spring and drink its water. / She took off her clothes and went over to the spring, drank the water, came away. / Returned and dwelt in her palace. / The priest was chanting the Housm in accordance with the Armenian custom [khayi onenk'i pen]. / Performing the mass and conferring sanctity on the girl. / The year was completed and the girl's belly swelled. / Her mother-in-law's answer reached the king: / "Your bride is pregnant." / The king went, sat in council [divan], summoned his vizier, and said, / "What do you say to such a thing!" / The vizier replied, "Live long, O king. / Take the priest and put him at the side of your bride. / Who knows, maybe the priest is doing that thing." / The king said, "Vizier, then what do we do?" / The vizier replied, "Then we kill both of them." / They ordered the executioner, "Go and behead both of them." / The executioner went to the bride's palace and said, / "The king has ordered me to slit your throat." / The bride replied, "Your king is unjust: / To cut the throat of a pregnant woman is two murders [kat'el] . . ."

(The twins are born.)

One day they went again to the sea shore to walk around. / An old man came straight up to them and said, / "Sanasar, come, I'll take you to an island in the sea, / And there I'll give you the Lightning Saber, / K'urku Jalali, the Mother-of-Pearl Saddle [Zin u Satafin], the Menacing Mace [Gurzn i Gorozin]." / Sanasar said to his brother, "Baghdasar, / You stay here. I'll go. / If I drown in the sea, / You will remain here alive [sagh]." / Baghdasar said, "Brother, you stay here and I'll go." / The old man said, "You stay here and / Let Sanasar come back to you. / He's strong: he'll bring the Menacing Mace." / The old man took Sanasar and went to the island in the sea. / There the old man showed him K'urku Jalali, / The Lightning Saber, the Pearly Saddle, and the Menacing Mace. / Sanasar said, "Grandfather, / From where we came to the island / No trace is left. We didn't drown in the water. / But from here, with these heavy things, / How can we go and not drown?" / The old man said, "You mount the horse, / Take those weapons, take my hand, / Shut your eyes tight, call upon God, / And I'll bring you out." / The old man brought him out, to his brother.

11. S1, pp. 875–877. Recited by Grigor P'okhan Yeghizaryan of Gavash and transcribed by Senek'erim Ter-Hakobyan in 1916.

(The text refers to the “pit” [Armenian *p'os*] of Gavash. This may be connected to the legend that there was a deep [*khor*] storehouse or cowshed [*gom*] in the village of Khorgom, West Armenian, Khorkom, east of Vostan/Gavash toward the city of Van. Khorkom's famous son is the American-Armenian abstract expressionist painter Arshile Gorky.)

Once upon a time there was idolatry in the pit of Gavash. / There were also worshippers of God in Aght'amar and Khavu valley [*Khavu tsor*—Kurdish *Havazor*, from Armenian *Hayots' dzor*, “Valley of the Armenians”]. / Now they are few. Kingship was in the idolaters' hands. / When the idolaters walked amongst the worshippers of God, / There was a priest at Aght'amar. / That priest's daughter was very pretty [*khoroṭ*]. / When they saw that girl they sent to the king: / “The priest at Aght'amar has a very pretty daughter.” / The king replied to the people of Aght'amar, / “Bring her, your heart's own, your daughter, give her to me. / If you don't, I'll slaughter your entire nation”

(She marries him.)

The king's seat was in the plain of Nor Gegh. / It was where he fought and where his place of prayer [*Aghot'kategh*] was. / That was a place of temples to idols [*krapashnots*]. / They celebrated the wedding for seven or eight days: / The bishop had his tent with his niece: it / Was pitched an acre away from the king's. / They were both under the same tent. / The royal decree was thus: / “For forty days the king will not come at his wife's side.” / Thirty-nine days later, / The bishop made a request of the king, and said: / “Command tomorrow that I take my niece / To go to Hili for a walk [*ser*] over the springs. / I'll walk around, come back, and go to my place.” / The king said, “It is a command for you: / Take your niece, / Go and walk around, return.” / He took his niece and they went to Hili. / When they came, they prayed at the Mother of God of the Forty Altars [*K'arsun Khoran Astvatsatsin*]. / As soon as they had prayed, they hastened away [*prtsan*], / Left the church, went over onto Hili. / There the bishop moved a stone away / And let water come out from under the stone. / The bishop took a cup at his breast, held it before the water, / The cup filled to the brim. / He said, “Girl, take this water and drink.” / He put the cup before her, filled it once more, / But it wasn't as full as the first time: / There was a little less, and it was a little murky. / He gave that, too, to her—and she drank. / He put back the stone, turned away and returned with his niece. / The bishop brought her deliberately / To the king's tent and through the door. / When it was the fortieth day / They came and sat under the tent. / The bishop when he had showed / his niece everything, / Got up and with the king's permission went to his place. / That evening the king was to go

in to his wife. / She sent a letter to the king, saying: / “In the moment I entered the doorway of your tent, / Whether it was your love, or fear of you, I became pregnant. / So you cannot come to me for nine months. / If you believe, / From the time I entered your tent-door / Reckon the time for the child to be born. / If I'm off by even half an hour either way, then cut off my head.” / The king did not go in to her. / He thought, “What sort of thing is this? / Stop, let me look and figure out whether this is a lie or the truth.” / When nine months were up, she gave birth to twin boys. / They took the news to the king: / “You have twin boys.” / The king had a wise man. He brought him in secretly and asked, / “Reckon from such-and-such a day and hour till now. / Have I made a mistake?” / “No, it's neither more nor less.” / The king was agreeable. / The girl sent answer to her uncle that he should come. / Her uncle arose, came. / Secretly, he baptized both boys. / He named one Sanasar; the other, Baghdasar. / Four or five days he stayed there, / Took his leave, and went away.

12. S1, pp. 1091–1092. Recited by Hovan Zohrabyan of Kachet' and transcribed by Karapet Melik'-Ohanjanyan in 1934.

(Kachet' is a variant of the name of the village of Kasht, in Moks, which is famous for its brave heroes, whose intrepid recklessness came to be taken for foolishness. The latter quality became proverbial for Kashtet's and, as a result, the *kat'naghbiur* “milky fountain” that nourished their heroism came to be regarded instead as destructive of people's wits and was sealed. See J. R. Russell, “Introduction,” in *Karapet Sital, An Armenian Epic: The Heroes of Kasht (Kashti k'ajer)*, trans. J. R. Russell (Ann Arbor: Caravan Books Anatolian and Caucasian Series, 2000).)

Gagik was the king: he sat in K'armanachegh', opposite Aght'amar. There he reigned over Gävash, Khavi Tsör [Hayots' dzor, *vide supra*], Shatakh [the principal town of Moks], Moks, Sparkert, Khizan, Karkarr, and Karchvan. He had a summer palace [*amaranots*] of his own. Its name was called Hili. It had three hundred fragrant meadows. The Milky spring [*Kat'nov hakhpür*], too, was there. In the village there was also a building, a house of idols [*krk'atun*]. It was a tall building with no signs [*nshanner*—crosses?] above it. There was only, they say, an A or an S.²⁸ In front of the door were forty small cells, which had been at one time the places of the idols; the big idol was put inside the monastery [*vank', sic!*]. That is king Gagik's summer palace.²⁹

28. In Armenian, both letters A and S have the basic shape of an English capital U; so perhaps the reciter means a Muslim crescent, or, more remotely, a Zoroastrian symbol such as the twin horns on the domes of the Karkoy fire-temple—and the Sasanians, too, used the crescent before the invention of Islam.

29. One recalls that the medieval Armenian historian Movses Khorenats'i described the fortified complex of bath, temple, or tomb,

King Gagik's daughter was there, too. / She went to stroll around the Milky spring. / She went there, drank water. / It's said that her pregnancy was received from that spring. / This is how the girl deceived her father. / Then when her father disbelieved, everybody abused the girl. / The girl summoned a doctor [hak'im] and had him examine her. / The doctors said, "It isn't from a man." / But her father still didn't believe it. / The girl took a man from amongst the servants, / Fled, and went to the lands of Sasun. / There she lived for herself. / The girl gave birth to two boys: / One Sanasar, one Bagdasar. / They got big there, they became handsome [khonor] men / And strong champions [p'ālivan, from Persian pahlavan, lit., "Parthian"], very strong. / They built their home there, too, / And founded a fine fortress as well. / They finished building the fortress . . .

13. Aram Chantalanyan, *Avandaputem* (Traditional Narratives) (Erevan: Armenian Academy of Sciences, 1969), pp. 313–314 (no. 774.xvi, from *Erevan Matenadaran MS 9861*, fol. 19b–21b).

(This aretological tale, in late-classical Armenian with Turkish and Persian loan-words, intersects at numerous points with the epic tradition. The text mentions the pilgrims' boat being blown in a storm away from opposite the city of Archesh [Urartean Argishtihina, Greek Arzes, Turkish Erchiş], which is on the northeastern shore of Lake Van. But they were presumably on their way from their home, Agh'tamar Island, to the port of Gavash/Vostan on the southern shore, a short distance away, from which they would have traveled the few miles overland to Narekavank'. Archesh, then, is far off course; but perhaps it entered the story because the medieval town, whelmed in the rising waters, is beneath Lake Van off Ororan between Plur and Plurmak. The modern town is 6 km northeast. The ruins excited the imagination of storytellers who wove tales of dragons and submerged palaces—in this tale and in the epic.)

There was a man named Andreas from Agh'tamar. His wife was barren and they had no child. So he took his wife and went to the tomb of Grigor Narekats'i; they asked the saint to grant them a son. And God by the intercession of St. Gregory

gave them a son and they rejoiced greatly, baptizing him with the name Grigor. When the boy was seven years old, his father and mother wanted to take the boy to the saint's grave. They boarded a boat and were in the midst of the sea on the Saturday of Vardavar [the Feast of the Transfiguration]. And by the impulse of the Evil one, a wind arose and took the boat from the seas opposite Archesh to opposite Karakashish [yArchshu dem / Gharak'ashishu yargew]. And the boy fell into the sea. His father and mother lamented so fiercely that their eyes became blind. And they debarked on dry land and searched everywhere, but they did not find the body of their son. So, departing with laments and bitter tears, they returned to their home. They stayed so till Vardavar of the following year. The villagers said to Andreas: "Your son fell into the sea and died. You've gone blind with crying. Come, let us go to the grave of the saint, that he give light to your eyes." They arrived at the water mill of the monastery. The other folks went ahead, to kiss the saint's grave. And, opening the gates of the tomb, they beheld the child Grigor seated on the tomb, drenched in water, and they were astonished. So they turned back in joy and related the good tidings to the boy's parents: "Your child is alive and on top of the saint's tomb." But they did not believe it, till they came up to their son themselves. When they saw him, they said to the son they saw, "Tell us what happened to you." And he replied, "When I fell into the water, a monster [aylakerp mi: lit., "xenomorph"] seized me and wished to drown me in the sea. Then Grigor Narekats'i appeared with a staff [gawazan: lit., "ox-prod," the term used for a bishop's crozier] in his hand and abjured [sustats': denominative verb from Old Iranian sasti- "pronouncement"] the monstrous demon [diwin, dative of dew; cf. Middle Persian dew, Avestan daeva-, etc.] and freed me from its hands. He took me, descended to the sea bottom, struck the ground with his staff and cast his mantle [p'ālon] over the staff like a tent [z-vran]. The water was like an arch [z-kamar] above me. And he made the sign of the cross as a seal [khach'akn'ebts'] in four directions and all became luminous. And I rested as though in a palace of light [i hangstan ibrew luseghen darpasi: the word for palace here, darpas, is the same as in the narratives of Sanasar's submarine adventure]. And he said, "Stay here while I go and fulfill the requests of pilgrims." And on Monday he returned and brought me two holy wafers [nshkhark']: I ate them and grew strong. And thus, every Saturday he brought me two holy wafers. But today he said to me, "Lo! Your father and mother are coming to my tomb on pilgrimage. I'll take you and give you to them." And he took me up and drew me out of the sea; suddenly I saw myself upon his tomb. And he gave me the napkin [Turkish aghlukht] of his hands as a sign: "By this your parent's eyes be restored to light." And when they kissed the holy napkin [olastamkn: here, the classical Armenian word is used of the holy napkin that retained Christ's visage], their eyes were illuminated. And those who saw and heard were all astonished and amazed and gave glory to God and to the holy doctor Narekats'i.

and palace at Gamii as the "summer palace" of the pre-Christian Armenian Anasid king Trilat (Tridates): There is a Greek inscription of Tolid I (first century A.D.) there. If there is a grain of truth to this strange description, the building might have been a Zoroastrian bagin (magical shrine) containing small statues of the thirty-three yazatas and seven Amesha Spentas, totaling forty though, it must be admitted, forty is the all-purpose number of the Near East, with a large statue of the supreme Creator God, Ahura Mazda (Aramard) in the main hall. A building at Parthian Anasid Nisa contained numerous niches with painted cult statues, and Armenian Anasid kings made pilgrimages to that home city of their divinized ancestors.

14. St. Gregory of Narek (Grigor Narekats'i), *Book of Lamentation* (Armenian *Matean oghbergut'ean*), ch. 82 (M= edition of P. Khach'atryan, A. Ghazinyan, Erevan: Academy of Sciences of the Armenian SSR, 1985).

(In the manuscripts, this chapter usually bears a title indicating it is addressed to the Apostles [Armenian *Arrak'elots'*]; however from the imagery of salvation from a dragon [*vishap*] in the depths it is clear how this prayer might have contributed to the legend about St. Gregory saving a drowning child. In most editions the text is printed as prose; I have followed here the strophic divisions of the M edition: sub-chapter, page, and line numbers refer also to that edition.)

(I) (p. 576) Beneficent Lord God, king of many gifts, / redoubt of life, image of light, place of repose wide in conception; / who was incarnated for the sake of me, a sinner, / you have shaped things past recounting, prepared miracles, / till you accomplished even that which was told, by your divinity through which all is replete. / Now, for the sake of the holy Apostle / appointed by ordination by your celestially formed hands, / and anointed by your Holy Spirit, / whose meet praise as best I can, / (line 10) for your glory, Lord of all, I have served in another meditation,³⁰ / have mercy on me, too, by the loving memory of their election. / Prepare for me through them a path of departure into desired bliss.³¹ / May there be audible to me in sweet welcoming into life the sound of their kind shepherdling. / May I have a part in the certainty of salvation of celebrated hope / (p. 577) with the guides into life, the first graces of my own honor³²— / of the glorified of the orders³³—of the rational Watchers,³⁴ / Evangelists of the

heights, glorious princes, / resplendent in a crown ablaze with light, / for the adornment of the inalienable power of the grace of the shining ones / (line 20) who are perfected by the oil of joy of the light of the Lord. / (II) With the disciples of your great command, / exalted, of God the Christ, / and through the act of martyrdom of those chosen for your witness, / who in their mortal and grief-stricken bodies, / with limbs imperiled and full-burdened, / in terrestrially confined and earth-compacted nature / warred against all the elements of substantial existence / and were crowned, raised up, and spiritually brought to life, / ascending valorously [*ariabar*] from the earth, as the prophet declares,³⁵ / (30) true witnesses to the ultimate tribulation of death, / seers in this world of the intelligible invisible things and of things hidden, / and of undoubted good things made visible through hope. / Disciples of the Apostles and sharers of the tribulations of the same, / made equal to them in deeds, / in perfected and undiminishing fullness, / dance in the feasting of beatitude unbounded by space: / By their pleasing and acceptable prayers, / with the praise of their supplications offered in blood, dedicated in labor, with sweat redolent of frankincense, / receive me, renewed together with them, / (40) my portion recorded in you with them, in certain salvation. / (III) With those daubed in blood by the play of fire and the sword, / the ascetics, holy fathers, hermits, / and those who follow you, Son of God, / in invincible bravery [*k'ajut'eamb*] and sincere chastity,³⁶ / fighting valiantly [*ariapes*] against the tyranny of my haughty, savage flesh, / (p. 578) by the same they vanquished incorporeal Belial, / and on the field of perpetual war, the arena of this life, / without recoiling from the weight of the burden, / from the broad-billowing breakers of the sea of this world,³⁷ / (50)

30. M, in note 4, suggests this refers to his Encomium to the apostles (*Nerboghean govesti, asats'eal i hamawren gunds arrak'elots' n . . .*).

31. In "path of departure" [Armenian, *shavigh elits'*], the first word is a loan from Aramaic (cf. Hebrew *Shavil* and Arabic *sabil* [as in the metaphorical Qur'anic expression *fi sabil Allah*, "In the Way of God"]). *Elits'* is genitive plural of *elk'*, "Exodus": The term means in the context of the Narek the departure of the soul from the body at death and its upward transit to the next world. Thus Narekats'i invokes straightaway the image of shepherds on a mountainside: an everyday scene for any Armenian. But, as will be seen below, the association for the Armenian reader with the biblical connotation of safe passage across the sea bottom is apposite also. Narekats'i uses it as a figure; the pious believers of the Van area evidently took it literally when, using folk and epic motifs, they constructed legends about the saint.

32. That is, the apostles who were the first men accorded the gracious honor of our Lord's high priesthood: Gregory is himself a bishop.

33. This refers to the angelic orders defined by Pseudo-Dionysius the Areopagite.

34. Armenian *getots'* (of rivers), found in many editions, is certainly erroneous. One should read, rather, *"ditats"*, genitive plural of *det*, "(angelic) Watcher." The latter would both translate Greek *egregoros* (for Aramaic *'irin* [*qadishin*], "holy Watchers"), a vigilant angel, and be a hidden pun thereby on Gregory's own name. See also note 5 in M.

35. M, note 7: a reference to Samuel or Elijah, cf. I Kings 28.13–14 and 4 Kings 2.11.

36. Though *ari* (brave) manly at several points in the text and *k'aj* (brave) here are entirely compatible with the Christian conception of the soldier martyr and ascetic warrior, champion against temptation (cf. the discussion of Martyropolis, *supra*), both words have deep resonances in the pre-Christian traditions that shaped in large part the Armenian heroic epic of *šasun*. Armenian *ari* echoes both *ayr* (man) and that much-abused epithet *arya-* (noble, Iranian, Aryan [!]); and it is a royal epithet in an epic fragment on the second-century B.C. King Artashes (Artaxias I, *apud* Movses Khorenats'i II.50: see J. R. Russell, *Bosphorus Nights: The Complete Lyric Poems of Bedros Tourian*, Harvard Armenian Texts and Studies 10 [Cambridge, Mass.: 2006], p. 149, on the continuing resonance of the passage in Armenian poetry). The word *k'aj* (brave), a constant epithet in heroic epic, refers in Armenian mythology also to a high-born race of mountain giants and similarly has retained its marked resonance down to our day (see *ibid.*, p. 64).

37. This phrase is typical in its intricacy of Narekats'i's poetics, and serves to draw the reader's attention dramatically to the introduction of the important theme of the sea introduced here and reiterated sporadically till the end of the prayer. In Armenian, it is *i laynatsaval tsp'anats' ashkharhis tsou*: The alliterative pattern here repeats the sound */ts/* thrice, the third after an allophonic intrusion that intensifies the resumptive resonance made possible by repetition of the spirant */v/*

riding the ark [*tapanakav*] of my body's solidity, / they made the souls in lightness fly [*t'rruts'eal*], / and reached the ship's haven [*navahangistn*] of life.³⁸ / And as the lovers of their celestial portion, / without thought for things behind, / they bound truly to their heads boldly / and in bright splendor the diadem of victory. / For the sake of their prayers in this world and dedicated supplications, / receive me also, a sinner from the midst of the guilty, with them. / (IV) And now, mingling my unclean words / (line 60) with the glorificatory, prayerful declarations of the blessed ones above inscribed, / who cry on my account for your favor, / I, too, with them, as one who offers bitter things in place of the sweet, / or a sharp nettle instead of smoothness, / ugliness in the place of comeliness, / and filth instead of the beauty of a pearl, / or soil instead of pure gold, / or yet worthless stones in place of shining silver, / negation in the place of truth, / or gritty sand instead of soft bread. / (70) Now heed, O powerful, capable, extolled one, / their praise on my behalf and mine with theirs in them, / for my salvation and your glory, / all-merciful, benevolent, blessed, / generous-minded, strong, unsearchable, / ineffable, certain, and uncreate.³⁹ / Thine are the gifts; thine, the graces. / You are beginning and cause of all that is good. / (V)(p. 579) You are not condemning, but liberating; / not the destroyer, but the discoverer; / (80) not the dealer of death, but the bringer to life; / not excluding, but ingathering; / not the betrayer, but the rescuer; / not the one who submerges [*enkgmhich*'], but the

one who lifts out [*veratsich*'];⁴⁰ / not throwing down, but raising up; / not cursing, but blessing; / not taking vengeance, but bestowing grace. / You are not the causer of wretchedness, but a comforter; / you do not refute, but inscribe; / you do not shake down, but sustain; / (90) not trip up, but assure; / you do not arrange the occasions of death, / but seek the means to life. / You are not moved to will destruction, / but to salvation in mercy. / You do not forget visitation, / nor cast away the good, / nor prohibit compassion; / nor bring sentence of oblivion, / but a writ of liberation. / (100) You are not hostile to generosity, / nor do you protest against grace, / nor abuse gifts, / nor condemn benefits freely bestowed, / nor shun munificence of mind, / nor abuse pardon, / nor accuse benevolence; / nor do you find dishonor in gentleness, / nor do you discount meekness: / to these are sent not sorrows, / (110) but sacrificial offerings in voice never stilled.⁴¹ / Lift away my sins, O powerful one, / loose my curses, O blessed one; / atone my debts, O merciful one; / (p. 580) erase my transgressions, O compassionate one; / let your finger come⁴² in visitation / and even here shall I be perfected. / What is easier for you, Lord, than these things, / and what is more important than them for me, the guilty one? / But, O providential one, cause breath again / (120) to breath renewal of the illumination of purifying grace / protecting my sinful spirit / and painting the portrait of my image that is created of you.⁴³ / (VI) Do not lead me, O merciful one, in an untimely hour, in too brief a time, / to

(*tsav . . . tsov*); and the /o/ and /u/ of the third element also mark it deeply from the previous vocalic predominance of /a/ (8x).

38. The ark (Armenian *tapan*) rested on the mountains of Ararat, so again Narekats'i has encoded multiple references to inundation, rescue, and ascent, making also the Armenian locus a prefiguration of the Israelite Exodus and thereby affirming not only the superiority of Christian Armenia as *versus Israel* to the Hebrews, but championing Armenian antiquity. The word *tapan* means also, as in the multiple usages of other Christian languages, a burial casket; so the metaphor of ascent of the soul from the body in the coffin is restated in the same figure of speech. *Navahangist* (lit., "ship's rest") reiterates the theme of Noah and Ararat; whilst *t'rruts'eal*, past participle of a causative verb of *t'rrch'im* (fly), will bear the multiple semantic values of sail, of enfranchised winged soul, and of the dove (of peace, of the Holy Spirit) flying out of Noah's cupped hands to return with the olive branch of good tidings.

39. The Armenian phrase *ancharr aneghts ev ansteghts* seems to encode also a kind of Trinitarian *charr* (speech) for Logos, *egh-* for Creation becoming, and *anegh* for God without beginning. The phrase also yields anagrammatically *a-st-va-ts*, "God." In ch. 3.1 of the *Matean*, Narekats'i acclaims the Lord as *hashtogh hogvots' hats*, "bread, sustainer of souls." Just as the phrase in this chapter is united by three apophatic negative prefixes in *an-*, the latter is marked by three in *h-*. It, too, encodes *ast-ov-ats*, "God," this time not anagrammatically but in acrophonic sequence; and the three substantives *Sustainer*, *Soul*, and *Bread* (cf. *Hic est corpus . . .*) again, and much more explicitly, symbolize the Trinity of Creator, Holy Spirit, and incarnate Son. Armenian *Astuts*, "God," is indeed probably to be derived from *has-tem* "create, sustain."

40. The two epithets evoke the image of a rescuer from drowning, which the folk legend transfers from the domain of God's metaphorical, salvific power to the local miracle of the saint himself; see also line 132 and n. 46.

41. *Och' k'amahis i hezut'eants' / och' arrak'in aysots'ik trjtmunk'*, / (110) *ayl anlrreli zohabanut'iunk'*. Line 108 is omitted from the Jerusalem St. James 1964 edition but restored in M. The change from first to third person suggests confusion in the manuscript tradition.

42. The Armenian has the figure *mato matn*; and one is to imagine the finger and hand of God as the emblem of visitation, as in Christian iconography from Armenia to the scene of the creation of Adam in the Sistine chapel!

43. Armenian *kendanagrea*, "make a portrait" (second person imperative) is a calque on Greek *zōgraphō*, lit., "write life." Here God is asked to breathe anew, restoring His own image, *k'oyinasteghts patker*. The latter word is a Parthian loan—cf. Pers. *paykar*—the former compound of Armenian *k'o* (thine) intensified by a possessive adjectival suffix—*yin* to which *steghts-* (create) is added, is a neologism typical of Narekats'i's need to bend language to his intricate conceptions. The Iranian word means both picture and eidolon: In the Sasanian inscription at Naqsh-e Rostam, its Greek equivalent is *prosōpon*, lit., "face" (on the Armenian use of *patker*, see J. R. Russell, "The Scepter of Tiridates," *Le Muséon* 114 [1–2, 2001], pp. 190–191, n. 11 [in *AIS* (note 3), pp. 1138–1139]). Here, then, the poet-mystic has multiplied the dimensions of *ut pictura poesis* into what one might call (allowing oneself a neologism) a kind of metekphrasis: Adam, the image of God, is reinscribed by God's moving finger (see the play on *matn* [finger] above) and fiery breath as a New Adam and reanimated image.

follow an imperfect [ankatar] road, short of hand [apadzernut'eamb], without provisions [ant'oshak].⁴⁴ / Do not proffer a cup of bitterness in the hour of thirst. / O compassionate one, do not close before me the success of my spiritual help, / nor let death's night chance upon me / like a sudden raid of hostile hordes.⁴⁵ / Let not the withering heat in a moment of unpreparedness dry and cut off my roots; / (130) nor let lunar assaults secretly harm. / Let not the ice of my sins grip me, / nor the rivers in spate of this life drown me.⁴⁶ / Let not rest bring death, / nor sleep advance my ruin, / nor yet slumber be my perdition, / nor somnolence work destruction. / Let not an unprepared end rush in, / nor the upward exhalation of my breath be seized and cast low. / (VII) You are Lord; you, compassionate; you, beneficent; / (140) you, generous of mind; you, all-powerful; / of every thing, you,

ineffable in your unapproachability, are capable: / to atone, save, revive, / enlighten, restore all new, / snatch back to life / from the fangs of devouring beasts / or dragons' teeth [i zhaneats' kerch'ats' gazanats' ew kam yatamants' vishapants' i keans korzel], / from the depths of abysses to lead into the light of gladness [i khorots' andndots' i loys berkrut'ean atsel], / out of drowning in the waves of sin [i heghdzmane tsp'anats' meg hats] / to erithrone [bazzmets'uts'anel] amidst the beatific righteous [ardars] in glory.⁴⁷ / Every spirit waits upon you in expectant hope, / (150) longing for your grace— / whether heavenly or earthly, / whether fallen in sin or upraised in righteousness, / whether lord or servant, / lady or maidservant. / And in your hand is the life breath of all. / And to you, with the Father and your Holy Spirit, / glory for ever and ever, / Amen.

44. The use in the strophe of three negative adjectives should at once capture the curiosity of the careful reader of the *Narek*. The road is that into the Otherworld, so "imperfect" (*ankatar*) has reference to those whose lives were "perfected" in martyrdom: *katarem* is the standard term for the death of a holy man. Narekats'i uses elsewhere the phrase *apadzern ant'oshakut'i*uns: The first term means "empty-handed," and probably refers metaphorically to one's own deeds. Armenian *t'oshak* (an Iranian loan), means, like Persian *tûsheh*, provisions for a journey. Thus, Sanâ'i wrote: *Sâqiyâ! may deh ke joz-e may na-shekand in zohd-e rang-âmîz-râ. / Din-e Zardoshtî ô râh-e qalandar chand chand tûsheh bâyard sâkhtan mar râh-e jân-âmîz-râ* (O wine-bearer! Give me wine, for without it one cannot escape this materialist asceticism. / One must make of Zoroastrianism and the Qalandari dervish way provision for the spiritual road). Professor Maria Subtelny of the University of Toronto notes that in Nezâmi's *Layla and Majnun*, the lovesick girl tells her mother she will be taking the pains of her love for Majnûn as provisions for the road (*râh-tûsheh*), that is, to the grave and beyond. Dr. Dalia Yasharpour, Harvard University, informs me that in Judaeo-Persian literature, too, *tûsheh* refers specifically to provision for the soul's journey after death to the Otherworld. In modern Armenian, *t'oshak* is not something one provides for oneself, though: It is a stipend or grant. So perhaps in the *Narek apadzern* implies what one has not taken oneself; but *ant'oshak* means that which one has not been given and refers specifically to grace. In any case, the *t'oshak* in classical Armenian usage is, as in the varieties of literary New Persian, provision specifically for the journey to the next world. Hâfez wrote that the mystics in the *bahr-e 'amiq* "deep sea" of the world *qerqeh gashtand ô na gashtand bâ âb âlûdeh* "were submerged and with water were not stained": compare this to Sanasar's safe submarine passage! As elsewhere in Armenian and Iranian tradition, the heroic quest—in this case, the submarine journey—may be regarded metaphorically as a mystical journey.

45. Armenian *aspatak*, with Iranian *asp* (horse) and *hen* (from Avestan *haēna-* [hostile army]), conjures a vivid picture of the sort of mounted semi-nomadic marauders who terrorized Armenian territory and made life continually perilous for the sedentary population. The next several lines pursue, indeed, similes of farming and cultivation.

46. Here Narekats'i deploys the arsenal of Armenian onomatopoeia and alliteration to evoke the image of drowning he has used earlier: *ughkh-k'* (river, brook) and *oghogh-ests'en* (whelm in third person aorist subjunctive).

47. Lines 139–148 create the picture of one drowning, seized by a *vishap* then saved, returned to the light of the sun, and seated in honor. It is all conceived as metaphor, with proximal reference to the tale of the prophet Jonah depicted in bas-relief at Aght'amar, near Arter and opposite Narekavank; and its deeper resonance is the *vishap*-lore of the Van area. But the lines surely contributed in their turn to the legend of Narekats'i's rescue of a drowning child; and, with the additional legend of Arter, to the versions of the Sasun epic that involve the saint's islet.

THE MEMORY PALACE OF ST. GRIGOR NAREKAC'I *

"A sense of unspeakable security is in me at this moment on account of your having understood the book... By what right do you drink from my flagon of life? And when I put it to my lips they are yours, not mine. I feel that the Godhead is broken up like the bread at the Supper, and that we are the pieces. Hence this infinite fraternity of feeling."¹

The pioneering work of the late Frances Yates, developed and refined by Mary Carruthers and an increasing number of other scholars, has shown how important a role the *ars memorativa*, the art of memory of Classical Antiquity, played in the intellectual and spiritual life, both of European mediaeval Christendom and of the Renaissance. I would like to explore its use in the work of St. Gregory of Narek, Arm. Grigor Narekac'i. Aristotle, though not the first Greek to employ mnemonic techniques, was the first who articulated the theory on which the art was to be founded: the presence of an image, *phantasma*, is necessary, he suggested, to the function of *mnēmē*, memory. Order and regularity then facilitate recollection, *anamnēsis*. Sensation and the more voluntary exercise of imagination (he calls the latter *phantasia aisthētikē*, evocation of a felt image, as it were) are linked to me-

memory; and he adds that memory seems to proceed from *topoi*, places.² Cicero describes anecdotally how the Greek poet Simonides employed the art of memory; and the Latin texts *Ad Herennium*, generally attributed to Cicero, and Quintillian's *De institutione oratoria*, following Aristotle's principles, teach the art systematically. It was a very practical skill. A Roman lawyer or politician did not deliver a speech from a written text: had he done so, his argument would have lost its force in the reception of his hearers. He orated from memory; and the technique suggested was to memorize one's planned speech while walking through the furnished rooms of a deserted house, associating the progression of ideas with the harmonious elements of the three-dimensional picture through which one moved. This was not the rote memorization that Erasmus and Montaigne, at the far end of the mediaeval period, were to deplore as an impediment to the exercise of an active intelligence: in the proper exercise of the art, linkages of active and flexible reasoning and feeling went together with precise recollection of the factual details and rhetorical armature—aesthetic fantasy indeed.

This exercise required of the practitioner a deliberate cast of mind, *intentio*, which Carruthers explains as a creative tension that makes the mind taut, prepared to engrave a new memory or to recover a stored one. This mental attitude is not value-free: it has certain

* Paper presented at the international symposium on the millennium of St. Grigor Narekac'i, Harvard University, 11 October 2003.

² ROSSI 2000, p. 7.

moral overtones, reminding one of Jewish *Kavvanā* and Buddhist Mindfulness, and I will come to these presently – but there were purely practical considerations that made the art important, before its religious possibilities. I have already noted the social factor: an audience lost its respect for an orator reading from a written text, much as we might today disdain an actor who cannot remember his lines. (Americans long ago gave up expecting our politicians to be masters of rhetoric: most of our leaders these days cannot manage complex, coherent sentences in English.) There are other aspects as well that made memory important in ways one must make a conscious effort now to appreciate. There were in antiquity few inexpensive or durable recording media or means of transmission and dissemination of information, and the average human life span was very brief; so the work of acquisition of knowledge and its transmission from one generation to the next, without which the maintenance of civilization should have been impossible, required efforts of Herculean prowess. It is not surprising, then, either that classical mnemonics long persisted, or that the mediaeval culture that inherited the art was itself memorial in character; for the material condition of culture had not changed appreciably from antiquity. Christianity added to the practice of mnemonics an explicitly moral dimension that is not stressed by the ancients – not so much because morality was absent from their conception of life as that paganism was innocent of the dogmatism that imposes its morality explicitly and universally. The new forms of the art might have acquired this moral facet, then, from Athens; but the propensity to articulate it came forth with the Law from Jerusalem.

Ancient Judaism valued mnemonics: the faith was from early times as much an intellectual system of books and of learning requiring powers of acquisition as it was a spiritual discipline of faith and practice. The two purposes were not really separable, either. Memory, Hebrew *zikārōn*, is a moral imperative as well: the act of remembering Creation, the Exodus, the Covenant at Sinai, and other events is an

essential aspect of the celebration of all festivals, from the weekly Sabbath to the high holidays of the New Year. This memory infuses the believer with consciousness of the grace of God towards the cosmos, mankind, and His chosen people. The flux of history in the light of patterned religious memory is seen thus as the growth of a relationship, the refinement of the soul, and the strengthening of the ties of responsibility and care that bind the worshipper to his God and the members of the community to each other. Each ritual act also is made by memory to enter the numinous realm, *in illo tempore*: the ruinous, separating aspect of times is erased. We shall see presently how the Christian theory and practice of memory deal similarly with the burden of time passing.³

Though one ought to speak properly of Judaism in the present as a religion that has continued to grow over millennia, mostly without theological reference to its younger

³ In the thirty-third prose poem of *Le Spleen de Paris*, Charles Baudelaire prescribes oblivion, not memory, against the pain of time's passage: *Il faut être toujours ivre. Tout est là: c'est l'unique question. Pour ne pas sentir l'horrible fardeau de Temps qui brise vos épaules et vous penche vers la terre...* In the novel *To the Lighthouse*, Virginia Woolf's heroine mends the terrible rent of the chapter "Time Passes" by completing a painting which seeks and recaptures the past, and which is also the perfection of a vision. The work of art freezes time, as religious sensibility strives to do. But carnal, realistic memory cannot perform this mental trick, and stares into the face only of the deleterious power of time – the only salvation from horror in such a case is then either compassion for the universal suffering intrinsic to the human state, or else the cold courage of the existentialist's acceptance (the former option, which has much in common with Buddhist philosophy, takes courage also). The memorious archaeology of looking up a lover of one's youth who has since aged and changed, is the kind of real and personal ritual recollection that stands in contrast to the mythological mnemonics of the Abrahamic religions: see, for instance, the novel by Mark Merlis, *Man about Town*, New York: Fourth Estate, 2003; and, on the level of literary history, Gilbert Adair, *The Real Tazio*, New York: Carroll and Graf, 2003.

siblings, Christianity and Islam, Israel became in the Christian cosmology a fixed substrate of vital relevance only to the past: Christians, creating for themselves the appellation of the New Israel in an act of appropriation, absorbed the morally tinged charge to remember of the Old, whilst categorizing the various events of the Old Testament as a fixed set of symbolic, almost code-like prefigurings upon which the parallel chain of events in the New Testament might be superimposed as perfections and fulfillments. These events concern the incarnation of God Himself and His self-sacrifice for us. The large themes of Divine love and care adumbrated by the Hebrew Bible in chronological progression, for the large universe first, for all mankind next, and then more specifically for Abraham and his legal progeny—Israel—continue in Christian symbolism to narrow, as it were, to the irreducibly specific point and emotional climax of the life of the single God-man. With Him, the focus widens again to the entire cosmos, the Covenant limited no longer to any particular nation. Armenian Christians have often perceived themselves as new Maccabees and a new Israel, not in a universal sense, but in a very special, national, particular way. I will return to this point below; for now it is important simply to stress that in Armenian writings the issue of memory is pulled in two directions: there is Armenian national memory, in which the history of St. Gregory the Illuminator, artificially elevated to the rank of an Apostle, the revelation of the Armenian script to St. Mesrop Maštoc', and the martyrdom of Sts. Lewond and Vardan and their companions, are equated with—and often elevated above—Old Testament (and, sometimes, even New Testament!) paradigms. The second is general, Biblical, Christian; and when employed with political purposes it represents the striving of the Armenians, often an embattled and isolated Christian island in an Iranian or Moslem sea, to gain recognition by others as a part of Christendom and of Western civilization. This aspect stresses Armenia's belonging, rather than its separateness.

There is also a third aspect of the treatment of memory, conditioned by the Iranian,

Zoroastrian cultural substrate in Armenia that includes stress upon the significance of religious memory. The Gospels themselves are called in Armenian *awetaran*, for which an etymology from Middle Iranian meaning "a collection of memorials" has been reasonably suggested by Prof. C. de Lamberterie. This would correspond, not only to a known—if somewhat rare—Greek designation of the Gospels, but also to the pre-Islamic Iranian practice of entitling epic narratives about legendary heroes of Zoroastrian sacred tradition as memorials, *ayādgār-ān* (with the same etymon, Phl. *ayād*, as seems to be reflected in an earlier form in the Armenian *awet-*). If the word *awetaran* waited long for this proposed etymology from Iranian,⁴ the common Armenian base *yuš*—"remember" (*yišel. yišatak*), at least, has long been recognized as a Middle Iranian loan. So Armenian tradition focusses doubly, from Iranian substrate and from Christian learning, on the aspect of memorial in Scripture. The Christian theologian is then charged to extract from the Gospels' four-fold narrative of a precious single life all its cosmic meaning, in all its divine symmetry. Associated to the *ars memorativa* of the orator now is

⁴ A problem of the suggestion, DE LAMBERTERIE 1996, is that the very common Arm. *awetik'* means "good tidings" and is semantically connected to the idea of memory only through the sense of a "happy reminder" or the like. It may be that this is a wholly secondary meaning, affected by the understanding of the Greek name of the Gospels, *Euangelion*. But if that is not the case, then one might propose, very hesitantly, a pre-Arsacid borrowing, with a devoicing in speech of the intervocalic -d-, from Iranian *ā- *vaēd-aya-*, "to proclaim forth", yielding Arm. *aweti(k)*, probably in the Achaemenian period—though the evidence for treatment of -d->-r- in Arm. certainly predates the loans from Middle Iranian. And in Clas. Arm. this putative form would rub shoulders, of course, with the religiously potent (and regularly formed) loan *nuēr* "consecration", cf. Av. *ni-vaēd-aya-* in Yasna 11.14. We encounter in Arm. the same form from different periods: cf. Arm. Spandaramet, "Dionysos", from NWMlr., vs. *sandarametk'*, "chthonic demons", from OP.; or *pašīpan*, "defender" from NWMlr., vs. *p'uštīpan*, "bodyguard", from MP.

a kind of subset of it, the homiletic craft, the *ars predicandi*, which pursued the “practical aims of rhetorical persuasion, and need to construct images able to provoke controllable emotions.”⁵ Forgetfulness, by contrast, is for Christians not just disadvantageous but morally perilous, and *lēthē* is the vile sleep that makes for perdition. The various philosophical cults characterized as Gnostic, to a greater or lesser degree Platonic in their disposition and intersecting more or less thoroughly with the diverse types of nascent Christianity or Iranian dualism, agreed that the tragedy that lies at the base of the human predicament is not so much primordial sin and its effects as ignorance of what happened to get us where we are—Wordsworth’s “a sleep and a forgetting”. Gnosis is a martial reconquest of usurped memory. Here one can compare the Christian ascetic and saint, whose vigilance and wakefulness—strivings not to sleep, not to forget—are so often evoked in athletic and military terms. St. Gregory of Narek knew well the Greek meaning and sense of his name, *grēgoros*, “awake, alert” (Arm. *art’un*, *hskot*: in Arm., accordingly, the *Zuart’unk’* are the watchful angels called in Aramaic *’Irīn*, Gk. *Egrēgoroi*): this understanding combines with the fact that it was also the Christian name bestowed upon the Arsacid prince who became the Illuminator of Armenia, to whom Narekac’i dedicated hymns, and who was for him so much the exemplar of the holy champion and priest, and theologian.

It is of passing interest that it is only in these and a very few other liturgical poems and orations that Narekac’i uses the terms “Armenia” and “Armenian” (*Hayastan*. *Hayk*, *Ask’anaz*, *T’orgom*, etc., the latter two being of course Biblical Ashkenaz—the Scythians—and Togarmah).⁶ There are oblique allusions in

his major work, the *Matean olbergut’ean*, “Book of Lamentation”, to the local lore of the region of Lake Van. He describes—a typical Armenian house. One prayer is patterned upon the form of a *gaylakap*, a folk spell against wolves. He mentions Ararat—but it is a Biblical mountain, as well as an Armenian one. The name of his people and country never appears there at all. The *Narek* has been praised as an Armenian *Divine Comedy*; its author, as an Armenian Dante, or even a Dostoyevsky. Such comparisons are so wide of the mark that they distort more than illuminate: Narekac’i’s language in the *Matean* (the *tals* can be more idiomatic) is as pure a *grabar* as his age allows; Dante departed from Latin to write *The Divine Comedy* in Italian, with much loving specificity about Italians. St. Gregory of Narek has none of this.⁷ His focus is inwardly personal and vastly cosmic: the world that we inhabit in between the two extremes is of interest to him only insofar as monastic establishments (*vank’*, *krawnastan*) or images useful to personal reflection and salvation are concerned. In the *Matean*, ch. 72.4, he declares: *Yawazanē koč’ec’ay Art’un, ew es i*

⁷ Prof. J.-P. Mahé has written judiciously of Narekac’i and Augustine. Comparisons may be made, but the danger is that people eager to praise the Armenian saint by comparing him to any world-famous Western classic will not be likewise judicious. So let it be said here that the differences between the Roman of Thagaste of the fourth century and the Armenian of the tenth are incommensurably greater than the similarities: Augustine’s *Confessions* are the first realistic autobiography in Christendom, the work of a man who lived pagan and classical life to the fullest and could be descriptive and candid and precise about the physical minutiae of his existence. Nobody till Montaigne did that again, or could do it, in the lands beneath the shadow of Cross or Crescent. If you read the *Matean*, you will never discover such things as the theft of pears by boys on a lark, the flapping of a curtain during a lesson on literature at school, or a youth’s embarrassment at his first erection when he is at the *thermae* with his pleased father. There is no house shared by eager young professionals, no garden, not even an angelic voice bidding the author “Take it and read.”

⁵ ROSSI 2000, p. 14.

⁶ An example is Narekac’i’s oration on the Cross of Aparan in Mokk’, the mountainous district south of Narek and the Van district, where the Armenians are called the progeny of Aškenaz (Gen. 10.3): see TASNAPEAN 1999, p. 10.

k'un mahu nñec', i p'rkut'ean awur Hskol yorjörjēc'ay, bayc' zgastut'eann ac's kap'uc'i. "I was called Awake at the baptismal font, and I fell asleep in death's slumber; on the day of salvation I was proclaimed Vigilant, but I shut my eyes fast against sobriety." The passage renders two terms, Gregory and *egrēgoros*, variously into Armenian; and the linkage of the underlying Greek words heightens the subtext: neither as a baptized man, Gregory, nor as a consecrated priest elevated to the company of the Illuminator, even to the angelic orders, *egrēgoros*, is the lamenting petitioner capable of that memory without which alertness is of no use. Memory within religious practice is so critical that it cannot be merely factual, but must have a determining moral content. What is it, in the *Narek*? It is in its way like that of the Gnostic: my failure is on the same scale as the primordial cosmic tragedy. They are one. The difference is that for the Gnostic, to hell with the cosmos; for the Christian, the cosmos is my personal responsibility and guilt. But neither has time for what is in between my microcosm and the universal macrocosm—the sounds of vendors in the morning on a street in fourth-century Alexandria, for the Gnostic, perhaps, or, for St. Gregory, the plowman and his oxen, just below the monastery hill in tenth-century Vaspurakan.⁸

In a recent monograph, *The Ethics of Memory*, the philosopher Avishai Margalit suggests that most specific remembrance is ethical and has to do with those near and dear

to us—what he calls "thick relations"—while less of our memory, both as to content and precision, is moral, and has to do with "thin relations"—that is, humanity in general, people we do not know. Margalit suggests the Christian project is to make all relations "thick", to make the sphere of meaningful and intense memory include every being.⁹ It would seem to be a romantic intention, more emotionally appealing than practicable; but it would appear that Narekac'i's method of effecting it is to telescope Biblical allusions and the varieties of actual imagery (his vices as swarms of vermin and bugs; his spiritual crisis, as a shipwreck) into himself and, by extension, into the imagination of the reader, the drama of damnation or salvation of this soul then becoming the entire concern of Heaven. In Ch. 3 he addresses his words to all classes and people at all times and in all countries. This implication is all there is of the middle between individual and universe: exclusion of any more specific mention of that middle—as Armenia, or whatever—makes all cosmic ties "thick"; detailed evocation of the middle would "thin" them. Mention of Armenia would make the *Matean* national, self-involved, exclusionary, defeating its purpose and ill serving the readers

⁸ The choice between foci of memory is similar to the ethical decision anyone committed to a great cause must make about the degree to which she will allow abstract principles to impinge on the importance she accords to the small things of her own home, to the local, even the national. This is the dilemma the philosopher Richard Rorty takes on in his famous essay, "Wild Orchids and Trotsky". Faust's great, world-denying macrocosmic effusions deny the local, and they are hypocrisy—he wants this world and its love. So the little demons cry in gentle mockery, *Weh, weh, du hast sie zerstört, die schöne Welt*. Reflections on Faust long ago, and on Rorty, later, owe much to conversations with my friend Robert Briscoe.

⁹ MARGALIT 2002. In the Preface, on p. viii, the author recalls his parents in Israel during World War II debating what life was to be like after the extinction of the European Jews. His mother thought it right to do nothing more with life save dwell on their memory, as the Armenians had been doing—she asserted—since their genocide a generation before. His father disagreed, asserting one must carry on in the future, even if that requires a certain amount of intentional forgetting. Margalit began to wonder after that conversation how much and in what contexts it is proper for people to remember. It is an interesting, if painful, jumping off point: for Jews and Armenians at the time of this writing, detailed memory of one's murdered people has become a sacral imperative. In a sense, Narekac'i enjoyed the luxury to ignore being Armenian in the *Matean*, and focus upon his soul: his Armenia was a given—vast, secure in its sophisticated culture, seemingly eternal, unshadowed by any horror approaching that of the twentieth century.

of Armenian. The morality of memory in the *Narek* precludes dwelling upon the actuality of the tenth century or the author's native land. That is how all relations become thick.¹⁰

For the patterning required by a memorative, homiletical art, it is the architectural and geometrical metaphors Cicero and Quintilian preferred, that still offered to Christians the most effective system of images; except that instead of a quiet villa off the Via Appia, with its rooms as paragraphs and chairs and tables as individual rhetorical points, the practitioners of the *ars predicandi* employed bigger structures: the hierarchically-ordered cosmos of Ps.-Dionysius the Areopagite, with the hosts and circles of the angelic orders; the Garden of Eden, its four rivers, and the dimensions of the body of the primordial Adam (explored in the Hebrew *Ši'ur Qōmā*); the levels and measurements of the Ark of Noah (with the dimensions of Christ's body superimposed upon it); the holy Tabernacle and the tablets and other sacred objects it contained; the Temple of Solomon and its decorations, images, and furniture; Ezekiel's vision of the Divine Throne, with its divine figure, the four holy animals, and the divine Chariot (cf. the sophisticated Jewish mysticism of the *Merkavā*); and Christ Himself, His Cross, and His tomb. Paul's metaphor is the Christian *locus classicus*: he is a master builder, and man is the Temple of God, in which his spirit dwells (I Cor. 3.10-17). Carruthers comments that architectural patterns, thus employed, then become "dispositive heuristics"—devices for discovering further mean-

ings.¹¹ That is, the images have their own intrinsic complexity and can be understood as more-than one-on-one representations of the ideas they represent, leading the suitably prepared imager to envisage further symmetries and deeper symbolisms. The letter killeth, as it were, but the picture giveth life. In a way, it is alive itself. One speaks of the suitably prepared examiner and memorizer, since it is quite possible to possess an astonishingly sophisticated capacity to memorize a chain of data of any length, employing an array of synaesthetic mechanisms whereby a sound becomes a light, color, taste, tactile experience or object, distributed along a given imagined space—all without ever once having any of those elements lead to a second level of elaboration of reflection. Such is the case of the famous patient, known to us only as S., of the Soviet psychiatrist Alexander Romanovich Luria. According to the latter's case histories, compiled over decades, this man could memorize a list of nonsense syllables of almost any length, distributing the sequence of associated synaesthetic phenomena along familiar Moscow streets in the guise of various things, colors, and sounds, and then retrieve them many years later, in order and with perfect exactitude. It was a monstrously enlarged rote of the sort Erasmus might abominate, without that free play of thought whereby man raises his mind from the mechanical to the artistic.¹²

Twelfth-century Europe provides several striking examples of the use of architectural symbolism in tracts of mnemonic-homiletic

¹⁰ In recent years, Armenian literature and journalism have often been absorbed in a narcissistic omphaloskepsis, pondering the identity and fate of Armenia and Armenians, to the exclusion of other topics; but before modern times, Armenian writers tended more to write about human concerns, just doing so in a particular language and from the midst of a particular culture. So one may recall that in authentic Armenian homes, if there were books, they were, first the Gospel, the Psalter, and the *Narek*—none of which focusses on an Armenian theme.

¹¹ CARRUTHERS 2000, p. 18.

¹² See LURIA 1968. What is most striking about his famous study is its deep humanism and compassion, which remind one of the great American neurologist and writer, Oliver Sacks. The question arises, What makes the book so heartbreaking, why is Luria's capacity for pity so apposite? It is perhaps because the capacity of S. might have become art, had he possessed the greater freedom to enter those mental Moscow streets and dream and play. Instead the talent, monstrously, possessed him—so one sees a human being from whom the good of the intelligence has been cruelly torn.

type. Hugh of St. Victor's *De arca Noe mystica* provides detailed instructions for the mental construction of a model of the tripartite Ark of Noah, which is itself likened to Tabernacle and Temple. The schema includes lists of Old Testament figures, Biblical books, the stations of the Israelites in the desert, the angelic orders, the Tree of Paradise, the four directions of the compass (which the letters of Adam's name spell out in Greek; so he is here the Primal Man), ladders of ascent, and Christ Himself at the center. The exercise has been likened to the Indian and later Tibetan Buddhist practice of visualizing a *mandala*, a circle with gates at the four cardinal points and many other details, to which it is strikingly similar. The psychiatrist C.G. Jung found that patients drew such complex mandalas without prior training or knowledge and derived therapeutic benefit from them. Characteristically he sought an explanation in the theory of archetypes; but one might reasonably argue that the circle as a symbol of perfection (or a halo) is sensibly ingrained in European imagination; as are, of course, the various quaternities of directions and the Cross. The store of geometric figures available to human meditation is generally rather limited. Another brother of Hugh's monastery prepared a similar mnemonic treatise in which the object of mnemonic visualization is the divine Throne in the vision of the prophet Ezekiel; and Alan of Lille focussed upon one of the Seraphim in a work which employs a mnemonic based upon the six wings of the heavenly being to list the stages of penance. Alan was a poet; so the terms in his lists are also chosen so as to be alliterative in sound, allowing an aesthetic and emotional affect to facilitate further the process of memorization.¹³

We can observe some similarities in the great monument of Armenian spirituality, the *Matean olbergut'ean* ("Book of Lamentation") of the tenth-century mystical poet and theologian, St. Gregory of Narek, and in some other,

shorter works of his. It has long been recognized that the overall structure of the *Matean* corresponds to the three parts of a church—porch, nave, and altar—and, simultaneously, to the three stages of the Divine Liturgy; so that the worshipper employing the prayers of the book proceeds in his imagination spatially, temporally, and imaginatively through the perfecting stages of the Christian mystery. Since this progress is an ascent, one is reminded also of the three levels of the Ark of Noah; and of earth, the middle air of the sky (Arm. *an̄ṛpet*), and heaven. Litanies of alliterative images superimposed upon each other produce the emotional, cathartic abreaction of tears sought by Christian mystics, and in Armenian tradition particularly known through the writings of St. Ephrem Syrus; whilst the author refers obliquely or by chapter and verse to Biblical passages and characters. It is possible either to pass over these strings of references or thoroughly to research each; and if one takes the latter option, it quickly becomes clear that the meanings of the Biblical texts, or of the Scriptural images evoked, comment upon each other, creating a second level of complexity, of a textual, rather than pictorial, "dispositive heuristics". It is thus possible to employ most of the *Matean* as a book of prayer alone, or as a theological work as well: Gregory at the outset declares that his work is intended for all classes and stations of believers in the world. The qualification "most" is necessary, because the great theological meditations on the Nicene Creed and on the Holy Chrism in the culminating third of the book are perhaps less accessible than shorter chapters to the untrained.¹⁴

¹⁴ For discussion of these themes, see RUSSELL 1996-1997. The long chapters, especially no. 75, on the Creed, differ from other prayers in the Book sufficiently for one to suggest that Narekac'i did not so much compose the whole in later life as arrange, and edit diverse meditations composed over the years, adding within them the occasional mention of "this book" (*aysr mateni*, etc.) to pull the chapters together, much as a scholar now might make a book of studies written at different times, inserting cross references in the course of

¹³ CARRUTHERS & ZIOLKOWSKI 2002, pp. 42-47, 50, 69, 84.

Memory and architectural metaphor frequently go together in the *Matean*: Narekac'i speaks of his book as a *(māh)arjan*, literally, "(death) monument"—to a resident of New England this evokes the rather dismal image of a thin, small tablet of slate emblazoned with a skull and crossbones or winged hourglass; but in Armenia the object is more often a lofty stele with scenes in relief of Biblical and local sacred history, or else the noble *xač'k'ar*, a Cross-stone. The latter is often a cosmogram: the Cross, blossoming as a Tree of Life, surmounts the cosmic symbols of a stepped mountain and a disk inscribed with radiating spirals. And in any case the term *maharjan* in Arm. lost early its exclusive association with death, coming to mean any towering monument or even decoration.

If, however, we consider Narekac'i's use of *maharjan* in its literal sense, the association with death raises some interesting aspects that are relevant to this exploration of his use of memory. A number of mediaeval European sarcophagi are constructed as *simulacra* (the same word employed for images in the *ars memorativa*) of houses, sometimes with scenes in bas relief separated by arcades—enabling the viewer to proceed from one scene to the next as though progressing through a house used for the mnemonic art. The Armenian monumental steles have separate scenes in bas relief, divided vertically, of sacred history; and there are a number of tombs, belonging to a school that flourished, notably, in the regions of Zangezur and Arc'ax, with horizontal scenes of the life of the departed. The imagery of these is sometimes very archaic, suggesting a longer tradition than the relatively late date of the ones studied might otherwise imply.¹⁵ The tomb of a saint might be screened, in the manner of the Catholic *fenestella confes-*

sionis—and this raises the association, frequent in the *Matean*, of recollection with *xostovanut' iwn*, confession. The Subvenite hymn of the Catholic funeral service asks angels and saints to raise (*suscipere*) the soul: the verb is the same the Romans used for a father raising a newborn child from the ground to acknowledge it.¹⁶ In the Armenian case, Narekac'i prays thus to be raised up at death: *et' ē nkateal dimec' ic' i ver yamenagraw ulin soskali, hreštak k'o xalahut' ean k'alc' rut' eamb inj patahesc' ē. C'oyc' inj, Tēr, i yelic' n awur šnč' oys arjakman, mak' rut' ean ogi lusov ambarjeal i yerknaworac' n erjankac' pargewawk' siroy k'oy ekeal haseal*, "If I direct my gaze upwards onto the all-seizing and frightful path, may your angel of peace meet me in sweetness. Show me, O Lord, on the day of departure, the release of my breath, a spirit of purity arisen in light from amongst the blessed heavenly ones, coming and arriving with the gifts of your love" (*Matean*, 2.2). The common Armenian belief is that the angel Gabriel, armed, with the written decree of death, comes and removes the soul, which is in the form of a swaddled baby (cf. the Latin association with a newborn child). The epithet *amenagraw* is used by Narekac'i in Ch. 8.1 of *Tartarus*; and this characterization of Hell, literally the hollow place under the earth, into which all is taken, is probably of common Indo-European antiquity, though the Arm. adjective includes a Mlr. loan, from *grab*—"seize" (cf. NP. *gereftan*). The old Armenian ballad of prince Aslan and Gabriel, the angel of death, is a local treatment of the mythologem of Alcestis; and in Greek both her name ("seizing") and that of her husband, Admetus ("indomitable"), are good epithets for Hades (as indeed is the name of Eurydice, lit. "of wide-spreading justice", in the related mythological complex of Orpheus).¹⁷ Narekac'i's use of the epithet thus introduces a subtle contradiction, or perhaps conflation of two

her editing. For why else would it have been necessary for Narekac'i's brother to work on the Book with him? Gregory perhaps read from a previous text, making oral insertions his brother duly took down as he recopied.

¹⁵ See RUSSELL 2001.

¹⁷ See RUSSELL 2002, esp. p. 170 and n. 27.

contradictory realities: when he looks up to heaven, he sees a path that will lead sinners down to hell. It is possible here too to imagine the archaic conception of the night sky as a dark, inverted world: how else, indeed, can the angel, the light spirit rise (*ambainam>ambarjeal*) to descend to Gregory to take his soul at the “release of the breath” (literally *nir-vāna*!)? The word *arjakman*, gen. sg. of *arjakumn*, from MĠr. *harz*—“release” (cf. also the Arm. loan *apaharzan*, “divorce”), in the second strophe may encode *arjan*, “monument”, to which it is probably etymologically related as well; and the visual aspect is stressed by the preceding imper. 2 sg. *c'oyc'*, “show!” It is true Gregory wishes his soul to see the angel; but there is another implied beholder—the reader—of the truly monumental scene. The image of the grave monument for Narekac'i is thus one of memory for the beholder, and of the reminding of future events for him—and this memory-in-reverse is apposite, since the Cross of the grave-stone becomes, literally, the Gate (Arm. *drunk'*, see below) into the other-world that reverses and inverts this one. “The things of this world must be looked at in reverse, to be seen the right way round.”¹⁸

The *Matean* itself begins, appropriately, with a preface, or Theses (*Drut'iwnk'*), or Doors (*Drunk'*, as the title is also frequently given in MSS.), into which the image of the Cross is verbally encoded, the literal or symbolic attributes of Christ's body and the Cross upon which He is splayed mentioned exactly at the points on the page where they might be, had one drawn a picture: a textual *xac'k'ar* and *maharjan*.¹⁹ And the Cross, with its complex symbolism and centrality²⁰ to Armenian Chris-

tianity, is not only the gate of passage, outward into the otherworld and inward into the heart at prayer from which the words of the Narek emanate. It becomes also an object of memorious contemplation throughout the book: in Ch. 90, for instance, Narekac'i prays, *Vasn p'aytid awrhnut'ean kenac'*, *yorum prkec'ar Astuacđ anəmbineli, yišatakaw beweiuč'd, orov i gorci mahun macuc'ar arařič'd erkni ew erkri, areambd tērunakanaw, orov zvišapn mec kart'iw aceal orsac'ar... elic'in ays amenayn pargewk' šnorhac'*, “Let all these gifts of grace come for the sake of your tree of the blessing of life, upon which you, unencompassable God, were tied down, by the memory of the nails by which you, Creator of heaven and earth, were fastened in the work of death, by your dominical blood, by which you fashioned a hook and hunted the great dragon...” In the passage Christ-bleeding on the Cross becomes bait on a hook to snare the sea-monster in whose hellish maw the dead languish. Narekac'i has the reader use the nails to remember the Biblical text, where God challenges Job to catch Leviathan with a hook. That memory links one to another watery scene: that of the Baptism, where Christ in the Jordan treads Leviathan underfoot.²¹

In Ch. 28, Narekac'i enumerates the sufferings of Christ on the *ařtarak* “tower” of the Cross: by the *yišatak*, recollection, of each Satan is to suffer pain and be driven out of the *řinuacoy xoran*, the edifice of the tabernacle of God's dwelling—Ew *yiřesc'e zařuřin haruacn anbžřkakan orov mahac'aw dimamat'ut'iwnic' iwnic' viřapin*, “And may [the devil] remember the incurable blow, by which the resistance of the dragon's poisons died.” Here is a mental picture of the Cross as the towering tree of life

¹⁸ Balthasar Gracian, cited by Bernard-Henri Lévy, *Who killed Daniel Pearl?* Hoboken, NJ: Melville, 2003, p. 11.

¹⁹ See RUSSELL 2000-2001, esp. pp. 32-33.

²⁰ The Armenian veneration of the Cross was so extreme, by comparison to the reverence accorded the Holy Sign by other, neighboring Christian communities, that it was condemned as akin to idolatry by the Syrian divine of Melitene, Dionysius Bar Salibi: see J.R. Russell, “The Armenians, the

Holy Cross, and Dionysius Bar Salibi,” Symposium on the 1700th Anniversary of Armenian Christianity, St. Vartan Cathedral, NYC, Dec. 2001 (in publication, *St. Nersess Theological Journal*).

²¹ On portrayals of a *viřapn-monster* in the Jordan in Arm. MSS miniatures of the Baptism of Christ, see RUSSELL 1998. On the Armenian version of the passage in Job and its interpretation, see RUSSELL 1996.

and the center—Jerusalem—of the tabernacle of the edifice of the cosmos. It employs the conceit of impressing Biblical realities upon one through the reversal of images: the blow that killed Christ (whose right hand in the verbal icon of the *Drut'iwnk'* is labelled "healing")—what could be more "incurable"—was in fact the cure, specifically the antidote to the dragon's poison,²² which is of course death itself. But the reversal has an aim beyond that of instruction of believing men: it is Satan himself, in this passage who is to undertake the exercise of memory, from cosmic edifice to tabernacle to Cross to wounds. And now the expulsion of the archdemon from the imagined building at the start of the string of images makes sense: it is a reversal of the expulsion from Eden, of which he had been the cause. And the human reader, following Satan's act of memory, is accordingly to regard the *xoran*, the Tabernacle, as the Church: an Eden reentered and a world restored. None of this is particularly original: the progress of restorative time and the remedy of the vices of the fall of man through mystical ascent, all portrayed symbolically, is standard Dionysian theology.²³ It is the *koinē* of Christian mysticism generally. St. Gregory, with his poetic and linguistic intricacy and intellectual mastery, expresses these verities nobly. It was not originality he strove for.

Let us return to the metaphor discussed earlier, of *maharjan*, of monument and death: in his meditation on the Chrism, Narekac'i inverts time (and, thus, frustrates death), making Jacob's prototype an object present in the memory of the future: *Zarjann iwleal kaṛoyc' npataki c'oyc's apaṛneac'n yiṣataki*: "He constructed the monument, anointing it, his aim a demonstration for the memory of those to come" (Buenos Aires ed., p. 252, section 5). Jacob foreshadows the *Narek* itself, whose

author prays: *...arasc'es zawranal krkin yačaxut'eamb burman xostovanut'ean aysr mateni i bazums azdeal, hamasp'iwir, amenatarac, ew ašxarhalir tann tesakaw, ašt awrinaki hamematut'ean noc'ayn yiṣataki*. " ... make me become strong by the frequent repetition of the aroma of confession of this book, having an influence upon many, in the form of a house that spreads all over, extends everywhere, and fills the world, according to the example, by comparison, of their own memory" (Ch. 33.1). Narekac'i's book becomes a house of all the nations and a universal memorial, extending spatially and temporally, pervaded by the sweet savor of incense that serves as the synaesthetic representation of the soul engaged in the work of perfection within. The smell of incense should remind one of the first chapter of the *Narek*, in which the author introduces the complex image of burnt offering and of incense in a censer, whose several parts adumbrate the structure of the book as a staged progression through the actions of the Divine Liturgy, the theme of ascent, and the contradictory senses of burning and refinement the soul is to undergo.²⁴

A further conceit of reversal of direction introduces the important theme of crying at prayer that, as was mentioned earlier, pervades the *Matean*: it is tears falling, not smoke rising, that will incline God, one hopes, to lift the soul. (Cf. Ch. 4.3, where Narekac'i cites Isaiah, *zi zolormut'iw n kamim, ew oč' patarag*, "for I will mercy, and not a sacrifice", and adds, *aha barjrac'ir verstin xkeal aysr yiṣatakaw*, "Therefore ascend now, offered incense anew, through the memorial of this.") The image, common enough in its context to be gracefully harmonious rather than awk-

²² The association of the dragon with poison can have entirely Christian associations; but etymologically the word *viṣap* itself, an Iranian loan, possibly is **viš-āpa-*, "poisonous water (creature)".

²³ See for instance, ZINN 1975.

²⁴ The Armenian *burvač*, censer, has a bowl which contains the coal and incense, and a perforated lid, often made in the shape of the dome of a church. The two parts are connected to each other and suspended by three chains (NERSOYAN 1950, p. 246). The church is censured before a ritual (ORMANIAN, pp. 47–48); so the metaphor has also a temporal symbolism. See also CENSING 1991.

wardly outlandish—as a more artificial word-picture might have been—is fertile, a true *ais-thetikē phantasia*, itself inspiring further consideration and remembrance of liturgical symbolism.²⁵ Narekac'i often calls his work a *xostovanut' iwn*, "confession"; and it is worth noting that St. Nersēs Šnorhali ("the Graceful"), the twelfth-century poet and patriarch whose compositions may be viewed as a continuation—and, stylistically, a simplification—of the tradition of Narek in the changed circumstances of Cilician Armenian culture, is rightly best remembered for his great credal poem, beginning precisely with the words *Ha-watov xostovanim*, "In faith I confess...". Keeping in mind that "confession" is a marker of the Narek, we note the request of Grigor in Ch. 72.1 that his brethren of the clergy accept his *awandut' iwn xostovanut' ean*, "bequest of confession" *i šinuac p'rkut' ean hogwoc'*, "into the edifice of the salvation of souls" a complex architectonic image incorporating memory and memorial (it is a bequest) and evoking both the Church itself as a heavenly Temple not built by hands and its corpus of literature. But they are to receive the offering of the book also into themselves, since they are themselves the Temple of the Lord: in the second chapter of the *Narek* we read of the Scriptural inner room into which one should retreat for prayer, this room standing for the solitude of the monk and the inwardness of the heart at once (on which the Armenian version of the *Commentary* on Matthew of St. John Chrysostom discourses:

²⁵ The image comes naturally to the makers of mnemonic Christian emblemata at the far end of Europe, in space, and of the mediaeval period, in time: the late-16th-cent. English *Basilikon Doron* of Henry Peacham, an emblem book, has as one of its pictures a domed well and a bucket on a rope. The Latin motto *Ascendo ut descendat*, "I rise so that it [i.e., grace] may descend," is elucidated by a further epigram, translated: "While you may see a fountain raised out of Parian marble, here an urn signifies prayers that burn for Christ. Let sighs rise, and grace will descend from heaven. In vain, let Arabian incense [try to] move God." All Narek's verbal mnemonic symbol is here, in an explicitly drawn one. See YOUNG 1998, p. 5.

Narekac'i probably read the translation).²⁶ Indeed, every chapter of the *Narek* begins with the title, "Speech with God from the depths of the heart(s)." From the image of the heart as the inner room within every man Narekac'i moves gradually to the concept of the special and sacred being who is entirely esoteric, the *nerk'in mard*, the "inner man", who becomes visible in the forms of the saints.²⁷ In Ch. 71.1 he calls the saints, thus, *andams K'ristosi*, "limbs of Christ", *ibrew zawt' ewans Hogwoyn Srboy* "as it were, inns of the Holy Spirit", whose *kerparans* "(bodily) forms" and *yišataks* "memories" are to be invoked. (Compare Ch. 5, where the postlapsarian human

²⁶ *Matean*, Ch. 2; and cf. CHRYSOSTOM 1849, p. 249: "Enter your room. Now they will say, How is this? Is it not necessary to pray in church? It is indeed so, but in everyplace with such will, since God searches one's thoughts. For if you enter your room and close also its doors, it is still possible to display oneself praying to people, and then closing the doors avails naught. See how precisely he qualifies it here: For they will appear, he says, to people. For this is the correctitude he wishes first to establish: before shutting the doors, first close those of one's thoughts, so that one may reject entirely the diversion of vainglory. It is well everywhere to distance oneself from that vice, especially at prayer." The passage not only illuminates Narekac'i's allusion to the Gospel, but also focuses upon the architectonic metaphor, adding allegorical doors to it—and this at the gateway and moment of preparation for prayer, of the *Matean* itself!

²⁷ See T'AMRAZIAN 1998. In Ch. 46 of the *Matean*, Gregory envisions head as a lamp upon a candlestick and speaks of the body's 360 parts: this is a symbolic and idealized type, with the perfect number that of the perfect year (the numbers 365 and 366 are also common in Armenian as expressions of entirety—the total number of diseases in the world, etc.). One recalls that the ancient Iranian world—mountain Tērag has 360 windows, which are the days through which the Sun shines over the year. Narekac'i's idealized vision of Adam has him, thus, as a pillar at the world's center (with the four letters of his name interpreted early as symbolic of the Greek words for the directions of the compass; the quaternity itself is expressive of the four elements and of the Cross). On eyes and windows, see the passage of Ch. 12 cited here.

visage is yet that damaged and distorted sign, *nšanak alartac'eal*, that sees in a glass darkly and is itself obscured from its pristine original nature.)

The closing section of Ch. 12, so explicitly vivid in its imagery that it is employed by the Armenian Church and the lay faithful as a prayer for protection of the home at night, speaks both of the actual house and of the body itself as a house, forcing the reader imaginatively to connect macro—and micro—cosm, enabling him to remind himself through the living interplay of the images that both are mutually reinforcing symbols recalling spiritual realities. In the passage, the parts of the house receive, as one would expect, metaphorical meanings, as for instance: *Amp'op'eal parurea zpatuhan tesut'eanc' zgayakanac's imastic' anzarhureli zetelmamb i cp'akan xiovut'eanc', kenc'alakan zbalmanac', anrjak-an erazoc', xawlakanac' c'noric', yiatakaw k'o yusoyd, anvnaseli paštpaneal*. "Surround and enclose the window of the visions afforded by my senses of intelligible things, by placing them, defended from harm by the memory of your hope, beyond the terror of troubles' agitation, the cares of everyday life, dreams in slumber, and senseless fantasies."²⁸ The window²⁹ of a house should thus remind the reciter of the meditation of one's eyes; and their vision of temporal things is then to remind one of the vision of imaginal things: the chains of images of reveries and daydreams to which the anxieties and concerns of life give birth, as

well as the dream-images that come in sleep. The mindful, associative memory of window as eye as inner eye of thought receives its specific moral power through the associated operation of memory of the hope of salvation that comes from the Scriptures.

The twelfth chapter of the *Narek* discussed above follows Paul and evokes a mass of Biblical imagery behind him, in calling the metaphorical house also a *tačar*, meaning both a Christian sanctuary and the prototypical Jerusalem Temple. Having noted above the importance of the metaphor of sacred architecture in the theology of Christian mysticism, and its use for mnemonic purposes within the *ars predicandi*, we may consider it now in two hymns composed by Narekac'i, with a prefatory comment. The ninety-five prayers of the *Book of Lamentation*, whether employed privately by a celebrant of the Divine Liturgy for purposes of internal purification and illumination, chanted in the context of the liturgy itself, or used in the devotions of lay people, are in essence penitential. Intense remorse and guilt pervade every chapter; and if tears do not well from the worshipper's eyes at some point in his recitation, he is accursed, obtuse, or insincere. However this work does not stand alone as the sole expression of Narekac'i's theology or mysticism: many of the hymns he composed for festivals of the Church are ecstatic and joyful, evoking the wonder of the chariot of Ezekiel's vision, the beauty of the Tabernacle, and the serene joy of the Nativity:³⁰ far from bemoaning alienation, they celebrate the glory and luminosity of the divine presence. In this respect, his mysticism belongs to the same stream as that of Vardan of Ani, whose commentary on Ezekiel's vision was published by Mnac'akanyan.³¹ The frequent portrayal of St. Gregory as a lachrymose, tortured soul merely is surely as misleading as the facile comparison to Dante. Let us consider here two hymns attributed to Narekac'i that employ images

²⁸ See RUSSELL 1994 on Ch. 12 of the *Narek* and folk prayers for protection of the home at night in general; and now also LA PORTA 2001-2002, esp. pp. 189-190.

²⁹ The word used is *patuhan*, literally, a hole let into a wall. This becomes the common Western Arm. for "window". In the same passage Narekac'i uses also *lusanc'oyc'*, literally a passage for light (cf. Mod. E. Arm. *lusamut*, window, lit. "light-entrance"), making it plain that the latter is the smoke-hole in the ceiling of the traditional Armenian *glxatun*, where four pillars around the hearth support a conical dome of squinch construction, with a smoke-hole on top.

³⁰ See Narekac'i's "Song of the Nativity" (*Tač Chndean*), for instance, in RUSSELL 1987.

³¹ See MNAC'AKANYAN 1971.

familiar from the *Matean*, presented in familiar configurations, yet suffused, not by penitence, but by the sense of triumph and glory, ecstasy even. Both are dedicated to the Church; and that physical and supernatural reality binds the successive architectural metaphors together. The theology is that of Ps.-Dionysius the Areopagite—divine thrones, hierarchies, extravagant and verbose evocations of luminescence. The Armenian version of Dionysius would have been easily available to Narekac'i: there is no indication that he relied upon the Greek original.³² The translations that follow are based upon the text published by K'yoškeryan: the first is attested in a sole manuscript.³³

HOMILY³⁴ OF THE CHURCH
AND THE ARK OF THE LORD,
OF GREGORY OF NAREK.

We who are all gathered into the holy, universal, and Apostolic church,
Sing in it, we in the earthly circle in glorification. with many choruses.

In spiritual multitudes, by miraculous birth
Conjoined to the rings of the races aglow like the sunlit sky.

(5) We bless the coming into you,
Most holy Trinity, we do beseech.

You who are upraised in the arches of the
watchtower of the four-faced cherubim
And receive proskynesis by all the circles and
the races wondrous in aspect,
Three-fold reality,

³² See THOMSON 1987.

³³ K'YOŠKERYAN 1981, pp. 184–188. I have followed her versification, though Abraham Terian (remarks at the Narek Conference, 11 Oct. 2003) is certainly right in his observation that Narekac'i was writing metric prose, not blank-verse.

³⁴ Arm. *k'aroz*, essentially a message, from Greek *kerygma*, via Syriac *karozā*. This has become the designation of a genre of Armenian hymnography, so my rendering is somewhat arbitrary.

(10) You willed through the holy Apostles to
establish this rock,
City undefeated, by miracles performed at will,
Four-fold, in the midst of the cosmos:

You made it resplendent upon foundations that
scatter rays

Commingled with heat and dazzling with light,
(15) And you ordained this noble queen into
being, splendidly adorned and glorious in
comeliness,

Daughter of the heavenly Zion,
From whose midst the cohorts in many voices
that are in her

Acclaim loud their superiors in heaven.
We bless...

Tabernacle built by the one without beginning,
universal, holy,
Who wast founded in the cosmos on this day,
holy Church,

In example of the paradise made by the Creator,
lovely in appearance,
Planted in Eden, place of delight,

(25) Which the Seraphim and Cherubim, by
the command of the Uncreate,
Surrounded, guarding the ways to the tree of
knowledge.

Opened are the joys of the great and strongly-
hidden paradise,

And we, with boldness aglow in joy, in the
earthly circle,

Joined to the ring of the Seraphim aglow like
the sunlit sky,

(30) Bless...

Ineffable tabernacle, in this wondrously bright
illumination

Thou wast established in the midst of the cosmos
this day, holy Church,

Exemplar of the high-domed Ark

(35) Which the patriarch Noah, by the command
of the Creator,

Founded of unputrefying wood

And built, the Ark for the salvation of the
many throngs of animals,

To rescue in life those who sought refuge

From the sweeping billows of the waves of the
waters of wrath.

(40) Today, brought into being by Him who
creates the sunlit sky,
Instead of the Ark there was revealed to us
holy Zion—
To us, the nation of rational sheep,
Stair of miracles aglow with light. Ranks
united in glorification,
We bless...

Tabernacle aglow like the sunlit sky, torch set
ablaze with the wondrous beams of the so-
lar orb,
This day, holy Church, in the midst of the
cosmos:
Exemplar of the banquet-tent of Abraham the
patriarch
Seated at the threshold of heaven's gates,
Seeing into heaven and into earth:
From there the Lord appeared with *egrēgoroi*
twain,
Came, attained the shady tree,
Repaying his loved ones the recompense of
good—
At which Abraham came running,
(55) Nursing calves and three loaves
He proffered in sacrificial offering to the Lord
God.
This day, itself, holy Zion, comes, God, unto
thee:
Heaven-like place of the sinners' atonement,
Suckling thy children at the waters of repose,
(60) From which the generations of the font
And the principalities in Seraphim abounding,
of the wonders on high
Are joined together in the circle.
We bless...

(65) Four-cornered temple, surpassingly won-
drous at its dawning,
Ablaze with interpenetrating light,
Holy Church, this day in the midst of the cos-
mos,
Art exemplar of the Ark that Moses made
Amongst the congregation of Israel's host,
(70) Placing within the incense-burner with
gold pillars shining all around,
Which exhaled the perfume of frankincense
within;

The golden vessel full of manna;
With the stone tablets of the Commandments.
And the flowering staff therein
(75) Today by the hand of Melchizedek's
priest
Appears in you always, instead of the tablets
that the Lord inscribed.
The Table, shining like the sun's orb, upraiser
of the offering sweet to savor,
Is transferred and established in thee, holy
Zion, mother church,
In which the ranks of earthborn living crea-
tures
(80) And the hosts of the lofty, rich in Sera-
phim, are joined together in the circle.
We bless...

Temple of four torches
Illuminated in the midst of the cosmos by mi-
raculous, supernal rays, holy church,
(85) Example of the wondrous globes and halls
light-bedecked and censed, of molten gold,
Which Solomon the wise
Taking cedar wood and juniper
Shaped into the Temple, glowing with gold.
All dazzling in appearance, with candelabra of
seven lamps,
(90) And wonders lovely roundabout, in the
shape of lilies made,
The gilded Seraphim:
And he establishes them in God's house.
We bless...

(95) Stronghold for the fleeing, domicile and
home,
City of refuge and house of atonement,
We beseech the heavenly king, who in unsun-
dered unity within thee dwells,
To grant us peace: heavenly, spiritual, and
intelligible,
Protecting us now
(100) From them that war against us: visible
and invisible opposing powers—
And at the dawning of the glory of great power
on the day that will have no night,
In the company of those raised, holy, in light,
may we be glad in unconditional rejoicing.

Now may you remember and have mercy on
the departed,
In hope of resurrection, we pray.
(105) And moreover
Grant us exhortation to love and good deeds,
we pray.
And let us dedicate ourselves and each other
To the omnipotent Lord God, we pray.

By the intercession of the all-blessed lady
Theotokos
(110) And forever Virgin, Mary;

By the petitions of the great prophet, John the
Prodomos;
By the prayers of the sharer of Thy Cross and
torments,
Stephen, Thy Protomartyr;
By the requests of Thy confessor
(115) St. Gregory, faithful archpriest;
By the general plea of them who love Thee,
Apostles and Prophets:
And have mercy on us now, O Lord our God,
In accord with your great mercy.

The final list of invocations and intercessions seems to me most likely Narekac'i's, though abbreviated from similar lists elsewhere; and the rest is still more probably his own composition, since many of the same words, in a somewhat different order but still forming a hierarchical progression of pictures together, can be found, for example, in Ch. 29.1 of the *Matean*: *patsparan* (*hzawr*), *duin* (*barjrut'ean tarakuseloys*), *sanduxk'* (*er-anut'ean elkeloys*) [instead of *astican*], *čana-parh* (*šawlac'*), *t'agawor(nerot)*—powerful stronghold; gate of loftiness for me in my waverings; stairs of blessedness for me, the wretched; way of roads, forgiving king. The hymn combines Dionysian imagery of the heavenly orders and of light with evocations of the great and powerful buildings, both physical and imagined, that were the hallmark of mystical vision, even power, of old, and which still have a sense of mystery and wonder: Noah's Ark, Abraham's tent and the visit of the three—angels, the Ark of the Covenant, the Temple of Solomon. All these symbols occur in other

hymns of his, too.³⁵ Each is a forerunner of the Church; so Narekac'i wherever possible stresses quaternities. Each is a sign of the reconciliation of all earthly creatures with all the denizens of heaven; and Narekac'i uses the circle or ring to express this *plērōma*. The circle may imply also the sense of the dance, which seems to me justified by the more explicit image of the dance in other, shorter songs of the saint (the *tal* of the Nativity, for instance), and by the celebratory character of the hymn. Cross and circle: mandala, spiritual wholeness and perfection. The luxuriantly alliterative compound adjectives for light, *arp'iap'ayl* and the like, that Armenian is so good at—and at which Narekac'i especially excelled—are intended to induce a sense of ecstasy as well; whilst the facts of the descriptions and their Biblical allusions challenge and the intellect. The three orders of perception and being line 98, *erknayin*, *hogewor*, and *imanali*—heavenly, spiritual, and intelligible—are thus engaged simultaneously: the most favorable state for operation of the *artes memorativa et predicandi*.

Here is a similar, longer hymn to the Church, this one more amply attested in several MSS.³⁶

HOMILY OF THE CHURCH, SAID BY GRIGOR NAREKAC'I.

Desirable treasure³⁷ of great good, found and concealed:

Pleroma without deficiency, bringer of all; and
you yourself are within the entirety—
Which not even highest heaven could bear,

³⁵ E.g., K'YOŠKERYAN 1981, p. 165, lines 41–45, lines 50–53.

³⁶ See the ed. of K'YOŠKERYAN 1981, pp=162–172.

³⁷ Arm. *ganj*, a Mlr. loan, “treasure”, means here the long form of a spiritual song, of which the more abbreviated and lyrical type is the *tal*.

Your atopic canopy³⁸ is the unattainable aether.

(5) You were shown defined, the non-intermediate space³⁹ of the races of fiery nature

beneath you.

Image unquantifiable of providential loving care,

On the throne of glory the king of the heights, above and beyond the mind,

Might you receive now supplications of prayers compounded with incense

In this consecrated place, holy Church, we pray.

(10) Splendid feast and intimate summons, Delectable voice, unencompassable,

Which on the light wings of the windy air⁴⁰

By surest helmsmanship, enthroned in lordly fashion,

You have cast forth your throne in mystic parables of the completion of the outcome of good tidings.⁴¹

³⁸ Arm. *xoran*, a loan from the Parthian for a banquetting tent, is intensely polyvalent, so any single alien equivalent must render it pallid: for it is at once the celestial *čahār-tāq* dome, revealed in light of the Illuminator's vision, the similarly-constructed stone dome above the high altar in an Armenian church, as well as the supra-celestial palace of the heavenly bridegroom of the *unio mystica*.

³⁹ Var. *ananjpet*, "without intermediate space". I prefer this reading, since the heavenly beings do not dwell in that separate, dividing space that keeps this world from heaven and subject to demons. See also Narekac'i's use of *ananjpet* in line 130 of this hymn.

⁴⁰ Arm. *or i t'ews t'et'ews hotmayin awdov*: this onomatopoeic evocation of the wings of the Seraphim raising aloft the divine Throne recalls also Narekac'i's invented compound to describe the same vision, *t'ewatrohat'ew*. "wing beating wing" (see RUSSELL 1994(a), p. 138. In the present case, note also the alliteration of the round o-sound of the howling whirlwind in the last two words of the strophe.

⁴¹ This strophe would seem to suggest that the tetramorphic scheme of the Throne vision embraces the four directions of the created universe, the four

You who guide the determined manner to its perfection,

Regarding the place of your dwelling,

Eternally sky and always in our souls:

A certain one, throne; the other, footstool—⁴²

Place of elemental light, of all the races.

(20) Might you...

Maker of wisdom, creator without mistake,

Fashioner in fitting construction of all,⁴³

Who was pleased to be first the inhabitant of this form of the matter miraculously adorned,

First made with hands, constructed before, and then, the one enthroned.⁴⁴

You have stretched forth the heavens, and there, the heavenly ones:

You established Eden, and, thereafter, Adam;

The structure of the ark, and in it, those who lived;

The Tabernacle of the primordial hospitality of Abraham,

(30) Anointed stele⁴⁵ and house of God,

The ladder of our ascent and the trace of your descent

And the tent of Aaron's service;

The testament of the book, the judge of the

elements of which it is compounded, the four symbolic letters of Adam's name, the harmonization of Adam, the elements, and all the world in the Cross, and the Cross also of the Parousia and the end.

⁴² That is, the Church is of both heaven and earth, while heaven is God's throne; man, His footstool, cf. Ps. 104.

⁴³ Though the line may do no more than praise the Creator, if one considers that Narekac'i both preached against heresy and himself weathered an accusation of it, it may be that the statement is a refutation also of the idea, common to Marcionites and Manichaeans, of an imperfect Demiurge and of a material Creation flawed *ab initio*.

⁴⁴ Since the Ancient of Days who sits upon the Throne is anthropomorphic, the two strophes may suggest that God the transcendent, in Whose nature Christ is pre-eternally present, is first the dweller (*bnakn*) in the throne's abstract shape, then incarnating as the human form enthroned (*zbazmealn*) upon it.

⁴⁵ This is the pillar of Beth El, in Genesis.

speakers of high Gerizim, [place] of election.⁴⁶

Light-bearing Temple of the great Solomon,
Mountain of the Lord and house of God,
Sign raised aloft to distant peoples,
Trumpet call summoning the world:
Your ineffable mystery, according to its seers.
Might you...

Tower erected in excellent beauty,
Indestructible⁴⁷ pillar of iron and strong bul-
work made of brass,
Tower of light, cast of gold,
Island surrounded by fortress-like breakers,
According to Ezekiel's second vision:
Come with a new summoning out of Tyre,⁴⁸
In search of wisdom coming out of Sheba,
From Canaan's races of alien seed,⁴⁹
Hasening eagerly from Babylon
(50) Wounded to the quick for love of the
Bridegroom.

⁴⁶ In Deuteronomy, Mt. Gerizim at Shechem (modern "Nablus", from the late Greek name of the place, Neapolis) is a place of blessing; Mt. Ebal, of curses, for the Israelites entering the Land promised by God to His Chosen People.

⁴⁷ Arm. *ankorcaneli*: K'yoškeryan prefers the reading *ankarceli*, "unthinkable", which makes nearly as little sense as the other variant, *ankarcreli*. "non-hardening" (which even the most bleary-eyed copyist could scarcely have found a desirable quality for an iron pillar—unthinkable!).

⁴⁸ Ezekiel 26 is a prophecy of the doom of Phoenician Tyre, then Sidon. In the *Matean*, whose primary tone is of introspective contrition rather than of exultation in the Church victorious, Grigor uses the image but decries his own sins and iniquities as worse than those of Tyre and Sidon.

⁴⁹ The Queen of Sheba, whose nation, according to the reckoning of Genesis, were of the race of Canaan, from the progeny of Ham, came to learn wisdom of Solomon. He shamed her ignorance by sitting on a throne on a floor of glass over water: she was afraid to advance. The passage is related to the things of marble in the divine *Hēkkālōt* that seem to the unworthy be water, in the *Himmelsreise* of R. 'Aqivā in Tr. Hagigā, which reappear in the transitional, visionary chapter 33 of the *Matean* as the *loyn macuac* of the "final veil".

Gate hewn of cedar planks,
Stones of crystal with rubies,
Orbs sun-inscribed on steles⁵⁰ of silver,
Living city built of God,
(55) By the impulse of the Spirit; by Jesus,
spoken:
Mountain of fatness, with holiness slathered,
Might you...

Rejoice, O queen, glorious bride,⁵¹
(60) Woman of great wonder diademmed:
Rejoicing in many children whilst retaining
your virginity,
As you were traced there at the beginning,
Now in this new time you are clothed in splen-
did being shining with gold:
In the manner of the call of Hagar,
(65) Serving woman taken from Sinai to Salem
As the Father's first-born came Himself,
He takes you in place of the rejected race of
Jacob,
Making your foundations the worshipful as-
semblies of the Apostles,
Beautifying you with illumination by the stars'
light,
(70) Making you splendid in a veil of dazzling
fire.
Clean in womb and without vice in birth
Whence you bring forth in labor God's heirs,
This is the very example to hand of hopeful
expectation
That verily found its peace.
(75) Might you...

Lord of light, mighty king, celestial bride-
groom,
In ineffable mystery at the festive gathering
encircling
Ordained unchanging canons for you:
(80) And example in diverse particulars of the
forms
Of the same scheme of all existence,

⁵⁰ Arm. *maharjanawk*'.

⁵¹ Arm. *dšxoy*, by which is meant the Church: the image is repeated, and evolved in detail, in the Narek ch. 75.1, 8; where she is also *iskuhi*, "female Being", Gk. *ousā*.

In myriad kinds for the universal Church's construction.

The statures of diverse races are-humbled in a single assembly,

House and place and hidden chamber

(85) That is a remedy from the burning heat,
the rock of aid to us traced into bodies by the Spirit.

You who make God familiar to mankind,
Hope for the atonement of the condemned for all races gathered of like name,
The bold emerging first,
The band of perfected souls.
(90) Might you...

Dwelling-place of the Father's wisdom,
Built upon the pillars of the seven stars,
In which the blessed One is offered in sacrifice on the altar of will for the taste of bread—

(95) On the palanquin of the holy table—
Manna of life and celestial Lamb,
Who removes sin from the living and those gone to sleep:

He Himself is all, and the sacrifice in all is greater than Abel's—

He gathers in His economy the dispersed
(100) In un-compelled arrival to the embrace at His bosom,

Summoning with His hand in sweet love, to the unapproachable fortress.

He is refuge to the fleeing, in the high palace-hall borne by Spirit

Where He inscribed in wonder the Disciples,
And where the enthroned elders in authority will be ranged in power,

(105) Rejoicing in honor of this, your day,
Who turn in the circles of the pure:
Our lord Patriarch [name].

With bishops, elders and deacons,
Teachers of the schools and all servants of the Church,

(110) Our king with his progeny,
And those who are rulers and princes under arms at his command,

Blessed by all with your own sacred love.
Remember now and have mercy upon the souls of the departed,

We pray, in hope of resurrection.

(115) And also we ask there be granted us
Exhortation to love and to good works.

We ask for those rejected by you to be gathered in again

By the intercession of the one who sits with you.

[Var.] The Holy Mother of God found the precious jewel, the pearl

(120) By ineffable energy in the sea of this world—

Daughter of light, mother of Zion,

Faith's foundation not built by hands, true eidolon,

By whose name in this type you were anointed and sealed.

Bridal-chamber of the sole incarnated God from you,

(125) Accept your intercession for the reconciliation of us, the condemned,

The scion of immortal life, the Forerunner of the calling of the Saints

And crown of Martyrs, with the Apostles and Prophets

And him who is our Illuminator,

With the ascetic hermits who are God's heirs,

(130) Those born into adoption by your holy font, with membership in spiritual kinship unseparated by space,⁵²

⁵² Arm. ...*surb awazanawd anan'fpet hogetoh-mut'eamb*. This complex image relies upon the symbolism of water: the *awazani*, "font", contains Iranian *āb*, "water". One is totally immersed in it, so indeed there is no hiatus or space, *an'fpet*, which means literally "domain without water" (the air that separates the world from the upper waters of Heaven). This space-realm is also that of the evil spirits of the air; so it separates the world from God in more than a spatial way. Baptism is release from this lesser dominion above us and membership in a spiritual clan (*tohm*) by an adoption which is, as Narekac'i stresses, entire and as immediate as sonship by birth. So one recalls that the word *tohm* is a loan from Iranian, where it means "progeny, semen". The ancients regarded the father's watery seed alone as parentage, the womb being merely a place where it grew. But the Church, the *harsnaran*, is more than this earthly motherhood: above, it is she who has found the pearl of great price, the divine semen-drop, in the midst of a different kind of liquid—the dark and vexed world-ocean of oblivion

In which again you will behold the renewal of
the small
Into the wideness of enlargement of glory in
uncontainable expansion,
Mother with children pure,
Marriage-crowned with the covenant in that
celestial chamber
(135) On the day of your awful appearance,
great God.
And our Lord God have mercy upon us,
As befits your great compassion.

The study of the art of memory invites one to consider a possible solution to a problem of the image of St. Gregory of Narek within Armenian tradition: the aura of heresy, even sorcery, that clings to this holiest of Armenian divines. The theological density of the *Matean* makes it, *inter alia*, a massive Scriptural mnemonic, on the scope of Raymond Lull's schemata for the acquisition of universal knowledge. Narekac'i's use of the Throne Vision and related material links him to those seen to have gained access to direct knowledge of divine mysteries veiled from the unworthy and uninitiated. One may note here that at the mention of Lull we touch upon the *ars notoria*, a slightly disreputable relative of the *ars memorativa*. Practitioners of the former often created their systems of symbols with the purpose of facilitating, not pious learning, but the all-encompassing and therefore necessarily amoral knowledge of universal reality. The *ars notoria* then became a tool of occultists seeking power by acquiring intelligence beyond man's proper ken altogether. This aspect may help to explain why the vast, potent, eloquent *Matean* in Armenian popular religion came to be regarded as a magical book: the belief was that to master one's fate, one must trace a circle, stand within, and recite forty chapters of the Narek in a row (folkloric shorthand for "a lot") without stopping or heeding the demons who will gather just beyond the charmed pe-

rimeter and try to distract one from the task; for if one yields to them, one is damned.⁵³ There is a ballad, too, in which two inquisitors from Sis come, rather anachronistically, to investigate Narekac'i for heresy. He makes fire burn in water, resurrects from the dead a skewer of roasted pigeons, and curses a dying man, telling him the earth will not accept his corpse. It doesn't; later the revenant repents and the saint lifts the curse. Armenian folk prayers, many of which really qualify as magical spells, often include a Cross and Seraphic choir, or the Throne Vision of Ezekiel itself.⁵⁴ Such symbols of power, of which the latter was regarded already in Jewish tradition with an ambiguous unease, are common in Gregory's writings, too, as we have seen. His own prayers find their way into talismanic scrolls, Arm. *hmayil*, a few centuries after his death. The usual explanation for the tradition is that Narekac'i was considered a *cayt'*—that is, a Chaldean, a sympathizer with the Byzantine Church. But that explanation, while not at all beyond the realm of possibility, when one considers the wild excesses of fantasy that the least suspicion of heresy might provoke, still seems scarcely sufficient to justify his reputation, which is that of a magician. No other Armenian saint shares it. I think the image comes from the sheer prodigiousness of the *Matean*, the vastness and depth of his knowledge, his familiarity with the angelic world.

So we have observed the great work of a penitent, a visionary, a prodigious intellectual and master of the art of teaching and of memory, an ecstatic poet, of such spirit and gifts that to tradition he was not merely a saint: in a culture where the small books containing the story of the conversion of the magician Cyprian of Antioch are still bestsellers—and yes, Dr. Faustus seems to come from Gregory's vicinity—it is perhaps inevitable that Gregory is seen also as a magician. I think the idea that great sages were instructed by supernatural beings contributed strongly to the aura of awe

and perdition, and has brought it forth. (On this symbolism of the quest for the Pearl and the sea, see RUSSELL 2001-2002.)

⁵³ RUSSELL 1981, p. xiii.

⁵⁴ See RUSSELL 1998, p. 153.

with which tradition surrounded them. In the Talmudic period and probably earlier (since earlier Greek magical texts which bear the marks of Jewish influence offer their testimony), Jewish sages adjured an angel they sometimes called *Sar ha-Torah*, Master of the Law, to come and assist them in the labor of learning and memorizing. This being bore also the name Yofiel, which appears to combine the Hebrew word for beauty with the customary divine suffix. He is at all events always described as brightly shining, young, and handsome: in some texts he is the brilliant archangel Metatron. In the high and late Middle Ages (with even swift Metatron perhaps too busy to attend to a growing clientele), rabbis are often visited by peternatural but less beautiful *magidim*, angelic narrators of information.

Something similar happens in Armenia. In the seventh century, the Armenian scientist Anania of Širak fell asleep one morning in a chapel at Trebizond (he had come to the seaport to study the profane sciences with a Greek, Teukhikos), and had a vision of the Sun descending as a radiant, beautiful youth: he asked whether there were inhabitants of the Antipodes. The boy informed him that there were not, and quoted God (from the book of Job) to the effect that waves crash on uninhabited shores. The citation from Scripture seems a mild rebuke to Anania for his inquisitive audacity, and it also suggests that the creature was either an angel or a piously Christian planetary being. No matter: Teukhikos strongly advised Anania not to discuss his experience, as though, one thinks, a stigma of sorcery attached to it. He had a point, for Anania was to gain an uncanny reputation in posterity: the *Vec' hazareak*, a mathematical table he compiled based on the eschatologically important number 6000, later gave its name to the most dreaded manual of Armenian magic. Over half a millennium later, Kostandin of Erzinka describes in an unusual lyric poem such a vision of a sun-like, angelic youth: this one gave him his poetic gift. He goes on to lament the hatred, fear, and envy his talent provoked amongst monastics. Ominously, that poem is unfinished. In the eighteenth century,

the great bard of Tiflis, Sayat' Nova, records that St. John the Prodromos came to him in an initiatory dream and taught him to play musical instruments. (This was standard practice: Moslem *'āsiqs* ["lovers", i.e., minstrels] in training waited for a vision of Khidr: for Armenians, *Surb Karapet* is the patron, not only of poets and musicians, but of tightrope walkers and entertainers generally.) Sayat' Nova's dream-vision, which he records in his own hand, proudly, in his divan, was considered proper and necessary, and he got into quite another sort of trouble later in life—he had an affair with the queen of Georgia, after which the penitential prayers of St. Gregory came to his help and consolation: before his death, Sayat' Nova copied the *Narek* at Sanahin monastery, to whose precincts the *ashugh* had been confined.⁵⁵

The most famous short hymn, or *tał*, of Narekac'i is the Song of the Resurrection, which describes an ox-drawn cart, upon which stands a throne. These mystical images, of God's throne and *merkava*,⁵⁶ are drawn from Habbakuk, Ezekiel, and Isaiah, and they haunt even mediaeval Armenian doodlers in model-books;⁵⁷ and in the concluding stanzas the poet

⁵⁵ For a translation of Kostandin's poem and references to the visions of Anania and others, see RUSSELL 2001-2002.

⁵⁶ See RUSSELL 1997.

⁵⁷ See SCHELLER 1995, Appendix cat. no. A4, "Armenian workshop in Constantinople, 16th century" (Venice, Mekhitharist MS. 1434), fig. 260, fol. 44r—a cart; and fol. 46r—the Throne. The other drawings include scenes from Jonah (esp. fig. 261, fol. 45r), a text popular in Armenia also, esp. in the Van area: aspects seem localized to the lake, on the Alt'amar-reliefs. There is also a tenebrous *vayri mard*, "wild man" (fig. 263, fol. 30r). Fig. 264, fol. 39r has a nicely-drawn Chinese dragon and a few lines of fake Persian. Interest in mystical things seems often to be related to interest in the exotic and the outré generally: one may recall that the only thing Anania of Širak asked of his angel was whether there were creatures in the Antipodes. Not a very pious question, and more the sort of thing an avid reader of the Alexander Romance

explains their Christian metaphorical meaning. But the cart is still, till its charioteer makes its oxen move. This is a powerful, radiant youth described by Narekac'i as *xartišagel*, having beautiful blond tresses: in the explanatory stanza, he is revealed as *Surb Karapet*, St. John the Prodromos. The epithet *xarteaš* belongs to the hymn preserved by Movsēs Xorenac'i on the birth of the old Zoroastrian divinity Vahagn (Avestan Vərəθraivna), who had reluctantly surrendered his shrine at Aštišat, near Muš—perhaps two hard days on horseback from Narek—and his attributes to *Surb Karapet* in the fourth century. But perhaps it is for Narekac'i foremost in the tradition that the ancient solar *angelus interpres* is specifically St. John, and, presumably, Gregory's teacher. Now, Prof. Abraham Terian once advanced what I will call the principle that "Sacred events either take place first and best in Armenia or else repeat themselves there better than they were the first time around elsewhere in the Bible and the world." We can see it at work in Koriwn's *Life of Maštoc*, where the saint who invents the Armenian script produces heavenly letters better than those Daniel saw, and brings them on a tablet more propitious than those that Moses bore down the slopes of mount Sinai to an ungrateful mob. I've applied it in a study of the story of St. Gregory the Illuminator and its iconography: Armenia's patron saint spends a longer time in his pit, and with more dragons, than did Jesus

Christ in Hell before His Resurrection.⁶⁸ But the song continues and the cart is moving. What is its itinerary? The divine Throne on its wheeled Chariot, descending first out of heaven, creaks down the right flank of *Ararat*, and only thereafter proceeds, from Armenia, that is, to the other holy mountain—Zion—at Jerusalem. The theophanic vision of Throne and Chariot thus comes to the mystic hymnologist St. Gregory, as it were, and to Armenia, even before it is vouchsafed to the prophet Ezekiel. (And presumably Grigor Narekac'i has also in mind the vision of Christ by his namesake, Gregory the Illuminator, in Valaršapat, at the foot of Ararat—hence the present name of the town, Ejmiacin, the place where God's sole-begotten Son descended.) Such usurpation by a sacred mountain of the Armenian highland of a lofty Biblical *locus classicus* has a parallel, though not, chronologically, a precedent, in a mediaeval Armenian prayer which combines lines of the Pater noster and Psalm 133. The latter evokes the dew from heaven that falls on Mt. Hermon, in Israel, and the oil of the flowers that grow there is used to anoint the high priests, sons of Aaron, at the holy Temple. In the Armenian poem, this dew comes to the Armenian mountain Sukawēt first, where Alano-Armenian disciples of St. Thaddeus—the Oskeank' and Suk'iaseank'—were martyred; and from their

might have wanted to know. I have discussed Armenian Wild Men in RUSSELL 2003; and the question of transmission of Chinese, Mongol, and Islamic material is addressed by Priscilla Souček in an art. in the vol. containing Russell 1998 and in my article "Frik: The Bridge of Poetry," forthcoming in R. Hovannisian, ed., *Proceedings of the UCLA Conference on Cilicia*. Arthur Machen, in his story "The White People", suggests saints desire to know what once man properly knew before the Fall, and are patient in learning it; whilst the evil (and here include magicians and heretics) try, impatiently, to know what the angels do—and what was never intended for us and is therefore unnatural. It is, of course, a fine line to cross, and one that is correspondingly hard to draw when observing another.

⁶⁸ This is an article (forthcoming in R. Hovannisian, ed., *Proceedings of the Conference on Kars and Ani*, UCLA, Nov. 2001) on the Church of the Holy Apostles erected at Kars by king Abas Bagratuni. One of the figures in bas relief on the drum has snakes on either side of him. I have argued—not for the first time, but offering the nuance of the Iranian substrate and some supporting data from similar figures in mediaeval Christian art—that this is St. Gregory the Illuminator, who, as Prof. Terian has noted brilliantly at the 2003 Narek Conference at Harvard, is celebrated as both Apostle and martyr, though he was born centuries after the former and did not die like the latter. The ingenuity of his elevation in status testifies to the active operation of the "better than" principle—and complements as well the literal elevation of his image on the church building.

blood grows the magic *hamasp'iwr* flower of Armenian mythology, a native complement to Hermon's blossoms and a nod to the particular composition of the Armenian *miwrōn*, "chrism", which, indeed, Narekac'i praises in the long 93rd chapter of the *Matean*. The mountain's name is itself theophoric: and Avestan Saoka (> Arm. *Soyk) happens to be precisely the divinity through whom, according to the Zoroastrian Pahlavi *Bundahišn*, heavenly blessings are channelled down to earth. Though the prayer is in late middle Armenian, and cannot therefore formally be a precursor to St. Gregory

of Narek's own hymn, it contains material unquestionably anterior to him, from both pre-Christian past and the legendry of the Apostolic tradition.⁸⁹ And Narekac'i's present example of the usurped *locus classicus* is, albeit in encoded form, a proud *exegi monumentum*; and it reminds one that, however absorbed was Narekac'i in the art of remembering the intimate and the cosmic, that he was an Armenian, of the race of golden-haired Vahagn and of king Artawazd imprisoned in Ararat and of the Illuminator who saw the temple of light at Ararat's base, he did not forget.

THE SCIENCE OF PARTING: ELIADE, IRANIAN SHAMANISM, AND THE VIEW FROM TOMIS

James R. RUSSELL

Harvard University, Cambridge, MA

Я изучил науку расставанья
–Осип Манделъштам, «Tristia»

Mircea Eliade created from a heterogeneous and rich dossier the study of Shamanism as a focused discipline: his scholarly studies and metaphysical or mystical novellas reflect aspects of particular shamanistic narratives in pre-Islamic Iranian religion, in a manner that illuminates also Eliade's important concerns as a Romanian, and his existential situation as an exile. All these concerns are related to each other, historically and as relevant features of the phenomenology of shamanism itself.

In shamanism the function of a priestly practitioner of religious ritual intersects with that of the protagonist of a heroic epic or character in a folktale. The shaman, who is recognized as the holder of a cultic office, generally wears a garment necessary to his activity that is considered an animate appendage to his being. He recites poems, sometimes cosmological, sometimes of his own composition or elaboration, which narrate his deeds. These usually consist of an out-of-body spiritual descent or flight into an otherworld where, with the assistance of animal or other spirits – or by compelling them – he acquires esoteric knowledge or effects the cure of a disease. Then he returns. The shaman is, even if the holder of a hereditary office, often an alienated individual, even a member of an outcast class. The process of initiation involves a traumatically violent symbolic dismemberment. He is thus a loner; and his activity is more action – the accomplishing of a quest – than the passive prayer one might otherwise associate with the religious. This lone questing hero overcomes figures out puzzles, overcomes obstacles, and vanquishes an adversary, like the main character in an epic or folktale; but he steps into the mythological plot without being fictionalized, as it were, himself. And he bests the dragon, not with a sword, but by means of his magical incantations. Shamanism is the main aspect of religious practice

of some traditions; in Zoroastrian and Manichaean Iran it was one of several.

The Sasanian high priest Kartir's shamanistic quests through the worlds of the afterlife drew upon the ancient precedents of Jāmāspa, some aspects of the *Ayōdgār ī Zarērān*, and particularly the *Ardā Virāz nāmāg*; his multiple, illustrated inscriptions of them accomplished the propagandistic purpose of official magic, of religious advertisement. This suggests that the Zoroastrian establishment was reacting to a serious challenge in a similar vein. This was posed, not by Christianity – his successor Ādurbād ī Amahraspandān's vernacular credo *Nām stāyishn* and the Pahlavi catechism *Čīdag andarz ī pōryōtkeshān* were to be the answer to the Nicene Creed – but by Manichaeism. The famous episode of Mānī's elevation of king Mihrshāh can be seen as shamanistic, and the vision of the Manichaean heaven and hell described in the hymn cycles *Angad rōšnān* and *Huyōdagmān* were impressive enough to be depicted on funerary bas-reliefs in China centuries after the Apostle of Light's own *parinirvāṇa*.

Two narratives from the Iranian sphere that have the hallmarks of cosmological and quest tales subjected secondarily to shamanistic recasting and religious use invite consideration. The first would belong to a Zoroastrian milieu. In "The Devil and God: Prehistory of the Romanian Folk Cosmogony," the third chapter of *Zalmoxis*, Eliade studied a myth in which God asks a lone bird associated with the power of evil to fetch soil from the sea bottom so He may create the Earth. The myth suggests that God was not capable of creating the world Himself and required the assistance of either Satanael or an intermediary. Eliade cites the well-known Armenian and Manichaean allusions to a Zoroastrian myth about the demon Mahmī, who supposedly taught Ohrmazd to create light; and he duly points out the probable Iranian provenance of the dualistic motif in the legend. He supports a diffusionist hypothesis, deriving the mythologem from a primordial model in Central Asia; but supposes also that the Iranized pattern reinforced a myth already existent in the Thracio-Dacian milieu; it survived the Christianization of the early Romanians because it provided a folk-cosmological explanation of the question of evil. Eliade claimed that the myth itself is not attested in a Zoroastrian text; however it seems possible that the *Bundahishn* contains a Zoroastrian and fully dualistic refraction of it: Ohrmazd invited Ahreman to assist him in making the world. The evil spirit refused, and then invaded it in the form of a serpent, puncturing the cosmic egg *at the sea bottom* and then rushing up into the floating disk of the earth, which fled from him and thereby formed the mountains. This myth of the *ēbgad*, or incursion, of the evil one answers for the Zoroastrians the question *Unde malum?* whilst differently distributing the elements of the myth Eliade has

analyzed. The cosmology of the *Bundahišn* would seem to have co-opted and altered a myth that in its original form compromises the creative powers of Ahura Mazda.

The myth in its original form is attested in Turco-Mongol tradition, where the creator god is called by the name Kurbystan – most likely a loan from Iranian *urmayzdan*-, “belonging to Ahura Mazda” – and his evil adversary is Erlik Khan. There is also, apparently, a shamanistic variant which recreates the cosmological setting but changes the purpose and events, and replaces one of the characters. In a Mongolian ritual song recorded by Heissig, it is a shaman who approaches the axial tree of the world on whose branches the Garuḍa perches – this is the powerful ancient Indian bird who is associated with the *nāgas*. By his magical prowess the shaman acquires the assistance of the bird. Armenian magicians of the mediaeval period used to employ in a ritual for healing a sick client the text of a talismanic scroll, in whose earliest version three angels approach an uncanny, wingless eagle (Armenian *artsiv*, a very early Iranian loan) capable of vanquishing serpents (the word used is another Iranian loan, *vishap*, a kind of submarine dragon) – seated on a branchless tree in the middle of the universe. The ritual was believed to be most effective on a Friday, especially Good Friday. I have argued that this mythological theme was borrowed in the oldest of the Russian ballads called *byliny*: that of Il’ya Muromets and the Nightingale-Robber (*Илья Муромец и Соловей-разбойник*). In the latter, the folk hero travels on Easter Sunday with preternatural speed to the court of prince Vladimir at Kiev, having vowed not to shed blood when overcoming obstacles in his path. This seems but a distant echo of the shamanic or magical refraction of the myth, where the practitioner employs his spells and cunning, for in the event Il’ya does slay the mighty and uncanny Nightingale-robber, who is perched on two trees. One need not adhere strictly to a diffusionist method to accept that the Armenian Christian magical spell has its origin in a shamanistic elaboration of the myth of the bird in the primordial ocean. The ultimate source would have been Central Asia; the path of transmission, most likely, would have traversed Iran. Thus the mythologem that the Zoroastrian divines recast would have persisted independently in the context of Iranian folk shamanism, where the Garuda would have been an *arəzifya*-; and the *nāgas*, *vīshāpas*.¹

¹ See on the transmission of Iranian dualistic mythology into the cultures of Slavic-speaking peoples and their Finno-Ugrian compatriots J. R. RUSSELL, “The Rime of the Book of the Dove (*Stikh o Golubinoi knige*): From Zoroastrian cosmology and Armenian heresiography to the Russian novel,” in Christine ALLISON, Anke JOISTEN-PRUSCHKE, and Antje WENDTLAND, eds., *From Daena to*

The second narrative to be considered has affinities to one of Eliade's marvelous mystical novellas. *Pelerina* (1975), translated as "The Cape", has in Romanian the specific overtone of the vestment of the *peregrinus*. The pilgrim is Zevedei, whose fifteen years of political activity were followed by fifteen of imprisonment: a kind of latter-day ordeal of shamanistic enlightenment equivalent to the lifetime of Christ and thus also indicative of a movement from physical genesis through the apogenesis of death into spiritual rebirth. (In "Youth Without Youth", Eliade's character, an elderly scholar, is struck by lightning and restored to youth: here the motif of shamanic dismemberment is even more explicit. Eliade's frequent chronologies of Christmas and Easter in reverse order also indicate the theme of apogenesis.) Zevedei's garb – a cape bearing the traces of pre-Communist epaulettes – attracts the unwelcome attention of the Securitate, who implicate him in the dissemination of issues of *Scînteia* back-dated three years (to 1966, a significant date for Eliade), in which the venerable Party slogan has been subversively rephrased as "Dreamers of the world, unite!" Christ's "poor in spirit" are encoded into the text; and "providence" replaces the word "provenance". These references are taken by the narrator to refer to Parsifal's quest for the chalice of the holy grail. Zevedei's cape marks him as a questing stranger, a pilgrim from another age. The cape, taking the shape of his true form, defines also his essential belonging to a different, better dispensation.

The overall structure of the story, and its strange details, remind one of a short Syriac poem embedded in the *Acts of Thomas* called the Hymn of the Pearl or the Hymn of the Soul. The milieu is geographically and socially that of Arsacid Parthia, and a number of key terms are Middle Iranian; and in the absence of a provenance, some students of the work have sought authorship in the providentially imperfectly documented Bardaisan of Edessa. In brief, the king of the East sends his son to recover the pearl that is held captive by a dragon in the sea of Egypt. The prince departs, but at the inn (Syriac *ešpeza*, from Parthian *ispinz*) in Egypt he is drugged and falls asleep, despite the counsel of a noble youth (*āzār*) from his homeland. A letter in the form of an eagle from his father reminds him of his quest and summons him to fight, that he may be inscribed in the Book of Heroes. The prince then employs magical incantations (the verb employed is a derivative of Persian

Din: Religion, Kultur und Sprache in der iranischen Welt, Wiesbaden: Harrassowitz, 2009, pp. 141-208 (*Festschrift Prof. Dr. Philip Kreyenbroek*). On the Nightingale-Robber and the Armenian material see J.R. RUSSELL, "Solov'i, solov'i," *St. Nersess Theological Review* 10 (2005), pp. 77-139 (published in Russian in *Rossiia XXI*, 2006, 4, Moscow, pp. 156-197.)

magush) to vanquish the dragon, recovers the pearl, and returns home to the royal court of kind and *vaspuhrān*; at the gates of the East his robe comes to him. Some twenty of the poem's hundred-odd lines are devoted to a description of the latter. It is the prince's true eidolon and bears the visage of the king of kings. It glitters with gems, the motions of gnosis stir upon it, and the robe sings to him, rejoicing in their reunion.

The poem's elements and structure are those of the traditional heroic epic in which a young warrior ventures forth on a quest, suffers perils and reversals, overcomes them, and slays a dragon. The Iranian trappings are cues to the audience to expect a familiar entertainment – but the preacher of the Gnostic, probably Manichaean, message of the Hymn achieves the effect of surprise by playing on that very expectation to deliver a radically different meaning. The prince does not slay the dragon with a sword; he puts a spell on him. Far from becoming an adult by affirming his place as a warrior in the world, he frees himself from the mire of a cosmos of lies and departs from it, donning the robe that is a reflection of his true self and an emblem of his rejection of physical life. The dragon's subjects are unable to drug him. Now the shamanistic song also employs this morphology of the heroic poem, in which the shaman as hero undertakes his otherworld journey in the manner of a quest, while substituting, as we have seen, magical operations for warfare. So the *Hymn of the Pearl* seems to be a heroic poem reconfigured as a Manichaean sermon; and the Manichaeans, like the Zoroastrians, retained some vestiges of shamanism which they employed – as the rivalry of Mānī and Kartīr suggests – for propagandistic purposes.

In Eliade's story, Bucharest under the Communists is the dragon's inn; the police, the monster's accomplices; and propaganda is the potation that stupefies. But Zevedei, attired in the pilgrim's cape of his true self and alien origin, defeats the dragon by magian formulas – the subversion of the clichés of *Scînteia*. There are other possible traces in Eliade's work of Manichaeism in general and the Syriac hymn in particular: in "Nineteen Roses", for instance, the hero discovers he has a son whom he does not know, who is aware his father tried once to stage a play on Orpheus' descent into the underworld. This enigmatic yet close relationship recalls the Manichaean spirit twin; and in the same story Niculina wears a special, exotic dress while reciting a *Syrian* spell. Why did Eliade, a gifted prose writer, focus so intently on these particular topics; and why is he so cryptic – why do they require decoding? As to the latter question, Eliade writes in his autobiography: "It seemed to me that this dialectics of hierophanies constituted – though camouflaged – the exemplary model of every human existence." That is, divinity is immanent, but it conceals itself. The purpose of the educational process of this life is to discover it through spiritual and intellectual striving and

insight. Subtlety and inference, to the point of using sheer wordplay as a defensive weapon, are a strategy of dealing with totalitarianism most recently – and more traditionally belong to the *Miorita* complex that Eliade defined and studied in Romanian culture. “Literature I can write only in Romanian, the language in which I dream,” Eliade once declared: of all forms of expression the dream is the most secretive of all, the most veiled in symbols: indeed, Iranian *rûz*, “secret”, is borrowed into Armenian as *eraz*, “dream”. Dreams are hyper-mioritic, as it were; and equally they are the vehicle, often, of religious vision, including shamanistic initiation. But why did Eliade evince, in his treatment of shamanistic phenomena, a particular interest in their expression in the pre-Islamic culture of Iran?

Herodotus and subsequent writers present the Zalmoxis cult as a religion whose founder was a shaman-philosopher-hero-king whose cosmological, eschatological, and moral doctrines were sufficiently profound as to serve the Romanized Dacians of the third century of the Christian era as a *præparatio evangelica*: the Gospel of redemption and rebirth easily embraced the *getas ious athanatizontas*. There is, as one might expect of any traditional culture, a strong pagan substratum in Romanian folk belief – possession by *Sânziana* (i.e., Sancta Diana, the Thracio-Dacian Bendis whom we meet in the first book of the *Republic* of Plato), and the shamanistic *călușari*, are the most relevant when one considers the shamanistic aspect of the Zalmoxis cult. Zalmoxis was specifically hailed as a religious figure parallel and akin to Zarathustra at the time of the Dacian revival in Romanian scholarship. The Iranian prophet, one need scarcely be reminded, had since the Renaissance gradually acquired the status of a hero figure of an extra-Biblical *prisca theologia*. At first this fictionalized Zoroaster was employed to undermine the dogma of the Catholic Church; as European local nationalisms gained strength, the Iranian prophet became the paragon of an Aryan ethos intended to overcome the slave mentality tendentiously ascribed to the Christian faith in general and to its Jewish origins in particular.

The Daco-Thracians, whom Ovid regarded as kin in every way to the Sarmatians and Scythians of the Black Sea littoral, might then be blood relatives of the Iranian prophet. In the course of forging an Iranian cultural kinship or patrimony for his Dacian ancestors that might at the same time bestow the charisma of antique precedent upon the cultic brotherhood of the Legionaries of the Archangel Michael, Eliade accepted uncritically the scholarship of his friend, the Iranist Stig Wikander. The latter's chief contribution was a hypothetical construction of Iranian *Männerbünde* whose young initiates were hooligans (a key word in Romanian literature from Eliade in the 1930's down to Norman Manea's memoirs) who swilled *soma* and acted with the amoral abandon of

werewolves. Wikander and Eliade accepted as *realia* of the institution the vulpine totem of the province of Hyrcania and the ostensibly vulpine symbolism of an Iranian war banner. By adopting the incautious misreading of an Old Persian epithet as *haumavarka* instead of *haumavarga*, Eliade was able to characterize the Dacians' Saka neighbors as ambrosia-imbibing lycanthropes; so that when on firmer ground he observed that the Dacian ethnonym itself contains an old word for "wolf", he could present a chain of kinship from Avesta to Saka to Dacian that is tenuous at best. The concept of an occult band of young, berserk males found a ready application under fascism; but in the Zoroastrian texts these *mairyas* are considered inimical to the message of the Prophet *ab initio*. It is impossible to square Männerbund with Mazdaism: the fictionalized Zarathustra of Nietzsche was beyond good and evil; but the singular message of the Zarathustra of the Avestan canon is that good and evil are so existentially different as to preclude the possibility of such transcendence.

Norman Manea has asserted that it would be vulgar to assess Eliade's scholarship through the prism of his politics; but Adriana Berger, in her study of the latter, has demonstrated how the refraction of learning through politics creates distortion that impairs scholarship. Chronology is an important factor in Eliade's mystic stories: particular years and festivals seem to exist outside of the flow of the time-space continuum, and this reminds one of the way a shaman can in his trance transcend linear time by entering suspended animation, a ritual death, and acting in the unmoving, primordial present of the Otherworld. It is telling, then, that one such fixed time to which Eliade returns several times in his prose is the year 1938, when Codreanu's supporters were violently suppressed by king Carol II's government and Eliade himself spent several months in detention. This was for him a traumatic and transforming turning point: though he was to serve in the foreign ministry under the Iron Guardist Antonescu régime that had overthrown the monarchy, 1938 was the point at which the prewar world ended and the prospect of exile became clear. One must not presume to stand in judgement of Eliade, though. He did not take part in the sanguinary, Männerbundist initiatory rites of the Legionaries, and in later years claimed to have been repelled by the extreme violence of the Iron Guard's pogroms in 1941. Perhaps he was: it can be argued that not everyone made the gradual transition from the virulent social anti-Semitism of the 1930's to the eliminationist violence of the Holocaust. That does not make the picture less tragic. The Romanian Jewish author Joseph Hechter, who wrote under the *nom de plume* of Mihail Sebastian, leaves no doubt in his diaries of the 1930's that his dear friend Mircea shared anti-Semitic prejudices common throughout Europe at the time and felt right-wing nationalism best served

Romania in her precarious position. For his part, Eliade avoided meeting Sebastian during a wartime mission home to Bucharest: he knew this would hurt Sebastian; but believed such a meeting would have endangered the latter.

Romania for world culture must evoke the *Tristia* of Ovid. It was an island of Latinity in the Balkans; a bastion of Orthodoxy in the chains of Ottoman oppression; and many of its most creative minds have endured the pain of flight. *Ya izuchil nauku rastavan'ya*, "I've mastered the science of parting," wrote Mandelstam in his own *Tristia*; and when one considers the legend of Zarathustra's grievous departure from his people and his wandering, and the sojourn of Zalmoxis in the household of Pythagoras and his loneliness even after his *nostos* amongst his own, then the biographies of the shaman-visionaries Eliade studied may be seen as studies in exile. The shaman himself, for all the social sanctioning that validates his practice, generally exhibits the neurotic traits of an individual alienated by different markers, often deviant sexuality, from the community. His very practice is a departure, whether a *psychanodia* or *descensus ad inferos*. But for it to be successful, he has to return with the goods, as it were, a successful Orpheus – or Odysseus (whose wanderings also included a visit to Hades). "Every exile is a Ulysses traveling toward Ithaca [...] toward the center," Eliade wrote; and in his scholarship and *belles lettres* he accomplished an imaginal return to the land from which he had fled into exile. Ovid plaintively asks in *Tristia ex Ponto*, *Quod mihi vobiscum est infelix cura, libelli?* For Eliade, books were the means of regaining lost Tomis: he had learnt the science of parting.

In the work of Eliade's disciple, the late Ioan Culianu, the questions of shamanism, and of exile, are refracted through a different prism. Where Eliade accepted an essentially diffusionist model of shamanism, one which reinforced, whether by deliberation or fortuity, an ideologically driven concept of Romanian ethnogenesis and cultural identity, Culianu considered the phenomenon an expression of a cast of religious imagination liable independently to originate in human cultures. In the Iranian case, Culianu tended to reject the diffusionist idea of a Zoroastrian source of contiguous dualistic systems, such as that encountered in Manichaeism. Culianu wrote in depth on one of the most perceptive students of Manichaeism, Hans Jonas, who analyzes the Hymn of the Pearl in his important book, *The Gnostic Religion*. The Romanian exile scholar in Chicago must have felt an affinity for the German refugee of an earlier generation: Jonas had been a pupil of Martin Heidegger, but he rejected the latter's fascism and the philosophical stances consonant with it. In particular, Jonas rejected Heidegger's idea of the "destinings" of Being – Christianity consists, Jonas argued, precisely in deliverance

from destiny and fate. The essential action of conscious being is not the experience of some heroic ecstatic moment, but the exercise of concern, which is the first principle of freedom. Freedom has as its concomitants love and pity, which must take place in the context of concerned involvement with others, rather than the transcendence of good and evil in heroic isolation or social absorption in some mass will to power.

Both Eliade and Culianu seem to have considered magical operations real in effect, but their thinking on this issue diverges, as well. For the former, shamanism and magic work because there is a spirit world. For the latter, they work because they create a mode of thinking which acts as a self-fulfilling prophecy in the human apperception of external reality; and they fire their symbolism with the energy of desire, co-opting in particular the components of eroticism. One can thus trace the image of Zarathustra from the *prisca theologia* of Ficino, Pico, and Bruno down to the Aryan model, as noted above; or, along the lines of Culianu's work, one can analyze the same forms of Renaissance magic and find their descendants in the seductive techniques of Fascist propaganda (in this regard, Borges' story "Tlön, Uqbar, and Orbis Tertius" served as an inspiration for Culianu's prose) and capitalist advertising. Culianu, like his fellow exiles Andrei Codrescu and Norman Manea, learnt a different science of parting, whose trajectory, as Manea put it, is not of nation and bloodline and force, but from the tragic experience of the labor camp of Transnistria to Trans-*tristia* – to a cosmopolitan embrace of the existential exilic state. He quotes Joyce, "I will not serve that in which I no longer believe, whether it call itself my home, my fatherland, or my church, and I will try to express myself in some mode of life or art as freely as I can and as wholly as I can, using for my defense the only arms I allow myself to use: silence, exile, and cunning." The genuine Zarathustra, who left his clan and turned against his ancestral religion, and then composed the sustained, intricate poetic revelation of the *Gāthās*, might have spoken much this way himself. And in the end Professor Mircea Eliade, the great scholar and artist whose virtual free Romania was cunningly encrypted and boldly argued in exile, might have inscribed the words of Stephen Daedalus on his escutcheon too, alongside the proud declaration in the language of his dreams. *Visători din toate țările, uniți-vă!*

THE BELLS: FROM POE TO SARDARAPAT

JAMES R. RUSSELL

Was it a dark and stormy night? No, but at least it was on a crisp and sere one, in autumn, and the scene is an old wooden house shaded by huge, gaunt trees. The nervous, overweight boy from the big city was uncomfortable with his four suburban cousins, with their healthy, athletic roughhousing and clean, wholesome, all-American good looks: their parents had not circumcised them and had rejected the antique language, the prophetic faith, and the tribal old-new land. But in the living room the Franklin stove crackled, all was bright and warm, and his aunt and uncle had put on a newly pressed record, “All The News That’s Fit to Sing” (Elektra Records, 1964)—a topical irony, since *The New York Times* boasted then, and still does, that it offers all the news fit to print. In that little, bright room in the ghoulish-woodland of suburban Philadelphia the boy heard for the first time Phil Ochs’ song “The Bells”, with its intricate guitar work and gorgeous melody. The music seemed part of the happy scene in every way the boy already knew he most definitely was not, yet he loved the music.¹

For something else entirely was at work as the song wove its enchantment. Ochs’ setting of Edgar Allan Poe’s poem suggested to him that music and words could be extremely close, closer than he had thought, not melody and lyric as two together but the *same thing*—and the subject of the poem, the bells, and the densely alliterative poem itself leapt across the boundary between sound and sense, between the apparently arbitrary semantics of the language we use and the sounds we employ to express meaning. And that is the sixty-four-dollar question, isn’t it? Is there anything more than an arbitrary relationship between signifier and signified? We receive the universe as information; and evaluate, relay, experience much of that information through a linguistic medium. The very diversity of languages would indicate that the relationship of names to things is indeed arbitrary, at least most of the time. Only most of the time, that is, since one can introduce into the issue two other factors: the idea of music and the musicality of language, and a specific category of words, the onomatopoeic ones—the ones that mimic a non-

¹ This article began with my graduate course at Harvard in the Fall term of 2011 on modern Armenian romantic and revolutionary poetry attended by two brilliant students, Ainsley Morse and Christian Millian, then a presentation to the Boston area Armenologists’ round table at my office, and a lecture at the invitation of Barbara Merquerian to the Armenian Library and Museum of America, Watertown, MA, in December 2011. I am grateful to these students and colleagues who listened, reacted, and suggested. The shortcomings of the study are all my own.

linguistic sound in nature associated with a named object or act. So, a bell rings. An English-speaking child hears **ding-dong**, and Poe hears tintinnabulation. A Russian's *kolokol'chiki* go **dzin'-dzin'**. In Hebrew a ringing bell *me-tsaltsél*, and a the *ghoghanj* of a clanging Armenian *zang* can be **dzendzgha**-voiced, or a child can sing *De, znga znga im zangak* "Hey, go ding-dong, my bell!" What if a word really were related to what it describes? Coleridge once mused, Were a man to dream of Paradise and then wake, holding a flower from there, yes, and what then? What then? This essay will probe some of the "What then."

At eleven I did not think all that out quite the way I've put it here, but I felt it, which is an essential first step if you take a poem seriously; and the grail of philology glimmered on the horizon, that line in the distance that melts away as one questing poet, or scholar, or madman approaches it. As time passed, and one learnt more of Poe and Ochs, there was a vindication of sorts, besides; for one discovered over time that Poe himself was no paragon of conventional virtue. And he was fascinated by the Near East and by my ancestral and sacral language, Hebrew. He was neither cheerful nor wholesome: he was as hung up a person as ever lived in the whole wide universe. I found out that his musical interpreter, Philip David Ochs (December 19, 1940–April 9, 1976), was a Jew whose youth in the Midwest was marred by anti-Semitism. He wasn't cheerful or wholesome either, and his fate was somewhat like that of Poe, whose poem he set to music in that unforgettable song. Ochs became a drunkard, believed he was possessed by somebody else's soul and that he himself had died, and then he hanged himself. My assimilationist relatives perhaps constructed their lives the way they did because they recoiled from what Salo Baron has called the lachrymose paradigm of Jewish history. My uncle had been in an army unit that liberated a Nazi death camp, and I believe he wished to camouflage his children, to protect them from anti-Semitism. But their sterile picture of a homogeneous American identity was conceived also, I think, in a self-loathing that makes life a lie. Armenians can also have an unhealthy obsession with the Genocide, as though that were all there was to the nation's history— though the issue of denial makes that giant episode unfinished business. There is no worldwide and ineradicable hatred of Armenians comparable to anti-Semitism, though; and that is perhaps why even with a cognate lachrymose paradigm there is no self-hatred. I remember my cousins now simply as graceful; their parents, as decent though chilled by life; and for their music, like Joseph Brodsky in his retrospective poem at forty, I will give nothing but thanks. Yet "The Bells" has Armenian echoes, and these will indeed be an alarum, plunged into the terror and murder of the Genocide, of the awful reality of being human that poets face head on, that I try to escape, that you try to escape, from which there is no escape.

I have heard the bells of Poe echo again, in a poem by the Western Armenian Rupen Sevag, with the tolling grim; and the poet's fate, hideous. And then I heard them in the verses of two Eastern Armenian poets: Yeghishe Ch'arents' and Paruyr Sevak—one murdered by the police at forty, the other killed when he was scarcely older, in a suspicious road accident. It seems that it is dangerous to be a good poet, dangerous to be a visionary, dangerous to hear bells. It seems that society often exacts a price from such people.² A scholar is also a person and as he grows older he can shed some of his armor and tell about the motives for what he has chosen to study, though his candor cannot compromise his practice of his art, the integrity of his method. He does this partly out of respect for the decent opinion of mankind. But paradoxically he may do it partly out of indifference to that opinion, as well. Because as Colin Wilson put it, "age has one advantage; it teaches one that the opinions of other people are not really very important; death is so much more real."³ So my project here is to suggest that at certain points, poets find a door between dimensions through which signifier and signified walk and shake hands. I want to assert that their doing so has a moral content: it is the exercise of a divine gift that may bring down the wrathful envy and enmity of their fellows, but it is work on behalf of the Platonic virtues, the good, the true, the beautiful. The beauty of the mainstream of culture belongs as much to the misfits and outcasts who made it and who are its guardians even now, as to the world they have given it to. And among us, those who cannot keep the bells from ringing in our heads and who have not the good sense to be silent, to stop creating and to stop protesting, are the drunkards and the drugged, the perverts and the mad, and the Jews and the Armenians. Everybody, that is, in Federico Garcia Lorca's bacchanal.

² One recalls this interchange in the movie "Easy Rider" (1969) between Jack Nicholson and Dennis Hopper:

George Hanson: They're not scared of you. They're scared of what you represent to 'em.

Billy: Hey, man. All we represent to them, man, is somebody who needs a haircut.

George Hanson: Oh, no. What you represent to them is freedom.

Billy: What the hell is wrong with freedom? That's what it's all about.

George Hanson: Oh, yeah, that's right. That's what it's all about, all right. But talkin' about it and bein' it, that's two different things. I mean, it's real hard to be free when you are bought and sold in the marketplace. Of course, don't ever tell anybody that they're not free, 'cause then they're gonna get real busy killin' and maimin' to prove to you that they are. Oh, yeah, they're gonna talk to you, and talk to you, and talk to you about individual freedom. But they see a free individual, it's gonna scare 'em.

Billy: Well, it don't make 'em runnin' scared.

George Hanson: No, it makes 'em dangerous.

1. EARLY CHIMES: POE

The diary of Mary Louise Shew, friend and benefactor of the American writer Edgar Allan Poe (January 19, 1809–October 7, 1849), contains an account of the genesis of his last, great poem “The Bells” in May 1848. The two were sitting in a conservatory overlooking a garden. Poe complained that he had to write a poem, but lacked inspiration. The sound of church bells filled the air, but they merely irritated his frayed nerves. He said, “I dislike the noise of bells tonight, I cannot write, I have no subject, I am exhausted.” Shew then wrote down a line and passed it to him: “The bells, the little, silver bells.” Poe composed a stanza, then lapsing into a nearly comatose state. She wrote again: “The heavy iron bells”—and at this he jotted down two more stanzas, which he attributed to her. He had to be put to bed, and a doctor was summoned. Poe was nearly insane, and physically close to death. But he survived to finish the poem begun that day, as well as “Annabel Lee,”⁴ in 1849; he died later that year, at forty.⁵ “The Bells” was printed posthumously in *Sartain’s Magazine*.⁶ On his last night on earth Poe was found in the street in Baltimore, in somebody else’s clothes, raving, calling out the name “Reynolds.” The latter is the name of the explorer whose project of an expedition to the Antarctic had given Poe the idea for his novella of Antarctic exploration, supernatural weirdness, and doom, *The Narrative of Arthur Gordon Pym of Nantucket*. The last line of this work portrays a maelstrom, a cataract, and a bottomless chasm out of which a giant shrouded human figure rises, white as snow—perhaps Poe experienced some similar, dire vision in his last moments, but the ending of *Pym* is more the synopsis of a cosmology than merely a shocking finale. (In the last months of his life Yeghishe Ch’arents’ was to write—nearly a century later—a poem he titled “Ulalume,” after Poe. It is translated in the Appendix here, and describes immersion in the vortices of an inner sea.)

The America of the first half of the 19th century was entranced by the metaphysical, by the mysteries and arts and languages of Ancient Egypt and the Near East—this was before the Civil War left in its wake the hard, cold, materialistic practicality that became the hallmark of the nation’s culture for some time to come.⁷ So the narrative of the antebellum *Pym* is replete with

⁴ This is the credal ballad of Humbert Humbert in Nabokov’s *Lolita*, with its kingdom by the sea for which lonely characters in other of his novels also long.

⁶ See Plate 1.

⁷ Greil Marcus addresses the cultural issue generally in chapter four, “The Old, Weird America,” of his *Invisible Republic: Bob Dylan’s Basement Tapes* (New York: Henry Holt & Co., 1997); Louis Menand’s *The Metaphysical Club: A Story of Ideas in America* (New York: Farrar, Straus and Giroux, 2001) stresses the wartime divide; and John T. Irwin, *American Hieroglyphics: The Symbol of the Egyptian Hieroglyphics in the American Renaissance* (New

relics of the Ancient Near East: the explorers discover in the Antarctic the Hebrew word *tsalmawet* “valley of death” of the 23rd Psalm inscribed in Ethiopic letters; and the birds of the southern wastes cry *Tekeli-li!* recalling the cryptic Aramaic words of doom on the wall in the book of Daniel: *Mene mene tekel upharsin*, “You have been weighed and found wanting!” It is important here to note that Poe relies upon the cryptic aspect of these words to bear his message, not their lexical, formal meaning: that is, what matters is their *sound*. The idea that a terrible whirlpool at the end of the earth plunges into a subterranean Otherworld inhabited by superior and not necessarily friendly beings has been the stuff of fantastic, mystical theories for two centuries: Edward Bulwer-Lytton’s novel *The Coming Race* has these beings from below, with their ultimate weapon, a force called by the invented word *vril*, poised to emerge, invade, and subjugate the sunlit realms of this planet.⁸ Poe’s *Pym* has a precursor with a Near Eastern connection of direct interest to us: it follows closely Coleridge’s *Rime of the Ancient Mariner*, a long narrative poem about a doomed Antarctic expedition, in which the surviving sailor—accursed for his horrible, unmotivated murder of an albatross—is pursued by a spirit the poet imagined after reading the medieval account of the exorcism at Constantinople of an Armenian-speaking demon.⁹

Cultural contacts are not unidirectional arrows, and sometimes indeed circle back to their remote sources rather like whirlpools: so in 1857, an abridged Western Armenian version of *Pym*, based upon the French of Baudelaire, was published by the Vienna Mekhitarists. They labored for a sophisticated and eclectic readership interested in the Romantics and in tales of adventure and of moral edification. For the same year saw a translation into Armenian of George Gordon Lord Byron’s *The Prisoner of Chillon* by Movsēs Zohrapēan of Arc’ax at Shemakhi,¹⁰ and the last Classical Armenian edition, at Tiflis (then the cultural capital of the Eastern Armenians), of the

Haven: Yale University Press, 1980), addresses the specific feature of aegyptomania. This writer’s unpublished lecture series “The Near East in the Mind of America” (National Association for Armenian Studies and Research, Belmont, MA, 2002) also explored the interests of such American Renaissance thinkers as Emerson and Thoreau in Armenia and Iran.

⁸ Jeffrey J. Kripal, *Mutants and Mystics* (Chicago: University of Chicago Press, 2011), pp. 34–36. Kripal points out that Herman Melville got from Poe’s account of a great white whale, Mocha Dick his idea for Moby Dick. That oceanic prose work, which in *Bend Sinister* Vladimir Nabokov insightfully calls a poem, is also replete with references to the ancient Near East.

nearly millennium-old miscellany “The History of the City of Bronze”, with its legend of a metropolis of death in the distant wastes inhabited by automata—a tale with a certain kinship to Coleridge and Poe, after all.¹¹ It was a moment in Armenian history of rapid innovation and progress, in the context of an ancient and unbroken cultural heritage—a point in its literature at which a modern adventure story could rub shoulders with an ancient travel narrative without the sense of dissonance or discontinuity.

Though Poe was slow to be appreciated in his native America, not least because his life and work both offended the standards of Victorian propriety, the French poet Charles Baudelaire recognized his genius and appreciated his unusual art instantly. And it was from the latter’s essay and translations into French that Western Armenian writers, many of them studying at European universities and settling in Constantinople, quickly learnt of the American visionary. English was not then the international language of culture and commerce that it has since become, and Poe’s readership, by virtue of his language, would then have been limited and provincial; so Baudelaire’s discovery was doubly fortunate. Pre-Revolutionary Eastern Armenians also studied in Europe and Russia, and read Poe in French or in the Russian translations of the Symbolist poet Konstantin Dmitrievich Bal’mont. The latter was born near Vladimir on 15 June 1867, fled Russia after the Revolution, and died in exile in Nazi-occupied Paris on 23 December 1942.¹² Poe’s bells, now *Kolokola*, were to clang and thunder in Russian music, too, long before Phil Ochs could ring them on the poet’s familiar soil. Sergei Vasilievich Rakhmaninov, who was born at Semyonovo, near Great Novgorod, on 1 April 1873, composed his choral symphony “The Bells” in 1913, using Bal’mont’s translation. He emigrated from Russia a few months after the October Revolution of 1917, composing very little thereafter. The symphony was published in 1920.¹³ Rakhmaninov, like Bal’mont, died in

¹¹ The tale seems to be based on the Mahayana Buddhist *Saddharmapundarikasutra* (“Lotus Sutra of the Good Law”), which may have originated in Iranian Central Asia. The tale was transmitted to Armenia and written down *ca.* AD 1000, with many subsequent revisions and recensions. The intermediary stages would have been Manichaean and Muslim. The Lotus Sutra seems to have been receptive to Western didactic story-telling, too; for it re-interprets the parable of the Prodigal Son of Christian scripture. See James R. Russell, “The Cross and the Lotus: The Armenian Mediaeval Miscellany *The City of Bronze*,” Soudavar Memorial Lecture, Univ. of London, 1 Feb. 2008, published in Vesta Curtis and Sarah Stewart, eds., *The Rise of Islam. The Idea of Iran*, vol. 4 (London: I.B. Tauris, 2009), pp. 71–81; and James R. Russell, “The Tale of the Bronze City in Armenian,” in Thomas Samuelian and Michael Stone, eds., *Medieval Armenian Culture*. University of Pennsylvania Armenian Texts and Studies 6 (Chico, CA: Scholars Press, 1984), pp. 250–261.

¹² See Joan Delaney Grossman, *Edgar Allan Poe in Russia: A Study in Legend and Literary Influence* (Würzburg: Jal Verlag, 1973); Russian trans. Maria A. Shereshevskaya, *Edgar Allan Po v Rossii* (St. Petersburg: Akademicheskii Proekt, 1998).

¹³ The focus on bells themselves in the choral symphony was new; but the use of bells in Russian music was not. One recalls just two famous examples: the coronation scene in

exile, and only a year after the poet, on 28 March 1943 in California. Now let us look at the poem itself.

The Bells

Edgar Allan Poe

I

Hear the sledges with the bells-
Silver bells!
What a world of merriment their melody foretells!
How they tinkle, tinkle, tinkle,
In the icy air of night!
While the stars that oversprinkle
All the heavens, seem to twinkle
With a crystalline delight;
Keeping time, time, time,
In a sort of Runic rhyme,
To the tintinnabulation that so musically wells
From the bells, bells, bells, bells,
Bells, bells, bells-
From the jingling and the tinkling of the bells.

II

Hear the mellow wedding bells,
Golden bells!
What a world of happiness their harmony foretells!
Through the balmy air of night
How they ring out their delight!
From the molten-golden notes,
And in tune,
What a liquid ditty floats
To the turtle-dove that listens, while she gloats
On the moon!
Oh, from out the sounding cells,

Modest Musorgsky's opera *Boris Godunov*, and the *1812 Overture* of Pyotr Il'ich Tchaikovsky. There is a long and rich tradition of bell ringing in Russia: fine bells are cast at Novgorod, and legend has it that the faithful can hear the bells of sunken Kitezh ringing. There is in Armenia a similar legend about sunken Arčeš (present day Erciş) on the north shore of Lake Van; see James R. Russell, "The Shrine Beneath the Waves," *RES* 51 (Spring 2007), pp. 136-156; Russian trans. "Svyatilishche pod volnami," *Rossiia XXI* (2007.4), pp. 156-196.

What a gush of euphony voluminously wells!
 How it swells!
 How it dwells
 On the Future! how it tells
 Of the rapture that impels
 To the swinging and the ringing
 Of the bells, bells, bells,
 Of the bells, bells, bells, bells,
 Bells, bells, bells-
 To the rhyming and the chiming of the bells!

III

Hear the loud alarum bells-
 Brazen bells!
 What a tale of terror, now, their turbulency tells!
 In the startled ear of night
 How they scream out their affright!
 Too much horrified to speak,
 They can only shriek, shriek,
 Out of tune,
 In a clamorous appealing to the mercy of the fire,
 In a mad expostulation with the deaf and frantic fire,
 Leaping higher, higher, higher,
 With a desperate desire,
 And a resolute endeavor,
 Now- now to sit or never,
 By the side of the pale-faced moon.
 Oh, the bells, bells, bells!
 What a tale their terror tells
 Of Despair!
 How they clang, and clash, and roar!
 What a horror they outpour
 On the bosom of the palpitating air!
 Yet the ear it fully knows,
 By the twanging,
 And the clanging,
 How the danger ebbs and flows:
 Yet the ear distinctly tells,
 In the jangling,
 And the wrangling,
 How the danger sinks and swells,
 By the sinking or the swelling in the anger of the bells-
 Of the bells-

Bells, bells, bells-
In the clamor and the clangor of the bells!

IV

Hear the tolling of the bells-
Iron Bells!
What a world of solemn thought their monody compels!
In the silence of the night,
How we shiver with affright
At the melancholy menace of their tone!
For every sound that floats
From the rust within their throats
Is a groan.
And the people- ah, the people-
They that dwell up in the steeple,
All Alone
And who, tolling, tolling, tolling,
In that muffled monotone,
Feel a glory in so rolling
On the human heart a stone-
They are neither man nor woman-
They are neither brute nor human-
They are Ghouls:
And their king it is who tolls;
And he rolls, rolls, rolls,
Rolls
A paean from the bells!
And his merry bosom swells
With the paean of the bells!
And he dances, and he yells;
Keeping time, time, time,
In a sort of Runic rhyme,
To the paean of the bells-
Of the bells:
Keeping time, time, time,
In a sort of Runic rhyme,
To the throbbing of the bells-
Of the bells, bells, bells-
To the sobbing of the bells;
Keeping time, time, time,
As he knells, knells, knells,

In a happy Runic rhyme,
 To the rolling of the bells-
 Of the bells, bells, bells:
 To the tolling of the bells,
 Of the bells, bells, bells, bells-
 Bells, bells, bells-
 To the moaning and the groaning of the bells.

The structure of the poem is simple. There are four parts, with four kinds of bells: silver, gold, bronze, and iron. Somewhat differently arranged, these are the epochs of the world, an old Greek idea from an older Near Eastern one, a metaphor of time decaying from its pristine golden age to the harsh iron final epoch of blood and violence. So in a way the poem traces obliquely the history of the world, from Eden to Apocalypse. One expects an occult cosmology with ancient roots from Poe. But “The Bells” does not end in a maelstrom of disaster at all—and as we have seen, Poe is only too happy to have an iron age ring down the curtain. Instead, the poem rings, rolls, clangs, tinkles, in a luxury of repetitive alliterations, the pleasure of pure sound, and concludes with a *happy* Runic rhyme. I think this coda is meant, not thematically, but *musically*, as a recapitulation of the opening theme, and what we have just read or heard are the movements of a symphony. Now, music has often been called a language, but one in which one cannot make a statement susceptible to translation. Poe seems to have forced his language into the procrustean semantic limitations, then, of music—the poem does not actually say anything, by the standards of poetic speech. The translatable aspect of the poem really doesn’t matter, and can be reduced to this: the silver bells are happy, the golden ones are passionate, the bronze ones are frightened, and the iron ones are sad. Now these feelings are not *thoughts* for which words are needed, though we can of course verbalize them as we wish—they are primary, animal *emotions* that are pre-linguistic and can be physically expressed without benefit of language at all. Bells are used in fact to chime at weddings, to sound alarms, to toll at funerals: with their metallic tongues, they are the musical instruments that come most closely to making actual linguistic statements, albeit ones that, as I have suggested, we do not require language for. That is a very enticing idea all by itself, considering its implications for the signifier-signified problem. But it was particularly attractive to the Symbolists, an artistic movement of the late 19th and early 20th centuries. They sought in words, music, and painting to explore just such regions of the senses where the semantic and the phonetic, the human and the natural worlds, elusively and ineluctably meet, in regions of colors in between those of the spectrum, at times in between night and day, in places hinted at, at the edge of one’s field of vision. So the tower of “The Bells” properly rose over the imaginal temple of Bal’mont and the other heirs of Baudelaire

2. THE ALARUM: SEVAG, TERYAN, AND CH'ARENTS'

Rupen Sevag (né Chilingirian)¹⁴ was born at Silivri near Constantinople in 1885; after graduating from the Berberian school in the capital he went to Lausanne to study medicine. Following the revolution of 1908 he and his friends founded the newspaper *Surhandak* ("The Courier"); he worked also for the newspaper *Azatomart* ("Freedom Struggle") of the Armenian Revolutionary Federation, the *Dašnak'ut'iun*. This trajectory of remarkable social and geographical mobility is not unusual for talented Western Armenian artists and intellectuals in the decades before the Genocide. Sevag is a fine lyric poet, his Armenian limpid and flowing; his sentiments, gentle and noble. This poem, with an almost liturgical refrain recalling the Beatitudes, expresses a simple joy in the beauty of nature that one finds particularly in the lyrics of Sevag's contemporary, Misak' Medzarents' (1886-1908). And in two verses—lines 5-6—Sevag seems to have decided to evoke the evanescence of the ship on the sea by eschewing as best he could the hard and heavy affricates in which Armenian abounds, striving for a liquid vocalism marked by two hiatuses (marked in bold type): *G'anēana navan herraga,/ Lijan yeraz m'ē, ga u ch'āga*.

NIGHTFALL

Night has fallen, cloudless, infinite.
What subtle name to its ten thousand crystals
May I give this holy space of dream?
O! the beatitude of living.

The far-off ship into nonexistence recedes.
The lake is a dream, it is and it isn't.
And the watery whisper is its sole witness,
O! beatitude of whispering.

Above, a thousand stars, a thousand lights below:
Souls stirring half in shadow,
Rock and stream and plant converse:
O! beatitude of earthly things.

¹⁴ A note on transliteration: I have transliterated here Modern Western and Eastern Armenian here as their respective speakers pronounce those dialects, and have done so in both cases in a simplified form to enable readers who are not specialists in the language to have a sense of its sound—a paramount consideration with the kind of poetry considered here. So, for two different poets, one from Constantinople and the other from Erevan, sharing the same *nom de plume*, one writes Sevag (Western) and Sevak (Eastern). For Classical Armenian, and in the citation of bibliographic references, I have employed the standard Hübschmann-Meillet system of transcription.

And the chapel, limpid, rings,
Here below the hoary trees
In this sweetness' plenitude,
O! its petrified beatitude.¹⁵

Like many Armenian students abroad, he was lonely and lovelorn, and adopted a tragic, romantic persona, fancying himself in several poems a suffering knight:¹⁶

THE KNIGHT'S SONG

See! He has saddled his gray:
The golden saddle astride,
Proud and silent goes the knight.
But tell ye, Whither does he ride?

His proud mount like a young lass prances;
The dawn is a parliament of flowers.
Invisible, the choir of a thousand birds is chanting—
But say ye, Whither does the knight go?

¹⁵ The Western Armenian text, from Alek'sandr T'op'č'yan, ed., Ruben Sevak, *Erker* (Works) (Erevan: Sovetakan groh, 1985), p. 155:

KISHERN ICHAV

*Kishern ichav anamb, anhun,
Pyur pyureghe inch' nurp bahun,
Akh! abrelu yerchangut 'yun...*

*G'aneana navn herraga:
Lijn yeraz m'e, ga u ch'ga,
Churi shshunchn e log vega,
Shshnchelu yerchangut 'yun.*

*Vern hazar asdgh, varn hazar luy,
Gisasdverin mech hokehuyz
Ge khosagts'in k'ar, vedag, puys:
Akh! ireru yerchangut 'yun...*

*U ge tsayne madurnn hsdag:
Sa dzeruni dzarrerun dag,
Ays k'aghts'rut'yan mech povantag
K'aranalu yerchangut 'yun!...*

¹⁶ Arm. text in T'op'č'yan, *Erker*, p. 132.

Where are the handsome soldiers all?
 Does our awesome warrior ride to war?
 No. He is wounded to his very soul.
 Tell ye, Whither does the knight go?

Now he has gained the rocky crest.
 He shields his face with iron gauntlet:
 Impassioned down his horse is plunging.
 The noble knight is going to his death.

Very moving, with shades perhaps of Poe's "Eldorado." But Sevag, a handsome and pleasant man, did not have to pine very long. He was married to a beautiful young woman and gave up his narcissistic reveries. Events in the outer world, too, swept aside the romantic pose of self-pity. The Adana massacres of 1909, coming less than a year after the Ottoman revolution, shocked Armenians who had believed, perhaps naïvely, in the reformist promise of multicultural brotherhood. The grieving, angry poems of Sevag's *Karmir girk'ə* ("The Red Book") can be compared to Siamant'o's similarly-titled cycle *Karmir lurer barekamēs* ("Red News from My Friend");¹⁷ and his poem *Verjīn hayerə* ("The Last Armenians") of that year was darkly prophetic. It would seem others felt intimations of catastrophe, for in the Summer of 1913 the Eastern Armenian Symbolist poet Vahan Teryan (1885-1920) was to write, "Could I really be the last poet,/ Last singer of my land?/ Is it death, perhaps, or sleep/ That has encompassed you, shining Nairi?" (*Mit'e verjīn poētn em yes/ Verjīn yergich 'n im yerkrī:/ Mahn e ardyok', t'e ninjə k'ez/ Patel, paytsarr Nairi?*)¹⁸

After obtaining his medical degree, Sevag returned to Constantinople in May 1914 with his young German wife Helene (née Apell) and their son Levon. When war broke out in August of that year he was conscripted as a military doctor and served in the Ottoman army at Çanakkale (i.e., Gallipoli, site of the bloodiest battle of the war). On 24 April 1915 many of his friends were among the 250-odd Armenian leaders and intellectuals arrested in the capital, as the wheels of the Genocide began to turn. Sevag expected arrest daily, but perhaps his utility in the war effort was responsible for the delay. He was detained only on 22 June of that year and was deported to Çankiri, where several of his literary colleagues arrested earlier had been concentrated. There he continued to practice medicine, while his wife sought German diplomatic

¹⁷ Peter Balakian and Nevart Yaghlian, trs., *Bloody News from My Friend: Poems by Siamanto*, Detroit: Wayne State University Press, 1996, with a superb introduction by the poet and scholar Prof. Peter Balakian, is the only volume in English that does justice to the poetry of this period of catastrophe.

¹⁸ Vach'e Partizuni, ed., Vahan Teryan, *Erkerižolovacu* (Collected Works) (Erevan: Haypethrat, 1960), vol. 1, p. 235. Nairi is here a poetic name for Armenia that Ch'arents' was to adopt; see below.

intervention for his release. In his last telegram he wrote to her that he was being sent to Ayaş together with the poet Daniel Varuzhan. It would seem that even after a short sojourn in his remote place of exile his diligence and kindness as a physician had won him the devotion of his many Muslim patients, one of whom warned him that a trap had been laid and he must convert to Islam and marry the man's daughter to escape death. Sevag brushed the warning aside, and told the good-hearted Turk that he was already a family man. Perhaps he was unable to comprehend how the government could want to kill a person not only harmless, but so obviously useful.

That same day the Armenian prisoners were taken away, and a Kurdish band led by the local operatives of the ruling Committee of Union and Progress party ambushed the deportees on the road: they tortured and mutilated them before killing them all. On 2 September the Turkish authorities, who had received official notification of Sevag's death on 30 August, requested that the Germans remove Helene to Germany. She refused to budge, but when on 11 September she learnt of his murder, she left with her family for Switzerland within hours. Turkey's wartime ally Germany rejected her further protests, abandoning the elaborate charade of treating the premeditated murder as a tragic incident of wartime chaos, and in the end she wrote this to the rulers of her native country: "If you love God, use every ounce of energy to confront the lying accusations being made [against the Armenians by the Turks]. Try to save whatever you can save by employing the most definite resolve. If you do not make use of every possibility in your power, the blood of innocent women, children, the sick and the elderly will ascend to the heavens and damn Germany." Helene then applied to the Armenian Bureau in Lausanne, requesting Armenian citizenship. She died at the end of 1967 without ever teaching her two children a single word of German. Levon passed away in 2005; Shamiram, who was born at Constantinople just before her father's arrest, was still alive in 2009 when the great scholar and historian Prof. Taner Akçam interviewed her.¹⁹

Sevag had written two poems about the massacres of Armenians in which he employed the image of bells. "Bells, bells!" (*Zankagner, zankagner!*) has been anthologized several times; but "The Alarm Bells" (*Ahazangerā*) was published posthumously in the journal *Šant'* (1918.2, p. 18), and was first anthologized only in 1985. Here are both poems.²⁰

¹⁹ See Taner Akçam, "The Chilingirian Murder: A Case Study from the 1915 Roundup of Armenian Intellectuals," *Holocaust and Genocide Studies* 25.1 (Spring 2011), pp. 127-143. I am indebted for this reference to Marc Mamigonian, Academic Director of NAASR, Belmont, MA.

²⁰ The Western Armenian text, T'op'č'yan, *Erker*, pp. 106-108:

ZANKAGNER, ZANKAGNER!

Zangakner, pari, pari zankagner!

BELLS, BELLS!

Bells, kind bells!

What thing has stopped your tolling tongues?

*Inch' pan gaset's'uts' tser kuzhgan lezun,
Khosk' yellel g'uze aryune vazun...
Ge lrrek', pari, pari zankagner?*

*Arteok' tser mist'ik' hakakn aruyre,
Ur geghev badets' aghot'k'i p'oshin,
Yev ur g'erazer khungi kolorshin,
Heghagardz ts'aven: anzor, ge lrre?*

*Voch'! Tser taravor hokin bghntsi
Vor shad, shad hajakh deser e Parin
Haght'evadz Ch'aren— ayzhm ir parparrin
U ir Asdudzuyn vra ge gasgadzi...*

*Art, ur ek' ch'k'nagh khosdumner khach'in,
Yeghpayrut'yan zur parparrner, ur ek'?
Gerag ge p'skhe hoghn amenurek'...
Kedern aryunov, tiagov g'urrch'in...*

*U g'iyna ayn vor ge dznge vakhov,
Zi t'urn aveli artar e Khach'en:
Zi gyank'n anonts' e miayn vor k'ach en:
Anonts' vor g'abrin urishin mahov.*

*Vorovhedeu terr herru e orn ayn,
Yerp kayln u karnug sirov aradzin...
T'e abril g'uze karre noradzin:
Bedk' e agrrav sre lrrelyayn.*

*Lurr ek', zankagner, Asdvadzn e merrer.
Kuyzh dvek' vaghvan: ir hasge merrav.
Kuyzh dvek' Hayun: zi azke merrav.
Zankagner, dzerug, pari zankagner...*

*Inch'bes g'uzei tserin baranin
Gakhvil u ts'nts'el yergat' pazugov.
Anonk' vor ingan pyurov, k'ove k'ov,
Tser ghoghanchin hed, lalu bedk' unin...*

*Hokiis hazar, khul ghoghanchnerov
Korrats'ek', zanker, u gadaghoren
Kahavizhets'ek' tser yergat' t'arren,
Urge miayn lal kids'ak' tarerov...*

O, ghoghanchets'ek', Asdvadzn e merrer!..

The blood, flowing, wants to cry out!
Why, good bells, are you still?

Could your mystic breath exhaled by bronze
Encrusted with the dust of prayer
Where the smoke of incense slept,
Struck strengthless by this sudden pain be stilled?

No! Your age-old, bronze-forged soul
That again and again has beheld Good
By Evil vanquished, now doubts
Its voice, and doubts its God as well.

Where are you then, sweet promises of the Cross?
Where have you gone, O vain fraternal talk?
Everywhere the earth is vomiting blood.
The rivers are swollen with corpses and gore...

And whoever bends his knee in fear, but falls:
For the drawn sword is truer than the Cross,
Since life is for the brave alone,
For those who live by another's death.

For the day is yet far off
When wolf and lamb together graze in love.
If the newborn lamb wishes to survive
He must sharpen in secret his fangs.

You are silent, O bells: God is dead.
Toll for the morrow: its harvest is dead.
Toll for the Armenian: his nation is dead.
Bells, aged, kind bells...

How I wanted from your rope
To hang and shake you with an iron arm:
The fallen tens of thousands, row on row,
Need your tolling for their howl.

My soul's thousand hollow peals
Thunder forth, O bells, and savage

Plunge down from your nest of iron
Where for ages you know only how to sob,
And let your clangor well the death of God.

Lausanne, 2 June 1909.

THE ALARM BELLS

Night of blood, the scenes and recollections!...
Again this night, this night of torments,
Bursting from within my sick soul's walls,
Clangs the tolling bell's dark song.

They are the bells of alarm, whose wild
And awful black and brazen sobs
Of catastrophe and of death's dire tidings
Thunder anew within my fevered skull.

Ringling, lamentation, bitter cries,
Shrieks and curses, and a mad exulting,
And from the midst of the demented groaning
Sounds the depthless terror's bell.

From the reddened plains, red with corpses strewn,
Can you not tell— the deceitful
Packs of dogs all sated on our flesh, their
Horrid snarling as night falls?

Can you not see, O so very far away,
On the horizon all scarlet in the conflagration
The lordly, godly, dominating
Domes that rise, decreeing death?

My eyes again see only red:
The last deep sighs heaved from breasts,
Heaped together, the dead and the dying,
And the cawing of the teeming pitch-black crows.

They ring out the alarm: in gloom, I listen.
They ring out the alarm whose unspeakable tale is without an end.
And out of my sickened soul's walls, penned
This night, they swell and burst and ring again.²¹

²¹ Western Armenian text in T'op'č'yan 1985, pp. 169-170:

In the first poem, Sevag's bells toll for the victims of a real, not an imagined, apocalypse, and his language is starkly descriptive rather than musical. Yet his imagery and message are phantasmagoric, a blasphemous inversion of the Christian past. It is not the meek, but the violent, that are to inherit the earth. For the lion to lay down with the lamb, the latter must grow fangs. The bell's tongue is like a gallows where the poet wants to hang and swing, and the last peal will be the sound of the bell falling from its collapsing tower. In the second poem, the bells toll maddeningly within the poet's fevered brain, the sound itself summoning a strongly chromatic landscape of nightmare: the bells drive the poet insane. The use of tolling bells to symbolize historical disaster was not unique to Armenian poetry in the period. The modern Hebrew poet Shaul Tchernichovsky (1875-1943), a contemporary

of Sevag and native of the Russian Empire, wrote a similar poem, though from a different point of view. In Tsarist Russia, church bells summoned mobs to pogroms against the Jewish communities at Easter time, so in his *Ha-pa'amonim (balada)* ("The Bells (a ballad)),²² *El ra'am pa'amonim—qol gore le-dam*, "To the thunder of bells a voice calls out for blood," *Bom-bom! Bom-bom! Bom-bom!* Ukrainian *haidamaks*—willing brigands enlisted by the authorities like the marauding Kurds who terrorized Armenians—storm the town, rape, plunder, defile the synagogue, and then "over it they built a tower white and tall" (*u-migdal lo banu lavan va-ram*) with a cluster of bells. But one of the *Lamed-vavnikim*, the Thirty-six just men for whose sake God allows the wicked world to go on, chants *Kaddish*, the prayer for the dead, for the victims of the pogrom. And Amen, the bells ring in response. The priest sprinkles holy water to set the enchanted bells aright and stop their anomalous, autonomous ringing, but to no avail. For at the vigil for the Temple in the middle of every night, *Shuv ne'enakh ha-pa'amon ba-migdal ha-ram/ Ha-metsilot ne'enakhot gam hen/ Be-tsiltul-yegonim, be-tsiltul shel khen, Amen, amen, ve-amen!* "Again in the tall tower sighs the bell/ And with him the chimes sigh as well,/ And tolling sorrows, ringing grace again:/ Amen, Amen, Amen!" Like the Armenian writing in the wake of the Adana massacre, the Hebrew poet reacting to the pogroms in Kishinev, Kiev, and elsewhere in 1903-1905 turns Poe's almost abstract creation into a lament for a real and immediate disaster. Sevag inverts the symbolism of the church bell in protest against the silence of God; through his invention of a mystical tale in balladic form, Tchernichovsky inverts the anti-Semitic overtones of Russian church bells, redeeming and appropriating them to the *Tiqqun khatsot*, the midnight vigil. It is an unwished-for irony that for both peoples these horrors, experienced only on the eve of World War I, were but the prelude to the greater catastrophes of a dark century.

In the wake of the Armenian Genocide a republic was forged in the sliver of the country Russian rule had protected from the slaughter. In 1921, after a civil war, Armenia became a Communist republic that was to share all the triumphs and disasters of the newly born Soviet Union. The bard of this new era was Yeghishe Ch'arents', born Soghomonyan at Kars, Western Armenia, in 1897. Ch'arents' was fascinated by Poe and by the irrational, the power of Eros: he read Freud, Baudelaire, Verlaine, Rimbaud. He entitled a late poem *Ulyalum*, the Russian form of the name of Poe's poem "Ulalume"—he did not know English, so we may be certain he read Poe's poems, including "The Bells," in Bal'mont's Russian translation. (See Appendix) In recent years, as the poet's hidden private papers have been discovered, deciphered, and published, we have learnt more and more of the creative inner life of a man who had outwardly come to personify the new Communist culture of Armenia

²² Text and translation in Ruth Finer Mintz, ed. and tr., *Modern Hebrew Poetry: A Bilingual Anthology* (Berkeley: University of California Press, 1968), pp. 66-71.

but who simultaneously lived within the spiritual heritage of St. Gregory of Narek and the artistic world of the Eastern and Western Armenian Symbolists Vahan Teryan and Misak' Medzarents'. Though as a spokesman for the new, proletarian Armenia he derided the bourgeois ARF and its nationalism,²³ he also loved Varuzhan, Siamant'o, and Sevag. Through the 1930s the Stalinist dictatorship tightened its hold on the country, and Ch'arents', who had been director of the Transcaucasian Publishing House, a leading light of the new Union of Soviet Writers, chair of various Armenian and All-Union publication committees, a man whose portrait followed directly those of Lenin, Stalin, and Khanjyan (the Armenian Party Secretary) in Soviet Armenia's 1932 Yearbook, was gradually ostracized from the literary and cultural life of the nation. He wrote many of his last works alone, in a kind of delirium or trance-like state induced partly by morphine, partly by loneliness and terror. He was arrested in the great purge and murdered in Erevan in November 1937.

Ch'arents'' immediate literary precursor was Vahan Teryan; and from the latter's poetic cycle *Erkir Nairi* (The Land of Nairi), begun in 1913 and continued over ten years, he inherited the idea of calling his country by its ancient Urartean name to evoke a kind of magical-realist or archetypal, Platonic Armenia that exists through the imagination of the poet, truer than visible fact, and manifesting itself in the sublunar world through the medium of creative, literary art. By the 30s the sense of a divergence between the actuality of the country and Ch'arents'' ideal was intensified: there was the everyday Armenia of crude and petty cruelty and privation, of Stalinist cultural bloodhounds; yet hovering above it is another country, the ideal of which the manifestation of the late 1930s is but one fleeting and flawed, wounded expression. Bells ring through Teryan's cycle, several of his poems can be considered here, for their own kinship with Sevag and with ancient streams of Armenian poetry and for their crucial influence of Ch'arents'' development.

You are not proud, my fatherland:
 You are sad, and wise.
 A brand of fire consumes you,
 A promise ancient and entrancing.

²³ In the early period of Soviet history, before Stalin imposed a cultural and sexual Puritanism to buttress his dictatorial rule, free love and sexual promiscuity were part of the revolutionary ethos. The Tiflis intellectual Nikol Aghbalean, minister of culture of the first Armenian republic, recognized and proclaimed the talent of the young Ch'arents' and arranged housing and a sinecure for the poet in those very lean times. After the Communist takeover Aghbalean fled to exile in Iran, and Ch'arents' sent him in 1923 several booklets of his latest verses, writing several lines of affection and gratitude in dedication. Aghbalean was outraged by what he considered Ch'arents'' sexual immodesty and vulgarity, and sent back a crudely parodic poem: see his embittered memoir "*Etišē Ć'arenc'n u es*" (Yeghishe Ch'arents' and I), in Nikol Aghbalean, *Grakan-k'nnadatan erker* (Literary and Critical Works) (Beirut: Hamazgayin, 1959), pp. 329-343.

Could it be that for that very sorrow
 I do not love you thus tenderly,
 And submit, stubborn like you,
 My fatherland, bitter and sweet.
 I was never dazzled by your laughing glory
 With its ancient, bygone shine.
 I loved you, your soul free of vengeance,
 Your soft and breaking songs,
 Your poverty so dark and still,
 Your prayers bitter and full of pain,
 The sad striking of your bells,
 And the faint lights of your monastic cells.
 (1915)²⁴

In poem three of Teryan's Nairi cycle, *Ijnum e gishern angut' u mt'in* (Relentless and dark descends the night), 1917, the poet echoes Sevag's alarms, but in his confidence also echoes the first verse, *Erknēr erkin, erknēr erkir*, "Labored heaven, labored earth", of the ancient hymn of the birth of Vahagn, the dragon-slaying storm god (about whom Ch'arents' wrote a long *poema*; and whom Narekats'i echoes in his meditation on the semandron, as

²⁴ The Eastern Armenian text, from Partizuni, *Erkeri žolovacu*, vol. 1, p. 229:

*Du hpart ch'es, im hayrenik',
 Trtum es du u imastun:
 Kizum e k'ez mi hur knik',
 Mi hemayogh u hin khostum.
 Yev mit'e ayd vshtid hamar
 Ch'em sirum k'ez ayspes k'nk'ush
 Yev khonarhvum k'ez pes hamarr,
 O, hayrenik' darn u amush...
 Ch'eshlats'a khndun p'arrk'id
 Ants'yal u hin p'aylov yerbek':
 Sirets'i k'ez, ank'en hogid,
 Yev yergered meghm u bekbek,
 Kheghchut'yuned khavar u lurr,
 Aghot'k'nered darn u ts'avot,
 Zangaknerid zarke tekhur,
 Yev khugherid huysern aghot...*

The *hin khostum*, "ancient promise" echoes in Ch'arents'' poem *Mahvan tesil* ("Vision of death") of 1920, line 6 where the scaffold erected for a public execution is *mi hin khostum*, *vor ankatar, drzhats t'oghi* "an ancient promise abandoned unfulfilled and betrayed," Yeghishe Ch'arents', *Erkeri žolovacu* (Collected Works) (Erevan: Academy of Sciences of the Armenian SSR, 1962), vol. 1, p. 321. The famous twentieth and concluding poem, *Yes im amush Hayastani...* ("I love my sweet Armenia's...") of Ch'arents'' *Talaran* ("Canticle") of 1920-1921 (Ch'arents', *Erkeri žolovacu*, vol. 1, pp. 246-247), is the true heir of this poem, though, with its evocations of Nairian girls, huts lost in darkness, and the nation's millennial wounds.

we shall see presently): “Tireless pilgrim, heir to the ages,/ A Nairian sad, I march on without haste./ Let the ill-omened night cheat with threats of alarm:/ The darker the gloom, the firmer is my tread./ With faith undimmed, labor, O my land! (*yerknir im erkir*) / Sacred is your way; and lofty, your crown...”²⁵ In the last year of his life, 1923, in the later poems of the cycle, Teryan writes, “The thin tolling of the bell/ Bemoans the pains of my land” (*Barak zangaki zarke/ Lalis e yerkris ts’averē*) and “And those bells sobbing/ In my dying land—/ Do they not excite your soul/ In infinite sorrow?” (*U zangern ayn lalagin/ Merrnogh im yerkrum/ Ch ‘en huzelu k’o hogin/ Tkhrut ‘yamb anhun*). The echoes of Teryan carry far. As we shall see presently, Paruyr Sevak was to write of the Genocide, “However many words, every one a groan,/ No matter what the song it’s only crying;” and it would seem he echoes here Teryan’s lines in the Nairi cycle, “Every thought now is but a wound;/ Every look, a sharpened sword./ The bloodied corpses are mute and bare,/ Staring strengthless at heaven in vain”.²⁶

Ch’arents’, steeped in Teryan, had read Sevak as well, and it would seem he turns to Sevak’s iteration of “The Bells”, in his *Fatherland Requiem* of 1936, a work written, as Russians said in the Soviet era, “for the desk drawer”:²⁷

²⁵ Partizuni, *Erkeri žolovacu*, vol. 1, p. 227: *Ukhtavor andul, dareri zharrang,/ Mi hek’ nairts’i gnum em ankang:/ T’ogh guzhkan gishern ahasast dave—/ Vork’an mut’e sev, ayk’an yes hamarr./ Yerknir im erkir havatov anmar,/ Surb e k’o ughin yev psaked veh...*

²⁶ Ibid., p. 228: *Amen mi mitk’ hima mi verk’/ Amen hayats’k’ hatu mi sur,/ Arnot diern en hamr u merk/ Nayum erkink’ anzor u zur.*

²⁷ Yeghishe Ch’arents’, *Rek’viem hayrenakan* (Fatherland Requiem), 1936, in Anahit Ch’arents’, ed., *Antip ev č’havak’vac erker* (Unpublished and uncollected works) (Erevan: Academy of Sciences of the Armenian SSR, 1983), pp. 116-122. Here is the transliterated text, p. 119, line 101f.:

*Zhangotvats mi zangi
Vor ch’uni huys andam, derr
Nor arevi yev kyank’i
Yev ghoghanji kensaber.*

*Akh, es gitem, vor mi mets
Zang e vogin nayiryan
Isk menk’— miayn lezuner,
Menk’ nra dzaynn enk’ miayn—
Yev mezanits’ depi mer
Zhoghovrdi sirte kheghch
Dzgvats en bark paranner...*

*O! kheghch mardik, ayd duk’,
Ayd duk’ ek’, vor, o, ard
Lok ach’k’erd ek’ t’art’um
Kangnats zangi tak ayd,—*

... Of a rusted bell
That has not even the hope anymore
Of new sun and of life,
Of a pealing, bringing life.

Ah, I know a great
Bell is the soul of Nairi
And we are but tongues,
We are but its voice—
And from us towards our
People's poor heart
Strain burning ropes
[...]

O, poor men! It is you,
It is you, who, Oh! now
But blink your eyes
Standing below that bell,
Beneath the bell tower
Of a monastery a thousand years old.
You stand full of lamentation,
Like passionless dogs,

Zangakatan takin
Hazaramya vank'i—
Kangnel ek' duk' voghbagin,
Vorpes shner ankirk',—

Zangakatan nerk'o
T'ok ek' p'ntrum t'ak'un,
Vor vochragsorts dzerrk'ov,—
K'ashek' zangern hognats
Hazaramya zangi
Yev vayr t'ap'ek'...
[...] angin.

Vor mi himar hnch'yun
Zrahat'ap' arats,—
Voghj ashkharhi ayd ch'un
Dardznek' dasht varats,
Vor ch'mna el veh
Voch' mi zangakatun
[...]
[...]
Bayts' duk', bayts' duk', vor derr
Voch' mi ban chek' shinel—
Inch' ek' uzum mer veh
Tarrapank'its', shner?..

Below the bell tower;
 You seek the hidden cord,
 So that with criminal hands
 You may drag the tired bell
 A thousand years old
 And pull it down...
 [...] priceless.

So that a stupid sound,
 Shorn of its armor,
 The whole world's road
 You make a plain plowed
 That there no longer remain
 Not one bell tower proud,
 [...]
 [...]
 But you, but you who still
 Have never built any thing,
 What do you want of our
 High sufferings, you dogs?...

Note in the poem the connecting epithet *hazaramya* “millennial” used of both *vank* “monastery” and *zang* “bell,” themselves a rhyming pair, as well as the play on *zhang* “rust” and *zang* “bell.” We have the text of this complex poem only in fragments owing to the deterioration of the manuscript in its place of hiding, and certainly not in its complete form, since the manuscripts are drafts. Ch’arents’ has taken, I think, Sevag’s image of a man grabbing at the tongue of a bell and hanging from it. But here the bell is not the voice of the mute corpses of the victims of massacre alone. In its monastery tower it has grown to cosmic dimensions, becoming the voice of the people of Nairi. The draft is fevered, violent—let us recall that as his life was disintegrating Ch’arents’ was drinking heavily, was addicted to morphine, and had already before turning forty witnessed more of the dark side of history than we might bear in a full lifetime. And he read Poe and died at the same age as the American poet. The destroyers of Armenian culture, soulless levelers, in the poem are trying to pull down the bell, the bell to whose invisible ropes all Nairians are tied. We have observed that bells can sing out emotion in a way that nearly breaks down the barriers between music and semantics; and the poet in turn would like to be able to sing nature, to sing beauty, to sing truth in a perfect and unmediated way. Hence Pushkin’s poem, “Echo,” in which the poet alone is the equal of pure, reverberated sound. Hence “The Bells,” hence too Ch’arents’ great despairing lyric of 18 May 1934.²⁸

²⁸ The Eastern Armenian text from Ch’arents’, *Antip ev č’havak’vac erker*, p. 81:

THE LANGUAGE OF EMOTION

The wind is chanting its plowman's song, *Horovel, horovel, ho!*
 The rain enunciates the words of cold.
 My emotion-laden tongue,
 Why are you so silent now?

Whatever it is you wish to say,
 See! With greater power than you can command,
 Outdoors by the blossoming flower is said,
 And by the crystal of the water.

And in a young girl's eyes
 When at a violet raptly she gazes,
 What is there left at all
 In a poem by Teryan that amazes?

The water runs over the brim in its passion;
 The fire is a grief stained madder.
 Poet, to you will be given never
 This language of emotion.

HUZUMNERI LEZUN

3. THE BELLS OF REBIRTH: PARUYR SEVAK.

When Ch'arents' was still a young man, a boy named Paruyr Ghazaryan was born 26 January 1924, in the obscure village of Chamakhchi, Soviet Armenia—the village now bears the name Zangakatun, “Bell Tower,” after his most famous work. The young Paruyr studied at Erevan and Moscow and wrote a dissertation that was published as a monograph on the work of the 18th-century bard Sayat'-Nova. He was co-editor of the two-volume critical edition of the complete works of the first modern Western Armenian poet, Bedros Tourian. Ch'arents' had envisioned great editions of the Western Armenian poets, and had edited a few collections; this poet continued that great work. Paruyr wrote numerous lyrics and such Biblically-inspired long cycles as “Let there be light” and “Song of Songs”—and, when it was suggested by an elder writer that he adopt a *nom de plume*, chose the pen name Sevak in memory of Rupen Sevak.

In 1959, Paruyr Sevak published a poetic epic on the life of the composer Komitas *vardapet*. Komitas was a village child, educated as a priest, who became an ethnographer and ethnomusicologist, undoubtedly the most important in Armenian history. He witnessed the Genocide, went raving mad and ceased to work, died years later in exile, and was re-interred in Armenia. Sevak called his epic *Anl'reli zangakatun* (The unsilenceable bell tower), an obvious reference and response to Rupen Sevak's poem discussed above. Not only is the bell not silenced, it rings unceasingly from a tower that shall stand forever; and each section is called, not a chapter, but a *lōlanj*, a peal of bells. The book was printed in a fine edition illustrated by the graphic artist Grigor Khanjyan (1926-2000), at a critical moment, the year 1966—that is, right after the popular demonstrations in Erevan marking the 50th anniversary of the Genocide in 1965, and just before the Soviet authorities opened in 1967 the Genocide memorial that stands at Tsitsernakaberd in Erevan. The book is a *tour de force* of eloquent, alliterative style, strongly declamatory in tone, carrying the reader in its verbal flood tide through the entire history of Armenian letters and music and historical catastrophe and rebirth. The lexicon of the poet is daunting and polyphonic, utilizing every register of Armenian speech, from phrases in fifth-century Classical *grabar* culled from the works of the Golden Age to the modern dialect of the folk songs Komitas had transcribed. In this way Sevak endows the poem with the oceanic quality of Whitman and Melville: the many voices of his sea clash, and encounter each other, in symphony and in dissonance, within the single flood of historical time. It is as though a collective, millennial bell were ringing, each peal rung by a witness of a different age, sounding all the music of Armenia's history.

THE PEAL OF HOLOCAUST

To stop? Why?
 It was spring. Summer was almost come
 And heaven's firmament collapsed.
 Snow drifted over our bare heads,
 Snow like burning fire fell.
 "It is spring, down comes the snow"
 Our rivers shuddered,
 Like an opened vein were flowing:
 "Blood has turned to water"
 The valleys became graves;
 Tombs, the abysses
 "The water has swept our home away"
 Every rock became a silent monument;
 Every house, a furnace burning.
 "We have become birds without a nest"
 However many words, every one a groan,
 No matter what the song it's only crying,
 "Alas, alas, and woe!"
 Against the fire, saber, sword,
 Only the plow, the spade, the hoe,
 "O child without a home"
 Our land, our native soil,
 Our country is desolation
 "Put on black, black over my blackened heart"
 A noble race of antique times
 Was done to death, did not merely die,
 "It is spring, down comes the snow..."²⁹

²⁹ Paruyr Sevak, *Anġeli zangakatun* (The unsilenceable bell tower) (Erevan: Hayastan, 1966), pp. 206-207. The text in transliterated Eastern Armenian:

There is only one other book-length poem in modern Armenian literature comparable in both scope and artistic design to Sevak's: Ch'arents' *Girk' čanaparhi* ("The Book of the Way"), published in 1933 and designed and illustrated by Hakob Kojoyan. Ch'arents' volume shapes a new proletarian and revolutionary narrative that transforms the entire sweep of Armenian history, the titanic and sovereign voice of the transcendent narrator co-opting to the purpose the native Epic of Sasun, the *Divine Comedy* of Dante, the life of the first Armenian novelist Khach'atur Abovyan, and the episodes of the civil wars that followed the 1917 Revolution. It spans East and West, and includes responses to Goethe and Heine, encounters with Khayyam, Ferdosi, and Pushkin, short lyrics modeled on medieval wisdom poetry, and paeans to wine, women, and song. The poem *Patgam* ("Message"), in the sense of a prophetic pronouncement) in the *Book of the Way* contains a subversive, patriotic acrostic: "O Armenian nation, your sole salvation is in your united strength!" The book was consigned to the flames soon after publication.

Kojoyan's intricate woodcuts, executed with the perfection of style of such great Russian contemporaries and associates as Favorsky—the graphic designer whose artistry Mandelstam praises in his verses—include full-page compositions and rubrics at the incipit of each section, like Gospel manuscripts, and the larger illustrations are organized in registers like the narrative bas-reliefs of the Ancient Near East. But again, these record the millennial struggles of the workers and peasants, not the sanguinary triumphs of absolute monarchs. Communism was to be the end of history; so Ch'arents' reclaimed both the genres of literature and of scriptural illumination for his retrospective and apocalypse. The work of the poet Sevak and the artist Khanjyan redeems the aspects of tradition that Socialism in the impetuous pride of its youth had derided. It begins to span the rift between the reborn Soviet Armenia and the vast devastation of Western Armenia, and addresses the tasks of mourning and of anger. Soviet Armenian historiography

had shied away hitherto from facing the full enormity of the Genocide, partly in order not to inflame anti-Turkish feeling (though even the most ardent Communists must have regarded this consideration as a formality or fantasy), and partly in order not to cast the shadow of powerlessness and victimhood over the sunlit image of the confident, muscular new Armenian—the industrial worker and collective farmer and soldier. We can observe a similar process in Israel, where the *chalutz*, or pioneer generation sometimes caricatured the powerless Holocaust victim as *sabon*, “soap.” (The Nazis used the fat of dead Jews to make soap.) Only after the survivor states Armenia and Israel were both secure and mature were they able to integrate the past and present, in historical narrative and in art.

One way Soviet Armenia accomplished this integration, recognizing the trauma and loss of the past while celebrating the strength and vitality of the present, was the erection in 1968 of a monument on the 50th anniversary of the battle of Sardarapat, where the army of the Republic of Armenia had repulsed a Turkish invasion whose purpose was to complete the genocide begun in the west by exterminating the Armenians of the Transcaucasus as well. Since the Catholicos had ordered that every church bells ring its bells to summon General Andranik’s citizen-army to the front, the monumental complex features a giant bell tower at the end of a long avenue lined with statues of standing eagles. The tower is flanked by recumbent winged bulls, with walls of narrative bas-reliefs to the side telling the story of the people’s war.³⁰ They embody much the same iconographic plan, indeed, as the horizontal narrative panels of Kojoyan’s designs for the *Book of the Way* of Ch’arents’. Paruyr Sevak wrote, turning the bells of Sardarapat into words even as Poe had done, but at the end of a very different historical journey:

SARDARAPAT

When no escape or remedy remains,
Madmen then will find a way.
Thus rose and dawned and blazed the sun
Of the great fight at Sardarapat we won:

Bells, ring out!
Summon the sacred heroes with your shout!
From Sardarapat, from this hallowed wall,
O ye generations yet to come—
Know yourselves all.

³⁰ Both the Genocide and Sardarapat memorial complexes, including the wall of bas reliefs, are illustrated in the trilingual album *K’ari simfonia* (A Symphony in Stone) (Moscow: Progress, 1974), pp. 142-149.

On the plain of Avarayr we strove,³¹
 And here a moment of repose
 We took, to render up our souls
 At the battlements of Sardarapat below.

But we have not fallen. Here we stand,
 We will return and have not lain to rest.
 When the bells ring out to sound the alarm,
 That we requite our soul's debt yet again.³²

Paruyr Sevak outlived his namesake by a little over a decade; his great precursor Ch'arents', by a few years: Sevak and his wife were killed in a car crash in Armenia on 18 June 1971. Their children survived. The accident is generally believed to have been planned by the Soviet secret police, the KGB. The song composed almost instantly to the words of "Sardarapat" had become, like Sevak's poem "Erevan-Erebuni," which commemorates the 2750th anniversary of the founding of the city, an unofficial anthem. The bells

³¹ The Armenian Christian armies under the command of St. Vardan Mamikonean faced the forces of the Sasanian king Yazdagird II in 451, resisting Iran's demand that the nation forsake its faith and return to Zoroastrianism. Among the major works of the artist Grigor Khanjyan is a vast tapestry, *Vardananc'*, 1985, which hangs now in the Veharan, the residence at Echmiadzin of the Catholicos. It portrays the battle, with various great men of Armenian history among the luminous warriors pressed from every side by the dark hordes. Among the heroes, destined for martyrdom, are Komitas, Ch'arents', and Sevak. See Nona Step'anyan, ed., *Grigor Xancyan* (Erevan: Graber, 2007).

³² The Armenian text:

Sardarapat

Yerb ch'i mnum yelk' u char
Khent'er en gtnum hnar.
Ayspes tsagets', aregakets'
Sardarapati marte mets.

Zanger, ghoghanjek '!
Srbazan k'ajerin kanch'ek'

Avarayrits' jank' arrank'
Aystegh mi pah kang arrank',
Vor shunch' arrats shunch'ernis tank'
Sardarapati patin tak.

Bayts' menk' ch'enkank', menk' misht kank',
Menk' ch'hangank', derr ke gank':
Yerb tan zange, ahazange,
Vor mer hogu partk'e tank'.

of Sardarapat have become Armenia's Liberty Bell, their message a very contemporary one, of freedom and defiance.

On the other side of the Atlantic, in Poe's homeland, other battles for freedom—for Blacks, for women, for gays—were also being fought. A bard in the line of Poe and Whitman and Woody Guthrie, a Jewish poet and songwriter from Minnesota named Bob Zimmerman had taken the pen name Dylan after the Welsh poet, and written this ballad:

THE CHIMES OF FREEDOM

Far between sundown's finish an' midnight's broken toll / We ducked inside the doorway, thunder crashing. / As majestic bells of bolts struck shadows in the sounds, / Seeming to be the chimes of freedom flashing. / Flashing for the warriors whose strength is not to fight, / Flashing for the refugees on the unarmed road of flight / An' for each an' ev'ry underdog soldier in the night / An' we gazed upon the chimes of freedom flashing. / In the city's melted furnace, unexpectedly we watched / With faces hidden as the walls were tightening / As the echo of the wedding bells before the blowin' rain / Dissolved into the bells of the lightning / Tolling for the rebel, tolling for the rake / Tolling for the luckless, the abandoned an' forsaken / Tolling for the outcast, burnin' constantly at stake / An' we gazed upon the chimes of freedom flashing. / Through the mad mystic hammering of the wild ripping hail / The sky cracked its poems in naked wonder / That the clinging of the church bells blew far into the breeze / Leaving only bells of lightning and its thunder. / Striking for the gentle, striking for the kind / Striking for the guardians and protectors of the mind / An' the poet an the painter far behind his rightful time / An' we gazed upon the chimes of freedom flashing. / In the wild cathedral evening the rain unraveled tales / For the disrobed faceless forms of no position / Tolling for the tongues with no place to bring their thoughts / All down in taken-for granted situations / Tolling for the deaf an' blind, tolling for the mute / For the mistreated, mateless mother, the mistitled prostitute / For the misdemeanor outlaw, chased an' cheated by pursuit / An' we gazed upon the chimes of freedom flashing. / Even though a cloud's white curtain in a far-off corner flashed / An' the hypnotic splattered mist was slowly lifting / Electric light still struck like arrows, fired but for the ones / Condemned to drift or else be kept from drifting / Tolling for the searching ones, on their speechless, seeking trail / For the lonesome-hearted lovers with too personal a tale / An' for each unharmed, gentle soul misplaced inside a jail / An' we gazed upon the chimes of freedom flashing. / Starry-eyed an' laughing as I recall when we were caught / Trapped by no track of hours for they hanged suspended / As we listened one last time an' we watched with one last look / Spellbound an' swallowed 'til the tolling ended / Tolling for the aching whose wounds cannot be nursed / For the countless confused, accused,

misused, strung-out ones an' worse/ An' for every hung-up person in the whole wide universe / An' we gazed upon the chimes of freedom flashing.³³

4. THE MYSTICAL AND EXEGETICAL BELL THAT IS NOT A BELL.

And with Bob Dylan's song it would seem our road had ended. But nearly every subject an Armenologist studies enforces a consideration of the *longue durée*, and with Armenia the duration is nearly always very long. For all they imbibed of Poe, of Symbolism, of Communism, the Armenian poets drank of older, deeper springs as well, even when they wrote of bells. The Armenian highland was a cradle of metallurgy, so bells big and small have rung in Armenia since time immemorial.³⁴ The sound of the *k'shots'* (in English liturgical terminology, the fan or flabellum) accompanies the Divine Liturgy. This is a descendant of the ancient sistrum: a silver disk under a foot wide, engraved with cherubs; little round bells, often twelve in number, are attached to its rim.³⁵ Little bells, *božož-ner*, were attached to the necks of pack animals in caravans from time immemorial, and the poet Misak' Medzarents' wrote of their sound along the paths leading down into his native village. Tambourines and cymbals were common in ancient music making— as we shall see presently, a mystical poet noted this approvingly. Armenian *zangak*, "bell", is a loan-word from Middle Iranian; while *cnclay*, "cymbal," is Aramaic.³⁶ The latter has great alliterative possibilities—one observes that it is a fair partner to Poe's "tintinnabulation"—and it produces such rich compounds as *cnclajayn*, *ltsntsghadzayn*, "cymbal-voiced". Another Armenian word for bell, *hnč'ak* ("sunder"), is native: the political party of that name fashioned itself after the Russian reformer Alexander Herzen's journal, *Kolokol*, "The

³³ See Bob Dylan, *Lyrics: 1962-1985* (New York: Knopf, 2000), pp. 132-133. My friend the Dylanologist, Arménisant, and Joyce scholar Marc Mamigonian, to whom I owe innumerable insights and priceless bibliographical help over the years, reminded me of Dylan's song when we were discussing bells, Poe, Armenia, and America.

³⁴ Nathaniel Spear, Jr., *A Treasury of Archaeological Bells* (New York: Hastings House, 1978), pp. 110-113 (figs. 118-122), discusses a number of bronze horse bells from Urartu (Hebrew Ararat, Ch'arents' Nairi), the kingdom whose language preceded Armenian on the Plateau. One is modeled after a two-story, domed, windowed tower. These are from Alishar and Karmir Blur; and two have the inscription *Argišti úrišhi*, i.e., from the armory or treasury of king Argishti. Similar bells are known from— and illustrated in bas-relief on the necks of horses at—Persepolis, several centuries later. Urartean architects seem to have worked in Iran; and Armenia became a satrapy of the Achemenids. Numerous other horse bells of the early first millennium BC have been found on the territory of Georgia and Ossetia, just north of Armenia in the Caucasus. The only time the Hebrew word for bell, *pa'amon*, as in the poem cited above, is found in the Bible, in the book of Exodus, it is part of a list of items to be worn by the High Priest, thus the size of a horse bell again.

³⁵ Bp. Tiran Nersoyan, *Pataragamatoyc'* (Divine Liturgy) (New York, Delphic Press, 1950), p. 248.

³⁶ This goes into Arabic, in turn, as *zill*, hence Turkish *zilci*, "cymbal-maker," hence Avedis Zildjian, the Armenian name known and revered by every rock drummer on Earth.

Bell". In Muslim-occupied Armenian lands the ringing of church bells was often forbidden, and those who were allowed to construct bell towers dared not raise them higher than a minaret. But the sound of the bells of St. Karapet of Mush carried so far that the village where the ancient monastery once stood still bears the name of Çengili—the place of bells. Within monasteries, and in other churches especially when alien rulers forbade bells, the faithful were summoned to prayer by the striking of a wooden board called in Greek a *semandron*; in Armenian, *koč'nak* ("summoner"), *žamkoč'* ("summoner to the Hours"), or *žamahar* ("striker of the Hours"). There is a great old bell cast with an Armenian inscription at Tat'ew; but ecclesiastical literature, in contrast to the secular poetry we have been considering, seems to prefer the wooden *koč'nak*. The final chapters of the *Book of Lamentation* of St. Gregory of Narek explore the meaning and power of some of the physical manifestations of Christian worship, such as the chrism, or myron, and the semandron. Of the latter, the Saint writes in Ch. 92.3, "By it, the sons of Zion assemble to battle against the world-conqueror, darkness" (*sovaw gumarin i paterazmi ordik' Siovni ənddēm ašxarhakalin xawari*). It is the "kin, very much the same in kind, to the tree of life that is in Your paradise, O God, the place of the happy summoning to come together in coursing haste to the state of beatitude, the image of the type of that tree of knowledge planted to ordain the act of choice between good and evil" (*azgakic' hangunanman kenac' n p'ayti, or i draxtid Astucoy, koč'aran barwawk' hawak'man p'oyt' ənt'ac'iwk' i yarkn awrhnut'ean, patker tesaki tnkoyt gitut'ean i karg əntrut'ean barwoyn ew č'ari*). Greater than the trumpet that sounded below the walls of Jericho (that Joshua fit the battle of), it is also superior to physically stronger materials, so before it "iron employed for the needs of war was rendered base" (*anargec'aw erkat' ar i pēts paterazmi*). He insists that he is not praising the "vibrating bell of bronze" (*zangak niwt'oy plnjoy*), though "the good instructive allegories of the tambourines of renown" (*barec'uc'akan bambbran barac'i barainut'eanc'*) in Scripture are relevant to it in typology.

The sound of the semandron is likened to that of a whistling arrow traveling far, released in battle against Satan's archers (*nets arjakec'er herajigs, jaynatrakans*—a phrase that encodes with repeated variations the base (*h*)*a-r-j*, "throw," a loan from Mir. *harz-* (>MPers. *hil-*, inf. *hištan*). It resounds indeed, declares Narekats'i,

ənd cags tiezerac'
ew ənd cirs ezerac'
i coc's ĵurc'
bazmut'ean covuc'
ew klzeac' noc'a

“to the dawning-horizons of the divine realms
and to the boundary-lines of the shores
in the bosom of the waters
of the multitude of seas
and of their islands”

This pericope is phonetically and semantically complex. Its phonetic pattern is foregrounded by the two verbs *arjak*-“release” and *jig*-“pull” connected to the simile of the sound of the wooden semandron— a wooden arrow, in flight, attacking evil. The two verbal sound patterns in *j*[/dz/]-*g*/*k* are resolved in *jaynatrakans* [/dzaynatrakans/] “giving voice”: one strikes the semandron or releases the arrow and the sound ensues. This simple pattern then is elaborated in the poet’s fugue, where we encounter *cag* [/tsag/] “horizon”— where the sound reaches. But *cags tiezerac*’ [/tsags tiezerats’/] is a phrase incorporating the word *ti+ezr* (pl.), lit. “divine boundaries”, i.e., “space, universe”; and in the second line is introduced a parallel and complementary expression, *tsirs ezerats*’, with the same *ts-r-ts*’ pattern and loss of *g*. The word *tsir*, “line”, a loan from Hebrew, is paired with *ezr*, “boundary” in an earthly sense. So we have the bounds of heaven and the bounds of earth, parallel and rhymed in phonetic plays that are also kennings. Then come the *tsots’s jurts*’/ “bosom(s) of the waters” with the same consonantal pattern but a shift of the vocal palette to deeper *o* and *u*. Heaven and earth as a pair with the sea as a contrastive third element: the Narek echoes the Song of the Birth of Vahagn here in both content and linguistic play. But what of the “multitude of seas and their islands”? From his monastery he faced two islands at least, the royal isle of the Arcrunid dynasty, Aġt’amar, and the islet of Aġtēr, where he prayed. But his sources are always both Armenian and Christian, native and Biblical; so the final lines must echo the series of cosmic Psalms beginning with 96.1, *Yišmeġū ha-šāmāyim ve-tagēl hā-ārets, yir’am ha-yam u-melo’ō* “May the heavens rejoice and the earth be glad, may the sea thunder and its entirety,” and 97.1, *Adonai malakh, tagēl hā-ārets, yiśmeġū iyyīm rabbīm*, “God reigns, may the earth be glad, may the many islands rejoice.”

The semandron is consecrated in the Armenian Church; the rite was translated thus by Conybeare, and it dwells more on warning and wrath than on the pealing of good tidings:

“They wash it with water and then with wine; and deterge it and hold it before the holy altar. And they say eight [sic: read “six”] Psalms:

Psalm 98 O sing unto the Lord a new song

Psalm 104 Bless the Lord, O my soul, O Lord my God

Psalm 136 Let us confess to the Lord

Psalm 138 I will be confessing thee, O Lord
 Psalm 142 With my voice I cried unto the Lord
 Psalm 146 Praise the Lord, O my soul

The Deacon proclaims:

Let us beseech in faith and concord

Thrice: Lord, have mercy.

The Priest saith the following prayer:

Lord God of hosts, and maker of all creatures. Thee do all creatures praise. Thee the trees praise, fruitful trees and all cedars [Psalm 148:9]. Thou because of thine infinite love of mankind wast pleased to dwell in the midst of our fathers (and didst converse with our fathers in the tent of witness) and to listen to their prayers. Thou hallowedst all the furniture of the tabernacle of holiness by the hand of Moses through sprinkling of blood. And now, O Lord our God, send the Grace of thy Holy Spirit into this wood, that it also may be brought nigh to and belong to the implements of the worship of thy Holy Church.

Give, Lord, grace to the voice of warning thereof, so that all who hear its noise may feel contrition in their hearts for the wrong they have done, and turn away from filthy thoughts and from all lawless words, and seek forgiveness and remission of their sins. And thou in thy kindness shalt give ear and have mercy on them.

Give, Lord, grace to the voice of warning thereof, so that all who are afflicted with sickness or terrors of satan, and hear its noise, may remember thy holy and dread name, and entreat for mercy; thou shalt hear them, and alleviate and disperse all their woes.

Give, Lord, grace to the voice of warning thereof, that all who are in sorrow or other troubles, and hear its noise, may remember thy Holy Church and thy dread worship, and entreat of thee succour; and thou shalt hear them and disperse their troubles and griefs.

Give, Lord, grace to the voice of warning thereof, that when the clouds of wrath are massed together, and men hear the sound thereof, they may also remember thy terrible name, at which all creation doth tremble, and may entreat of thee indulgence towards their transgressions, and protection of their fields and of all their fruits. And thou shalt hear and have mercy on them, and avert the sentence of thy wrath. For thou art wont by means of trifling instruments of thy service to work mighty wonders.

Even as thou didst overthrow the wall of Jericho by means of the sound of a trumpet horn; so now vouchsafe by means of the noise of this to overthrow among us all the fortifications of the enemy, that we may be worthy to bless thee, Almighty God, now and ever and to eternity.

And then they bring it to the bema before the holy altar, the deacons holding it up. And the priest anoints with the chrism the four corners, and takes the semandron and strikes it thrice, and gives it to the attendant to beat. And forthwith they go into church for the office of the hour.”³⁷

So the semandron of Narek and of all the Armenian Church is a bell not made of metal but of the wood that furnished the Cross that sounds but does not ring; and it flies like an arrow across primordial Armenian sacral poetry and Biblical cosmology, attacking the archers of the satanic world-conqueror’s horde—a martial and probably contemporary image evoking the Central Asian marauders of Anatolia whose ruinous assault on civilization had barely begun. Of course both Sevak, and Ch‘arents‘, were raised on the Narek and never stopped studying it. We can see why, as well as how, with Poe, it inspired them. Even when Narekats‘i’s bells are made of wood they have a cosmic and moral power and a wealth of rich sound that Poe would have recognized and that Ochs and Dylan would have delighted in. But then, they did not know Armenian.

APPENDIX

In her groundbreaking monograph *In the World of Ch‘arents‘* Manuscripts (1978), the poet’s daughter mentions a long draft:

“Poem without a title

1. On dreams

2. The dream

3. The key

According to Edgar Poe + Freud

Begun 2 April 1937, Erevan,

Anno Domini MCMXXXVII

in the Arm(enian) y(ear) 1387

Yeghishe Ch‘arents‘

Clerk of sinful ways and songster.”³⁸

The poet wrote numerous drafts of the early stanzas of this projected major work and one overlapping with it, “Ulalume,” without ever completing either poem, much less editing the rough drafts into a final version. The manuscripts were hidden from the police and suffered considerable damage over the years; so the lacunae are numerous. Part of the poem was published in 1983; the rest, in 1996.³⁹ I have brought the two parts together here.

ULALUME

1. Introduction.

Concerning dreams.

Amazingly confused, absurd, and dark

I had of a sudden a dream this evening.

Silent, I had plunged into an abundantly beatific, immaterial,

Narcotic state. Strange, unwilling,

I was whirled in a blue ocean.

In my brain there was not a wisp of cloud, not a scintilla, eve, of care

That might agitate my spirit’s imperturbability dark.

My eyes were closed, and weary, and stained with care,

But in all my being I remained awake.

Amazingly confused, absurd, and dark

I of a sudden this evening beheld a dream.

My eyes wide open, I was plunged into a waking sleep,

³⁸ Anahit Ch‘arents‘, *Č‘arenc‘i jetagreri ašxarhum* (In the World of Ch‘arents‘’ Manuscripts) (Erevan: Academy of Sciences of the Armenian SSR, 1978), p. 113.

³⁹ Ch‘arents‘, *Antip ev č‘havak‘vac erker*, (Erevan: Academy of Sciences of the Armenian SSR, 1983), pp. 666-668; Davit‘ Gasparyan, ed., *Eliše Č‘arenc‘. Norahayt ējer* (Yeghishe Ch‘arents‘. Newly-Discovered Pages) (Erevan: Erevan University Press, 1996), pp. 314-320.

That was no dream, but an adventure fantastic
 Or as it were delirium, that would seem to have no end,
 Was not a sleep but a waking dream,
 Like delirium, a curious adventure.

Amazingly confused, absurd, and dark
 I saw all of a sudden a dream this evening:
 Helpless, fallen into semi-wakeful sleep,
 Rocked without will in a shoreless ocean,
 I was interred and insensate remained
 When from my terror I awoke, the delirium now calm,
 But in my soul there stayed a wordless misty dark
 That transported me, and...

I. O! morphine's boundless bliss,
 The spirit's calm and shoreless weariness.
 Ethereal as an impersonal sleep,
 Dreaming exhaustion, egoless self...
 I tasted that unconscious bliss
 As if I'd slumbered and a soft, meek
 Familiar being were rocking me
 With its deceptive charm and unearthly song.

II. I've long grown familiar
 With that strange and hapless yogic life,
 And, sitting with my legs folded beneath me for hours,
 I enjoy unbounded rest
 Or dream long, like a limpid teardrop,
 Like an unblemished conscience that cries...
 But more than that brilliant reverie
 I turn the pages of my endless past, its past,
 And more than the distance of these visions
 The chasm of the past it is that often takes me captive.

When for hours thus seated, legs folded beneath me,
 Either I enjoy unbounded rest
 Or the precincts and the lands of dreaming,
 Certain I should never find myself in those climes severe...
 Or shall I fashion songs, unreal and clear
 As the tears of a wailing conscience.

2. For a long time now have I
 Become familiar with this unreal life within my room.

For a long time now have I
 Become accustomed to lie here night and day,
 Or seated, all awake
 In this sunless bed, this un<...> hour, passionless,
 Solitude.
 For a long time now have I
 Grown accustomed to this strange and carefree, yogic life,
 And seated thus crosslegged for hours,
 Either I enjoy a shoreless calm
 Or dream of works as clear as tears,
 Like the tears of an unblemished conscience...

But more than this brilliant dreaming
 I turn the pages of the past, of my infinite past...
 Or I enjoy pure yogic rest
 But more often that these sighing visions
 The chasm of the past imprisons me...

2. For a long time now have I grown familiar
 With this yogic life conferred upon me from above,
 And for hours thus crosslegged seated
 I enjoy either a pure and yogic rest,
 That is, in silence I sit and for hours
 I gaze at my navel, without pondering, without passion.

2. There is another diversion also, still more mindless,
 That the endless perusal of the silence's book
 When you know beforehand every incident,
 Every chapter and citation, every page...
 So that also I

2. For a long time now I've grown accustomed
 To this unreal life given me from on high,
 And seated thus crosslegged for hours
 I enjoy a yogic peace.
 That is, I sit in silence, motionless: for hours
 I train my spirit like a passionless yogi,
 Rising up and away from life and its petty passions
 To gaze in silence for hours at my navel, as

For a long time now I've become accustomed
 To the unreal life granted me from on high,
 And on my bed seated crosslegged thus
 I teach my wretched soul a yogic

2. For a long time now I've grown accustomed
 To the unreal life given to me from above,
 And seated thus crosslegged for hours
 In order to sample yogic peace
 I train my wretched spirit, that untroubled, certain,
 Rising over life, passionless and free of feeling,
 Simply— as is only proper to a yogi—
 To gaze for hours in silence at my navel...

And on my bed seated thus, legs crossed,
 I train my wretched spirit for the abstract and unpassioned
 Final deep plunge into the looking glass,
 For passionless and unattainable bliss...

2. Simply— I study, confident in my strength of will.
 Simply— I compel myself, confident in patience
 As is only proper to a yogi
 To gaze in silence for hours at my navel...

3. And so? Do I attain that bliss?
 Or, bored by the charmless spectacle of my navel,
 Do I flatten the wall
 Like a flood or a confused...
 To fight all abstract puberty
 And let my blood's <...>
 Cursing this spirit's enslavement,
 <...> every abstract peace
 <...> from a bed without enchantment
 <...> priceless
 And <...> bewitches

3. And so? Do I reach that bliss,
 Or, quickly tiring of my own navel,
 Lunge, like a Tork' unchained,⁴⁰
 Preferring to any abstract deed
 An animal, mindless, <...> unsoulful
 Sensuous joy, that from the navel
 Floods abundant, roars, thunders, churns, tearing,
 Like a bolt of lightning at the end of its existence...

⁴⁰ Arm. *Tork' št'ayazerc*: Tork' is a fearsome titan of Armenian mythology who could carve with his fingernails on stones and who cast huge boulders from the coast at the ships of invaders, see James R. Russell, "Polyphemos Armenios," *REArm* 26 (1996-7), pp. 25-38. Perhaps Ch'arents' conflates him here with the apocalyptic hero king Artawazd, who is chained till the end of days in the gorge of Mt. Ararat.

3. And so? So I reach that higher bliss,
 Or, worn out by this hard, dark occupation
 Or, plainly in a dream, or by my own hand,
 Tearing from my navel some sort of "thesis" fantastic
 I tax my mind so that at last like
 A man crazed having fallen into an endless labyrinth,
 Who dully falls, and

4. Alas! How intimate and ever sacred for me was
 Alone this precious bursting into flame,
 But by a whim of fate— or was it only
 Stupid human fanaticism, I was drawn away from life beneath the sun
 To <...> this solitude,
 By my identity's passionless <...> now,
 Massacring the stormy daring of my spirit,
 I grow used to another hollow fanaticism...

Alas! How intimate and ever
 Agreeable alone to me this unconsumed burning,
 Yet present, the bed, as an immovable stone,
 Isolated from life, as a stranger

6. Sister Dian's shining chase does not <...>⁴¹
 Emerging freshly onto the plain <...>
 With boyish body, delicate and childlike,
 Like the star-bright, light-spattered, sunlit sky

... And a golden arrow in your hand, carefree and still
 With such sixteen-year-old⁴² hips clean and slim,
 With boyish body, delicate, childlike,
 Blue-eyed as the star-bright sunlit sky...

7. O my clear breaking dawn, my going swiftly
 Still in advance of the sun, in that moment streaming milk
 Like a lily pale when dawn awakens,
 Opening milky-dark, and crescent moon colorless,
 Bow of the soul, gripped and heated brow,

⁴¹ Cf. Poe's "Ulalume": "Astarte's bediamonded crescent,/ Distinct with its duplicate horn./ And I said, She is warmer than Dian," etc.

⁴² He uses the marked Classical Armenian form *veštasnamya*, as in his poem on the beautiful Giovanni Beltraffio, whom Leonardo woke one night to draw the face of Christ, see James R. Russell, "The Armenian Counterculture That Never Was: Reflections on Eghishe Ch'arents'," *JSAS* 9 (1996-97 [1999]), p. 32.

Silver-flecked like adamantine and naïve,
 Star blinking, in amazement,
 Dawns. Newly-come day, that ineffable beaming...
 Morning star, enkindled, burning, lovely, beyond saying,
 A day newly come, shines, shining day,
 No way
 New song
 New life
 New torch

9. What shall I do, my poor and helpless love,
 Nairian my song, tragedy my fate,
 Since your high ascent seemed poison
 That your early anger never forgave
 And the more you unfolded and the higher you went
 All the more uncomprehending and unlucky and savage
 All who did surround you at your untoward ardor

That seemed contempt to that black conclave,
 Even your early service to that assemblage lofty...

(10)

By highest right that stems from your place of birth,
 To those wretched hordes without a shred of talent...

That seemed contempt to that black conclave,
 Even your early service to that assemblage lofty,
 And the more you grew and the higher you soared,
 So much the worse did you become for those independent of all graces,
 By highest right that stems from a hidden place,
 To those hordes who sit themselves down as masters...

MISAK' MEDZARENTS': THE CALM BEFORE THE STORM

Misak' Medzarents' was born in the village of Pingyan, north of Malatya and Akn, in the farthest west of historical Armenia. Where the Euphrates river bends wide and lazily west on its course south to Mesopotamia was the Hittite province of Melid that the ancient Greeks came to know as Melitene: it is the people they called Melitenioi who were perhaps the first speakers of Armenian, moving over what was to be the country's ultimate western boundary, as they sought the rising of the sun. The city now called Malatya remained at the traditional boundary between Roman and Parthian, then Byzantine and Sasanian, spheres of influence. Within its bend was the Armenian kingdom of Cop'k', Sophene—and the mountain fastnesses north of Xarberd and south of Erznka, called Dersim, never submitted to any alien conqueror. Centuries later and for long ages, till the baptized armies of Tiridates the Great destroyed it, sometime in the second decade of the fourth century, the temple of Aramazd, father of the gods of the pantheon of the Armenian's national faith, rose over the cliffs of the Western Euphrates—in Armenian, the Aracani—river at Ani-Kemakh, to the north and east. Somewhat eastward on Sepuh in the mountains ringing the plain of Erznka the Arsacid prince who had brought the faith was spending his last days in prayer. Trdat, the legend says, appeared at the cave entrance and held out his magic Havluni saber to the Illuminator. Saint Gregory raised his hand, and the weapon of death, turning downwards in the shape of the Cross, the contrivance of life, entered the stone to await the future king.

The Parthian dynasty that had ruled Armenia for nearly half a millennium fell in 429 but its blood flowed in the veins of the great *naxarar* noblemen and the Pahlavuni Catholicoi. A generation later the *nakharrar* Vardan and the priest Lewond shed that blood to preserve the new faith against the Sasanian Persians' onslaught; and late in the eighth century the Mamikonians took their last stand, against a newer enemy and conqueror, the Muslim Arab Caliphate. In the century that followed, two surviving *nakharrar* houses, the Bagratunis and Artsrunis, succeeded in carving out kingdoms in the north and south of Armenia. In the early eleventh century, the diplomatic and military balancing act faltered: the successes of Byzantine campaigns against the Abbasids enabled the emperor Basil to turn his attention to Armenia. In 1021, Senek'erim Artsruni ceded Vaspurakan to the Empire and moved with 14,000 retainers to the west of Armenia, to Sebastia; and in 1045 Byzantium annexed the great Bagratid city of Ani. The Armenians even transferred the sacred relics of their saints to these new appanages: the monastery of Narek, on the southern shore of lake Van, was re-founded near Sebastia at Tephrike (Tk. Divriği). St. Gregory of Narek, the great mystical poet of the tenth century, had lived on the lake shore and later in a mountain cave. As a boy Misak'

Medzarents, an avid reader of the Narek, was go on pilgrimage from his native village of Binkyan to the western shrine, which by the 19th century had come to be called Areka *vank*.¹ But these shifts of Armenian population and power back towards the lands through which the remotest bearers of their speech had come in immemorial antiquity turned to panicked flight after the Seljuk Turks shattered the forces of Romanos Digenes at Manazkert in 1071. Armenians remained, in numbers, in their own land for another millennium. Ani continued to prosper, even to expand; and a class of powerful merchants called *mecatun*, literally, “great houses”, grew alongside the ancient nobility. But the highland was never to know freedom under Christian kings again.

Legend has it that one of the retainers of Senek'erim, a man named Benjamin, or Benik, fortified a place called Hrabat' (Arabic for “town”) on the banks of the Aratsani in the far west.² A chronicler from nearby Ani-Kemakh where Aramazd's temple once stood, Grigor Daranaghts'i, came in the early years of the seventeenth century to the place, by now called Benkan after the long-dead prince: ... *apa ealeal antic' gnac'ak' i Benkan i vank'n, arak' ew dadarec'ak' andēn, or amroc' ēr ew mardikn paterazmolk' anddēm yap šatakol anirawac'.* “Leaving there, we went to Benkan, to the monastery. We stayed on in that place, which was a fortress; and the men, fighters against lawless marauders.” Grigor spent the year 1611 there and began to copy a Bible; he finished copying other books there, too.³ In July 1878 the Armenian ethnographer Garegin Sruanjteanc' visited the village, now called Benka or Binkyan: in Western Armenian the name is either Pengyan or Pingyan. It was almost entirely Armenian in population, with about 1000 inhabitants, three churches and a monastery, and five teachers in two schools serving 150 boy and girl pupils who learned, among other subjects, English and French. Every home had books on its shelves; and the village received newspapers and journals from Constantinople and abroad. More important, the village retained and defended much of its ancient freedom. The spoken language was Armenian, not Armeno-Turkish; and Binkyan even minted its own coins marked in Armenian script for local trade. The men of the village were excellent fast horsemen who bore arms and struck terror into would-be Kurdish marauders and rapists: no Muslim dared look at an Armenian woman. On the landward side, the village nestled between the slopes of two mountains, *Ḫač'mēj* and *Sōsik*. The first means something like “Cross within”; the second, “Little plane tree”, refers to the giant ancient shade tree of traditional village squares, by the rustling of whose thousands of leaves the ancient Armenians

¹ See M. Thierry, *Répertoire des monastères Arméniens*, Turnhout: Brepols, 1993, p. 76 no. 410.

² On Lynch's map, Pingan, as the name of the village was pronounced in Western Armenian, is on the east bank of the Western Euphrates (Aracani), north of Egin (Akn) and west of Rabet.

³ Fr. Mesrop Nšanecan, ed., *Žamanakagrut' iwn Grigor Vardapeti Kamaxec'woy kam Daranalc'woy* [Chronography of Fr. Grigor of Kamax or Daranali], Jerusalem: St. James', 1915, pp. 162-163. The name Benik is historically attested only from the 12th or 13th century: see H. Ačařean, *Hayoc' anjnanunneri bařaran* [“Dictionary of Armenian Proper Names”], vol. I, p. 407.

practiced divination. A famous and most unusual bridge spanned the Aratsani: it could be raised in time of trouble and was closed with iron gates every night. The villagers were farmers and also raised silkworms: one poem by Medzarents', *Šerami eraza*, "What the silkworm dreams", was obviously inspired by the latter craft.⁴

The people of Pingyan successfully resisted the first wave of Muslim marauders during the massacres of 1895-96, but a second, larger attack devastated Binkyan, with the survivors fleeing into the mountains or to large cities. Most had traveled to the capital and had relatives with whom to stay. Apparently a number stubbornly returned; for Binkyan defied the order of deportation in 1915 and ended its thousand-year life fighting in self defense.

The principal clan of Pingyan was the Mecaturean, pronounced Medzadurian, family, who lived in 66 houses clustered around a stone *aivan*, or vaulted, palace-like structure. When Sruanjteanc' visited there, eight years before the poet's birth, one of them was village headman, or *müdir*. According to one tradition the family were descended from the *meliks* of Karabagh, that is, descendants of the ancient nakharars: these proud, warlike mountaineers had for centuries retained a measure of independence on the eastern edge of Greater Armenia and formed the nucleus of the uprising of David Bek in 1722—the time of the first real stirrings of the modern Armenian liberation movement. According to Vahan Arslanian, a relative, the Medzadurians had come from Ani.⁵ This would have probably happened in the 13th or 14th century; and if his supposition is true, then the family name may perhaps be understood as a deformation of the term *mecatun*, pronounced *medzadun*—the merchant-princes of the medieval Bagratid metropolis. So it is more than likely that the early Medzadurians who made the long trek from one end of Armenia to the other chose a place where the old freedoms survived. In January 1886 Iskuhi (*née* Avakian) Medzadurian bore a son, Misak', to her husband Garabed *agha*. The latter, like many villagers, moved to the capital to work; and Misak' was to join him in Galata in September 1902. A monastery dedicated the *Eric' Mankanc'*—the three Hebrew youths cast into the fiery furnace, in the Book of Daniel—stood in Pingyan, and Misak' bears the Armenian form of the name of the middle one, Meshekh. (Shadrach—Setrak—and Abednego are the other two. They bear Cappadocian names, and were thus local holy men.) He was the youngest child of the family, with two brothers and a sister. Gevorg had left the village become a prominent lawyer and journalist in Sebastia (Sivas). But Misak' spent his first nine years in Pingyan, where he was a somewhat inattentive schoolboy who loved going out to the fields and woods and

⁴ See the engraving (pl. no. 210, "The bridge of Benkean") accompanying the article *Benkean* in *Ep'rikean, Bnaštarhik ba'aran* ["Geographical Dictionary"], vol. I, pp. 414-415. On the village, see also Ašak'el K'ēč'ean, Mkrtič' Parsamean, *Akn ew Aknc'ik'* ["Akn and Its People"], Paris, 1952, pp. 101-115.

⁵ See Albert Šaruryan, *Misak' Mecarenc'*, Erevan: Sovetakan Grol, 1983, p. 25. Most details of the life of the poet are culled from this authoritative biography by the greatest scholar and editor of 19th- and early 20th-century Western Armenian poetry.

listening to the shepherds' flutes when the herds were driven home. Sometimes he went out to the nighttime irrigation of the fields with a kinsman and would ride behind the saddle on the way back. He went to the spring of Cak to hunt butterflies. On one of his lonely rambles he met a bear. The villagers went on pilgrimages to monasteries in the mountainous countryside; and Misak' joined these.

Misak' loved the village love songs and lyrics called *šer* (from the Arabic for "poem") and *haren* (from *hay(e)rēn*, "Armenian" poem, the genre for which the late medieval bard Nahapet K'uč'ak, "the Boy", was famous); and he listened with rapt attention to the recitation of *hek'iat*'s—folktales. His mother Iskuhi was a devout woman: her prayers on Saturday nights made a strong impression on him and echo through his poems, as do the words of the Sunrise office and Divine Liturgy of the Armenian Church and the hymns and prayers of St. Gregory of Narek. I have dwelt at some length on his early childhood and origins in order to dispel the possible impression that he was a country bumpkin who escaped what Marx rather unkindly called "the idiocy of rural life" to escape to a short but brilliant career—he died of consumption at twenty-two—in the big city Constantinople. Rather to the contrary, his earliest and most powerful memories were of an almost magical realm where armed and virile Armenians unbowed by centuries of Ottoman rule lived in freedom, in the midst of a flourishing traditional culture augmented by European learning and enlightenment. Medzarents' language is extraordinarily rich; and its Classical elements are not stilted and bookish, but naturally flowing. His evocations of village life and of nature are vital, rather than precious and contrived; and a happy childhood in the midst of an accomplished and loving clan of probable nobility and fabulous antiquity left in him a deep, indestructible cheerfulness that emerges again and again in his work, the sun coming out from behind the clouds. In all these respects he differs sharply from the other great young Western Armenian poet of nearly two generations before, Bedros Tourian.

It was to end. The reign of the paranoid, obscurantist sultan Abdul Hamid was oppressive enough: it was forbidden to print the words *Hayastan* "Armenia" and *azg* "nation", but even words like *astl*, "star", were prohibited, since it was suspected they might refer to Yıldız ("Star") palace. When Pingyan was first attacked in 1895, during the first great wave of Muslim massacres of the Armenians, Misak' and his mother went to live with his elder brother in Sivas (There was to be a second, far deadlier attack that reduced the family home to flames and depopulated the village, a year later.) He studied at the Sahakian school there; and was then sent in 1898 to Anatolia College, a boarding school run by American Protestant missionaries in Marsovan (Merzifun). Misak', who was remembered as slender, melancholy, and a little bashful, studied English and French. He knew Verlaine, probably also Baudelaire and maybe Rimbaud. He may have read Poe and Blake in English, and he loved Oscar Wilde's writing in particular, and later published an essay about him. Some Armenian writers had

fled abroad, to Paris or Cairo, to escape the Hamidian reaction; but their writings in the journals they founded, such as *Anahid*, were smuggled in. So Misak' read Arshak Chobanian and Krikor Zohrab as well as the *fin de siècle* fare of decadents like Yeghia Demirjibashian. He read and revered Bedros Tourian's lyrics—and was in Scutari to visit the poet's grave and write a tribute inspired by Wilde's elegy of Shelley. In a later critical essay on the writings of Abp. Yeghishe Tourian—Bedros' younger brother, born Mihran—Medzarents' observes that this is who Bedros, who died of consumption at twenty-one, might have become had he lived longer.⁶

Life in the large provincial towns was still dangerous for Armenians and Misak's relatives worried about his rambles. In June 1901, Medzarents' was on his way in Marsovan to visit a sick friend—Nerses Hoveyan, who was to die of consumption two years later—when a Turkish butcher's boy attacked and stabbed him in the shoulder with a knife. Misak' had sickened and been close to death during a severe drought when he was a year old; though the stab wound healed, it seems to have permanently weakened the boy. He left Marsovan to join his father in Constantinople the following year, in September 1902, and enrolled in the *Getronagan* "Central" Armenian school. He withdrew from his studies because of advanced consumption in 1905; and he died on 4 July 1908 (the night of 21 June O.S.).

The attack brought forth Medzarents' first poem, *Marmni vērk', srti vērk'* ("Wounds to the body, wounds to the heart"); and soon after his arrival in the capital he was publishing poems in Armenian journals such as *Arevelean mamul* ("Eastern Press"), using first the *nom de plume* Šawasp Ciacan (Arm. *dziadzan*, "rainbow", the title of his first published volume of verse), then Medzarents'. He quickly shed the remnants of village dialect for the standard literary Western Armenian of Constantinople, with its complex and rather overblown prose syntax. His poems, which were rather unfairly compared to the work of the contemporary Symbolists (Eastern Armenian criticism would compare him to Vahan Deryan) achieved instant, if not always favorable, notice: Arp'iar Arp'irian attacked him among other young poets in an article in *Masis* in 1902, still more unfairly implying a kinship in his work with Decadence. Medzarents' was neither hurt nor passive in response: striding happily into the arena, he published vigorous defenses of his own work and attacks on his critics. He had made friends in Sivas and Marsovan, and his social circle in the capital expanded; so his satirical poems both mock his critics and gently nudge his friends. Guilt by association is an imprecise method in literary criticism. The Symbolists' creed asserted that exotic colors, misted vistas, nocturnal reveries and half-heard murmurs are the delicate

⁶ See J.R. Russell, *Bosphorus Nights: The Complete Lyric Poems of Bedros Tourian*, Armenian Heritage Press and Harvard Armenian Texts and Studies 10, Cambridge, MA, 2006, "Homage from the Future: A poem by Misak' Medzarents'," pp. 366-368, with Armenian text and translation.

and allusive symbols in this world of another, truer and better one. Though Medzarents' poems have all these elements he cherishes nature, celebrates life, and regards its Creator with grateful amazement. In this regard he is still remoter from the decadents, whose exploration of the Inner World—the *Nerashkharh* of Medzarents' contemporary Tiran Č'rak'ean, "Indra", comes to mind—is a longing for death, for the grave. Indra created a plethora of new compound words in Armenian to express, or perhaps conceal, his arcane imaginings; Medzarents' compounds seem rather strivings to evoke a vividly remembered scene or color or feeling in the world as it exists. His deep optimism and cheerfulness in the face of sickness and the certainty of an early death seem almost improbable, and contrast with the agonized sorrow of Bedros Tourian. Like Tourian, though, he worked feverishly towards the end: the volumes *Ciacan* ("Rainbow") and *Nor Taler* ("New Poems") were printed in 1907; and he continued to publish until a month before he passed away. All in all, he wrote about a hundred poems, roughly twice as many as Tourian—but then, he lived two years longer.⁷

The year of Misak's death saw the revolutionary overthrow of the *ancien régime* and the installation of the Young Turks. The story by now is familiar: Armenians participated enthusiastically in the new parliament and expressed nationalist aspirations. The ultra-nationalist Turkish Committee of Union and Progress, especially after the Balkan war in which Turkey lost the city of Salonica and most of what was left of its European territory, regarded the Armenians as a dangerous alien element to be eliminated from the political life of the empire; their economic role, radically to be curtailed; their physical presence, to be extirpated or greatly reduced. In 1915, with the Great War half reason, half pretext, Turkey murdered or deported the Armenians from their homeland. Only starving refugees, or the Armenians living in the eastern sliver of the country under Russian rule, remained. The Turks and Kurds destroyed whatever Armenian monuments were left standing; and the postwar fascist state of Mustafa Kemal expelled the few Armenians who had trickled back to the ruins of their old homes, while changing the names of towns and villages in an effort retroactively to eradicate the Armenian past. Armenia did not exist—it had never existed. The campaign of mass murder that the Turks had called a *jihad* at the time—the Polish Jewish lawyer Raphael Lemkin was to coin the term "genocide" to give a name to what had been done to Armenia only in the 1940's, in the midst of the massacre of his own people—was a civil war, or resistance to a fifth column fighting for the Russians, or just one of those tragedies that happen in war. The latest iteration of Turkish denial is the approach of the journalist Ece Temelkuran, who overtly refuses to study the events and prefers to view the present in terms of a perverse

⁷ The standard edition is by Albert Šaruryan, Misak' Mecarenc', *Erkeri liakatar žolovacu* [Russian title, *Polnoe sobranie sochinenii*, "Complete Works"], Erevan: Academy of Sciences of the Armenian SSR, 1981. The edition of 1986 published by the Catholicosate of Cilicia at Antelias, Lebanon, is also usable, though P. Snapean in his introduction, p. 15, identifies the Czech Jewish writer Franz Kafka as a Pole.

Gestalt psychology whereby both Armenians and Turks suffer from trauma, especially the Armenians, whose greater trauma suggests only that they are frozen in infantile complexes. Christopher de Bellaigue, who was stung by my accusation of Holocaust denial in the *New York Review of Books*, after he characterized the Genocide as a reaction by their Ottoman fellow-citizens, if you please, to Armenian rioting, has written a slim volume peddling a similarly psycho-analgesic anti-history. Another dilettantish columnist, Roger Cohen of the *New York Times*, applauds it and calls for historians to be more "vague". If there were some intellectual content it might be dismissed as a *recherché* joke about Symbolist poetry. But there isn't.

Medzarents' published his *ars poetica*, *Inc' arbec'ut'eamb*, "With what intoxication!" which we will look at presently, in *Arevelyan Mamul* on 1 August 1907, with a dedication to his friend, the poet and prose writer Kegham Parseghian, whom he had met in the offices of the journal *Surhandak* ("The Courier") two years before. So one checks the dates: 1883-1915—Kegham was three years Misak's senior, and he was murdered in the Genocide. The death knell of the date 1915 rings in every biography of every friend and contemporary. Daniel Varuzhan, Siamanto, Krikor Zohrab: there is absolutely no doubt that, after perhaps another few more volumes of verse Medzarents', just shy of his thirtieth birthday, perhaps married, with a son and daughter to whom he sang the songs and chanted the tales of Pingyan, where he had been planning to go to collect folklore—maybe he would have made it back there and brought God knows what oral treasures—would have been dragged from his home, tortured, and then shot or bludgeoned to death and dumped in an unmarked mass grave. But Misak' was one of the *apriyan nahatakner*, the Martyrs of April 1915, wasn't he, just *avant la lettre*: the young Turkish thug with his butcher's knife, the wound to the body that was really a wound to the heart. And the exile ever westward, across the Euphrates—to Sivas, to Marsovan, to Constantinople, away from the home of the sun into the darkness, into the nowhere left to go that the Muslims, the world, have thrust the Armenians. And it was over.

But the great world ground on. In 1917 the Caucasian front collapsed as the Russians left to fight their revolution; and Turkey pressed on to kill the rest of the Armenians on the plain of Ararat and in the mountains of Karabagh. But the mills, for once stalled: in 1918 General Andranik's army beat back the invading Turks from Alexandropol and Eastern Armenia was saved. Intellectuals from Tiflis, refugees from Van and Kars, began in the new Soviet Union to rebuild what was left of Armenia. The young poet Yeghishe Ch'arents', who became general editor of the Transcaucasian Publishing House, vowed to print editions of the Western Armenian poets Tourian and Medzarents'. In 1934, the State Publishing House (*Petakan hratarakč'ut'yan*) at Erevan published an edition of the complete works of Medzarents' edited by Ch'arents' and illustrated by T. Xač'vank'yan, with a fine glossary and an introduction prepared jointly by the Soviet Armenian writers Alazan and Valaršak Norenc'. According to the great green *Soviet Armenian*

Encyclopedia Alazan, whose real name was Vahram Gabuzyan, was born at Van in 1903, served as secretary of the Union of Soviet Armenian Writers and editor of the literary paper *Grakan T'ert'* till 1936, and published a volume of reflective essays, *Horizons*, in 1957. Norenc', a better-known writer and close friend of Ch'arents', pursued a career with a similarly strange empty bit, like a donut hole in the middle. For Soviet writers like Ch'arents' without the hole, there is instead a terminal date, 1937. So soon after the publication of the 1934 edition another one came out with the same date but no editorial page and no introduction and the reference to the latter in the table of contents (at the back, Russian style) neatly blacked out. Medzarents' brother poets had been erased by Stalin's great purge from history; and Ch'arents', the greatest poet ever to write in Eastern Armenian, was shot and dumped in an unmarked pit across the Hrazdan river from central Erevan. One genocide had not been enough. But Stalin died, Anastas Mikoyan flew to Erevan bearing the order that the banned poets be rehabilitated and published, the statue of the tyrant was toppled, and Mother Armenia, sword in hand, rose over the capital city.

Prevented by the Hamidian censorship from speaking openly of his nation's hopes, Medzarents' had perhaps attempted in his verses to do the very thing his critics were unable to see: to imagine a free and empowered life spoken in Armenian alone on one's own land, steeped in the images and sounds of ancient and unbroken tradition joined harmoniously to world culture. This was a vision unencumbered by the lachrymose paradigm of defeat, of suffering and martyrdom, whose final expressions were the escapism of Symbolism and the masochistic death-wish of Decadence. Misak' Medzarents' died only a bit over half a century after Xaç'atur Abovyan's first vernacular Armenian novel, *Vērē' Hayastani*; a strip of Armenian land, the khanate of Erivan, had been wrested from Muslim rule for the first time since the fall of the Cilician kingdom in 1375. And he was only the second poet of real importance to write in the common vernacular Armenian of modern times that most of his nation spoke. Five years after Abovyan's *Wounds of Armenia*, Avraham Mapu's novel *Ahavat Tsion*, "The Love of Zion", the first to be written in modern Hebrew, was published. Five years before Misak's birth Eliezer Ben Yehuda settled in Jerusalem to raise a Hebrew-speaking child in his own ancestral land; and as the young Medzarents' was moving from town to town and school to school, a Viennese journalist named Theodore Herzl witnessed the Dreyfus trial and forged the political movement of national liberation of the Jews, Zionism. Two peoples whose talent, energy, and economic advancement excited envy; two peoples whose lack of political and military power excited contempt. And even as both struggled to create a normal life in a land of their own, events overtook them.

In 1957, this time under the editorship of S. Tarone'i Medzarents' *Erkeri žołovacu* ("Collected Works") was printed yet again, with the introduction by Alazan and Norenc' restored though abridged to about a third of its original length. Soviet Armenians could cherish again their entire national heritage: the

great poet Paruyr Sevak published in 1971—the year of his own young, untimely death—the critical edition of Bedros Tourian's work. The superb, authoritative study and edition of the complete works by Albert Šaruryan came in the early 1980's. As Misak' used cheerfully to affirm, the rain is harbinger of a clear day. And the work has survived, with the tenacity of the little village clinging to its steep mountainsides above the Aracani through the surging flood of time. So let us turn now to the poems.

● 2 ●

The first work I would like to examine is *Kaydzer*, "Sparks", a perfect, small example of Medzarents' poetic and thematic intricacy and loveliness, his dense intertextuality.

The drumbeat of my soul and its tambourine's
Trill this night descend in laughter.
Like cymbals clashing, they delight:
My memories clap their hands together.

Accompanying the lutes' song
Your falcon's eyes' flame
Purple-born and fire
Burn within my soul again.

Drunken on that intangible ambrosia
With kisses redolent of flowers
Sway there in mad dances
The regal lady's undulations.

The dark night gently wears away!
Oh, just once more, just once again!
My soul intoxication craves
In the rivulets of fire flowing from your gaze.

The first stanza introduces a rhythmic pattern of musical sound: in the words *tap' u t'ampugi* "tambourine and drum" is the actual percussive beat *táp-tamp*; and there follows a cadence of alliterative patterns: *dzidzogh* "laughter" > *dzandz-ghá* "cymbal" > *ts'andzin* "joyful", with *dzáp'* "clapping" in the final line finishing the pattern and recapitulating the sound pattern in *-ap* of the beginning.

The second stanza moves from the sense of sound to that of sight—from sound to color—and introduces a density of allusion to ancient visions instead of alliteration. The musical instrument *pamplir* in the first line reminds one at once of lute, the *p'andurn*: Movsēs Xorenac'i in his *History of the Armenians*, 1.31, declares that he heard with his own ears the bards singing of the birth of the fiery-

haired god Vahagn from a flaming reed in the purple sea (*covn cirani*). And the stanza mentions fire thrice, calling it *ciranecin*, “purple-born”. The epithet refers to the ancient Song; but it is also a calque—a part-by-part literal translation of Greek *porphyrogenitos*, with the sense of noble or regal. The latter meaning is echoed by *šahēni*, “falcon-like”, since the Persian name of the noble hunting bird includes *šāh*, “king”.

The third stanza moves to the senses of taste, smell, and touch: it begins with *ginov*, “drunk”; and the substance of the intoxication is the touch of a kiss, *hamboy*, literally, “the sharing of a scent”. That scent is *dzaghg-anuš*, “flower-sweet”, but note that both *nektar* and *anoyš* mean “ambrosia, drink of immortality” as well. The stanza then evokes the lovely erotic motion of the dance: resuming the motif of archaic nobility, Medzarents’ uses the very archaic Iranian word *pampiš* (Middle Persian *banbišn*) for “queen”.

And in the fourth stanza the fabulous reverie of wild music and undulation, of purple-hued fire and mystic intoxication, fades even as the velvet night dark goes to predawn gray, but not without a last potently marked word. The gaze of the beloved is *hrahosan*, “flowing with fire”: the compound comes from the Hymn of Vesting that precedes the Divine Liturgy: *Anjrewacin bažak hrahosan, or hetar yAřak’ealsn i surb vernatann, heł ew i mez, hogid surb Astuac, and patmučani zk’o zimastut’iwnn* “That rain-born cup flowing with fire that you poured into the Apostles in the holy coenaculum, pour upon us as well, O Holy Spirit, God—your wisdom together with this vestment.” The passage adumbrates a spiritual intoxication imagined as a cup of fire pouring down like rain, the mystical drunkenness that has infused the poet’s soul with both artistic wisdom and sensual delight.

The brief poem *Kišerin erazank’ə*, “What the night dreams”, recalls William Blake’s *Songs of Innocence* and *Songs of Experience* in its deceptive simplicity.

In the tenebrous fog dreams the night
Of the burning cherry lips of daybreak bright,
And then the shining stars of joy all smile
Upon the gloried lap of heaven’s blue delight.

But sometimes too in nightmares deep
Dawn yawns abyssal in the nighttime’s sleep
And after the rude blast’s growls and heaves
The rain comes, shedding floods of tears.

Here the tenebrous fog, *aghchamughch*, of the first line of the first stanza adumbrates the phonetically paired and thematically twinned *mghtsavanch*, “nightmare”, of the first line of the second; so rain may come even if one dreams of a clear day. And the dark day, an inversion of the hope of light, becomes a spatial inversion, too: dawn does not rise or break but yawns, an *antunt*, or bottomless abyss. The language and structure are simple at first glance, then

strange and disorienting. But Medzarents' tends to recover his strength and thrust darkness away, as in *Gyank'in yerka*, "The Song of Life":

From within life's frightful furrows
Hissed whispers interspersed with cries
To me, All hopes come but to great vanity.
Emptiness seals life's inanity.

Every flower by its fading is attended;
Every life, in black shadows, ended;
And as the incense of the bloom is routed
So vanishes all hope, unsprouted.

But through my smouldering reveries
Steals a light of sudden purple bright:
The gold and iridescent lovely song of life
To all of which I listened, trembling.

Let not these gloomy lamentations crush you,
Nor your golden hopes be scattered to the wind.
Each furrowed brow is smoothed, a salve to every pain
Comes in self-forgotten smiles and laughter.

Look now, the blue of heaven's canopy
By bleary clouds is sometimes stained
And smiles wink out, the rain pours down—
But tears of rain predict their very end.

Our word for rain contains the sun's name as its ending,
And crying ends with sunlit smiles,
And all the past occasions of our laughing
Create a long inheritance of happiness.

The line *Amēn antsrev arev m'uni irmēn verch*, literally "Every rain has a sun after it" I have translated "Our word for rain contains the sun's name as its ending", stressing the play on Armenian *antsrev* "rain" – *arev* "sun" and the double meaning of *verch* as "after" and "ending".

In *Irigvan tēm*, "Towards dusk", Medzarents' encodes his pen name, *dziadzan*, "rainbow":

Close to voluptuous daybreak in my slumber I dreamed
Of the song of life in burning hues festooned
And shivering rainbows of sūken shimmer stretching
Fringe aglow into the other world.

Diurnal life's concerns the maelstrom
 Of enchantment of my dreams dispelled
 And I saw life up close and shorn of manic
 And deceitful games: savage wounding pain.

Dusk comes, shadows swiftly fall,
 In vain now morning's reveries I seek.
 A savage love imbibed the dewdrops of their light
 And with my sobbing I remained, all alone and far away.

The last two lines of the first stanza enclose the poet's rainbow in a cadence of gorgeous, reduplicative compounds, whose rhythmic doubling and length the very verb *g'ergarēin* "they were stretching out" both expresses and phonetically reflects: *Ev toghtochun dziadzanner medak'sarēch/ u p'aghp'adzob g'ergarēin ashkharh m'antin*. But the only phonetic echo the *dziadzan* finds, as night falls, is *hedzedzan-k'*, crying. The poems *Giragmudk'*, "On the Eve of Sunday" and *Khung ev arts'unk'*, "Incense and tears" evoke the poet's mother's evening prayers and are suffused with a spiritual calm. The first bears the Classical Armenian epigraph,

"Coming at the setting of the Sun, we have beheld this evening's light."

The softly fleeting violet evening light is happiness:
 Golden threads are wreathed in velvet mist of frankincense;
 Blue fringes, rainbow, voices' ripple, mystic rose;
 And, as they melt, the shining tears of tapers.

My incense-thirsting soul sips the silent moment
 As the censers swing, their eyes of golden flame.
 Soul-seizing fear there sets me down, unblinking,
 I sense the kiss, my soul swathed in sea green.

Hues of amethyst anoint the swirls of incense smoke:
 On bended knee before the mystery I stand; my arms, a Cross,
 And wait for Sunday, brilliant, to dawn upon my soul.

The torches dream, enwrapt in chrysolite and emerald,
 From arch and dome the light and laughter rise,
 My soul sinks, buried in this vision splendid:
 The softly fleeting violet evening light is happiness.

The liturgical text of the epigraph is the ancient hymn recited Saturday evening, *Erg kirakamtic'*: *Loys zuart' surb p'arac' anmah!*... "Hallelujah, hallelujah! Joyful light of the holy immortal glory of the heavenly father, holy

maker of life, Jesus Christ! We have come at the setting of the sun and seen the light of this evening. We bless Father and Son and Holy Spirit of God. And all say Amen. Make us worthy in every hour to bless in a voice of song the name of the glory of your holy Trinity, which gives life, on account of which this world, too, glorifies you."⁸ And the second poem:

Her tear drops with the dripping myrrh
My mother mixes in the censer:
Passing through and unseen door
She listens, happy

To a voice emerging from the Otherworld.
To the eyes that observe
Her Saturday evening incense
Her hand ceaseless makes the sign of the Cross.

And to all she gives a portion
Of the ringing censer's flower smoke;
And the eve of Sunday is a mirror
Where the ardent fire glows

Of guardian angels luminous in soul
Whom this evening she has given to sip
Her tears and weekly incense smoke.

And now my grey-haired mother bows...

The guardian angels here are the *zavart'unner*; compare the phrase *loys zuart'* in the hymn. But the angels are *lusahoki*, "of luminous soul", an epithet of the departed; so the simple rhyming collocation of *khung*, "incense" and *arts'unik'* "tears" may reflect both ardent prayer and sad recollection of those departed to *Andrashkharh*, the Otherworld. As his mother swings the censer to give each member of the family a breath of its aroma, Misak' hints at its cymbal-clapping sound: *dzukhēn dzaghik mā dzap'eli*. Paruyr Sevak probably had in mind these lines about a loving mother's pure hearted faith and its transcendent power, and the sounds and scent of Armenian Christian prayer, when he wrote in his poem *Kheghkataka*, "The Jester" (1962): *Vortegh en mernum bolor kirk'era?/ Tsap' u tsntsghayi tsanrut'yan nerk'o./ Naye khunkerum*. "Where do all the idols die?/ Under the weight of applause and of cymbals,/ And also in incense."

⁸ On the hymn and its echoes in recent Armenian writing, see J.R. Russell, English trans., intro., and commentary, Derenik Demirjian, *The Book of Flowers*, Belmont, MA: Armenian Heritage Press, 2003.

Medzarents' writes a homeland of sleeping skies, nocturnal royal revels, weeping dawns, angels peeking in from the otherworld at his mother's prayers, the sounds of cymbals, colors of rainbows and streaming silks. He wonders what a silkworm dreams in its cocoon. And in the cycle *Ellayi, allayi*, "Would, would that I were" he creates a world-embracing liturgy of his own:

Evening.

Would I were this evening
 to touch every passerby's brow
 lovely, languorously to linger
 Would I were this evening.

Would I were this evening
 filled with human song and birdsong
 and the elements' clamorous heartbeat
 would I were this evening.

Would I were this evening
 lazy, charming, gauzy, rosy-smelling
 and undulant as a gold-brocaded curtain
 every soul sheltering.

Would I were this evening
 Dense with the bells' clangor that strides upon Heaven,
 as an incense-dimmed chapel anointed, torch-litten
 would I were this evening.

Would I were this evening
 tranquil to give to the waning lamp
 of a dying girl new flame from my shining—
 would I were this evening.

Would I were this evening
 filled with the oceanic waters' heavy booming
 and with the blossom of the breezes' melody—
 would I were this evening.

Would I were this evening
 that on daybreak's pearly pillow fades
 tossing its gorgeous tresses streaming—
 would I were this evening.

Would I were this evening
 resplendent, universal, sweet, bestowing
 upon all my shining locks' fire and gold,
 would I were this evening!

And even broken in sickness, his generous spirit imagines only light, in the poem *Arevin*, "To the Sun":

With the gentle and full-voice wind from the south
 So like a kiss though dreamed of long ago
 It fills my love-lorn soul with pleasure.
 Sun, shine on, your arrows tinged with gold
 Upon my birth pangs muffled by the fog
 There where thought lingers and has lost its way:
 Shine on, good Sun, for I am sick...
 Plunging madly in the fluid casement's breast
 For the noon's embrace, lush green, dream fire-bound,
 I attend with outstretched arms.
 Spin round me all your nets of flame
 And rock me in your heat until
 Locked in your kiss, consuming, burning,
 The drowsy children rise and file
 Out of my soul
 That I may rise and tread anew
 My ardent paths of sensuous delight.
 I am sick, good Sun, shine, shine on...
 My soul is a bird, It longs
 For laughing song and air and light.
 But the trill that takes wing from its depths
 On steps over-shadowed and unseen
 Is short of breath. It plummets down.
 Shine, shine, good Sun, for I am sick.
 In your flaring, effortlessly roused
 Long as the wild, fierce hornets' antic hay
 Whirls on, drunken with your flame,
 Till thirsting leaf expire; blossom, fade—
 I drink this restful day its nameless pleasures,
 Slothful, sentient,
 Intoxicant, luxuriant.
 Just a little longer,
 Good sun, shine on, for I am sick.
 For one last time
 Cleave to my impassioned soul: it burns with fire!
 I am sick, good Sun. Shine, and shine.

This is a poem I think Ch'arents' might have had in mind when in 1920 he wrote *Mahvan tesil*, "Vision of death", which uses the expressive words *marmrel* (*marogh ev marmrogh irikva mej*, "in the evening waning and decaying") and *borb* (*im borb erkir, lusapsak k'o apagan* "my land of fire, your future crowned

with light”) that stand out here too. Both poems are pleas *in extremis*; and Medzarents’ draws expressly from the language and gestures of prayer: the line *t’evadaradz gə spasem*, “arms outstretched I wait” evokes a line from the Narek that he cites in his article *Naregats’iin hed*, “With Narekac’i”: *Aha karkarəm zkarkameal bazuks hogwoys yanun k’o, hzawr...* “Now I stretch wide my soul’s bending arms to you, O mighty one...”

The final poem I would like to present here is the one I believe may best serve as the *ars poetica*, the poet’s particular artistic credo. *Inch’ arpets’ut’yamb*, “With what intoxication!” was printed, as noted above, less than a year before Medzarents’ death, and was dedicated to a friend who was to be murdered in 1915. The poem deploys every gorgeous alliterative cadence, every intricacy of verbal combinatory invention, every extravagance of imagery, every incantatory rhythm its author had honed, and gathered, and cherished. You will find in it the marital diadem, the *narōd*, and the folksong’s word for loveliness, *khorođ*. The green of the crowns of trees is *dzovadzup’*, “sea wave tossing” and the plains’ purple majesty is *dzirani*. There is a catalogue of herbs, *pazmapurum*, “with crowding multitudes of their aromas” and at the end as all elements and beings join the dance together they experience an *antratarts dziadzanum*, a reflecting, returning “rainbowness” that is the poet bidding envoi, his soul reaching up from all, a graceful arc composed of color, light, and dew to touch the face of heaven and once again embrace the earth. In its pantheistic intoxication, its unashamed love, its elemental exultation and delight, it stands as a testament, an inheritance, a clarion of the Armenian language and literature, the victory of a free spirit come from an unconquered ancient land. What is, in the end, the light that shines in darkness, and the darkness comprehends it not, but the singular courage of the soul. And here it is.

How drunken, the trees in the light!
 Trees in the wind and in the rain,
 Shaggy-tressed trees, trees that to the heavens strain,
 And saplings green and tossing, crests like sea waves,
 Tumbling to the bosom of the wheat fields in a daze,
 All life is drunken on the sun’s abundant blaze!
 In what intoxication the grass above the dark soil rises,
 Opens to the light, amazed,
 In the instant of its life the dewdrops of its eyes.
 How drunken are the flowers in the dew:
 Flowers in the light, at ease beneath the hand’s caress,
 Are swooning now in expectation.
 With what intoxication!
 Every hillock on its green brow binds
 The blossoms’ multicolored nuptial diadem,
 And from the lovely plain and dale
 The red foot stork now guides his bride:

Returning home, imbibes his longings' satiation.
With what intoxication blackbirds drink the light
And whisper it, alert
In orchards' leafy fastnesses.
With what intoxication the snow-white jays afloat
On high, sail, perambulate upon the sky,
Taking wing, their bodies gilded on the glowing firmament.
With such intoxication the turtle dove
Her nuptial bed arranges in the shady bower of a tree
For her swain in patient passion.
The drunken butterfly unfolds upon
The tiny sparkling lakelet of its leaf
And with its milky winds erects its canopy.
With that intoxication above the purple plain
To scarlet flowers hives the bee
To suck upon the tiny female nipples, luxuriant.
In their drunkenness the seas brim blue,
The river waters surge, the streams are spilling;
The rivulets purl swiftly; lakes, azure—
The brook, his waves green-fronded tossing,
Slips between the willows' pale lunar limbs.
The drunken clouds now shake their shaggy heads,
The wondrous liquid massing in their breasts,
And, like a snaking thread, the rain descends
To slake the hot gold thirst of earth.
With that intoxication drink their fill
Upon the parched soil's universal burn
All creatures born, all flowers grown:
Drunk, the wave laps in embrace the perfumed tree:
Thyme and mint and basil growing wild
And storax, frankincense, aromas teeming
Are embracing, drunken, every thing,
All shapes and forms, all colors gleaming,
All essences and elements: He
Whose rainbow every thing reflects, returning,
God! Who from God knows where, has come to them.

ՅՅ. ԻՆՉ ԱՐԲԵՑ ՈՒԹՅԱՄԲ...

Գեղամ Բաբսեղյան բաբեկամիս

Ի՜նչ արբեցությամբ, ծառեր, լույսին մեջ,
 Մաղեր հովին մեջ և անձրևներուն,
 Վարսավոր ծառեր, ծառեր երկնուղեշ,
 Ու ծառեր մատաղ՝ ծովածուսի կանանշ
 Ցորենի ցանքին գոգն ինկած շվարուն՝
 Ամենն ալ կյանքին կ'ըմպեն հորդ ճաճանշ:
 Ի՜նչ արբեցությամբ խոտն՝ այս հողեն վեր
 Կ'ելլեն, ըզմայլո՜ւն՝ կը բանա լույսին՝
 Վայրկյան մը ասլուղ իր ցողն աչքեր:
 Ի՜նչ արբեցությամբ ծաղիկներ շաղին,
 Մաղիկներ լույսին, մըտերիմ ձեռքին,
 Ըսպասումներուն մեջ կը նըվաղին:
 Ի՜նչ արբեցությամբ ամենմեկ արոտ,
 Ամենմեկ բլրակ՝ իր կանանշ ճակտին
 Կը կապե երփնած ծաղիկն նարոտ:
 Ի՜նչ արբեցությամբ դաշտերեն խորոտ,
 Ծվ հարս հովիտեն՝ կարմըրոտանի
 Կ'առնեն արագիլն իր դարձին կտրոտ:
 Ի՜նչ արբեցությամբ սարյակներն, արթուն,
 Լո՛ւյսը կը ծըծեն, լո՛ւյսը կը հծծեն,
 Մրգաստաններու մեջեն սաղարթուն:
 Ի՜նչ արբեցությամբ ձյուն ճայեր, ծրփին,
 Բարձրեն՝ օդաճեմ լյուղ կու գան. արփին
 Մեջ կ'ոսկեզօծին ու կը թևանան:
 Ի՜նչ արբեցությամբ սատրակն հարսենի,
 Առագաստ ըրած ծառի հովանին՝

Կըսպասե տարփոտ իր վարուժանին։
 Ի՞նչ արբեցությամբ թիթեռն է բացեր,
 Լեւակի մանրիկ լիճին վրա փրփրուն՝
 Առագաստաշեն իր կաթ թեփկներ։
 Ի՞նչ արբեցությամբ ծիրանի դաշտին
 Շեկ ծաղիկներուն մը վազն մեղուն,
 Սըծել իգայի պտկունքներն հեշտին։
 Ի՞նչ արբեցությամբ ծովերն են կապույտ,
 Գետերն՝ հորդաշուր, աղբյուրներ՝ զեղուն,
 Լիճներ՝ խաժագուն, առուն՝ շուտափուլթ,
 Լոռածամ առուն՝ որ կ'անցնի քովեն
 Ուռեստաններու գեջ, լսնակապույտ։
 Ի՞նչ արբեցությամբ ամպեր կը թոթվեն
 Հրաշալի հեղուկն իրենց ըստինքին՝
 Որ ղերթ ասղանի վար կը սողոսկի՝
 Մարելու երկրին պասուքը ոսկի։
 Ի՞նչ արբեցությամբ զայն կո՛ւշտ կը խըմեն
 Համազրավ տապեն սարսառած հողին
 Սընունդներն ամեն, ծակտիքներն ամեն։
 Ի՞նչ արբեցությամբ հոգին կ'ընդգրկեն
 Ալյակն հորդահոս՝ ծայրիի բույրին,
 Մաթրին, անանուխ, վայրի ռեհանի
 Բազմաբուրումներն ըստաշխ ու խունկե։
 Ի՞նչ արբեցությամբ կ'ընդգրկեն անի-
 Բոլոր ձևերն ու երանգներն ամեն,
 Բոլոր գոյությանց, բոլոր տարրերուն
 Իր մեջ անդրադարձ ծիածանումեն՝
 Աստվածն՝ որ եկավ՝ շե՛ս գիտեր ուրկե՛...

3. Կ Ա Յ Ծ Ե Ր

Հոգվույս դափ ու թմբուկի
 Կ'իջնե ծիծաղն այս գիշեր.
 Մնծղաներու պես ցնծուն՝
 Մափ կը զարնեն իմ հուշեր:

Բամբիռներու երգին հետ
 Քու շահենի աչքերուդ
 Միրանեծին բոցն հըրուտ
 Կ'այրի հոգվույս մեջ նորեն:

Գինով՝ աննյութ նեկտարեն
 Համբըւրներուն ծաղկանուշ՝
 Հոն խուլաբար կը պարեն
 Շարժուձևեր բամբիշի:

Ցայգն համրորեն կը մաշի՜,
 Ա՛հ, քի՛չ մըն ալ, քի՛չ մըն ալ,
 Կ'ուզե հոգիս գինովնալ
 Նայվածքիդ մեջ հրահոսան:

THE BOOK OF THE WAY (GIRK' CHANAPARHI) OF YEGHISHE CHARENTS:
AN ILLUMINATED APOCALYPTIC GOSPEL FOR SOVIET ARMENIA.

James R. Russell
Harvard University

To Joseph B. Russell, my father; and to the memory of Sidney A. Russell, my grandfather.

1. THE BACKGROUND.

In 1932 *Pethrat*, the State Publishing House in Erevan, published the *Hoktember/Noyember Taregirk' (October/November Yearbook)*¹ to commemorate the achievements of Soviet Armenia on the fifteenth anniversary of the Revolution and the tenth of the foundation of the USSR and the incorporation of Armenia into the Union. The poet Yeghishe Ch'arents', his friend the writer Aksel Bakunts', and Yeghia Ch'ubar edited the volume, which was designed and illustrated by the well-known graphic artist Hakob Kojoyan. Following a title page, the book opens with full, facing-page woodcuts of the founder of the Soviet Union, Vladimir Il'ich Lenin, and of Iosif Vissarionovich Stalin, who had by then consolidated dictatorial power. The former appears against the background of a regimented line of banner-bearing soldiers and workers marching; this emphatic pattern of regimentation has been carried forward and made more abstract, even dehumanized, for the background to Stalin, who looms over waters flowing evenly through the symmetric locks of a dam and tractors seen from above moving along the parallel furrows of a collective farm. The leaders of the masses thus preside over a society unified in purpose and strength, as inevitable and incontrovertible as mathematics and science in its ideology, its historical progress, and its power. Gone are the antique, hieratic double-headed eagles and obscure religious symbols of the Tsars: the Soviet Union is a new phenomenon in human affairs and a future that works (as H.G. Wells put it), with a new and severely modern iconography of its own.

The next Communist leader of the hierarchy depicted in the *Yearbook* is Armenia's Party Secretary Aghasi Khanjyan, patron and protector of the eccentric Charents, whom the poet called fondly and reverentially the Dauphin of Nairi. He merits half a page in which the themes of the first two portraits are blended together but also softened by being broken up into a *mélange* that works in the distant vista of the country's mountains. (Pls. 1-4: title page, Lenin, Stalin, and Khanjyan in the 1932 *Yearbook*.) After two grainy photographs of minor local functionaries comes Kojoyan's striking full-page, two-color title of Charents' "Praises of the Grape, Wine, and Belles Lettres, written for the Fifteenth Anniversary of the October Revolution" (discussed below with its twin in the *Book of the Way*), with vignettes of Armenia's feudal past and Socialist present. The poet very nearly dominates the book of which he is the chief editor, overshadowing all three of his country's rulers; and one is left with two impressions.

The first impression is that the art of the book as Kojoyan designed it is not simply decorative but consciously iconographic: the order of the pictures and their design speak to the reader in the symbolic language of a system of belief, much as though, *mutatis mutandis*, one were opening an Armenian illuminated manuscript of the Gospels. The observation that Communism was a dogma that co-opted the imagery and techniques of earlier state and confessional ideologies, particularly the theme of apocalypse and the end of history, to its own purposes is not new. The Russian Symbolist poet Alexander Blok (1880-1921), for instance, wrote a long poem, "The Twelve" (Rus. Двенадцать), in which a violent gang of Red Guards are revealed to be the Apostles, with Christ at their head.² Recent study of the arts in the early Soviet Union has focused on Russian book design of the 1920's, particularly of the avant garde, futurist trends, and on the remarkable efflorescence of Russian Jewish art and book production in Yiddish in particular, in towns of the former Pale such as Vitebsk and in the metropolitan centers of the USSR.³ With the imposition of Socialist Realism, the study of the Soviet artistic heritage turns often to a comparativist approach that juxtaposes Russian art at the height of Stalinist totalitarianism to that of Nazi Germany.⁴ The experience of the cultures of Central Asia and the Caucasus, south of the Slavic big brother, receives little attention, suffering perhaps from a patronizing condescension that Russian chauvinists seem to

have communicated by osmosis to some scholars of Soviet studies abroad. Armenia has a religious and artistic background in the Ancient Near East— Urartu, Assyria, and Iran— and in Eastern Christianity, where the country has strong ties to Syrian and Byzantine painting but also developed powerful artistic schools and exegetical traditions of its own. The art of this Transcaucasian/Near Eastern Communist polity ought to fascinate one as the Communist reflex of the culmination of the visual traditions of the Ancient Near East and of East Christianity, but it has not received hitherto the attention it warrants: even in the Armenian studies field, art historians focus on the glories of the medieval period, while the modern era is left largely to students of politics and of the vast and terrible record of the Genocide, that watershed in modern Armenian history before which so much else simply pales in significance.

The second impression, aided no doubt by hindsight, is the exposure of Charents by his immense personal presence in the *Yearbook*, a dangerous hubris. For in that same year a volume of the work of Soviet Armenia's greatest living poet was published, more modest than the sumptuous jubilee edition he had expected. This was a warning: the USSR had room for only one cult of personality, that of the *ghekavar* (the Helmsman)— as Charents and others called Stalin— and the satellite cults of those whom Osip Mandelstam, a friend of Charents, derided as the “Ossete’s” half-men, his thick-skinned leaders. Charents wrote the bulk of the poems that comprise the volume *Girk' chanaparhi* (*Book of the Way*), which came out with Pethrat a year later, in 1933, in the first six months of that year,⁵ incorporating the cycle of poems already printed in the *Yearbook*. Kojoyan designed the volume in its entirety. Charents' collaboration with the artist had, thus, already begun; but the two must have worked still with the speed and dedication of a Stakhanovite shock brigade of the five-year plan to produce the finished volume within a single year. Modern Armenian literature has no other artistic object, I think, quite like it: from start to finish it is a unified graphic and textual work, the Communist response to and meditation upon a millennium of Armenian Christian manuscript books of the Bible that co-opts several others styles as well, particularly the Ancient Near Eastern triumphal bas-relief. The first edition of the book contained a play, “Achilles or Pierrot”, that the Armenian Communist Party arbitrarily and inaccurately condemned as Trotskyist on 14

November 1933. It was withdrawn, and in 1934 a second edition (still bearing the date of 1933) was issued with other poems to fill the gap: “*Arvest k’ert’ut’yan*” (“Ars poetica”) and “*Girk’ imastut’yan*” (“Book of Wisdom”). The book also contains the famous acrostic *Hay zhoghovurd, k’o miak p’rkut’yunə k’o havak’akan uzhi mej e* (“Armenian people, your sole salvation is in your united strength”), formed by every second letter of the lines of the poem “*Patgam*” (“Message”)—a title itself underscoring the powerful intent of the poet.⁶ Charents seems to have injudiciously boasted to an acquaintance that he had got away with his trick, the friend promptly informed on him, and the verse, which the poet had not intended as anti-Soviet or nationalistic, but which was easily so interpreted so as to incriminate him, was then emphasized in a memorandum from Moscow to Armenia of 27 January 1937. The verse was the nail that sealed shut the coffin, and the decision of the establishment to do away with him was now certain: he was arrested on 26 July of that year and died or was executed on 27 November.⁷ Some who kept copies paid in the years to come with their freedom and even their lives.⁸

2. THE BOOK.

The *Book of the Way*, Charents’ last, is a *tour de force* and a tour of time and space as well, in which the poet’s path through life and Armenia’s long road through the ages merge into a single monumental, epic narrative. Charents and Armenia have arrived, he writes, at the crossroads of history. He retells the *Epic of Sasun*, but with his own, critical, triumphalist Communist voice. He changes the traditional invocation of blessing, the *Voghormi*, that begins each section (called a *chyugh*, “branch”) of the recited text, into a curse, excoriating the country’s princes and priests—as though the folk bards of the past had somehow failed to see the true story. And he has the imprisoned apocalyptic hero Little Mher—Mithra—emerge from his millennial captivity in the rock of Van: “*Minc’hev orn ekav—yev demk’ov varr/ Yelav k’arayrits’ Mhern ardar,/ Yev berets’ zarmin Ohani ch’ar/ Ankum verjnakan yev mah anchar*” (“Till the day came, and with fiery countenance/ Mher the righteous emerged from the cave,/ And brought to Ohan’s wicked kin/ A final fall and an unspeakable death”). In the epic, this event is to take place at the end of time, but for the poet the Bolshevik revolution of 25 October 1917 (7

November outside Russia) is Apocalypse Now. In “Vision of Death”, he beholds a vast and politicized vision of that death— the death of a whole class of enemies, of class enemies— wholly unlike the other lonely, introspective, emotional lyric poem with the same title, “*Mahvan tesil’*”, written in 1920, in which Charents sees the preparations for a public hanging and offers to die alone on the scaffold as the ransom for all the Armenian people. Now, he encounters the great Armenian poets, scholars, and national leaders of the past century. These include, in order, the Mekhitarist scholar Ghevont Alishan; the Persian Armenian novelist and social reformer Raffi; the patriotic writer Raphael Patkanian; the founder of the Dashnak party, K’ristap’or Mik’ayelian; the leaders of the nationalist Dashnak party Rostom and Zavarian; the democratic poet Step’an Nazarians’; the Western Armenian poet Mgrdich’ Beshigt’ashlian (who holds a brass shepherd’s flute) and the poet Bedros Tourian (who plays a genuine one, *iskakan sring*); Grigor Artsruni, founder of the progressive newspaper *Mshak* (*The Cultivator*); Catholicos Mkrtich’ Khrimian [called universally and lovingly *Hayrik*, (“The Little Father”)]; the Dashnak statesman and poet Avetis Aharonian; the poets Siamant’o and Daniel Varuzhan; and at last, at the travelers’ emergence from the darkness of the pit, “a light of heavenly hue” (*erknaguyn mi luys*)— Lenin. In the *Divine Comedy*, Virgil and Dante come out of hell on the dawn of Easter Sunday, but to Charents it is, again, the Revolution that is the resurrection and the life, the true light and salvation of mankind. So as the lone, proud Dante guides him through the Inferno (he turns down Virgil and Ferdosi as unworthy of this new voyage, as they were poets who bowed in fealty to kings) he derides his political enemies, the Dashnaks. It is not just a titanic settling of scores but an entire cultural and political landscape, all doomed by their heresy or simply by their failure to live long enough to see the Communist salvation dawn and become properly enlightened by Marxist class-consciousness. When the Party met to consider the book, even Khanjyan expressed outrage that Charents in his survey seemed to have drawn so decisive a line between past and present, to see nothing at all in Armenia’s past and tradition worthy of remembering and preserving.

The Armenian Revolutionary Federation, Dashnaks for short, who populate this parochial Inferno, are an Armenian socialist party who founded the short-lived first

Republic and were driven by the Communists into exile after the bitter civil strife of 1920-1921. The literary scholar Nikol Aghbalian, who had served as the ill-fated Republic's minister of culture, had taken Charents under his wing and publicized his work. Though the poet sent copies of his books with respectful dedications to Aghbalian in Tehran, the older man was enraged by Charents' anti-Dashnak polemics, which he regarded as base ingratitude. Aghbalian wrote back accusing Charents of vulgar obscenity, and even penned an embittered parody of the poet's proletarian verses about free love.⁹ In 1936 the Boston Dashnak paper *Hairenik* (*Fatherland*) published a scathing review of the *Book of the Way*, predicting that its author would be writing more Communist propaganda for years to come. But by then Charents was wholly isolated, in fear of arrest, writing very different poems that were to survive only because they were buried secretly by friends.

As the *Book of the Way* progresses, Charents scales the unapproachable peak of Ararat anew with Khach'atur Abovyan, whose novel *Verk' Hayastani* (*Wounds of Armenia*), was both the chronicle of Russia's liberation of Eastern Armenia in 1828 and the first prose work in the vernacular tongue—written one generation later, in the fateful revolutionary year of 1848. The Church had condemned Abovyan for setting foot on the holy mountain, and disapproved of his secularist views, which were doubly dangerous since as a teacher he imparted them to young and impressionable minds. Shortly after finishing his book, Abovyan left his house one morning and vanished: the mystery of his disappearance has never been solved. In the poem, Charents has Abovyan set out on his last day for Ararat, "that there he might sample eternal rest" (*vor chashake ayntegh haverzhakan hangist*). The poet felt a close kinship to Abovyan as an ingenious literary innovator, and perhaps even foresaw a confluence of fates. But there is an echo here, too, of a verse from the final poem of the *Tagharan* (*Song Book*) cycle of 1920, in which Charents exclaims that he loves Mount Ararat *inchpes anhas p'arrk'i champ'a*, ("like the way to an inaccessible glory"). The road to Ararat and its glorious summit and mystic snows may thus be the way to death as well.

Armored trains played an important role in the civil war that followed the 1917 Revolution, and a popular Russian Communist song bade: Наш паровоз, вперед гуди, в коммуне остановка,/ Иного нет у нас пути, в руках у нас винтовка (“Our locomotive, forward, let your whistle blow, our stop is at the Commune:/ We have no other way, and hold a rifle in our hands”). So Charents, retelling an actual event of the anti-Dashnak Bolshevik uprising in Armenia of May 1920, boards an armored train, *Zrahapat Vardan Zoravar*, bearing the name of St. Vardan Mamikonian, the fifth-century hero of Armenia’s war for spiritual survival as a Christian polity against the attempts by Sasanian Iran to force the nation to return to Zoroastrianism. The train is converted to the Communist cause in the Armenian civil war and races on to victory, sending its defiant message not in the eloquent, ponderous diction of ancient hagiography but by the lightning and the concise wording of what has been called the Victorian Internet—the telegraph. It is the cadence of Charents’ early revolutionary tirades *en escalier*, the style of his comrade, the larger-than-life poetic hero Mayakovsky.

Speaking to the centuries to come, the poet addresses seven counsels to future poets—the seventh being that they accept no counsel! And he engages in a conversation outside space and time with his poetic brethren Goethe, Schiller, Heine, and Ferdosi. The book contains also the praises of wine and song with which Charents had celebrated his old-new land’s anniversary in the *Yearbook*. He had experimented with the various poetic styles of his time: decadence, symbolism, futurism, Mayakovsky’s stridently declamatory proletarian verse, and a limpid, almost neo-Classical realism. Here is his personal artistic summation on the threshold of middle age, but it is a bequest that is transcendent, in which he addresses the ages, challenging the Armenian canon in general and, with the book’s iconographic program, the Gospel (and manuscript art) in particular.

One has mentioned Mayakovsky; and the strident Russian bard of the Revolution, after deriding the suicide of the poet Sergei Esenin, had gone on to take his own life in 1930. These events shocked all Soviet literati, and would have had a very powerful impact on Charents. He knew and admired Mayakovsky; and Esenin had belonged for a time to the group of the Imaginist poets: Alexander Kusikov, a Russian-Armenian poet

from Moscow, belonged to this school and Charents used a line from Kusikov as the epigraph to his autobiographical “*Ch’arents’ Name*” (“Book of Charents”, with the title modeled on the Persian of Ferdosi’s *Book of Kings*, the *Šāh-nāme*). It is very likely that Charents had known Esenin as well. In his last poem, Mayakovsky overtly *rejects* the telegraphic mode, returning to a lyricism that with impassioned solemnity surveys the world rather than haranguing it. It is also a letter to his beloved, much reworked, that became, in the end, his *obiter dicta* and suicide note. Уже второй, должно быть, ты легла./ В ночи Млечпуть серебряной Окою./ Я не спешу и молниями телеграмм/ Мне незачем тебя будить и беспокоить./ Как говорят, инцидент исперчен./ Любовная лодка разбилась о быт./ С тобой мы в расчете и не к чему перечень/ взаимных болей, бед и обид./ Ты посмотри, какая в мире тишь./ Ночь обложила небо звездной данью./ В такие вот часы встаешь и говоришь/ векам, истории и мирозданию. “It’s past one in the morning. You must have gone to bed./ The Milky Way at night streams silver like the Oka./ I’m in no hurry and there’s no need/ With the lightning bolts of telegrams to disturb and wake you./ As they say, the incident’s exhausted./ Love’s boat has shattered on life’s daily grind./ We’re quits, you and I, no need to reckon/ Mutual offenses, miseries, and pains./ But look, what a silence is upon the world./ Night wraps the sky in starry tribute./ At hours such as this you arise and speak/ To the centuries, to history, to all the cosmos.” Charents perhaps knew that the *Book of the Way*, his speech to the centuries, to history, and all the cosmos, was a valediction.

Modesty and obscurity rarely saved anyone from the meat-grinder of the Stalin purges; but Charents’ titanic, heroic persona made him perilously visible to the Helmsman in the Kremlin, who knew of him, asked about him, toyed with him. And this made Charents the prey of the cowardly, spiteful, and envious homunculi that came to dominate Soviet Armenia’s arts and letters in the late 1930s. There can be no doubt that his greatest book was also his nemesis. But that is of course the fault of a degenerate system and a pathological society, not of the magnificent book or the man: such a man cannot become silent and compliant.¹⁰ And what a man he was. The teenager dreaming in Symbolist verse in dusty Kars, the revolutionary soldier, the mischief maker of hungry

proto-Soviet Moscow, the energetic and meticulous chief editor of Armenia's main publishing house, the bold speaker at the first congress of the Union of Soviet Writers, the head of the publication committee for the millennium of the Sasun Epic, the Armenian member of the All-Union publication committee for the Pushkin centenary, the poet, the heir of Sayat Nova and the bards of old, the drinker who could party till dawn whom Khanjyan supplied with cases of cognac, the caring father, the grieving widower, the versatile lover, the drug addict whose reveries became dramas defeating space and time, the mystic, the friend of William Saroyan, Leonid Pasternak, and Osip Mandelstam, this Prometheus, this giant— for if such a man can grow to his true stature he is Olympian— was ostracized and isolated, tied down with a thousand tiny, lethal threads, stabbed with a thousand small cuts by the reprobate creatures of the Soviet Armenian literary mafia, then arrested, then dead in November 1937. Khanjyan had been killed by Beria at Tiflis the year before, sharing the fate of other Party leaders of Stalin's inner Caucasian circle, like Sergo Ordzhonikidze in Georgia. The great purge swept away the best of the Soviet Armenian intelligentsia, leaving behind in positions of authority betrayers, assassins, cowards, and time-servers, sparing some artists like Kojoyan with the plain luck to survive unnoticed or to evade denunciation; and Charents was not to be fully rehabilitated until 1954, a year after Stalin's death, when Anastas Mikoyan—the Armenian in the Central Committee of the CPSU— personally ordered that a book of his verse be published without delay.¹¹ One will consider the book, not for its fateful political implications for the poet's career— historians of the era continue to trace that trajectory— but as a unique artifact of Armenian iconography; and this leads one to address two further issues, that do still have, however, a political aspect.

The first of these is the nature of the ideological message of the *Book of the Way*: The October Revolution and the victory of the Communists in Armenia several years later was seen as the single great watershed, the turning point, in the history of the human race. Socialism was now being built in one great country, but that blessed land was beset on all sides by the forces of darkness. The 1930s thus telescoped together both the tribulation and the resurrection, as it were. Historical inevitability, instead of Divine will, ensured that Communism was to win through. This is the final conflict, declares the

“Internationale”, which was then still the national anthem of the USSR (it was Charents who did the official Armenian translation) and with that was to come the decisive enlightenment of the whole human race, that hitherto had languished in darkness—for Marxism alone provided the only key to the true perception of historical and all other reality, even the physical sciences. In human affairs, Communism thus was to bring the perfection and the end of history. In his lyrics Charents imagined this utopia and evoked a future Erevan of perfect beauty, imagining the handsome, curly-haired Komsomol lad (*gangraher tghan*) walking down the road to Ararat amidst gardens and orchards, clean factories and beautiful houses, and pausing at the poet’s grave. This is a meditation on death as well as on future life, and echoes to some degree Pushkin’s lyric on death with the final wish that “young life play at the entrance to (my) tomb” (И пусть у гробового входа младая будет жизнь играть); but the great Russian poet whose work Charents knew and loved had, for all his cautious support of the Decembrists and hope for democratic reform, never believed in any sort of transfigured future reality of the sort Christianity offered and Communism was to preach. Life itself was magical enough. These assertions of Charents are the claims, then, of an apocalyptic faith; and the *Book of the Way* in its texts and iconographic program supports them from the particular standpoint of Armenia and its multifaceted engagement with Ancient Near Eastern, East Christian, and modern Western and Soviet art.

The second issue one engages is the attitude of the poet himself to this radical ideology, that he embraced and advocated so forcefully and overtly. Charents was born in 1897 in the sleepy, provincial garrison town of Kars, Russian Armenia, under the *ancien régime*,¹² and although he was spared the worst traumas that befell the nation in the Armenian lands under Ottoman domination, he was a Russian soldier on the Caucasian front and witnessed the aftermath of the Genocide of 1915, including the devastating loss of his native town. The Symbolist poet Vahan Teryan was his immediate model and precursor, and he looked up to two other, more traditional, Eastern Armenian poets, Hovhannes T’umanyan and Avetik Isahakyan. Both were lyricists so close in spirit to folklore and folk life that some of their verses became actual folksongs whose authorship was not always remembered. Their words were, as Pushkin had declared about his own

poems, as close to unadorned nature itself as the echo. But Charents was very interested in the whole range of Western Armenian poetry as well, with its far more formal aestheticism— from its mid-19th-century progenitor Bedros Tourian (1851-1872)¹³ to the Symbolist Misak‘ Medzarents‘ (1886-1908: both died tragically young, of consumption), and the other great lyric and patriotic poets who were murdered by the Turks in 1915, Rupen Sevag, Siamant‘o, and Daniel Varuzhan. His debt to these artists is greater than has been supposed hitherto. Siamant‘o (the *nom de plume* is that of the romantic hero of a Kurdish folk epic: the poet’s actual name was Adom Yarjanian) in 1898 published at Manchester a poem on the massacres two years before, “*Mahvan desilk*” (“Vision of Death”), and Charents was to borrow the title twice, once in a poem of 1920 and again for a much longer poem in the *Book of the Way*. In the poem “Dream of Torment” (“*Ch‘arch‘arank‘i yeraz*”) of the cycle “Torches of Last Breath and of Hope” (“*Hokevark‘i yev huysi chaher*”), Siamanto concludes, *Hamarroren yev ariapar tuk‘ tser jamp‘an vjrrets‘ek‘* (“Firmly and manfully decide upon your way”).¹⁴ Perhaps Charents was inspired in part by this line to select the title of his book itself.

Despite his avowals of utter rejection of the past, Charents was still devoted, not only to the other, martyred, Armenia to the west of the Soviet frontier, but to the long Christian Armenian tradition as well— to the bards, from the 16th-century Nahapet K‘uch‘ak to the 18th-century Sayat‘ Nova, and, particularly to the mystic poet of the tenth century, St. Grigor Narekats‘i.¹⁵ He writes fondly of these literary ancestors in his *Tagharan* (*Song Book*) of 1920, and he was committed to the publication of Western Armenian lyrics. The 1932 *Yearbook* records his shepherding of several into publication, and more were to come.¹⁶ His unpublished manuscripts, which came to light and began to be published and studied from the late 1970s on, are sometimes imbued with Christian poetic usage and religious faith: a poem in three parts the poet calls a triptych, as though it were an icon, deliberately emulates the “speech with God from the depths of the heart(s)” of the *Narek*. Yet, the *Book of the Way* expresses a contradictory view, deriding St. Gregory of Narek himself and rejecting the pre- and non-Communist Armenian heritage: he addresses the manuscript illuminators of medieval Armenian scriptoria, chiding them for wasting their talent on books that degraded the joys of life and

condemned men to servitude.¹⁷ We cannot require consistency of genius; yet Charents in his seeming simultaneous espousal of two different world views seems to exhibit a kind of paranoia which, one might suggest, is both a concomitant of apocalypticism itself and a result of living in an ideologically driven, apocalyptic society that had broken radically with its own roots and past. That is, he was driven by the tremendous power of a mass movement that presented itself as the last hope for true human freedom and equality in a world already staggering under the burdens of capitalist exploitation, colonialist oppression, and religious obscurantism, and now further threatened by the dark shadow of fascism. Yet, his formation as a person and poet embraced the pre-Revolutionary heritage, and he could no more deny this than reject his own art. So he resorts to extremes, he wavers between private and public faces, he sees his growing doubts as inadequacies, he rebels. The Erevan of Charents was still a fairly primitive Near Eastern town of only about sixty thousand souls, most of whom lived by the rhythms of an ancient traditional life deeply rooted in Christian faith. This was the heritage of Charents as well; yet at the same time he was committed to Marxism-Leninism, with its claim that it had achieved the right answers to all meaningful human questions: the world was about to be perfected, and history was about to end. Any deficiencies in Soviet society itself, never mind opposition to it, must therefore be the fault of malign conspiracies; and since these could very well snuff out the last hope of the race, any means was justified in rooting them out, in exposing and destroying the enemy. Even if the enemy proved to be oneself. Rather like the mystics he both excoriated and venerated, Charents thus saw the contest between good and evil as an inner battle as well as an outer one. *The Book of the Way* chronicles both wars.

3. THE ART.

The Book was designed and illustrated by a friend and longtime associate, Hakob Kojoyan. The artist was born in 1883 at Akhaltskhe, an Armenian enclave in Georgia.¹⁸ His father was a jeweler. The family soon moved north to Vladikavkaz, in Ossetia; and in 1898 the boy was sent to study engraving in Moscow. From there he went to Munich to study under Anton Aschbe, where the great Russian graphic artists Favorsky and

Dobuzhinsky were working. This was an exalted company: the Russian Acmeist poet Osip Mandelstam, a friend of Charents, was to praise the delicacy and mastery of Favorsky's engravings; and Dobuzhinsky was for a time the writer Vladimir Nabokov's drawing teacher. Vladimir Andreyevich Favorsky (1886-1964) wrote several essays in the 20s and early 30s on graphic composition and the relationship of illustration to text that express concerns Kojoyan would have shared: one observation would be applicable to the successive stages of narrative and movement the Armenian artist attempts in the registers of his framed pages of the *Book of the Way*: "Compositionality consists in fully realizing movement and time as synchronism, for without this capacity, by whose power a thing that is complex is perceived by us as simple, the portrayal of space is not possible."¹⁹ After graduating in 1907 from the Munich Academy of Arts, Kojoyan went to Paris, spent two years there, and returned to serve in the first World War in the Russian army. He returned to the Caucasus in 1918, joining Nicholas Marr's expedition to the vast ruins of the medieval capital of the Armenian Bagratid dynasty, Ani, then lived for two years in Tabriz. In 1922 he accepted the invitation of the Soviet government to settle in Armenia, and designed and illustrated for *Pethrat*, the publishing house chaired by Charents, a number of titles including Stepan Zoryan's *Hazaran blbul* (*Thousand-voiced Nightingale*) and the children's books of the poet Hovhannes T'umanyan. In the 30s he designed and illustrated Charents' *Book of the Way*, the *Book of the Fox* (*Aghvesagirk*'), 1935, a collection of fables by the medieval author Vardan Aygekts'i), and the Armenian edition of Maxim Gorky's work. The *Book of the Fox*, with its spare, exquisite historiated capitals, exemplifies the way the artist balances a modernist restraint and linearity of design and the richness of the heritage of Armenian medieval book illumination (see Pls. 5-6). In 1929, Kojoyan designed and illustrated a book published in Paris for the Armenian diaspora to extol the achievements of the young Soviet Armenian republic.²⁰ The angular style of the woodcuts of the cover and chapter headings and their mixture of Armenian and proletarian themes may be seen as preliminary studies for the achievement that was to be the *Book of the Way* (see Pls. 7-9). The latter is undoubtedly Kojoyan's *magnum opus* and the only one accomplished in full collaboration with its living author, an admired friend. The artist survived the poet; and his subsequent major project illustrates his capacity to employ ancient styles to new purposes.

Kojoyan had always been interested in the Epic of Sasun and was to illustrate the sumptuous jubilee edition published two years after Charents' arrest and execution. The Stalinist regime had begun a campaign against the innovative styles and art-for-art's-sake sophistication of the Soviet culture of the 20s, deriding it as a decadent "formalism" detached from the native talent and legitimate interest of the people. Folk epic, supposedly an oral and unmediated expression of popular genius, was elevated by Socialist Realism to the status of a kind of secular scripture; so in his illustrations of *Sasunts 'i Davit'* Kojoyan uses gold ink on blue paper as though producing an ancient manuscript for imperial use; and a great central illustration of David on horseback, surrounded by a frame of smaller subsidiary scenes from the epic, is a deliberate adaptation of Orthodox icon painting, with David himself the vanquisher of evil replacing Armenia's mounted warrior saints: George, Sergius, and Theodore.

Kojoyan, as has been noted, was an avid student of medieval Armenian art, so several observations are in order about key aspects of it that would on some level have informed his own ideas about the visual plan and composition of the *Book of the Way*. The Bible is the book most often copied and illuminated by medieval Armenian artists. Armenian Gospel illustrations may be divided into three sets: the canon tables at the beginning of the manuscript, the four portraits of the Evangelists that precede each Gospel, and the narrative illustrations of the life of Christ interspersed through the book. For the *Book of the Way*, the portrait of Charents and the title page facing it have co-opted the first two categories; and we shall discuss these two pages presently. Of the three types of Gospel illustrations the narrative set is the most complex for the researcher: Prof. Thomas Mathews has distinguished in Armenian Gospel illumination four systems in this category: a frieze with "dense, moment-by-moment strips of scenes across the page"; marginal placement, with vignettes alongside the text; a "festival" type of image with select scenes from Christ's life; and a "running narrative system which interrupts the columns of text to insert the illustration". He also notes that in Western art, by contrast, the illustrations tend to be more detachable from the text, while Armenian pictures tend to adhere closely to it.²¹ In his illustrations of the *Book of the Way*, Kojoyan has

employed an amalgam of the first, second, and third types— dense, narrative strips that move across the page and alternate with lines of text or employ individual words or phrases, all placed in a “festival” frame preceding the body of the poem, which begins with a framed, historiated capital letter. This method allows the artist and author the widest field of possibilities for work together on the book; and it is worth noting that some of the greatest medieval Armenian Gospel manuscripts, such as the Gladzor Gospel at the UCLA Library, were the product of close collaboration between illuminator and scribe.

There is one other salient artistic factor that plays a role in Kojoyan’s style and composition of narrative pictures though it is unrelated to the Christian heritage: the Ancient Near Eastern royal bas-relief. The narrative triumphal reliefs in stone of the Assyrian and Achaemenid kings, rediscovered in the nineteenth century by archeologists, quickly became well known to Armenians, who saw their ancestors, the recently-discovered civilization of Nairi/Urartu, as the peaceable, all-too-often defeated captives of the haughty monarchs of the great empires of the ancient Near East.²² Charents recast in early poems, for instance, the well-known narrative of Movses Khorenats‘i, the nation’s *patmahayr* (Father of History)— the Armenian Herodotus!— which pits the faithful, guileless Armenian king Ara the Beautiful against the lustful, mighty Assyrian queen Shamiram (Akkadian Šammuramat, better known in the West by the Greek form of her name, Semiramis), who invades his domains in order to kidnap him and enjoy his love. Movses, ever the euhemerist, insists that the queen’s *aralēzk*‘ (the supernatural white dogs of Armenian mythology who licked fallen heroes back to life) could not save the king, who was killed by accident in the field, so Shamiram dressed up a courtier and displayed him to the people. The story may be a source of the tenth book of the *Republic* of Plato, which describes how Er, son of Armenios, died in battle, saw the rewards and punishments of the afterlife, and was revived some days later.²³ Charents shifts the scene to contemporary Erevan and laments that Shamiram might now enjoy without strife the favors of many street-smart Aras, but the true Ara would ever elude her: this permutation may in its way be a weary comment on art in the age of mechanical reproduction! Kojoyan himself illustrated in 1945 Nairi Zaryan’s tragedy *Ara geghets‘ik* (*Ara the*

Beautiful): one scene shows the imperious Assyrian monarch in her throne room, whose wall is a series of horizontal registers of battle scenes with horse-drawn chariots rolling over the prostrate bodies of defeated enemies (see Pl. 10).²⁴ Though the illustration came over a decade after the *Book of the Way*, this is precisely the formal composition of a number of the illustrations of the Charents volume. It subverts or co-opts the genre, of course, by reversing the roles: it is the masses, and their heroes, who defeat and drive out the tyrants. The Soviet Armenian artist Suren Step'anyan, a contemporary of Charents and Kojoyan, executed sculptural bas-reliefs of lines of collective farmers busy at their harmonious work, thereby employing the Ancient Near Eastern genre, with its numerous regimented figures, in the service of the new Soviet creed of collectivism (see Pl. 11).²⁵ So there seems no reasonable doubt about the inspiration of the style that artist and poet agreed upon: it was part of their *Zeitgeist* and iconographic vocabulary.²⁶

We may consider now the illustrated pages of the *Book of the Way* in order, starting from the beginning of the book, where a portrait of the poet faces the title page (Pls. 12, 13). The text on the portrait page, top, reads: *Yeghishe Charents' Anno MCMXXXIII*— the Latin (which is Charents', not Kojoyan's usage) establishing the lapidary monumentality of the scene, and also setting the scene for a tension presently to be explored between Armenia and Rome. Below is the text of Charents' epigrammatic "Answer to Goethe": "O Olympian, in this world when/ There are neither lords nor vassals of the Spirit,/ Again she will reap the abundant harvest,/ And again, again on our ways/ Forward the Goddess of Song will lead us." The heroic portrait and the use of the word "Olympian" raise the poet to that status, but as a bard of the masses, not of an elite. On the facing, title page, Kojoyan repeats the phrase in lines selected elsewhere in the book from the work of the poet in red that divide the two pictorial friezes on the title page: "A new Yerevan rises/ Where there are neither lords nor vassals." Thereby he underscores the theme of a new Olympian while linking the two pages thematically. The upper frieze shows masons and a rising sun, with a line of lutanists walking left towards them; the lower one, ranks of soldiers and marchers with drums walking right, against a background of factories. The direction of movement creates a boustrophedon effect, as though one were reading an ancient text, the eye moving down one row of characters and

then dropping down to the next line and proceeding in the opposite direction, much as an ox plows a field; but it also draws one over and down to the title itself.

The next large illustration opens the retelling of the folk epic of David of Sasun (Pl. 14). There are two pictorial registers: in the upper one, the turbaned busts of men identified as the characters Lion Mher and Loud-Voiced Ohan frame David charging left on his magic steed K'urrkik Jelali (Fierce Little Colt), Lightning Sword in hand. Kojoyan had created this image a decade before, and it had already become the icon of the text and tradition: it remained only for the sculptor Yervand K'och'ar to cast it in metal (Pl. 15), and it is now one of the symbols of modern Armenian statehood, reflecting the traditions of monumental equestrian sculpture from Marcus Aurelius Antoninus to Falconet's Peter the Great, the Bronze Horseman of St. Petersburg, of Pushkin and Gogol. *Davit' hur-dzin k'shets'* ("David spurred his fiery horse") runs the text. The lower register, with the verse *O, anmah Mher, rramik du ayr* ("O immortal Mher, you man of the masses"), shows the risen apocalyptic hero of the epic's final chapter, Little Mher. Surrounded and diademmed by the adoring commoners for whose salvation he has emerged from millennial imprisonment in his cave at Van, he rides slowly to the right astride K'urrkik Jelali, Lightning Sword (Arm. *ketsaki t'ur*) raised, driving away a line of priests and nobles in their cowls and tiaras who retreat before him, heads bowed in shame. The action of this scene has been slowed: David rode to war with force and speed, but the storms of history's road are past, and now, at the end of time, Little Mher brings rest and peace.²⁷ The historiated capital at the incipit of the text recalls the close reader's attention to these contrastive movements and attitudes of the horse: beneath the capital letter *D*, K'urrkik Jelali is shown in a third attitude, kneeling and sad within a dark chamber. This scene alludes to David's early youth: his cowardly uncles, afraid that the scion of Sasun might see the steed, remember the seed from which he had sprung, and rise in rebellion against Armenia's alien oppressors, the Arab Caliphs, had imprisoned the horse in a dark, sealed room. Thus the vision of the free future is framed between two of the past—of war and captivity. Charents, before his dismissal from the post of editor-in-chief at Pethrat, had chaired the committee preparing a splendid jubilee volume of the Epic; but Kojoyan survived to illustrate it.²⁸ As for Mher, Avetik' Isahakyan, the poet whom

Charents called, reverentially, *varpet* (“master”), also made the ancient figure of apocalypse harbinger of the new Soviet end-times.²⁹

The next composition, “At the Crossroads of History” (*Patmut ‘yan k’arrughinerov*”), has three pictorial registers divided by lines of text (Pl. 17). The top is divided into two contrasting vignettes: on the left, a lean Armenian wolf, mouth opened slightly and head turned away, slouches warily past mount Ararat at night; while on the right, a haughty vixen labeled ROMA in Latin uncials, frozen in sculpture on a plinth, growls directly at the viewer and gives suck to Romulus and Remus, the twin founders of the imperial city. *O, ch ‘i yeghel mer gayln pghndzya* (“O, our wolf was not one of bronze”) declares the caption. The next register enlarges the contrast of this class war: noble cavaliers, capes flying, gallop left to right towards a castle on a mountain, overlooking crude peasant huts crouched in a valley. *Aparank ‘ə... isk nerk ‘evum—khugher* (“The palace... and hovels down below”) explains the caption. The third and lowest register brings us from the mythology of antiquity and the legendry of the medieval period into the class conflict of the modern world: on the eve of Revolution, aristocrats and bosses are shown as the slave drivers of the cowed, exhausted masses; but the caption, drawing together the lessons of all three epochs, ominously promises, *Piti zharrangenk ‘ mer dareri korustə* (“We shall inherit our centuries’ loss”). In the Communist end times, that is, the oppressed and despoiled are to receive full recompense, much as though they had risen from the dead to the Last Judgment. Medieval Armenian iconography affords numerous depictions of the torments of the rich in hell: here, the balance will be righted on earth.

The next large composition introduces the long poem “Towards the Mountain of Ararat” (*Depi lyarrn Masis*”). But here instead of a continuous narrative graphic sequence, the illustration is broken up into a series of chronological vignettes (Pl. 18). “To Ak’sel Bakunts’, my brilliant friend,” reads the dedication just below the title;³⁰ and there follow three registers: the Romantic poet laboring by the light of his lamp’s midnight oil (“He had not slept that night,” the caption helpfully explains); the standard portrait of the writer Khach’atur Abovyan with his name in clear uncials; then a cameo

portrait of Abovyan's German sweetheart, a spray of flowers and oak leaves with the anchor of true love, and the opened book *Verk' Hayastani*, Abovyan's *Wounds of Armenia*.³¹ It is only in the third register that Kojoyan reintroduces the continuous narrative panel, showing Abovyan on the day of his disappearance, striding at dawn towards Mount Ararat, the rising sun at his back and the houses and ruins of old K'anak'er, his home village near Erevan, behind him. The somewhat precious, narrowly framed pictures of the first two registers express, perhaps, the sentimentality and confining morality of the European Romantic era; while the third register expands to a monumental, heroic view of liberating movement into a mysterious, brilliant world to come. In it, the old village is left in the night and the past, the sun of a new era is dawning, and the man who created modern Armenian prose is walking into the future whose foundations he has laid—one in which, as in the poem "The Curly-haired Boy", the main road of Armenia in the Communist paradise to come leads to Ararat. But Ararat is also, as I have noted, for Charents the road to an unattainable glory; and the scene is of course that of Abovyan about to disappear. Death is thus merged, apocalyptically, with the promise of a glorious future rebirth. The historiated capital letter *N* shows a writer surrounded by the pages of a manuscript, a carafe of wine conveniently close. Abovyan in the poem is a monumental and tragic figure, a great lover and literary genius, larger than life—Charents' precursor. The frontal portrait of Abovyan indeed recalls that of Charents facing the title page of the *Book of the Way*. Charents uses the marked Classical Armenian *lyarrn* (*learn*) rather than modern *lerr* for "mountain" in the poem, to endow the titan peak, unapproachable and wreathed in myth, with a corresponding linguistic marking. It may also underscore the continuity between the Classical tradition and the new literature begun by Abovyan and brought to fruition by Charents.

The three-quarter-page illustration for "Vision of Death" ("*Mahvan desilk*") consists of five pictographic registers of outlined, rather than shaded, figures that seem rather like lines of hieroglyphic text (Pl. 19). This is doubly effective since they illustrate ghosts of the dead; and the impression of hieroglyphs must be intentional since the jackal-headed god of the Egyptian pantheon, Anubis, is shown seated upon a throne in the midst of the fires of hell in the bottom register. The page, which illustrates the events

of the poem in sequence, thus gives the impression of an unrolled segment of a papyrus of the Egyptian *Book of the Dead*. The historiated capital letter *K* directly below shows Charents in the foreground in a Central Asian cap (Rus. тюбетейка), with Dante just above and behind him. The figures move right to left, as though marching backwards into the past, while the poet and his guide face left to right, emerging at last into the light—not the dawn of Easter Sunday, as in the *Divine Comedy*, but the brilliance of Lenin. The epigraph is a line from “*Mahvan desilk*” (the source of Charents’ title) in the cycle “*Torches of Death Throes and of Hope*” (“*Hokevark ‘i yev huysi chaher*”) by the Western Armenian poet-martyr of 1915, Siamant’o: “*Godoradz! Godoradz! Godoradz!*” (“Murder, murder, murder!”) The words appear only in the illustration, not in the text, though in general it is Kojoyan’s practice to select a few lines from the poem for an illustration and they are repeated in the body of the text as well. And these three howls of pain are the only words in the illustration at all. These departures from the usual pattern may elevate the clamorous emotion of the epigraph to the status of an icon in its own right; and Siamanto’s poem, which I translate here in its entirety,³² is Dantesque in its visionary horror, intensely ekphrastic, that is, a description of a thing pictured rather than merely the verbal expression of a more abstract thought or feeling. The word picture here becomes more than a caption to Kojoyan’s linear illumination—it is almost a soundtrack:

Murder! Murder! Murder!
 In the cities and outside the cities
 And the barbarians turn in blood
 From the dead and from the dying
 And throngs of crows fly past above
 With bloodied beaks and drunken cawing.
 A sirocco strangles the half-dead in a fury,
 And voiceless caravans of aged women
 Flee in haste along the wide, wide ways.
 From the midst of night a wave of blood is rising,
 Tracing fountainheads against the canopy of trees,
 And on every side shrill the driven
 Quarry from the conflagrated fields.
 In the streets the slaughtered generations I behold
 And mobs turning from the unhistoried killings.
 A tropical heat is massing
 From the noble cities given all to flames,
 While under snow that falls with the weight of white marble

Lonely shiver the ruins and the dead.
 O listen, listen to the horrid wagons' creak,
 Beneath their heaps of corpses,
 To the tearful prayers of men in mourning
 In long lines stretching down the way to mass graves,
 Beneath the winds that smite and crush the trees.
 O do not come closer, closer, closer!
 Do not come nigh to the cemeteries, to the sea
 Of red waters on which I spy a distant ship
 And mountains of the dead therein,
 And on the pain-blown rolling breakers
 Wash whitened skulls and bones.
 Listen, listen, listen!
 To the summons of the storm upon the swelling sea:
 Murder, murder, murder!
 Listen, listen, listen!
 To the death-knell, to the howling dogs in terror
 That reaches me from the valleys and the graves:
 O shut your windows! Shut your eyes as well!
 Murder! Murder! Murder!

The illustration to the poem "*Zrahapat Vardan Zoravar*" ("The Armored Train 'Vardan the Commander'") follows the pattern, by now familiar to the reader, of horizontal strips of linear narrative divided by text (Pl. 20). As noted earlier, the poem comes to its climax in a terse, lightning-fast telegram, and the concluding line, "*darrnum e iskakan zrahapat*" ("is becoming a real armored train") forms the base caption while the telegram is the theme of the historiated capital directly below. By contrast Charents dismisses the ideology and struggle of the bourgeois Dashnaks as a mere "*t'ghit'e saghavarit*" (a "paper helmet") they have clapped onto their heads— and this line provides the caption of the second line. But Kojoyan has chosen to illustrate it, at the exact center of the composition, not a modern soldier's helmet but the Roman-looking plumed one that for the last few centuries has been standard in portrayals of St. Vardan Mamikonian, hero of the Battle of Avarayr against the Sasanian Persians in A.D. 451. A good example is a much-reproduced, naïve Armenian-American painting of St. Vardan overturning an Iranian fire-altar (the original hangs in a stairwell at the Kavookjian auditorium at St. Vartan Cathedral, New York City) (Pl. 21). The style of the helmet in recent art reflects the conviction of the Armenian faithful that this was not merely a war of Christianity against Zoroastrianism but one of the civilized West against Oriental

despotism and barbarism. The image lost nothing of its potency: a decade after the first publication of the *Book of the Way*, during the dark days of World War II, the left-liberal magazine *Baïkar* depicted the spirit of Vardan, plumed helmet and all, leading Soviet Armenian soldiers into battle against the Nazis (Pl. 22).³³ In medieval Armenian depictions of the battle, the Persians advance on monstrous, exotic elephants, much as the fifth-century eyewitness Eghishe *vardapet* (after whom Charents was named) described the war in his hagiographical history of it.³⁴ The Armenians are proper, heroic horsemen; so the choice of mounts marks the cultural differences and values. Grigor Khanjyan's famous tapestry *Vardanank'*, 1985 (Pl. 25), does not show the central figure, St. Vardan, in a plumed helmet, but it intensifies the ideological symbolism of the battle scene in other ways: the mostly bareheaded Armenian martyrs of all ages, Charents among them, dressed in light-colored garments, are a kind of celestial army transcending time. They are hemmed in by their enemies to right and left, who move in and down from above. So the Armenians, when one views the picture from a distance, are a Greater Ararat, a triangular mountain of light, while some of the helmets of the anonymous dark horde of armored Iranians besieging them are identifiably those of the Nazis. Headgear in the iconography of the War of Vardan is meaningful indeed; so Kojoyan's centering of Vardan's iconic plumed helmet then is an intentional and shocking inversion of the great and overdetermined icon of Armenian armed resistance to tyranny. The illustration bears a message to which few Armenians would lend credence and most would find repellent. Revolution is the only authentic war of national liberation: St. Vardan's war was as thin and insubstantial as the paper helmet of a child playing with a cardboard sword. Charents returns to the theme of false leaders in the intricate play "Achilles or Pierrot, an Interlude" later on in the *Book of the Way*. In short, the Vardan revered by the hagiographer whose name the poet bears, is not a hero, but a clown—not an Achilles, but a Pierrot.

Kojoyan's illustration of "The Masons of the Future" ("*Galik'i vormnadirnerē*") is a straightforward depiction of the proletariat, dedicated to the Stakhanovite *harvatsayinner* (a calque on Russian ударники)—the "shock-workers" of the Five-Year Plan. Like that of the next poem, "Sowers of the Communal Plains" ("*Hamaynakan*")

dashteri sermnats 'anner”), it is somewhat anticlimactic: both pictures simply show people at work, without irony, shock, conflict, or intricacy of symbolism (Pls. 26, 27). But “Paean to the Grape, Wine, and Belles Lettres” (“*Govk' khaghoghi, gimu, yev geghets 'ik dprut 'yan*”), despite the elegantly lighthearted title, returns to the theme of class struggle, contrasting feudal oppression with human equality in Communism. And it is a fairly simple reworking of the full title page Kojoyan made for the same poem in the *Yearbook* a year earlier (Pls. 28, 29). This suggests that the project involving the collaboration of artist and poet might already have been well underway.

The illustration of “Nork”, a poem about a district of Erevan where a slender yet unbroken poplar tree buffeted by storm winds stands in for the Symbolist poet Vahan Teryan, has four creative men in the bottom panel parallel the four storm winds raging above; and a curving caption serves as the hill over which the pencil-thin poplar rises (Pl. 30). Teryan, who wondered once whether he was the last poet of Nairi, was the model—the idol—of the young, romantic Charents. The revolutionary pushed him away, scorning his reveries; but the older, introspective poet, integrating at last the various strains of the Armenian past into the inner chords of an increasingly private symphony, returned to Teryan’s verses. “Nork” reflects that inner struggle, perhaps. One is tempted to associate the plowman’s ancient chant, “*Horovel, horovel, ho!*” of the upper register of “Sowers of the Communal Plains”, with Teryan and with a poem Charents wrote in a troubled and reflective mood after the debacle of the *Book of the Way*, in May 1934:³⁵

THE LANGUAGE OF EMOTION

The wind is chanting its plowman’s song, *Horovel, horovel, ho!*
 The rain enunciates the words of cold.
 My emotion-laden tongue,
 Why are you so silent now?

Whatever it is you wish to say,
 See! With greater power than you can command,
 Outdoors by the blossoming flower is said,
 And by the crystal of the water.

And in a young girl’s eyes
 When at a violet raptly she gazes,

What is there left at all
In a poem by Teryan that amazes?

The water runs over the brim in its passion;
The fire is a grief stained crimson.
Poet, to you will be given never
This language of emotion.³⁶

If the plowman of Kojoyan's illustration is representative of the past, then Charents a year after the *Book of the Way* longs in a way for the archaic sounds and rhythms of that past. If the plowman is a collective farmer of the present or future, there is still anxiety, for the poet cannot echo him, and stands at the remove of the formalist, the esthete, from unmediated reality. He is, to borrow from the vocabulary of Christian *Heilsgeschichte*—the history of cosmic wellbeing, healing, wholeness— unjustified, lacking salvation.

With the play "Achilles or Pierrot" on page 173 of the *Book of the Way* (Pl. 31), a straightforward depiction of the action in the theater, the cycle of illustrations concludes, though the book itself is 317 pages long. The cycle began with the answer of Charents to Goethe; and a number of Goethe's poems are translated (with Charents' full retort) in the long, unilluminated, latter half. Goethe has two prologues to Faust, one in Heaven that is an answer to Job; and one in the theater that is a reflection on Kalidasa. The strategy is a *majmu' al-bahrain*, a confluence of the seas of East and West, that the great poet ever sought to realize. Charents was even more a poet of both oceans; so perhaps "Achilles or Pierrot" brings the cycle round as a ring to its closing, the rest of the book pure text, Charents and the other poets in the spectral dialogue of *les artistes chez eux*.³⁷

If one takes as a template for our literary journey the life of Christ that the medieval illuminators labored to illustrate, then the scenes of greatest power and pathos are those of His life as a man amongst us, culminating in the Passion and Crucifixion: though there are of course paintings of the Ascension, the Dormition of the Virgin, the Cross of the Parousia, and other scenes following the Resurrection, these are, like the rites of the Divine Liturgy itself after Communion, something of an anticlimax, events no longer of a human career but of a divine world at some remove from the reader, the

celebrant, the communicant. The victory of Communist Revolution parallels this quandary: history is over, life is good, and there is nothing more to say, in a frictionless and redeemed cosmos. "Friction is fun," a student named David Soloff scribbled in his notebook in a class at Columbia many years ago, when we were addressing a problem of this kind in religious apocalyptic thought. The frictionless world is also entropic, and an artist, at least one whose major field of interest is the human world we actually know, cannot do very much with it. His labors are ended.

The foregoing, then, is a contribution to the study of Soviet ideology as expressed in the exquisite graphic art of the fully designed book, in the period of the last flush of creative freedom, before the imposition of Socialist Realism and the destruction of much of the Soviet intelligentsia. There are many other such studies; but none, to my knowledge, has considered hitherto with depth and nuance the particular case of Armenia, a Soviet republic with roots in the art and civilization of the Ancient Near East, pre-Islamic Iran, early Christianity, and the medieval Middle East, as well as a long and rich heritage of interaction with Europe and Russia. In this respect, the essay is a first step; and one can but hope others will continue the work adumbrated here. Charents, it is seen, is a Protean intelligence and cannot be fit into any Procrustean bed the critics prepare. The *Book of the Way* is his revelation and passion and *ars poetica*, his combative and provocative synopsis of the Armenian past and its apocalyptic present instant. But the Way is for movement and for the unknown. Where yet might the traveler have gone?

POSTSCRIPT.

It is in the nature of apocalypse that, one proclaimed, it must be postponed. Stalin retreated from the grand plan of world revolution into the project of building of Socialism in one country. After World War II the Socialist camp, by conquest more than by revolution, expanded vastly. The Soviet Union was no longer an embattled experiment, but a superpower. And, one was now told in the stagnant Brezhnev era, the USSR had achieved a developed form of Socialism and Communism was just on the horizon; as the system continued to decay, a joke was based on this latest dogmatic postponement: "The

horizon is defined as an imaginary line that recedes as you approach it.” Christianity has offered humankind enough to endure without rapture or *parousia*, perhaps even without the initial Resurrection itself: Dostoyevsky famously asserted that he would follow Christ, even if Christ be proven wrong. There is not very much about the Soviet system that has not been proven wrong, and perhaps Goya’s painting of Saturn devouring his own children expresses its legacy to the arts and letters.

But the Marxist gospel captured the imaginations, and commanded the loyalty, of good men who lived and created honestly, who even in adversity and disillusionment saw their cause as corrupted, but not wrong in its essence. Perhaps fighting the good fight, in hope and dedication, though one is lied to and betrayed, though no clear day ensues, is sufficient to sustain a man’s belief that he has made his life meaningful. And we must remember the world in which Charents lived, the character of the adversary. So here is an incident from the career of another artist, far across the ocean from Kojoyan and Charents but no less their comrade and contemporary.

In 1920, two poor Italian-American immigrant factory workers—Bartolomeo Vanzetti and Nicola Sacco—were arrested for the murder of a paymaster and his guard in South Braintree, Massachusetts. They were anarchists, regarded with loathing in the Red Scare that swept a terrified America; and a year later they were convicted of murder in the first degree and sentenced to death. There was no evidence they had been at the scene of the crime, no evidence either that the stolen payroll could be traced to them. The conviction was appealed and the case dragged on through the Roaring Twenties, but in 1927 a commission chaired by President Lowell of Harvard upheld it, and they were executed that August. Lowell was also the initiator of the *numerus clausus*, the policy that barred Jewish students from top American universities. Lowell’s was the Harvard of the notorious “secret court” that ferreted out and condemned gay students and went to extraordinary lengths to ruin their lives, long after their expulsion. The American Jewish artist Ben Shahn regarded the judicial murder of the two immigrants as “another Crucifixion”, a pivotal historical event he had never dreamed of witnessing.³⁸ His paintings of the affair, particularly “The Passion of Sacco and Vanzetti” (Museum of

Modern Art, New York), which shows Lowell in academic robes with his accomplices gloating over the open coffins of the men, so enraged the establishment that in the depths of the Great Depression one wealthy donor offered a fortune for the painting just so that he might burn it. (It was not sold.) Lowell inaugurated the “house” system at Harvard—his stated aim was to bring students of diverse backgrounds and interests together in a friendly and democratic environment— and the university dedicated one to Lowell. It is a pleasant building with sonorous Russian bells in its tower. It still bears his name; but the Harvard of today, where Lowell’s Master is a gay woman and one of the greatest living scholars on Hinduism and religious diversity, is a very different place from the bastion of privilege it was in Lowell’s day. But that is the point: to understand Charents and the passions of his time one must project one’s mind and imagination away from these times, to his own. The Union of Soviet Socialist Republics named a *battleship* after Sacco and Vanzetti.

My father, Joseph B. Russell, was born in Brooklyn, New York on the tenth of the month Sacco and Vanzetti passed into immortality. He grew up with friends who left these shores to fight Hitler and Mussolini in Spain with Russian rifles, since the Western powers blockaded the Spanish Republic. (An ambulance of the International Brigades, one is happy to report, bore on its side the prominent notice that it had been donated by students and faculty of Harvard University!) Other friends, including a Yale boy named John Armstrong who later married Dad’s cousin Willa and became a sedate New York literary editor, stormed the German passenger ship, the Bremen, in New York harbor in 1935 and ripped down its swastika flag. Dad served in the US Navy and in my childhood worked as a legal volunteer for the Rev. Martin Luther King. Such was the good fight on this side of the Atlantic.

Charents was a poet of many parts, of warring contradictions and contending thoughts, of changing passions; and his love of the Russian Revolution and his hope in its aims and ideals, even his faith in its apocalyptic claim that it was to inaugurate the social and economic equality, freedom from superstition, and universal human solidarity that alone can save the human race and even the planet, remains a part of him that some new

ideological trend cannot erase. And I disdain to conceal that I share some of that grand hope still, which, when one looks at what the world has become in the last two decades since the Red flag ceased to fly, may not be that bad a thing at all.

Endnotes

¹ A note on transliteration: Except in cases requiring historical or bibliographical precision, where one employs the Hübschmann-Meillet system of transcription of Armenian (e.g., Č'arenc'), the simplified orthography of Modern Eastern Armenian—the language of Ch'arents', henceforth simply Charents—is used for both the Eastern and Western dialects, without unnecessary diacritical marks; but whenever the latter is cited one adheres to its phonetics. So Rupen *Sevag* is the Western Armenian poet, while the Eastern Armenian poet who adopted his surname is Paruyr *Sevak*.

² One notes that Charents was a close reader of Blok; and in 1937, when the former had been ostracized entirely from professional and social life and awaited arrest, he translated Blok's poem "A voice from the chorus" (Rus. "Голос из хора") into Armenian. Three drafts in manuscript survived and were published by the daughter of the poet. Here is a roughly literal translation of the first:

How often we now bewail
Our black and joyless fortune!
If only, men, you knew
The cold and darkness of the future.

Now you squeeze the beloved woman's hand
And play with her— at peace.
And you cry, seeing poison
Or the beloved hand gripping a dagger,
Little child, O, child!

You'll find no end to lies and deceit.
And death is still far away.
The world will become darker
And the earth will enter a blacker way
For age after age!

And the last age, the foulest,
Even we will see.
Heaven will release frightful sin,
Foul smiles on every lip will rest
So passionless!

My little child, you'll dream of spring:
Spring will not bloom.
You'll desire the luminous Sun in the sky:
The Sun will not dawn.
And your cry, when you want to scream
Will, like a stone, go unheard.

Be satisfied, then, with your fortune old:
Meeker than water, humbler than grass.

If only, men, you knew
The cold and dark of the future!

1937, 5-6-June, Erevan

In the Russian, the line Все будет чернее страшный свет is best translated, “All blacker will be the awful light”, where the author plays on the pregnant ambiguity of the two meanings of Rus. *svet*: “light” and “world”, while opting for the startling image of light that radiates darkness. Charents in the drafts renders the line *Piti sevana inch'k'an gna*, “The farther it goes, the blacker will it get”, but opts for *ashkharh*, “world” in his final version. To make a rhyme parallel to Blok’s *lozh'-noz* (“the lie-the knife”) the Armenian poet has *t'uy'n-dashuyn* (“poison-dagger”). See Arm. text in Anahit Č'arenc', ed., *Eliše Č'arenc' Antip ev č'havak'vac erker (Yeghishe Charents: Unpublished and Uncollected Works)*, Erevan: Academy of Sciences of the Armenian SSR, 1983, pp. 432, 676-677.

³ See M. Rowell and D. Wye, eds., *The Russian Avant-Garde Book, 1910-1934*, New York: Museum of Modern Art, 2002. Kojoyan often divides the illustrated page into three registers interspersed with significant lines of text; and one might compare the strategy of the woodcuts by Moshe Broderzon for the Passover song “*Had gadya*” (“One kid”, p. 140). In the final scene, God’s all-seeing Eye is set above in a futuristic skyscape of linear cloud and fire; the avenging sword hangs in mid-air; and below the skeleton of the vanquished Angel of Death lies prostrate. Father, who in the song has bought the one kid, looks to the left, and the goat that had been sacrificed leaps up, revived. The artist privileges the modern vernacular over the venerable classical: the original Jewish Aramaic text (*Ve-ata ha-qadosh barukh hu*, “And the Holy One, Blessed be He, came...”) is inscribed at the bottom; but the Yiddish version, the everyday language of many Soviet Russian Jews, dominates the scene in an arch over the top.

⁴ The *opus classicus* is Igor Golomstock, *Totalitarian Art*, New York: Icon Editions, 1990. The author ran into trouble with the Soviet authorities when he showed a slide of a Nazi painting to his students and they thought at first glance it was a Socialist Realist one!

⁵ Hrant T'amrazyan, *Eliše Č'arenc'*, Erevan: Arevik, 1987, p. 127.

⁶ The word is an old loan from Iranian that is found in Aramaic as well as *pethgāmā*; and in modern Persian and Turkish usage *payghāmbar*, “bearer of the message”, can render no less than Arabic *rasūl*, “messenger”, with reference to Mohammed, bearer of the *Risāla*, the Message—the *Qur'ān* itself. The Armenian word carries, then, an implicit weight and power.

⁷ Some authorities assert that Charents was taken in his pyjamas to a killing field on the far side of the river Hrazdan from Erevan and shot, his body then dumped in an unmarked grave. According to another version, he was denied the morphine to which he had become addicted: he banged his head on the walls of his cell in withdrawal and died.

⁸ On the chronology and events of this period see Anahit Charents, “Yeghishe Charents’s Final Years: His Life and Work from 1934 to 1937,” in Marc Nichanian, ed., *Yeghishe Charents: Poet of the Revolution*, Costa Mesa, CA: Mazda, 2003, pp. 68-105. Charents himself wrote a long letter from Erevan to Marietta Shaginian (a well established Soviet writer of Armenian nationality living in Moscow who wrote in Russian) on 1 December 1933. It includes this passage, which I translate from the original Russian. “Я имел несчастье написать новую книгу стихов и поэм, страниц 300, под общим заглавием *Книга Пути*,— о прошлом, настоящем и будущем

нашего народа, с основной идеей, что ни один господствующий класс в прошлом не давал положительной исторической идеи нашему народу и только пролетариат после Октября. Революции дал нам эту идею. Это, так сказать, основная концепция книги, в которой, кроме стихов, посв. прошлому, есть такие стихи, посвященные ударникам, колхозникам, тов. Сталину и т.д.” “I have had the misfortune to write a new book of verses and long poems of about 300 pages, under the general title the *Book of the Way*, about the past, present, and future of our people, with the fundamental idea that not one ruling class in the past gave our people a positive historical idea, and only the proletariat after the October Revolution gave us this idea. This is, so to speak, the fundamental concept of the book, in which, aside from verses dedicated to the past there are poems dedicated to shock workers, Comrade Stalin, and so on.” In the same letter, Charents compares his predicament to the Beilis trial. (In the twilight years of Tsarist rule a Jew from Kiev named Mendel Beilis was falsely accused of murdering a Christian boy to use his blood for the baking of Passover matzo. This resurrection of the medieval blood libel outraged the civilized world and scandalized the Russian intelligentsia. In the preface to his long poem, “Возмездие” (“Retribution”), the Symbolist poet Alexander Blok mentioned the trial without asserting Beilis’ obvious innocence— so strong was the revulsion of Russian liberals towards such genteel anti-Semitism that the writer Vladimir Nabokov, who was strongly committed to a Western liberal democratic ethos, never forgave Blok.) For the full text of the letter, see Davit’ Gasparyan, ed., *Ēliše Ć’arenc’, Norahayt ējer (Yeghishe Charents: Newly-Discovered Pages)*, Erevan: Erevan University Press, 1996, pp. 263-267.

⁹ He reproduces his parody, written in the 20s, in the article published in *Akōs*, Vol. 6, 1945, “*Ēliše Ć’arenc’ u es*” (“Yeghishe Charents and I”), repr. in Nikol Aḡbalean, *Grakan-k’nnadatakan erker (Works of Literary Criticism)*, Beirut: Hamazgayin, 1959, pp. 329-348. Charents often used the word “crotch”, which offended the elder writer. Nowadays the homoerotic verses of the poet’s unpublished manuscripts, or, more precisely, this writer’s audacity in following Charents’ dying admonition that the finder of these writings publish them (for nobody any longer would dare to criticize the divinized Charents), has enraged the new puritans. They can be read in J.R. Russell, “From an Archive of Unpublished Poems of Yeghishe Ch’arents’,” *Armenian and Iranian Studies*, Armenian Heritage Press and Harvard Armenian Texts and Studies 9, Cambridge, MA, 2004. See also the Armenian translations of this writer’s principal studies of the poet, including the latter articles: “*Ēliše Ć’arenc’ i antip banastelcut yunneri arxivic*” (“From Yeghishe Charents’ Unpublished Poetry Archives”) and “*Ć’arenc’ ē: margare*” (“Charents: the Prophet”) in *Ink’nagir grakan handes (Autograph Literary Journal)* 5, Erevan, 2008, printed 2009, pp. 5-41. *Plus ça change...*

¹⁰ In the mid-30s, in Moscow, Charents told the young William Saroyan to “say yes and then spit in their eye”. Years later Saroyan mused in a memoir consisting of letters to the dead, “Why didn’t you say yes? I’ll tell you why, Charentz. Because you are more than an Armenian, more even than only another member of the human race. You are a poet, so shocked by the treachery of all men seeking to save their skins at any cost that only with the help of cocaine could you stay among them and pretend to be one of them. God love them, as every poet is obliged to say, not with contempt but with charity. They all did, they are all doing, only what you advised me to do, which I have never done, which you never did.” William Saroyan, *Letters from 74 rue Taitbout or Don’t Go But If You Must Say Hello To Everybody*, New York: World Publishing Company, 1969, p. 122.

¹¹ Curiously, some of Charents’ verses were published long before his rehabilitation— at Erevan, in a sumptuous anthology of Armenian verse in 1946 intended to attract repatriants to the country enfeebled by war. One poem is a slavish, feverish ode to Stalin that Charents had written in his

last year, in a desperate and pathetic effort to save himself: it is incomprehensible that the grotesqueness of its circumstances, its selection, its inclusion, everything about it, evaded the editors. Yet, equally one cannot conceive of their intending an irony or coded message, even in the very narrow postwar window of relative artistic freedom that preceded the Leningrad affair, the pillorying of Akhmatova, Shostakovich, and Zoshchenko, and the subsequent horror of the campaign against “rootless cosmopolites” and the manufactured Doctors’ plot.

¹² The poet’s autobiographical novel *Erkir Nairi* (*Land of Nairi*) evokes the town of his boyhood.

¹³ See James R. Russell, *Bosphorus Nights: The Complete Lyric Poems of Bedros Tourian*, Armenian Heritage Press and Harvard Armenian Texts and Studies 10, Cambridge, MA, 2006.

¹⁴ Atom Earčanean Siamant’o, *Amboljakan gorcə* (“Complete Works”), Boston: Hayrenik’, 1910, p. 54.

¹⁵ Charents owned and frequently read a Classical Armenian copy of the cycle of 95 mystical and penitential poems of Narekats’i, the *Matean olbergut’ean* (*Book of Lamentation*, often called simply the *Narek*). He also read and annotated a study of the *Narek* (see James R. Russell, “Bedros Tourian’s Cruciform Poem and Its Antecedents,” *Journal of Armenian Studies* Vol. VI, No. 2, Belmont, MA, Winter-Spring 2000-2001, pp. 27-45).

¹⁶ One such volume suffered a fate similar to that of the *Book of the Way*: the introduction by Step’an Alazan and Vagharshak Norents’ to the first Pethrat edition of the poems of Medzarents’ was excised from the second edition when both men were purged; and in the Table of Contents (located at the back, as in all Soviet books) their names are simply blacked out. The year after Nikita Khrushchev’s de-Stalinization speech to the 20th Party Congress in 1956 a third edition of Medzarents’ appeared at Erevan, this time with the Introduction and its authors restored—but at only a third of the original length, their “infantile leftist” sentiments excised (see discussion in James R. Russell, “Calm before the Storm: The Armenian Poet Misak Medzarents on the Threshold of the Genocide,” Boston University, 13 Oct. 2010, special publication of the Boston University Armenian Program).

¹⁷ In 1935, the Soviet Armenian writer Derenik Demirjian published his novella *Girk’ tsaghkants’*, “Book of Flowers”, a parable about a medieval Armenian illuminated manuscript that survives the vicissitudes of history. The manuscript is not a Gospel; it contains a pantheistic poem inspired by the vision of the medieval lyricist Kostandin of Erzuka (modern Erzincan). But, like his contemporary Mikhail Bulgakov, who has Woland (Mephistopheles) in *The Master and Margarita* retrieve a novel about Pontius Pilate condemned by the Soviet critics and declare that manuscripts do not burn, it would seem the Armenian writer was arguing against censorship and for the preservation of the treasures of the past. He was doubtless aware of the bitter irony that Charents’ great book, at first condemned for its very derision of the past, had been banned two years before. See J.R. Russell, *The Book of Flowers*, by Derenik Demirjian: English trans., intro., and commentary, Belmont, MA: Armenian Heritage Press, 2003.

¹⁸ See K. Zurabov, intro., *Hakob Kojoyan*, Erevan: Sovetakan groġ, 1983.

¹⁹ “Композиционность... заключается в том, чтобы осознать движение и время как единовременность, а без этой способности, в силу которой нечто сложное воспринимается нами как простое, невозможно изображение пространства,” cited by N. Rozanova, ed., *Favorskii*, Leningrad: Aurora, 1970, p. 17.

²⁰ Yovhannēs Yakobean, *Xorhrdayin Hayastan (Tpaworut 'iwnner ew Usumnasirut 'iwnner) [Soviet Armenia (Impressions and Studies)]*, Paris: Gegharvestakan Hay Tparan, 1929.

²² As Mehmet-Ali Ataç convincingly argues in his monograph *The Mythology of Kingship in Neo-Assyrian Art*, Cambridge: Cambridge University Press, 2010, many reliefs strove to portray the beauty and harmony of the paired, muscled legs of beasts and men, the re-enactment of mythological scenes, the rehearsal of learned symbols. However to many viewers, then as now, the scenes of battle, victory, subjugation, and punishment of enemies will have left the more enduring impression, that of overwhelming might and unmitigated cruelty. It is mainly this aspect Kojoyan employs or subverts. See Leo Bersani and Ulysse Dutoit, *The Forms of Violence: Narrative in Assyrian Art and Modern Culture*, New York: Schocken, 1985.

²³ On the ancient connections of the myth, see James R. Russell, "The Platonic Myth of Er, Ara, and Arda Viraz," *Revue des Études Arméniennes* 18, 1984, pp. 477-485.

²⁴ See Zurabov, *op. cit.*, pl. 115 and p. 205.

²⁵ Suren Step'anyan, *Bambakahavak'* ("Picking the Cotton") and *Depi garnanats'an* ("To the Spring Sowing"), in *Xorhrdayin Hayastani kerpavestā 1922-1934 (Art of Soviet Armenia, 1922-1934)*, Erevan: Pethrat, 1934. After some decades, the liberalization of Moscow's cultural policy and the toleration of some local patriotism enabled Soviet Armenia to commemorate and celebrate the nation's past while emphasizing the strength and vitality of the Socialist present. In 1968 the country dedicated a huge complex of monuments on the 50th anniversary of the battle of Sardarapat, at the site where an Armenian people's army had repulsed a Turkish invasion whose purpose was to complete the genocide begun in the west by exterminating the Armenians of the Transcaucasus as well. Since the supreme patriarch of the Armenian Church, the Catholicos, had ordered that every church ring its bells to summon General Andranik's citizen-army to the front, the complex features a giant bell tower at the end of a long avenue lined with statues of standing eagles. The tower is flanked by recumbent winged bulls, with walls of narrative bas-reliefs to the side telling the story of the people's war. They embody much the same iconographic plan, indeed, as the horizontal narrative panels of Kojoyan's designs for the *Book of the Way* of Charents.

²⁶ On their collaboration, see V.H. Mat'evosyan, "Č'arenc'-Kojoyan ('Girk' čanaparhi')," *Sovetakan Grakanut'yun (Soviet Literature)*, Erevan, 1967, No. 9, pp. 33-42.

²⁷ In fact, the composition of Mher's part of the scene most closely resembles the horizontal, narrative reliefs on the late medieval tombstones of the Armenian regions of Karabagh (Arts'akh), Nakhijevan, and elsewhere that show the departed enjoying the pleasures of the afterlife. For a discussion of the iconography of these monuments see James R. Russell, "The Scepter of Tiridates," *Le Muséon* 114.1-2, 2001, pp. 187-215.

²⁸ In subsequent editions of the Epic, the artist Ervand K'och'ar rendered David (Pl. 16) and other characters in the style of ancient bas-reliefs, endowing them, however, with an un-ironic triumphalism that essentially reverses the subversive ideological intent of earlier Soviet art. [See Hovsep' Ōrbeli, *Haykakan herosakan ēposā (The Armenian Heroic Epic)*, Erevan: Academy of Sciences of the Armenian SSR, 1956, pl. opp. p. 88].

²⁹ See James R. Russell, "Mithras in Stalinist Armenia," *Ararat Quarterly*, Vol. 39, No. 154, New York: Spring 1998, pp. 45-46; and "The Epic of Sasun: Armenian Apocalypse," forthcoming in S. La Porta, ed., Proceedings of the conference "After the Apocalypse: The *Nachleben* of Apocalyptic Literature in the Armenian Tradition," The Center for Literary Studies, The Hebrew University of Jerusalem, Israel, 4 June 2007.

³⁰ Bakunts', a prose writer whose works describe the life of the Armenian villager, was killed in the Great Purge of 1937 and was rehabilitated only after Stalin's death.

³¹ The book is the first novel in vernacular Armenian, and describes the liberation of Eastern Armenia from Muslim rule by the Russians in 1828.

³² Atom Earčanean (Yarjanian)-Siamant'o, *Amboljakan gorcə (Complete Works)*, Vol. 1, Boston: Hairenik, 1910, pp. 51-52.

³³ *Payk'ar: Nor tarwoy bac 'arik, 1943 (Struggle: Special New Year Issue, 1943)*, Boston: Baikar. Marc Mamigonian, Director of educational and cultural affairs of the National Association for Armenian Studies and Research, Belmont, Massachusetts, contributed this explanation to a display of the magazine cover for the exhibit *The Armenians and the Book*, Lamont Library, Harvard University, 9-25 April 2012, curated by this writer: "Baikar was the name of the Boston-based (later Watertown-based) publishing arm of the *Ramkavar Azatakan Kusak'ut'iwn* or (Armenian) Democratic Liberal Party, which issued an Armenian-language newspaper of the same name (1923-1993), an English-language weekly newspaper *The Armenian Mirror-Spectator* (1932-present), numerous books and pamphlets, and from 1930-1931 and 1942-1963 an annual anthology of literature and essays. In the 1940s the *Baikar* annuals bore the striking artwork of Zaven Melik'... In an explanatory essay in this issue of the volume, the artist explained: 'The moving force which prompted the creation of this picture, is Armenia's magnificent contribution of her heroes to the battle-torn Stalingrad where my relatives are and from whom I have heard no word since the war. In this greatest battle in the history of mankind, the Armenian heroes, led by the Spirit of Vardan, have been doing their glorious part in twisting Hitler's 'invincible' swastika into humiliating contortions... Perched atop a tank, I have pictured a typical Armenian youth, with the vengeance burning in his eyes, and charged with a determination not to return to Erivan until the Nazi hordes are routed... Rising from the valley of the Arax, I have portrayed the Spirit of the Great Vardan pointing the way towards the Axis storm...' The composition of the 1943 magazine cover was probably inspired partly by a Russian war poster of 1942 that shows the spirit of (St.) Alexander Nevsky, the hero of Sergei Eisenstein's patriotic, anti-German film of the same name (1938), hovering over a Soviet cavalry charge against the barbarous Hun invader (Pl. 23). Such emulation is not unusual: the Armenian artist Eduard Isabekyan's canvas "Reply to Hazkert" (*Patasxan Hazkertin*, i.e., Yazdegerd II, 1960: see *Eduard Isabekyan*, Erevan: Sovetakan Groġ, 1985, pl. 38), an incident in the history of the war of A.D. 451, is clearly inspired by the Russian artist Il'ya Repin's famous painting, now in the Tret'yakov Museum (Moscow), of the Zaporozh'e Cossacks writing a defiant and hilariously obscene reply to another local tyrant of another age—the Ottoman Sultan.

³⁴ The motif is borrowed from the standard Hellenistic portrayal, as on coins (Pl. 24), of the battle between the Macedonian Alexander, on horseback, and the Indian king Porus, on an elephant.

³⁵ The Armenian text:

HUZUMNERI LEZUN

*Hovn— horovel e asum,
Andzrevə— ts 'urt barrer:—
Huzumnavor im lezu
Inch'u es lrrel?*

*Ayn, vor asel es uzum—
Tes! k'ezanits 'zoregh—
Drsum tsaghikn e asum,
Yev jurə byuregh.*

*Yev aghjeka ach'k'erits '
Yerb manishakn e nayum,—
El Teryani ergeri
Inch'n e hmayum?...*

*Jurə— hordor e huzum,
Hurə— mormok' karmir.
Huzumnavor ays lezun
Poet, k'ez ch'i trvi.*

³⁶ Text in Anahit Ch'arents', *Unpublished and Uncollected Works*, *op. cit.*, p. 81; tr. by J.R. Russell.

³⁷ This is the expression my teacher Professor Nina Georgievna Garsoian, the dean of Armenian Studies in America, used when all the official guests had left her great Easter party in New York with its endless bottles of red wine, the roast lamb, and the fish pie called *karasun tel* for its forty layers. Her students and scholarly friends were left, this is what she called us, and never have I felt so honored, before or since.

THE BRIDGE OF POETRY

James R. Russell

The middle and late thirteenth century – the generation or two after the Mongol invasion of the Near East around 1230 – was for Greater Armenia a cataclysmic period: the alien, Seljuk rulers of much of the land resisted the Mongols by main force and suffered defeat. The victors punished savagely any who had dared oppose them: clemency was not a Mongol policy, and Kirakos of Ganjak and others supply the gory details. The Mongols were not then Muslim, though; so the Cilician Armenian settler-state, an autonomous kingdom, perceived the opportunity for an alliance and responded with diplomacy instead of arms to the invasion. For Christians of Cilicia and the West, the change in the Near Eastern balance of power brought, at least at first, new political chances, commercial growth, and cultural change and enrichment. Het'um I (1226–69) pursued an alliance with the Mongols, in the hope that they might see Cilicia as a base from which to launch attacks against Muslim Syria and the Mamluks in Egypt. It was a time of literary, as well as diplomatic, creativity. This king's nephew, also named Het'um, traveled to the Mongolian capital at Karakoram and in 1307 dictated at Poitiers a memoir of his journey, in French: *La Fleur des histoires de la terre d'Orient*. It was a popular book, taking its place alongside the better-remembered accounts by William of Rubruck and Marco Polo: a translation by Richard Pynson into Middle English, titled *A Lytell Chronicle*, was published at London around 1520.¹ Het'um's uncle, Smbat the Constable, had translated the Assizes of Antioch into Armenian. One purpose of the invention of an Armenian alphabet by St. Mesrop Mashtots' early in the fifth century had been to turn the cultural orientation of Armenia westward. The power of the Sasanian empire, and the indifference or hostility of Byzantium, left Armenia after these efforts as a Christian island in a Muslim sea. Now, once more, the Armenians sought a Western European trajectory, and the book of "Haithon" in Britain seems a ghostly afterglow of what might have been. But once more, the configuration of power in the East – the conversion of Ghazan Khan to Islam in 1295 –

and the shortsightedness of the West – the failure of the Crusader kingdom of Outremer to follow the example of Armenian diplomacy – was to dash Armenian hopes and doom the nation once more to isolation in the Islamic world.

But the other side of the cultural equation is the Cilician Armenian encounter with the Mongol East. This may be exemplified by a striking monument of the visual arts. Matenadaran MS 979, the famous Lectionary (*Chashots'*) of Erevan,² was produced in 1286 for prince Het'um, three years before his coronation as the second Cilician king of that name. He was to be murdered by the fanatical Muslim Emir Bilarghu in 1307 – even as another Het'um was composing his chronicle in France. The sumptuous miniatures are anonymous, though many ascribe them to the great painter T'oros Roslin. The traditional headpiece of East Christian art, constantly developed and reinterpreted over the centuries as the Armenian *xorani*, now becomes (fol. 295) a successful fusion of naturalistic, Western-style portraiture and Mongol imperial symbolism: the lion, temple-dog, dragon, and phoenix of the Chinese court. How did such images actually reach Cilicia? Travelers mention East Asian silks and other imports, but a more direct source for both theme and technique might have been the sketchbook of a traveling artist. Villard de Hon-

Kouymjian, "Chinese Elements in Armenian Miniature Painting in the Mongol Period," in *Armenian Studies/Études Arméniennes: In Memoriam Haig Berberian* (Lisbon, 1986), 415–68. On contacts generally, see Priscilla P. Soucek, "Armenian and Islamic Manuscript Painting, A Visual Dialogue," in *Treasures in Heaven: Armenian Art, Religion, and Society*, ed. T. F. Mathews and R. S. Wieck (New York, 1998), 115–29, esp. 120 and n. 25.

necourt (a village south of Cambrai), who probably flourished in the mid-thirteenth century, has left one.³ The Turkish art historian Mazhar Ipsiroghlu has compared the swirls of drapery and contortions of the figures to the drawings of an anonymous Muslim artist who portrayed dervishes, real and fantastic animals, and scenes of everyday life in the Mongolian encampments, in a style that combines Persian and Chinese forms. He is known to posterity by a Persian title, *Ostad Muhammad Siyah Qalam*, Master Muhammad the Black Pen; and there is little reason to suppose he was not an Iranian by nationality. His lions are most like those of the *Lectionary*; the Armenian painter of the *Lectionary* might have seen drawings like his.

The Mongol conquest drove many Armenians into exile, too, even as it impelled others to undertake voluntary journeys like *Het'um's*; and the poet Frik seems to have fled from his native place, somewhere in the northeast of Armenia, in the mid- to late thirteenth century. He settled for some years in the relative peace and safety of the southwest, perhaps in Hajin – the place he calls by the name Harg in a poem. His works reflect the harsh realities of direct Mongol rule: he tells us that the burden of debt had obliged him to relinquish his own son as a hostage. This was one of the bitter experiences that impelled him to reflect upon the inherent tragedy of the human condition. He writes also of the devastation of his homeland, “*Ork'an k'aken ekeghet' / K'ani shinen pighc mzk't'ni*” (“How many churches they demolish – / How many filthy mosques they build!”) which reflects either Seljuk oppression in Greater Armenia or conditions after the conversion of Ghazan Khan. But Frik is most famous for his eloquent protests against human social inequality, which are somewhat rare in medieval Armenian poetry. Unsurprisingly, these made him popular in Soviet Armenian official literary circles, which presented him as a sort of proto-Communist: a small selection of his poems relevant to the theme, accompanied by ideologically tendentious introductory and historical essays, was printed in Erevan at the height of Stalin's purges.⁴

Mtok's yays banis veray
Shat aten i hogs em ankac:
Asem, t'e ays er lini,
Or zamen hawsar ch'e zugac.

In my mind I've brooded
Long in worry on this matter.
I say: Why is this
That He did not make all men equal?

He wrote also a satirical poem commenting on contemporary Mongol politics, and his most famous verses decry the injustice of Fate, for which he uses the Arabo-Persian term *falak*. Social protest, satire, and fatalism are all hallmarks of classical Persian literature, however unusual they may be in Armenian; and fatalism in particular is a stance popular throughout the medieval Islamic world, from Andalusia to Iran. Many nominally Muslim fatalists conclude by enjoining their audience to seize the ephemeral pleasures of the world – *carpe diem* – but Frik makes his personification of fate argue back that man's fortune is assigned through Divine decree, and is therefore ultimately just. This is a Christian conclusion to the theme, and a harmonious innovation, in that it is unexpected in the genre while predictable in the context of Armenian tradition. Despite his less-than-charitable characterization of mosques as spiritually unclear, this bridging of Muslim and Armenian Christian themes and ideas is characteristic of Frik's work. Though Armenian Christians responded with appropriate militancy to Muslim aggression and regarded Muhammad as a heretical madman, they still lived in and with Muslim culture and thought, and inevitably, it blended with their own.

Rather like a Sufi *zاهد* mendicant, Frik champions the ascetic mode of life, condemning material attachments and luxuries, and admonishes himself, “*Gna, t'ogh i bac' zamen, u eghir sirogh vanerun*” (“Go, leave everything behind, and become a lover of the monasteries”).⁵ In the twenty-fourth poem of the *Diwan*, he counsels his “little son” to become a *kama'awor aghk'at*, “willing pauper.” The phrase refers most likely to the popular Byzantine story of the prince Alexis who renounced both inheritance and nuptial bed: he is called Alek'sianos in medieval Armenian balladry.⁶ As a monk Frik would have addressed his fellows as brethren; but his compositions are written not in the late Classical id-

iom of purely ecclesiastical literature, but in a highly colloquial Middle Armenian laden with Persian, Arabic, and some Mongolian loan words. He refers to some of his poems as *hay(e)ren*, meaning a lyric of about six to ten lines – the *tagh*, a lyric tending to be twice or thrice that length, is a genre found in both secular and Church poetry. Nahapet Kuch'ak, who lived two centuries later, was to be the master of the *hayren* – both he and his predecessors composed such pieces for oral performance, usually with musical accompaniment. This is the craft, not of the priest, but of the minstrel, the ancient *gusan* or medieval and modern *ashugh*, literally, “lover.” Frik addresses a poem that we shall examine in some detail to his “brethren,” *eghbark'*, and claims to have received the message of his verses as a revelation in a dream. The lyric poet Kostandin Erznkac'i was most likely his contemporary: he lived in a monastery, but, like Frik, writes in colloquial style. He, too, declares direct revelation – from a detailed vision of a solar being⁷ – to listeners he calls his brethren, who may be fellow monastics, or members of the secular brotherhood of the young men of Erznka, or a mixture of both. Erznkac'i's visionary poem bears this title: “Omank' ch'araxosen zinen vash naxandzu, t'e orpes xosi sa aypisi ban, zi vardapeti ch'e ashakertel: zi ayl e ashkhatiln ew ayl e shnorh'k'n i hogwoyn: zor es patmem dzez, yaghags teslean imoy, zor tesi zarmanali tesil, minch' i vank' kayi hngetasan amac'; zor tesi ayr mi aregaknazgest ew li lusov.” (“Some enviously slander me, saying, ‘Why does he say this kind of thing? For he has not studied with a priest-teacher.’ For work is one thing and the grace of the Spirit another. Which I will tell you, concerning my vision which I saw, a marvelous apparition, while I was in the monastery at age fifteen – I saw a man clothed in the Sun and full of light.”)⁸ It would seem that Frik lived in the latter part of his life in a monastery but had begun as a husband and father and minstrel – so his public, creative life existed in an area on the margin of ecclesiastical and secular life, in entertainments and at gatherings where both the clergy and the laity might be present.

Kostandin's parallel career may shed light on these circumstances, for Erznkac'i wrote another poem on Christian themes, which at the behest of “the Brethren” he phrased in a meter approximating that of the *Shahname* of Ferdosi. The Iranian epic, which is only nominally Islamic, celebrates the heroic code and its exemplar, Rostam, and its vigorous rhythm is well suited to its martial theme and to recitation during athletic training: it is still chanted in the traditional Iranian gymnasium, the *zor-khane*. Armenians, centuries before and after Ferdosi, recanted the cycle of the exploits of Rostam

Zal; so Erznkac'i's poem, it would seem, could be the composition of a monastic possessing a minstrel's gifts for a primarily lay audience already well acquainted with the epic cycle of Rostam as part of their own national tradition.⁹ Erznkac'i's entire oeuvre, as Prof. Theo Van Lint has demonstrated in his Leiden thesis, can be restored to its original order as a *divan*, a cycle of poems, in which the Christian cosmology is taught systematically in lyric. Kostandin uses the Persian conceit of the rose and nightingale in a poem on Christ, and in the very next poem of the *divan* makes the metaphor explicit, complaining that his hearers had taken him literally: it is not clear whether this is a didactic tactic for the unlettered that backfired, or a defensive response to the disingenuous malice of fellow monastics envious of his poetic gifts. Both Erznkac'i and Frik deny having had much schooling and stress the immediacy of their experience and wisdom: Frik also declares, “*Och' i hawre arel mirat'*” (“I took no inheritance from my father”). This may be the dramatic boast of the dervish, with his counterpart in the itinerant holy man of eastern Christendom, as well as that of the minstrel. The employment of the direct, untutored experience of the dream can be an effective literary strategy in another way. If it is from insubstantial dreams that one learns the truth about reality, then the experience of wakefulness is called into question as untrustworthy. This creates a tension in which the suspension of disbelief is heightened; and the poet's authority is strengthened. Life is a dream; the dream, life. Erznkac'i opens a poem on the contention of body and soul with a word culled from the Psalms that his listeners would have known well also as the beginning of a hymn for dawn of St. Nerses Shnorhali: “*Zart'ik' i yerazut, bac'ek' zach'erd, ov kayk' i k'un*” (“Wake from your dream, open your eyes, who are asleep!”). But by sleep he means this life; so dawn is the next, when darkness closes over our earthly eyes. It is a well-crafted surprise worthy of Plato's strategic reversal in the *Republic* of the intent of Achilles on Hades in

⁷ Such visions are not unusual in the literature of the ancient and mediaeval worlds; see J. R. Russell, “The Dream Vision of Anania Shirakac'i,” *REArm* 21 (1988–89): 159–70, for the Armenian and comparative evidence. For a study of the literary strategies of the dream vision in literature, see J. Stephen Russell, *The English Dream Vision: Anatomy of a Form* (Columbus, Ohio, 1988).

Homer, where the hero's dread of the underworld is made by the philosopher to refer to physical life.

It is evident from the foregoing that minstrel poems of Christian counsel are a kind of interface between popular minstrelsy, with its stock of imagery and vocabulary from the Muslim world and from the pre-Christian traditions of Parthian Armenia, and the ideology of the Church. I propose to examine aspects of a few of Frik's poems that demonstrate this mixture, this bridge of civilizations. By a bridge, I mean not the trite connection of two mutual aliens who want nothing to do with each other in fact, but a means by which one crosses over into new territory and is changed in the process, harmonized with a new landscape. Frik's is a Christian landscape, steeped in the already ancient Armenian Christian literary culture; and the first thing that strikes one in the twenty-fourth poem of the *divan* is the title, with its formal Classical Armenian style and its designation of the poem as a *ban*, or Logos: *Norin Frkann asac'eal*. This is, without doubt, modeled upon the titles of the consecutive *bans* of the mystic St. Gregory of Narek, such as *Ban ... norin hskoghi*, "Logos... of the same vigilant [monk]." His penitential poem thus assumes the mantle of Narekac'i, as a vernacular level of prayer and vision. Two images then invite our particular attention in this didactic poem. The first is that of the pearl at the bottom of the sea for which the poet's mind quests: "Zim mits loghnord ari - i covu yatak n i'uc'i / Vasn ayn margartin hamar, or covu yatak n lini" ("I made my mind a swimmer, made it descend to the bottom of the sea / For that pearl that on the ocean's floor will be," *Frik Diwan*, 24.55-56). It is Iranian at its source and has to do with the perilous profession of the pearl divers of the Persian Gulf. The Gnostic "Hymn of the Pearl," with its locus in Parthian Iran, is the most elaborate religious allegory on the theme, but the "pearl of great price" of the Gospel would have been known immediately to the most untutored Armenian Christian. The pearl is also a treasured religious image in the contemporary culture of its origin. Abp. Tirayr quotes, for instance, the third chapter of the *Golestan* of Sa'di: "Ghawas gar andishe konad kam-e nihang / Hargiz na-konad dorr-e garanmaye be-chang" ("If the diver thinks a bit about the shark / He'll never get the precious pearl in his grasp"). One is reminded of the explicitly mystical allegories of Hafez of Shiraz, for whom the risk of mysticism is often like submersion in the deep sea: "Gohari k-az sadaf-e kaun o makan birun ast / talab az gomshodegan-e lab-e darya mi-kard" ("[My heart] inquired of those lost on the shore of the sea / Where the pearl outside the shell of time and space might be").

Another image, linked intricately to that of the pearl of wisdom the poet seeks, has roots in the depths of Armenian and Indo-European poetics, as well as resonances, again, in Iranian mystical poetry. "Erku loysn i mi darjaw, gisherin inch'ur hasuc'i" ("The two lights became one, as I ripened it, by night," *Frik Diwan* 24.51-52), declares Frik of the work his mind did in planting a metaphorical paradise (*drakht*) of *hayrens*, whose flowers and trees are the wisdom embodied by the pearl discussed above, which is bestowed in a dream from supernal reality. He adds, expanding the metaphor, that he watered the paradise with his tears (the anglophone reader remembers Blake here) - a reference to the devotional and mystical practice of inducing tears that is recommended often by Narekac'i and his predecessors. The poet then compares his own eyes to the sea, and that simile serves as a transition to the image of the diver seeking wisdom's pearl in the depths. The line seems to mean on the face of it that Frik worked with such ceaseless energy that he did not notice when the light of the moon replaced that of the sun.

But it echoes also an old poetic paradox: Indo-European poetic traditions liken the eyes to the sun, but there are two of the former and one of the latter. The Prophet Zarathushtra in his revelatory hymns, the *Gathas*, second millennium B.C., saw the eyes of Ahura Mazda, the Wise Lord, as sunlike, and the ancient Armenian hymn of the birth of the Zoroastrian *yazata* Vahagn/Verethraghna, recorded by Movses Khorenac'i from an oral recitation, declares the god's "little eyes were suns" (*ach'kunk'u ein aregakunk'*). Pentheus in the *Bacchae* of Euripides, fifth century B.C., in the madness induced by Dionysus sees two suns in the sky: poetic fancies have become realities, even as Bacchus alters the reality of consciousness. In the *Shahname*, tenth-eleventh century, Tahmine mourns Sohrab: "Alas! My body and soul and eye and light."¹⁰ This looks at first like an enumeration of the multiple souls of Zoroastrianism, but the equation of eye and sun is related to them all. In Frik's age, Rumi exclaims, preserving Euripides's ecstasies shorn of their sinister, tragic aspect,

What a day this is, for there are two suns.
This day is outside and apart from days.
From the heavenly Wheel to earthly beings comes
a wedding invitation, and the voice crying out:
O you who are become your hearts, good tidings -
for this is your day!¹¹

¹⁰ *Shahname*, ed. Jules Mohl (Paris, 1838), II, 130.

¹¹ Shahram T. Shiva, *Rending the Veil: Literal and Poetic Translations of Rumi* (Prescott, Ariz., 1995), 16.

In the Ode of Nativity of St. Gregory of Narek, the eyes of the Blessed Virgin Mary take the homology a step further, fusing the opposites of sea and fire in a cascade of alliterative magnificence: "Ach'k'n cov i cov cı-caghakhıt cawalanayr yawarawtun erku p'aylakadzew aregakan nman" ("Eyes, sea into sea, laughter-dense dilated in the dawn like two suns of dazzling form").¹² And we have seen how Frik uses this additional homology, too, with particular reference to penitence – the principal theme of his poem – and as a transition. The complex symbol of dual sun-flower-eye-sea may be reflected in ancient Armenian figural art, as well.

A four-sided stele from Gamahovit, Armenia, dated to the fourth or fifth century A.D., has a strange bas-relief of a woman whose lower half seems to be a spreading plant (perhaps a fertility goddess, as in the nightmare of the Median king Astyages [Arm., Azhdahak], in the first book of the *Histories* of Herodotus). Or she is rising behind a plant. She holds aloft a trapezoidal frame or tray containing a pair of rosette-like disks. The symbol is enigmatic, and there is no inscription to explain its meaning, but the rose, too, is often a poetic equivalent to the sun (and Christ in devotional hymnology is equally the Sun of Righteousness and the "Rose ever blooming that from such tender root hath sprung"); so the whole is suggestive of fertility and of spring, of two luminous orbs carried aloft in harmony. Frik's poetic line draws together, in a deceptively simple metaphor of hard work in which day blends into night, a host of densely meaningful images. The homology of sun and eye invites one into a consideration of paradoxical realities, with the attendant tension between what we think we see and what really is – this resumes the theme of the dream vision introduced toward the start of the poem. And the uniting of two into one in a paradise signifies the resolution of the ruinous dualities that the Fall of Adam and Eve brought about. The waking of the soul in Christian wisdom is reentry into the Garden. Frik's listener will have recalled that Eden was believed to hover over Hark' in Greater Armenia: a party of monks saw it from afar and reported on it to St. Nerses Shnorhali. This was a legend that Frik, whose work reflects the influence of the poetry of St. Nerses, who died only about a century before, might well have known.¹³

Frik uses images with a resonance in Islam and gives them additional symbolic power culled from Armenian and Christian sources. He does the same with a whole Persian text. Persian was known in Armenia in all stages of its growth as a spoken language. The headmen of the Armenian villages through which Xenophon and his mercenaries marched at the end of the fifth century B.C. knew Old Persian. A millennium later, the contempo-

raries of Mashtoc' knew Middle Persian. Many Armenians, both clergy and laity, of the Middle Ages knew New Persian. In the late fifteenth century, Katholikos Grigoris I of Aght'amar composed a love poem with alternating Persian and Armenian lines.¹⁴ In the Cilician period, there was an active trade route from Tabriz in Iran to the ports of Cilicia, so Persian was often heard in the Mediterranean Armenian state. Some of Frik's listeners evidently knew Persian as well. At the end of the twentieth poem of Frik's *Divan* is a quatrain of Khaqani in Persian, which, as a great Soviet Armenian Iranist, the late professor Babken Chugaszyan showed, is rendered into Armenian in the twenty-first.

In love's kitchen they slaughter none but the good:
They kill not those of comely visage but evil nature.
If you are really a lover, do not flee the slaughter!
For anyone they do not kill – is mortal.¹⁵

¹² A. E. Housman, *The Name and Nature of Poetry* (New York, 1939), 11, cites a poem on the weeping Mary Magdalen that explores part of the image – in my view, disastrously: "Two walking baths, two weeping motions, / Portable and compendious oceans." A Victorian bathing machine totters over our Lord. A recent rehearsal of the theme by the early punk rocker Patti Smith is better: "The little boy's face lit up with such naked joy that the sun burned around his lids and his eyes were like two suns" (song "Birdlands" on the album *Horses*). Since on the same album "Go man go!" alternates with "Go Rimbaud!" it is apposite to note that in one of his most famous poems, in the cycle *Un saison en enfer*, the French poet declared (and he sincerely believed in alchemy and the *mysterium coniunctionis*), "Elle est retrouvée! / Quoi? l'éternité. / C'est la mer mêlée / Au soleil." Patti Smith's lover, Robert Mapplethorpe, loved Rimbaud, and an edition of *A Season in Hell* with photographs by the late artist was published by Little, Brown (New York, 1986). The interaction of light and water did not escape our poet. Frik, echoing (unaware, for sure) Virgil's metaphor of thought in the *Aeneid* as the reflection of light on agitated water striking ceilings and walls, writes, "Zinch' arewu shoghn i jrin / I mej hogwoys ku terveray" ("It darts through my soul / Like the sun's ray on water," *Divan*, 9.74).

¹³ See Nira Stone, *The Kaffa Lives of the Desert Fathers: A Study in Armenian Manuscript Illumination*, CSCO vol. 566, Subsidia Tomus 94 (Louvain, 1997), 82–87 and pl. 6.

¹⁴ See J. R. Russell, "An Armeno-Persian Love Poem of Grigoris Aght'amarts'i," *JSA* 6 (1992–93): 99–105. The object of desire is another male standard in Iranian literature, even for heterosexual poets, but rare in Armenian.

¹⁵ Compare with Rumi: "Your love makes the fire of youth leap up. / In the breast of the beautiful the soul leaps. / If you are killing me, kill me then! For you it's lawful. / Since when the Friend kills, life arises in result." Armenian Christian devotees of the great Sufi master marched at Rumi's funeral in Konya (Iconium), A.D. 1273.

Frik's Armenian lines are:

On the holy table they sacrifice none but the good.
When, brothers, would they ever accept for God
one emaciated, or weak?
If you are really loved, then act so they do not
reject you.
I know the firstling they do not sacrifice is useless.¹⁶

The Persian poem deals with the familiar Sufi theme of the devout lover (*asheq*) seeking annihilation (*fana*) in the divine Beloved (*dust*), employing the phantasmagoric paradox of death as the true life, similar to the one of dreaming as true wakefulness that we have already seen. The theme of death as life is familiar in Armenian literature, though from a Hermetic, not a Platonic source: the famous slogan *Mahn imac'eal anmahut'ian e* (Death understood is immortality) employed by Eghishe vardapet in his fifth-century *History* of the war of Vardan. But Frik has taken the Muslim poem and recast in Armenian Christian terms of great symbolic power: the sacrificial offering of the firstling (*matagh*) on the altar – the Paschal Lamb itself. So he has added to the metaphorical weight of the poem the Christian mystery of death become into the instrument of bodily resurrection, enriching the translation in a creative way: the message has crossed the bridge of the translator from Muslim to Christian territory, as it were.

Frik uses the Armenian *sireli*, "loved," in translating the Arabo-Persian *asheq*, an active participle whose primary meaning is "lover": it and the passive *ashuq* (Arm. loan word *ashugh*) can mean also, secondarily, "minstrel." Didactic poems are often confessional, too: Frik may well be admonishing himself with his brethren. *Sireli* may encode his name. The name Frik is rare, and cannot of course be attested in native writing before the introduction in the twelfth century into Armenian of a letter to represent the sound /f/, which had existed in dialects but not in the official literary tongue, where it becomes aspirated *p* (for which a letter based on Greek *phi* was employed). The introduction of the new letter coincides with a period in which the pronunciation and accurate recording of Western European terms with /f/ was necessary in the highest circles of society.¹⁷ Though neither the poet Frik nor others in the Middle Ages of the name were from Cilicia, it is generally accepted that the name is a typically abbreviated Armenian diminutive of a Western European name that would have been better known there than in the hinterlands of Armenia proper: Frederick Archbishop Tirayr (*Diwan*, 86) cites an edict of Lewon V with the Armenian name Ftrkay, in the dative. The French translation has "père Frédéric." This

name is similar, but not the same, as Frik; so the hypothesis, however reasonable, remains unproven. But the word Frik, translatable in the context of its language and tradition, is attested in a Sasanian inscription of the third century A.D., as the name of the satrap of Weh Antiok Shabuhr: it is Iranian and means "beloved," and a related form, Friyan, is popular in the Parthian Zoroastrian literature the Sasanians inherited – precisely the Iranian literature that the Armenians knew best, of course. Nor did the name vanish. In the form Ifrik, it survives into the early Muslim period as a girl's name in Iran.¹⁸ If my suggestion is right, then we now have the native Iranian appellation (alongside *gosan*, Arm. loan word *gusan*) of which the Arabic for "minstrel" would then be a translation.

My new explanation of this freakish (!) name is unprovable and maybe even unlikely. But it has in its favor two things the equally unprovable reconstruction of the diminutive from Frederick does not. First, the Iranian name is not a hypothetical form, but a real one that existed into the medieval period, with definite Arsacid connections that would thus have been particularly fa-

¹⁶ See B. Ch'ugaszian, "Frike parskeren karyaki t'argmanich," *Banber Matenadaran* 4 (1958): 111–19; also my subsequent comments in J. R. Russell, "On Armeno-Iranian Interaction in the Medieval Period," in *Au Carrefour des Religions: Mélanges offerts à Philippe Gignoux, Res Orientales* 7, ed. R. Gyselen (Bures-sur-Yvette, 1995), 235–38.

¹⁷ On such evolution, see Stanley Morison, *Politics and Script* (Oxford, 1972).

¹⁸ The inscription of Shabuhr I, Ka'abe-ye Zardosht (SKZ), line 62: MP. ply2ky (with the orthographical convention of -yw-), Pth. pr(y)/ak, Gk. FREIKOU: < *fryiaka-, cf. Av. frya- (Yt. 13.110, 119), family Fryana- (M. Back, *Die Sassanidischen Staatsinschriften*, Leiden, 1978, 247, 358). The Parthian riddle-text is *Joisht I Friyan*, "Youngest (Son) of the Fryanas." From Iranian *fri* "love," note also Elamite *Nebenüberlieferungen* of Old Pers.: Pirriyana = *Fryana-, Ampiriya = *Ham-friya- (cf. Skt. sam-priya- "loving each other"), Priyasba = *Fryaspa- "Hippophile" (see Mayrhofer, *Onomastica Persepolitana*, 8.1316, 8.56; E. Benveniste, *Titres et Noms*, 91; cf. Aristophanes's obscenely satirical Hippobinos, *Nephelai!*). The name survives in Iran into the Islamic period: Tabari mentions Ifrik, "die liebliche," slave-girl of Asad son of Marzuban (Justi, *Iranisches Namenbuch* [Marburg, 1895], 141). The base *fri*- with preverb yields familiar Av. *afri-nami* "I bless," Arm. loan word *awrhnem*, with change of Mlr. -fr-> Arm. -hr- and metathesis. The -w- may be accounted for by Pers. fC > Arm. uC (see Hübschmann, Arm. Gr., 511, with refs. to Marr and Meillet). Colloquial Arm. has also the interjection, from Pers.-in-Tk., *afarin!*, lit. "blessing," with the meaning "well done, bravo!" Arm. shortens names to add the diminutive -ik: a relevant example from a name where /f/ had been changed in Classical times to *p'* is Ep'rik = Little Ephrem!

vorable for introduction into the old Armenian onomasticon (where it would have lain low in orality till the invention of the letter *f* facilitated its emergence into light on the written page). Second, it means *sireli*, "beloved," just the right moniker for an *ashluq*, the "beloved" minstrel, at home in the Cilician Christian Armenian and Muslim Iranian worlds of the Mongol age, who remains in some respects still as enigmatic as his name.

Diwan 24

Of the same Frik
recited
A *logos* of profit to the soul and good
concerning contrition.
(5) Brothers, heed this counsel on what befalls me:
I plummeted into gold's mirage and did not build a
house for my soul.
I said, I will make me forts and towns and palaces.
For years, brothers, I did hard time in Harg [Ha'in?]
(10) And said, I'll achieve greatness by dint of my
own efforts, without the Command.
They came to me in a dream and said, That image
may be seemly to you,
But day by day, what God has prepared for you,
will be!
Without God, brothers, whoever wants to attain
his bread
Will live out his days barefoot and naked in this life.
(15) But if he petitions God and stands in prayer
before Him,
God has the power to give whatever he asks,
to fulfill all.
Day and night, ponder as we might, all is blocked.
In our minds we fantasize many lovely things in
this life.
But whatever God does – and His will be done! –
(20) His word and thought are all complete, and
nobody can flee.
Little son, if you heed me and lend an ear to my
advice,
See you are not bold in vain, saying, Why must
all this be?
Heed the Gospel, learn what is there:
The first is last; the last, first.
(25) Where are the kings of the earth and the treasure
they hoarded?
Be a willing pauper [*kamawor aghkat*] – to small and
great be meek.
Distribute all you have here, lest you be pitiful and
bewailed.

Why are you so stubborn in your sins? You deceive
Adam's son [*adamordi*, cf. Tk. *adamoghlu*: "Man"].
You fell in love with the world and it appears sweet
to you:
(30) This life is but brass, though, that rots in soil to
verdigris.
Examine yourself well, if you possess a mind and soul.
If you do not comprehend this, brother, then you are
neither dead nor alive.
This evil lust made its dwelling in me: it carries
me away,
Contented with me, to deliver me to Satan as his slave.
(35) I said, I renounce the wicked and cease to be
hellfire's lot.
My sin weighs upon my shoulder, bears me down
[cf. the Muslim belief in good and bad angels on
either shoulder].
Frik, consider profit and harm and decide which one
you need.
If you want the kingdom, leave the world in haste.
But if it's darkness and torment you prefer, and
piteous slavery,
(40) Eat and drink all day, and act in any way you
please.
I said, I turn away from my many evil deeds.
I ate ashes as my bread, drank the water of my tears.
My body loved this world, I sinned anew,
And needed the wisdom to make a resolution this
very day.
(45) He gave me an answer, brother, which I heeded:
Why have you stayed for this like an ass in the mire?
Deafen your ear, blind your eyes twain-
When your body cries out, Enough! then of it your
soul is freed.
Many *hayren logoi* I planted, as a paradise within
the mind
(50) That I watered from the fountains of my eyes.
I consumed my own liver, brother, as bread, raising it.
The two lights became one by night as I ripened it.
I fell into a sea of cares when I recalled these things:
I took my eyes' measure, and that of the waters of
the sea.
(55) I made my mind a swimmer and plunged to the
floor of the sea
For that pearl which lies upon the ocean floor.
So much did I implore God that the eyes of my soul
be opened
And my five senses be cleansed of the rust of this
world.
You wanted something precious, Frik, and when it is
accomplished, you will know:
Holy will then be your nature, eyes and ears, and mind.

Diwan 20

By the same Frik
recited
Counsel.

Come, let us cast aside this cheating life, lest we be deceived.

(5) Let us go and seek the place where we hope to dwell.

Many have been deluded by this life, yet none has declared, Enough!

Strive to find a remedy in this world, lest you be condemned in the next.

The longer you live happily here, the more the next life will be bitterness and tears;

If you live in soft luxury here, many tortures are being saved for you there.

(10) Many have been deceived in this world and have become fuel for the fire in the next.

Once you free yourself, why recite your human needs?

You speak only injustice; you work boundless evil.

You make friends with every thief; you share the lot of dogs [*shun* means also "fornicator"].

Your mouth profanes My holy and awful name

[God is clearly speaking here: Frik may be reciting the colloquy of a vision].

(15) Am I like you – a fornicating, drunken dog?

Can't you see my angry gaze? I give the earth
[of your bodies] to the winds

That take them and heap them to the dark, ice-bound regions.

Till resurrection I keep you, and you are tormented

When the river of fire glints, and there you burn.

(20) Repenting on the morrow does no good, I tell you.
Heed me, Frik!

Whoever was rich is left dishonored and humiliated.

If you don't look at hellfire from far off and burn,
good sirs,

Muslins and royal purple won't save you later on.

Many years now you've been condemned in body
and soul.

(25) All is scattered to the winds, and you've been asleep.

Wake up, find a solution and do some good,

Fast, pray, do not do more evil, more sin.

What God gives you, share with the man whose need
is keen,

That on the day of resurrection you receive much
good in return.

(30) But if you live in a dissipated way, consorting
with the base,

You condemn yourself here, and there your tortures
are increased.

You must be like the wise virgins, ready:

And when the gate opens, do not be separated from
your companions.

Make sure that you do not find yourself among the
foolish ones.

(35) If you depart with a torch, you will be the friend
of the wise.

It is a wonder to me why you always condemn
yourself in this world, Frik.

You have no house or home, neither wife nor daughter
nor son.

With friends like fate and fortune, what more do you
need?

You run around the land and find all lies and empty
wind.

(40) How much treasure and finery and goods will
you hoard?

When you've enjoyed the world to the full for these
many years,

And still have given naught to the poor by your hand
and labored for your soul,

We reckon you a fruitless tree – [good only] for the fire,
as kindling.

Try to make a remedy for yourself: to this human life
naught remains.

(45) Your black has turned to white, the invitation's
come, if only you will heed.

If you've any sense stored up in your soul, Frik,
Shake the wine out of your head, and make your
homeland on the other side.

Listen to all equally, don't be jealous of the wicked.
Evil does not accrue for a man, so wish it on none.

(50) But if you are a source of good, then you win
double:

Here you acquire a good name; there, you attain bliss.

When your heart's ear is more attentive than your
head's,

Then you must listen, brothers. Don't be fooled in
this world.

Our Lord descended from heaven, preached to
Adam's sons:

(55) Set this life at naught, He said – that other one
is to be desired.

I pondered hard and begged: I have need of you,
And if you render me good counsel, I'll serve you
many a year.

He said, Flee evil, do good on earth,

Turn to your Creator, and say Enough! to sin.

(60) That man who is wise will find this advice
sufficient.

He heeds his heart, and keeps it many years.
 But if you are not helped by this word of mine, then
 reckon it as wind:
 When said among fools and the ignorant, it's not
 worth a handful of dung.

[Lines 64–67: the Persian quatrain from Khaqani.]

Diwan 21

By the same Frik
 recited.

[Lines 3–6: Frik's translation of Khaqani's quatrain.]
 You know this well, brother, that they'll summon you
 on the morrow.

Make provision that they won't sacrifice you there.
 If you have wits and sense and examine all profit
 and harm,

(10) Be the sacrificial firstling in this world, that they
 receive you in the next.

Whether it is good or evil that you do, day by day
 they write it down.

When the court is assembled, they bring forth the
 record:

They will accuse you then of every evil you've done
 to man,

So anyone who has intelligence will pay his debts
 off now.

(15) They compile here the record of your debts and
 present it on the morrow there –

Otherwise, when Easter comes, when all will eat
 and drink,

You'll be in a great prison, where those who wish
 you ill will string you up.

They will demand your works, and all that you've
 done in this life – they'll know.

JAMES R. RUSSELL

SASANIAN YARNS:
THE PROBLEM OF THE CENTAURS RECONSIDERED

This paper deals with the Indo-European mythical creature known to the Greeks as the *kentauros* and to the Indo-Iranians as the *gandharva* or *gandarəwa*: by comparison of its functions in different cultures that tend to treat archaic mythical themes in consistently particular ways I attempt to derive its root meaning, then to examine its treatment in a cycle of Iranian tales, and to follow several possible vectors of their likely diffusion far to the north and west of the Classical world. It is rather more than threescore and ten years since Georges Dumézil tilted his lance against “the problem of the centaurs”. On the face of it Centaurs are not a problem. They do not loom large any longer in literature: the centaur in John Updike’s novel of the same name is a sad, middle-aged schoolteacher in rural Pennsylvania. A few generations ago it might have seemed that even dragons had lost their old prominence in literature and the study of the symbolic and imaginative components of human culture, but J. R. R. Tolkien defended manfully the importance of these hapless creatures in his essay “Beowulf, the Monsters and the Critics”⁽¹⁾, striking a blow for winged worms and *Mischwesen* everywhere – the German taxonomical genius extends even into the realms of nonexistent genera, providing this useful term for “mixed beings” who are half-man and half-horse or half-goat, etc. They are quite respectable in mythological study. In other contexts centaurs are more of a pleasure than a problem, and this has long been the case, it would

⁽¹⁾ TOLKIEN 1984, pp. 5-48. The scholar of English literature, Frank Kermode, in a review of Seamus Heaney’s recent translation of *Beowulf*, summarizes the argument: Tolkien finds in the poem “a high seriousness, a grim understanding that monsters are evidence of what cannot be denied, the potential of evil in the world; they are the enemies of men and gods (and God). The poem is a celebration of the necessary of even the greatest human valor; the tragic truth of mortality...”. See KERMODE 2000, pp. 18-19.

seem: since the work of the sculptors of the Parthenon frieze and of Zeuxis the painter – who was the first, as it seems, to portray a family group of them, since they had been shown only as fully-grown males before him – they are not monstrous but beautiful, combining the nobility and power of equine and human musculature. They transform the wedding of Peirithous on the Elgin marbles⁽²⁾ into a brawl, a pitched battle- but then he knew them- they were his nephews- and still had invited them, since it seems Centaurs were a kind of catalyst to the successful consummation of a marriage, and the fight has nothing of distress in it, and infuses the art with the dynamic aspect that is essential to the loveliness of the Athenian culture, and in any case how many Centaurs are you likely to meet in a day? Nor were all Centaurs necessarily to be feared. Achilles' tutor in the arts of healing and of war, Chiron, exemplified the esoteric and powerful knowledge for which the Centaurs were also famous. By the time the Centaurs join portrayals of the Dionysiac *thiasos*, they are joyful, but no longer dangerous. There are paintings of aquatic *thiasoi* as well, and in these the whale, *kētos*, is strikingly similar to the Centaur⁽³⁾. These creatures will be seen to have figured in stories associated with tales of centaurs and like creatures- and they, too, once had a certain reputation for wreaking death and destruction. They, too, become innocuous over time. Where there is a known problem: the vexed etymological relationship of the name of the Greek *kentauros* to that of his undoubted cousin, the Indo-Iranian *gandharva* – Georges Dumézil⁽⁴⁾ came to doubt his own solution, and since it seems unlikely that on present evidence a satisfactory one will be found, what is there left to reconsider? In fact there is plenty.

First I will present as a test case for the method of mythological triangulation to be employed for centaurs, another mythological figure

⁽²⁾ For a full register of the Centauromachy on the south metopes and the most comprehensive recent discussion of the Parthenon see HURWIT 1999, esp. pp. 171-174.

⁽³⁾ See VON BLANCKENHAGEN 1987.

⁽⁴⁾ DUMÉZIL 1929 and NAPIER 1986, p. 63. Dumézil's attempt to connect centaurs and their relatives or analogues to rites of the beginning of the year, notably, in Europe, to Carnival as a survival of Lupercalia, has however gained general acceptance: see, for instance, DUMÉZIL 1988, pp. 28-29. I would tentatively suggest that the Greek word *kentauros* reflects devoicing from an original form like *gandarva*, not through a development within Indo-European, but by secondary borrowing from an old Anatolian language; cf. the Etruscan that has given us "catamite", from Greek Ganymede! On the latter topic, Centaurs were associated with pederasty, also, and the word could *mean* a pederast (BARTRA 1994, p. 29 and n. 51). There is a fresco, for instance, of Achilles and Chiron from Herculaneum, first century B.C., at the Museo Archeologico Nazionale, Napoli. Chiron's equine body kneels, and his human torso, adorned with a knotted cape, towers over the naked, beardless Achilles, who holds a lyre. FERNANDEZ 2002, p. 33 and pl. 24, finds the scene homoerotic.

who is slightly less complex. There is an Armenian mythological figure called the *t'ux manuk*, "black youth", a playful, seductive being who descends by mountain streams to the ruined chapels where women light candles and kindle incense for him as to a saint- the being has become Christianized. In classical Greece there is a similar black youth, Melanthos, who also comes from the edge of settlements, but who becomes one of the pivotal figures in a myth on the basis of which Athenian youths enacted a ritual of passage from boyhood to the status of adolescent citizens – that is, the mythologem is, characteristically, absorbed into the social and political concerns at the focus of Hellenic civilization. In India, to the east, there is another black youth – Sanskrit *Bālakrishna* – whose mischievous butter-thievery marks the passage from childhood to boyhood. He is also the object of an intense devotion, *bhakti*, that has as its metaphoric and actual source of vitality the erotic attraction between the sexes: Krishna and his *gopī* cowherdesses. The mythologem in India becomes a sophisticated meditation on the energy and nature of nascent human sexuality and of the erotic power of the devotion of the worshipper to his select divinity. By this comparison of three Indo-European cultures, which takes into account the distinct concerns of each, one proposed an explanation of what would seem to be a common, Indo-European, mythologem of awakening adolescence and of the sexual love that brings into being the first significant social relationships outside the family⁽⁵⁾.

In the case of the Black Youth in Armenia, there does not appear to be any tangible Zoroastrian component, though it is common for Indo-European and Urartean or other Old Anatolian mythological material transmitted in Armenian tradition or appropriated by the local Christian cult to have undergone secondary Iranization. In the case of the Centaurs, we are confronted by a more complex series of developments, in which an Iranian loan replaces whatever the original term for a centaur in Armenian might have been. The Armenian translation of Eusebius renders the name of the onocentaurs of Berossus – themselves Mesopotamian Sagittarii with no known genetic relation to the Indo-European creature⁽⁶⁾ – by the Iranian loan *yuškəparik*. The first part of the

⁽⁵⁾ RUSSELL 1998.

⁽⁶⁾ In the *Reallexikon der Assyriologie*, art. "Mischwesen", pp. 243-246, are discussed and illustrated several types of Mesopotamian centaur, from the Kassite period. All have the quadriped body of a horse, surmounted by human torso, arms, and head. One, winged, is a Sagittarius; another, without wings, flourishes a sword. These centaurs appear on *kudurrus* (boundary steles) and cylinder seals, and on Babylonian stamp seals of the Seleucid era. The beings are generally shown hunting: see COLLON 1988, p. 81 pl. 364 and p. 184 pl. 881.

word accounts for the Greek prefix, the “donkey”; and the *perī* is an evil supernatural being – but, in the Avesta, a female one, *pairikā*. Prof. Martin Schwartz has suggested her name means “coverer”, making her a sort of succubus, a seductress in deed and probably in word as well. (And one would add that the Arabic *jinn*, who in the *Qur’ān*, *sūra* 114, is associated with the whisperer of heretical lies to men, probably means the same thing, from a base **gmn-* “cover”). Irrespective of the asinine prefix, the term *yuškaparik* is used by Armenian writers of Peirithous’ Centaur also. Moreover, in Armenian art the *yuškaparik* is not an equine humanoid, but a bird with a woman’s head- a Siren. But in neither case need this be either late or entirely a misidentification, since the donkey-man Silenus is closely associated with the Centaur; and the Siren (called *ham-baru* in Armenian and mentioned in the Armenian version of the Biblical book of Isaiah alongside the *yuškaparik*- a juxtaposition that helped future authors to associate the two creatures) is seductive and disruptive, promising knowledge in her song. One recalls that the Centaurs had wisdom, too: Chiron was renowned for his knowledge of medicine.

Centaurs in Greek mythology apparently embody the potentially chaotic, anarchic power- mainly sexual- that is the catalyst to the beginning of social bonds- like marriages- if properly controlled. They are manifestly uncivilized, living in wild places and eating raw flesh⁽⁷⁾. The battle between Lapiths and Centaurs on the Parthenon frieze may convey, overtly, the message of the victory of human reason and restraint over bestial passion and unbridled license. But, since the sculptures show a contest, not a victory, the scene may also suggest, more subtly, that upon the Akropolis the temple of Athena Parthenos achieves the harmonious balance and tension of two forces, rational and animal, both of which are necessary to life. It is perhaps significant, also, that there is also a cavalcade on the Parthenon frieze: the Centaur is man-horse, a being, as the German Romantic poet Hölderlin observed, living in “the in-between time when the earth tries to give its own elements form, when the dry things congeal...”⁽⁸⁾. The new, human régime of the hunt-

Berosos, a priest of Marduk, probably at the Esagila temple in Babylon, who lived around the time of Alexander, wrote a history of Mesopotamia in Greek, employing for his account of Creation the *Enuma Eliš* and providing also an account of the story of Deluge like that in the epic of Gilgameš. Eusebius of Caesarea, ca. A.D. 260-340, summarizes citations of Berosos by other writers in his *Chronicon*, an epitome of world history which was translated, in unknown circumstances, into Armenian around the fifth century: see VERBRUGGHE-WICKERSHAM 1996, pp. 17-29.

⁽⁷⁾ See BARTRA 1994, p. 16.

⁽⁸⁾ See FRIEDMAN-CACCIARI 1996, p. 126. Cacciari offers his observations on the division of man and horse upon contemplation of Max Klinger’s engraving, “Verfolgter Centaur”

er is that of man and horse divided, moreover, of man as the master of his mount. The Greeks of the period hunted mostly on horseback- when Xenophon, in his *Cynegetica*, remarked famously that hunting is training for war, he meant hunting on horseback. So in a way the cavalcade on the Parthenon signifies the resolution of the conflict between centaurs and men – the dynamic mastery of his mount by the rider – in the context of a public ritual. It is certainly significant that the name of Peirithous' bride is Hippodamia, "tamer or subduer of horses"! The Greek treatment of the myth is, predictably, to recast it as a social metaphor; but as we shall see, Centaurs in Greek mythology are associated also with wisdom, with poison, and with water- all perennial features of the other Indo-European oikotypes of the mythologem.

In India, the *Satapatha-brāhmaṇa* derives *gāndharva* from a root *grdh-*, "to covet", especially women; and the form *gāndharva-* can mean either a marriage of mutual sexual attraction, or a sort of music. There is a custom according to which one marries after celibacy as a student, but for three nights husband and wife sleep separated by the "Gandharva staff": the Gandharva Visvāvasu is regarded as the husband's rival during these nights, and one must appease him, asking him to go back to his own wives, the Apsarases. At the end of the fourth night the husband touches his bride's private parts and pronounces the formula, "You are the mouth of the Gandharva Visvāvasu". According to the *Satapatha-brāhmaṇa* it is the *vājin*, a vigorous horse whose sexual energy is stressed, that carries the Gandharvas (the *haya-* bears gods; *asva-*, men); and this equine association with its sexual overtones, is continued. For a derivative from Gandharva is the *kinnara*, a being with the body of a

(fig. 7). The preceding figure, "Centaur mit Wäscherinnen", shows the creature talking seductively to village washer-women. Significantly, he is standing in a stream that descends from a wilderness to the village: it would be hard to find a better illustration of the itinerary and function of the Armenian *t'ux manuk*, who seems to display points of similarity to the centaur. (In connection with the stream it is worthwhile to note that Paul Kretschmer connected *kentauros* with Gk. *anauros*, "mountain torrent": see KIRK 1973, p. 155.) Klinger also did an engraving of centaurs fighting. In Classical art, as for example on a Lycian marble sarcophagus of the fifth century B.C. at the Istanbul Archaeological Museum, the composition of the scene is serenely harmonious and symmetrical, but Klinger's vision is of tiny figures in a bleak, snowy waste, echoing the painting by Arnold Böcklin of centaurs fighting- a scene, also in some barren upland, of bloody, stone-throwing barbarism (see LE RIDER 2001, p. 57, fig. 7). The painters of Viennese fin-de-siècle decadence capture the *horror antiquus* of the centaur as primordial monster. Both artists offer a critique, as it seems to me, of the Classical tradition, particularly of the manner in which the heirs of the Renaissance, such as Winckelmann, interpreted it. Their works cry out that violence cannot be tamed, that the grin of death cannot be an eirenic smile, that civilization cannot overcome human atavism (see figs. 1-4).

Fig. 1 – Lydian sarcophagus, fifth century B.C., Istanbul, Türk Arkeoloji Müzesi.

horse and the head of a human being, who sings and plays music (*Viś-nudharmottara-purāṇa*); and *kandarpa*, a Prakritization of Gandarva, is taken back into Sanskrit as a name of Kāmadeva, the god of love⁽⁹⁾. It is clear from the Indian data that Centaur and Gandharva are essentially the same mythical creature, with a similar, though differently stressed, meaning and function. The Indian Gandharva is an occult rival and third partner, both obstructing the wedding and, by his power, enabling coitus to occur; and his particular art is a kind of wisdom- music, with its non-linguistic appeal to our emotional sense of the meaning and order of life. Professor Alex Wayman has linked the Gandharva in Indian philosophy to the function of rebirth: so the being becomes the esoteric embodiment of a function of union and transition and of a branch of wisdom akin to passion- music. Passion is not a social issue in India. It's a god.

In Zoroastrian Iran, the *gandarəwa* is an aquatic monster whose participation in human affairs has been demonized entirely: he has given up seduction for the more direct and prosaic act of the kidnapping and eating of a hero's relatives and friends. It retains its association with major points of transition, though, since the hero Kərəsāspa – about whom more presently – slays it on the New Year's feast of Nō Rōz. The Avestan *gandarəwa* survived into the Middle and New Iranian languages, but the word is not attested in a borrowing by the Armenians, perhaps because the intervention of learned translations- Bible translations, Eusebius, the *Alexander Romance*, and Movsēs Xorenac'i- obliterated it. But an argument from silence is not necessary, since the portrayal of the *yuškariparik*/(ono)centaur in a vulgar late mediaeval text displays a typical process of Christianization of the creature's functions in a manner parallel to the treatment of the mythologem of the Black Youth.

The text, attested in one 17th-century manuscript, appears to draw indifferently upon a range of ill-digested superstition and mediaeval learning- that is, to represent to a certain extent the folk tradition of storytelling, of old oral tradition and not just Christian lucubration. It asserts that the *yuškariparik* was an aquatic siren, a monstrous Mischwesen compounded of dog, ass, crane, and woman, descended from Scylla⁽¹⁰⁾, Cain,

⁽⁹⁾ See WAYMAN 1997, who cites on pp. 39-40 the description of the rite of the Gandharva staff from P. K. N. PILLAI, *Non-Rgvedic Mantras in the Marriage Ceremonies*, The Travancore Devaswom Board, Trivandrum 1958, pp. 303-304.

⁽¹⁰⁾ There are several features of the monster relevant to the centaur. She has an aquatic association, and one with poison, and with seduction, and with cannibalism: the sea-god Glaucus loved her but could not win her, so he asked the witch Circe to enchant her. But

and Satan. Persian sea captains snared it and Iranian kings fornicated with it: it became the mother of heresy, bearing the inventor of the Pepuzian heresy. From her in turn were begotten other heresiarchs and sectarians- Mani, the Tondrakites, the Armenian Sun – and poplar – worshippers (that is, the late Zoroastrian *Arewordik*’, “Children of the Sun”), Simon Magus, and Šidar, the latter a being linked to the imprisoned apocalyptic hero-king Artawazd⁽¹¹⁾. Several features of Christianization of the primordial mythologem stand out in this narrative. The disruptive action of the Centaur-creature comes at the inception of Armenian Christian sacred history instead of at some other beginning- Greek wedding feast or Indian nuptial bed or Persian New Year. And it employs its powers of seduction to pervert men’s minds to heresy. So, this is the pattern of treatment of the myth of the Centaur-creature across a wide geographical area, essentially East-West, in which three or four important test-cultures are examined. Now let us consider how the myth, in a fully-developed form- embedded principally in a cluster of Iranian adventure stories adhering to the figure of a hero- might have spread, on a South-North axis, in one case possibly coloring another narrative of similar character with which it could have come in contact.

Persian sea captains, the Armenian story says, captured the Yuška-parik for their kings. It is a yarn with roots in the Sasanian era, like those of Sindbad in the Thousand and One Nights. Yarns can travel in clusters, showing up singly or together in new environments; so let us now consider the cluster of episodes to which the Iranian Gandarva tale belongs, and its possible route of migration. It was a very popular one, cited in several Avestan sources and repeated and elaborated in the Pahlavi texts. The Avestan hero Kərəsāspa once landed on what he thought was an island and cooked his midday meal. But the island was in fact a huge sea-monster- Aži Srvara, the Horned Dragon, the frightful (*sima-*), spitting poison (*višō.vaēpa-*), devourer of men and horses (*nərə.gar-, aspō.gar-*). The fire burned the beast, who reared up; and the hero slew him (Ys. 9, 9, etc.). He killed also Gandarəwa the golden-heeled (*zairi.pāšna-*), the submarine (*upāpa-*) monster, who rushed forth with

Circe loved Glaucus herself, so she poisoned the spring where Scylla used to bathe, and the poor girl became a monster with six dog-heads. Now a rock between Sicily and Calabria, she lures sailors with her voice, and then eats them. Scylla and her sister Charybdis personify greed and excess- again, cf. the Indian association of the *gandharva* with greed (and Grendel, too, *infra*): see Ovid, *Metam.* 14.17-74. In the Armenian text, we encounter a curious mixture of Classical learning in the author’s source, assuming that in mentioning Scylla he knew the details of her story, and folkloric naïveté.

⁽¹¹⁾ See RUSSELL 1993.

open jaws to devour the living world; then he slew all nine of the brood of Pathana. (One notes juxtaposition of Gandarəwa and serpent: in India the two are related also, for after Pārvaṭi's curse the Gandharva Citraratha falls from heaven to become the dragon Vrtra⁽¹²⁾). He slew also the stone-fisted young monster Snavidhka, who had boasted that he would yoke God and the devil to his chariot and drive round and round the world as soon as he grew up (Yt. 19, 35-44)⁽¹³⁾. Angra Mainyu created a *pairikā*, Xnathaiti, who clave unto the hero (Vd. 1, 10). The Pahlavi texts expand upon these themes: Kərəsāspa was immortal, but because of his disregard for the Religion a Turanian, Nihag, wounded him with an arrow while he slept, in the plain of Pešyansai, where he now slumbers till the New Year's day, Xurdād rōz of Fravardīn *māh*, at the beginning of the millennium of the savior Sōšyans, when he will wake finally to slay the arch-monster of Avestan and later Persian lore, the dragon-man Aži Dahāka (Bdh. 29.7-9, 33)⁽¹⁴⁾. In Armenian learned tradition the epithet of the latter, Biwraspi, lit., "of the myriad horses", is considered identical to the name of the Centaur at Peirithous' wedding. If indeed Centaur and Gandarva are related, then this collocation may be linked to another: in the *Šāh-nāme* of Ferdōsi it is none other than one Ganderev or Kondrov who is master of ceremonies at the court of Zohhāk, i.e., Aži Dahāka⁽¹⁵⁾. Kondrov sees Farēdōn seated on

⁽¹²⁾ See O'FLAHERTY 1976, pp. 110-111, citing the *Bhāgavata* and *Skanda Purāṇas*.

⁽¹³⁾ This absurd boastfulness seems a parody of hubris, and there are echoes in later Persian literature, in the *Šāh-nāme*: when at the drinking after a feat Esfandiyār (maybe, like the Centaurs, he has got too drunk) ... *az ān mardī-ye xōd hamī kard yād*, "kept on memorializing his own valor", Rostam rebukes him: *ma dān xwēš-rā bartar az āsmān*, "Do not think yourself higher than heaven!". See DAVIDSON 2000, pp. 99-121.

⁽¹⁴⁾ See EDULJEE 1983 and SKJAERVO 1989 for useful surveys of the sources in translation. In his 36th Letter, the Armenian scholar Grigor Magistros Pahlawuni (990-1058), expanding upon material known from Movšēs Xorenac'i, writes, *Gitem ew zBiwrasp i leārn Dabawand, or ē Kentorosn Priwdeay: oē' morac'ayc' zSpandiarn i Sabalanin kalow lerin, kam zmern Artawaz i cayrs Ararad i Masek'ohn* "I know Biwrasp in the mountain Dabawand, who is the Kentoros of *Priwdeas: I will not forget Spandiarn standing in the mountain Sabalan, or our Artawaz at the edge of Ararad in Masek'oh". Biwrasp is Bewarasp, "of ten thousand horses", an epithet of Aži Dahāka/ Aždahak/ Zohhāk known to Armenians as Biwraspi. He is believed to have been imprisoned by Farēdōn in Mt. Demavand. Xorenac'i renders the Arm. of Peirithoos in the gen. sg. as *Perit'eay*, and claims *Piwrīday* is the correct form of *Biwraspeay*, as he found "in a Chaldaean book". AMBARTSUMYAN 1998, 114, suggests *asp-* is to be understood as "Centaur"; and *biwr-*, by *piwr-*, with a patronymic *-id[ēs]* added. But the explanation of THOMSON 1978, p. 127 n. 7 is to be preferred: in the Arm. version of the *Alexander Romance* of Ps.-Callisthenes Piwrid is killed in the battle of the Centaurs and Lapiths. It seems to me the expression could be understood also as "the Centaur of Peirithoos", with an alternate form of the latter name perhaps confused with the name of the strongest of the Centaurs at the battle, Eurytion.

⁽¹⁵⁾ On Ferdōsi, see DUMÉZIL 1929, p. 75.

Zohhāk's throne, enjoying the company of the maidens Arnavāz and Šahrnāz. He serves a feast to the usurper, but later on mounts his horse and goes off to inform his master. So here, too, *mutatis mutandis*, the Centaur-figure is introduced in the context of feasting and of usurped and illicit love⁽¹⁶⁾.

The story of the Gandarw (Phl., *gndlp*) is elaborated in the Pahlavi *Rivāyat*: it dragged Kersāsp to the sea and he fought it for nine days. After he bound it and went to sleep, exhausted by the combat, it extricated itself, returned, and dragged his friends and family into the sea⁽¹⁷⁾. The same text relates that Kərəsāspa slew giant highwaymen (*rāhdār*)-they were so tall the sea came up to their ankles. This episode could have assisted the introduction of Kərəsāspa, named by his familial epithet Sām, into the apocryphal *Book of Giants*, on which more below. It is not clear what the Iranians thought the creature looked like; but in Sogdian the *ghantarf* (*yntrw*) was a sort of water sprite; in Šuyni, it means a monster, dragon, or werewolf.⁽¹⁸⁾ the latter, at least, a Mischwesen somewhat like the Greek Centaur, but more sinister. This werewolf type will reappear in the myths about the Slavic Centaur-being, Kitovras.

Kərəsāspa's adventure with the horned dragon corresponds to a well-known folktale type: sailors think a large sea creature to be an island and light a fire on its back, waking it. Most relevant to Iran is the story of Sindbad and the whale-island; to diffusion westwards in the Sasanian period, the narrative of Bar Ḥana in the Babylonian Talmud, to be considered presently. In the Parthian period, it is known in the Armenian area- to Lucian of Samosata, the father of science-fiction. It shows up later, with suitable permutation, and far to the northwest, in the legend of St. Brendan⁽¹⁹⁾. In the latter case it is possible that the basics

⁽¹⁶⁾ See BANU 1957, lines 2043-2142. In the commentary to this section of the *Šāh-nāme* the editors comment (p. 615: I translate from the Russian): "Kondrov- limping, lame, that is, going down the wrong path, incapable of distinguishing between good and evil. It is possible that we have to do here with a distortion of the primary name Kunderav, which can be associated with Indic Gandharva, Greek Kentauros, and Slavonic Kitovras. In some Armenian sources [I have not seen these and they do not specify them- J. R. R.] the name Kunderav is related to Zohhak. In this manner the demon who in ancient traditions fought against the Sun with Zohhak could have gradually receded into the background to become Zohhak's assistant- his housekeeper".

⁽¹⁷⁾ See WILLIAMS 1990, Ch. 18.

⁽¹⁸⁾ See SKJAERVO 1989 citing Morgenstierne.

⁽¹⁹⁾ In THOMPSON 1955, vol. 4, p. 143, under the category "The Wise and the Foolish: Absurd Misunderstandings: One Thing Mistaken for Another", is sub-heading J 1761.1: "Whale thought to be an island. Sailors light a fire on his back", with ref. to Dov Neuman [Noy] on the Talmud. On "Sindbād le marin", see CHAUVIN 1892-1922, vol. 7, p. 7, no. 373,

of the narrative migrated from the central regions of Christendom, since we deal with the hagiographical genre, and mingled with the existing Celtic oikotype.

In the Babylonian Talmud, there are several tall tales about the desert and the sea attributed to Rabba (bar Bar Ḥana), third century A.D., who lived in Sasanian Babylonia but also spent much time in the Land of Israel- that is, in the vicinity of the Mediterranean coast, where such stories might conceivably start their journey out through the Pillars of Hercules and north to the Celtic world. He might have acquired some of his gifts as a raconteur from his own teacher, R. Yohannan, who said he had seen the jewel-studded box in which the purple threads for the garments of the righteous were kept. The box is presumably in the sea, since it is guarded by the fabulous *karesa* fish⁽²⁰⁾. The latter is reminiscent of the Avestan *kāra* fish that guards the Tree of All Seeds. And Rabba's tales also have an Iranian flavor and locus: in *Seder Neziqin* of Tr. *Baba Bathra* he relates that he saw *Hormiz the son of Lilith running on the parapet of the wall of Maḥoza, so fast that a rider galloping on a horse could not overtake him. Why Lilith? Probably this has to do with the syncretism of religious images in the beliefs reflected in the practical magic of late Parthian and Sasanian Mesopotamia, where the king of the demons in one text on a magic bowl is the Iranian Bagadāna, "place of the gods". The latter would be holy, not demonic, to Zoroastrians (an Armenian temple-city, Bagaran, bears the name)⁽²¹⁾; so the evocation of Ahura Mazdā as the child of the most prominent demoness of the magicians – the child-stealing witch Lilith, against whom

with synopsis and references to Lane's tr. of the Thousand and One Nights, 79-85; and Lucian, *Hist. véritable*, I. See also BURTON 1934, vol. IV, pp. 2014-2016 (night 538). Sindbad and his companions land on an island where trees grow. But it is a beast, and their cooking rouses him. Sindbad is saved by jumping into a floating tub. In the next tale (night 539), Sindbad washes up on shore with a noble mare. The grooms of the place, who serve king Mihrjān (i.e., Mihragān, a Zoroastrian name, making the locus, again, pre-Islamic Iran), come when they hear their own horses neighing. Sea-stallions come out of the water to mount these mares. This latter theme, of the *babri*, or merhorse, mating with a terrestrial mare, is a standard fixture of the folklore of the Iranian peoples (see THACKSTON 1999, p. ii, and the Tale of King Ahmad, pp. 81-85, which interweaves the theme of Hippolytus- or Yusuf and Zuleika if you prefer), and provides the opening episode of the great *Kōroghlu* epic. I heard in June 1997 a local version of the tale in isolation told by a resident of Šahbayi, on the shore of lake Van, about the "king" of that town and the "king" of Gevaš on the lakeshore opposite Aht'amar island near ancient Armenian Ostan, which really did have its Arcrunid king once.

⁽²⁰⁾ See PATAI 1998, pp. 125, 127.

⁽²¹⁾ See RUSSELL 1999, p. 114 and n. 7, with refs. to S. Shaked's study of the magic bowl and to the Armenian sources.

talismanic texts are produced to this day – is not surprising in context, though that would not make it any less appalling to an Iranian. Another interesting aspect is that Hormiz (as a demon) is named by his mother, not his father. This is an Iranian feature: Ažī Dahāka is so named, and in Persian the greater child-stealing witch is called *mādar-e Āl*, mother of the demoness of puerperal fever (the Armenian folk-tales follow the convention, deriving it from Iran); and presently we shall consider a northern monster and his mother.

Rabba also saw a frog the size of Hagronia fortress (near Nehardea): a snake swallowed it; then a raven swallowed the snake and sat on a tree. This series of creatures devouring each other, with a hint of a monstrous evil, reminds one of the common folk pattern seen, in moralizing form, in the Passover hymn *Ḥad gadyā* (“One kid”) and in other Near Eastern traditions. He also said, “We travelled once on board a ship, and saw a fish whose back was covered with sand out of which grew grass. Thinking it was dry land we went up and baked, and cooked, upon its back. When, however, its back was heated it turned, and had not the ship been nearby we should have been drowned”⁽²²⁾. He speaks of another giant fish called the *gildānā*, whose name sounds as though it might be Iranian; but in view of the general setting of Rabba’s stories, it seems reasonable to suggest a Middle Iranian version of the legend of Kərəsāspa reached him.

In later Jewish tradition, Rabba’s story of the island came to be interpreted by Eastern European Jews as symbolic of the instability of life in the Diaspora: they think themselves settled on dry land, but the plain is a fish, their cooking fires disturb it, and it dives⁽²³⁾. Their Slavic neighbors seem to have adopted the theme from them, and it is perhaps partly through memory of the tradition that in recent times the rhyming name of the great fish, *Chudo-yudo-ryba-kit*, has come to be explained as “the miraculous Jewish fish of a whale”. But the sense of existential insecurity is, understandably, absent: the whale’s back sup-

⁽²²⁾ See SIMON-SLOTKI 1935, pp. 190-191 (= 73a-b, 74a-b); text in Moses GASTER, *Beiträge zur vergleichenden Sagen- und Märchenkunde*, «MGWJ» (1880-1881), pp. 1-107, repr. in Vol. II of his *Studies and Texts*, London 1928, repr. GASTER 1971, pp. 53 (1239)-57 (1243): “VII. Ein Fisch als Insel”.

⁽²³⁾ R. Samuel Edels, 17th cent., Poland, cited a Rabbinical tale: the Jews wander in the depths of the metaphorical “sea of exile” (*be-‘imqē metsulōt yam ha-galūt*) and come upon a great plain, where they settle, thinking the place to be an island, “for they thought they had found dry land and forgot they were in exile” (*sevūrim hēm de-yabāšā hava veleika galūtā*). But it turns out to be the back of a beast, and their fires disturb it. It rears up and throws them off. See GOBERMAN 2000, p. 27, citing HESCHEL 1985, p. 40.

ports a dreamy Russian village⁽²⁴⁾. In these two Eastern European cases, the type of *Kərəsāspa* and *Aži Srvāra* probably merged with the related motif, best known in the West from the book of Jonah but attested also in the Indian *Kathāsaritsāgara* and in Lucian, of an inhabitable whale, within whose belly there can be even whole cities and countries⁽²⁵⁾.

There is another narrative in Slavonic tradition meriting discussion at this point. We have seen how *Kərəsāspa*'s encounter with *Aži Srvāra* is followed by his battle with *Gandarəwa*. In Old Slavonic is attested *Kitovras*, a being whose name certainly derives from *Kentauros*, with contamination by the Greek loan *kit*, "whale". In a 14th-century apocryphon it is related that when Solomon ruled in Jerusalem, his brother *Kitovras* reigned at a place called *Lukor'e*, a (human) king by day, but transformed into a beast every night. Here is a *Mischwesen*, and one close to the modern Eastern Iranian sense of a *Gandarva* as a werewolf. This *Kitovras* decides to kidnap Solomon's comely wife, and sends a ship with a magician on board to accomplish the task. The latter gives the woman a sleeping draught. Solomon, thinking her dead, buries her; the mage exhumes her and absconds. Solomon learns of the deception, attacks his brother's realm, and secretly makes his way to his wife, who betrays him to *Kitovras*. Solomon is imprisoned and sentenced to death, but he gets word to his army, who free him. *Kitovras*, his wife, and the wizard are hanged on the gallows meant for him⁽²⁶⁾. Here is a tale of uncontrolled sexual passion, kidnapping, and violation worthy of the wedding of the *Lapiths*. Poison plays a role in myths about Centaurs: *Herakles*, after a similar pattern of erotic betrayals, is killed by the poisonous blood of the Centaur in which his shirt has been soaked⁽²⁷⁾. The

⁽²⁴⁾ The story, retold by P.P. Yershov in *Konyok-gorbunok*, was much loved by Pushkin, and illustrations and sculptures of the whale-village are very popular in Russian folk-art and children's books: see SOLOMATINA 2001, figs. 237, 250, 252.

⁽²⁵⁾ See PENZER 1924, vol. II, p. 188 (ch. 25.29): in the Story of the Golden City, the Brahmin *Shaktideva* is swallowed by a big fish after a shipwreck. He comes alive to the island of *Utsthala*: the natives catch the fish and out he comes. Penzer (p. 193 n. 1) cites Lucian- a fish swallows a ship, and the sailors find whole countries within. As to Jonah, there seems little doubt that this wry, Hellenistic Jewish satire was constructed on the armature of a sea story- likely as not an Indo-Persian one- and it is pleasantly ironic that piety has made a 360-degree turn to the sources: BICKERMAN 1967, pp. 3-4, observes that "in modern times exegetes have often tried to vindicate the episode by quoting sailor yarns".

⁽²⁶⁾ VESELOVSKII 1872, pp. 140-141.

⁽²⁷⁾ This aspect of the Greek myth was known to Christians, including Armenians, from the Scholia to the first Invective against Julian of Gregory Nazianzenus. *Nessos*, one of the *hippokentauroi*, fell in love with *Deianeira*, the wife of *Herakles*, and wanted to sleep with her. *Herakles* shot *Nessos*, who when dying gave some of his blood to the woman, saying it was a love-charm: if *Herakles* ever loves another, she should smear his clothes with it. The

Avestan dragons exude poison (*viš*); it is possible that the word for an aquatic monster that becomes the general term in Armenian for a dragon, *višāpa*-, contains the term for poison, though the etymology is disputed. Veselovskii suggested that the Greek original of the text on Kitovras was carried north into the Slavic world by Bulgarian Bogomil and Armenian Paulician sectarians; and in its origins the tale looks like a Jewish *midrash*, concluding on a necessary note of vengeful justice, itself reminiscent of the fate of Haman and his sons in *Esther*. It would have been based originally upon a Greek tale, with rich Oriental admixtures. And the introduction of Solomon is to be expected: the storied king, in the *Antiquities* of Josephus and elsewhere, accretes the exotic and adventurous as a magnet attracts bits of iron to itself.

Veselovskii's suggestion that sectarians in particular liked such stories is sound, and is strikingly borne out by the treatment of it in a work of the sectarians *par excellence*- the Manichaean version of the *Book of the Giants*. In the Avesta, Sāma Kərəsāspa bears the epithet *naire.manah*-, "manly-minded", and in later literature he is named often by his clan-name, as Sām, the epithet Narīmān hypostatizing into another hero. So in the text of the *Book*, known in Middle Persian and Sogdian, the combat of the Kərəsāspa cycle becomes the struggle of the hero Sām (who takes the place of Ohya/Ogias the dragon-slayer) against Leviathan⁽²⁸⁾ – here the Iranian hero keeps his name but the sea monster gets a Biblical Hebrew one.

There is another Slavonic tale, attested at least from the 14th century, in which king Solomon seeks out Kitovras, who alone knows about and is able to help the king to catch the *shamir*, a creature of Midrashic literature by whose help alone the stones of the Holy of Holies may lawfully be cut. Here Kitovras lives in the desert and is caught with iron chains inscribed with a spell bearing God's name. Throughout the story, Kitovras demonstrates uncanny foresight and proverbial knowledge.

hero later fell in love with Iole, so she smeared the blood on his shirt, to return his love. But it was man-killing, and the garment burst into flame as he put it on. He threw himself into the river but succeeded only in heating the water as he died, giving Thermopylae its name (See BROCK 1971, p. 84, where the Gk. *hippocentaurōn*, gen. pl., is Syriac *qnt'rw*; the Arm. is *kentaurosac'n*, see MANANDIAN 1903, p. 246). Another version has Nessos ferrying travellers on his back across the river Evenus. When she is his passenger, the Centaur tries to rape. Deianeira midstream, and Herakles shoots him (BARTHA 1994, p. 15). In the latter story the Centaur retains an aquatic association. The ironic, nasty trick with the blood has one specifically Iranian association in Greek literature: the spiteful gift of the deserted Medea to Jason's new wife.

⁽²⁸⁾ See W. SUNDERMANN in *Encyclopaedia Iranica*, Vol. 10, pp. 592-523, and SKJAERVO 1995, pp. 198-199.

But he is also very dangerous: when released from his bonds, he strikes Solomon once with his wing and sends the king flying to the very boundary of the Promised Land, after which Solomon commands sixty strong youths to guard his bed⁽²⁹⁾ – apparently he fears Kitovras will attack him as he sleeps. The tale, which plays, like the previous one cited, upon the famous, perennial theme of Solomon's perilous occult activities and control of demons, stresses the Centaur's indispensable wisdom. This aspect is not present in the Kərəsāspa cycle, where Gandarəwa is wholly demonic, but we have seen it variously refracted through the Greek, Indian, and Armenian treatments. A familiar feature to the Iranian type, though, is the nocturnal danger Kitovras poses, a feature we will return to presently in the consideration of another text.

Rabba's original source was probably Iranian, and his narrative shows how the Avestan and then Pahlavi story could travel as part of a cycle of salty yarns told in the sea of the text of the Talmud. And the Jewish *midrashim* of Late Antiquity, by direct transmission amongst migrating Jews and indirectly, through Greek translations employed by Christian sectarians, moved far north, into the mediaeval Slavic world. Another powerful and likely vector for the further transmission of the story of the fish-island would have been the popular *Alexander Romance* or narratives derived from it and clustering around it, where the "monstrous races" and fabulous beasts of legend are especially popular. In the Greek text the fish-island the Macedonian conqueror sees on his travels is called *aspidokhelōnē*, "shielded tortoise" – hence the *Aspadoklōni* in an Ethiopic *Physiologus*. In the Ethiopic version of the *Romance* the "beast of the monsters of the sea" is to be found in the sea of Prasiake (from Skt. *pārasika*-, "Persian"?), or Yōmēda, in India⁽³⁰⁾. The locus is right; and perhaps a barbarian deformation of the name yields *Jasconius*, the whale-island of the *Navigatio Sancti Brendani Abbatis*. If the name is barbarous, the creature is not: Brendan's companions pull up on a black and treeless isle in the mid-Atlantic, they light a cooking fire, and of

⁽²⁹⁾ *Skazanie o tom, kako yat byl Kitovras Solomonom*, from the Kirillo-Belozersk collection No. 11-1088, of the scribe Efrosin, 15th century, with a lacuna filled from No. 68-1145 of the same collection, in *Izbornik* 1969, pp. 370-375 and note, pp. 746-747. This story was popular as part of a cycle about Solomon by the 14th century in northeastern Russia. In a retelling of the story by the 20th-century Russian writer Alexei REMIZOV 1947, Solomon eats too much at a *Persian* supper. There are Masonic touches- the architect Hiram is mentioned specifically, and the pillars Jachin and Boaz are described- and Arab, Armenian, Persian, Indian, and Chinese captives at the court of the Israelite king lend added Oriental exoticism to the tale.

⁽³⁰⁾ See BUDGE 1896, vol. II, p. 143.

course the island starts to move. St. Brendan explains to his frightened men that it is the fish Jasconius. Years later they land on it again, but have the courtesy to prepare a cold picnic lunch. The appreciative fish returns to them the iron pot they had abandoned in their previous flight⁽³¹⁾. It is all very Franciscan. In the Armenian version of the *Alexander Romance*, the island is called simply *kitos*, i.e., a whale⁽³²⁾. The *Alexander Romance* contains also an episode (III, 17) in which people tell Alexander there is an island with an ancient king's tomb, full of gold. But the island turns out to be a monster, and it dives: this incident perhaps combines the myth of the horned dragon with another about treasures guarded at sea – cf. R. Yoḥannan's box, above.

The Greek Centaur, Indian Gandharva, Armenian Yuškparik, and Iranian Gandarōwa are differently treated in the contexts of their respective cultures, in a manner consistent with and parallel to the various treatments of the mythologem of the Black Youth, for example, in India, Armenia, and Greece; and in the present case also the Centaurs and Gandharvas seem to go back the same Indo-European mythological creature. The attestation of the Centaur in Greek mythology and art is functionally complex and rich with associations to other beings, indicating that it figured in a series of tales; and in Iran the battle with the Gandarōwa forms an incident in a series of adventure tales that cluster around the hero Kərəsāspa. One of these latter tales belongs to the prominent type of the big fish thought to be an island; and from the altered versions of this Persian oikotype that entered the Talmud, the Jewish Midrashim at the point of origin of the Slavonic Kitovras cycle, and the extra-Biblical, sectarian *Book of the Giants*, it appears that from the Iran of the Sasanian period these tales travelled as a series of which this or that element appears in the texts. As seamen's yarns, too, they are in the Persian Sindbad cycle. Localized to India and Persia in the *Alexander Romance*, the fish-as-island motif may make its way, with permutation, to the Celtic hagiography of Brendan. Note that the vexatious problem of the etymology of the name Centaur or Gandharva, perhaps insoluble, does not materially affect the plain and obvious identity of the two creatures on a primordial level of their mythological development; and still less would the right solution of that problem matter in Late Antiquity and the Early Middle Ages, when the facile similarity of

⁽³¹⁾ See ELLIS 1996, p. 193.

⁽³²⁾ See SIMONYAN 1989, pp. 282-284: the barbarous Indian ichthyavores who tell Alexander of the fish-island are illustrated, with the Macedonian hero, in Venice Mxit'arist MS. 424, p. 186 (= fig. 52 in MACLER 1928), but there is, disappointingly, no whale shown.

names would be sufficient for the identification of a creature whose name was heard in a foreign tale with another known at home whose subsequent visage in literature might then be altered in the context. So the present reconsideration of the Centaur problem is now to encounter a poem whose locus of composition was Denmark- also to the north of the Irano-Greek world, and midway between Russian Kitovras and Irish Jasconius. It contains a monster very like the *gandarəwa* of Kərəsāspa as described in the Pahlavi literature of the Sasanian period, who has a somewhat like-sounding name.

The Arabs of Andalusia, who knew their Vikings, called the Scandinavians *majūs*- Magi. Nobody knows why. Was it their alien religion, their commercial contacts with Persia, a confusion based on a Celtic word for a town, or simply a known designation, reapplied to Western circumstances, for a society without the Book with which Moslems came into contact?⁽³³⁾ But the Danes sang a poem about a hero, Beowulf. He had killed nine⁽³⁴⁾ sea-monsters in single combat off the Finnish coast before coming to Hrothgar's hall, Heorot, which the aquatic monster Grendel would stealthily attack by night. And it is just the hall he attacks, not private houses, say, or boats: the hall, in Germanic society, is the equivalent of the institutions of guest-friendship and marriage into which Greek Centaurs erupt. The monster is part human, like the Centaur, but he lives outside the artificial construction of society exemplified by the hall. In his ferocity he can invade it, but he cannot be part of it. His very matrilineality- a feature I have noted above, and one which may be a Near Eastern aspect- makes him functionally alien to patrilineal human society⁽³⁵⁾. But back to the story. Beowulf comes, engages, and fatally wounds the half-human marauding cannibal, a real *Mischwesen*, which slinks back to its mere to die. Praise songs begin

⁽³³⁾ See GABRIEL 1999, p. 41; and PRITSAK 1990, on Celtic toponyms. The functional explanation I cite last, though, seems to be the best, and was argued by Roberto SCARCIA 1992. I am indebted to the author's proud father, Prof. Gianroberto Scarcia – one of the enduring and delightful memories of the Rome conference will be the pleasure of making his acquaintance – for bringing this important study to my attention.

⁽³⁴⁾ Note that in the *Zam Yazad Yašt* (Yt. 19), verses 38-44, Kərəsāspa kills *all nine* of the brood of Pathana.

⁽³⁵⁾ DUBOIS 1991 compares the Centauromachy to the Amazonomachy- a matriarchal society was in the Greek imagination uncanny and dangerous in many of the same ways Centaurs were. One notes the locus of the Amazons in both the Iranian East (or Irano-Scythian Northeast) and barbarous West. The latter placement was, I think, later, and reflects the same kind of process of transference that, *mutatis mutandis*, led Arabs to call Vikings Magi, or, indeed, relocated the ancient Eastern City of Bronze in the *Thousand and One Nights* to the Maghreb (see RUSSELL 1984).

immediately: you are still in the Indo-European world, though it is the land of the midnight sun, not the realm of the Parthian *gōšān*⁽³⁶⁾. Their joy is premature – Grendel's mother attacks while Beowulf is away resting and the Danes in Heorot are *asleep*. (We have been here before!) But he returns and defeats her. Any etymological association of Grendel and Gandharva is, according to de Vries, "lautlich unmöglich"⁽³⁷⁾, and explanations of the name tend to the base *grand-*: a meat-grinder, maybe a storm-drain⁽³⁸⁾ – the creature is a kind of nightmare combination of Moulinex and Jacuzzi. The Grendel family have a particular feature that links them with Centaurs, beyond their aquatic haunts and propensity to invade and disrupt the ceremonies of civilization: their blood makes swords melt- a feature which one Germanist finds not particularly Germanic. He cites Pliny, who claims, helpfully if we are looking for a Centaur, that equine blood is corrosive⁽³⁹⁾.

The *mother* of Grendel seems slightly odd in a Germanic context but normal in an Iranian and Near Eastern one, where there is not just the *āl*-monster but the *mādar-e āl*, the Ferdosian *mādar-e fōlād-zareh*, etc. But the poet helpfully provides the genealogy of the Grendel brood: they are descendants of Cain. Or of Ham- the two names sound alike in Latin, and the two characters are both outcasts, one for his violence, the other for his base lewdness- and that was enough for the mediaeval popular and exegetic imagination to fuse them⁽⁴⁰⁾, which is probably also what happened when stories of Centaurs and Gandarvas enjoyed reunions. And how did Cain get there? Christianity, happily, did not come to Britain without its accumulations of apocrypha. There is a 25-

⁽³⁶⁾ The praise song is performed by the bard before Beowulf's peers- that is, in the same hall that was under attack by the monster. It is precisely social acclaim, conferred thus, that is of greatest value in the "shame" society of the Indo-European heroes, ensuring that the hero will receive not only immortal fame, but the lion's share of monetary reward, out of which the *aidos* is to be paid. The song fulfills a part in the tripartite cycle as well: The hero performs his deed (1), the bard sings his praise (2), and the hero receives the acclaim and wealth enabling him to pay the bard his reward (3), ensuring that the cycle will be repeated. In this connection, it is significant that in Ossetic the same word, *kuvd*, is used both of "prière" and "banquet", probably through semantic contamination, rather than etymological identity: banquets were the occasions where the bards sang the praises of the exploits of the Nart-heroes (see CHRISTOL 1998).

⁽³⁷⁾ *Altmordisches Etymologisches Wörterbuch*, 1929, s.v., cit. by LIBERMAN 1994, p. 22. I am grateful for this reference, and for a very enjoyable afternoon talking about *Beowulf*, to my Harvard colleague, Prof. Joseph Harris.

⁽³⁸⁾ LIBERMAN 1994, pp. 141, 162.

⁽³⁹⁾ WHITMAN 1977, p. 276, citing Pliny, *Nat. Hist.* 28, 41 and *Beowulf* 1605-1617.

⁽⁴⁰⁾ See QUINONES 1991, p. 53, on the confusion of Chaym (Cain) a dñHam (Cham) in *Beowulf*.

line fragment of Enoch in Latin, probably from eighth-century England. It concerns the Giants already familiar to us. They are cannibals, blood-drinkers, corporeal beings and evil spirits, and their names have the Hebrew theophoric suffix *-el*⁽⁴¹⁾. This could conceivably have been thought (wrongly, to the linguist; but usefully, for us) by the anonymous author of *Beowulf*, who muses on the Old Testament theme of the war of the Giants against Heaven, to explain the ending of Grendel's name. One recalls the Armenian Centaur, Yuškaparik, is descended from Cain, too. So even if Grendel was a purely Baltic monster, it would seem that Persian stories of sea-monsters, wafted north on the vector of Enochian books, and in the yarns of traders and seamen, reached the receptive ears of a people whose Germanic culture was, after all, distantly kindred to India and Iran. A *Centaur-el (!) might have seemed to them an echo of their own Grendel; the descent from Cain, in a poem that took final shape in a society in the first flush of Christianization, echoes Armenian developments. And in *Beowulf* the epithets *graedig* and *gīfre* "greedy" are associated with the race of Cain, Grendel's race. It does no harm that, next to Grendel, they are nicely alliterative, or that Jerome and Isidore both glossed the Hebrew Cain as "possessio"⁽⁴²⁾. All of it is grist for greedy Grendel's mill; and one recalls the Indian gloss of Gandharva from a root meaning "to covet". Gandarvas and Centaurs are lusty- they are greedy.

There is another aspect of *Beowulf* that may display fertilization from a source that is ultimately Sasanian. I have noted that Kərəsāspa's adventures form a series: the contests with the fish-island Aži Srvāra first, then with the humanoid monsters Gandarəwa and Snavidhka, and, at the end of the world, with Aži Dahāka. There is a triad in both the Iranian and Germanic epics, and even if episodes from the former have remotely influenced the latter, then it must still be admitted that such a tripartite division of exploits, even of the ages of man, must have been implicit in both poetic traditions *ab initio*- facilitating fertilization, perhaps, by a kindred cycle, but also making it more difficult to assert that the influence has occurred. *Beowulf* does battle with whales and other sea-monsters first, then with Grendel and his dam, and finally with a dragon. This third combat, though successful, brings his death- like the storied third wave that makes storm-tossed ships founder, that drowns sailors. And it is a salient feature of Germanic epic that the conclusion is frequently pessimistic. For Zoroastrian Iran this cannot be the case,

(41) See MELLINKOFF 1979 and KASKE 1971.

(42) See AMSLER 1979.

though, so Kərəsāspa's last combat, against the direst dragon of them all, is transposed to a time after his personal death- to the age of the resurrection. In the Pāzand Jāmāspī, Aži Dahāka (Bewarasp) emerges from his long imprisonment in Mount Damāvand and offers Kərəsāspa friendship. The hero responds by offering the dragon-man the Good Religion of Mazdā-worship, so that they may rule the world together, but Bewarasp refuses. Kərəsāspa smites him, and the villain begs him to stop, since they can yet rule the world together, but the former shuts his ears to temptation and slays him. This Zoroastrian formulation of the episode recapitulates, in a kind of cosmic ring-composition, the same temptation of the Prophet Zarathuštra himself in the *Vīdēvdāt* by the archdemon Angra Mainyu (who mentions Aži Dahāka as Vadagana, the latter's *matronymic*, significantly). Temptation did not work at the beginning, nor does it at the end, and, thanks to this religious recasting of an earlier epic narrative, Creation is saved from evil. There is a variant in the *Jāmāsp-nāme*: Kərəsāspa makes his offer thrice, and at the third asking the arch-monster accepts the Mazdean creed and evil vanishes. This variant reflects the same ambiguity that pervades Zoroastrian eschatological doctrine: what appears to be the earlier teaching affirms that the souls of the wicked will be utterly eradicated at the end of time. Later, when Zoroastrianism had become a national faith with no propensity to seek converts, one could scarcely condemn fairly to eternal damnation adherents of other religions who had never been given a chance to follow the truth, so a later doctrine holds that their souls will at the end be purified and redeemed, if painfully. It is typical of the conservatism of the Iranian faith that the two, mutually contradictory, doctrines, were both kept in texts.

Perhaps before its treatment within the Zoroastrian tradition, the Kərəsāspa cycle had concluded with the killing of Aži Dahāka and the death in that last, greatest, battle- the third of his cycle- of the Iranian champion. This hypothetical ending of the cycle in the early period of Indo-Iranian poetry would, then, have been most similar to the actual ending of *Beowulf*, at the end of the living age of the Indo-European oral heroic poetic art, at the opposite extremity of the Indo-European world. So I suggest that the Pahlavi Kərəsāspa cycle current in Sasanian times might have enriched the character of Grendel specifically and the analogous structure of *Beowulf* itself generally, providing incidents such as the attack during the hero's sleep to a tale with ancient Indo-European roots of its own in which key Centaur-like features and a similar deep structure were already present.

The oikotypes of the rich and polyvalent mythologem of the Centaur meet and mingle, change in transmission, become endowed with Biblical trappings, travel far. In the Mediterranean world of early Christendom, the Centaur seems to have succumbed to the power of the Nazarene. Jerome in his *Life of St. Paul* recounts St. Antony's journey through the desert in search of the Apostle. Around midday he sees a *hominem equo mixtum*: "the fancy of poets name this creature a hippocentaur", explains Jerome. The Christian asks it for directions; and though it can utter only "barbarous sounds" – the Logos has, plainly, made nonsense of the old pagan speech that once imparted the secrets of natural wisdom to Achilles and Prometheus⁽⁴³⁾ – it points the way with its right hand, flees, and vanishes. A satyr appears later on, also – but all these creatures have been reduced to mere signposts and pets by the holy men of God who have made of the desert a city. The Centaur has become, in the formulation of Patricia Cox Miller, a "hyper-icon of the desert"⁽⁴⁴⁾. Except as a sort of monastic accessory, the Centaur in the climes of its birth is mute, and powerless.

But not everywhere: it survived long, in the northern parts whither this investigation has pursued it. In the early twentieth century, Nikolai Klyuev addressed a love poem to that most amorous, anarchic, and Centaurish of seductive singers and heretics, the fallen angel, Sergei Esenin, where the Centaur is no pallid hyper-icon, but a real one, gleaming with the golden light of erotic energy: *Belyi tsvet Serezha,/ S Kitovrasom skhozhi,/ Razlyubil moi skaz!// On prishelets dal'nii, Serafim opal'nyi,/ Ruki- sviitki keryl./ Kak k prichast'yu zvony,/ Maminy ikony,/ Ya ego lyubil.* "Shining white Seryozha,/ Who art like unto Kitovras,/ Lovest thou my song no more!// He is a wanderer come from afar,/ A Seraph fallen in disgrace:/ His hands, pinions furled./ And as the clanging Communion bells chime,/ My mother's icons' golden shine,/ So once he was the true love of mine"⁽⁴⁵⁾. And that warm, wistful image of the powerful creature is a good one with which to part from him.

⁽⁴³⁾ This is perhaps their nadir; and by the time Dante heralds the rejuvenation of the Classical heritage, Chiron and his company are, though serving as guards in hell, articulate once more (*Inferno* XII.64 f.).

⁽⁴⁴⁾ See MILLER 2001.

⁽⁴⁵⁾ KLYUEV 1977, pp. 334-335, from the cycle "Poetu Sergeyu Eseninu". MOSS-KARLINSKY 1997, p. 151: Klyuev, born 1887, was a peasant poet, and gay. He courted Esenin, who committed suicide in 1925, and was himself arrested and exiled in the great purge of 1937. After his death his ex-lover Nikolai Arkhipov kept his unpublished poems and letters, but these were lost when Arkhipov was arrested also. Esenin had dedicated some poems to Klyuev. They broke up at the time of the October Revolution of 1917.

SOLOV'I, SOLOV'I...

James R. Russell

The Old Persian text of the inscription of Darius I at Behistun, in which the new king seeks to justify his seizure of power with the claim that he has quelled illegitimate uprisings in all the satrapies of the Achaemenian Empire, contains a genealogical passage in which the royal line is described as *duvityaparana-*, “having two wings”, and the rather defensive assertion is made that the family have been kings since the memory of man runneth not to the contrary. Darius belongs, as one might expect, to the branch that has not yet held power.

The Pythagoreans disliked the number two, as a departure from sturdy unity—a mathematical expression, as it were, of the fall of nature. Many epic heroes, and some kings, find virtue in mixed parentage: Digenes Akrites, the “Two-born Border-lord” of a Byzantine epic that took shape in the region of Melitene (Tk. Malatya), is part-Greek, part-Arab; Antiochus, king of Commagene, who lived a few miles away and a millennium before, boasted of two ancestral lines, Achaemenian and Macedonian. But dual parentage seems to make its progeny unusual, too—to set them apart from the common run of man, from straight lines. This paper has two wings; but at least there is one bird, the nightingale, between them—and both parts have to do with that bird’s particular feature and virtue, his voice. “Rose is a rose is a rose,” said Gertrude Stein famously of things that are the same and different; and this expression should shade and alter the intention of my title, which means “Nightingales, nightingales” and is culled from the first line of a famous Russian song of the Great Patriotic War of 1941-1945. The singer pleads with the bird not to torment the soldiers with longing (*toska*) with its song. But as we shall see, the nightingale’s voice can have all kinds of powers even as it sings its ever-altered songs; and that, indeed, is what poetry is about. A nightingale is a nightingale is a nightingale.

The first part of the essay deals with an Armenian spell, an East Mongolian shaman's chant, and a Russian heroic ballad. The first two texts deal with eagles—supernatural ones whose most prominent aspect is their powerful voice. I will suggest the common origin of the spell and chant in Indo-Iranian mythology, and trace then its transformation in Russian tradition, where a bird whose voice is its main feature is most likely to become a nightingale: the *Solovei-razboinik*, “Nightingale-robber” whose disastrous encounter with the folk hero Il’ya Muromets is the subject of one of the most popular and oldest of the *byliny*.

The second part considers this Russian nightingale further. Its song is seen as analogous to human poetic speech, in particular to the kind of speech—heroic epic—that confers glory on both the bard and the men of whom he sings. I will approach this fame-conferring nightingale through the 12th-century *Slovo o polku Igoreve*, or “Song of the Campaign of Igor” and the intricate work of its most gifted translator and interpreter, the 20th-century Russian-American poet and writer Vladimir Nabokov.

ARMENIAN SPELLS

The first text here to be examined is a spell for healing, the first part of which is a historiola. It is fairly common in Armenian *hmayils*, or magic scrolls, about which a few general remarks are in order. These are generally several yards long and two to six inches wide, depending on their intended use: the smaller ones were made to be worn on one's person; the larger ones, to be kept at home. They contain diverse prayers; since one of the most frequent texts is the narrative of the conversion of Cyprian of Antioch, *hmayils* printed as booklets at the present time by Armenian Church publishers and others usually bear the title *Kiprianos*. Veneration of the Holy Cross is a particularly conspicuous feature of Armenian worship; so pronounced, indeed, that other East Christians unkindly disposed toward Armenians were wont to decry this propensity as idolatrous. *Hmayils* generally contain a prayer consisting of an invocation of the power of the hundreds of elaborately-carven stone crosses

(*xačkars*) that mark sacred sites across the vastness of the Armenian highlands. This text is frequently written out in the form of cross-hatchings that form innumerable crosses all by themselves.¹ Another important text in these scrolls, and one that is frequently, though crudely, illustrated, is the spell against the child-stealing witch Lilith, called *Al* or *Ēpta* in Armenian.

The spell to be considered here is directed against a demonic eagle: four versions are given below. The first comes from a MS. of 1453, the *Atoṭagirk* [Prayer Book] of V. Marafači, with the title “Atoṭk amenayn čel xoči” [Prayer against every kind of wound].²

*Caṛ mi kayr i mēj tiezerač,
Oč čiwł uner ew oč tak ew oč terew.
Arciw mi nster i veray noray,
Oč otn uner, oč fēw ew oč glux:
Tesanein tiezerk, lsein ararack, hiačan hreštakk...*

*Kalan kapečin zna ew asen,
Ov es du?
Ase, es em or ertam mtanem yazgs mardkan,
zMisn utem, zariwnn ccem, erku ačāčn xawar berem...*

*Ase čna hreštakn, erd! [sic] yanvayr vayri daštn,
Ur oč goy hawu jayn, nist i veray višapin gagatann,
zMisn ker, zariwn cce, erku ačāčn xawar ac,
Ew oč mardkan: čunis išxanutīwn merjenal
I caṛays Astucoy...*

¹ On Armenian veneration of the Cross and its reflection in modern literature see now J.R. Russell, *Bosphorus Nights: The Complete Lyric Poems of Bedros Tourian* (Harvard Armenian Texts and Studies 10), Cambridge, MA: Harvard University Press, 2006, tr. and discussion of the poem *Manukn ar Xač*, [The Child to the Cross].

² Partially cited by Fr. Vardan Hačuni, *Երկամուկ չին Հայոց մէջ* [Spells in Ancient Armenia], Venice: S. Lazzaro, 1932, 216-217. Given the misspelling of imperative *ert*’, “go!” as *erd*, with the letter *da* pronounced *t*, it is most likely the text was copied in Western Armenia or Cilicia.

There was a tree in the midst of the universe
 That had no branch, no bottom, and no leaf.
 An eagle sat upon it
 Who had no foot, no wing, and no head.
 The universe saw, the creatures heard, and the angels
 marveled...

They seized and bound him and said,
 "Who are you?"
 He said, "I am the one who comes and goes among the
 races of men;
 I eat their flesh, I suck their blood, and bring darkness
 upon their eyes twain..."

The angel said to him, "Go to the plain in the place of
 no place,
 Where there is no voice of a bird: sit upon the dragon's
 brow
 And eat his flesh, and suck his blood, and cast darkness
 upon his eyes twain— but not on men's.
 You have no power to come nigh this servant of God..."

The second text comes from the first Armenian printed
 book (Venice, 1512), the *Urbatagirk* [Friday Book], which is a
 collection of prayers and spells.³

³ The book was reprinted at S. Lazzaro, Venice, in a facsimile edition, in 1975. The font, as one might perhaps expect of a first effort, is primitive; and the meaning of the printer's device, an orb and cross with the letters DIZA, remains a mystery. Indeed, following the printing of a collection of lyrics [*Tataran*] and a treatise on the calendar [*Parzatomar*], the press seems to have entirely ceased to function. Nor was it run, it would seem, by men of very high learning: the word *čiwł*, [branch] is given as the dialect form *čel*; and the factitive *pakasečucanem* [I cause to diminish] is given as the semi-colloquial *pakasečnem* (without the marker *kě* of the present and past continuous verb of Western Armenian).

A written spell against every kind of affliction.
Take a steel knife and three nails, and make the
sign of the Cross over the wound, and recite this
*prayer.

There was a tree in the midst of the earth
That had no branch, and no leaf, and no root.
An eagle was seated upon it,
Who had no head, and no wing, and no feet.

They put questions to that eagle and said,
“Who are you, seated on that tree,
Which has no branch, and no leaf, and no root?”

That foul eagle said, “I go and sit upon the head of man.
I eat his flesh, I suck his marrow, I lessen the light of his
eyes.”

The angels and archangels heard that. They
commanded, saying:

“We bind you by the 365 angels who are in the heart of
the sun,

Whom neither angels nor archangel know, but only the
Father.

And again we bind you by the 365 angels who are in the
midst of the sea,

Whom neither angels nor archangel know, but o
Father.”

And again they said, “We bind you

By the harp of David,

By the ring of Solomon,

By the tablet of Moses,

By the robe of Aaron,

By the napkin of Christ,

By the sweet milk of the Holy Virgin,
By the four nails of Christ that were baptized by the
blood of the Lord.

I bind⁴ you by the binding of Peter and Paul,
By the Transfiguration of Christ on Mount Tabor,
And by the thrice-holy light that shone on the immortal
brow of Christ.

You do not have power to grow and conceive,
To grow strong and harden.
But dry up, vanish, turn to naught by the word of our
Lord Jesus Christ.”
I read this writing; Jesus Christ is the medicine. Amen...

The third version comes from a talismanic scroll a little over three inches wide and four yards long, “on heavy paper of considerable antiquity”, that was tightly rolled so as to be worn by its owner. The early-20th-century American armenologist Jane Wingate obtained it, at the instance of Prof. Frédéric Macler, from Prof. V.H. Hagopian of Anatolia College, Marsovan, in 1913: Hagopian, she notes, died a martyr’s death a few years later on a death march⁵ in the Armenian Genocide.

⁴ *Kapem*, 1st pers. sg., is probably a typographical error for pl. *kapemk*.

⁵ It is to be remembered that these texts belong to a folk culture that was within living memory almost entirely erased from the face of the earth. Since one is to discuss presently some recent methodologies and constructions of culture with reference to the case of the Armenians, it is relevant to recall how Prof. Hagopian—and perhaps 1.5 million other Armenians—died. In 1915, using the war as a cover and pretext, the Turkish nationalist government of the Ottoman Empire executed its plan to exterminate the Armenians. Armenian civilians in central and western Anatolia were killed by being driven on long marches, without shelter, nourishment, or protection from bandits, into the Syrian desert. Those who did not perish on the road or drown in rivers were left in the empty wastes of the Deir ez-Zor district to die, or were herded into caves and burnt alive. Young men were generally drafted into the Ottoman army and killed through slave labor or simply by being dispatched with blunt instruments. On the Pontic coast, Armenians were herded onto barges, which were dragged out to sea and torpedoed. In the east, where there was some

Wingate does not provide the Armenian text, so only her English translation is cited here:⁶

Another writing concerning a devil.
 In the land there was a tree
 which had neither branch nor leaf
 nor root. And upon it was seated
 an eagle having neither head nor
 feet. Questions were asked the eagle, saying,—
 Why art thou sitting upon a tree
 which hath neither branch nor leaf nor root?
 The fowl eagle said:—I go and sit
 upon the head of a man, devour his
 flesh, suck his brain, put out
 the light of his eyes.
 The angels and the archangels,
 hearing him, said:—Satan, we do
 bind thee by the three hundred and
 sixty-five Saints who are in the
 heart of the earth, whom neither

possibility of escape to Russian Armenia or of rescue by the Christian army of the Tsar, swifter and more drastic measures were taken to assure the extermination of the Armenian people, such as the herding of the population into barns, which were then set on fire. Turkey received assistance from its German allies: one 16-year-old soldier named Höss evidently remembered his youthful training a generation later, when he served as commandant of the Nazi concentration camp at Oswiecim/Auschwitz. Raphael Lemkin coined the term “genocide” with reference to what was happening to the Jews in the Second World War and what had already happened to the Armenians, in the First.

⁶ [Mrs.] J.S. Wingate, “The Scroll of Cyprian: An Armenian Family Amulet,” *Folklore* 41/2 (30 June, 1930), 169-187. Both Macler and Wingate were pioneers in the study of Armenian medieval vernacular literature, oral heroic epic (the National Association for Armenian Studies and Research, Belmont, MA, possesses an unpublished typescript of the translation by Wingate of the Sasun Epic), folklore, folk religion and magic. My articles on the magical text *Vec' hazareak* [Book of the Six Thousand], the *tukh manuk* (the “Black Youth” of the lists of Crosses in *hmayils*) and similar topics owe much to these great scholars of the past. See J.R. Russell, *Armenian and Iranian Studies [=AIS]* (Harvard Armenian Texts and Studies 9), Cambridge, MA: Harvard University Press, 2004.

the angels nor the archangels do know, but only the Father. And, again, we bind thee by the three hundred and sixty-five Saints who are in the sea, whom neither the angels nor the archangels do know, but only the Father.

And, again, they said:—We bind Thee by the Harp of David, by the Ring of Solomon, by the Tables of Moses, by the Robe of Aaron, by the Napkin of Christ [which covered his face at his burial and upon which his features were imprinted], by the Sweet Milk of the Holy Virgin, by the Four Nails of [the Cross of] Christ, which were baptised with the Blood of the Lord.

We bind thee by the Bonds of Peter and of Paul; by the Transfiguration of Christ upon Mount Tabor; by the Tri-Holy Light which shone upon the Immortal Head of Christ.

Thou hast no power to grow nor to contrive wicked things, but thou shalt wither away; thou art naught and thou shalt turn to naught.

Upon whomsoever, or in whatsoever house this writing shall be found thou shalt remove [thyself] forty houses [away], and shalt not approach unto the servant of God, Elisabeth, nor to her sons, nor to her daughters. Through the prayers and the intercessions of all the Saints, Amen.

So let it be, and so let it be.

A longer version of the spell in a finer Classical Armenian than that of the *Urbatagirk* was published, with facing-page French translation, by Feydit.⁷ It includes a miniature (fig. 89, from the Bibliothèque Nationale, MS. 102 in Feydit's discussion on 13) of an angel confronting the wingless bird on its branchless tree: the artist gamely attempted to depict these enigmatic creations, and his effort surely deserves a place in the texts of art history as a literal exercise of negative capability.

Prayer Which Is the Book of Friday

A tree stood in the midst of the earth which had neither branch, nor leaf, nor root. An eagle was seated on top of it, who had neither head, nor wing, nor foot. Angels and archangels questioned him, saying: "O foul one, what are you? Hey, foul one, why is it that you have neither head, nor wing, nor foot, and are seated on that tree, which has neither branch, nor leaf, nor root?" The eagle said, "I am the mother of all evils; I go and sit on the heads of men, I eat their flesh, suck their marrow, and put out the light of their eyes." The angels and archangels heard this and commanded, saying: "O foul one, we bind you by the 365 saints who are in the midst of the sea, whom neither angels know, nor men, but only the Father on high. We bind you by the 365 saints who are in the heart of the sun, whom neither angels know, nor men, but only God the Father. We bind you by the name of the uncreate and immortal, by the tetramorphic throne of God the fiery. We bind you by the seraphim and cherubim, by the dominion[s] and power[s]. We bind you by the harp of David, the ring of Solomon, the [stone] tablet [and staff] of Moses, the robe of Aaron, the napkin of our Lord Jesus Christ, and by the sweet milk of the

mother of our Lord the Blessed Virgin Mary. We bind you all, foul demons and pains, by the 24 Prophets, the twelve Apostles, the 72 Disciples, the 150 Patriarchs, the four nails of our Savior that were baptized in the blood of the Lord, and by the word which he spoke upon the Cross: *Eli, Eli, lama sabachthani*. I bind you with the bonds of Peter and Paul, and by the Transfiguration of Christ on Mount Tabor. I bind you by the thrice-holy light that appeared upon the immortal brow of Christ. You are bound and you have no power to grow and strengthen and harden; but you will dry up and turn to naught by the word of our Lord Jesus Christ. I read this writing; may our Lord Jesus Christ be medicine and healing. I bind you by the glory of Adam and by the comeliness of paradise. I bind you by the weapon of life, the Cross of Christ. I bind you, 365 foul and deleterious pains, that you not appear again”...

The second, third, and fourth versions of the spell are substantially the same, though Feydit’s text is the longest and is composed in the purest Classical Armenian. The eagle there names (her)self as the mother of all evils [*mayrn amenayn čareac*].⁸ One is reminded of another text about a siren (Arm. *yuškaparik*, a loan from Iranian) who gives birth to all the heresies of Christianity.⁹ But it is the first text, however, the one cited by Hačuni, that is sufficiently different as to belong to

⁸ This would suggest the eagle, like the Al, is female, unless “mother of...” is just an Armenian usage of the common Near Eastern expression for a superlative. Iranian spells against the child-stealing witch call the Al the *mādar-e āl*, “mother of the Al”. It is to be noted that in some Armenian narratives the Al feeds human entrails to her children; in the Russian texts on the Nightingale-Robber, the latter also has a brood. Russian *solovei* [nightingale] is of masc. gender, and the character has the masc. patronymic (*O*)*dikhmant’ev syn* [son of Odikhman(t)]; so even if the creature was originally female and underwent a sex-change in its russification, it is a father.

⁹ See J.R. Russell, “The Mother of All Heresies: A late mediaeval Armenian text on the *yushkaparik*,” *Revue des études arméniennes* 24 (1993), 273-293, repr. *AIS*, 509-523.

another branch of the textual tradition, one far closer to the ancient prototype than the last two, which betray features of subsequent simplification by copyists.

In Hačuni's text, the tree upon which the eagle (which is called neither *piłc* [foul], nor Satan) sits is in the middle of the universe [*tiezerk*], not just of the earth [*erkir*]; it is without bottom [*tak*] rather than merely without root [*armat*]. In its cosmic setting, the eagle elicits the angels' awe rather than their contempt. The creatures *hear* it; and the angels command it to go to a place where there is no [other] *bird's voice*. Its power seems, thus, to be connected to its voice: this feature is entirely absent from the other two texts. In the latter, it is merely banished; but here it is assigned to attack the dragon or serpent (Arm. *višap*), not man. It is apparent that it is to do so by means of its voice, since no other bird sings where the dragon lives.

The bird of the Hačuni text seems to be a mythological creature with an Indic analogue that was, as we have seen, gradually demonized by its refraction in Christian Armenian folk belief and ritual. The Indic creature is Garuda, the king of the birds and vehicle of Vishnu, who dwells in heaven and is as radiant as the fire-god Agni: when the thunder-god Indra struck Garuda once with his lightning-bolt, the *vajra*, a single feather dropped from Garuda into the atmosphere, after which he acquired the epithet *suparna*-, "of good feathers". One may recall here the feather of the similar Iranian *senmurw* or *simorgh* (originally a kind of eagle), which is given to a hero to summon aid in time of need, and which in the Islamic period acquires *magical* connotations—cf. the Armenian development. On his way to the realm of the gods, Devaloka, the Garuda rests on a fig tree named Subhadra. Most important, he eats *nagas*, serpents: the scene of Garuda standing victoriously over the prostrate body of a defeated *naga*, or holding the creature in its beak, is to this day one of standard iconographic depictions of the creature in Indo-Tibetan and Southeast Asian Hindu and

Buddhist art. The Garuda has a human torso and the head of a bird.¹⁰

A MONGOLIAN SHAMANIST INVOCATION WITH A GARUDA

Now let us consider a text where the Garuda is explicitly named, which bears a structural and thematic relationship to the Armenian spell considered above. This is an invocation, recorded in 1944, of a Mongolian female shaman [*ekener böge*], Tungchinggarbu.¹¹ The substratum of the text, notably in the final section on the otherworldly land of the shamans where the Garuda is mentioned, belongs to the pre-Buddhist Mongolian shamanist tradition; there are also appeals to the Buddhas and enumerations of the monasteries of the Tibetan Buddhism that became in the Middle Ages the Mongolian state religion. The prayer begins with invocations of the paradise Sukhavati, the Samvara Buddha, and Manjushri. With offerings and the burning of incense, the shamaness proceeds to purge the world of demons and pestilence. She invokes Khan Hormuzta Tengri, i.e., the Lord (*khan*, presumably translating a Sogdian form of Persian *khoda*) God (*tengri*, again translating a Sogdian equivalent of older Iranian *baga* or *yazata*) Ahura Mazda of Zoroastrianism—a borrowing of the pre-Buddhist period.¹² The concluding part of the prayer is worth citing in its entirety:¹³

Our land of the Shamans,
Of the four groups of Shamans is
A place unreachable to man,
The realm of death, our country.

¹⁰ See Vettam Mani, *Puranic Encyclopaedia*, Delhi: Motilal Banarsidass, 1984, s.v.; and B.C. Olschak and Geshe Thupten Wangyal, *Mystic Art of Ancient Tibet*, Boston: Shambhala, 1987, 158-159 and figs. 184-186. I am indebted for both references to my Tibetologist spouse Dennis E. Cordell.

North of Kōl kōkū
 The low plain west of Kūnji yamen
 Is the place of the desert's guardian ghosts.
 A very high peak
 And grown in front of it,
 Eighty-thousand branch-shaped,
 Forty-thousand leaf-shaped,
 Forty-thousand root-shaped,
 The Ongghot¹⁴ of each leaf of
 The single tree.
 Around its central branch a poisonous serpent is rolled,
 On its top bird-king Garudi is chanting.
 [Oh,] Lords of the nine passages,
 Mounted on nine white horses,
 With steel riding-crops,
 Accompanied by ferocious tigers:
 Begone all who entered from outside,
 Adversaries and grief!

The affinities of this section of the Mongolian prayer to the Armenian spell are striking: the shamaness is performing a ritual to rid her client of demonic affliction and disease. To accomplish this she invokes the power of the Buddhas themselves and of an impressively numerous array of Buddhist and pre-Buddhist Mongolian sacred sites and beings; cf. the Armenian invocations of Christ, the Virgin, the Apostles, several assemblages of 365 saints, and diverse holy objects such as the nails of the Cross and the napkin of Christ. In the text from the *Urbatagirk*, the healer is instructed to have actual nails on hand for the ritual: one is reminded of the various objects the shaman utilizes in his performance dramatically to evoke the presence of the otherworld beings and objects described in his song. A magician's client, once he believes in the supernatural origin of disease in the first place, will be psychologically

¹⁴ This is a word for a kind of spirit, metal images of which are stitched onto a shaman's robe.

strengthened and in a better position to be healed when he is assured that his healer's arsenal is both powerful and large.

Shamanic songs in northern Asia generally contain a narrative also of the shaman's journey to the otherworld: this part of the text partakes of the genre of the heroic tale. For the shaman must traverse great distances, often at preternatural speeds, overcoming dread obstacles, in order to gain the object of his quest. This is either a powerful supernatural being who will aid him, or one who has in thrall the patient's soul and must be overcome by force or guile. Though the shaman himself accomplishes these tasks, assuming the hero's role, he often has, in addition to his magic arsenal (cf. the hero's talking steed, lightning sword, and so on), helpful associates in the spirit world. For the Mongolian shamaness, these are *ongghots*, *tengris*, and the armed divine horsemen-guardians; the Armenian Christian healer is assisted by a band of angels and archangels. The number of these is significant: the shamaness mentions nine horsemen; and the otherworlds of Siberian and Mongolian shamanism are often stacked levels numbering multiples of three—9, or 27. The 365 Armenian saints "known only to the Father" correspond in number to the members of the body and, of course, to the days of the year. Without the five intercalary days, one has 360, the good and literally round number of the degrees of a circle, the days of the duodecimal year, and the even the windows around the Zoroastrian world-mountain Terag.

If one attempts a restoration of the original Armenian text from the imperfect versions cited, these occulted saints would inhabit three worlds neatly stacked in three vertical levels, too: sun, earth, and sea. The reason this cosmic symmetry is important is that magical rituals have to be performed with precision to be effective, with the presumption that the worlds and beings they affect operate by discoverable rules. The best way to represent a cosmos ordered by rules is to impose upon it mathematical symmetry. Roman magicians were called *mathematici*; the difference, though, between the magico-religious point of view and the scientific is that the former imposes a preconceived and partially arbitrary "intelligent design" upon the universe; the latter seeks to discover such rules

and patterns as may exist, through repeated observation and experimentation.

The shamaness emerges at the end of her song into the land of the dead, to which shamans have special access. In the midst of it is the unimaginably great tree upon which sits the Garuda, *chanting*, with a *poisonous serpent* coiled below. This is evidently a dangerous creature, but a sacred one, with whom the shamaness can parley to accomplish her mission of healing. It dwells in the realm of death, but it can kill the poisonous serpent that represents, perhaps, fatal disease. Its chant is not described, and may be presumed to be of corresponding power to do good or ill. Significantly, chanting is the only activity of the Garuda mentioned. The shamaness' narrative would seem to be an Indo-Iranian spell, recast in the environment of Mongolian shamanism, in which a powerful bird on a cosmic tree in the otherworld is bidden to destroy the dragon or serpent that personifies disease. As we have seen, the Mongols had contact not only with Buddhists, but with Zoroastrians as well; so the earliest form of such a spell might have reached them from a region where both Vajrayana Buddhism and the religion of Ahura Mazda flourished. The Central Asian East-Iranian realm of Sogd¹⁵—whose script, through the intermediary stage of Uighur, became that of classical Mongolian—seems the likely candidate, given the propensity of Sogdians to travel long distances on business. And Buddhist Sogdian texts, being kindred to the Vajrayana tradition, are rich in spells.

The Sogdians, a people of the Iranian periphery, enjoyed a plethora of religions and a correspondingly rich artistic culture entirely unaffected by the iconoclasm of their Sasanian

¹⁵ Sogd, Sogdiana, Sogdia derive from a word meaning "burnt" (cf. Pers. *sokhta*), i.e., "purified, holy". The principal cities of the country were Samarkand and Bokhara; the language, close to Bactrian, now survives only amongst the few speakers of a language bearing the name of the "Ice river": Sunny and Shady Yaghnobi. Though never many in number, Sogdians were anciently everywhere. Sogdian merchants were numerous and culturally influential in 6th-century China; and the town of Sudak in the Crimea was originally Sughdak—a Sogdian settlement. The old name of the Sea of Azov, Surozh, most likely also derives from the name Sogdian.

neighbors. Unlike the Sasanians and again like the Armenians, their noble houses, rather than a centralized state, largely determined the distribution of power. It is reasonable that Sogdia and Armenia, though separated from each other by thousands of miles and by profound differences in cultural milieu, should nonetheless produce parallels such as this spell—if indeed there was a Sogdian prototype inspiring or even underlying the Mongolian text considered above. In Armenia, such a spell would have come, not from Sogdia of course, but from Parthian Iran of the Arsacid period. The dogmatic rigor of the Christian faith would have altered the text—and re-evaluated the role of the Garuda—far more than was the case in the Buddhist culture in which modern Mongolian shamans operate. And indeed we have observed these changes, which are in keeping with the general pattern of the transformation of mythological types in Christian Armenia.

What might the creature in the Parthian spell have looked like? Zoroastrian lore is rich in birds: the *karshiptar*, “black-wing”, i.e., raven, conveys religious messages to the other world from this; in Armenian heroic epic, it is a talking raven [*agʻaw*] who guides *Ħokʻr Mher* [Mithra the Younger] to the cave in *Agrawuʻē Kar* [Ravens’ Rock], at Van, where he is to pine in immortal confinement till Doomsday. This is obviously the *Corax*, “Raven”, of the initiatory grades of the Roman mystery religion of Mithraism that had its beginnings in the Armeno-Iranian world, in Anatolia. The raptor called in Avestan *vareghna-*, literally “ram-smiter”, might be the original of the heraldic bird of the Armenian *naxarar* house of the Mamikoneans: bas-reliefs at *čaxacʻ Kar*, Gomer, and Geghard, for instance show an eagle-like bird *en face* gripping in its talons a ram or sheep. The divinely-bestowed, luminous glory, Avestan *khvarenah-*, Armenian loan-word *patʻ(ē)*, sometimes takes the form of a bird. But the *senmurw/simorgh*, mentioned above, seems the best candidate for the magic bird of the spell, given its prominence over time in Persian literature and in magical tradition. There is even some suggestion of secondary demonization: the fifth-century Armenian writer Eznik of Kolb writes in his *Refutation of Sects* that the archdemon Ahriman, desiring to show that he was able to create but chose not to out

of mere spite, made the peacock. The Armenian word for this bird is *siramarg*, an alternate form of *simorgh*: the supposed vanity of the male peacock's beautiful tail feathers, together with his ugly feet (Satan can be very handsome, but his ugly feet give him away), have made him in Christian lore, too, a bird associated with evil. And for the Kurdish practitioners of the Yazidi religion in Armenia and nearby countries, *Malak Ta'us*, the Peacock Angel, is a hypostasis of Satan, albeit a repentant character in their mythology. In Iranian epic, Rostam, a character subsequently endowed with mystical features, is closely associated with the *simorgh*; but other magical types include the Avestan hero Thraetaona (Middle Iranian Fredon, Persian Faredun, and Arm. Hfuden, the latter Hellenized to Rhodanes in the *Babyloniaka* of Iamblikhos) and the first man, Gayomard. The use in the Armenian spell of the evocative, marked term *vilap* indicates that we have to do, not with any kind of snake, but with a truly dangerous, powerful serpent—like a Sanskrit *naga*. The Parthian prototype might then have involved a hero such as Fredon seeking through an invocation the magical assistance of a *senmurw* against a dragon or other monster.

In the Armenian Christian text, it would plainly not do to have such a mythic bird of the pagan past, morally neutral and very powerful, described in laudatory detail or portrayed as perched on a majestic tree adorned with thousands of helper-spirits or the like. Christian dualism admits no moral neutrality: the creature, if an angel is to conjure it, must be a fiend, otherwise the angel's intervention would be superfluous. So the eagle's perch is transferred in successive versions of the spell, as I have suggested, from the midst of the universe to a less exalted locus at the middle of earth. In the universe, at first, it astonishes angels; on the earth, the latter call it "foul" and "Satan". To evoke its uncanny, otherworldly quality without endowing it with glamor, the Armenian author resorted at some point, rather ingeniously, to a kind of apophysis—a detailed description of what eagle and tree are *not* and do *not* have. The Armenian bird is without wings, head, or feet; its tree, without branches, leaves, or roots.

It is clear that in doing this the author was resorting to the language and genre of the riddle: What tree has neither branches, nor leaves, nor roots, but grows? The phallus, I should think, would be Dr. Freud's answer. What bird has neither wings, nor head, nor feet, but sings? The answer to this riddle is the same, but easier. In the *Decameron* of Boccaccio, that wingless *uccello* is the nightingale, for the latter is a colloquial euphemism for the penis: a girl tells her parents she wants to sleep on the balcony to hear the nightingale sing. The song is nocturnal intercourse with her boyfriend: when her parents discover the young lovers fast asleep together one morning, they decree marriage, and after that the nightingale sings at all hours. These solutions to a presumed riddle are of some relevance, perhaps, for demons depicted in antiquity are often ithyphallic; and sexuality, for Christians, always has a little of the devil in it. But that is not strictly necessary to our argument, which asserts only that the Christian who reshaped the spell employed the rhetorical strategy of apophasis, and the wording of the genre of the riddle came to him, ready made.

But the pleasant digression to Boccaccio is useful in another way: when a bird is best known for its song—particularly if that song has some emotional affect, or complexity sufficient to liken it to speech—then tradition, experience, and imagination will evoke the nightingale. In Armenian, the bird is known as *saxak*, a word Hübschmann convincingly derived from a hypothetical Northwestern Middle Iranian form—Middle Median or Parthian—from the base *sah-*, “speak”: “the speaking [bird]”.¹⁶ Persian does not preserve this word: the apparently onomatopoeic Arabic loan *bulbul* replaced long ago whatever native term designated the nightingale. Part of the newer word's resilience must derive from the pleasing alliteration *gol o bolbol*, “rose and nightingale”, for a standard theme of Persian lyric.

¹⁶ A.G. Perikanyan, *Materiāly k etimologičeskomu slovarju drevnearmyanskogo jazyka*, Part I, Erevan: Izd. NAN Respubliki Armeniya, 1993, 85: with the hypothetical form **sakhva-vaka* > *sokhak*, “speaking a word”, note the Gk. expression *epos eipein* “idem”, and cf. Sgd. *zandwāch* (*mergha*), “nightingale”, lit. “story-telling [bird]”, Tk. l-w *sandawach*, New Pers. *zandwaf*, *zandkhvan*.

Gol, "rose", derives from *vard*, the Iranian loan for "rose" preserved by Armenian, which, however, often uses the loan *bulbul* in lyrical pairings of bird and rose rather than *soxak*, even though the phrase has no alliterative quality. It is its voice that defines the nightingale, rather than any other feature: Greek *khelidón*, "nightingale", derives from the Proto-Indo-European base **ghel-*, "call", from which, indeed, comes also Germanic *nahti-gala*. Greeks would have heard the name for the nightingale, too, in the word **klewédón*, "call": this derives from another PIE root, **k^hleu-ik^hlú-*, "hear", to which belongs Greek *kleos*, "fame, glory", as well as Sanskrit *śhravas-* and Russian *slava* "idem".¹⁷

The latter terms are of extreme importance to our investigation because of their cultural resonance and particular importance to the genre of epic poetry, with which these invocation-texts overlap. As is well known, both Greek, at the western side of the ancient Indo-European family, and Sanskrit, towards its eastern extremity, preserve in their respective traditions of heroic poetry the same expression, from the same verbal base, "immortal glory" (*kleos aphthiton*): this is what bards confer and heroes obtain. In the same genre, both Olympian and Vedic divinities imbibe the same "death-repelling" potion, called *durosha* in Sanskrit and *nektar* or *ambrosia* in Greek. Philologists came to the conclusion, from these and similar collocations, that there was a common stock of Indo-European poetic expression and thematics (notably the dragon-slaying quest, in the latter category) that predated the wider geographical dispersion of the various speakers of the earliest Indo-European dialects. In this dossier, the nightingale emerges as the Indo-European speaking/singing bird *par*

¹⁷ Julius Pokorny, *Indogermanisches Etymologisches Wörterbuch*, Bern: Francke, 1948-59, 428, 605-606. In Armenian, the base **k^hleu-* is realized as *lu-*, the aorist base of *lsem*, "hear", which contains the extension **-sko-*. Arm. *lur*, the equivalent of Gk. *kleos*, might once have had the poetic importance of the latter, but the Iranian term for glory discussed above, *khvarenah-*, a word of uncertain etymology perhaps related to *khvar-*, "sun" (cf. Sanskrit *śurya-*, etc.), replaced it long ago. Christian Greek replaces *kleos* with *doxai*; and Arm. *parē* mechanically translates the latter.

excellence. In that respect it is a good candidate to replace, at some remove from an ancient source, the more muscular eagle of a myth, when the main point in the tale has to do not with talons, or wings, but with a powerful voice. And that brings us to our next text, which, as will be seen, is related, *mutatis mutandis*, to the Armenian spell.

IL'YA MUROMETS AND THE NIGHTINGALE-ROBBER

There are a number of heroic ballads in Russian whose reciters called them *stárinny* or *starínki*—songs about olden times. The term I will use here, though, since it is used now universally for them in scholarly studies, is *bylina*. It is, however, artificial, anachronistic, and inaccurate: its employment with reference to a ballad dates only from the 1830's, and was drawn from an expression "the *byliny* [i.e., *actualités*] of this time" in the epic *The Song of the Campaign of Igor'*, about which we shall have much more to say presently. The oldest of the *byliny* go back to 1619-1620; systematic collections date back to the 18th century. *Byliny* are important not only to the study of folklore, but also to that of modern Russian literature, which really began with Alexander Pushkin (1799-1837). The poet, who was fascinated by Russian folklore and wrote a number of ballads and romances based on stories culled from it, read and treasured the collection made by the Cossack Kirsha Danilov, published in 1804.¹⁸ M. Sokolov has noted that "with especial frequency we

¹⁸ M. Sokolov, *Russian Folklore*, New York: Macmillan, 1950, 291-293; B.N. Putilov, ed., *Byliny* (Biblioteka Poeta, Bol'shaya Seriya), Leningrad: Sovetskii Pisatel', 1957, Introduction, Edward L. Keenan, *Josef Dombrovsky and the Origins of the Igor' Tale* (Harvard Series in Ukrainian Studies), Cambridge, MA: Harvard University Press, 2003, 159 and n. 74, observes that the only naturally-occurring and otherwise-attested word *bylina* in Slavic means "steppe grass". The word occurs at the very beginning of the Igor' Song, in the second sentence: *Nachati zhe sya t'i pesni po bylinam sego vremeni, a ne po zamyshleniyu Boyanyu*. "Let us, however, begin this song in keeping with the happenings of these times and not with the contriving of Boyan" (Vladimir Nabokov, tr. and comm., *The Song of Igor's*

encounter in [the earliest transcriptions] the *bylina* of Elijah of Murom (i.e., Il'ya Muromets—J.R.R.) and Solovey (Rus. *solovei*, “nightingale”—J.R.R.) the Robber.” This is the most frequently attested prose tale in manuscripts for which a recitation in the form of a *bylina* also exists.¹⁹

There are a number of variants of *Il'ya Muromets i Solovei-razboinik*, but for our present purpose it seems adequate to establish a composite version whose particulars can be analyzed in discussion:²⁰

1. Il'ya Ivanovich is born in a village of Murom, Karachaevo/Karacharov or Laptevo. He dreams of a roan horse, and his father buys it for him; so it would seem he foresees his career as an errant knight. But for the first thirty years of his life he is lame, and lies ill on the stove in the family hut.
2. Then two strangers come and in gratitude for his parents' hospitality give their son a drink that enables him not only to walk but to acquire immense physical power—far too much, in fact, for him to remain down on the farm without endangering everybody around him. Though he is praised with the standard epithet *molodec*, literally “[brave] young man”, Il'ya is also always called a *staryi kazak* “old Cossack”—this means more than “good ol' boy”. He has started his knightly career late, after crippling illness. But the ethos of knighthood still comes effortlessly to him: when offered the choice of wealth or the strength and stature of a knight [*bogatyr*'], he properly scorns the former and chooses the latter, and embarks at once upon suitable exploits.²¹

Campaign: An Epic of the Twelfth Century, New York: McGraw-Hill, 1960, 29, lines 6-10).

¹⁹ Sokolov, 292.

²⁰ For this purpose I employ the edition of Putilov noted above and the prose [*poves'*] versions in A.M. Astakhova, ed., *Il'ya Muromets*, Moscow-Leningrad: Izdatel'stvo Akademii Nauk SSSR, 1958: nos. 60-64, pp. 355-376.

²¹ For the knightly exploit Russian generally uses the word *podvig*. This (and the telling of it) is the way one attains glory, *slava*. Vladimir Nabokov often

3. One day he decides to travel by the straight way to the royal capital, Kiev, there to serve Vladimir Vseslavich. The journey is to be accomplished between matins and vespers; and since the day is Easter in some variants of the narrative, Il'ya vows to avoid *boi-draka-krovolitie*, "battle, fighting, and bloodshed" on the way.
4. However at Chernigov (most often; in some narratives it is Sebezh-grad or Kineshma) he encounters a vast infidel horde [*silushka poganaya*] led by three Tatar princes besieging the city. He "violates the great vow" [*narushaet zapoved' velikuyu*] and fights. Il'ya defeats them and the grateful townspeople implore him to stay as their commander [*voevoda*], but he refuses: *Ne dai, Gospodi, delat' s barina kholopa/ S barina kholopa, s kholopa dvoryanina/ Dvoryanina s kholopa, iz popa palacha/ A takzhe iz bogatyrya voevodu*. "God forbid a master should be made a slave;/ A master, a slave; a slave, a nobleman;/ A nobleman of a slave; an executioner from a priest;/ Or also a commander, of a knight."²²

thought and wrote of what it might be like to return to Russia under Soviet rule. In one poem, *Razstrel* [Execution by Firing Squad], the first stanza reads, *Byvayut noch': tol'ko lyagu/ v Rossiya poplyvyot krovat' i vot vedut menya k ovragu/ vedut k ovragu abivat'* "There are nights: as soon as I lie down/ The bed sails off to Russia/ And now they're leading me to a ravine/ Leading me to a ravine to kill me." (Berlin, 1927; see Vladimir V. Nabokov, *Stikhotvoreniya* [Novaya Biblioteka Poeta], St. Petersburg: Akademicheskii Proekt, 2002, 186). The poem was sufficiently important to its author that when Edmund Wilson asked Nabokov to incise a line of his own in the window glass of the critic's guest bedroom, he chose the first two lines. Now, Nabokov had written a novel, *Podvig*, about a young émigré in Berlin who returns to Russia and disappears. The title Nabokov preferred for the English translation of that book is *Glory*; we will see in the second part of this essay the relevance of this theme attaching to glory in his work, to the poem he actually entitled *Slava*.

²² V. Ya. Propp, *Russkii geroicheskiĭ epos*, 2nd ed., Moscow: Gosudarstvennoe izdatel'stvo khudozhestvennoi literatury, 1958, 249, interprets these lines as Il'ya's refusal of a change of class. One might further observe that the hero Arjuna in the *Bhagavad Gita* refuses to fight, not only because he would then have to kill relatives, but also because war would lead to the confusion of caste and the collapse of society.

5. Il'ya asks directions and is told that the straight road to Kiev goes through the Bryansk forest, the Smarodina river, Kalinov bridge, and the *Gryazi chornye*, a swampy black waste land. Neither bird, man, nor beast has used this road for thirty years, though, since the *Solovei-razboinik*, "Nightingale-Robber", [*Odimant'ev syn* "son of Odiman[t]"], who sits on two oak trees (the number varies, but the implication is that he is very large) and kills with his whistle all who try to pass his roadblock [*zastava*]. This noise is repeatedly described in tripartite fashion: *Kak zasvishchet Solovei po-solov'inomu/ Zakrichit, sobaka, I po-zverinomu/ Zashipit, proklyaty, po-zmeinomu* "When the Nightingale will let forth his whistle, in the manner of a nightingale/ And holler, the dog, like a beast/ And hiss, the accursed one, like a serpent...."²³ Notably, the creature, though he kills birds, beasts, and *men*, makes a noise like a bird, beast, and *serpent*. This may be a telling relic of the substratum of the narrative—as I would suggest—which dealt with a man-slaying bird forced to kill serpents instead.
6. Il'ya proceeds: the Nightingale's whistle spooks his horse, whom he collects. He fights and defeats his enemy, shooting him in the right temple with an arrow. The wounded Nightingale pleads for his life and is spared. In the *skazka* ["folktale"]-forms of the narrative, Propp notes, Il'ya asks the Nightingale at this point about his treasure; in the *byliny*, never. Il'ya puts his captive in a bag for fowl, having bound its *ruchki belye*, "little white hands", and hangs it from his right stirrup. One notes confusion here: Il'ya has again violated his vow, and one would have expected an arrow to the brain to have killed his foe, but it has not. So probably in the original version Il'ya defeated the Nightingale by a spell or prayer.
7. Il'ya rides on to the village of Kutuzovo, where the twelve (or nine) sons of the Nightingale live. They offer Il'ya food, but he refuses it; they offer to buy him off, but he will not

²³ Putilov, 77.

take their gold—so, seeing that he holds their father captive, they do not fight him.

8. So he arrives in time for vespers at Kiev, where Prince Vladimir's courtiers scoff at his claim to have traveled there in a day. They do not believe his story about the Nightingale, either. Prince Vladimir commands the bird to whistle, but it retorts that it will obey only Il'ya, its master. He duly gives the order, and the Nightingale whistles with all its might, terrifying Vladimir and killing his entourage. Il'ya asks the Nightingale why it has let fly with all, instead of half, its might: it replies that it was bound and feared death. Il'ya takes it off to Kulikovo field—the site of the Russians' epic battle with the Mongols—and beheads it. The poor Nightingale had been loyal to its new master; this cruel, sad *dénouement* seems to me to be an interpolation: the *Drachenkampf* requires not a defeated, but a dead dragon (cf. *Jabberwocky*: "He killed it dead/ and with its head he went galumphing back.") Originally, *Solovei-razboinik* would presumably have been usefully employed killing poisonous snakes with its uncanny screech. But all ends well for the good ol' Cossack: his liege lord grants the beamish Muromets honor and riches.

Though the *bylina* has been illustrated numerous times,²⁴ there is really no description of the appearance of the Nightingale-Robber. On the one hand, he is very big; on the other, he can be put in a bag for fowl (though Il'ya has grown to larger-than-life stature himself). He is a bird; but he acts and speaks at times like a man. So he is shown in a woodcut [*lubok*] noted above as a bird-man of human size: the image summons recollections of eagle and siren. Putilov comments on the tale:

²⁴ *Ibid.*, opp. 80, reproduces a 19th-century *lubok*, or folk woodcut; see also the illustrations by Vladimir M. Konashevich, 1940, and Nicholas K. Roerich (who was later to become famous for his paintings of the Himalaya, Tibet, and Mongolia, and his yogic teachings), 1910, in *Skazka v Rosni*, St. Petersburg: Gosudarstvennyi Russkii Muzei, 2001, 134 pl. 149 and 162 pl. 156.

The heroic character of the *bylina*, as well as the presence in it of social motifs (the peasant Il'ya's clash with the prince and the boyars), are entirely clear. The difficulty inheres in understanding the meaning of the quest accomplished by Il'ya. In this context the image of the Nightingale-Robber is of fundamental interest. This image is contradictory and, in many respects, enigmatic. The Nightingale's outward appearance is not revealed in the balladic variants: there are both monstrous and wholly human features. It is apparent that in the history of the epos this form is a transitional one between monstrous foes who belong to another world and the historical enemies of the Kievan state. Nor is the character of the actions of the Nightingale altogether clear: he is neither oppressor nor conqueror....²⁵

One hopes to resolve the contradiction sensed in the latter remarks by showing that the story is a magical historiola, with its roots in Indo-Iranian mythology, that was recast in the terms of a martial quest. V. Ya. Propp also finds that the tale fails, strangely, to conform fully to earlier or later types, and regards it as a degenerated and therefore late form of the folktale type of the heroic quest involving a battle with a monster—the type to which the *Drachenkampf*, or battle with a dragon, belongs—and argues:

V razvitii epasa nastayot moment, kogda geroicheskaya skhvatka s chudovishchem uzhe ne mozhet polnost'yu udovletvorit' khudozhestvennye zaprosy naroda. Skhvatka s takogo roda chudovishchami nachinaet teryat' svoi geroicheskii kharakter. Ona nachinaet priobretat' kharakter avantyrno-zanimatel'nyi. Imenno eto nablyudaetsya v byline o Solov'e-razboinike.

²⁵ Putilov, 452.

In the development of epic the moment comes when the heroic combat with a monster is already unable entirely to satisfy the aesthetic prerequisites of the folk. Combat with monsters of this kind begins to lose its heroic character. It begins to acquire an adventurous and entertaining character. Precisely this is observed in the *bylina* about the Nightingale-Robber.²⁶

Some objections may be raised to Propp's thesis. First, variation of the quest narrative does not necessarily imply a linear process of degeneration. It is equally possible for the existing themes of the quest and the combat with a monster to be employed in other, synchronic types of narrative. In another context, I have argued that the Gnostic *Hymn of the Pearl* is a poem intended to preach Manichaeism that employs the themes of quest and dragon-combat while reversing the heroic and social values implicit in these, with the aim of surprising the conventional expectations of an audience. The Gnostic text is thus a deliberate fusion of two different genres and views of life: the written religious treatise or sermon and anti-cosmic mood of the Manichaeans, and the oral epic and life-affirming heroic quest.²⁷ In the case of the tale of Il'ya Muromets and the Nightingale-Robber, it seems to me we are dealing with a magical narrative that possessed from the beginning some aspects of the heroic tale; but as the story was absorbed into Russian folk culture, these heroic features became most pronounced, conditioned by the environments of the genres of *skazka* and *bylina* that received it. Propp speaks of a process of degeneration; yet surely one must consider the antiquity of this very tale, relative to others in which that supposed process of degeneration has not occurred.

One might, therefore, compare more usefully the Russian tale to the Armenian spell and Mongolian shamanistic chant discussed earlier. The visit of the two strangers to Il'ya's home,

²⁶ Propp, 243.

²⁷ J.R. Russell, "The Epic of the Pearl," *Rearm* 28 (2002), 29-100; repr. *AJS*, 1261-1332.

and their blessing of healing by way of thanks for his parents' hospitality, should remind one immediately of the visit of the three strangers to the welcoming abode of the patriarch Abraham. The three are angels; and in Christian exegesis they prefigure the Holy Trinity. One of the most famous Russian icons, the Old Testament Trinity of Andrei Rublyov, depicts them seated at table. It is also relevant that in the story of the pursuit and capture of the child-stealing witch Lilith reproduced in talismans against childbed fever in Byzantium, Armenia, Russia, the Jewish Diaspora, and elsewhere, three armed angels chase the demoness. Il'ya's quest takes place on Easter: one recalls that the Armenian spell discussed above is part of a ritual of healing to be performed on Friday [*urbat*]. This is an unlucky day because of what is euphemistically called "Good" Friday, the day of Christ's crucifixion; and on it supernatural forces of evil are least constrained, requiring therefore the exercise of the most potent magic.²⁸ Il'ya's Paschal vow not to fight or shed blood may have to do, then, with magic: on this marked day he must employ other powers to overcome his uncanny foe.

It is also possible that the substrate was not wholly a borrowing from the Mongolian refraction of an Indo-Iranian text, but partook also of an ancient native tradition—a pagan Slavonic narrative closely cognate to, rather than merely derivative from, the Indo-Iranian material. In such a case, if indeed some or most of the material reshaped as a ballad came from an ultimate Indo-Iranian source through an intermediary

²⁸ Arm. *urbat* derives from Hebrew 'arvit, "evening (service)", i.e., 'erev Shabbat, the eve of the Sabbath. Arm. preserves the latter word, too, for Saturday: *šabat*—Sunday bears the Greek name *Kyriakē*, Arm. *Kirakī*, i.e., "the Lord's day". When I was a student of Armenian at Columbia College, my instructor, Dr. (now the Very Rev.) Krikor H. Maksoudian, who had studied at the Armenian seminary in Jerusalem, related that a priest got drunk one Good Friday: when others warned him that God would see and punish him, he retorted in all seriousness that this was the one day a person might sin with impunity, since God was—temporarily—dead. Such beliefs are not uncommon in Christendom: *mayomberos*, practitioners of black magic in the larger context of the Afro-Cuban religion of Santería, nourish their *egungas*, or skull-vessels, with the fresh blood of animal sacrifices on Fridays.

Tatar-Mongol transmission, it would have found a ready-made niche in the kindred mythological conceptions of the Slavs themselves. The prophet Elijah (Rus. Il'ya) is considered to have assumed in Christianized Russian folk belief the functions and personality of the pagan thunder-god Perun. The prophet, whom people invoke for rain, is imagined riding across the sky in a fiery chariot (flying without wings?), smiting with his thunderbolts unclean forces. Perun, who lived atop the world-tree, was believed to struggle with the serpent-being Volos, who lived at the tree's base: Volos was a chthonic deity, the guardian of cattle and other wealth. He presided over oaths, and was a god of the dead.²⁹ In a precursor of the *bylina*, then, the roles would in the drama have been distributed thus: A human Elijah comes to a bird-like Perun and by his divinely-granted prophetic verbal power forces the latter to serve him and fight Volos rather than harm mankind. This pattern would conform to the Armenian and Mongolian types, though the latter two mention *vīšaps* and *nagas* for the Garuda to kill, whereas in the Russian text the Nightingale-Robber becomes only Il'ya's servant.

If we deal with a magical text from which armed force is excluded, what, then, of the notable interlude at Chernigov? Il'ya fights a whole war there. In the scheme of a heroic quest, this episode is necessary: the overgrown and impassable straight road from Murom to Kiev, a line bisecting the heart of Rus', is blocked by both human and supernatural foes, and a proper hero must confront and conquer both. He is also, as we have seen, tempted at Chernigov to become a *voevoda*—an office that a prince, not a knight, generally held—which would require abandoning both his sacred choice of the calling of a knight-errant and his vow to go directly to Kiev and to offer fealty to Prince Vladimir. Note that wealth was an option at the moment of his choice; and in the episode at Kutuzovo this temptation, offered by a dozen *soloveichiki*, is also successfully turned aside. As students of the tale have long ago noticed, Il'ya experiences the standard Indo-European *triad* of obstacles or adventures on

²⁹ See Linda J. Ivanits, *Russian Folk Belief*, Armonk, NY: M.E. Sharpe, 1990, 29-31, citing V.V. Ivanov and V.N. Toporov.

his way. I might add that one has to do with religious matters (the supernatural *Solovei-razboinik*); one, with nobility (the office of *voevoda*); and one, with possessions and food (the *Solovei-razboinik*'s sons). Priests, warriors, herdsman: this is the standard tripartite division of the ancient Indo-European castes or classes, the mixing of which Il'ya quite traditionally wishes at all costs to avoid. It has been argued whether the battle for Chernigov is an interpolation, a later addition, but this construction of the matter misses the point. It is an organic component of a standard heroic quest narrative; and even if it contradicts Il'ya's determined vow not to use weapons or draw blood (a vow he breaks thrice), it has to be there. The story consists of two overlapping genres, heroic epic and magical tale, and if the encounter necessitates some inconsistency, that is nothing too grave in literature.

For Il'ya does not kill the Nightingale in combat, though he shoots it and will kill it later on: in confronting what in an *Ur-tale* would have been a supernatural adversary to be overcome only by magical means, he keeps his vow. Though variants of the story differ in describing the manner in which Il'ya vanquishes the Nightingale, and all imply some violence, the point seems to be that the battle is a mental one: when the Nightingale whistles and terrifies Il'ya's horse, the knight keeps his wits about him and calms his steed, too. That makes sense if the substratum is a spell or shamanic song: one must deploy spiritual power to control an otherworld opponent. In the case of the *Song of the Pearl*, the young Parthian prince defeats the dragon, not with a sword, but by "Magian" chanting—i.e., the recitation of spells or mantras. The Mongolian shamaness in her song manages to enter, thanks to her office and gift, the land of death where she can gain access to the powers of the Garuda, seated on his tree. The angels and archangels, when they meet the headless eagle, Mother of All Evils, on its branchless and bottomless tree at the center of the universe, rely upon the diverse spiritual powers of Jesus Christ to force it to use its power against dragons and other very big, poisonous snakes (*višaps, nagas!*) rather than men. Correspondingly, Il'ya does not kill the Nightingale; he defeats it and becomes its master. Its

whistle is now at his service; he, at Prince Vladimir's—and its powers are thus turned to good and holy ends.

A Tataro-Mongol source has long been surmised for the *bylina*: it seems that a shamanic song of the kind we have examined above would be the best candidate. The ballad is a third way the story can be told of how to make a large, powerful bird endowed with human speech and uncanny song use its powers to help mankind. I have proposed an Indo-Iranian source for the root narrative spell and suggested a path of transmission from Sogdia to Mongolia, and from Parthia to Armenia. In both cases the host cultures accommodated the material within existing genres and systems of belief, altering it accordingly. The same thing seems to have happened in transmission of the tale from Mongolia to Rus': it was partially reshaped in accordance with the Christian heroic epic form where it found reception. As we have noted above, the actual appearance of the Nightingale-Robber remains a point of ambiguity, and perhaps this must be so, since although eagles can carry off rams, babies, and even, in one case, a fetching Phrygian teenager named Ganymede who was tending his flock when Zeus, *patér andrón te theón te*, decided to enjoy recreation instead of procreation for a bit, nightingales do not get all that big. A Garuda-size nightingale would look decidedly ungainly to a rose. Why the apparent substitution?

THE SONG OF IGOR'S CAMPAIGN AND ITS DISCONTENTS

The Russian word for nightingale, as we have seen, is *solovei*, a word displaying the usual East Slavic lengthening (*moloko* "milk" instead of *mleko*, etc.). The Old Church Slavonic form is, accordingly, *slavii*, "*Nachtigall*, [Gk.] *aédón*", a word which Vasmer understands to refer to a color, "*gelblichgrau*", from a base **solv*. He adds, "*Den berühmten Solovei-razboinik der russ. Volksdichtung wollte O. Mollerts mit einem mächtigen Mordwinen (17 Jhdt.) bei N.-Novgorod*

identifizieren."³⁰ Vasmer and subsequent investigators, including Keenan, regard the derivation of the word for nightingale from the same base as *slavo* and *slava* as *Volksetymologie*, and there is little doubt they are right. Recent scholarship has put forth the suggestion that another base, meaning to hop or jump, might be the origin of *solovei*.

As to the discussion of the *bylina*, greater misgiving must be expressed. While it is possible that the tale of Il'ya Muromets and the Nightingale-Robber might have reminded some Russians of a particularly morbid Mordvin (the name has been thought to be Iranian, from a form related to Pers. *mard-khor*, "man-eater"), the tale was already in existence early in the 17th century; and it seems to this writer special pleading to relocate the Nightingale-Robber from his comfortable perch somewhere between Chernigov and Kiev all the way back, east of Moscow, to Nizhnii Novgorod and to force what is evidently at its root a supernatural tale into the procrustean bed of an eminently forgettable historical incident. Vasmer in his entry on the nightingale has nothing approving to say of the hugely important literary and semantic connection of *slavii/solovei* to speech and fame. Though he was not, strictly speaking, obligated to do so by the exigencies of linguistic examination, the omission is troubling: ancient Russian literature has explicitly linked *slavii* to *slava*, everywhere and always, and never to **Gelblichgraulichkeit*.

In recent decades historians of scholarship have devoted critical scrutiny to the role deeply ingrained prejudices can play in the study of other cultures than one's own. This is a legitimate undertaking, though writers pursuing a disingenuous political agenda of their own have abused the exercise. Western Christian students of the Arab and Islamic world may have expressed bias, but very often it was explicable, even justifiable, on the grounds of the behavior of Islamic states towards both

³⁰Max Vasmer, *Russisches Etymologisches Wörterbuch*, Heidelberg: Carl Winter Universitätsverlag, 1953, II, 690-691. Keenan, 217 n. 300, rejects the etymology of *slavii/solovei* from *slu-*, "hear", as mistaken, but, as will be seen below, recognizes the immense poetic importance of such an interpretation of the bird's name.

Christian subjects and European countries.³¹ But might one suggest that in the case of German study of the Slavs, we encounter a less ambiguous pattern of scholarship at the service of political malfeasance? German scholars, who have led the way in Slavonic as in other branches of philology, have exercised considerable ingenuity to derive the term Slav, not from the base cited above that produced *slovo*, *slava*, but from *sklavos* "slave" (or even more demeaning bases still). Though there is no evidence any *slavyanin* ever meant by thus designating himself that he was a *mamluk*, as it were, they propose this partly on the grounds that Slavs formed a considerable part of the human cargo of the Pontic slave-trade, from the Byzantine age down through the Ottoman period.³²

³¹ I have in mind the egregious *Orientalism* of the late Edward Said, a scholar of modern European literature with no professional training in Oriental studies. Said proposed that European scholarship on the Near East, beginning essentially in the late 18th century, has been marred by an unjustifiable bias against Islam in general and against Arabs in particular. In a note above on the scroll provided by Prof. Hagopian of Marsovan, one found it necessary to review concisely the circumstances of the latter's death: he was murdered in the first genocide of modern times, which was carried out ostensibly in the name of Islam. The culprit was the only Near Eastern political entity, holder of the Caliphate, whose military power and geographical proximity for half a millennium had made it a concern to Europe, and whose mistreatment of its Christian minorities had for decades enraged public opinion. One recalls that the Turks occupied all the Christian lands and peoples of southeastern Europe—Greeks, Serbians, Bulgarians, and others—and had attempted to take Vienna. That oppression culminated, for the Armenians, in the Genocide of 1915 noted above, in the course of which Jane Wingate's informant, the learned and generous Prof. Hagopian, met a hideous death. This was not an Arab empire—though it ruled most Arabs. It was Ottoman Turkey. But of the Turks, and of the reasonable fear and dislike their political and religious policies inspired, and of the Armenians, and of a Genocide carried out from the shores of the Aegean to the mountainous frontiers of Iran, Said has nothing to say. Armenian history stands as a demonstration of the essential mendacity—and cold inhumanity—of his argument.

³² One must recall that, not even a decade before the publication of Vasmer's dictionary, Heidelberg was an enthusiastic bastion—as was every other German university—of an ideology that consigned the Slavs to the status of *Untermenschen* and exploited all the means of the philological and other sciences to justify the extermination of the Jews and the enslavement and

The German philologists and their followers evidently find of slight relevance to their investigation the common Slavic designation of the Germans themselves, *nemets* ["dumb, unable to speak"]. The latter is obviously a term meant to contrast a neighbor speaking a harsh and unintelligible tongue with one's articulate and glorious self. This was a well-known neighbor; and the closer one is to an alien neighbor, the worse the enmity. Thus, although Russian acquired useful words we have seen like the title *knyaz'* ["prince"] and the name of that title's bearer, Vladimir, from Germanic, Russians also say, *Chto russkomu khorosho, nemtsu smert'* ["What's good for a Russian is death for a German."]

So if indeed the main thing about the nightingale that the early Slavs noticed was its drab color—a suggestion rather uncomplimentary in its implication that the *sklavoi* were either deaf or boorish, and one which I am strongly inclined to take *cum grano salis* despite the general approbation with which this etymology has been received—then that perception sets them apart from nearly every other nation and language, for whom the nightingale, as we have seen, is pre-eminently the bird who sings varied songs, the bird of poetry, the bird of incantation. That is also the main feature of the eagle of the Armenian spell and the Garuda of the Mongolian shamanistic chant; and one suggests that this feature of powerful speech dictated the transformation of the bird in Russian reception into a nightingale. But the Armenian and Mongolian birds are also powerful raptors, which the nightingale decidedly is not; so the

gradual extirpation of the Slavs. It is interesting that even today it seems *de rigueur* in Western scholarship to deny to the Slavs an antiquity of their own on the grounds that the term Slav is first attested in writing after an arbitrary cut-off point of the fifth century A.D. We know that the Finns call Russians *Venäläinen*, and ancient references to the Venedi by Tacitus and others probably have to do with Slavs, but since the latter term is not used—even though it is also argued that it means "slaves" and cannot therefore have been an original self-designation, *slavyanin* as "speaking, articulate, famed" being a latter misunderstanding—then Venedi will not qualify for discussion of the self-evidently very ancient language group to be designated as Slavic. This is a circular argument in which the Slavs are set up to be the losers; and it is impossible to suppose that it is not motivated by a deep-seated prejudice.

epithet *razboinik*, meaning a robber or highwayman, would have been added to modify the name. (Vasmer would see it differently, following the Mordvinian hypothesis: "Vgl. Dazu die Sippe von mordw. *salams*, 'stehlen', *salitsa*, 'Dieb'"—as though some esoteric rhyming-pair involving a pun on "thief" were to be adumbrated.) Whatever the remote etymology of *slaviis/solovei*, it is at any rate entirely irrelevant to the understanding of the word by Russian-speakers themselves in their literary culture, where it always means a bird connected *kat' exokhen* to the word and to glory.

The *solovei* is usually regarded positively. In the folktale *Ptichii yazyk*, "The Language of the Birds", a merchant and his wife have a son, Vasilii. While they are at table, a nightingale in a cage keeps singing, and the merchant swears he will give his wealth away to anyone who can tell what the bird is saying. Their six-year-old son demurs, but when his parents urge him to speak and to conceal nothing, he tells them the bird is saying the day will come when his parents will be his servants. They are distressed and later that night put the sleeping Vasya in a boat and push it off to sea. The *solovei-veshchun*, "Nightingale-Sage" (note the compound usage, and cf. *Solovei-razboinik*—J.R.R.) escapes from its cage, flies out to the boat, and perches on the boy's shoulder. They are rescued by a ship's captain, who ignores the bird's warning, interpreted by Vasya, that they are about to be damaged by a squall. After the ensuing storm, though, the chastened mariner heeds the bird's advice to put into hiding to avoid twelve pirate ships. They resume their journey and strike anchor at Khvalynsk, where the king suffers from the incessant squawking of a raven and its wife. He promises to give the hand of his daughter to anybody who can get the black birds to fly away so he can enjoy peace and quiet. However anyone who accepts the challenge and fails will be beheaded. Vasya's nightingale explains that the ravens are arguing about whether their son belongs to his mother or father, and have been asking all this time for the king's judgment. "To the father!" declares the monarch, and they fly away. The boy is ennobled and richly rewarded, and in the course of his travels he stops at a house where he is shown due honor. But its inhabitants turn out to be his parents. The nightingale's

prophecy is fulfilled, the family are reconciled and Vasilii brings his parents to Khvalynsk, where they live happily.³³

The *locus classicus* for the complex, stressed, poetic use of *slaviislovei* in Russian, though, is the *Slovo o polku Igoreve*, "The Song of Igor's Campaign" (Nabokov) or, more concisely, the "Igor Tale" (Keenan). In the 810 lines of the epic, the word *slava* "glory" occurs 15 times; *slovo* "word (with all the nuances, when necessary, of *logos*, the Word—J.R.R.)", three times; and *slaviislovii* "nightingale", four times. There are also numerous proper names with the element *-slav-*, even Gorislavich, which Nabokov in his translation renders as "Malgory";³⁴ in Prof. Keenan's words, "the sound of Slavic glory is heard once every three verses,"³⁵ though the word Slav itself does not appear.

One cannot discuss the *Song* without some reference to the vexed question of its authenticity. The *Song* is a literary masterpiece that in its gorgeous strangeness and literary perfection stands alone in Old Slavonic, somewhat as *Beowulf* does in Old English. Both texts were preserved in unique manuscripts; but unlike the Cotton MS. containing *Beowulf* that survived conflagration and found a safe haven in the British Library, the manuscript of the *Song* was lost in the great Moscow fire of 1812. An edition of the Slavonic text with translation and annotation was printed at Moscow in 1800, and a handwritten copy was made for the Empress Catherine: nothing else survives. An agent of Count Aleksei Musin-Pushkin had acquired the manuscript from the archimandrite Ioil' of the Spaso-Yaroslavskii monastery around 1790: it was a miscellany, bound together with texts of the *Tale of Opulent India*, the *Wisdom of Ahiqar* (Rus. Akir), and the Byzantine epic *Digenes Akritas*. The *Song* describes the unsuccessful campaign of a

³³ *Narodnye russkie skazki iz sbornika A.N. Afanas'eva*, Moscow: Khudozhestvennaya literatura, 1978, 196-199. This beautiful volume, which has afforded this writer many happy hours of bedtime reading, was the generous gift of my dear friend Oksana Fyodorovna Nikol'skaya, whose wonderful hospitality I have enjoyed year after year in St. Petersburg. It is a pleasure to record here my gratitude to her.

³⁴ Nabokov, 102.

³⁵ Keenan, 216.

prince of Kievan Rus', Igor', in the spring of 1185 against the Polovtsy (or Cumans): Bilbo Baggins might have called the poem "Almost to the Don and back again." Over the years, various scholars have sought to demonstrate that the *Song* was a forgery and no such manuscript ever existed. This was a period, after all, when enlightened Europeans were sedulously discovering for their nations native heroic epics whose antiquity and substance might release them from a cultural and spiritual fealty to the Greek and Roman traditions, or the Bible. It was the time of James Macpherson's bestseller, *Ossian*. Most recently, Prof. Keenan has argued that the gifted scholar and pan-Slavic patriot Josef Dombrovsky, a contemporary of Musin-Pushkin's, stitched the *Song* together, dipping frequently into the waters of the *Zadonshchina* ("What happened beyond the Don"), a much later work of far less literary merit. That would not make the Moravian savant an utter falsifier, at least not by the somewhat flexible standards of scholarship and originality of the age: the *Kalevala*, too, is more a compilation by Lonnröt (1835) of various sources than a long and continuous original text. It is now accepted by many researchers that much of *Ossian*, to which a decidedly unromantic mist of disrepute and scandal clung from the time that Samuel Johnson loudly denounced the work as a forgery, was possibly genuine material that Macpherson assembled and published, albeit indulging in generous authorial liberties.

The other contents of the miscellany that ostensibly contained also the lost manuscript of the *Song* seem to me to present the grounds of an argument for its authenticity. There is a mediaeval Armenian miscellany to which the printing tradition generally assigns the title of its most popular component, *Zruyc' plnjē Kalaki*, the "Tale of the City of Bronze", an edifying adventure story most likely of Buddhist origin that was transmitted to the Near East and became an episode in the Thousand and One Nights. The Armenian manuscripts, followed by printed books (the last of the latter in Classical Armenian was published in the latter half of the 19th century; translations into the modern Western dialect continued into the 20th), situate the Tale amidst other stories of edification and entertainment, notably the *Wisdom of Ahiqar*, which was, of

course, also included amongst apocryphal texts of the Bible from very early times. The Armenians of mediaeval times (and later) enjoyed stories about distant India and heroic narratives—the *Alexander Romance* and their own Sasun epic. Though the Akritic cycle was not translated into Armenian, it took shape in the region of Melitene (modern Malatya), on the Euphrates border of Armenia; and various characters, scenes, and themes in the Byzantine epic are of local, Armenian origin. It is certain that Josef Dombrovsky, Musin-Pushkin, the latter's buyer, and the needy archimandrite Ioil' were innocent of Armenology in general and of the character and contents of mediaeval Armenian compilations for instruction and enjoyment in particular; but the volume that included the lost manuscript of the *Song* fits admirably into a kindred tradition of the compilation in manuscript miscellanies of edifying and entertaining texts that the Armenian evidence parallels and corroborates *grasso modo*.

Then there are the Ossianisms that have been noted in the *Song*. Do these tend to cast doubt upon, or buttress, claims of authenticity? Nabokov writes, "Throughout the *Song* there occur here and there a few poetical formulas strikingly resembling those in Macpherson's *Ossian*. I discuss them in my Commentary. Paradoxically, these coincidences tend to prove not that a Russian of the eighteenth century emulated Macpherson, but that Macpherson's concoction does contain after all scraps derived from authentic ancient poems."³⁶ This prescient comment anticipates the re-evaluation of Macpherson's work in recent scholarship; and the several references in the Commentary are, accordingly, not (or not just) a tease intended to keep the reader wondering whether the *Song* is genuine or not. Nabokov was, as a poet and writer as well as a literary scholar, interested in the enormous impact of *Ossian* on Russian literature itself.³⁷ His attention to Ossianisms is thus

³⁶ Nabokov, 12.

³⁷ Yu.D. Levin, ed., *Ossian* (Akademiya Nauk SSSR, Literaturnye Pamyatniki), Leningrad: Nauka, 1983, contains a Russian tr. of Macpherson as well as a huge section of Russian prose and poetry on Ossianic themes by writers

including Karamzin, Muraviov, Derzhavin, Potezhaev, Glinka, Zhukovsky, and Küchelbecker. Even if, as Nabokov argues fairly, Russians in the late 18th and early 19th centuries generally did not know English well enough to read *Ossian* in the original, the impact of the work was instant, profound, and long-lasting. Pushkin in his Lycée years and later, retold and imitated *Ossian*. I offer in translation here three of the more important poems on the theme, spanning a century and illustrating different concerns. Lermontov strives for romantic inspiration by half-imagined ancestral roots (he was in fact part-Scottish). Gumilyov in the midst of modern decadence invokes the clarity of a heroic past. Mandelstam offers a more subtle meditation on literary authenticity and heritage.

Mikhail Yur'evich Lermontov
Ossian's Tomb

Beneath the veil of fog,
In the plains below a stormy sky
Stands the tomb of Ossian
In the hills of Scotland mine,
Thither flies my slumbering spirit
To breathe deeply of its native gale
And from the grave sunk in oblivion
Again to give life to my soul. (1830)

Nikolai Gumilyov
Ossian

Heavy, leaden cloud scudded 'cross the sky,
The moon incarnadine, as if a fatal wound, among them.
Cuchulain the strong, champion of green Erin,
Fell at the sword stroke of Svaran, the king of Ocean.

Ominously sobbed old sybil's imprecations;
The sea, churned to foam, rose and fell,
And Svaran, in ecstatic storm of jubilation
Met Fingal, the lord of the waste land, hero of heroes.

They join in fight and slip on bedewed boulders,
Breaking each other's mighty, ursine shoulders,
And heed the tidings of the keening winds
Of the great battle of the plain in mighty terror.

When I tire of embraces and caressing words,
When I tire of quotidian affairs and thoughts,
I hear the air tremble with their mighty curses;
I see the heroes on the hilltop grim and full of anger. (1907)

straightforward and proper. Prof. Keenan, defending vigorously his lonely thesis, takes to task his adversaries. This is understandable: there is a lot of knock down, drag out writing in a field where the stakes are high and emotions are strong. And Keenan's is an encyclopaedic work of consummate scholarship. He suggests that "the most imaginative practitioners" in modern times of the study of the *Song* "to the end (almost universally) of affirming its 12th-century authenticity" are Roman Jakobson and Nabokov. But he observes also that the latter "eventually took (as he so often did) a dodging, ambiguous stance on the matter of authenticity ('we shall have to cope with eerie doubt...')." Keenan is no less generous about the literary quality of Nabokov's translation, which he calls "precious".³⁸ By this logic, if you accept the authenticity of the text then that is because this was a predetermined position, not one arrived at by scholarly investigation—since that can lead only to Keenan's lonely assertion that the *Song* is a forgery. But if you find the text to be authentic, yet decline to make a dogmatic assertion to

Osip Emil'evich Mandelstam

I have not heard the tales of Ossian,
I have not drunk the ancient wine;
Why then do I perceive the bloodied moon of Scotland
And the battle plain?

And in a silence ominous I sense
The martial roll of harp and raven called,
And in the moonlight clansmen's
Wind-driven tartans flicker, curl.

I have received the charmed inheritance
Of foreign songsters' migratory dreams:
Our own heritage, our boring neighbors—
We're long, unabashedly contemptuous of these.

And perhaps this is not the only treasure
That, skipping grandsons, to their sons will go,
And again a skald will shape another's epic
And pronounce it as his own. (1914)

³⁸ Keenan, 137, 138 n. 2, and 189 n. 213.

that effect, allowing that you may be wrong, or at least that the text as we have received it may contain interpolations or alterations in transmission (a condition not unheard of in the history of ancient manuscripts), then that is a "dodge". Keenan does not specify other places where the great, scrupulous, and fastidiously honest scholar Nabokov was "often" a dodger. Keenan cites Nabokov's comparison of passages in the *Song* to *Ossian*, without, however, noting Nabokov's suggestion in his Introduction, cited above, that such similarities may tend to support the authenticity of the Caledonian poem. So Nabokov's references are meant to imply the opposite of the conclusion towards which Keenan tends, and in support of which he cites them. The characterization of Nabokov's style as "precious" (one might as well call Keenan's turgid—but what for?) doubtless disturbs the immortal shade of one of the greatest writers of Russia and America as much as the buzzing of a gnat at the tail of an elephant. Yet one has no doubt that, were Vladimir Vladimirovich among us to reply to these disparagements as he did to Edmund Wilson's ill-considered critique of his much longer translation and commentary on Pushkin's *Eugene Onegin*, he would mete out to the hapless savant a spectacular and condign public horsewhipping in print. If he thought it worth the trouble.

THE BARD BOYAN, SQUIRRELS, AND NIGHTINGALES

The unknown narrator of the *Song* refers several times to the older bard Boyan:

Boyan bo veshchii, ashche komu khotyashe pesn' tvoriti, to rastekashetsya mys(l)iyu po drevu, serym v' lkom po zemli, shizym orlom pod oblaky.

O Boyane, soloviyu starago vremeni! Aby ty sia pl''ky ushchekotal, skacha, slaviyu, po myslenu drevu, letaya umom pod oblaky, svivaya slavy oba poly sego vremeni, rishcha v tropu Troyanyu chres polya na gory...

For he, vatic Boyan,/ if he wished to make a laud for
 one,/ ranged in thought/ [like the nightingale] over the
 tree:/ like the gray wolf/ across land:/ like the smoky
 eagle/ up to the clouds.

O Boyan, nightingale/ of the times of old!/ If you were to
 trill [your praise of] *these* troops,/ while hopping,
 nightingale,/ over the tree of thought/ [if you were]
 flying in mind/ up to the clouds:/ [if] weaving paeans
 around *these* times,/ [you were] roving the Trojan
 Trail,/across fields onto hills...³⁹

Nabokov in his Commentary notes:

In thought over the tree: *misliyu po drevu*. This has taxed
 the scholarship and artfulness of numerous
 commentators. At least two species of squirrel (evolved
 from *mis'*, mouse) have been made to perform in the
 branches of this metaphor. But apart from the fact that the
 same image in another form occurs ... and that a genuine
 squirrel is properly named *belya* at [line] 349, it seems
 clear that the logical or clerical lacuna here between
 "thought" and "tree" should be filled with *slaviem* ("in the
 guise of a nightingale"), thus completing the triple
 formula...

The commentators include the dean of the Russian
 Symbolists, Vyacheslav Ivanov, whose St. Petersburg "Bashnya"
 ["The Tower"] was a meeting place of the literati of the capital.
 On 25 December 1916 he wrote *Zamyshlen'e Bayana*
 ([*"Bayan's [sic] Conception"*], tr. by J.R. Russell from the 1995
 edition, ser. *Novaya Biblioteka Poeta*, St. Petersburg):

³⁹ Nabokov, 30.,32.

To S.M. Gorodetsky

Grandsons, do you hold fast
The patrimonial teachings
Of the swans' noble order?
Have you not forgotten
The singing of Bayan
Famed from the forefather
Of the youngest tribe
In the lays of ancient time?
Have you kept the intonement's enchantment?
Like a squirrel, along the branches
Of the world tree,
Bayan's conception
Plays and hides
From the roots to the crown,
And frightens and delights.
Imagine—and he's there. Look—he's here!
Who will chase after the sage? Who will guess where he is?
Where in the blink of an eye will he be?
There is for him no space, no time,
Now all of him leans
Down over the well's deep—
He falls
As if entering the ground,
And now he'll be buried...
But just look up! Who is hanging in the height
And swings?
Thus flows the mage, like a squirrel, on the tree...

And the oak's branches drowse,
Through them spread the blue-gray clouds,
And a shifting canopy in star-hue
Of the highest heavens grew.
And the oak's roots are strong;
Their subterranean tendrils sleep,

And downward grow to heavens deep,
And with leaves of stars is their forest crowned.

(Variant: lines 33-34: "Their subterranean branches
straining/ Grow deep to the subterranean skies.)

Ivanov's poem is a world-tree, like that of the Garuda, or of Perun, though I suspect its proximate source is the Norse *Yggdrasil*: the squirrel in it plays hide and seek. This reminds one immediately of "Hide and Seek", a well-known painting in the Museum of Modern Art, New York, by the Russian émigré artist Pavel Tchelitchev, whom Nabokov knew, rather disliked, and parodied mildly in a play.⁴⁰ The painting conceals various creatures and symbols, including one Nabokov would have liked and noticed—a butterfly—amongst the infinite branches and twigs of a world-tree, where a little girl plays. Russians like squirrels: a popular chocolate confection is called *Belochka*, "Little Squirrel"; and a few years ago I was handed a flier outside the Pionerskaya metro station in St. Petersburg advertising the services of a stomatological clinic whose satisfied customers enjoyed the gnawing abilities of a bright-eyed, bushy-tailed squirrel. I think Nabokov was reluctant to part with the creature, though critical evaluation of the text of the *Song* demanded he do so. Instead, the squirrel makes a leap from the branches of Kievan Rus' to upstate New York: in the novel *Pnin*, a squirrel appears at moments where near death or sharp memory bring the academic émigré hero close to Nabokov's *potustoronnost'*—the Otherworld—where beloved

⁴⁰ Tchelitchev (i.e., Rus. Chelishchev) was flamboyantly gay. Though Nabokov was personally averse to homosexuality, his gay brother, stranded in occupied Paris, was murdered by the Nazis for his orientation. Nabokov's father, who died protecting a friend from a right-wing assassin's bullet, had sought to decriminalize homosexuality in Russia; so acceptance of gay people and support for their rights was as essential a component of Nabokov's creed as a Russian liberal as was his violent and uncompromising detestation of anti-Semitism in any form. He was a firm supporter of the State of Israel. The idea of homosexuality as sexual *inversion* was useful in the construction of an outsider in a world of reversals and mirrors, as we shall see presently in the discussion of his novel *Pale Fire*.

faces from a lost Russia are restored.⁴¹ One, indeed, is Pnin's first love, Mira Belochkina [Little Squirrel], a Jewish woman murdered by the Nazis. So, squirrels hopping about, appearing and hiding on the world tree bring one a glimpse of meaning from beyond the barrier of existence. Nabokov plays more complex games here. As Gennadi Barabtarlo notes in his learned commentary on *Pnin*, citing Peter Lubin's study "Kickshaws and Motley" among others, Nabokov believed that Cendrillon's "pantoufle de verre" [Cinderella's glass slipper] was not of glass, but of *vair*, squirrel fur, cf. Rus. *veveritsa*. The motif preoccupied Nabokov, for it recurs from the beginning to the end of his American period: in *Bend Sinister* ("a girl's tiny slipper trimmed with moth-eaten squirrel fur"), *Lolita* ("her eyes were *vair*"), and *Ada* ("miniver-trimmed slipper"). But he also finds a crucial use for the Cinderella glass that the image of the squirrel (with its references to Cinderella's slippers of squirrel-fur) replaces in the novel.

Pnin's wife Liza, a cheap soul who writes vulgar poems,⁴² has left him for a blowhard German (of course, given the author's aversions) aptly named Wind, a psychiatrist (Nabokov hated Freud). It is not clear how much of Pnin there is to the son, Victor, who visits him from school. Outwardly the meeting is not successful: Victor is not hungry and does not care for the soccer ball Pnin offers him. But the two dream the same thing; and later on Victor sends Pnin an aquamarine punchbowl whose beauty is a certain revelation to Pnin of the profundity and beauty of the boy's soul, and of his love. On the night Pnin, at last confident of the security of his teaching post at Waindell College, holds a housewarming party, his guests admire the punchbowl. As they are departing, Pnin's chairman of department (a German, again), tells the Russian he is not to receive tenure—home and job are all lost. Pnin goes into his

⁴¹ Véra Nabokov insisted that *ponatoronnostr'* was the key to her husband's artistry and philosophy; see Vladimir E. Alexandrov's superb monograph, *Nabokov's Otherworld*, Princeton, N.J.: Princeton University Press, 1991.

⁴² Diabolically funny, obscene parodies of the early Akhmatova: Lydia Chukovskaya reports that these offended and infuriated the great poetess.

empty, empty home to clean up, remembering to make a plate of scraps for a neighborhood dog, for a human's misfortune should not deprive an animal of pleasure.⁴³ While washing up, Pnin lets fall a heavy nutcracker in the soapy water; there is a sound of shattering glass, and for an agonizing moment the hero thinks he has broken Victor's gift. At that moment, the narrator tells us, he looked very old. But the bowl—and love, and meaning, and the texture of Pnin's identity—is unbroken, whole, and true

Nabokov, as we have seen from his comment on the *Song* and his novel *Pnin*, could not bear to part with a squirrel who was not there. How much more, then, would he have had to say about a nightingale who was. But as is usual with Nabokov, the good reader is invited to play a game of hide-and-seek to find out what it is. The first point to be made is that Nabokov was

⁴³ This small detail, in the context of the episode, is not only as heartbreaking (Russian *serdtserazdirayushchee*, "ripping the heart violently to shreds", puts it better) in its perfect placement and artistry as the death of Anna Karenina. It is the great vindication of Nabokov as a sternly moral writer in the great Russian tradition of Pushkin and Tolstoy, and the ultimate refutation of those who regard Nabokov as a post-modern cynic playing brittle intellectual games. Games there are—but they are for real. It is not hard to find other assertions of a deeply felt and responsible decency in the writer's oeuvre; what is more astonishing is the failure of those who find Nabokov facilely clever, to perceive them. Consider Nabokov's angry advocacy of the kind Gregor Samsa, in his lecture on *Metamorphosis* and later in *Strong Opinions*: Vladimir Vladimirovich saw Gregor's family as proto-Nazis, and went to some lengths to prove that the hero had been transformed, not into a cockroach, but into a pleasantly roly-poly beetle. If he'd discovered his wings, he could have flown out the window, to roll around happily in the company of other beetles—like *Cincinnati*, in *Invitation to a Beheading*, who at the end walks away from the dystopia of the novel, to find others like himself! (Nabokov apparently read German quite well, though of course he averred that he barely knew the language.) Or notice Humbert's admission, at the center of *Lolita*, that he had left a trail of slime across dreamy, trusting America. Who could possibly read this and consider the novel amoral or obscene? In the case of *Pnin* one notes, however, that the author was prepared to let "my poor Pnin" die—his friends at *The New Yorker* protested, and Nabokov heeded them. He passed the test, and more: Pnin jumps novels, to become a happy, tenured professor beyond anyone's capacity to harm.

acutely sensible of the *brevity* of the masterpiece under study: in his introduction, he notes that the *Song* "consists of 14,175 letters or about 2850 words", which he has divided into 860 lines. The notes in the Commentary are generally very focused, and deal with a line or two. But on p. 92, quite unobtrusively, the translator inserts a relatively short note—on lines 1-70! That is quite a large chunk of the text: it looks like Nabokovian humor, hiding something of serious significance. Here is the note:

1-70. Under the pretext of trying to decide what style to adopt, the old, involved, grandiloquent style of Boyan, or something more in keeping with a contemporaneous subject—the would-be singer of Igor's campaign asks himself how would Boyan have begun, invents examples of Boyan's political idiom (63-70), as if to see how they fit recent events, toys with them, rejects them—but in the meantime he has craftily and successfully fashioned of them the beginning of his story. Thus, in his *Pamyatnik* [The Monument], Pushkin in 1836 parodied a poem by his predecessor Derzhavin (1743-1816) on a Horatian theme ["*Exegi monumentum...*"], in order to smuggle in his own secret aspirations, his own secret pride, under the cloak of high mummery.

This is Derzhavin's poem of 1795, in my translation:

I raised to myself a monument wondrous and eternal.
It is harder than the metals and o'ertops the pyramids;
Neither whirlwind nor swift lightning will break it,
And the flight of time will not cause it to crumble.

So!— I will not altogether die, but a large part of me,
Escaping decay, will be alive after my death,
And my glory [Rus.: *slava*] will grow, not fade away
As long as the world esteems the Slavic race.

Rumor [Rus.: *slukh*] of me will spread from White Sea
Waters to the Black;

Where Volga, Don, Neva flow; from Ripheus, flows Ural:
Amidst numberless peoples every one will recall
How I arrived at fame from obscurity because

In light Russian verse first I was to dare
Advertise Felice's moral graces,
In heartfelt simplicity to converse of God
And with a grin to tell the truth to Tsars.

O Muse! Take pride in service justly earned.
Who scorns you—treat them with contempt yourself,
And with casual and unhurried hand
Crown your brow with immortal dawn.

Here is Pushkin's *Exegi monumentum*, written in 1836, one year before the poet's death. I have italicized lines where the Russian is identical, or nearly so, to Derzhavin's.

I have erected for myself a monument not built with hands;
To it the people's path will not be overgrown with grass.
Higher has it reared its unquiet head
Than the pillar of Alexander.

No, I shall not altogether die: my soul in intimate lyric
Will outlive my ashes and *escape decay*,
And *gloried* [Rus.: *slaven*] shall I be, as long as in this
sublunar world
Even a single poet yet shall live.

Rumor [Rus.: *slukh*] of me shall traverse great Rus' entire;
And every tongue existing there, me acclaim:
The proud son of the Slavs, and Finn, and still wild
Tungus, and the friend of the steppes, the Kalmyk.

And long will I be beloved of the people
For the feelings of good that my lyre aroused,
For in my brutal age I glorified Liberty
And for mercy for the fallen, called.

To God's command, *O Muse*, be heedful,
Of offense, unafraid, demanding not a crown.
Praise and slander accept with equal grace,
And do not argue with a clown.

The common features of the two poems fall into three closely related categories: 1) A monument, and escape of decay, both of which are related to immortality; 2) The glory (*slava*, *slaven*) and rumor or fame (*slukh*), from the same root as the latter), which guarantee that immortality; and 3) The Muse, who confers the poetic gift whereby fame and glory are achieved.

Out of modesty or, more likely, the sort of game of hide-and-seek he plays with his cherished careful reader, Nabokov does not mention his own *Exegi monumentum*. It is the 124-line *Slava*, composed at Wellesley, MA in 1942, which he translates as "Fame" (*Poems and Problems*, 1970, no. 31, pp. 102-113). It contains a direct and ironic reference to Pushkin in lines 73-76, where a grotesque figure counseling despair says,

*Net, nikto nikogda na prostore velikom
ni odnoi ne pomyanet stranitsy tvoei:
nyne dikii prebudet v neveden'i dikom, drug stepei dlya tebya
ne zabudet stepei.*

No, never will anyone in the great spaces
make mention of even one page of your work;
the now savage will dwell in his savage ignorance,
friends of steppes won't forget their steppes for your sake.⁴⁴

⁴⁴ Another line, in Nabokov's poem *O pravitelyakh* ("On Rulers", Cambridge, MA, 1944), reproduces the rhythmic signature of this strophe of weary disgust at the inevitable sameness and hopelessness of the future: *Umiraet so skakoi istorik/ za Mamaem vroy tot zhe Mamai* (anapaestic trimeter, which he did into English thus: "The historian dies of sheer boredom:/ On the heels of Mamay comes another Mamay (anapaestic tetrameter = *dlya tebya drug stepei ne zabudet stepei*). And Tatar tyranny dully precedes that of the pogromist Romanov, the cockroach-whiskered Ossete.

In his footnotes to his English translation, the author cites Pushkin's lines on the Tungus and Kalmyk, lest the Anglophone reader miss the reference. The poem divides in two, in two different ways; thematic and metric. In lines 57 and following, Nabokov evokes a Russia with a threshold [*porog*], "a path drenched by maples in violet blood" [*tropa vsya v lilovoi krovi*] and "ditches" [*kanavy*]. Blood and a ditch: rearrange anagrammatically and symbolically *kanava* and *porog*, change the season from despairing autumn to hopeful spring, and you have the analogous line with *ves' v cheryomukhe ovrag* "all in racemosa the ravine" to whose edge the dreamer, returned in sleep to Russia, is being taken to be shot (*Rasstrel*, "Execution by firing squad", Berlin, 1927). The racemosa is a spring tree blossom used by the Symbolist poet Konstantin Dmitrievich Bal'mont as an emblem of love, and it is emotionally charged in Russian poetry.⁴⁵

⁴⁵ As noted above, Nabokov etched the first lines of this poem in glass in Edmund Wilson's guest bedroom, where writers were encouraged to leave a favorite strophe. Mandelstam's poem *Chto poyut chasy-kaznachik*, 1917, printed in the collection *Tristia*, is apposite to discuss here because of its highly symbolic use of the images of both *cheryomukha* and *solovei*. Osip Mandel'shtam, *Sobranie sochinenii v II tomakh*, G.P. Struve and B.A. Filippov, eds., Washington, D.C.: Inter-Language Literary Associates, 1964, I, 69, no. 98, my tr.: "What does the cricket clock sing./ Fever rustles./ And the dry stove mutters./ This is the red silk burning./ What are the mice doing, gnawing/ Life's hull so thin?/ This is the swallow, and Kore/ Unfastening my barque./ What is the rain on the rooftop muttering?/ This is how black silk burns./ But the racemosa will hear 'Farewell!'/ Uttered even at the bottom of the sea./ For death is blameless./ And nothing can be helped./ Since in its nightingale-fever (*Chto v goryachke solov'inoi*) My heart stays warm." M.L. Gasparov, Osip Mandel'shtam, *Snikhovoreniya*, Proza, Moscow: Biblioteka Poeta, 2001, 630, proposes the explanation that "the poet himself, in the nightingale-fever of love and creativity, has an intimation of the proximity of death. The boat of his life is gnawed through, he is sinking, and from the bottom of the sea he sends his love—racemosa, a symbol from Bal'mont—his final 'Farewell'. The swallow for Mandel'shtam is an intermediary between this world and the world of shades; the daughter is perhaps Antigone leading her blind father Oedipus to his place of rest." I render *dochka* here as Kore, since Persephone is a girl Mandel'shtam mentions more often; and she belongs better to the milieu of psychopompoi and crossings of the Styx.

If one superimposes the poem of 1942 upon that of 1927, it expresses a heartfelt nostalgia that the mind's conscious knowledge of tyranny must refuse. Also, in roughly the first half of the poem the dactyl is very prominent [*i serdtse prósitsya, i serdtse méchetsyač tak i kátitsya óstroyu ósip'yu pód goru*, and so on]. In lines 44-47, Nabokov introduces and stresses [*Perechítite i ostanovites' na etikh strokakh*, "Reread and pause upon these lines"] an image of the magic Sirin bird, his old *nom de plume*, and the word *vol'shebnik*, "wizard", which is a partial anagram of his own name. The maker of magic, its own creature, is the poet himself: after the evil guest's discouraging words, the poet laughs, *i vnezapno s pera moi lyubimyi sletaet anapest*, "and at once from my pen nib a flight of my favorite anapaests rises"—and a reader, a body, and *slava* are all but an "empty dream" then. The work of the poet in its facets becomes itself transcendence: he is his words, Sirin-bird-bard.⁴⁶

The reversal of tone and sense, from lonely, despairing, and earthbound to exultant and soaring, is signified by a mirror-like

⁴⁶ At the end of the title poem of his collection *Chast' rechi* [A Part of Speech], Joseph Brodsky employs a mirroring play of which both English and Russian are capable in this case to express the idea that one informs, is informed by, and is part of the spoken word, especially when it is the bard's grammatically and rhetorically rigorous word: *Ot vsego cheloveka vam ostayotsya chast' rechi. Chast' rechi voobshche. Chast' rechi*. "What gets left of a man amounts/ to a part. To his spoken part. To a part of speech." In English, "spoken part" must resonate also with the "...poor player/ That struts and frets his hour upon the stage/ And then is heard no more"; mortal man, in the Scottish play, Act V, Scene vi. To understand fully Brodsky's conception of the sound of the poem itself as the immortal part of its maker and his ultimate expression, one must refer to the poem Alexander Genis calls Brodsky's *Pamyatnik: U vsego est' predel/ Gorizont—u trachka, u oshayan'ya—pamyat' dlya rosta— rasshirenie plech/ Tol'ko zvuk otdel'ya'sya sposoben ot tel/ Vrode prizraka, Tomas/ Sirotoivo/ zvuka, Tomas, est' reč!* "Everything has its limit/ The eye, the horizon; memory, for despair/ Height, one's shoulders squared/ Only a sound is capable of detaching itself from bodies/ Like a ghost, Tomas/ The orphanhood/ Of sound, Tomas, is speech!" (*Litovskii noktyurn*, XVIII, in *Uraniya*). This immortal speech, detached from the decaying flesh, is not repetitive, though, but unique: the verse Whitman declares in "O Me! O Life!" that each man may contribute to the eternal, powerful play.

reversal of meter itself: dactyl (§- -) to anapest (- - §).⁴⁷ The ability to see this world in the looking-glass is Nabokov's special gift, and liberation, and glory. At the end (lines 120-124) he stresses the image:

*No odnazhdy, plasty razumen'ya drobya,
uglublyayas' v svoyo klyuchevoe,
ya uvidel, kak v zerkale, mir, i sebya,
i drugoye, drugoye, drugoye.*

But one day while disrupting the strata of sense
and descending deep down to my wellspring
I saw **mirrored**, beside my own self and the world,
something else, something else, something else.

Nabokov's nightingale, his *slavii* of *slava*, is a bird who transports one through the looking glass and transforms the quotidian into the marvelous. But it is also *slovo*, the word itself, which shapes and is shaped by the poet; and sound alone is capable of detaching from this decaying flesh, sound carrying word into glory and immortality. Where Nabokov mentions the nightingale outright, he foregrounds it in punning and names it in a mirror-like etymologizing reversal, too:

⁴⁷ In *Strong Opinions*, 98, Nabokov declares, "I am as American as April in Arizona," a locution which "conceals and transforms so many clichés of American culture" (Elizabeth K. Beaujour, *Alien Tongues: Bilingual Russian Writers of the "First" Emigration*, Ithaca, NY: Cornell University Press, 1989, 82). Since the Nabokovs used to go butterfly-collecting in the Western states every summer, it is not a dishonest declaration; but it clearly plays upon the expectation of "...as apple pie", and surprises one with the substitution by the strong spirant /z/ in the last word of the expected labial/liquid pattern (*April, apple, pie*) yet rounds the strophe poetically by echoing "American" with "Arizona". But the word American (- §- -) has a dactyl; Arizona (- - §-), an anapaest: so when Nabokov departs from the cliché for the exotic, liberated and liberating new vision, he uses this marker of a meter seeing itself in the mirror, and beholding something new, something else.

Among the animals that haunt our verse,
 that bird of bards, regale of night, comes first: scores of
 locutions mimicking its throat
 render its every whistling, bubbling, bursting, flutelike
 or cuckoolike or ghostlike note⁴⁸

Regale + night > nightingale, Ger. *Nachtigall*; bird/bard provides the association of the poet's craft and coin, *slovo* "word" and *slava* "glory", with *slaviisloveni*, "nightingale" to follow.

PALE FIRE

We have seen that Nabokov encoded through Horace, Derzhavin, and Pushkin his own bardic claim to glory in a footnote in his Commentary to the *Slovo o polku Igoreve* that discusses the unnamed author's equally furtive claim, made through the prelude describing Boyan, the nightingale of olden time. There is nothing new about such oblique contrivances: Virgil's seems a Pythagorean numerical puzzle.⁴⁹ Given the

⁴⁸ "An Evening of Russian Poetry," 1945, *Poems and Problems*, 160.

⁴⁹ Pythagoreans, and Platonic readers of the *Timaeus* thereafter, were interested in the *tetraktys*, a figure of 9 (i.e., 3x3) points plus one to make the perfect number 10. Virgil accordingly encodes himself in a triad of places into the *Aeneid*:

- 1) Spectator of one's own picture. Virgil declares Jupiter's covenant with—and decree of the future of—Rome, which divides into periods of 3+30+300 years, plus infinity (equal to the ineffable Unity), i.e., 3+3+3+1: *tetraktys*. This covers the events of the poem itself and shortly thereafter. In this early part of the book, Achaes and Aeneas arrive at Carthage and see their own past on a new bas-relief.
- 2) In Book VI in Hades, a vision only a bard can vouchsafe, Achaes runs past a relief of Icarus that is not there. So the bardic power of *ekphrasis* is stressed without the intervention of any picture at all. This is a second, more spiritual level of art. And indeed here it is decreed that others will be better painters and sculptors: Rome's genius is to be the higher *logos* of reason, expressed through Law.
- 3) Aeneas receives his shield, which portrays the future Empire. He delights in the pictures, understanding nothing of them, and takes up willingly the burden of his nation's future. This third experience of art,

importance Nabokov ascribed to form, one must consider the relation of his scholarly publications to his fiction. His extraordinary novel *Pale Fire* (1962) consists of an edition poem of 999 lines, the 1000th of which would have been identical to line one. Its author, John Shade, is a reflection and ghost: he does not live to write that last line, though we know what it is.⁵⁰ An Introduction and Commentary enclose the poem: the editor, Charles Kinbote, is himself a mirror-character. He is either the deposed king of a semi-Slavic, semi-Scandinavian country, Zembla; or he is the deranged Russian professor Botkin. He lives in a rented house. Its owner, a judge, may be stalked by an escaped criminal, Jack Gray; or else an assassin, Jacob Gradus (who himself has a mirror-double, Sudarg of Bokay, a master of—what else?—glassmaking), has been dispatched by the revolutionary régime to kill the king. Pekka Tammi argues that the “ready model” for *Pale Fire* is “the scheme of a scholarly edition adopted by Nabokov in his four-volume *Eugene Onegin* (1964), finished before the novel.” On its mirror-worlds, she observes, following Véra Nabokov, that “it may well be on the

reason and understanding. In these latter two instances Virgil expands with conscious metaphorical and artistic intent upon Homer's episode of Odysseus' descent to Hades and Thetis' delivery to Achilles of a new shield. And as for the numbers, see John Shade's poem in *Pale Fire*: 999 lines, plus one the author died before writing, but which we know!

⁵⁰ “I was the shadow of the waxwing slain/ By the false azure in the windowpane/ I was the smudge of ashen fluff—and I/ Lived on, flew on, in the reflected sky.” I wonder whether Shade's first vision, and his subsequent musings on objects reflected in the glass and seen as though deposited upon the ground outdoors, might owe something to one of Nabokov's favorite poets, Vladislav Khodasevich. This is *Berlinskoe* (“Berlin poem”: *Chto zh, ot oznoba i prostudy*), 14–24 Sept. 1922 (*Stikhotvoreniya*, [Biblioteka Poeta, Bol'shaya Seriya], Leningrad: Sovetskii Pisatel', 1989, 161, no. 175), in my tr.: “Well, then, for chill and cold/ There's cognac or hot grog./ Here's music, the clink of plates./ And a lilac sort of dusk./ And there, beyond the thick, big/ Polished glass,/ As though in a darkened aquarium./ A blue aquarium—/ Multi-eyed trams/ Swim between submarine lindens./ Like electric schools/ Of shining, lazy fish./ And there, slipping into the nighttime rot/ On the thickness of the alien glass/ In the carriage windows is reflected/ The surface of my table./ And, penetrating into a stranger's life/ Suddenly with disgust I recognize/ My lifeless, severed/ Head at night.”

ultimate indeterminacy of such questions (as whether Zembla exists or not any more than anything else in *Pale Fire* exists within an agreed reality—J.R.R.) that much of the joy of reading this novel hinges.” It is Nabokov’s tribute to Pushkin, his own 20th-century *roman v stikhakh*, “novel in verse”. Alexander Dolinin agrees, in his essay on Nabokov’s translation of *Eugene Onegin*, that “now and then the authorial persona of the commentary (on Pushkin—J.R.R.), not unlike the protagonist of *Pale Fire*, grows out of proportion and starts to supplant the reality of Pushkin and his novel by self-projections....” He suggests Nabokov intended the Commentary in *Pale Fire* to mimic the structure of that written for *Onegin*, “which, in his words, builds up the character of Pushkin ‘by means of ... digressions or brief interpolations, nostalgic yearnings, sensuous enchantments, bitter memories, professional remarks, and genial banter (II.170)’.”⁵¹ Nabokov uses all these discursive strategies to create a living, detailed picture of Pushkin’s work, reading, life and times. Kinbote, by contrast, employs the structure of the commentary on a text to write about himself and his perhaps delusional world of Zembla. Shade is a heterosexual, and the poem deals with his love for his wife Sybil and their grief over the suicide of their daughter, Hazel, which occurs at the exact midpoint of the poem. The commentator is homosexual, loathes Sybil, and is entirely indifferent to Hazel. He will typically take a single word out of context and use it as the pretext for a long footnote about palace intrigues or paederastic dalliances in Zembla. His motto might have been, “Only disconnect.”

Again, Nabokov, as we have seen, does the opposite in his own scholarly work: the short note to a long chunk of text in his Commentary on the *Song*, far from obscuring or distorting Boyan, places the ancient bard within a catena of poetic apologiae whose leitmotif is *slovo* and *slava*—and *slavii*, too. The *Song* deals with the epoch of the Varangian presence in

⁵¹ See Pekka Tammi, “*Pale Fire*,” in Vladimir E. Alexandrov, ed., *The Garland Companion to Vladimir Nabokov*, New York: Routledge, 1995, 571-586; here, 572, 575, and Alexander Dolinin, “*Eugene Onegin*,” in *The Garland Companion*, 117-130; here 126, 127.

Rus'; and one recalls the mixed Slavo-Scandinavian milieu of Zembla in *Pale Fire*. Could Nabokov's work on the *Song* have been as germane to the idea of *Pale Fire* as his work on *Onegin*, or perhaps even more so? Nabokov had loved the Igor' epic since his school days, and he studied it at Cambridge. He collaborated on a translation with Roman Jakobson and Marc Szeftel (the latter, Galya Diment has argued in her *Pniniad*, was perhaps the model for Pnin) through the late 1940's; and he put finishing touches to his work on the *Song* in Corral Log Cabins, Afton, Wyoming, in August 1952.⁵² Kinbote completes his work on Shade's poem at the fictional "Cedarn, Utana"—obviously an amalgam of Utah and Montana (Wyoming lies between them). One would expect this correspondence alone to have put Nabokov's chief biographer on the track of a link between *Pale Fire* and the *Song*; but in the index to Brian Boyd's monograph, *Nabokov's Pale Fire: The Magic of Artistic Discovery* (Princeton, NJ: Princeton University Press, 1999), I find no mention of *Slovo o polku Igoreve*.

But Priscilla Meyer, in her earlier study *Find What the Sailor Has Hidden: Vladimir Nabokov's 'Pale Fire'* (Middletown, CT: Wesleyan University Press, 1988), had seen the influences plainly; she notes how Nabokov seeded *Pale Fire* with references to Norse literature in order to create Zembla and to reassert old Viking-Russian connections; she writes that Nabokov's commentary on the *Song* was "the literary-historical point of departure for *Pale Fire*," and she points out the note to line 681 in *Pale Fire* with its reference to the Zemblan forger of "a famous old Russian *chanson de geste*, generally attributed to an anonymous bard of the twelfth century." (One must keep in mind Nabokov's propensity to play hide-and-seek: since the forger belongs to the mirror-world of Zembla, in some hypothetical real world the *Chanson* is probably genuine!) As to *Onegin*, she recognizes its influence on *Pale Fire* and goes so far as to term Nabokov's study "a literary autobiography that

⁵² See Brian Boyd, *Vladimir Nabokov: The Russian Years*, Princeton, NJ: Princeton University Press, 1990, 174 and n. 36; and *The American Years*, 1991, 219.

mimics a commentary."⁵³ But Meyer, who in her admirable work of scholarship found most of what the sailor had hidden, still did not unearth the *pamyatnik*: there are plenty of happy discoveries awaiting the attentive reader still. "Kinbote places himself," Meyer writes, "at the center of a series of circles focused on self rather than on the expanding universe that his scholarship should have revealed to him."⁵⁴ In his footnote on Boyan in the commentary to the *Song*, though, Nabokov renders homage to the poets of Russia, from the Slavonic bards to the 18th century to Pushkin, and on into the present time, their words ever alive and echoing, the holy words of poetic power radiating across the universe as if borne on the wings of eagles and sung by the birds of speech who regale the night.

We are perhaps some distance from a magic eagle *in illo tempore*, its power mastered by saints and their words of power in an Armenian spell. But the verses of the Russian Symbolist Nikolai Gumilyov belong to a kindred poetic culture and heritage of East Christian faith and Indo-Iranian-tinged myth. So one may catch both *slovo* and *slava*, in the charged primordial Word of Creation, *logos* and *mantra*, poem and prayer, that paralyzes an eagle and frightens the stars.⁵⁵

⁵³ Meyer, 41, 53, 55, 63, 140. John Lyons, "Pale Fire and the fine art of annotation," in L.S. Dembo, ed., *Nabokov: The Man and His Work*, Madison, WI: University of Wisconsin Press, 1967, 157-164, points out the similarity of Nabokov's comment in *Onegin*, II, 79, that he is prevented by "a barbarous regime" from going to Leningrad to consult playbills in libraries to Kinbote's complaint in Cedarn that he has no access to a library and must quote references from memory. This seems to me only a very distant comparison. Afton, Wyoming is much closer to Cedarn than the Saltykov-Shchedrin Library. It is important also to stress that for Nabokov the American West, which he visited in the company of a loving family, was a place of beauty and continuous marvel. For Kinbote it is all misery and exile—and here, too, Kinbote is the antithesis, the mirror-opposite of his demiurge. Lyons does not seem to have recognized the influence of the *Song* in *Pale Fire*.

⁵⁴ Meyer, 96.

⁵⁵ N. Gumilyov, *Slovo* [The Word], *Tsikh poetov*, I, repr. Berlin: Izd. S. Efron, 1922, 15-16, tr. mine.

The Word

On the day when above the newly-made world
 God inclined His face,
 They used to make the Sun halt with the Word;
 By the Word cities were laid waste.

And the Eagle would not beat his wings,
 The Stars fled, clinging to the Moon,
 When, appearing as a rosy flame,
 The Word upon heaven sailed.⁵⁶

But for the lower life there were the numbers
 Like domestic animals harnessed to the plow.
 For the number, intelligent, conveys
 All of meaning's necessary shades.

The grey Patriarch, who had subdued
 Both good and evil 'neath his hand,
 Determined not to assay sound
 Engrossed the Number on the sand.

But we forgot the Word alone
 Shines in the midst of this world's woes:
 The Gospel according to St. John,
 The Word is God declared.

We fixed as its boundary
 Nature's mean limits, though:
 And like bees in an abandoned hive
 The words now dead smell foul.

⁵⁶ *I oryol ne vzmakhival krylami./ Zvyozdy zhalis' v uzhas k lune./ Esli, tochno
 rozovoye plamy./ Slovo proplyvalo v vyskine.*

AN ARMENOLOGICAL NOTE ON KARTĪR'S VISION.

By James R. Russell,
Harvard University,
Cambridge, MA

*Et'ē nkateal dimec'ic' i ver yamenagraw uṭin soskali
Hreštak k'o xatātut'ean k'aṭc'rut'eamb inj patahesc'ē.
C'oyc' inj, Tēr, i yelic'n awur šnč'oys arjakman,
Mak'rut'ean oḡi lusov ambarjeal i yerknaworac'n erĵankac'
Pargewawk' siroy k'oy ekeal haseal.*

“If I direct my gaze upwards, towards the fearsome road that takes all,
May your angel of peace meet me, in sweetness.
Show me, O Lord, on the day of departure and expulsion of my breath,
A spirit of purity arising in light from the midst of the joyous in heaven
Coming, reaching me, with the gifts of your love.”

St. Gregory of Narek, Armenia, 10th century.

The Zoroastrian high priest Kartīr left several epigraphic accounts of his visionary journey to the otherworld: much attention has been devoted to these texts, for they are unique in the Sasanian corpus and reflect an extraordinary situation in which the state religion responded to an existential challenge. The vision of Jāmāspa in the *Ayādgār ī Zarērān* and that described in the several recensions of the *Ardā Vīrāz Nāmag* are the sole parallels in the corpus of Middle Persian texts. I have suggested that Kartīr's spirit-journey was a reaction to similar miracles performed by his arch-rival, Mānī, whose new creed attracted the early Sasanian rulers of a polyglot empire because of its multi-confessional

claims (notably Christian and Buddhist) and its particular Gnostic refraction of Mazdean dualism. The mystico-ecstatic practices of both religious figures employ a sufficient number of features in common with those of Siberian, Mongolian, Thracian, and other shamanic systems that they can reasonably be categorized as shamanistic.¹ While definitions of shamanism may reasonably differ, affecting the scope of usage, there have been in the Iranian field characterizations of shamanism as “primitive” and thus inapplicable to the faiths of complex societies. These are sentimental rather than semantic objections— they have literally no scholarly meaning. One crux in the interpretation of Kartīr’s inscriptions is the Middle Persian expression *ēwēn mahr*. The first word can mean “a kind of”, or “ritual” (cf. the Armenian loan *awrēn(k’)* “custom, law”), or “mirror” (cf. New Persian *āyina*). It has recently been argued by Prof. Martin Schwartz on the basis of the latter reading that the ritual involved a kind of catoptromancy familiar from Egyptian, Hellenistic, and other forms of magic. That is not implausible, given the lecanomantic properties ascribed in Persian tradition to the Cup of Jamšēd, the *jām-e Jam*. The second word can mean “death” (<*mrθyu-, cf. Arm. l-w *ma(r)h*) or “sacred word, mantra” (Av. *maqθra-*, cf. Arm. l-w *margarē*, “prophet”, lit. “mantra-maker”). During his spirit’s absence the body of the righteous Vīrāz is treated with the taboos appropriate to a corpse; this is usual in shamanic beliefs and practices. Kartīr’s boy helpers would be familiar both to Late Antique magicians and to shamans of any period.

One has proposed that the repeated use in Kartīr’s inscription of the MPers. of the Avestan formula *humata, huxta, hvaršta* indicates that this was in fact the ritual mantra he used: the prayer *Vīspa humata* in fact affirms that the triad is salvific; and one might interpret the text to mean either that the good thoughts, words, and deeds are, or that the formula itself is. The very familiar and obvious character of the formula— to this day the commonest Persian souvenir is the “*fravašī*” symbol with the NPers. *pendār-e nīk, goftār-e nīk, kerdār-e nīk* inscribed above— conceals it, like the purloined letter.

Yet the formula, with its thrice-repeated initial *h-*, a strong expulsion of breath, would be conducive to the controlled and rhythmic ventilation helpful for inducing a trance state for the otherworld journey. The sound has semantic force by its association in Iranian with both “good” (*hu-*) and the verb *h-*, “to be”. One contributes additionally to the discussion a relevant formula from the Armenian dossier. The relevance of Armenian data to Iranian religion does not require argument; but to underscore the fact that Iranian religious culture is the *substratum* of Armenian Christianity, I have double-starred every lexical item, all or part of which is of unambiguously Iranian origin. The tenth-century theologian and mystic St. Gregory of Narek (Arm. Grigor Narekac‘i) compiled 95 meditative prayers into the ***Matean ołbergut‘ean*, “Book of Lamentation”. The prayers are intended to be recited aloud, at length and in tears, to induce a state of heightened religious feeling and of receptivity to the indwelling presence and outflowing grace of Christ. A preface to part

1- See J.R. Russell, “Kartīr and Mānī: a Shamanistic Model of Their Conflict” and “A Parthian *Bhagavad Gītā* and Its Echoes,” repr. in James R. Russell, *Armenian and Iranian Studies* [=AIS], Harvard Armenian Texts and Studies, 9, Cambridge, MA, 2004.

of the 33rd, for instance, explains that it is recited intensively as part of the ritual of the ***Patarag* ("Divine Liturgy", lit. "Offering") to enable the celebrant physically to behold the divine light descending upon the altar with the consecrated gifts: I have called this practice liturgical mysticism;² and it corresponds, *mutatis mutandis*, to the intensification of normal *halakhic* practice that Prof. Moshe Idel has illuminatingly discussed as one of the types of Jewish mysticism.³ Armenian folk tradition ascribes magical properties to the ***Matean*; and one who recites it uninterruptedly is supposed to acquire supernatural powers. From its very title it is evident that the text should provoke the emotional abreaction of tears. Though this aspect is alien to the Zoroastrian types of religiosity, the poetics Narekac'i deploys to bring one closer to God must be relevant nonetheless.

In chapter 3, God is evoked in a typical litany, of which several lines may be cited: *Amenap'ayl čaṛagayt'*, ***xostovaneal loys*,/ ***Antarakoys **vstahut'iwn*, *antartam **hangist*,/ *Anyeḷli knik'*, ***ansahmaneli tesil*, ***vkayael anun*,/ ***Čašak k'atc'rut'ean*, ***bažak berkrut'ean*,/ *Hastič' hogwoc' hac'*, ***awtar mt'ut'eanc' sēr*, *anerkbay **xostumn*,/ *Cackoyt' c'ankali*, *zgest ankaput*,/ *Awt'oc' baḷjali*, *zard **p'arac'*... "Universally shining ray, light confessed/ Undoubted certainty, resolute rest/ Unchanging seal, unbounded vision, witnessed name/ Taste of sweetness, cup of joy/ Creator, bread of souls, love alien to the tenebrous, unequivocal promise/ Desirable covering, raiment that cannot be stolen/ Shelter sought, adornment of glory..." The passage stresses divinity as a light, banishing darkness, to which one goes with speech and an emphasis on certainty — as in the soul's passage after death. God is the mystic's food, shelter, and clothing. The phrase emphasized in bold characters deserves special discussion: obviously, there are three repeated *h*'s, as in Kartīr's mantra. In Armenian, the prefix *h-*, from Iranian *hu-*, "good", is an intensifier: ***hskay*, "gigantic" (lit. "good and Scythian"), *hlu* "meek" (lit. "good and attentive"), ***hzawr* "mighty" (lit. "good and strong"), etc. So the repeated use of the letter can have a semantic overtone and emphasis as in Iranian. The use of a triad must evoke the Trinity, too. *Hastič'*, "creator, affirmer" from the vb. *astem* is a mediaeval — and probably accurate — *Volksetymologie* of *Astuac*, "God" and would thus represent God the Father; *hogwoc'*, gen. pl. of *hogi*, "soul", would refer to the Holy Spirit. *Hac'* (pronounced *hâts*, with final aspiration), refers to Our Lord Jesus Christ: the unmixed wine and unleavened bread become in the Mass His blood and flesh. The phrase acrophonically renders also the word for the Triune Christian God, *hAST hOgWoc' hAC' > ASTOWAC'(> / Astuac* (Arm. *ow* is the conventional scribal diphthong for *u*, which is now pron. /v/ before a vowel: /*Astvadz*/). There is no doubt that Narekac'i did this intentionally: in chapter 52.2 one finds the strophe *Ew and Hastotid mianal tēruni marmnoyd **čašakmamb* "And to be
